ritain by the treaty of London of 17th March
824, Britain undertaking not to hold any of the
lands south of Singapore. The dominant powers
t present are the British on the west and south,
nd the Siamese on the east and south.

Kalantan, *Quedah*, *Tringanu*, *Perak*, *Kema-*
an, *Jellabu*, *Sunjie Ujong*, *Jompole*, *Srimananti*,
Sumbowe, *Johole*, *Nanning*, *Sejamet*, and *Johore*
re native states, over which Siam claims supre-
iacy, and the British territory comprises the
outhern part of Tavoy, Mergui, Province Wel-
sley, and Malacca, with the islands of Singapore,
enang, the Andamans, the Nicobars, and the
lergui Archipelago. Lieut. Newbold furnished
n estimate of their populations in 1839:—

Exterior—		Interior—	
uedah and Ligore,	50,000	Rumbowe, . . .	9,000
erak, ...	35,000	Sunjie Ujong, . .	3,600
ılangor and		Johole, ...	3,080
Kalang, . . .	12,000	Jompole, . . .	2,000
ohore with Sejamet		Jellabu, ...	2,000
and Muar, . .	25,000	Srimananti, . .	8,000
ihang, ...	40,000	Aborigines scattered over	
emaman, . . .	1,000	the Peninsula, .	9,000
alantan, . . .	50,000	British—	
ringanu, . . .	30,000	Malacca and Penang	
ıtani, ...	10,000	(1836), ...	37,706
		Pro. Wellesley (1835),	46,880

It was estimated that Quedah had 100,000 souls
ıd Patani 90,000 before the Siamese invasion,
hen they were reduced to one-eighth of their
ormer numbers.

The more southern states are Malay, inter-
ersed with small colonies of Chinese, mostly
n, and of Chulia and Kling emigrants from
e Peninsula of India. There are four British
istricts styled the Straits Settlements. These
re occupied in the early part of the 19th
ntury, and attracted numbers of Chinese,
alay, and Kling. A census taken in 1881
ows their population as under:—

	Singapore.		Penang and Pro. Wellesley.		Malacca.	
	M.	F.	M.	F.	M.	F.
alıs, . .	274	191	179	175	152	151

gis, . .	1,014	978	6	8	47	38
inese, . .	46,631	7,467	30,168	6,214	9,850	3,606
vanese, .	2,155	1,084	804	283	246	93
weepahan,	...	...	1,718	1,773	...	...
ing, . .	7,664	1,633	5,136	1,687	1,556	1,318
lay, . .	10,041	9,209	35,501	34,963	28,102	29,372
nese, .	25	19	266	183	3	3

Two distinct races are in that peninsula and its
jacent islands, the Mongoloid, Mon, Siamese,
d Malay, with the Negroid, Mincopi, and
mang. The tribes of the Mongoloid race are
merous, but are in places so few in numbers
at a hut or two form a nation. They are of
tle political or ethnical importance. In the
ates bordering on Siam, the bulk of the popu-
ion consists of the Malay, Siamese, and Samsam,
e latter being Siamese converts to Muham-
danism, who have adopted the language, the
bits, and manners of the Malays.

All but the Malays are engaged in mercantile,
isan, or agricultural avocations, making a little
ney and returning to their native countries.
s is evident from the disproportion of the
sexes. The Malays have 73,644 men and 73,544
women; but the Chinese men are 86,649, with only
17,287 women; and the Kling 14,356 men and
4638 women.

Quedah, between lat. 5° and 6° 50′ N., and its
several islands are occupied by the Malay, Siamese,
Samsam, and Semang. In the *Salangor* State,
from lat. 3° 50′ N., the mass of the population is
Malay, but the ruling race are Bugis from the
Celebes. This small state, up to the earlier part
of the 19th century, was more addicted to piracy
than any other of those in the Peninsula.

Tringanu, a maritime state on the east coast,
is peopled by Malays. *Patani* has Malays and
Siamese.

The four inland states of Rumbowe, Sunjie
Ujong, Johole, and Srimananti, as also the pro-
vince of Nanning (4000 square miles), are peopled
by the descendants of a Malay colony direct from
the ancient empire of Menangkabau in Sumatra.

The **Johore Archipelago** embraces several
hundreds of islets, and the considerable islands
of Battam, Bintang, Krimun, Gampang, Gallat,
and Sinkep, in the line of the plutonic zone of
elevation of the Malay Peninsula from Singapore
to Billiton. Banka and Billiton may also be
included in it; they are so geologically and ethno-
logically, though not geographically. The more
important of the tribes in this Archipelago are
those termed collectively Orang Pe-Sukuan,
literally the people divided into tribes. They are
all vassals of the king of Johore. The tribes of
highest rank are the Orang Bentan under an
Ulubalang, the Orang Singgera under a Batin,
the Orang Kopet under a Jumang, the Orang
Bulo, and the Orang Lingga. There are other tribes
of the creeks and the sea, and some in the interior
of the larger islands are wild.

Johore, formerly the chief city of the empire
of that name, and residence of the sultan, is
situated about 20 miles up the river so called.
The town was founded in A.D. 1511 or 1512 by
Sultan Muhammad Shah II. of Malacca, who, after
his expulsion from that place by the Portuguese,
fled to the river of Johore. From that time the
town of Johore has been the capital of the empire,
which took the name of the empire of Johore
instead of that of Malacca. It is in the extreme
southern part of the Peninsula, with numerous
islands. Johore is the residence of a Panghulu,
who is appointed both by the sultan of Johore
and by the Tumungong of Singapore. It is now
the generally received opinion that Johore derived
its population from Menangkabau. The Johore
Archipelago was probably inhabited from a very
remote period, anterior even to the existence of
any race in Sumatra, by a maritime branch of the
same people, radically Malayan, who are now
found in the interior of the Peninsula and of
the southern half of Sumatra. Several tribes
in various stages of civilisation still possess the
Johore Islands. Though little known to Euro-
peans, they can never have been without Malay
or Indo-Malay visitors, for it was by the great
rivers of Palembang, Jambi, Indragiri, and Kampar,
before whose embouchures these islands lie, that
the natives of Ceylon and Southern India must
have gradually carried civilisation into the interior
of Southern Sumatra.

Kalang, *Jellabu*, *Ulu Pahang*, *Jellaye*, and
Srimananti are also Malay, subject to Johore.

The smaller tribes of the interior and of the sea-coast have their own names, but are known generally by Malay designations, of local signification, with the word Orang prefixed,—Orang Binua, men of the soil; Orang Bukit, men of the hills; Orang-Utan, men of the woods; Orang Slitar, men of the strait; Orang Laut, men of the sea. Occasionally the Arabic word Rayat, or subject, is used, as Rayat Utan, Rayat Laut.

Also, among the forests and mountains of the interior are several barbarous tribes, who subsist chiefly by hunting and by shooting game, using the blowpipe and poisoned arrows. Amongst them are the Semang, the Sakai, or Orang Bukit, men of the hills; the Jakun, or Orang-Utan, or Rayat Utan, men of the woods. The wild tribes are chiefly in the mountain chain running down the centre of the Peninsula from Quedah to Point Ramunia. The Rayat Utan, the Jakun, the Sakai, the Hala, the Belanda, and Besisik, are in the forests in the south.

Pahang territory extends from Sadile, in lat. 2° 15′ N., to Kamamang or Kemaman. The population of Kemaman consists of Malays and Chinese; but in the interior of Pakaa, between Kemaman and Tringanu, is an aboriginal race termed Pangan, said to have the frizzled hair of the Papuan.

Orang Binua, literally men of the soil, is a name applied by the Malays indiscriminately to all the uncivilised scattered tribes.—Semang, Bela, Jakun, Hala, and Udai. In the States of Sunjie Ujong and Johole there are twelve such tribes, besides the Besisik and the Belanda, and others in Salangor. The Binua have been supposed by some to be of Negro origin, but others regard them as Mongoloid races.

Newbold says it is stated by the Binua, and admitted by the Malays, that before the Malay Peninsula had the name of Malacca, it was inhabited by the Orang Binua. In course of time, the early Arab trading vessels brought over priests from Arabia, who made a number of converts to Islam; those of the Orang Binua who declined to abjure the customs of their forefathers, in consequence of the persecutions to which they were exposed, fled to the fastnesses of the interior, where they have since continued in a savage state. He says their general physical appearance, their lineaments, their nomadic habits, and a few similarities in customs, point to a Tartar extraction.

In the Binua, the cheek-bones are broad in all directions and prominent, giving to the face below the base of the forehead a marked lateral development, beyond it or to the forehead an appearance of being compressed. The lower jaw is massive, spreads out, and does not rise rapidly, thus producing an obtuse chin and the anterior maxillary projection considerable.

The ruder Binua dialects of the Peninsula are rapidly disappearing. There are Binua on the Simrong and other branches of the Indau, which are in Johore. The southern part of Pahang is inhabited by the same tribe of Binua who are found in Johore. Some of them, indeed, have habitations, which can scarcely be called houses.

The *Jakun* are scattered through the interior, and are often called Rayat Utan. They do not differ materially from the Malay in colour and physiognomy.

The Bodoanda Jakun and Bodoanda Jawa are two tribes in the Rumbowe State. In Rumbowe Ilir are the Battu Ampar, Munkal, Paya Kumba Barrat, and Tiga Nenik tribes, and in Rumbowe Ulu are the Battu Ballang, the Paya Kumba Darrat, the Sa Melongang, and the Sri Lummah; also the Tiga Battu, Anak Malacca, Anak Achi (children of Malacca and Achin), and Tannah Dattar.

The Jakun are proud, impatient of control, but honest, fond of music. Both men and women, in their forests, have only a strip of the tarap tree for covering. The features of the Jakun or Sakai, the Belanda, the Besisik, and the Akkye bear a common resemblance to the pure Malays: they have the same sturdy legs and breadth of chest, the small depressed, though not flattened nose, with diverging nostrils, and broad, prominent cheek-bones, which distinguish that race of men.

Udai are little known. Many Malays believe they are a class of Jakuns, while others affirm that they are a colony from some foreign country. The Tuanku Putch of Rumbowe informed Newbold that the Udai are a race of savages, thinly scattered over the states of Jellabu, Pahang, Tringanu, and Quedah, and resemble in feature the darker variety of Jakuns. Their size is represented as smaller, and their habits more savage, going nearly naked, dirty in person, rarely constructing huts, and subsisting on forest products, using the sumpitan and poisoned arrows, and sharp stakes as spears.

The *Semang* and the *Udai* dwell in the forests in the north, and are met with in Quedah, Perak, Tringanu, and Salangor. To the north of the province of Ligore, the Semang seem to be called Karian. Malays class the Semang as the Semang Paya, Semang Bukit, Semang Bakowe, and Semang Bila, meaning the Semang of the marsh, of the hills, of the coast, and the civilised. Sir Stamford Raffles and Mr. Anderson described the Semang as having a black skin, woolly hair, thick lips, flat nose, receding forehead, and protuberant belly; and subsequent authorities regard them as of the Papuan race. Newbold (ii. p. 378) says that those around Quedah are scarcely to be distinguished from the Jakun, having the same curly and matted, though not frizzled hair, but with a complexion generally a little darker. They use poisoned arrows with the blowpipe sumpitan. They are said to write on the leaves of the 'stebbal.' Many have been converted to Muhammadanism. They will be further noticed along with the Papuans.

The *Orang Sabimba* is a small tribe of forest nomades who hunt the wild hog with dogs, and use the sumpitan blowpipe as their weapon. Rice is their chief food, but they eat the hog, monkey, snakes, birds of all kinds, except the domestic fowl. They abstain from agriculture. They bury their dead, depositing all the deceased's utensils along with the body. They speak the Malay language, but with a peculiar accent.

The *Mintira* believe that all diseases are caused by spirits, each ailment having its own spirit, who haunts in caves, in woods. They have wishing rocks to which they resort to gather the Chinkwi flower, which gives them supernatural power over others. Amongst their marriage ceremonies is that of the bride and bridegroom eating from the same plate. The Mintira, and all the tribes

of the interior, have a dread of the sea, and never venture on it.

The *Chinese* scattered over the principal islands of the Archipelago were estimated in 1839 at nearly a million in Siam, Tonquin, Cochin-China, Kamboja, Laos, and the Malay Peninsula. In the year 1871, in the British Settlements in the Straits, there were 103,936. Facilities for travel have allured a great influx of that intelligent race, who are largely engaged in mining operations, in garden cultivation.

The *Orang* (Slitar) *Selat*, literally people of the straits, the Cellates of Valentyn, are a wild tribe, living in boats near the old Straits of Singapore, using small boats 20 feet long. With the Biduanda, they are joint occupants of Singapore. They speak a Malay dialect with a guttural accent. They gather shell-fish; they fish and collect forest produce. They are liable to a leprous affection of the skin. They are supposed to be uncivilised Malays.

The *Sakai* is a pagan population in the Malay Peninsula, divided into the Sakai Jina and Sakai Bukit, the latter being hillmen and mountaineers, the former more settled and civilised. They are strict worshippers of the elements. Sakai is the Pahang word for an aboriginal.

The *Hala*, a branch of the Sakai, tattoo their face and breast, pierce their ears and nose, and insert porcupine quills. The Sakai tongue of Perak appears to resemble in its phonetic character the ruder dialects of the Burman group. This character is intermediate between that of the Semang on the one side, and that of the ruder Sumatran, Javan, and Borneon on the other. The Johore Binua is more guttural, aspirate, and harsh, remarkably broad and slow.

Rayat Laut and Orang Laut literally mean seafaring people. The Malays distinguish them from the localities they occupy, as the Orang Rawang, the Orang Selat or Orang Slitar. Their principal haunts are Galang, Selat, Muru, Baru, Kalang, Timiang, Lingga, Tambusa, Sooghi, Mantang, Akik, Murabu, and Ratas. They resemble the Jakun and Malay in appearance, but are of darker colour, and more savage and uncouth in aspect. They are proud and restless, impatient of control, and fond of music. They live in their boats, in which they make long voyages. They are expert divers and fishers, and collect agar-agar, trepang, wood, oil, etc. The *Akkye* or *Rayat Laut*, of the shores and islets, dwell apart from the Malay, from whom they differ in habits and religion. They are thinly scattered, living upon fish, and are probably identical with the Ichthyophagi mentioned by Herodotus, Diodorus, and Pliny.

The *Selong* or *Selome* sail all through the islands of the Mergui Archipelago, south of Tavoy. They are a mild, honest, intelligent, and peaceful race, timid, reserved, and difficult to approach. They number about 1000. They reside in their boats, which are good; are decently clad, and are inclined to settle in villages and cultivate. They are fishers for the sea-slug, which they pick up at the low water of spring tides during the N.E. monsoon. They bring to the ports of Tenasserim and of the Malay Peninsula, tortoise-shell, the larger shells of the triton and nautilus, valuable for their mother-of-pearl; the gigantic tridacna, and pearls found in a species of meleagrina the deep bays of the Lampee Island; also beche-de-mer, sharks' fins, dried fish, and edible birds' nests. They believe that Nat or spirits dwell in the land, the sea, the air, and the forest, but they do not invoke or sacrifice to them. They subsist entirely on fish, turtle, and shell-fish.

Perak, on the west coast, south of Quedah, is 75 miles long. It is tributary to Siam. Its inhabitants consist of the Malays; also the Batta, Barak, Rawa, Mandeling, and Korinchi people of Sumatra; the Bugis and wild tribes in the interior, with settlers from Europe and China. The Bugis are much respected. They at one time overran Quedah, but are now of little importance. The *Korinchi* are strict Muhammadans, dress always in white. They have the Malay manners and language, but use a writing character of their own. The Rawa and Mandeling people are labourers.

The *Orang Binua*, literally men of the country, are called Sakai by the Malays of Perak, also Orang Bukit or hillmen, or Orang Laut or sea men, or Jakun, Besisik, from the localities or rivers they occupy. The Sakai or Jakun of Perak are smaller in size than the Malay. The Semang of Perak are of the same size as the Malay, in complexion of a dark-brown more than black, with flat nose, thick lips, large mouth, and hair not lank and black like the Malay, nor woolly like the Ethiopian Negro, but long and in tufts. The Perak population has been estimated at 30,000 to 80,000, and its wild tribes at 5000 or 6000.

Salangor runs for 120 miles south of Perak, from lat. 3° 50′ N. The mass of the population is Malay, but the government was held by Bugis from Celebes. In the early part of the 19th century, it was more addicted to piracy than any other of the states of the Malay Peninsula.

Until the earlier part of the 19th century, the Malays on the E. and W. coasts of the Peninsula were largely piratical.

Rhio-Lingga is the name given to two groups of islands, the Rhio and Lingga, forming the Archipelago of innumerable islands and reefs stretching between Sumatra and Borneo, and which, till 1824, were a part of the formerly powerful kingdom of Lingga, which extended over a great part of the Malay Peninsula, and over the maritime provinces on the east coast of Sumatra from Palembang to the territory of Siak. The Rhio group includes Bintang, Battam, Gallat, Bulan, Chumbol, Sugel, Durian (Dryon), Karimon, and Segupong; that of Lingga including Lingga, Sinkep, Timian and Roding, Saga and the Seven Islands. On the cession from the Netherlands to the British Government of the Dutch possessions on the Malay Peninsula, Rhio (pronounced Ree-ow) became of some importance.

ANNAM, COCHIN-CHINA, KAMBOGIA, LAOS, SIAM.—Around the borders of British India, in the N.W., the N.E., S.E., and E., is an ethnical group, which contains the Tibetans, the Nepal tribes, several nationalities of the sub-Himalayan range, the Burmese, the Siamese, the natives of Pegu, the Kambogians, the Cochin-Chinese, and the Chinese, in populations which cover perhaps one-fifth of Asia. They have a general similarity, they are somewhat fair in complexion, with what are called Mongolian features. There are Christians, Muhammadans, and shamanists among their religious sects, but the Buddhist, Confucian, and Taoist philosophies are used as

religions, and almost all believe in the transmigration of souls towards a final absorption. The first migrants from the northern side of the Himalaya, now represented by the Annam, Kambogian, Mon, and Laos tribes, appear to have been at a later period gradually pressed to the eastward and southward by the Tibeto-Burman tribes.

The *Mon-Annam* or East Himalaic tribes occupy the territory bounded on the north by the left side of the valley of the Brahmaputra as far as the head of Assam, and a line drawn thence eastwards along the range in which the Irawadi has its sources, and across the converging meridional chains, beyond to the most eastern, the Mangli, which separates the Kiang from the Mei-kong.

On the south-east of Assam are numerous tribes, many of them subject to the Burmese. These belong to the Siamese or Thai group, and are composed of the Siamese proper, the Khamti, the Laos, and the Shan, who each speak a dialect of their own, none of which are like the Burmese.

The *Laos* or *Shan* race speak a language which was primarily East Himalaic, like Mon, Kambogian, Annam, and Pa-long. Like them, it was carried at some remote period into the Brahmaputra-Gangetic province, and received some Dravidian roots. Subsequently it shared in the great eastern movement of the Himalaic dialects, from the basin of the Ganges into that of the Irawadi, where it was intimately connected with some of the intrusive West Himalaic or Tibeto-Burman dialects. It was then pressed farther into the east, into the basin of the Upper Mei-kong and Tonkin, and became the language of Yunnan. During the Han dynasty, Chinese colonies began to occupy the valleys of Yunnan, and from that time the Laos language was exposed to the influence of Chinese, and began to receive the modified form it possessed when the pressure of that great race on the older tribes of Yunnan caused the Laos people to swarm to the westward and southward. When they re-entered the basin of the Irawadi, they had acquired from their partially Chinese civilisation a superiority over the Tibeto-Burman tribes of Northern Ultra-India, which made the Laos clans predominant along the central belt of Ultra-India from the Himalaya to the mouth of the Menam.

The *Shan* or Shyan call themselves Thi or Thai, and occupy great part of Laos and Siam, and bordering districts of Burma. In personal appearance, customs, and languages, the Shan and Karen are but offshoots of the same stock. The Laos, the Shan, and the people called Ahom were originally the same, and once held Assam and Bhutan under their dominion, Assam, indeed, being a dialectal variation of Ahom. The Shan race swarm in numerous tribes over the countries stretching from the valleys between China and Tibet on the north, to the Gulf of Siam in the south, and if united would form the most formidable state in Eastern Asia. They occupy all the territories between the Irawadi and the mountains of Annam. At Bhamo, to the north, east, and south-east of which they are numerous, the language of the Shan corresponds with that of the Siamese. Their habits, mode of living, cultivation of the ground, correspond with those of the Khyen and Karen. Peopl of the Thai group have a superior physical development, and resemble the Balinese.

Perpetual aggressions and frequent conquests, extirpations of villages and migrations, mark the modern history of nearly all the Tibeto-Burman tribes, and of the different branches of the same tribe. In recent ages, the Laos have settled in the lands of the Singpho, the Bodo, the Burman, the Peguan, the Kambogian, and the Malay, and have originated communities having no connection with each other. The Singpho at a late period forced their way from Burma into Assam. The Bodo have occupied the country of the Mikir, and the Arung Angami and Kuki have intruded on both. The same tribes also, separated into clans and villages, are permanently at war with each other; Kuki flees from Kuki, Singpho from Singpho, Abor from Abor.

The *Mon*, called by the Burmans Ta-lain, and Peguans or Peguers by Europeans, long successfully contested with the Burmans the sway over the basin of the Irawadi. They were annexed to Burma in the middle of the 16th century, but again threw off the yoke in the beginning of the 18th century, and subjugated all Burma. Their range embraces the delta of the Salwin, where Moutama or Martaban was their chief port. They long preceded the Siamese in the Tenasserim Provinces, and the languages of the Semang and Binua of the Malay Peninsula retain deep traces of their ancient influence to the south. A colony is also found in the basin of the Menam. Before the great southern movement of the Laos, the Mon appear to have occupied that basin also, and to have marched and intermixed with the closely-allied Kambogians of the Lower Mei-kong. They seem to have been at one time the chief traders eastward of the Bay of Bengal.

The **Nicobar Islanders** appear to have been an early colony of the Mon race in its pure or more west Chinese and less Indian condition. They are flatter faced and more oblique eyed than the Rakhoing and Mon, in this resembling the more sequestered hill tribes of the Burman race. In some islands they have been much mixed with Malay colonists. Nicobar phonology is allied to that of the Selong and Semang. The entire population has been estimated at 6000 souls. They eat the pig, yam, and plantain. They dread evil spirits. They bury the dead, and deposit with the body all the small articles of property of the deceased. They are monogamic, but divorce is frequent.

Ka-Khyen.—In the Irawadi and Mei-kong basins, there are remnants of tribes strongly distinguished from the predominant races, and tending, with the evidence of language, to show that the ethnic history of Ultra-India is very ancient, and has undergone repeated revolutions. One of the most remarkable is the Ka-Khyen. They are described as being in their appearance not Mongolian, and totally different from the surrounding races of Shan, Burmese, and Chinese.

The *Palong*, Pa-on, or Ze-baing are partially subject to, and located to the east of, the Mo Meit (Mung Myit, Moung-m-ri), beyond the Karen-ni, and along the Chinese frontier, as far as the latitude of Bamo (Mang-mo). They are good carpenters, dyers, and blacksmiths. Their dha or swords are exclusively used in and around

Bamo. They approximate to the Shans, of whom they are probably an offshoot; they wear the same dress, and are Buddhist, but they have affinities with the Ka-Khyen. The Palong seem to resemble the Annamese in some respects.

A race of the same name (Panong), but to which the Siamese apply the generic name of Ka or Kha, inhabit the mountains of Laos, bordering on Kambogia. They are a coarse and debased variety of the Annam and the Kambogian type.

Chong.—On the same side of the Mei-kong basin, but towards the sea, between lat. 11° and 12° N., a hill tribe called Chong preserve more of the ancient Australo-Tamilian character than the surrounding tribes. In the Chong, the hair, instead of being stiff or harsh, as in the Mongolian, Tibetan, and prevalent Ultra-Indian and Malaya-Polynesian race, is comparatively soft, the features are much more prominent, and the beard is fuller.

The *Muong* or *Muang*, who inhabit the mountains on the west of the Tonkinese province of Thank-Hoa-noi, and stretch into China, are evidently an extension of the aboriginal or uncivilised Laos of Yunnan. The name is the Laos term for town or village which is scattered over so large a portion of the Chinese maps of Yunnan, indicating the present limits of Laos in that province.

The *Annamese*, or Annamitic group of peoples inhabiting Cochin-China and Tonkin, are a section of the division to which the Chinese belong. The Chinese designate the Annam people Ngannam. The Tonkinese call the Cochin-Chinese Kuang and Kekuang, names probably the same as Khyen and Ka-Khyen. The Cochin-Chinese, on the other hand, call the Tonkinese Kepak.

The Annamese group, amongst whom are the Moy, are found in Cochin-China and Tonkin, and two centuries before Christ the Chinese found the Annamese in possession of the basin of Sang Koi. The Annam race (comprehending under this name both the Cochin-Chinese and Tonkinese, for there is very little difference between them) are fair, but are a short, squat, and ill-favoured people, with long arms and short legs. They are probably lower in stature than any people of Central Asia. Their limbs are strong and well formed, and they are active and hardy. In point of features they bear a nearer resemblance to the Malay than to any other people; their countenances exhibit an air of cheerfulness and good-humour. The women are, to a remarkable degree, fairer and handsomer than the men, their hands, arms, and feet are well formed, and the carriage even of the lower orders is graceful. The hair of the head is worn long, and put up in a knot at the back of the head, as was practised by the Chinese before the present fashion was imposed upon them by the Manchu; and the dress of both sexes is becoming; it is the old costume of China, before the Chinese were compelled to adopt that of the Manchu conquerors. Both sexes dress nearly alike. For the lower part of the body, the covering consists of a pair of loose trousers, secured at the waist by a sash. The main portion of dress consists of two or more loose frocks, reaching half-way down the thigh. Its sleeves are loose, and with persons not compelled to labour, they dangle a foot, or even a foot and a half, beyond the extremities of the fingers; but the labouring classes from necessity wear them short. With the women, the inner frock reaches below the knee, and the outer down to the ankles. When a Cochin-Chinese is in full dress, as when he makes visits or is engaged in the performance of religious rites, he always wears over the frocks now mentioned a loose silk gown reaching to the ankles. Both sexes wear turbands, which are put on with much neatness; and the form of this article of dress, which is always determinate, distinguishes the civil from the military order of public officers.

Cochin-China is the name given in Europe to a kingdom occupied by an Annam people. The derivation of this European name is obscure. Kachao is the name given by the Annam people to the capital of Tonkin; and Cochin-China is known to the Malay navigators as Cutchi, but they give the same name to Cochin on the Malabar coast. Cochin-China has probably been so called from the alliteration or reduplication so common with easterns, aided by the proximity of China, and may be derived from Kachao, the capital of Tonkin and China, so that Cochin-China may mean China-Cutchi. Cochin-China is bounded on the west by the Laos country. It extends between lat. 10° and 11° to 18° N. The laws and modes of punishment of the Cochin-Chinese are nearly the same as those of China. Their language, termed the Annamite, is monosyllabic, and evidently derived from that of China. Their written language, indeed, is merely borrowed in whole or in part from the Chinese, though the two languages have become so different that persons of the two nations cannot communicate either in reading or writing. Chinese, however, is the learned language of Cochin-China, with the pronunciation of the Cochin-Chinese. The Annamite language, from its monosyllabic character, presents but a small variety in the sound of the words, and a great number of significations, all indicated by the tone, are given to words spelled alike. The religion of the common people is the religion of Fo, which they call Phat; but the people readily embrace Christianity. The common language is spoken in Cochin-China, Tonkin, Ciampa or Tsampa, Kambogia, Siam, and in Laos.

The *Moi* or *Ka-moi*, who occupy the broad expansion of the Annam chain towards Kambogia, and appear to extend northwards along these mountains, marching with the Laos people on the westward, are said to be black savages, with Negro features. The Kambogians style them Kha-men. They are the Kho-men of Leyden and the Kha-men of Gutzlaff. They are very black, and resemble in their features the Caffre.

Kwanto are the aborigines of Tonkin, and must not be confounded with the Annamese.

Kambogia, lying between Siam and Cochin-China, contains about 1,000,000 people, of whom four-fifths are the native Kho. It contains the four provinces, Potisat, Kampong Suak, Kampong, and Kampot Son. Kambogia was anciently called Kamphucha. The people call themselves Khmer, and their country Sroe-Khmer, the country of the Khmer. They are called by the Siamese, Kammen; by the Cochin-Chinese, Komen; by the Chinese, Tang-po-cha; and by the Malays, Kamboja. Kambogia is the lower portion of the valley of the Mei-kong river.

The ancient territory of the Kambogians appears to have embraced all the country lying west and south of the river of Saigun, extending on the Gulf of Siam as far north as the twelfth degree of latitude, and in the interior at least to the fifteenth. The eastern part of their territory having been subjugated by the Cochin-Chinese, and the western fully taken possession of by the Siamese, the latter, with the co-operation of the Kambogians under their rule, have retaken Pennom-pen, on the great river Mei-kong, called by the Burmese Meh-kwan-mit (Moor, p. 190), but which probably receives several names in its long course of 1500 miles, till it enters the sea by several branches.

Sovereignty over the kingdom of Kambogia was claimed by Siam and Cochin-China, and the Kambogian prince, unable to resist either of the sovereigns, paid tribute to both. The Government of Siam compelled the young princes of Kambogia to reside as hostages at Bankok. It is now under the protection of France, which has formed a colonial government over six provinces of Cochin-China, which were formerly part of the kingdom of Kambogia. The population of French Cochin-China, principally of Chinese descent, is about three millions. The provinces were obtained from the emperor of Annam by a treaty signed at Hue in 1862.

The whole of the coast from Kamas in Kambogia, quite up to what is called by the Siamese Lem Samme-san, the Cape Liant of Europeans, is an uninterrupted archipelago of beautiful islands. The Kambogians who are subjects of Siam occupy the southern districts of the Mei-kong down to the frontiers of Cochin-China. The river of Kambogia is one of the largest in Asia. It falls into the sea by three mouths, between the ninth and eleventh degrees. These three embouchures are known to European navigators by the names of the Western or Basak river, the Eeastern or central branch, and the Northern or Japanese river. The first of these is the largest, and the more suitable for navigation, and is said to have from 14 to 18 feet of water on the bar at its mouth at high-water or spring-tides.

The capital was visited by a Madras officer in the year 1854, at which time the king, besides his four married wives, had three hundred other women. The women of Kambogia shave their head, leaving only a short tuft of hair. They also blacken their teeth. The Kambogians speak a language distinct from those of all their neighbours; but in physical form, manners, laws, religion, and state of civilisation, they bear a closer resemblance to the Siamese than to any other people. A few of its people have embraced Christianity.

In Kambogia, it is stated by a writer in the Journal of the Indian Archipelago that Buddha is there styled Samonacudom. But there prevails amongst them a pantheism, in which all nature is deified, but above all they place Buddha, and worship him daily. The Sa tra Trayphum and the Sa tra Papithum are mentioned as two of their religious books.

The *Kho* occupy the delta of the Mei-kong in Kambogia, between Siam and Cochin-China, the remaining population being Chinese, Cochin-Chinese, Siamese, Malays, Portuguese, and mixed races. The Kho are the aborigines of Kambogia. Their language and that of the Mon in Pegu are said to be much more nearly allied to each other than to the Thai language, which is spoken in the intervening country. The Kho and Siamese languages are mutually unintelligible.

Champa is a narrow mountainous tract between Cochin-China and Kambogia. The only part of the continent of Asia, the Malay Peninsula excepted, in which the Malays have settled, and to which their language has extended, is Kambogia. In that country they established the little independent principality called Champa, well known both in Malay and Javanese story. Both the Malays of the Peninsula and the Javanese appear to have carried on a commercial intercourse with Champa, and the same commerce still goes on between Champa and the British settlement of Singapore. The people are known in Kambogia as the Tsiam, and to the Annamese as the Loi Thuan or Thieng. Colonel Yule says a number of them are settled near the Great Lake.

The *Maung Thai* or *Siam people* consist of the Siamese proper, the Khamti, the Laos, and the Shan. The valley of the Menam, throughout its whole course, is exclusively Thai, and the Thai attain their highest civilisation on the alluvial delta of their river. The old capital, Ayuthia, founded in 1351, was abandoned in 1751 for Bankok, lower down the river, and Siamese now dominate that part of the Peninsula which extends from the Siam Gulf to lat. 7 N. Kambogia, the Laos of the Lu country, Luang, Phra Bang, and Nan, are also tributary to Siam. The Siamese are a Mongoloid race, as are those of Ava, Pegu, Kambogia, Cochin-China, and the Malays. The Siamese have large, straight faces, flat occiputs, lowness of the hairy scalp, comparatively small and firm mouth, hard staring eyes, and a grave expression. The Siamese are physically superior to the natives of the Indian Archipelago, if we except those of Bali; indeed, the Balinese and Siamese bear a striking resemblance to each other. Some natives of Siam attain a height about the middle size, and are generally well made; but their average height is 5 feet 3 inches. The hue of their skin is a shade darker than that of the Chinese, but they have fairer complexions than the Malays and Javanese. They are a busy, industrious, and enterprising people, but vain, deceitful, and cruel. Thai is the native name of the Siamese, and their chief divisions are the Laos, Shyan (Shan or Ahom), and Khamti.

The *Laos* nation are in the interior of Siam, and their language is a variety of that of the Thai. Burma, Siam, and Tonkin received their first culture from India, along with Buddhism, and their ancient buildings all bear the stamp of Indian origin and Indian taste of a post-Christian age; Siam in recent times has added Chinese methods of improvement to the Indian ones; while Tonkin mainly from China. De Carne mentions (p. 129) that at the close of the 18th century, when the king of Siam made himself master of Palembang on the Kambogia, he drove out all the inhabitants, and replaced them by others. Many foreigners, Chinese and Cochin-Chinese, reside in Siam, also Portuguese, French, British, and Dutch. The Siamese marriage approaches more to a civil contract than to a

religious institution. The bridegrooms are from 16 to 20 years of age, and the brides about 14 years. In Siam polygamy and concubinage are allowed. There are four classes of wives recognised, the first being those received from royalty. Relatives of the same blood do not intermarry. In Siam, the kings marry into their own family, even with their own sisters and daughters.

The wives of the Burmese and Siamese engage largely in business, take an active part in their husband's affairs, and enter into personal transactions. The wives of men of rank advise and issue orders; those of humbler station make trading voyages in boats up the river on their own account and on that of their husbands. The women of Burma and Siam attend public festivals and theatrical representations. They go abroad on foot without ostentation or affectation.

The dress of both men and women consists of a cloth wrapped round the waist, one end being brought between the legs and fastened behind, which gives this portion of their attire the appearance of a pair of trousers. In addition, women wear a cloth wrapped round the body, under the arms. Both men and women have the hair shaved from their heads, with the exception of a small round patch which is left between the crown and the forehead. This, being brushed up, is made to stand on end, which gives them a scared appearance. Paternal authority is strongly enforced.

The Chinese and Siamese have an annual ploughing festival. The Siamese kings formerly attended, and personally held the plough; but in later years it is the duty of the Phonlat'hep, or superintendent of the rice granaries, who proceeds in great pomp to a field beyond the town, where he ploughs ground sufficient to yield a crop of five measures of grain. On the second month he revisits the field, and stands on one foot for three solar hours, in invocation of the Devata.

The Siamese and the Burmese Buddhists, though they avoid killing any creature for food, eat the flesh of animals which other people have killed, as also that of creatures, cattle, and sheep that have died of disease.

Slavery exists in Siam, but only war captives are kept with severity. Gambling in every form, as with the Chinese and Malay, is common, and cock-fighting, fish-fighting, cricket-fighting, and lotteries.

Siamese appears by far the most widely spoken language of Ultra-India. It was at one time the lingua franca of Quedah, almost as much as the Malay, and even that wandering Negro tribe the Semang spoke it in some places. It was also current in Assam and Yunnan, at the opposite extremities of Ultra-India. No dialect of the T'hai is intelligible to a Burmese. The alphabets also differ, but on the whole the essentials of their civilisation are the same, the chief difference being in the language. The Laos alphabet slightly differs from that of the Siamese proper, but, practically speaking, the language is spoken with remarkable uniformity over the whole T'hai area, and the Siamese proper, the Laos, the Shan dialects, and the Khamti are one. From Assam to Bankok, the difference in the language is merely that of pronunciation.

Pali is the sacred literature of the Siamese, and [illegible] Pali, Bali, and Pasa Makata (Bhasha Magadha), the language of Magadha. The talapoin or priests are enormously disproportioned to the rest of the inhabitants. In Bankok alone their numbers exceed 30,000. The Pheek'ho, or priests of Siam, are taken from the mass of the people. They can revert to the laity at pleasure.

With the richer classes, the body, after the bowels have been extracted, is laid in a wooden coffin, externally lacquered and gilt, and this is placed for some days on a high table. In the meantime the priests light up tapers, burn perfumes under the coffin, and chant funeral hymns at night. A procession of relatives and friends, dressed in white and covered with white veils, follow the corpse. Beside it are borne figures of various animals or singularly-shaped monsters carved out of bamboo, and the accompanying talapoins exclaim, 'We must all die, we are all mortal!' The mourners attest their sorrow by their tears, and often hire women for the express purpose. The body is then taken from the coffin and placed naked on the pile, which is set fire to, and the remains are scorched. The body is then replaced in the coffin, and deposited under one of the pyramids erected about the temple. Graves are held sacred among the Siamese, and their violation is considered as a heinous offence. The bodies of persons killed by accident, by lightning, the still-born, those who die in child-birth or from small-pox, and suicides, are either thrown into the water or exposed to the beasts of prey. When a person dies absent from home, his heir writes his name and age on slips of paper, and burns them along with an effigy or a portrait of the deceased.

Zimmay, also written Chang-mai and Xiengmai, is due north of Siam proper, on the Menam river, between lat. 19° and 23° N. It is tributary to Siam. Its capital has a population of 50,000. The Laos form the humbler population. The Miaotse or Miautsi are said to belong to the T'hai group.

The *mountain races* in Siam are the Kariang, the Lawa, the Ka, and the Chong.

The *Kariang* inhabit the mountains on the N.W. frontier of Siam, as far as lat. 20° N.

The *Lawa* dwell in the same mountain range, but to the S. of the Kariang.

The *Ka* are in the range of mountains between the valleys of the Menam and Mei-kong. The Ka and the Chong (the Gueo of the Portuguese) are rude tribes, elephant hunters.

Chong are a hill tribe on the side of the Mei-kong basin, but towards the sea, between lat. 11½° and 13° N., in the hilly region at the N.E. angle of the Gulf of Siam. They preserve more of the Australo-Tamilian character than any of the neighbouring tribes. Their hair, instead of being stiff or harsh as in the Mongolian, Tibetan, and prevalent Ultra-Indian and Malaya-Polynesian race, is comparatively soft, the features are much more prominent, and the beard is fuller.

Luang Praban, Sien-kan, Muong-Nan are also tributary to Siam. The last named is probably Muang Loon, a small state S.E. of Zimmay; and Muang Phre Bang, on the Mei-kong, is a larger state which acknowledges the supremacy of Siam.

EASTERN ASIA and its inhabitants have received the attention of many eminent ethnologists,—Bennett, Bikmore, Burns, Crawfurd, Earl, Keane,

Jagor, Giglioli, Hogendorp, Lesson, Logan, Lubbock, Huxley, MacGillivray, De Marne, Marsden, Moor, Newbold, Norris, Peschel, Raffles, St. John, Temminck, and Wallace,—almost all of whom have resided there, some of them for long terms of years. The names which they applied to this region have been based partly on geographic, partly on ethnic, grounds; the more generally accepted being—

Indonesia, or the Indo-Pacific insular region.

Melanesia, comprising New Guinea, Australia, and all the eastern Papuan islands.

Micronesia is all the islands between Melanesia and the Loo-Choo and Japanese chain.

Polynesia, all the islands of the Pacific to the east of Micronesia and Melanesia, as far as Easter Island.

Papuanesia has been occasionally used to distinguish the northern Melanesian islands, inhabited chiefly by spiral-haired races.

Oceanica includes all the Indo-Pacific islands.

Asianesia is a comprehensive term, including the S.E. insular region, viz. Indonesia, Melanesia, Micronesia, and Polynesia.

The region embraced by these terms extends through 80 degrees of longitude and 80 degrees of latitude, from lat. 40° N. to 40° S., and long. 100° to 180° E.; and Behm and Wagner's enumeration for 1881 give as under:—

	Square kilometre	Population.
China, viz.—		
China proper,	4,024,690	350,000,000
China Tributaries — Manchuria, Mongolia, Tibet, Zangaria, East Turkestan,	7,531,074	21,180,000
Total,	11,555,764	371,200,000
Corea,	236,784	8,500,000?
Japan and its Dependencies (Kuriles, Loo-Choo, Benin Islands),	382,447	36,357,212

Micronesia,	3,530	91,600

The Eastern Archipelago lies entirely within the tropics. It overspreads an area from lat. 10° S. to 10° N. of the equator, and forty-five degrees of longitude (95° to 140° E.), measuring upwards of 4000 miles from east to west, and about 1300 miles from north to south. Three of the islands, Borneo, Sumatra, and New Guinea, are larger than Great Britain; Java, Luçon, and Celebes are about the size of Ireland. The region here indicated is known usually as the Archipelago, also the Eastern and the Malay Archipelago. This Archipelago is marked by a chain of active and extinct volcanoes through the whole length of Sumatra and Java, and thence by the islands of Bali, Lombok, Sumbawa, Flores, the Servatty islands, Banda, Amboyna, Batchian, Makian, Tidore, Ternate, and Gilolo to Morty Island. Here the belt is broken and shifted 200 miles to the west, to North Celebes, from which it passes on to Siau and Sanguir, to the Philippine Islands, along the eastern side of which it continues in a curving line to their northern extremity. From the extreme eastern bend of this belt at Banda, for 1000 miles, to the north-east coast of New Guinea, is a non-volcanic district. But there, on the north-east coast of New Guinea, another volcanic belt can be traced through New Britain, New Ireland, and the Solomon Islands to the farthest eastern limits of the Archipelago. The united length of these volcanic belts is 90 degrees, their width about 50 miles; but for about 200 miles on either side of them, evidences of subterranean action are to be seen in recently elevated coral rock or in the barrier coral reefs, which indicate recent submergence.

Five European powers, Spain, Portugal, Holland, France, and Britain, have sought dominion in the Archipelago. Portugal has now only Macao and the Dilly settlement in Timor. France is directing her attention to Annam and Tonkin on the mainland. Great Britain claims possession, including Hong Kong, of 1400 square miles; Holland, 600,000 square miles, and rules over 26,000,000 of Asiatics; and Spain, 116,000 square miles, with eight millions of Asiatic subjects.

Mr. George Windsor Earl, in the middle of the nineteenth century (1855), made known to geographers that a continuous submarine bank stretches out from the Malay and Siamese peninsulas, embracing Sumatra, Borneo, Java, and as far as the Philippines. It extends all along the east side of Asia, from lat. 8° S. to 6° N., 1200 miles from N. to S. and 1500 from E. to W. The soundings in this vast area are all under 100 fathoms, but the greater part from the Gulf of Siam to Sumatra and Java is under 50 fathoms. East of this succeeds the seas of the Straits of Macassar and Lombok, more than 100 fathoms deep. Then begins another bank which unites New Guinea and other Papuan islands, the Celebes, the Timor group, the Moluccas, as far as Aru Islands, Mysol, and Waigiou, with Australia.

It is now the opinion of naturalists that the Asiatic continent once included Java, Sumatra, and Borneo, probably also at an earlier period the Philippine Islands; also that the Australian continent included the Timor group, the Celebes, the Moluccas, and the Papuan Island, and that the islands of the Asiatic division on the one hand, and those of the Australian on the other, have been disrupted from their original continents by the violence of their respective volcanoes; that the phenomena of volcanic action have been all of comparatively recent occurrence, and have not wholly obliterated the traces of the ancient distribution of land and water.

These views have been arrived at from the fact that the natural productions of the Asiatic islands and those of the Australian islands widely differ. The elephant and tapir of Sumatra and Borneo, the rhinoceros of Sumatra and Java, the wild cattle of Java and Borneo, belong to the same genera which inhabit part of Southern Asia. Similarly with the birds and insects, every family and almost every genus found on any of the Asiatic islands occurs also on the Asiatic mainland, and in a great many instances even the species are identical.

On the other hand, neither Australia nor the Australo-Malay islands have ape or monkey, cat or tiger, no wolves, no hyænas, no bears, no elephants, horses, sheep, deer, or oxen. But Australia and the Australo-Malay islands have the opossum and the wombat; and the kangaroo, long supposed to be peculiar to Australia, is found both in the Aru Islands and in the southern part of New Guinea.

The Asiatic division has woodpeckers, pheasants, barbets, and fruit thrushes, but no cockatoos or brush-tongued lories. Australia and the Australo-Malay islands have none of the former, but are the natural home of the latter.

Lastly, Mr. A. R. Wallace formed the opinion that all the peoples of the various islands can be grouped either with the Malay or the Papuan, two races differing in their physical, mental, and moral characters. In this view he carries out Mr. Earl's idea, and he is of opinion that a line can be drawn which shall so divide the islands as to indicate the one-half which truly belong to Asia, while the other with no less certainty is allied to Australia, and he designates these respectively the Indo-Malayan and the Austro-Malayan divisions of the Archipelago.

The races occupying the islands, speaking broadly, are Malays or Papuans; but Mr. A. H. Keane has classed them as Malays, Moluccan-Malays, Malayo-Papuans, and Papuans, as under:—

i. The Asiatic Malay Islands.

Group 1. The Indo-Malay Islands, viz. Sumatra, Java, and Borneo, with Malay inhabitants.

ii. The Australo-Malay Islands.

Group 2. The Timor Islands, viz. Lombok, Sumbawa, Flores, and Timor, with Malayo-Papuans.

Group 3. Celebes, Sulu Islands, and Bouton, with Malay inhabitants.

Group 4. The Moluccas, with Molucca-Malays in Bouru, Ceram, Batchian, Gilolo, Morty, Ternate, Tidore, Makian, Kaioa, Amboyna, Banda, Goram, and Matabello.

Group 5. The Papuan Islands, New Guinea or Papua, Aru Islands, Ke Islands, Mysol, Salwatty, Waigiou, and others.

Of dark and brown types, Mr. Keane (p. 593) recognises four distinct stocks,—one of various shades of brown, and three of a distinctly dark type, physically different, speaking languages which belong to radically distinct linguistic types, while the varieties of the brown stock are one in speech and physique. The three dark races are the Austral of Australia, the Negrito, and the Papuan.

The *Negrito* occur in Luçon and other of the Philippine Islands, the interior of Malacca, and the Andamans. Those in the Philippines are the Aëtas, Aïtas, or Itas of Spanish writers, a term in Tagala meaning black, the same as the Malay هيتم, hetam. Those of the Andamans are the Mincopi, and those in the Malay Peninsula are the Semang and Bila. The Papuans, another of the black type, Papua, from Malay پاپوا, papuwah, meaning curly, have also been called Melanesians. They are found in a pure state, or mixed with other races, in all the islands stretching from about the meridian of Flores eastwards to Fiji. They have sometimes been called Alfuro and Harafora, which some writers apply to heathen, *i.e.* the non-Muhammadan and non-Christian tribes interspersed in Bouro, Ceram, Flores, Gilolo, and simply means non-Muhammadan.

Malayo-Polynesian, Indo-Pacific, Micronesian, and Maori are names which have been applied to the three types of the brown races; but Mr. Keane prefers that of Malay for the western branch, Micronesian for the north-western group, and Maori or Polynesian for the large brown races of the Eastern Archipelagoes. He says that the Papuans are pure only in the interior and western parts of New Guinea, Aru, Waigiou, Salwatty, and other islands. On the N. coast of Australia, they are mixed with the Austral stock.

In the Admiralty, New Britain, and all the Archipelagoes from New Guinea east to Fiji, they form the basis of the population intermingled with the Maori race. These are Maori-Papuans. In the Indian Archipelago, from Timor Laut westwards to Flores inclusive, they are blended with Malayan elements. These are Malayo-Papuans. New Guinea, he says, has at least two, but probably three tribes, viz. Papuan, Negrito, and Maori, but the presence of Maori there needs confirmation.

The races and their varieties present marked differences in their physical formation, even as to the mere heights, as will be seen by their measurements in millimetres, as under:—

Negrito.—The Malay race, in stature, are inter-

terior, north of the town of Padang. Palembang is nearly all Muhammadan.

The *Achi* or Achinese are the most civilised, and through them Muhammadanism, with such arts and civilisation as accompanied it, were directly or indirectly communicated to the other islands in the Archipelago. They are supposed to be a mixture of the Batta and Malay with the Arab, and with the Chulia natives of the west of India. During the latter half of the 17th century, four queens reigned in succession over Acheen.

The *Batta* are partly under the Dutch, partly independent, and the latter continue cannibals. They do not allow marriages between people of the same clan.

In Sumatra there were formerly three perfectly distinct kinds of marriage,—the Jugur, in which the man purchased the woman; the Ambel-anak, in which the woman purchased the man; and the Semando, in which they joined on terms of equality. In the Ambel-anak marriage, the father of a virgin makes choice of some young man for her husband, generally from an inferior family, which renounces all further right to or interest in him, and he is taken into the house of his father-in-law, who kills a buffalo on the occasion, and receives twenty dollars from his son's relations. After this, the burnk baik'nia (the good and bad of him) is invested in the wife's family. If he murder or rob, they pay the bangun or the fine. If he be murdered, they receive the bangun. They are liable to any debts he may contract in marriage, those prior to it remaining with his parents. He lives in the family in a state between that of a son and a debtor. He partakes as a son of what the house affords, but has no property in himself. His rice plantation, the produce of his pepper garden, with everything that he can gain or earn, belongs to the family. He is liable to be divorced at their pleasure, and though he has children, must leave all, and return naked as he came.

A Sumatran scrupulously abstains from pronouncing his own name, merely as a punctilio in manners. It occasions him infinite embarrassment when a stranger, unacquainted with their customs, requires it of him. As soon as he recovers from his confusion, he solicits the interposition of his neighbour. He is never addressed, except in the case of a superior dictating to his dependent, in the second person, but always in the third, using his name or title instead of the pronoun; and when these are unknown, a general title of respect is substituted, and they say, for instance, 'Apa orang kaya punia suka,' 'What is his honour's pleasure?' for 'What is your or your honour's pleasure?' When ignominious persons are spoken to, use is made of the personal pronoun kau (a contraction of angkau), particularly expressive of contempt.

People of rank allow their finger nails to grow to a great length. Both sexes file their teeth, and blacken them with the empyreumatic oil of the cocoanut shell. The Lampong women have their teeth rubbed down even with their gums. Others have them formed into points, or have the ends rubbed off and the stumps blackened. Their chiefs sometimes set their teeth in gold, by casing the gums with a sheathing of that metal.

Java is supposed to have had early intercourse with races trading down the Red Sea. From the 12th to the close of the 15th century, it was ruled by sovereigns professing the Hindu religion, and many architectural remains are to be seen throughout the island. In 1478, the Majo Pahit dynasty was overthrown by the Arabs. Subsequently, in 1511, the Portuguese reached Java, followed a century later, 1605, by the Dutch, who since 1609 have partially occupied it, except for the years 1811 to 1816, when the British captured it. In 1880, Java and Madura had an area of 2380·7 geographical square miles, with a population of 19,797,077 inhabitants, viz.—

Javanese,	19,542,835	Europeans,	33,703
Chinese,	206,915	Others,	3,092
Arabs,	10,528		

The Javanese are a Mongoloid race, with mild, placid, prepossessing features, and lank hair. They are taller than the Bugis. Their limbs are slender, and wrists and ankles small, and the colour of their skin is yellow. They are enthusiastically fond of poetry, and have a delicate ear for music.

Until the middle of the 19th century there was a remnant of an aboriginal race in the Tengger mountains following Hinduism, and the Kalang and Bedui are hill and forest tribes. The Arabs are religious teachers, the Bugis are settled on the sea-coasts. In the western part of the island, the Malays speak the Sunda language, but the bulk of the people speak Javanese, which has a high and low dialect, with many Sanskrit words.

Madura is separated from Java Island by a strait not more than a mile wide. Many of the Madurese have settled on Java. The people are of martial tendencies, but victims of cruel and degrading superstitions. Its population is 810,135, of whom 3932 are Chinese, 1516 Arabs, and 509 Europeans.

Bali Island is immediately to the east of Java, of which it looks like a continuation. In parts of Java, in Lombok, in parts of Sumatra, amongst the Dyak of Borneo, and the Philippine islanders, there are remains and customs indicative of a Hindu origin; but in Bali, since A.D. 1478, the entire population, amounting to about one million, profess the Hindu religion, and the burning of widows amongst them is carried to an extent never known even in continental India. The slaves of a great man are also consumed upon his funeral pile; and when the immense annual loss of life produced by these frightful practices is considered, it is surprising that the island possesses so large a population. They are fairer in complexion, stouter in frame, and more energetic in their dispositions, than the Javanese, and in appearance and dress bear a great resemblance to the natives of Siam. The Balinese entertain a great aversion to a maritime life, and are more rarely to be met with at the European ports than the natives of the other islands to the eastward. Bali women, like the Burmese, attend to the selling of goods and merchandise.

Women take precedence, not only by custom, but by law; if unmarried, according to the rank of their fathers, and if married, according to the rank of their husbands. The men are indolent, and abstain from labour, and men of all ranks receive great assistance in their households, and in conducting their public duties, from the skill, activity, and zealous intelligence of their wives. The Balinese abduct their intended partners,

running away with them into the woods, where they remain concealed until the friends of the young man are able to compensate the family of the girl, when they return and live together as man and wife. The amount paid ranges from Rs. 100 to 200, 20 per cent. of which falls to the king. The language of Bali is of the same family as the Javanese, from which, however, it differs in its terminations. The court language (Bhasha Dalam), the ancient Kawi, is spoken by the king. There is an active volcano in the island, and earthquakes occur from time to time.

Banca Island in its interior has a hill race or Orang Gunong, but its littoral is occupied by cultivators, and around the coasts a maritime people, the Orang Laut, dwell in their prahu boats. These are similar in their habits to the Baju Laut of Borneo and Celebes. They subsist entirely by fishing. This island abounds in tin, and many Chinese have been working the mines.

Borneo is the principal island of the Sunda group. After Australia, it is the largest island on the globe, as large as France and England combined. Stein estimated it at 210,107, and the Penny Magazine at 286,000 square miles, with 3 to 4 millions as its population. Its many tribes take their tribal names from the river basins or the districts they inhabit, and thus we have the Dyak clans, Orang Duson, and the Orang Sampit from these rivers; and in the north of the island are the Sarebu Dyaks, Sakarran, Lundu, Sibnuw, established on the rivers which bear these names. Other rivers are the Borneo, Banjarmassin, Passir, Coti, Pontianak, and Sambas.

The better known tribes are Malay, Suluk, Baju, Balagnini, Dusun or Duson, Illanun, Kadayan, Bisaya, Murut, Kalamut, Tutung, Kyajao, Kayan, Dyak, Tatao, Kanawit, and Melando. The sea-coast has tribes totally unconnected with each other, each with its own manners and customs, and governed by its own laws. The west is occupied by Malays and Chinese; the north-west by the half-caste descendants of the Muhammadans of Western India; the north by the Cochin-Chinese; the north-east by Sulu; and the east and south coasts by the Bugis tribes of Celebes. There are, besides, numerous seafaring tribes, who live in prahus in islands near the coast; amongst others, th Lanun from Magindanao, and the Orang Baju and Oran Tidong, source unknown.

Since A.D. 1244, Malays from Malacca, Sumatra, and Java have been settled along the coast. On the east coast there is a great admixture of *Bugis* blood. All the rajas and principal men are Bugis, or have Bugis relatives in Celebes, and there are also many Bugis in the Western Residency. The greater part of the coast is dotted, rather than peopled, with Malay settlements.

The *Dyak* inhabit thatched bamboo houses, erected on piles 18 or 20 feet high, those belonging to each family or petty tribe being joined together by means of a stage or verandah running along the front, and reached by ladders, which are pulled up at night. Many of the smaller villages are defended by stockades. The Jangkang Dyaks dwelling on the Sakiam, a branch of the Sadong river, are said to be cannibals. The men of this tribe file down their teeth to a point, like the teeth of a saw. Until after the middle of the 19th century, the Dyak tribes were constantly at war with each other, making forays for heads, which they suspended in their houses. A man could not marry until he procured a head, and distant voyages and every stratagem were adopted to obtain these.

The *Kyan*, a powerful tribe, about 100,000 in number, occupy the country from the south of the kingdom of Brunei, right away into the interior. They are the most martial tribe in Borneo, fierce, hot-blooded, and reckless of life. The Kyan have eleven tributary clans, several of whom, both men and women, tattoo. The Kyan and the Idaan or Murut are said to be addicted to human sacrifice; and they arrange skulls about the houses.

Mr. Burbidge (Gardens of the Sun) has given the latest and best account of the present state of the inhabitants. He tells us that the *Kadyans* are a peaceable and well-disposed tribe of aboriginals, who, living along the coast near to the capital, have mixed a good deal with the Malays, and speak their language. Some of the older and more intelligent men of this tribe are well acquainted with the Murut, Duson, and the Brunei dialects. Although the Kadyan people are nominally Muhammadans, their women enjoy the greatest freedom, and are never secluded, as is the custom of the Malays of the coast; indeed, many Kadyan houses consist of one very large room only, there being no private apartments of any kind. This is a rather singular trait of these people, since even the Murut and the Duson have one side of their houses partitioned off so as to allow of a separate private room for each family.

The *Duson* villagers keep bees and export wax in quantity, and most of the tribes collect the varied natural products of the sea or of the forest in their respective districts.

The physique of the inland tribes, especially of the Dyak, Kadyan, and Murut, is superior to that of the Malays.

Murut women, whether in boats or afield, appear to be as active as the men. Their hair is often very gracefully wreathed up with a string of red or amber-coloured beads, sometimes with a strip of the pale-yellow nipa leaf in its young state, and the colour contrast is then very effective. In Borneo and elsewhere in the Malayan islands, Orang-Utan (literally wild man) is applied not only to the large red monkey, but also to the aboriginal inhabitants of the interior. The Murut are frequently spoken of as Orang-Utan, not only by the Malays, but also by the Kadyans, a tribe of aboriginals converted to the Muhammadan faith. The Murut have a great love for gong music; and now and then a cheap German gun or old Tower musket is obtained from Chinese traders. Spears, blowpipes, krisses or parongs (swords), and their ghastly baskets of human skulls, form their only accumulated wealth.

With the Murut, one enormous house is built, sufficiently large to accommodate from twenty to fifty families. These houses vary from 30 to 100 yards in length, and, like those of the Kadyan, are built on piles, so as to be better prepared for resistance in case of a sudden attack. The Murut and the Kadyan who live in the vicinity of the Baram river, and one or two other tribes of the aboriginal Borneans, still continue the practice of head-hunting, although the custom is now fast dying out here, as it has in the case

of the Dyak of Sarawak and other places farther south. Long after the middle of the 19th century, a youth was not allowed to marry until he had taken the head of an enemy, and if any ill-luck or death occurred in the tribe, head-hunting raids were indulged in at once to appease the malignant spirits which were believed to have been the cause; or if a chief's favourite wife or child died, he at once took to head-hunting in a blood-thirsty spirit of revenge. The Murut and other aboriginals are great believers in omens, and whether on head-hunting or pig-killing expeditions, they pay great regard to the cries of birds and animals.

The Baju, Lanun, Balagnini, and Sulu tribes, who inhabit the north of Borneo and the islands to the north-east, are given to piracy. The *Lanun* or *Illanun* long infested about 300 miles of the north-west coast, by cruising to other parts of the Archipelago, plundering villages, and often carrying off whole populations into slavery. The Lanuns on the coasts north of Menkabong are petty traders or cultivators. The Duson, who live in the hills farther from the coast, give them a bad character.

The *Orang Baju* or *Baju Laut* profess Muhammadanism. They live in boats at the mouths of most of the rivers on the east coast. Their boats are 8 or 10 tons each, and when in harbour are covered with a roof of matting. They are fishermen and collect trepang.

The *Orang Tidong*, a hardy, seafaring race, occupy to the north of the Baju Laut. They cruise among the Philippine and Sulu Islands, disposing of sago, which is their principal food. They are said to be occasionally cannibals.

The *Chinese* settlers are largely engaged in working the gold mines. Coal, diamonds, iron, antimony, mother-of-pearl, caoutchouc, gutta-percha are also products. The elephant, rhinoceros, leopard, ox, hog, orang-utan, and others of the monkey tribe.

The Bornean *Malays* may be said to have but little literature; the Koran, a few MS. poems, prayers, and tales are the only books generally seen in the island; but the people possess a vast amount of traditional lore, and many of their songs refer to the history of the country, the beauty of their women, or to the personal attributes and prowess of their former rulers. Malayan romances and minstrelsy are alike rich in imagery. Malay is the court language at Brunei, but the inhabitants generally use a dialect similar to that of the aboriginals who live near the capital. Slavery, although not yet abolished in Borneo, is not nearly so common as was formerly the case.

Amboyna, Banda, Ternate, Tidore, and others in the neighbourhood are small volcanic islands, fertile in fine spices. The clove tree grows spontaneously in Ternate, Tidore, Motir, Makian, and Batchian.

The Amboyna people are of the Malay race, short, squab, and darker than the Javanese; they are gentle, sober, brave, easily managed, make good mounted or infantry soldiers, and a considerable number of them have embraced Christianity.

The **Buro** people consist of Malays of the Celebes type, often exactly similar to the Tomore people of East Celebes who are settled in Batchian. These form the bulk of the population. Another race, in smaller numbers, resemble the Alfuro of Ceram.

Ternate, Tidore, Motir, and **Makian** are only trachytic cones, standing on the same great fissure of the earth. The Ternate people consist of Malay, Orang Sirani, and Dutch.

Celebes Island is in the Molucca Sea. It extends from lat. 2° N. to 6° S., and from long. 125° to 129° E. It is composed of four peninsulas, forming gulfs. Some of the mountains rise to 7000 feet above the sea, Klabat in the Northern Peninsula being 6500 feet. In the north of Celebes there are several active volcanoes.

The population is over a million, and is composed of several of the Malay nations. Of these, the Wugi, Bugi or Bugis are the most advanced in civilisation.

In 1512, Celebes was taken possession of by the Portuguese, who were displaced in 1660 by the Dutch, and the British kept it from 1811 to 1816. One of the Dutch Residencies is at Mang Kasara, which has been modified into *Macassar*, and Macassar men is a common name for the Bugi. Many of them have adopted Christianity. They are the great traders and navigators of the Archipelago. At the beginning of the western monsoon they go in great numbers to the Aru Islands, which is the principal rendezvous for the people of Ceram, Goram, the Ki Islands, Tenimber, Baba, Kilwaru, and the adjacent coast of New Guinea, a distance from Macassar of upwards of 1000 miles. They are of the Malay family, but, although exposed to the same temptations, they have never been pirates; they defend themselves against the Malay prahus with the most heroic and desperate valour, and if overpowered will blow up their vessels rather than submit. They are the Phœnicians of the Archipelago, and are to be seen on every coast from the northern parts of Australia to the Malay Peninsula. With the eastern monsoon, they sail westwards until they reach Singapore. The Alfuro race thinly occupy the elevated woody parts.

The *Minahassa* people, of the Malay family, up to the early part of the 19th century were head-hunters like the Dyaks of Borneo, and, like them, built their houses on posts 20 feet or more above the ground, and 90 to 200 feet long, and 48 feet broad, to contain 16 or 20 households.

Around the coasts, a fishing and seafaring race, the Orang Laut, dwell in boats.

The languages current are the Bugi, Macassar, Bouton, Salayer, Tomore, Tomohow, Langowen, Ratahan, Belang, Tanawauko, Kema, Bantek, Menado, and Bolanghitam.

Batchian, in lat. 0° 30′ S., and long. 127° 30′ E., 54 miles long and 20 miles broad, is separated from Gilolo by a narrow channel. Its inhabitants profess Muhammadanism. The interior is uninhabited, there are only a few villages on the coasts. The Batchian Malays differ very little from those of Ternate. Their language, however, has more of the Papuan element in it, with a mixture of pure Malay, showing that they are formed from stragglers of various races, almost homogeneous. The Orang Sirani (qu. Nasrani or Suryani) are Christians of Portuguese descent, like those of Ternate. Many of these have a Portuguese physiognomy, but their skin is generally darker than that of the Malays. They speak Malay, with a large number of Portuguese

words and idioms. The Orang Sirani are very fond of dancing. In 300 years, they have changed their language and lost all knowledge of their nationality, but in manners and appearance they are almost pure Portuguese. Everywhere in the east, where the Portuguese have mixed with the native races, the offspring are darker in colour than either of the parent stocks. This is the case with the Orang Sirani, and with the Portuguese of Malacca and Goa. This is not the case in South America, where the Mameluco, the offspring of the Portuguese and Indian, is often fairer than either race, but always fairer than the Indian. The Orang Sirani are as civil, obliging, and industrious as the Malay, but they consider themselves of a superior order, and are inclined to trade and commerce rather than to manual labour.

The *Galela* men from *Gilolo* is a third race, and a fourth race is a colony from Timor, in the Eastern Peninsula of Celebes, who were brought there many years ago, at their own request, to avoid extermination by another tribe. They have a very light complexion, open Tartar physiognomy, low stature, and a language of the Bugis type. They are an industrious agricultural people, and supply the town with vegetables. They make a good deal of bark cloth, similar to the tapa of the Polynesians. A cylinder of bark is taken off and soaked and beaten till it be as thin and as tough as parchment. It is used for wrapping up clothes; also dyed with a bark dye, and sewed into jackets.

Gold has been washed for in the island of Batchian ever since 1774. Batchian and Tawali Islands are separated by a narrow strait.

The Keffing Islands is a little group of 17 islands, in the Molucca Sea, encircled by very extensive reefs projecting into deep water, and rendering them difficult of approach. The cachalot or spermaceti whale abounds in the ocean, and might support an extensive fishery. Some of the islets are low, sandy, girdled by reefs, and, as in Ghissa, with a lagoon in the centre, absolutely swarming with fish, while the shores are peopled by ducks and snipes. Their inhabitants resemble those of the S. coast of Ceram, and are not of the Papuan or Negro race. They are great traders, and constantly visit New Guinea, and purchase birds of paradise, luri, crows, pigeons, megapodiidæ, and scented woods.

Pulo Manok, or Bird Island, lies midway between Ceram and the Serwatty group. It is a high solitary mountain resting on the bosom of the sea, with a truncated cone, desert, and the refuge only of myriads of birds, which deposit such vast quantities of eggs, that many of the natives of the neighbouring islands visit the place and subsist for whole days on this wholesome food. Sulphur is also found on the rocks.

The little communities existing in these scattered groups present curious phases of social life. Dwelling in houses erected on posts, they in many instances surround their villages with rough walls of coral, occasionally carrying a similar fortification all along the shore. Many of them, apparently peaceful traders, were secretly addicted to piracy, though some bore a character for innocence and love of industry altogether inconsistent with this pursuit. Among these are the inhabitants of *Motir*, a trachytic cone south of *Makian*, a gentle, tranquil, sober tribe, following the occupation of potters, and supplying the neighbouring islands with vessels and utensils of various kinds made of red clay, elegantly moulded and of good quality. These compete in the markets of the Molucca Sea with the plates and pans brought by the traders of Keffing from the Ki Islands.

Savu Island, one of the Sunda group, is on the south of Flores. Mr. Wallace says (ii. p. 277) that Savu and Rotti have a handsome race with good features, distinct from the Timorese or Papuans, and whom he classes with the Malays of the western islands of the Archipelago.

The **Negroid** tribes of the S.E. of Asia have been variedly classed by Lesson, Macgillivray, Earl, Logan, Bikmore, and Wallace. There are two very distinct varieties amongst them,—a diminutive statured, who have been styled Negrito, with a larger, even stalwart people, who are equally black, but called by the Malay term Papua, from their curly woolly hair, which, however, is a characteristic alike of Negrito and Papua. Also on the coasts of the more westerly islands, and on those of the islands to the eastward, Malay and Polynesian tribes have settled, and intermarried with the Negrito and Papua, and their descendants appear in modified forms of the two aboriginal races. The pure but less martial Negrito have taken refuge in the mountain fastnesses of their islands. Also Peschel arranged the Papuan race into an Australian and an Asiatic group, comprising in the latter the Alfur, Mincopi, Negrito, and Semang, but there is no marked difference between these. The Andaman islanders, called Mincopi, are decided Negrito, as also are the Semang and Bilo of the Malacca States of Quedah, Perak, and Kalantan; and there was said to be a tribe in the neighbourhood of the Timboro mountain in Sumbawa. The known tribes of the Mincopi are said to be the Akakol, Arokojuwai, Balawa, Bogijiab, Bojingijida, Jarawa, and Yerewa, speaking different languages.

In a N.W. direction from New Guinea, the **Papuan** race extends through the Moluccas to the Philippines, but in those islands they only appear in small and scattered tribes, occupants of the mountain fastnesses. From New Guinea to Timor, again, the small islands, with the exception of the Aru, are occupied by a race whom Earl designated Malaya-Polynesians; but at Timor, especially near the N.E. end, a Papuan race reappears, though not, in his opinion, in a pure state. Some on the island of Flores or Mangarai assume a more decided Papuan character. Mr. A. R. Wallace (ii. p. 104) describes the Papuan face as compressed and projecting, brow protuberant and overhanging, mouth large and prominent, the nose very large, the apex elongated downwards, the ridge thick, and the nostrils large,—the nose is an obtrusive feature, the beard is twisted, and the hair of the head is frizzly. In mental and moral characteristics the Papuans differ remarkably from the Malay races. They are much more impulsive, and do not conceal their emotions and passions. They are inquisitive, talk much and loudly, and laugh boisterously, reminding one of the Negro character as much as of the Negro form and aspect.

Gilolo or Halmahera is one of the Molucca

islands. Its north end is in about lat. 2° 23′ N. It lies between lat. 0° 50′ S. and 3° 10′ N., and is in length 220 miles. Like Celebes, it consists of four peninsulas, separated from each other by a deep bay. Its area is 6500 square miles. Tidore, which was discovered by Magellan, and taken into the possession of the Portuguese in 1527, and by the Dutch in 1607, as also Ternate Island, are on the west coast of Gilolo. Gilolo has a long mountainous coast; high bold land, with three remarkable peaks. The *Negro indigenes* called *Alfuro* live in the north of the island. They are an industrious and enterprising race, cultivating rice and vegetables, and indefatigable in their search after game, fish, trepang, pearls, and tortoise-shell. They are radically distinct from all the Malay race. Their stature, their features, as well as their dispositions and habits, are almost the same as those of the Papuan. Their hair is semi-Papuan, neither straight, smooth, and glossy like all true Malays, nor so frizzly and woolly as the perfect Papuan type, but always crisp, waved, and rough, such as often occurs among the true Papuans, but never among the Malays. Their colour alone is often exactly that of the Malay, or even lighter. Of course there has been intermixture, and individuals are seen whom it is difficult to classify, but in most cases the large somewhat aquiline nose with elongated apex, the tall stature, the waved hair, bearded face, and hairy body, as well as the less reserved manner and louder voice, unmistakingly proclaim the Papuan type. Here is the exact boundary between the Malay and Papuan race. It is only in the Northern Peninsula that these Papuan indigenes exist, the whole of the rest of the island, with Batchian and the other islands westward, being exclusively inhabited by Malay tribes like those of Ternate and Tidore. This would seem to indicate that the Alfuro are a comparatively recent immigration, and that they have come from the north or east, perhaps from some of the islands of the Pacific, though it is difficult to understand why so many fertile islands should possess no indigenes. It has, indeed, been stated that Obi, Batchian, and the three Southern Peninsulas of Gilolo possess no true indigenous population. The Galela race are natives of a district in the extreme north of Gilolo, but they are great wanderers over the Archipelago. They are a very fine race, remarkably energetic and industrious, of light complexion, tall and with Papuan features, coming near to the drawings and descriptions of the true Polynesians of Tahiti and Owyhee. They build large and roomy prahus, with outriggers, and settle on any coast or island they take a fancy for. They catch turtle and trepang, hunt deer and wild pigs, and dry the meat, and cut down the forest and plant rice or maize. The *Tebello* tribe is similarly described. Bikmore, however, states, seemingly erroneously, that the Alfuro are strictly of the Malay type, and have not the dark skin and frizzly hair of the Alfuro of Ceram and Buru, though representatives of that people may exist in Gilolo. The population of Gilolo is supposed to be 75,000; all but 5000 of them are under the sultan of Ternate. It has been suggested that the Alfuro seem to have affinities with the Tagala race of the Philippines, through the Sangir islanders.

Lombok Island is about 53 miles long and 45 miles broad, lying between lat. 8° 12′ and 9° 1′ S., and is intersected by the meridian of 116° 15′ E. The Bugis call it Sassak, which is the name by which the inhabitants designate themselves, but its proper name is Selaparan. It is separated from Bali by the Straits of Lombok, and from Sumbawa by the Straits of Allass. It is mountainous, well covered with wood; a volcanic peak in the N.E. corner of the island has an altitude of 11,134 feet. The island has been peopled from the neighbouring islands.

The *Sassak* are a Malay race, hardly differing from those of Malacca or Borneo. They had been converted to Muhammadanism, but the island was conquered by the Balinese, and the ruling race are Brahmanical from Bali, and the raja of Lombok has the title of Anak Agong, which means son of heaven. A Sassak accepting Hinduism enjoys the privileges of the Balinese, and is exempt from taxation. An extensive commerce is carried on with all the Malay islands, particularly with Java and Borneo. The people frequently do a-mok, and it seems to be deliberately done. On one occasion, a person doing a-mok killed seventeen people before he could be killed. In war, a whole regiment will agree to a-mok, and then run on with such desperate resolution as to be very formidable to men less excited than themselves.

The men are strict with their wives; infidelity is punished by the couple being tied back to back and thrown into the sea, where crocodiles devour the bodies. Even a married woman accepting a flower or betel from a stranger has been punished by death with the kris; and any one found without leave within the grounds of a house is krissed, and his body thrown out to the street. The people of Lombok believe that some men can turn themselves into crocodiles, which transformation they adopt in order to devour their enemies.

Sumbawa, a large mountainous island, 160 miles E. to W. and 20 miles broad, with an area of about 3200 square miles, separated on the W. from Lombok by the Strait of Allass, and by the Supia Strait on the east from Flores and Commodo. It has six native states,—Sumbawa, Bhima, Dompo, Tomboro, Sangar, Pekat, under the supremacy of Netherlands India. It produces wax, birds' nests, sulphur, pearls, gold-dust, tobacco, horses, rice, timber, sandal-wood. The (fire mountain) Gunong Api is at the N.E. end of Bhima harbour. In Sumbawa, in 1815, 12,000 people were destroyed by the great eruption of Tomboro. Three languages are current in this island, one of them spoken by the people of Bhima. Their alphabet, once distinct, has been displaced by that of the Celebes.

Ceram Island, next to Celebes, is the largest island of the Moluccas. It is situated between lat. 3° and 4° S. on the meridian of 130° E., and is 180 miles long, but its greatest breadth is only 42 miles. The island is one long mountain chain that sets off transverse spurs, and some of the peaks are 5000 or 6000 feet in height, all of them sending down innumerable streams to the sea. The vegetation is everywhere luxuriant, and the trees gigantic. The northern peninsula of Gilolo, and the great island of Ceram, are inhabited by tall and well-made people, with Papuan features and curly hair. They are bearded and hairy limbed, but they are quite as light in colour as

the Malays. They are an industrious and enterprising race. The people of Ceram approach nearer to the Papuan type than those of Gilolo. They are darker in colour, and a number of them have the frizzly Papuan hair; their features are harsh and prominent, and the women are far less engaging than those of the Malay race. The Papua or Alfuro man of Ceram gathers his frizzly hair into a flat circular knot over the left temple, and places cylinders of wood, as thick as one's fingers and coloured red at the ends, in the lobes of the ears. They go almost naked, but armlets and anklets of woven grass or of silver, with necklaces of beads or small fruits, complete their attire. The women have similar ornaments, but wear their hair loose. All are tall, with a dark-brown skin, and well-marked Papuan physiognomy. Ceram has on its western side the three islands Bonoa, Kelang, and Manipa. The commercial products from these islands consist of tortoise-shell, mother-of-pearl, beche-de-mer, wild cinnamon, wild nutmegs, and birds of paradise. Of 28 words of the language of Ceram, nine of the words are Malay, two Javanese, and 17 are common to these two languages.

Goram is a group of three islands at Manowolko, east of Ceram; a slight infusion of Papuan on a mixture of Malay and Bugi has produced a good-looking people. The Goram people are wholly traders; every year they visit the Tenimber, Ki, and Aru islands, the whole N.W. coast of N. Guinea, from Octanata to Salwatty, and the islands of Waigiou and Mysol. They also extend their voyages to Tidore, Ternate, Banda, and Amboyna. Their trade is in trepang, medicinal Mussoi bark, wild nutmegs, and tortoise-shell, which they sell to the Bugi traders at Ceram Laut and Aru. Their prahus are all built by the Ki islanders, who annually turn out hundreds of neat boats.

S.E. of Goram is a high group composed of raised coral reefs 300 or 400 feet, with a volcano on the island of Teor, which broke forth in 1659.

Sangir and *Siau* Islands are two groups between Celebes and the Philippines. The inhabitants resemble the people of Menado, whom Mr. Wallace (ii. pp. 292–95) describes as Negrito. Christianity has made progress among the Sangir islands, the Christian population in the middle of the 19th century having been 20,000. There are several extinct volcanoes, and some still in full action, in the Sangir group; the devastations which they have caused from time to time have been disastrous to the inhabitants. The eruption of Duwana, in 1808, completely annihilated the village of Tagalando, destroyed all the surrounding forests, and suddenly deprived the inhabitants of all means of livelihood, by the destruction of their fields. The Gunong Api causes numerous ravages in the island of Siau; its peak, 6000 feet above the level of the sea, forms the culminating point of this group. Gunong Api covers with its base all the northern part of Sangir-besar; this volcano was active in 1812, when the torrents of lava destroyed the extensive forests of cocoanut trees with which this part of the island was covered, and caused the death of many of the inhabitants. These islands furnish more than 25 kinds of wood suited for building and furniture. Two harbours, sheltered from all winds, exist in the larger Sangir, one in the Bay of Taruna, the other called Midelu on the eastern side.

Floris or *Flores* is an extensive island of the Archipelago, 201 miles long from E. to W., and from 34 to 45 miles broad. It was so named from the Portuguese word Flor, a flower, but is called Ende and Mangerye, from its chief south and west ports. It is in lat. 8° and 9° S., and in long. 123° E. The inland parts are very mountainous and woody, and it contains several active volcanoes of considerable height. The Portuguese early visited and named this island, but they do not appear ever to have settled on it, and in 1812 the Bugi expelled all European settlers. But on the east of the island many profess Christianity, and hoist the Portuguese flag. Its chief trade at Ende is with Sumba or Sandal-wood Island; the Mangerye port trades with the Bugi and Malay. According to the statements of Bugi traders who had settled in Flores, that island is inhabited by six different tribes or races speaking as many different languages, the Ende, the Mangarai, the Kio, the Roka or Rakka, the Konga, and the Galeteng, names derived from the principal places of their residence. The coast is occupied by the Malay or brown race, but in the interior is a people with frizzled hair, and a similar frizzled-hair people live in the mountainous parts of Solor, Pintar, Lombatta; and Ombay. On the south coast is the Rakka or Roka tribe, who are reported to be cannibals, accustomed to eat their enemies and their own relatives who die. Captain Keppel says that the natives captured from the island used to be much esteemed by the Celebes pirates as slaves.

Solor island is about 70 miles in circumference, lying south of Celebes. Its N.E. extremity is in lat. 8° 26′ S., and long. 123° 10′ E., and it is separated from Flores by the straits of that name. The mountaineers appear to be the original inhabitants. Up to 1837 they were perfectly savage, subsisting on and bartering forest products with the coast tribes. The latter are said to be of the Malay race, are called by Moor the *Raju Laut* or *Orang Laut*, are remarkable for their skill in managing their prahus and canoes, and are the most expert fishermen in these seas, frequently capturing the black fish, a small variety of the cachalot or sperm whale, which no other fishermen in these seas will venture to attack. The blubber or fat obtained from them is used as food, and also as an article of barter with the inland inhabitants; and the oil and spermaceti is sometimes disposed of to the Bugi and Macassar traders, who prefer it to cocoanut oil for burning in their prahus. Several Solor fishermen are always to be found at Coupang, the Dutch settlement on Timor, chiefly in the service of the Netherland Government, from whom they obtain a fixed allowance of rice and maize. These are relieved by others every year, in compliance with an old treaty, by which the coast natives of Solor agreed to furnish an annual quota of men for the public service. As all the youths have to take their turn, the system makes them accustomed to intercourse with Europeans. Their religion is Muhammadan, but many on the north coast have been converted to Christianity.

The neighbouring islands of Sebrao, Pantar or Alao, Ombay, and Wetter are inhabited by the same race as the mountaineers of Solor, and are

said to be cannibals (Moor, p. 11), constantly on the watch to surprise the unwary.

Timor is the most southerly and the largest of the Molucca Islands, extending from lat. 8° 21′ to 10° 23′ S., and long. 123° 30′ to 127° 15′ E.; it is about 300 miles long and 60 broad, and has high undulating mountains in the interior. Timor seems to form the N.E. end of the great range of volcanic islands, which extends N.E. and S.W. from Timor to Sumatra. It has only one active volcano, Timor Peak, near the centre of the island, which was blown up during an eruption in 1638, and has since been quiescent. Earthquakes occasionally recur. Timor means the east. The Portuguese settlement of Dieli or Diely is in lat. 8° 34′ S., and long. 125° 40′ E., and on the north side of the island. Koepang or Coupang, in the west end of the island, is the chief Dutch town. These two nations claim between them the entire sovereignty of the island. The coast is largely occupied by Malays and Chinese, but in the interior are tribes much nearer to the true Papuan than those of the Moluccas. The Timorese are dusky-brown or blackish, with bushy frizzled hair, and the long Papuan nose. They are of medium height and of rather slender figures, are constantly at war with each other, but they are not very courageous or bloodthirsty. In their excitable disposition, loud voices, and fearless demeanour, the Timorese closely resemble the Papuan people of New Guinea. In the islands west of Timor, as far as Sumba or Sandal-wood Island and Flores, a very similar race is found, which also extends eastward to Timor Laut, where the true Papuan race begins to appear. The inhabitants of the south-western part of Timor, in the neighbourhood of Coupang, are an exceedingly dark, coarse-haired people, and travellers have found difficulty in coming to a conclusion as to whether they belong to Malayan or Papuan races, so equally balanced are their characteristics. The anonymous author of an excellent Account of Timor, Rotti, Savu, Solor, etc., in Moor's Notices of the Indian Archipelago, says the natives are generally of a very dark colour, with frizzled, bushy hair, but less inclining to the Papuans than the natives of Ende (on the island of Flores). They are below the middle size, and rather slight in figure. In countenance they more nearly resemble the South Sea islanders than any of the Malay tribes. The S.E. coast of Timor near Mount Allas is, according to Bikmore, occupied by the Papuan race with frizzled hair in tufts on the head. Mr. Earl says that the short tufted hair of the mountain Papuan is found in Timor, and it is possible that the races are there mixing, as its position is next to Papua. There are Malays and Chinese, but the native Timorese preponderate; they have nothing in common with the Malays, and are closely allied to the true Papuans of the Aru Islands and New Guinea. The women talk to each other and to the men with loud voices, and with a self-assertion quite different from Malay women. The mountaineers of Timor are of Papuan type, have rather slender forms, bushy frizzled hair, the skin of a dusky-brown colour, and have a long, somewhat aquiline nose, with the overhanging apex, which is so characteristic of the Papuan, and so absolutely unknown among races of Malayan origin on the coast. There has been an admixture of Malay, and the coast occupants have wavy, not frizzled hair, a lower stature, with less prominent features, and the houses are built from the ground. The houses of the Papuan mountaineers are raised on posts. The dead of the Papuan Timorese are laid on a stage six or eight feet above the ground, sometimes open, sometimes covered, and are retained there till money for a feast can be obtained, when they are burned. The 'Pomali,' exactly resembling the taboo of the Pacific, is in full operation here, and a few palm leaves stuck outside of a garden will preserve it from any thief.

The land mammals in Timor are only seven in number,—Macacus cynomolgus, common all over the Indo-Malayan Archipelago; Paradoxurus fasciatus, a civet cat; Felis megalotis, a tiger cat; Cervus Timorensis; Sorex teais; and Cuscus orientalis.

Semao Island is near Timor. The natives of this place have been named by Mr. Crawfurd of the Negro-Malayan race. The people are like those of Timor, with frizzly or wavy hair and a coppery-brown colour. Semao Island has abundance of monkeys, one of them, the Macacus cynomolgus, or hare-lipped monkey, which is found all over the western islands of the Archipelago.

Rotti Island lies off the S.W. end of Timor. It is about 60 miles long and 38 miles broad, and is in lat. 10° 53′ S., and long. 123° 5′ E. It is a succession of low hills and narrow valleys, the soil is stony but fertile. In the early part of the 19th century it had 18 rajas over as many districts, who could bring 10,000 fighting-men into the field, sometimes opposing, sometimes aiding the Dutch, but always at enmity with the Timor raja. The inhabitants are below the middle height, and are considerably darker than the people of Celebes, but are remarkable for having long lank hair, whilst nearly the whole of the inhabitants of the surrounding islands have frizzled hair. Their features are more prominent, and they bear a stronger resemblance to the natives of India than to those of the eastern islands. The women are much fairer than the men, and many of them have very pleasing countenances. They are a mild-tempered people, and not of jealous disposition; polygamy and divorce are allowed. Their religion and belief in auguries are nearly the same as in Timor. They inter their dead under their houses, which, as in Celebes, are always raised several feet from the ground, whilst those of Timor are always built on the ground. Their language has many words in use in Timor, but the natives of the two islands do not understand each other. The slave trade up to the early part of the 19th century was carried to a great length in this island, several hundred slaves having been exported to Batavia, Amboyna, and other Dutch settlements in the course of one year.

Ansus Island is Papuan. The houses, built on posts, are placed entirely in the water. At very low water only is the beach partially uncovered. This beach consists of mud, in which mangroves grow luxuriantly, and completely obstruct a landing. The gardens, from this cause, are situated on the surrounding islands, principally on an island with a high beach lying opposite to the kampong. The Ansus Papuans' hair is in tufts. Their appearance is good-natured, faces regular, eyes beautifully black, the mouth broad, with

beautiful regular teeth, and the forehead high but narrow. Many have thin lips and finely curved noses, which give them a more European physiognomy. The men are generally handsome and well formed, stout, without being too thick, strong and muscular; the women very good looking; and some children with very regular soft faces and long pendent curling hair.

Bo Island is inhabited by a mixed race of Papuans and the brown race.

New Guinea is known to the Malays as the Tanna Papua. Its approximate area is 275,000 square miles, and it is, after Australia and Borneo, the largest island of Australasia. It is essentially the Papua land, its people being partly of the diminutive and partly of the stalwart Negro race. The island was discovered in 1525-26 by the Portuguese, and up to the present time its coasts and seas have often been visited by ethnologists, surveyors, and Christian missionaries; but the sickly nature of the climate, and the repellent character of the Papuans, have prevented investigation.

Captain Moresby says the coast north of Torres Straits, as far east as Yule Island, appears to be occupied by the black Papuan race, naked and hostile. It is an unbroken level of swampy, mangrove-covered ground, and probably malarious; its shores have no protecting barrier reef.

He speaks of the fierce and bloody nature of the black Papuans of West New Guinea. But he also mentions that from Red Scar-Head to the extreme east of New Guinea, the coast is peopled by a mild Malayan race of inoffensive manners. Red Scar-Head is 35 miles east of Yule Island; outside from 4 to 10 miles from the shore is a great barrier reef. Some of their houses are 30 to 40 feet long. They are a small, lithe, copper-coloured people, with clean, well-cut features and a pleasing expression of countenance. They wear their hair frizzled out, mop fashion, and are tattooed with stars and small figures on the breast and shoulders. They wear a leaf girdle; the young men have cowrie shell ornaments on the legs and arms, and plumes of paradise birds on the head. The cartilage of the nose is pierced, and bits of bamboo or shells inserted. According to the same author, in Robert Hall Sound the people are of the Malay type, shorter, coarser in feature, and thick lipped, almost beardless. They have high cheek-bones, like the Malay, but their noses are well formed and inclined to be aquiline. Their eyes are dark and beautiful, with good eyebrows. The men's hair is frizzled into a mop form, but that of the women is cut short, and their bodies are tattooed with graceful patterns. The men do not tattoo. Their race joins the black Papuan in the vicinity of Cape Possession; but Captain Moresby also says both races were present at Robert Hall Sound, and the natives varied in stature and cast of feature.

Dori harbour or bay is formed by a long, low promontory, curving round towards the Arfak range, which rises abruptly from the opposite side of the bay. Towards the extremity of this promontory is situated the village of Dori, and opposite, at about a mile, is the inhabited island of Mansinam, and a smaller one uninhabited. The inhabitants of Dori build their houses at or below low-water mark, raised on posts, and reached by a rough and tottering causeway from the beach. The natives of the interior do not differ perceptibly in physical character, but have a distinct language, and are called Arfaki by the Dori people. Their houses are very similar, but are raised 12 or 15 feet high, on a perfect forest of thin poles, a few of which are put diagonally, and prevent the whole from falling with the first wind. The people of Dori are fishers and traders, the Arfaki are agriculturists. The former catch turtle and trepang, which they sell for beads, knives, and cloth, and purchase of the Arfaki their rice and yams, plantains, and bread-fruits, and numbers of tame cockatoos and lories, which they sell again to the Ternate and Tidore traders. All these natives have the characters of the Papuan race very strongly marked,—the flat forehead, heavy brows, and large nose, with the apex bent downwards, are almost universal, as well as the harsh curly hair, which often forms an enormous stiff mop, and is then highly esteemed. It has, in fact, a very grand and imposing effect. The colour of the skin varies greatly. In general it is a dirty black or sooty colour, but varies to a fine brown, which is often quite as light as that of the pure Malay races. The natives of Dori possess the rude artistic genius of the Oceanic tribes, decorating their household utensils and the prows of their canoes with elaborate carving, and the posts of their council-house with obscene caryotides. The language of the Dori people resembles that of the Aru and Ki Islands in containing a large number of monosyllabic words, as well as others excessively polysyllabic, offering a remarkable contrast to the striking dissyllabic character of the whole Malayan group of languages.

Papuans of Sorong, on the N.W. coast of New Guinea, are said to drink the blood which drops from a newly-cut-off head of an enemy killed in war, provided he had been a man of valour; they believe thus to inbibe his courage.

The Papuan idols called Karwar are the effigies of the distinguished men. They are similar to the Tikki of the Maori and other wooden figures of the Polynesians.

Brumer.—The women of Brumer Island, on the south coast of New Guinea, are tattooed on the face, arms, and front of the body, but generally not on the back, in vertical stripes less than an inch apart, and connected by zigzag markings. On the face these are more complicated, and on the forearm and wrist they are frequently so elaborate as to resemble lacework. The men are more rarely tattooed, and then only with a few lines or stars on the right breast. Sometimes, however, the markings consist of a double series of large stars and dots stretching from the shoulder to the pit of the stomach.

Warrior Island is in Torres Straits. The men are powerful, are armed with six-foot bows; their war canoes are 50 and 60 feet long.

Aiou or *Yowl* is a group of islands situated about 70 miles W.N.W. from the Cape of Good Hope, on the W. coast of New Guinea, and 30 miles N.E. from the island of Waigiou in the Gilolo Passage. The group consists of circular low isles, 16 in number. The largest lies in about lat. 0° 25′ N., and long. 131° E. The group is surrounded by an extensive coral reef, nearly a degree in circumference, the south-western portion

of which is separated from the main reef by a narrow but deep channel. Aiou Baba, the largest of the group, lies on this detached portion of the reef, and is about 7 miles round, and 500 feet in elevation. The north-eastern or larger reef, which contains the islands of Abdon and Konibar, with several coral islets, is said to have an opening on the N.W. side which admits large vessels within the reef. The inhabitants are Papuans, are few in number, and occupy themselves almost exclusively in fishing and in catching turtle, with which the lagoons within the reef abound. The chief exports are tortoise-shell of good quality, which is obtained here in large quantities, and trepang. These are purchased by Chinese from Ternate, the king of which place assumes supreme authority over all those parts of the coast of New Guinea which his subjects have been in the habit of visiting for purposes of trade. The traders to Aiou all employ small vessels, which alone are adapted for going within the reef of Aiou Baba, their chief resort. They bring red and white calicoes, thick brass wire, old clothes, glass beads, and all sorts of ornamental finery which the Negroes of New Guinea delight in as much as those of Africa. The natives are tolerably friendly to strangers, but must not be trusted too much, as they are inclined to be treacherous and revengeful, which is the case, indeed, with all the Papuan tribes.

Modera is about 25 miles in length, lying to the N.N.E. of the Great Ki, distant about 60 miles, and is the south-westernmost of a group of high islands, which until lately were considered as forming a part of New Guinea. The inhabitants are Papuans, and do not bear a high character among their neighbours. Wild nutmegs, trepang, and tortoise-shell are obtained here. Red calico, parang or chopping knives, coarse cotton shawls and handkerchiefs, with iron, Java tobacco, muskets, and gunpowder, are the principal articles in demand. The chief traffic was in slaves, which are distributed among the neighbouring islands of the Archipelago, and are sometimes carried as far as Bali and Celebes.

Waigiou Island lies between New Guinea and Gilolo. Its inhabitants are Negroes, with features more regular, an expression of countenance more agreeable, and complexion less black, than the Negroes of New Ireland. Their persons are delicate and slender, and their stature short. The hair differs in texture among individuals, some having it woolly like the African Negroes, some lank like the European, and others again of a texture between the two. The highest facial angle was 69°, and the lowest from 63° to 64°. Paradisea rubra, the rare red paradise bird, and Ptilonopus pulchellus, a lovely little dove, occur here.

Gebe Island is between New Guinea and Gilolo. It is occupied by the Negro race, with nose flat, the lips thick and projecting, the complexion a dark olive, the eyes deep seated, and on an average the facial angle 77°, but as high as 81°. In Gebe, Waigiou, and in some parts also of the coast of New Guinea, the Malayan race may have become intermixed with the Negro, as the complexion is lighter and the peculiar texture of the Negro hair altered or obliterated. The language spoken at Waigiou is entirely Papuan, being that which is used on all the coasts of Mysol, Salwatty, the N.W. of Guinea, and the islands in the Great Geelvink Bay. Waigiou, Gebe, Poppa, Obi, Batchian between New Guinea, and the Moluccas, as well as the south and east peninsulas of Gilolo, possess no original tribes, but are inhabited by people who are evidently mongrels and wanderers.

Arroe or *Aru Islands* extend from lat. 7° to lat. 5° 52′ S., and in long. 133° 56′ E., run for upwards of 100 miles N. and S., and between 40 and 50 miles in breadth. They lie between the Timor Laut group and the S.W. coast of New Guinea, distant about 60 miles. They are a closely-packed group. Some of the southern islands are of considerable extent, but those to the north, lying close to the edge of the bank, are rarely more than 5 or 6 miles in circumference. The land is low, being only a few feet above the level of the sea, except in spots where patches of rock rise to the height of 20 feet, but the lofty trees which cover the face of the country give to it the appearance of being much more elevated. Coral reefs extend from the shores of all the islands, and in the eastern parts of the group these are often of great extent. The Aru islanders have had much intercourse with strangers. They purchased from the Bugis the Papuan slaves brought from New Guinea, who were employed in diving for pearls and in the beche-de-mer fishery. The Aru islanders are excessive in their use of intoxicating liquors, imported from Java and Macassar. In personal appearance the people are between the Malayan and Polynesian Negro. In stature they surpass the civilised natives of Celebes. The dress of the men is a piece of matting or cloth girded round the loins, and drawn tight between the thighs, and a salendan or shawl. No fillet is worn round the head. The hair is woolly and frizzled out like that of the Papuan. The men are jealous, and easily roused to anger by abuse of their women or ancestors; otherwise they are of mild disposition. Christianity was introduced into the Aru Islands many years ago by the Dutch of Amboyna, and nearly all the principal people profess this creed, but some are Muhammadans. The Aru islanders bear a strong personal resemblance to the aborigines of Port Essington; indeed, on several occasions in which natives from the neighbourhood of the late settlement visited the islands in European vessels, they were considered by the Aruans as belonging to some remote part of their own group. But the Aruans also possess many characteristics in common with the Outanata of the opposite coast of New Guinea. One of their most singular peculiarities, however, consists in the value which they attach to elephants' tusks, brass gongs and trays (dulam, talam), and huge porcelain dishes. A man's goods on his death, all the chattels which he has collected during his life, including tusks, gongs, and precious china dishes, are broken in pieces and thrown away; and in the villages may be seen heaps of these fragments of property which custom or some singular superstition has deterred the living from appropriating. The natives are Papuans, with black or sooty-brown skins, woolly or frizzly hair, thick-ridged prominent noses, and rather slender limbs; most of them wear nothing but a waist-cloth. The Papuan talks, laughs, shouts without intermission. Papuan boys sing cheerily as they walk along, or talk

aloud to themselves, which is quite a Negro peculiarity. They have as food, sago, vegetables, fish, and molluscs; and tobacco, betel, and arrack are their luxuries. Their houses are rude sheds. There are some mixed races amongst them. The women have only a mat of plaited strips of palm leaves worn tight round the body, and reaching from the hips to the knee, or suspend a mat in front and one behind. Their frizzly hair is tied in a bunch at the back of the head. They delight in combing it or forking it, using a large wooden fork with four diverging prongs, to separate and arrange the long, tangled, frizzly mass. They and the men wear ear-rings, necklaces of silver, brass, shell. The Aru Papuans told Mr. Wallace that some of their tribes kill the old men and women when they can no longer work, but he saw many old folk. Their hair is usually black, and strongly curled. Like the African Somali, they wash it with wood-ashes or lime-water, which impart to it a lightish colour, and cause it to appear rough, both these peculiarities being considered very tasteful by the Alfoor as well as by the Papuans. The usual height of the men is from 5 feet 4 inches to 5 feet 8 inches, and there is a great inclination to slimness about the lower extremities among the taller men, some of whom attain the height of 6 feet.

The *Baju* or *Baju Laut*, meaning the Sea Baju, are a maritime people in the Aru Islands, who venture far to sea. Many of the Baju remain throughout the year near the Dutch Settlement of Macassar, on the south end of Celebes, where they are found very useful in carrying despatches. They are chiefly employed by the Chinese in fishing for trepang or sea-slug, and, according to the policy invariably adopted by the latter in their dealings with the natives, are generally involved in debt, from which extrication is nearly hopeless. The demand against each boat or family usually averages about four hundred guilders (twenty-five pounds sterling), and, extraordinary as it may appear, no instance is on record of their ever having absconded to avoid the payment of their debts. About Sulu and the circumjacent islands, the Baju Laut are the most industrious and useful race, and to them Sulu is indebted for bringing its submarine wealth. A hundred sail of ten to twenty tons burden have been seen at one time at Bontian under Dutch colours. They are a different race from the Orang Laut of the Malay Peninsula and the Straits of Malacca. They are the Orang Solok of the east of Subanas and Lutas. They speak the language of Sulu, and profess Muhammadanism.

The *Kei Group* of ten islands adjoins the Aru Islands. Ke, Kei, or Ki is prefixed to the names of all their villages. The Great Ki is about the size of Tanakeka, an island near Macassar. The Ki group form the northern of the south-easterly islands. The natives are industrious, and great boat-builders. The islands, covered with luxuriant forests, are occupied by two races, one of them the Papuan, who make cocoanut oil, build boats, and make wooden bowls; their boats are from small planked canoes to prahus of 20 to 30 tons burden. They build the skin first and fit on the knees and bends and ribs. Money is not used, but every transaction is in kind. The Papuan wears a waist-cloth of cotton or bark. The Papuan women of Ki are not secluded, the children are merry, noisy, and have the Nigger grin, and amongst the men is a noisy confusion of tongues and excitement on every occasion. The other race are Muhammadans who were driven out of Banda, and wear cotton clothing. They are probably a brown race, more allied to Malays, but their mixed descendants have great varieties of hair, colour, and features, graduating between the Malay and Papuan tribes. The men profess Muhammadanism, but eat hog's flesh. The islands produce Maratigo and Banyaro woods, well adapted for masts.

Carpophaga concinna occurs in the Ki and in Banda, where it is called the nutmeg pigeon. Cyphogastra calepyga, a beautiful species of the Buprestidæ, occurs here; also the butterfly Orchis, Phalænopsis grandiflora, two large beetles, Therates labiata and Tricondyla aptera. T. labiata is ever on the watch, and from time to time emits an odour like otto of roses. Tricondyla aptera of the Malay Islands resembles a large ant, more than an inch long, and of a purple-black colour. It is wingless.

The **PHILIPPINE ISLANDS** were discovered in 1521 by Magellan, and they were named after Philip II. of Spain. There are ten principal islands, 400 of medium size, and 800 islets, running 900 miles from north to south, and 500 miles from east to west, from lat. 5° 40′ to 18° 47′ N., and between the meridians of 120° and 125° E.

The larger islands are traversed by chains of lofty mountains, in which are active volcanoes, amongst others, Dabao in Mindanao, Albay and Taalen in Luzon. Earthquakes recur apparently three times in a century, and hurricanes frequently sweep across the islands. The population is about four millions, in many distinct nations or tribes, speaking distinct languages unintelligible to each other. They are sometimes called the *Manillas*, and their inhabitants Manillamen.

Spanish territory is nearly 116,000 square miles, and population about 8 millions, and a trade exchange of 12 millions sterling. The three great outlets into the Pacific lead from the Philippines, viz. the Sulu channel, leading direct to New Guinea; the Bernardino strait opposite the Pelew and Mariana Islands, and in the north the Bashi passage, the nearest outlet from China. In 1833, the population of the principal islands was estimated—

Batanes Islands,	8,000	Mindoro,	41,190
Calamianas,	20,730	Negros,	60,980
Leytes,	91,273	Panay,	425,745
Luzon,	2,323,395	Samar,	92,730
Magindanao,	77,630	Zebu,	203,555

A writer in the Quarterly Review (No. 314 of 1884) says their southern half is tenanted by the Visaian (Bisayan), who resemble the Dyak of Borneo. Many of them have adopted Christianity. They are fond of music and gaiety.

The *Tagala* subdivisions are the Kosan, Bicol, Igorrotes, and others in the northern part of the Philippines. They are darker than the Visaian, are excellent agriculturists, ingenious artificers, and daring seamen. Chinese have married with the Tagal. The total number of Spaniards does not much exceed 5000.

The *Negrito* are believed to have been the prior occupants, and to have retired into the mountain districts before invaders. They are a black, woolly-haired race, of diminutive stature, 4 feet

6 inches to 4 feet 8 inches high, with hair like that of the Papuan and many Negroes of Africa. But of the central group of the Philippines, consisting of Panay, Negros, Samar, Leyte, Masbate, Bohol, and Zebu, only in the first two were Negrito tribes remaining, the crest of the mountain range of Negros, which extends for 120 miles throughout the length of the island, being almost exclusively occupied by scattered tribes of Negritos.

Magindanao or *Mindanao*, the most southerly island, is partly under Spain, and in part under feudatory chiefs, with Muhammadan subjects of Malay race, whose women at the age of 13 (probably on marriage) have their teeth filed thin, stripped of the enamel, and blackened. The Negrito sparsely occupy the interior. Mindanao people were addicted to piracy, using prahus 96 feet in length, 26 in breadth, and 8½ feet of hold, with 40 oars, 2 rudders, and a crew of 90 men. Some of their prahus are long and narrow, 50 feet long, and only 3 in breadth, but with outriggers to enable them to carry sail. They use the tripod mast, and sail with great speed.

In *Mindoro* Island, the Negrito occupy the Bengan, a mountainous district, living on friendly terms with the Manguianes, wild tribes of the brown race, by whom they are surrounded.

The principal tongues of Luçon are the Tagala, the Pampanga, the Pangasinan, and the Iloco.

The islands produce gold, sulphur, amber, pearls, tortoise-shell, mother-of-pearl, sappan-wood, and ebony; and rice, cocoa, coffee, indigo, and pina fibre are grown.

Negros.—The woolly-haired tribes are more numerous in the Philippines than in any other group of the Indian Archipelago, with the exception of New Guinea. The Negrito population in 1842 was 25,000. The island on which they were first seen was named by Magellan 'Isla dos Negros,' to distinguish it from the adjacent island of Zebu, where his ships remained for some months. Negros still contains a large population of Papuans, while Zebu is altogether free from them, and no record exists of their having ever been found there. Samar and Leyte are similarly situated with Zebu, but Mindanao and Mindoro contain several tribes of Negritos, and they form the chief population of the less accessible parts in the mountain ranges of Luçon, the largest island of the Philippine group. The accounts of the Negritos given by the early Spanish navigators perfectly apply to their present condition. They are described as being smaller, more slightly built, and less dark in colour than the Negroes of Africa, and as having features less marked with the Negro characteristics, but as having woolly hair. The Indian races are in general superstitious, credulous, fond of gaming, and particularly addicted to cock-fighting. The Negrito are said to be the original inhabitants of the islands, who retired before the invading Indians. The extent of this Archipelago is 300 leagues from north to south, and 180 leagues from east to west. Its islands are traversed by a mountain range, and partially fertilized by the overflow of spacious lakes. This Archipelago received its name after Philip II. of Spain, in whose name they were finally conquered, pacified, and peopled. The Negrito of the Philippines are polytheists, but without temple or ritual. They believe in omens, invoke Camburan (God), the moon and stars, and adore the rainbow after a storm. They have also a worship of ancestors, a god of the harvest, of the fisherman and hunter, and a remnant of fetishism in a grotesque native devil. Iloco is one of the languages spoken in the island of Luçon. In the Philippines are many separate nations or tribes, speaking distinct languages unintelligible to each other. The principal tongues of Luçon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250,000 people, while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 1,200,000 people.

Negros or *Buglas Island* extends from lat. 9° 4′ to lat. 9° 50′ N. Of the central group of the Philippines, consisting of Panay, Negros, Samar, Leyte, Masbate, Bohol, and Zebu, the two former are the only islands in which Negrito tribes exist to the present day, and even as regards Panay, the fact must be considered doubtful. Negros, however, contains a considerable Negrito population, the crest of the mountain range, which extends throughout the length of the island, a distance of 120 miles, being almost exclusively occupied by scattered tribes.

The **SULU ARCHIPELAGO** is that chain of islands, about 60 in number, which stretches across from the N.E. point of Borneo to the island of Mindanao. Sulu Island, from which the Archipelago is named, is high and of considerable extent, being 35 miles long and from 5 to 10 broad; it lies in long. 121° E., near the centre of the Archipelago. Sulu was called Felicia by the Spaniards. It was also called Banjar Kulan, Little Banjar, to distinguish it from Banjar Massing in Borneo; and the word Sulu has been surmised to be from the Chinese Su and Lao, the island of the Laos. The ruling race are Malays. The occupants were Papuans, who have been driven to the mountains by subsequent races. A people called Orang Dampuwan, or by the Chinese Sonpotualan, held Sulu and all the sea-coasts for a short time. Chinese and Spaniards have several times taken and lost ground. A race is named who are called Orang Duson, and another as the Orang Sulok or Bisayan. The religion of the ruling race is Muhammadanism, but part of the Papuans are pagans and part Muhammadan, and there are remains of Buddhism and Hinduism. There are Christian freemen in the interior. The Bisayan language of Luçonia is in general use, but many of the people speak Malay, others Chinese, and others Spanish. Marsden mentions the existence of dictionaries of the Bisayan, Tagala, and Pompanga tongues. In the middle of the 18th century the British sent to Sulu Mr. A. Dalrymple and others on commercial missions, which led to no permanent results. The houses are, like those of the Malays, raised 4 or 5 feet from the ground, the ascent being by a ladder, which is pulled up at night. The Macassar men of Celebes determine many disputes by single combat, but never avenge themselves by personal assassination. On the contrary, the Sulu race have no idea of putting themselves on a footing with their antagonist, but always attack him in the dark, or off guard. It would scarcely be possible to scrape up a more infamous race than the Sulu. The only virtue they boast is courage, which, unaccompanied with principle, is at best

but negative, and in this instance doubtful. Honesty, industry, or hospitality are unknown to the mass of them, at least in practice, but they are distinguished by civil dissensions, treacherous assassinations, vain-boasting, theft, laziness, dirt, envy, and dissimulation, or rather unconnected falsehood.

The Sulu do not, like the Muhammadans of Hindustan, seclude their women; on the contrary, they mix in society as in Europe. The women wear a close, short baju of cotton of various colours, with kanchings on the back part of their arm; trousers (saluar) of fine white cloth or of flowered silks or kimkhabs, with two sarongs, one put on as a petticoat, the other thrown over their shoulders. They tie their hair in a bunch at the fore part of their head; wear krabows in their ears, rings on their fingers, and Chinese shoes on their feet. In their houses, however, their sole apparel is their trousers, remaining nude from the waist upwards. They arch their eyebrows with the razor, shave off the short hairs round their foreheads, and their teeth, like those of the men, are filed and stained black.

Mr. Hunt says the *Baju* of the Sulu Archipelago are really the Orang Sulok of the east of Subanos and Lutas. Authorities, however, have considered them to be from Johore, from China, from Japan, or a Bugi tribe. They speak the Bisayan language of Sulu, profess Muhammadanism, and are, as the word 'Baju' indicates, fishermen. They made Macassar their headquarters, to escape from the oppression from which they suffered at the hands of the Datu chiefs of Sulu. The Lanun or Illanun race, from the provinces of Illano and Melana, in the island of Magindanao, long carried on piratical expeditions, making Sulu their chief headquarters and entrepot for the sale of their plunder. They moved in large fleets of small prahus in the straits of Macassar, among the Moluccas, and in the southern islands of the Philippines. During a six months' residence at Sulu, about the year 1830, Mr. Hunt heard of many ships being captured. Their twelve establishments in the Sulu dominions in his time had upwards of 8000 pirates, with prahus manned by 30 to 60. In 1851 the Governor-General of the Philippines took the fortress at Sulu, and since then Spain has been dominant over the Sultan, to whom they allow 2400 dollars per annum. In 1883 they assumed a more direct control.

FIJI group consists of numerous islands between lat. 15° 30′ and 19° 30′ S., and long. 177° and 178° W. They are in three divisions, an eastern, northern, and western, in a semicircle, with the base, about lat. 19° 30′, in great part surrounded by coralline reefs. The population amounts to about 150,000 souls. They are of a Negroid race. Beyond the Fiji, the brown Polynesian race, or some intermediate type, extends over the Pacific. The descriptions of these latter agree exactly with the characters of the brown indigenes of Gilolo and Ceram.

AUSTRALASIA embraces Australia, Tasmania or Van Diemen's Land, New Caledonia, New Hebrides, Queen Charlotte's Islands, Salomon Archipelago, New Britain, New Zealand, and others.

AUSTRALIA lies between lat. 10° 39′ and 39° 11′ S., and long. 113° 5′ and 153° 16′ E. Its coastline is about 7750 miles, within which is an area of three millions of square miles. The complexion of the natives is chocolate-coloured, the lips thick, teeth white and even; eyes deep set, small, and black; hair long and black, generally straight, but sometimes slightly curled; beards thick and bushy.

SANDWICH or Hawaii or Owyhee Islands group, eleven in number, were discovered in 1778 by Captain Cook, and on the 14th February 1779 he was killed on the shore of the Bay of Kealakekua, on the west side of the island of Hawaii. They lie in the N. Pacific, between lat. 18° 50′ and 22° 20′ N., and long. 154° 55′ and 160° 15′ W. Maunakea mountain, in Hawaii Island, rises to 13,953 feet above the sea. The population in 1849 was supposed to be about 80,000 souls. There has been a large influx of foreigners from Asia, America, and Europe. The inhabitants are nominally Christians. The male population are a good height, athletic, and well proportioned; but neither men nor women are prepossessing in appearance, although they have the reputation of being good tempered and not easily aroused into anger. The ruins of an old temple are still to be seen about six miles from Honolulu, near Diamond Hill. It is said to have been built by Ka-me-hameha the First, after the conquest of the island. It is called Heiau. Here, in the days of heathenism, were offered human sacrifices. The victim was chosen either by the priest or king. The messenger of death entered his abode while he slept, and he met his end by strangling. He was then dragged off as an offering to the sanguinary god.

SAMOAN group, or Navigators' Islands, in the S. Pacific, eight in number, situated between lat. 13° 30′ and 14° 30′ S., and long. 168° and 173° W., were discovered in 1768 by Count de Bougainville. The population is about 60,000. The people are taller and better formed than any other of the Polynesians.

NEW ZEALAND consists of two large and several smaller islands in the Southern Pacific Ocean, between lat. 35° and 46° S., and long. 166° and 179° E. They were discovered by Tasman in 1642. The area is about 86,000 square miles. There is an active volcano in the Bay of Plenty, and many conical hillocks, seemingly extinct volcanoes. The native population is estimated at 100,000. The men are tall, well-formed, strong, athletic, and active. Many of the chiefs are upwards of six feet high. The women are likewise well formed. The eyes are black, strong, and piercing; hair black and commonly straight, but sometimes thick, bushy, and curly; that of the women fine, soft, and silky. The men who can afford it tattoo the skin. The principal chiefs and their wives wear green talc stones, called Heitiki, suspended from their necks, on which is carved a human figure sitting cross-legged. Cannibalism and infanticide were formerly very common.

LADRONES.—Two groups of islands are so designated. The group near the S. coast of China, 18 miles S.E. of Macao, in lat. 21° 57′ N., and long. 113° 52′ E., at the entrance of the Bay of Canton, consists of two islands. The Grand Ladrone, called by the Chinese Tyman Shan, is in lat. 20° 56′ N., and long. 113° 44′ E., 12 miles east of Macao, and 29 miles east of Canton factories. It is steep and bold, and 2 miles in circumference. On its west side is the Little Ladrone.

The *pirates* who infested the Archipelago consisted of the inhabitants of the free Muhammadan states in Sumatra, Lingin, Borneo, Magindanao, and Sulu; those natives who have remained uncontaminated by the doctrines of the Arabs never being known to engage in the like pursuits. The Europeans who were unfortunate enough to fall into their hands were generally murdered, while the natives who composed the crews of the captured vessels were sold for slaves. The term Ladrone is of Portuguese origin, and is applied by the Portuguese to the Chinese pirates, who commenced to gain power by the close of the 18th century.

Ladrones, also called the Marianne Islands, were the first islands seen by Magellan in 1521. From these he sailed to the Philippines, where, in the island of Mactan, near Zebu, he was killed, as also was Barbosa. Magellan's companions then visited Timor in 1522, and returned to Lisbon, making the first circumnavigation of the globe. They are a large archipelago, stretching from N. to S., from the southern extremity of China into the N. Pacific for 450 miles, between lat. 13° and 21° 35′ N., and nearly under long. 145° E. The islands are 20 in number. When the Spaniards arrived, the inhabitants, in manners, government, colour, and speech resembled the Tagala of the Philippines, — a tall, robust, well-proportioned race, olive-complexioned, with well-grown beards and long black hair; both sexes stained their teeth black, and some painted their bodies red. But that race has disappeared, and only about 2000 people of foreign origin now inhabit the islands.

CHINA has an area of 11,555,764 square kilometres. Its emperor rules over 371 millions of Mongoloid races, viz. Chinese proper 350 millions, and 21 millions Tibetans, people in Formosa, Tungus, Manchu, Mongol, Kalmuk, Buriat, and Uzbak, in Manchuria, Mongolia, Tibet, Zangaria, and East Turkestan; and he claims tribute from several semi-independent states. Its dynasties have ruled through 4000 years, and the territorial distinctions—China proper and the Chinese empire —have existed from the earliest periods of their history.

Among the tributaries are those of Inner and Outer Mongolia, of Ulia-Sutai and Tsing-Hai, or Koko-Nor; and the tribes acknowledging the sway of China are classed as Inner and Outer Mongolians. Inner Mongolia lies between the desert of Gobi and the continuous frontier of Manchuria and China. The Outer Mongolians are Kalkas of different tribes. Among the tribes and remnants of tribes are the Shunet of Shan-si beyond the wall; Chahar, Bargou, Eluth, Solon, Taguri, Orunchun, Oilar, Hassack, Yu-muh, Tasang or T'sang, and Sang-ting.

The *Chinese* proper are of a yellow colour, but brown and sometimes a maroon tint are seen. Their face is broad and flat, the cheek-bones projecting, irides black, eyes oblique, beard scanty, stature above that of the Malay and Tibetan. They are skilful, enterprising, and self-reliant; emigrate with confidence, and are numerous in the islands of the Archipelago, the Indian Ocean, and America. They have made many great discoveries in the arts, but they do not advance beyond a certain grade of intellectual development.

Their many millions belong to about 400 sing or clans, and those of the same sing are relatives, descended from the same ancestor, and bound to help one another. With the nation, the idea of the family is the grand principle that serves as the basis of society, of which the emperor is the head. The poor, and all who are not well-to-do, rarely use any kind of animal food. In the midland and southern provinces, the diet consists of plain boiled rice, with a relish of pickled fish or vegetables, salted eggs, and curd made of lentils, etc. When meat can be afforded, pork is always the favourite dish, and amongst the higher classes, mutton, poultry, venison, or game; with such delicacies as beche-de-mer, seaweed, sharks'-fin jelly, fish, the edible swallow's nest, ducks' tongues, pigeons' and plovers' eggs. Weak tea is their great liquid. Spirits are rarely used.

Yunnan province, in the extreme S.W., is inhabited by many tribes. Amongst them, the Lolo of different clans, the Pai-yi, the Pen-ti, the Min-kya. Also, in the mountain ranges which separate China and Burma, are the Mousso, whose women wear huge silver ornaments. To their west are the Lissu tribe, in the tract between the Lan-tsang-keang and the Lo-keang or Salwin. And in addition to these, on the borders, are the Sifan, Meau-tsze, Pa-e, Ho-nhi, Khato, Lo-pé, Shen-tsen, and other tribes.

Within the borders lying in the southern and western provinces, parts of the Chinese empire,—Hu-kwang, Sze-chuen, Yunnan, Kwei-chau, and Kwang-si,—are various tribes, known as the Miau, Yau, Tung, and Keh-lau, who are reckoned by the Chinese as Miau or barbarians. Some of them in the recesses of the mountains, still unsubdued, are styled the Sang Miau; but the subdued tribes paying tribute are called Shuh-Miau. Many of the wild Miau live in Kai-li, Tai-hung, Hwang-niu, and Shi-ping.

Sifan, Kham, Miau, Tzu, Yeh, Jen Mantzu, and Ichia, in Chinese phraseology all mean various degrees of savagery or barbarity. The rude Tibetan tribes of nomade and predatory habits are chiefly known in Tibet under the generic name of Kham; it corresponds to the Sifan of China.

The Miao-tse or Miau-tse, occupying the highlands of the southern half of the Chinese empire, nearly a hundred in number, are regarded as aborigines, and are said to belong to the Thai group. They are cultivators, rear the silk-worm, forge iron, and work in other metals, are weavers, traders, fowlers, fishers, herdsmen, and some of them highly predatory.

The Kih-mang-ku-yin live in excavations made in high cliffs in the Kwang-shun-chau district. The King-kia of Li-po-hien have a festival on the last day of the tenth month, at which they sacrifice to demons. In the eleventh month, the unmarried folks have a dance, at which they choose life partners for themselves.

The Luh-ngeh-tsze of the Wei-ning district, in Ta-ting, inter their dead in coffins, but after a year, and for seven successive years, re-open the graves, wash and clean the bones, and replace them.

The Lang-tsze-Miau of Wei-ning follow the Couvade practice. On the birth of a child, the husband takes to bed, and is cooked for and waited on by the wife, who suckles the child and works in the fields; not till after a month does the husband go abroad. When a parent dies, so soon as life becomes extinct, they twist the head round

backwards, so that, as they say, he can see behind him.

Tungus, a general name applied to a population common to a vast area in Siberia and China. Their physiognomy connects it with the tribes of Northern Asia in general, and their language forms a transition between the monosyllabic and agglutinate forms of speech. The Tungus, under the name *Manchu*, constitute the dominant population of China itself. The tribes under Chinese rule, in Manchuria, on the watershed of the Amu, are termed Manchu. The Manchu proper have a literature, with an alphabet modified from the Mongol. They are agricultural and industrial. They conquered China in 1644, and founded a dynasty. The Tungus on the shores of Okotsk call themselves Lamut, from Lamu, the sea. Some Tungus call themselves Boji or men, others Donki or people.

The *Mongol*, properly Mang-ku, have four branches, viz. the Eastern Mongol, the Kalmuk, the Buriat, and the Hazara or Aimaq. Originally the Eastern Mongol got from the Chinese the nickname of Ta Ta, but since the 8th century they have been called Mang-ku (Mongol). They inhabit the eastern half of Gobi, and are divided into the two borders, the Schara towards the south, and the Kalka, their northern neighbours.

The *Chinese* are now spreading through the Archipelago, east of Asia, and America. The immigrants evince great physical strength and endurance, much intellectual energy and perseverance. They have great power of organization, and give each other mutual assistance and support. Wherever bodily strength and manual dexterity have to be combined, the Chinese in the east of Asia have no equal, and they are seen wherever mines have to be worked, new agricultural products introduced, or factories erected and put to use; expert in all artisan and handicraft work. While the British and German settlers refuse to marry the native women with whom they associate, and leave the offspring in bastardy, the Chinese invariably raises his Burmese, Cambodian, Malay, or Siamese helpmate to the full rank of wife, treats and honours her as such, and bestows on her children all the advantages to be conferred by acknowledged legitimacy, backed by strong parental affection.

There are three prominent philosophies in China, following the views of Kung-tsze (Confucius), of Laou-tse, whose religion is known as the Taou, and the Buddhists who adhere to the teachings of Sakya. The doctrines of Confucius are based on the moral consciousness of right and wrong, which he believed to be inherent in all men. The Taouist morality is based on the Kan-yong-peen, or book of retribution, in which it is inculcated that the punishments of sin and rewards of good doing fall in this life. Sakya's followers teach a strictly moral code, but in Tibet there is a hierarchy which exercises political power. The Woo-wei-keaou is a sect of China. Muhammadanism and Christianity have made progress. In the state religion there are sacrifices to the heavens (Teen), to Te, the earth, and to Tae-meaou, the great temple of ancestors; and education of the people is regarded as essential to the welfare of the state. Women are rarely educated. Marriage is universal; polygamy is allowed. Infanticide and sale of children are practised.

FORMOSA, called *Tai-wan* by the Chinese, is a large island in the China Sea, separated from China by a stormy strait, 80 or 90 miles wide. It stretches as far north as lat. 25° N., and this is the most northerly limit of the Malay language, Malay words being found in the language of the aborigines, and the inhabitants of the interior, who are supposed to be of Malay origin, are in several groups, each speaking a dialect of their own. On the easterly side of the island is a belt of level land near the sea, but it is rugged and mountainous in the interior. The Chinese occupied it about A.D. 1430. The Dutch took possession of it in A.D. 1634, but were dispossessed by a Chinese adventurer in 1661, though a small body of men claim to be their descendants. The Chinese colonies are mostly on the N. coast. The central and southern districts are inhabited by the aborigines. The Formosa tribes are Favorlong, Jakih, Pepukhwan or Peppohoan, Sideia, Tilloi, Yukan.

The barbarian tribes worship a good and evil spirit, with women priestesses termed Inib. They are, fond of out-of-door merry-makings, and during the annual nine days' festival, they drink and play and give themselves up to sensual pleasures. Marriage of men is not allowed until they be 21 years of age. Libations to the earth and sky are poured out, and they are married, but the wife remains in her father's house, and until the husband reach the age of 40, he can only visit the wife by stealth at night, and daylight sees the signal for his quitting it. It is said that divorces are very frequent, and children born before the mother is 37 years of age are allowed to live.

The Peppohoan race of this island are descendants of the savage tribes who inhabited the plain country, and, being conquered by the Chinese, have mixed with them to a great extent. They are a promising race, and accept Christianity readily. The Chinese residents prefer Peppohoan women for wives, being finer and stronger women, prettier and more useful, than those of the Chinese. The savage tribes of Formosa tattoo their faces; the men wear a tunic of coarse grass-cloth, and the 'fighting women' a tunic and a short petticoat or piece of grass-cloth. Their huts are neatly built of bamboo and palm leaves. Over some of the doors are seen rows of the skulls of wild animals, the deer, the boar, the monkey; and one of them displayed the tails of six Chinamen tied up in a bunch, which he said had belonged to men he had killed.

COREA or Korea the Manchu call Solgo; Kao-li is the Chinese name. Its area has been stated at 236,784 square kilometres, and its population at from 7½ to 15 millions. The people use rice, barley meal, and flour of millet. The Coreans were driven out of East Tartary into the peninsula which they now occupy. Their country was subsequently invaded by the Mongols, on which occasion the Siogour Yoritomo defeated Kablai Khan. They have since been conquered by the Japanese. Its people are supposed to be a mixed race, descendants from Tartars, Chinese, and Japanese. They have flat faces, oblique eyes, broad cheek-bones, strong black hair, and scanty beard; they are strongly made, their skin varies from tawny or yellow to brown, wheat, or straw colour, and reddish-yellow. They have a mixture of the Chinese and Japanese physical features. Their religion is Buddhist; their alphabet and language differ from the Chinese.

JAPAN and its dependencies (the Kuriles, Loo-Choo, and Benin Islands) are in area 382,447 square kilometres, and population 36,357,312. The Japanese are a short-statured Mongoloid race, intelligent and progressive, ruled over by an emperor. The Aino were the aborigines of the Japanese islands, but only a remnant of them now exist in the island of Yezo. The Aino, the Ghiliak, and Yenesei Ostiak respect the bear. The true Ostiak hang the skin on a tree, pay it homage, and beg the animal's pardon for having killed it. They also swear by the bear. Their severe treatment by the Japanese has led them to other countries. They occupy the southern part of the island of Saghalin, which is in possession of the Japanese. The Aino are of short stature, with broad faces of the Mongol type. They are a timid race, their limbs are hairy; they have bushy beards and long tangled hair, large heads and clumsy figures; the expression of their faces is that of good-nature combined with stupidity. According to M. Rosney, their language is dissimilar to Japanese, and that spoken in the Kuriles and in the island of Yezo is also different from Japanese.

The *Loo-Choo* or *Lieu-chou Islands* lie to the N.E. of the Patchu group, and consist of one large island surrounded by smaller ones, the large island being of considerable size and well peopled. It extends from lat. 26° 3′ to 26° 53′ N., and long. 127° 34′ to 128° 25′ E., being 58 miles long, and about 10 or 12 miles broad. In language and physical form the Loo-Choo islanders resemble the Japanese, their Buddhism being more imperfect, and their manners more simple.

SAGHALIN, SAGHALIEN, or **TARAKAI,** long believed to be a peninsula, is an island lying between lat. 45° 54′ 2″ and 54° 24′ N., and long. 141° 40′ and 144° 46′ E. It is about 600 miles in length, and from 20 to 100 broad. It is well wooded and fertile, and coal is found in many places, especially about Jonquiere Bay. Two-thirds of the northern part belong to Russia, and is peopled by Ghiliak.—*Aitcheson's Treaties; Asiatic Researches; Mr. F. H. INDIAN NAVY. In A.D. 1609, in the early years of the English East India Company's trade with India, the need for the protection of their shipping led to Sir Henry Middleton being sent with three ships to Surat. His flag-ship ran aground at Mocha, and he was detained more than a year by the Arabs, and, after reaching Surat, he withdrew, under the advice of both the native and the English merchants, and drove a kind of filibustering trade in the Red Sea. Afterwards he was joined by Captain John Saris, who was sent out with three more vessels to protect the Indian trade. Captain Hippon, who was despatched about the same time in a single ship, the *Globe*, founded the factories in the Bay of Bengal which developed into the Presidencies of Calcutta and Madras. The victory of Captain Best over the Portuguese fleet in the roadstead of Surat, October 29, 1612, which two years later was eclipsed by the operations of Captain Downton, followed up by exploits in the Persian Gulf, crowned by the capture of Ormuz, disposed of all fear of Portuguese ascendency in the east, and firmly established this East India Company's trading privileges. In 1615 a local marine force of ten grabs and galivats was established, which, added to the small home squadron, formed the nucleus of the future navy of the Company. The right of trial by common and martial law, as in the royal service, was in 1624 conceded to the Company's commanders and agents abroad, to which was added that of building forts for the security of their trade, the earliest of these being that of Fort St. George at Madras, erected in 1640. The acquisition of Bombay in 1668 gave the Company a valuable port and naval station, and their service, —thenceforth known as the Bombay Marine,— now amounting to a respectable fleet, was not long in distinguishing itself in the defence of Surat and Bombay against the Mahrattas, as well as in repelling the threatened attack of the Dutch in 1672. On the pacification which ensued, the English Company's ships were entrusted with the police of the Southern Indian seas, the protection of the Red Sea being assigned to the Dutch, and that of the Persian Gulf to the French. The suppression of piracy became from the first one of the prominent duties of the service. Surat, where the larger vessels had originally been constructed under native foremen, gave place in 1735 to Bombay as the depôt for building purposes. The Company's fleet then numbered more than 20 vessels, one of them, the *Revenge*, mounting 28 guns, 20 of which were twelve-pounders. This fine frigate was lost, with all hands, in a gale, April 20, 1782, after having done good service in the war with France and Hyder Ali. In the reduction of Pondicherry, August 23, 1793, the capture of Ceylon in 1795, and the attack upon the Dutch in the Moluccas in 1801, the services of the Bombay Marine were of the utmost value; nor were they less conspicuous in the taking of Mauritius in 1809, in the reduction of Java in 1811, in the attack upon Mocha in 1820, and in the operations against the Joasmi pirates in the Persian Gulf, who, from the year 1797, had given unintermitting trouble to the protective cruisers of the Company. The Burmese war, from 1824 to 1826, gave occasion to many a brilliant display of skill and valour, for which the thanks of the Directors and of both Houses of Parliament were tendered at the conclusion of peace. Remodelled under the charge of Sir Charles Malcolm, brother to the Governor of

Bombay, as superintendent, the service was constituted as a marine corps, with the title of the Indian Navy, under an order dated May 1, 1830.

Under Sir Henry Leake, the naval expedition, 1852–53, which aided in the reduction of Burma, was ably planned and carried out, followed up by no less successful operations in the war with Persia in 1856–57. The latest and not the least brilliant of the warlike services of the Indian navy was that rendered by the detachment which, after aiding in the suppression of panic in Calcutta, pushed up the country to the relief of the beleaguered Europeans. But no officer of the service was ever honoured with knighthood or with a military order. Until the final hauling down of the flag in Bombay harbour at noon of the 30th of April 1863, its duties—faithfully, zealously, and often brilliantly discharged—brought with them little more reward than that which is proverbially said to be conferred by virtue upon itself. Nevertheless its band of skilled officers had given to the world a body of charts the value of which it is impossible to overstate, and the hydrography of the Indian coasts and seas had been carried to a degree of perfection which is beyond all proportion to the slenderness of the means under command. Among the most notable are the surveys of the Red Sea by Elwon and Moresby, those of Mesopotamia by Lynch, Campbell, and Felix Jones, those of the Coromandel coast by Lloyd and Fell, those of the south-east coast of Arabia by Haines and Saunders, with the more recent charts of the Persian Gulf by Constable and Stiffe, and those of the Kattyawar and Malabar coasts by Commander Dundas Taylor. To the last-named officer maritime interests are indebted for the Wind and Current Charts, which give so much security to the navigation of the Indian seas; and above all, for a Sailing Directory, founded on Horsburgh. To the impression produced by Captain Taylor's memorandum on the existing state and deficiencies of the Indian marine surveys, was due the seasonable establishment, about 1873, of a special department of that nature at Calcutta, of which Commander Taylor was made superintendent, with a staff of well-chosen assistants. In the year 1858 the whole service had been summarily broken up, the vessels were condemned to be sold, the officers pensioned off, the official records disposed of as waste-paper. In his anniversary address to the Royal Geographical Society in 1863, Sir Roderick Murchison said its services had been varied, useful, and honourable: the beneficial and enduring results of its suppression of piracy and the slave trade are well known, and the widespread and lasting utility of the excellent surveys made by its officers hold an equally prominent place.—*East India Marine Surveys.*

INDIAN OCEAN is bounded on the west by the coast of Africa to the meridian of Cape L'Agulhas, continued to the antarctic circle. The antarctic circle is its southern limit as far as the meridian of Tasmania, but strictly the western coast of Australia, continued northwards to the larger islands of the Asiatic Archipelago and the Bay of Bengal. One of the large currents of water which have their origin in the Indian Ocean, is the well-known Mozambique current, called at the Cape of Good Hope the L'Agulhas current. Another makes its way through the Straits of Malacca, and, being joined by other warm streams from the Java and China Seas, flows out into the Pacific, like another Gulf Stream, between the Philippines and the shores of Asia. Thence it attempts the great circle route for the Aleutian Islands, tempering climates and losing itself in the sea on its route towards the N.W. coast of America. There is a counter current of cold water between it and the China shore.—*Findlay.*

INDIAN YELLOW, a dye procured from the urine of the cow, after eating decayed and yellow mango leaves; other authorities refer it to camels' dung. Analysis shows it to be composed chiefly of purreic acid, combined with magnesia. Its Hindi name is Purree.—*Simmonds' Dict.*

The plants which afford indigo dyes are grown chiefly in the East and West Indies, in the middle regions of America, Colombia, and Florida, in Africa, and in Europe, and are mostly species of the genera Indigofera, Isatis, Tephrosia, and Nerium. Indigofera tinctoria furnishes the chief indigo of commerce; produced in Bengal, Madagascar, the Isle of France, and St. Domingo. The Indigofera disperma, a plant cultivated in Spain and America, grows higher than the preceding, is woody, and furnishes a superior dyestuff. The Guatemala indigo comes from this species. Indigofera anil grows in the same countries, and also in the West Indies. The Indigofera argentea, which flourishes in Africa, yields little indigo, but it is of an excellent quality. I. glauca is the Egyptian and Arabian species. There are also the I. cinerea, I. erecta (a native of Guinea), I. hirsuta, I. glabra, and several other species. Indigo of an excellent quality has been obtained in the East from Gymnema tingens, or Asclepias tingens, a twining plant. Species of Ruellia furnish the well-known room dye of Assam, and the Chinese obtain a blue dye from the Ruellia indigotica, as also from the Isatis indigotica. Wrightia tinctoria, an evergreen with white blossoms, affords some indigo, as do the Isatis tinctoria, or woad, in Europe, and the Polygonum tinctorium, with red flowers, a native of China. Baptista tinctoria furnishes a blue dye, and is the wild indigo of the United States. Plants of other genera are also employed for obtaining indigo, as Marsdenia tinctoria, Galega tinctoria, but especially the former. Dr. Bancroft (i. p. 190) also adduces Spilanthes tinctoria, Scabiosa succisa, Cheiranthus fenestralis, also a species of Bignonia and a Tabernæmontana, on the African coast, with Anorpha fruticosa and Saphora tinctoria, as all yielding a blue dye, or coarse sorts of indigo. It is obtained in Nubia from the Tephrosia apollinea, and on the banks of the Niger from the T. toxicaria; and Indigofera Australis of Australia produces a good indigo. A small quantity has been produced by chemists in the laboratory.

Indigo is produced largely in Bengal and N. India, from the 20th to the 30th deg. of north latitude; also in the provinces of Tinnevelly, Cuddapah, and the two Arcots of the Madras Presidency; in Java, in the largest of the Philippine

islands in Guatemala, Caraccas, Central America, and Brazil. It is also cultivated in some of the West India islands, especially St. Domingo, but not in large quantities. The varieties recognised in commerce are—1st, Bengal, which, from the care taken in its preparation, and the large scale on which it is made in that district, is the best; and its various gradations of quality, ten in number, varying from 9s. to 5s. per lb., are always kept distinct. In other sorts, they are usually much mixed. 2d, Madras and Kurpah; 3d, Oudh; 4th, Manilla; 5th, Java; and 6th, South American. The last is packed in serons or cases of dried ox-skin, and its qualities are distinguished as follows:—1st, Flores; 2d, Sobres; and 3d, Cortes; all the others are in wooden chests, containing about 250 lbs. each. Indigo has been manufactured from time immemorial in the district of Multan, and the country west of the river Indus, called the Derajat. It is exported, but not to any great extent, in the direction of Afghanistan.

In the year 1855, the out-turn of the Bengal crop was 128,551 maunds; and in the 13 years from 1859 to 1871 inclusive, the out-turns ranged from 90,500 to 113,550 maunds, as under:—

1859, .	106,500	1864, .	100,618	1868, .	105,501
1860, .	113,500	1865, .	102,009	1869, .	88,999
1861, .	68,000	1866, .	112,200	1870, .	90,500
1862, .	110,000	1867, .	96,000	1871, .	95,700
1863, .	93,800				

In later years the export from all India were—

The one-half to the United Kingdom, an eighth part to France, and a twelfth part to Austria; the United States, Persia, and Italy take the rest.

Its total imports into the United Kingdom in the years 1867 to 1881 ranged between 58,283 and 106,307 cwt., varying greatly from year to year; the values, £1,712,995 and £2,937,224.

Since the year 1833, in Bengal, the cultivation of the indigo plant and manufacture of indigo have greatly fallen off. In the troubles which followed the famine of 1769, the cultivation had declined. During the years which followed 1786, Lord Cornwallis, and with him Sir John Shore, re-established it under extraordinary privileges. Minute accounts of how the plant should be grown and the drug beaten out, written by high officials, appeared in the public prints. The Company's servants were permitted, nay, encouraged, to remit their savings in indigo investments, in spite of the croakings of an alarmist, who foretold the failure of such efforts by reason of the manufacture having been successfully introduced into the Brazils, which were nearer the European market. For a time, indeed, the Government was shy of actually engaging in the cultivation, and contented itself with winking hard at its officers, who were willing to venture on their own account. But the revival of the indigo planting, which took place in the ten years subsequent to 1786, was conducted under the auspices of Government, though at the risk of its commercial residents. For long it continued to be the most profitable part of these officers' private trade, and more than one great Calcutta house owed its origin to their operations. The valleys of the Damuda and of the Adjie, and indeed all Bardwan, were dotted with factories.

The Indigo of Bengal is divided into two classes, called in commercial language, Bengal and Oudh; the first being the produce of the southern provinces of Bengal and Behar, and the last that of the northern provinces, and of Benares. The first class is in point of quality much superior to the other. The inferiority of the Oudh indigo is thought to be more the result of soil and climate than of any difference in the skill with which the manufacture is conducted. The indigo of Madras, which is superior to that of Manilla, is about equal to ordinary Bengal indigo. The produce of Java is superior to these. Large quantities of indigo, of a very fine quality, are grown in Sind. Mr. Wood, deputy collector of Sukkur, was of opinion that Sind is much better suited than Bengal for the production of this dye-stuff; the alluvial soil on the banks of the Indus is equal in richness to that on those of the Ganges, and the climate seems equally well suited for the growth of the plant. But in two years out of three, the crops of the Bengal plants are injured by excessive inundations, while the work of gathering and manipulation is necessarily performed during the rainy season under the greatest imaginable disadvantages. In Sind, on the other hand, the inundation of the river is produced almost solely from the melting of the snows in the Himalayas, and it is not liable to those excessive fluctuations in amount, or that suddenness in appearance, peculiar to inundations chiefly arising from falls of rain. The Ganges sometimes rises ten feet in 24 hours, and at some parts of its course its depth is at times forty feet greater during a flood than in fair weather; while the Indus rarely rises above a foot a day, its extreme flood never exceeding fifteen feet, the limits and amount of the inundation being singularly uniform over a succession of years. Moreover, as rain hardly ever falls in Sind, and when it does so, only continues over a few days, and extends to the amount of three or four inches, no danger or inconvenience from this can be apprehended. The districts of Kishnagar, Jessore, and Murshidabad, in Bengal, ranging from 88° to 90° E. longitude, and 22½° to 24° of N. latitude, produce the finest indigo. That from the districts about Bardwan and Benares is of a coarser or harsher grain. Tirhut, in lat. 26° N., yields a tolerably good article. The portion of Bengal most propitious to the cultivation of indigo, lies between the river Hoogly and the main stream of the Ganges.

The culture of indigo is a very precarious trade, not only in so far as respects the growth of the plant from year to year, but also as regards the quantity and quality of the drug which the same amount of plant will afford in the same season. The fixed capital required in the manufacture consists simply of a few vats of common masonry for steeping the plant and precipitating the colouring matter, a boiling and drying-house, and a dwelling for the planter. Thus a factory of ten pairs of vats, capable of producing, at an average, 12,500 lbs. of indigo, worth on the spot £2500, will not cost above £1500 sterling. The buildings and machinery necessary to produce an

equal value in sugar and rum, would probably cost about £4000.

The indigo of the Indigofera tinctoria is obtained by subjecting the plant to a fermentive process, in large masses, in tanks. After its removal, the water is stirred and beaten by paddles, its colour passes to a blue, and the suspended particles settle to the bottom, forming a blue sediment, which, after the water is drawn off, is dried in the sun and cut up into cakes. The time for sowing varies in Bengal proper, Tirhut, and the several districts of the N.W. Provinces. In Bengal, sowings prevail in the month Kartik (October), hence called Kartiki. In Tirhut, Sarun, and Champarum, in which there is rich alluvial land and a natural moisture, the sowings are in February (Phalgun), and the factories are known as Phalguni. The preparation of the land in Tirhut is much more elaborate than in Bengal proper or the N.W. Provinces, and altogether a more advanced system prevails there, and the work is regularly spread over the whole year. In the N.W. Provinces and in Oudh, the sowings chiefly take place on the first fall of rain in June (Asarh), hence the factories are known as Asarhi, but these have sowings also called Jamowa, which is a sort of compromise between the Phalguni and Asarhi periods. An artificial moisture is secured in February and March by irrigation, and small patches of indigo are sown near every available well.

In the *N.W. Provinces* the planter's work comes on him all in a heap in June or July (Asarh and Sawan). He has sowing, cutting the stumps left of the past year's crop, manufacture of the new crop, packing and despatch of the indigo. The fresh plant is filled into steeper vats, and pressed down with beams of wood interlaced with bamboos; water is then let in from the reservoir, and steeping or fermentation allowed to go on for ten or twelve hours, according to the state of the atmosphere. After fermentation is complete, the liquor is drawn off into a lower beating vat (hauz mahye). Ten or twelve men now enter the vat with shovels; they are called mahuneah or beaters; they beat (mahye) from one and a half to two hours, and by this means a great quantity of carbonic acid gas is disengaged, and the particles of indigo get thoroughly exposed to the atmosphere, and obtain their requisite supply of oxygen, after which they granulate. The vat is now allowed to settle, the indigo gradually subsides, and the water, which separates, is drawn off, and is of the colour of dark sherry. A sediment is left at the bottom of the vat, which is collected and discharged into a cistern alongside, and runs through a strainer (channah) into the boiler (karah), when it is heated to boiling point. From the boiler the liquid indigo (mal) is run on a table on which is spread a sheet, and allowed to filter through until the liquid runs clear. The day following, the indigo, fully drained, is of the consistency of curds, when it is removed to the press-house, put into presses, and subjected to severe pressure. With the aid of nuts and screws, a solid mass is thus obtained, which is taken to the drying-house (bari khana), placed on a cutting frame, and cut with brass wire into cubes or cakes (goti or bari). The cakes are placed on wicker-work frames to dry. A whitish efflorescence soon covers the cakes, and a strong smell of ammonia prevails throughout the drying-house. When quite dry, the cakes are taken down, brushed, assorted according to colour and quality (rang milan), and packed into boxes for export, after which the N.W. planter has nothing to do till the following June.

In *Tirhut* the preparation of the land is commenced in October. All the old stumps are dug out, the land is twice ploughed (somra or docha), and a flat roller (henga) passed over, to break the clods and keep in the moisture. If the sith or jhuthi, or refuse indigo stalks (a rich manure), has not already been spread on the land, and allowed to decompose, it is now spread, and, to save time, set fire to, and the ashes well ploughed in; then all the smaller clods are pulverized, and all grass and refuse removed. The land is then finally ploughed and rolled, and allowed to rest till the end of January. In the beginning of February, sowings begin and last to the end of March. In April and May, the young plant is weeded. About the middle of June or first week in July, manufacturing begins, and lasts without interruption till the end of September. In October the cakes are taken down from the shelves where they have been drying, brushed, packed in boxes weighing about three factory maunds each, marked and numbered, and finally sent down to Calcutta for sale and shipment to Europe, China, Persia, and America.

In *Bengal proper*, indigo is cultivated at a season when nothing else is on the ground. It occurs intermediately between the two great crops of the year, and it has puzzled Boards of Revenue before now to decide whether it is a rabi or kharif crop. It is cleared off the ground in time for another crop, and it is far from being an exhausting crop. The ryots know this well, and all they get for their indigo is additional to their income, though, at a strict calculation, it would not cover the expense of the cultivation.

After having ploughed the ground in October, November, and the beginning of December, they sow the seed in the last half of March and the beginning of April, while the soil, being neither too hot nor too dry, is most propitious to its germination. A light mould answers best, and sunshine, with occasional light showers, are most favourable to its growth. Twelve pounds of seed are sufficient for sowing an acre of land. The plants grow rapidly, and will bear to be cut for the first time at the beginning of July; nay, in some districts so early as the middle of June. The indications of maturity are the bursting forth of the flower-buds and the expansion of the blossoms, at which period the plant abounds most in the dyeing principle. Another indication is taken from the leaves, which, if they break across when doubled flat, denote a state of maturity. But this character is somewhat fallacious, and depends upon the poverty or richness of the soil. When much rain falls, the plants grow too rapidly, and do not sufficiently elaborate the blue pigment. Bright sunshine is most advantageous to its production. The first cropping of the plants is the best; after two months a second is made, after another interval a third, and even a fourth; but each of these is of diminished value.

The plant is sold in Bengal by the bundle, which is measured by a chain. In the Doab it is

sold for 1 rupee for 5 to 6 maunds. 200 to 225 maunds of plant to a maund (75 lbs.) of indigo, is a fair average produce. Therefore it would cost about 36 to 40 rupees for the plant necessary to make 75 lbs. of indigo. The expense of manufacturing would be but little.

The finest quality of dye is produced by factories in the Jessore and Kishnagar districts. An ordinary plantation there comprises 4000 acres of land, which may yield on an average 1000 maunds of 82 lbs. each. The annual outlay for labour, seed, etc., on this one branch of industry, is seldom less than a million and a half sterling, of which fully nineteen-twentieths are expended by Europeans. The cultivation is generally one of hazard, as the fields are always liable to be swept of their produce during any heavy or sudden fall of rain. The plant often suffers from long drought. With a few good seasons, favourable soil, a thorough knowledge of the business, and a certain degree of industry, an indigo planter may reckon on realizing an independence in less than a dozen years, supposing him to have started with ample means.

In South Arcot, Kurnool, and Cuddapah, indigo is largely cultivated, and especially in the last-named district, which is well suited for the cultivation of the staple. The average growth in the Madras Presidency covers 304,676 acres, two-thirds of which are in the South Arcot, Cuddapah, Nellore, Kistna, and Kurnool districts. Cuddapah indigo is grown by ryots on contract to deliver so much indigo plant at the factory at a fixed rate per bundle. The agents of the Madras firms avoid occupying the same taluks, so that there is no system of forcing the cultivation upon the ryots, who are much too independent to submit to such a process. The trade is quite free, and the system of advances to the tenantry has done a great deal to improve their condition, as well as facilitated the collection of the revenue. The cultivation of indigo is not fixed; it extends or contracts with the demand for the article. It has, however, been steadily increasing of late years; many of the richer ryots cultivate it, and manufacture it on their own account. Native capitalists also engage in the trade. Mr. Wedderburn estimated the cultivation and manufacture of indigo by natives, without European superintendence, in the ratio of 10 to 1 of that produced under European management. Eight lakhs of rupees were drawn by bills in 1859, on the Cuddapah Treasury, by Madras mercantile houses. And eight lakhs scarcely represent one-half of the sum paid for indigo, the out-turn of which, on 36,000 acres, cultivated in the year 1860, at an average profit of 50 rupees per acre, will show a value of 18 lakhs of rupees.

Mr. Rohde (MS.) mentions that two methods of preparing indigo are in use in the Madras territories. That called Karpa indigo, and which is known in the market as Madras indigo, is prepared from the dried leaves; the Bimlipatam indigo is from the recent leaves upon the Bengal plan. He says that in the indigo factories of Bengal, using the recent leaves, there are two large stone-built cisterns, the bottom of the first being nearly upon a level with the top of the second, in order to allow the liquid contents to be run out of the one into the other. The uppermost is called the fermenting vat or the steeper, its area is 20 feet square, and its depth 3 feet; the lowermost, called the beater or beating vat, is as broad as the other, but one-third longer. The cuttings of the plant as they come from the field are stratified in the steeper till this be filled within 5 or 6 inches of its brim. In order that the plant during its fermentation may not swell and rise out of the vat, beams of wood and twigs of bamboo are braced tight over the surface of the plants, after which water is pumped upon them till it stands within three or four inches of the edge of the vessel, and an active fermentation speedily commences, which is completed within fourteen or fifteen hours, a little longer or shorter according to the temperature of the air, the prevailing winds, the quality of the water, and the ripeness of the plants. Nine or ten hours after immersion of the plant, the condition of the vat must be examined, for then bubbles appear, which rise like little pyramids, are at first of a white colour, but soon become grey, blue, and then deep purple red. The fermentation is at this time violent, the fluid is in constant commotion, innumerable bubbles mount to the surface, and a copper-coloured dense scum covers the whole. As long as the liquor is agitated, the fermentation must not be disturbed, but when it becomes more tranquil, the liquor is to be drawn off into the lower cistern. It is of the utmost consequence not to push the fermentation too far, because the quality of the whole indigo is thereby deteriorated; but rather to cut it short, in which case there is, indeed, a loss of weight, but the article is better. The liquor possesses now a glistening yellow colour, which, when the indigo precipitates, changes to green. The average temperature of the liquor is commonly 85° Fahr.; its specific gravity at the surface is 1001·5, and at the bottom 1003. So soon as the liquor has been run into the lower cistern, ten men are set to work to beat it with oars or shovels four feet long, called basquets; paddle-wheels have also been employed for the same purpose. Meanwhile two other labourers clear away the compressing beams and bamboos from the surface of the upper vat, remove the exhausted plant, set it to dry for fuel, clean out the vessel, and stratify fresh plants in it. The fermented plant appears still green, but it has lost three-fourths of its bulk in the process, or from 12 to 14 per cent. of its weight, chiefly water and extractive matter. The liquor in the lower vat must be strongly beaten for an hour and a half, when the indigo begins to agglomerate in flocks, and to precipitate. This is the moment for judging whether there has been any error committed in the fermentation, which, if so, must be corrected by the operation of beating. If the fermentation has been defective, much froth rises in the beating, which must be allayed with a little oil, and then a reddish tinge appears. If large round granulations are formed, the beating is continued, in order to see if they will grow smaller. If they become as small as fine sand, and if the water clear up, the indigo is allowed quietly to subside. Should the vat have been over-fermented, a thick fat-looking crust covers the liquor, which does not disappear by the introduction of the flask of oil. In such a case the beating must be moderated. Whenever the granulations become round and begin to subside, and the liquor clears up, the beating must be discontinued. The froth

or scum diffuses itself spontaneously into separate minute particles, that move about the surface of the liquor, which are marks of an excessive fermentation. On the other hand, a rightly fermented vat is easy to work; the froth, though abundant, vanishes whenever the granulations make their appearance. The colour of the liquor when drawn out of the steeper into the beater is bright green, but so soon as the agglomerations of the indigo commence, it assumes the colour of Madeira wine, and speedily afterwards, in the course of beating, a small round grain is formed, which on separating makes the water transparent, and falls down, when all the turbidity and froth vanish. The object of beating is threefold: first, it tends to disengage a great quantity of carbonic acid present in the fermented liquor; secondly, to give the newly-developed indigo its requisite dose of oxygen by the most extensive exposure of its particles to the atmosphere; thirdly, to agglomerate the indigo in distinct flocks or granulations. In order to hasten the precipitation, lime-water is occasionally added to the fermented liquor in the progress of beating, but it is not indispensable, and has been supposed capable of deteriorating the indigo. In the front of the beater a beam is fixed upright, in which three or more holes are pierced a few inches in diameter. These are closed with plugs during the beating, but two or three hours after it, as the indigo subsides, the upper plug is withdrawn, to run off the supernatant liquor, and then the lower plugs in succession. The state of this liquor being examined, affords an indication of the success of both the processes. When the whole liquor is run off, a labourer enters the vat, and sweeps all the precipitate into one corner, and empties the thinner part into a spout which leads into a cistern alongside of a boiler 20 feet long, 3 feet wide, and 3 deep. When all the liquor is once collected, it is pumped through a bag for retaining the impurities into the boiler, and heated to ebullition. The froth soon subsides, and shows an oily-looking film upon the liquor. The indigo is by this process not only freed from the yellow extractive matter, but is enriched in the intensity of its colour, and increased in weight. From the boiler the mixture is run, after two or three hours, into a general receiver, called the dripping vat or table, which, for a factory of twelve pairs of preparation vats, is 20 feet long, 10 feet wide, and 3 feet deep, having a false bottom 2 feet under the top edge. This cistern stands in a basin of masonry made water-tight with chunam hydraulic cement, the bottom of which slopes to one end in order to facilitate the drainage; a thick woollen veil is stretched along the bottom of the inner vessel to act as a filter. So long as the liquor passes through turbid, it is pumped back into the receiver. Whenever it runs clear, the receiver is covered with another piece of cloth to exclude the dust, and allowed to drain at its leisure. Next morning the drained indigo is put into a strong bag and squeezed in a press. The indigo is then carefully taken out of the bag, and cut with a brass wire into bits about 3 inches cube, which are dried in an airy house upon shelves of wicker-work. During the drying, a whitish efflorescence comes upon the pieces, which must be carefully removed with a brush. In some places, particularly on the coast of Coromandel, the dried indigo lumps are allowed to effloresce in a cask for some time, and when they become hard, they are wiped and packed for exportation.

In preparing indigo from *dried leaves*, the ripe plant being cropped is to be dried in sunshine from 9 o'clock in the morning till 4 in the afternoon during two days, and thrashed to separate the stems from the leaves, which are then stored up in magazines till a sufficient quantity be collected for manufacturing operations. The newly-dried leaves must be free from spots, and friable between the fingers. When kept dry, the leaves undergo, in the course of four week, a material change, their beautiful green tint turning into a pale blue grey, previous to which the leaves afford no indigo by maceration in water, but subsequently a large quantity. Afterwards the product becomes less considerable. The dried leaves are infused in the macerated steeping vat, with six times their bulk of water, and allowed to macerate for two hours, with continual stirring, till all the floating leaves sink. The fine green liquor is then drawn off into the beater vat; for if it stood longer in the steeper, some of the indigo would settle among the leaves and be lost. Hot water, as employed by some manufacturers, is not necessary. The process with dry leaves possesses these advantages, that a provision of the plant may be made at the most suitable times, independently of the vicissitudes of the weather, th indigo may be uniformly made, and the fermentation of the fresh leaves, often capricious in its course, is superseded by a much shorter period of simple maceration.

Dr. Walker mentions, in his Account of the Productions of Humamkunda in the Dekhan, that only one species, Indigofera tinctoria, is there used for the preparation of indigo, and it is collected in the rains, when the dye is commonly made. A strong decoction is made of the plant, —leaves, flowers, pods, and twigs being all indiscriminately thrust into a pot; when this is hot an infusion of Eugenia jambolana (rose-apple tree) is added, the indigo is immediately precipitated, and, the superincumbent water being drawn off, is dried in the sun.

The native plan of mounting the indigo vat merits attention. A potash ley is prepared from the ashes of the Euphorbia tiruculli (milk bush hedge) and lime, by mixing them together and then filtering; in this ley seeds of the Trigonella fœnum-grecum and Cassia tora are boiled, and, the liquor being strained, is poured into the water drawn off after the precipitation of the indigo, and the indigo itself is then put in, and some more potash ley is added.

In three or four hours the fermentation is perfected, and the vat filled for the purposes of the dyer. The theory of this vat is very obvious: extractive matter derived from the liquor in which the indigo was first boiled, with the sugar, starch, and mucilage of the two leguminous seeds, cause a fermentation by which the indigo is rendered soluble in the alkaline solution. The process is more simple than that usually followed by dyers in Europe, and is in perfect accordance with every rule of practical chemistry. There is no superfluity and no waste, and on the whole it is a most favourable specimen of native ingenuity and skill.

The indigo plant is cultivated in *China* to a great extent, as well as a species of polygonum,

from the leaves of which a colour is produced which nearly equals the blue obtained from indigo.

With the Javanese, who of all the Malayan race have certainly made the highest progress in all the useful arts, there is a specific term for dyeing or tinting,—madall; but the Malays express it only by Chalup, the word for dipping. Yet the only generic words which either of them possesses for colour, are the Sanskrit Warna and the Portuguese Tinta. Their colours are usually sombre,—little varied, but generally fast. Blues are always produced from indigo, yielded for the most part by the Indigofera tinctoria, as in other parts of India, but in Sumatra occasionally from the Marsdenia tinctoria, a plant of the natural order of the Asclepiaceæ. Kulaf or vasma, in the Panjab, is the pounded dried leaves of the indigo plant, used principally as a hair-dye after the previous application of henna (Lawsonia inermis). The powdered leaf of Indigofera anil is used in the cure of hepatitis.—*Capper's Three Presidencies; Powell's Handbook; Mr. Rohde's MSS.; Simmonds; Royle's Him. Botany; Annals of Indian Administration*, 1870; *Bonynge, America; Tomlinson's Dict.; Sirr's China; Cal. Cat. Ex.*, 1862; *Carnegy.*

INDIGOFERA, a genus of plants, some of them of great economic value, of the natural order Fabaceæ. About 150 species are known, many of which grow in the East Indies; amongst others—

cinerascens.	glandulosa.	pulchella.	viscosa.
cærulia.	hirsuta.		

There are also several undetermined species, the dug kenti and the kenti of Kaghan (qu. I. arborea), the doun-daloun of Burma, the latter a tree four or five feet in girth, found both in the Rangoon and Tounghoo districts, though it is scarce. Its white-coloured wood is adapted to every purpose of house building. An indigenous species of indigo is sometimes in Tenasserim used in forming a blue dye, and a wild indigo is found abundant in the Sutlej valley between Rampur and Sungnam, at an elevation of 7000 feet, in rocky hills. The species are indigenous in the equinoctial parts of Asia, Africa, and America; but there is some difficulty in ascertaining all the cultivated species, as the subject is usually neglected both by naturalists and cultivators.

Indigofera anil is said by De Candolle to grow wild in America, and to be cultivated in both Indies, as also along the Gambia in Africa. Drs. Wight and Arnott state they have not sufficient materials to determine if I. anil be a distinct species. According to Dr. Honigberger, I. anil is cultivated in some provinces of the Panjab, but more for dye than for medicine, the leaf (Vishaso danie, Sansk.) being used by the natives in hepatitis.—*O'Sh.* p. 292; *Honigb.* p. 289.

INDIGOFERA ARBOREA. *Roxb.* iii. p. 381.

Manthu of Chamba Hills.	Dug, Hast, Kast of Panj.
Jand of . Murree Hills.	Hathi, Kainti, . . ,,

A shrub of no value as a timber tree; elevation 7000 feet.—*Roxb.; Powell.*

INDIGOFERA ARGENTEA, *L.*, is I. cærulea and I. colorata, *Roxb.* Drs. Wight and Arnott state that it is the species cultivated in Egypt and Barbary for the sake of its indigo, and, according to Humboldt, also in America. I. argentea is shrubby, with round branches, which appear of a silky whiteness from appressed pubescence.—*Voigt.*

INDIGOFERA ASPALATHOIDES. *Vahl.*

I. aspalathifolia, *Roxb.*	Lespedeza juncea, *Wall.*
Aspalathus Indicus, *Linn.*	
Manili, ... Maleal.	Shiva nimba, . . Sansk.
Manneli, . . . ,,	Shevenar vembu, . Tam.

A shrubby, low-growing plant of the Peninsula of India. The small leaves, flowers, and tender shoots being supposed to possess cooling demulcent and alterative properties, are prescribed in decoction in leprous and cancerous affections. Rheede tells us that from the root of it an oil is extracted which is of use in erysipelas.—*Ainsl.; Voigt.*

INDIGOFERA CŒRULEA. *Roxb.*

I. brachycarpa, *D. C.*	Kar-nili, ... Tel.

This plant grows in the Dindigul Hills and the ajamundry Circars, and Dr. Roxburgh states that it comes near to I. argentea, *Linn.* De Candolle inquires whether this be sufficiently stinct from I. tinctoria. It is an erect shrubby species, growing in dry, barren, uncultivated round to the height of three feet, and higher in good garden soil. It flowers during the wet and cold seasons. The leaves are pinnate. Dr. Roxburgh states that he extracted a most beautiful light indigo from the leaves of this plant, and in greater quantity than he ever could from the common indigo plant, or even from Nerium tinctorium. The process he adopted was similar to that practised with the leaves of Nerium tinctorium, or the scalding process.—*Roxb.*

INDIGOFERA ENNEAPHYLLA. *Linn.*

I. cæspitosa, *Wight.*	Hedysarum prostratum, *L.*
Chepu-naringi, Tam.	Chala pachchi, Tel.
Cherra gadan, Tel.	

Grows at Dindigul, Saharunpur, Prome, Segain. The expressed juice is given as an alterative by the native physicians in old syphilitic diseases.—*O'Sh.: Roxb.* iii. p. 376; *Voigt.*

INDIGOFERA GLANDULOSA. *Willde.* Barugadam, Tel. A small shrubby species, a native of moist rich lands amongst the Circar mountains. Flowers and ripens its seeds during the wet and cold seasons. The natives of the hilly countries make meal of the seeds, which they bake into bread, and use as an article of diet, when more agreeable food is scarce. Cattle are fond of the plant.—*Roxb.*

INDIGOFERA HETERANTHA. *Wall.*

Kathi, Kati, . . . Beas.	Kanti, Khenti, . . Hind.
Kathewat, ... ,,	Kiitz of . . . Kaghan.
Shagali of . . Chenab.	Katsu, Kaskei of . Ravi.

This, the commonest of the Himalayan species, is a shrub which is abundant in many places in the hills and the eastern skirts of the Suliman Range from 2500 to 8000 feet. In Kashmir and elsewhere the twigs are largely used for making baskets, etc., and they form part of some of the twig bridges. In Kangra the flowers are used as a pot herb.—*Drs. Stewart, Cleghorn.*

INDIGOFERA LINIFOLIA, *Retz*, vegetates in both Peninsulas, in Bengal, and in the lower mountains of the Panjab. There the root is used in febrile eruptions.—*Honig.; Stewart.*

INDIGOFERA TINCTORIA. *Linn.*

I. Indica, *Lam.* I. sumatrana, *Gært.*

Tom, Tarum, Talum, MAL.	Aviri, Nilam, TAM., TEL.

This is the dye species generally cultivated in India, whence it has been introduced into Africa and America, and in the W. Indies is sometimes called Indigo Franc, or French indigo. It is said to be found wild along the sands of Senegal. It is grown occasionally by Karens and Burmese, and is cultivated in the Panjab. Indigo from the Indus is mentioned in Arrian's Periplus, and many traces of an export of it by the same river to Europe are found in the historical records as early as the middle of the 17th century. At present the chief tracts for its cultivation are in the Southern Panjab, near Multan, largely in Lower Bengal, in the Northern Circars, and throughout the North Arcot and the Cuddapah collectorates of the Peninsula of India.—*Roxb.; Stew.; Mason's Tenasserim; Eng. Cyc.*

INDIGOFERA TRITA. *Linn.* Indigofera cinerea, *Roxb.* A common herbaceous plant, with trifoliate leaves, and small, reddish-green flowers. —*Roxb.* iii. p. 371.

INDO-ATLANTIC, a designation of the Caucasian race of mankind, and of their language, usually styled Indo-European. Indo-Australian, a name applied by Mr. Logan to the Negroid race occupying the southern shores of Asia. Indo-Briton, a term by which the mixed races of European descent are known in British India. They are also called Eurasians, East Indians, and half-castes. Many, however, who so call themselves are Creoles of pure descent, but Creole is not used in India. Indo-Chinese races occupy the low lands near the Brahmaputra but the term is applied strictly to the people occupying the countries between India and China. Indo-European, a term applied by Dr. Prichard to a dynasty of languages, sometimes called Indo-Germanic, and by later writers also Aryan or Iranian. Indo-Germanic, a term employed to designate the Indo-Atlantic. Indo-European, or Caucasian race of man, and the family of languages spoken by them. Indo-Getic, a term in use to designate the Scythic Getæ race who settled in India and on its N.W. borders. Indonesia, a geographic and ethnic name suggested by Mr. Logan to designate the Eastern Archipelago.—*Campbell*, p. 49.

INDORE, a city on the left bank of the Katki, in Malwa, in lat. 22° 42′ N., and long. 74° 51′ E., and 1998 feet above the sea. It is the capital of the dominions of the maharaja Holkar. The state has an area of 8075 square miles, and population about 635,000 souls, lying between lat. 21° 24′ and 24° 14′ N., and long. 74° 28′ and 77° 10′ E. It is nearly bisected by the Nerbadda river, and has the Chambal and its tributaries on the northern part. The state consists of many isolated tracts, and within it is the British cantonment of Mhow (Mau). It is bounded on the north by part of Sindia's dominions, on the east by the states of Dewas and Dhar and the district of Nimar, on the south by Kandesh district, and on the west by Barwani and Dhar. Like the rest of Malwa, the soil of Indore is fertile, consisting largely of the rich black loam known as cotton soil. The principal crops are wheat, rice, millets, pulses, oil-seeds, sugar-cane, cotton. The revenue of the state in 1878, £512,300; the expenditure, £416,600. The Residency or Rajkumar College at Indore, for the education of the sons of the chiefs and gentry of Central India, is affiliated to the Calcutta University.

Indore was captured by the British on the 24th August 1804. As a city, it is of modern date. That part of the Holkar capital called Old Indore was a small village, the site of which pleased Ahalya Bai, who encamped at it after the death of Mulhar Rao Holkar. The dominant race in Indore are Mahrattas, and there are a considerable number of Gonds and Bhils. There are several cotton mills in the state of Indore (one belonging to the Maharaja), which are in constant work. Opium manufacture is another important industry, and in 1877-78, 16,243 chests were exported from Indore.

INDO-SCYTHI and Indo-Scythian are terms employed to designate races who became early occupants of N.W. India. The Yuchi, established in Bactria and along the Jihun eventually bore the name of Jeta or Yetan, that is to say, Getes. Their empire subsisted a long time in this part of Asia, and extended even into India. These are the people whom the Greeks knew under the name of Indo-Scythi. The period allowed by all authorities for the migration of these Scythic hordes into Europe, is also that for their entry into India. The sixth century is that calculated for the Takshak from Sehesnagdes; and it is on this event and reign that the Puranas declare that from this period no prince of pure blood would be found, but that the Sudra, the Turshka, and the Yavan would prevail. All the Indo-Scythic invaders held the religion of Buddha, and hence the conformity of manners and mythology between the Scandinavian or German tribes and the Rajputs increased by comparing their martial poetry. The Indo-Scythi of Arrian were a Scythic tribe who had settled along the Indus. They attempted to penetrate eastward by way of Kandesh and Malwa, but were opposed by Vikramaditya. The Indo-Scythia of the Greeks was therefore the valley of the Indus, Northern Indo-Scythia being the Panjab proper, and occupied by the Med race, and Southern Indo-Scythia being Sind, occupied by the Jat, a tribe of the Abar hordes. Pliny calls the western region of the Caucasus, Scythia Sendica; and about this were congregated the Maidi, next to the Sindi and Kerketæ; a tribe of Arii or Arichi, who gave their name to an island of Aria, or Arietas, or river Arius; a tribe of Mactes or Mæotai, with towns named Madia and Matium; a tribe of Matiani, with a town of Mateta; a tribe of Kottæ, with a country called Kutais, and cities called Kuta and Kutaia; a tribe named Kolchi, with a mountain and a district called Koli; a tribe of Iberes, with a town called Iberia; a tribe called Buonomai, a district of Minyas, a city of Male; and a tribe of Baternæ, with a river called Bathys, and a port named Bata;—these names reminding the investigator of the Med, Kathi, Kol, Ahhir, Mina, Mallina, and Bhatti of the valley of the Indus. See India.

INDRA, the Hindu god of thunder, a personification of the sky, the chief of the Devata or Sura, the name being from the Sanskrit root Id, to be

glorious (vide Devata). The attributes of Indra correspond to those of the Jupiter Pluvius and Jupiter Tonans of the Greeks and Romans, and the Thor of Scandinavia, and as such he is the impersonation of the phenomena of the skies. He is represented as a white man sitting upon his celestial vahan, the elephant Airavati, produced at the churning of the ocean, and holding in his hand the vajra or thunderbolt. One of the Rig Veda hymns describes the contest of Indra, the lord of thunder, with Vritra, otherwise called A'hi, the personification of the rain-cloud; and those who know how important rain is to countries like India, can appreciate the joy that welcomes descending showers upon the parched and heated fields, and understand how the cloud which is supposed to imprison the waters is regarded as a demon, while the lightning that cleaves it, and sets them free to descend on earth, is worshipped as a beneficent deity. The following is Professor Wilson's translation of the hymn in the 32d Sakta:—

'I declare the former valorous deeds of Indra, which the thunderer has achieved: he clove the cloud; he cast the waters down (to earth); he broke (a way) for the torrents of the mountain.

'He clove the cloud, seeking refuge on the mountain; Twashtri sharpened his far-whirling bolt; the flowing waters quickly hastened to the ocean, like cows (hastening) to their calves.

'Impetuous as a bull, he quaffed the soma juice; he drank of the libations at the triple sacrifice. Maghavan took his shaft, the thunderbolt, and with it struck the first-born of the clouds.

'Inasmuch, Indra, as thou has divided the first born of the clouds, thou hast destroyed the delusions of the deluders, and then engendering the sun, the dawn, the firmament, thou has not left an enemy (to oppose thee).

'With his vast destroying thunderbolt, Indra struck the darkling mutilated Vritra; as the trunks of trees are felled by the axe, so lies A'hi prostrate on the earth.'

Indra takes a different position in each of the three periods of Hindu mythology. In the Vedic period he is the great being who inhabits the firmament, guides the winds and clouds, dispenses rain, and hurls the thunderbolt. In the Epic period he is still a principal deity, taking precedence of Agni, Varuna, and Yama. In the Puranic period he is inferior in rank to Brahma, Vishnu, and Siva. His heaven is called Swargaloka or Indra-loka, and his pleasure-garden or elysium, his city (sometimes placed on Mount Meru, the Olympus of the Greeks), his charioteer, his thunderbolt, his elephant, his bow (the rainbow) are all famed.

Nature-worship, with Indra as ifs chief deity, seems to have been holding its place until about B.C. 1500; but, in later mythologies, he is even vilified, and described as extremely licentious. And in the present state of Hinduism, in which every Hindu has a separate belief, and hero-worship, devil-worship, and lingam-worship are the prevailing forms, Indra is almost unheard of and unknown, is never invoked, and has been replaced by Vishnu and Siva, their wives and children and incarnations.

Amongst the earliest dissenters from Indra were the Yadu race under Krishna's influence. The Mahabharata makes Krishna say to Nanda, his adopted father, 'Why worship Indra as the Supreme God? O father! we are Vaisyas, and our cattle live upon the pastures, let us therefore cease to worship Indra, and pay our devotions to the mountain Govardhana.' Up to that time, it was to the heaven of Indra that the good who died were believed to proceed.

These changes indicate the strife between sects as the present forms of Hinduism were being eliminated. In one myth, Indra is depicted, like Argus, covered with eyes, and is thus called the thousand-eyed god. Having become enamoured of Ahalya, wife of the rishi Gautama, the rishi discovered his intentions, and bestowed on the god his curse that his body should be covered in a very extraordinary manner, which, on the contrition of the offending deity, he changed into eyes.

It is related that on one occasion, in the form of a shepherd boy, Indra robbed the garden of a peasant. In this theft he was detected. The story is told in a hymn—

'The sage musician chose;
He told how Sachi, soft as morning light,
Blythe Sachi, from her lord Indrani hight,
When through clear skies their car ethereal rose,
Fixed on a garden trim her wandering sight,
Where gay pomegranates, fresh with early dew,
Vaunted their blossoms new;
Oh! pluck, she said, you gems, which nature dresses
To grace my darker tresses.
In form a shepherd's boy, a god in soul,
He hastened, and the bloomy treasure stole.
The reckless peasant, who those glowing flowers,
Hopeful of rubied fruit, had fostered long,
Seized, and with cordage strong
Shackled the god, who gave him showers.
Straight from seven winds immortal Genii flew,—
Varuna green, whom foamy waves obey,
Bright Vahni, flaming like the lamp of day,
Cuvera, sought by all, enjoyed by few,
Marut, who bids the winged breezes play,
Stern Yama, ruthless judge, and Isa cold,
With Nairit mildly bold;
They with the ruddy flash, that points his thunder,
Rend his vain bands asunder.
The exulting god resumes his thousand eyes,
Four arms divine, and robes of changing dyes.'

To understand these allusions, it must be remembered that the Hindus have assigned regents to each cardinal and intermediate point of the compass. Indra being esteemed the first of firmamental deities, and especially the ruler of the east, that point is reckoned first, and the others are thus ruled:—Agni, south-east; Yama, south; Nairit, south-west; Varuna, west; Vayu, north-west; Kuvera, north; Isa or Isani, north-east. To which are sometimes added three other quarters or points, viz. above, governed by Brahma; below, by Naga or Sesha Naga, the king of serpents, otherwise named Vauki; and the centre, ruled by Rudra or Siva.

Indra is called Sakra in consequence of being the evil adviser of the demons or asura, by whom he was so often driven from heaven; but also, with mythological inconsistency, Pakushasani, he who governs the gods with justice; Shatkratu, he to whom a hundred sacrifices are made; Vitraha, Bularati, and Numuchisadana, the destroyer of the giants; Urisha, the holy; Meghusadana, he who is borne on the clouds, etc., etc. Indra possesses the following blessings, produced at the churning of the ocean:—Kamdenu, the all-yielding cow; Pariyataka, the tree of plenty; and Uchisrava, the eight-headed horse. The princes of Kangti, the rajas of Assam, and other chiefs in the eastern parts of India, claim to have derived their origin from Indra.

One of his numerous names is Dyupeti, or, in

the nominative case, before certain letters, Dyupetir, which means the Lord of Heaven. He may be considered as the Jove of Ennius, in his memorable line—

'Aspice hoc sublime candens, quem invocant omnes Jovem,'

where the poet clearly means the firmament, of which Indra is the personification.

Indra is fabled to reside in the celestial city of Amravati, where his palace Vaijayanta is situated in the garden Nandana, which contains the all-yielding trees Pariyataka, Kalpadruma, and three others similarly bountiful. He rides the elephant Airavati, driven by his charioteer Matali, and he holds the weapon Vajra or the thunderbolt, and he is hence named Vajrapani. His chief musician is named Chitra-rat'ha, who rides in a painted car, which on one occasion was burned by Arjun, the confidential friend and agent of Krishna or the sun. The water-spout is said to be the trunk of his elephant, and the iris is appropriately called his bow, which it is not deemed auspicious to point out. Menu says, 'Let not him who knows right from wrong, and sees in the sky the bow of Indra, show it to any man.' His consort is Indrani, or Aindri, or Mahendri, also named Pulomaya, sometimes Powluni and Sachi, and she is very virtuous as well as beautiful.—*Williams' Nala: Coleman; Menu; Moore; Cal. Rec.; N. Br. Rev.; Sir W. Jones' Hymn to Indra*, xiii. p. 275.

INDRABHUTI, son of Vasubhuti, one of the Ganadharas or masters of the Jain schools, the same with Gautama.

INDRADWIPA or Gandharvachanda, a division of the Old Continent. Has been supposed to be the Orkney Islands, but also Japan.

INDRAGIRI, a hill at Sravana Belgola in the south of India, has the oldest known Jain inscription. It records an emigration of Jains from Ujjain, under the leadership of Swami Bhadra Bahu, the last of the Sruta Kevalis, who was accompanied by Chandragupta, king of Pataliputra. Its date is supposed to be about the 3d century B.C.—*Grouse*, p. 49.

INDRAJIT, in Hindu legends the conqueror of India. The term is Sanskrit, from Jee, to conquer. He was the bravest and most powerful of the sons of Ravana. In the war which Rama carried on against Ravana. Indrajit's bravery was very conspicuous, but at the close of the war he was slain by Lakshmana.

INDRA-LOKA, called also Swarga, the heaven of Indra, built by Visvakarma, a son of Brahma, and architect of the gods.

INDRAPRASTHA, an ancient town of Pandava, Kaurava, and Yadava times. Its ruins are pointed out half-way between Dehli and the Kutub. Indraprastha and Dehli were about five miles apart, the one on the Jumna, and the other on a rocky hill to the S.W. in the interior. Indraprastha does not appear to have been a famous place in the history of Buddha. The historians of Alexander and Seleucus also make no allusion to the princes of Indraprastha, which, however, was one of the five pat or prastha which had been demanded by Yudishthra as the price of peace between the rival Kuru and Pandava races, and which old Dhrita Rashtra gave away from his kingdom to his turbulent nephews. The principality assigned to them was a bit of forest land, then known under the name of Khandava-vana. The existence of Indraprastha in the 2d century A.D. may, however, be recognised in the Indabara of Ptolemy; and Dehli may possibly be found in Ptolemy's Daidala, which is placed close to Indrabara (perhaps Indrapat), and midway between Modura or Mathura and Batan Kaisara or Sthaneswara. The date of the occupation of Indraprastha as a capital, by Yudishthra, may be attributed, with some confidence, to the latter half of the 15th century B.C. Posterity can now hardly trace its site. The only spot that has any claim to have belonged to that ancient city, is a place of pilgrimage on the Jumna called the Negumbode Ghat, immediately outside the northern wall of the present city. Popular tradition regards this ghat as the place where Yudishthra, after his performance of the Aswa Medha, or the horse sacrifice, celebrated the Hom, and a fair is held at the ghat whenever the new moon falls on a Monday. Local tradition, however, in this instance, contradicts the Mahabharata, which states the Aswa Medha to have been performed at Hastinapura on the Ganges. The Negumbode Ghat may be the spot where Prithi-raj celebrated his Aswa Medha, but it had acquired a sacredness from before the time of that prince, and was a place of resort where his grandfather, Visal Deva, had put up an inscription to transmit the fame of his conquests. Humayun tried to do away with the name of Indrapat, and substitute that of Deenpana. None but pedantic or bigoted Muhammadans make use of this name. The common people either call it Indrapat or Purana Killa. Neither could Sher Shah have it called after him as Sherghar,—the voice of tradition is not easily silenced. The Purana Killa, as it now stands, is nearly rectangular in shape, and its walls are over a mile in circuit. In the interior of the Purana Killa is the Keelar Kona mosque, said to have been commenced by Humayun, and completed by Sher Shah. It has five horseshoe arches, decorated with blue tiles and marble, and is a favourable specimen of the architecture of the Afghan period. It is, perhaps, one of the most tasteful mosques in or near Dehli, and is remarkable for its richly inlaid work and graceful pendentives. The prevailing material of the centre arch is red cut sandstone and black slate, and towards the ground white marble and black slate, the carving throughout being very ornate. The two side arches are composed of simple red-stone, picked out with yellow glaze and black slate finely carved, the outermost arches are still plainer in construction, the outer walls changing from red to grey stone. —*Tr. of Hind.* ii. p. 130–145. See Dehli.

INDUR LATIB. PERS. A drug imported from Persia into the Panjab, supposed to be Nardostachys jatamansi.

INDUS.

Sam-po-ho,	CHIN.	Sind'hu, the adjective	
Sin-tow,	,,	Saind'hava,	SANSK.
Sinthus,	GR.	Sing-ge-chu or Lion river,	TIBETAN.
Tsang-po,	LADAKH.	Sinh-ka-bab or Lion's-mouth-descended,	,,
Aba-Sin,	,,		
Sindus,	LAT.		
Nil-ab,	PERS.		

The source of the Indus is in lat. 31° 20′ N., and long. 80° 30′ E., at an estimated height of 17,000 feet, to the N.W. of Lakes Manasarowara and Rawan H'rad in the southern slopes of the Gangri or Kailas mountains, a short way to the eastward of Gartop (Garo). The Garo river is the Sing-ge-chu or Indus. From the lofty moun-

tains round Lake Manasarowara, spring the Indus, the Sutlej, the Gogra, and the Brahmaputra. A few miles from Leh, about a mile above Nimo, the Indus is joined by the Zanskar river. The valley where the two rivers unite is very rocky and precipitous, and bends a long way to the south. From this point the course of the Indus, in front of Leh and to the S.E. for many miles, runs through a wide valley, but the range of mountains to the north sends down many rugged spurs. A little lower, the Indus is a tranquil but somewhat rapid stream, divided into several branches by gravelly islands, generally swampy, and covered with low Hippophae scrub. The size of the river there is very much less than below the junction of the river of Zanskar. The bed of the Indus at Pitak, below Leh, has an elevation of about 10,500 feet above the level of the sea, but the town is at least 1300 feet higher. From the sudden melting of accumulations of ice, and from temporary obstacles, occasioned by glaciers and avalanches in its upper course, this river is subject to irregularities, and especially to debacles or cataclysms, one of which, in June 1841, produced terrific devastation along its course, down even to Attock.

At the confluence of Sinh-ka-bab with the Shayok, the principal river which joins it on the north from the Kara-korum mountains, the river takes the name of Aba-Sin, Father of Rivers, or Indus proper, and flows then between lofty rocks, which confine its furious waters, receiving the tribute of various streams: and at Acho, expanding into a broader surface, it reaches Derbend, the N.W. angle of the Panjab, where (about 815 miles from its source) it is 100 yards wide in August, its fullest season. From Derbend it traverses a plain, in a broad channel of no great depth in Attock, in lat. 33° 54′ N., long. 72° 18′ E., having, about 200 yards above this place, received the river of Kábul, almost equal in breadth and volume, and attains a width of 286 yards, with a rapid boiling current, running (in August) at the rate of six miles an hour. The breadth of the Indus at Attock depends not only upon the season but the state of the river upwards, and varies from 100 to 260 yards. The whole length of its mountain course, from its source to Attock, is about 1035 miles, and the whole fall is 16,000 feet, or 15·4 per mile. From Attock to the sea the length is 942 miles, making its whole length, from the Kailas mountain to the Indian Ocean, 1977 miles. Its maximum discharge, above the confluence of the Panjab or Five Rivers, occurs in July and August, when it is swollen by the seasonal rains, and it then reaches 135,000 cubic feet, falling to its minimum of 15,000 in December.

In the Tibetan of Ladakh it is commonly designated Tsang-po, or the river, and is the Sampo-ho of the Chinese Pilgrim Hiwen Thsang, who travelled in the middle of the seventh century.

Below the junction of the Panjab rivers down to Schwan, the Indus takes the name of Sar, Siro, or Sira; from below Hyderabad to the sea it is called Lar; and the intermediate portion is called Wicholo (Bich, Hindi), or Central, representing the district lying immediately around Hyderabad, just as, on the Nile, the Wustani, or Midlands of the Arabs, represents the tract between Upper and Lower Egypt. Sir A. Burnes mentions that Sar and Lar are two Baluch words for north and south. The Indus or Sind has been called by that name from time immemorial to the present day, by the races on its banks. The ancients knew that this was the native appellation. Pliny (lib. 6, vi.) says, 'Indus incolis Sindus appellatus.' The Chinese call the river Sin-tow.

From Attock the course of the Indus to the sea, 940 miles, is S. and S.W., sometimes along a rocky channel, between high perpendicular cliffs, or forcing its way, tumbling and roaring, amidst huge boulders, the immense body of water being pent within a narrow channel, causing occasional whirlpools, dangerous to navigation, to Kalabagh, in lat. 32° 57′ N., long. 71° 36′ E., situated in a gorge of the great Salt Range, through which the river rushes forth into the plain. In this part of its course it has acquired the name of Nil-ab, or Blue Water, from the colour imparted to it by the blue limestone hills through which it flows. There are some remains of a town on the bank of the river, named Nil-ab (where Timur crossed the Indus), supposed to be the Naulibus or Naulibe of Ptolemy. At Kalabagh the Indus enters a level country, having for a short time the Khusuri Hills, which rise abruptly on the right. It now becomes muddy, and as far as Mittunkote, about 350 miles, the banks being low, the river, when it rises, inundates the country sometimes as far as the eye can reach. Hence the channels are continually changing, and the soil of the country being soft,—a mud basin, as Lieutenant Wood terms it,—the banks and bed of the river are undergoing constant alterations. These variations, added to the shoals, and the terrific blasts occasionally encountered in this part of the river, are great impediments to navigation. The population on its banks are almost amphibious; they launch upon its surface, sustained by the inflated skins or mussaks, dried gourds, and empty jars used for catching the celebrated pulla fish, the Hilsa of Bengal.

At Mittunkote the Indus is often 2000 yards broad, and near this place, in lat. 28° 55′ N., long. 70° 28′ E., it is joined, without violence, by the Panjnad, a large navigable stream, the collected waters of the Sutlej, Beas, Ravi, Chenab, and Jhelum. Its true channel, then a mile and a quarter wide, flows thence through Sind, sometimes severed into distinct streams, and discharges its different branches by various mouths into the Indian Ocean, after a course of 1977 miles. The Indus, when joined by the Panjnad, never shallows, in the dry season, to less than 15 feet, and seldom preserves so great a breadth as half a mile. Keeled boats are not suited to its navigation, as they are liable to be upset. The Zoruk, or native boat, is flat-bottomed. Other boats are the Dundi, Dund, Kotal, and Jumpti. Gold is found in some parts of the sands of the Indus.

The shore of its delta, about 125 miles in extent, is low and flat, and at high tide, to a considerable distance inland, overflowed; and generally a succession of dreary, bare swamps.

In the mouths of the Indus, the tides rise about 9 feet at full moon, and flow and ebb with great violence, particularly near the sea, when they flood and abandon the banks with incredible velocity. At 75 miles from the ocean they cease to be perceptible.

Between the Seer and Kori mouths, at the S.E. of the delta, it is overspread with low mangrove jungle, running far into the sea, and from the Seer is a bare, uninhabited marsh. The main stream of the Indus has discharged its waters at many points between Cape Monze, immediately west of Kurachee and the Gulf of Cutch, if not even that of Cambay. Pitti, Hajamri, and Kediwari, now sea-channels and tidal creeks, shut off from the river, except during the monsoon, are all former mouths of the Indus. The Buggaur or Gharra is still a considerable stream during the inundation; it takes off from the Indus close to Tatta.

The languages spoken on the N.W. border of India are dialects of Hindi, but sufficiently distinct to be called Sindi, Panjabi, and Kashmiri. Lieutenant Leech, indeed, has given vocabularies of seven languages spoken on the west of the Indus. The western border tribes are still mostly under patriarchal governments. In the more southerly are the various Baluch tribes in the territories to which they give their name, and whose language is said by Captain Raverty to be a mixture of Persian, Sindi, Panjabi, Hindi, and Sanskrit. The Brahui tribes in Saharawan and Jhalawan, whose great chief is the khan of Khilat, ethnologists consider to be of the same Scythic stock as the Dravidian races in the Peninsula, and infer from this that the passage of some of the Dravidian tribes from Turan was along the valley of the Indus. The Brahui physical type is Scythic, and the language has strong Dravidian affinities. The Brahui is a genuine representative of the pre-Iranian population of S.E. Irania or Baluchistan. The Jat of the Lower Indus appear to be of the same race as the Brahui, and are almost black.

The principal towns on the banks of the Indus river are Leh, Attock, Kalabagh, Dehra Ismail Khan, Dehra Ghazi Khan, Mittunkote, Hyderabad.—*Captain Carless; Lieut. Wood; Dr. Lord; Cunningham; Findlay; Elliot; Hist. of the Panjab.*

INDUVANSA, also known as the Lunar race, a race who, in pre-historic times, were dominant in Northern India. In the Raj Tarringini and Rajaoli, the Induvansa family are shown to be descendants of Pandu, through his eldest son Yudishthra. These works, celebrated in Rajwara as collections of genealogies and historical facts, were compiled by the pandits Vedyadhra and Ragonath, under the eye of the most learned prince of his period, Siwai Jai Singh of Amber, and give the various dynasties which ruled at Indraprastha, from Yudishthra to Vikramaditya. Tarringini commences with Adinath, or Reshabdeva, being the Jain theogony. Rapidly noticing the leading princes of the dynasties discussed, they pass to the birth of the kings Dhrita Rashtra and Pandu, and their offspring, detailing the causes of their civil strife, to that conflict termed the Mahabharata or great war. On the death of Pandu, Duryodhana, nephew of Pandu (son of Dhrita Rashtra, who from blindness could not inherit), asserted their illegitimacy before the assembled kin at Hastinapur. With the aid, however, of the priesthood, and the blind Dhrita Rashtra, his nephew Yudishthra, elder son of Pandu, was invested by him with the seal of royalty, in the capital of Hastinapur. But Duryodhana's plots against the Pandu were so numerous, that the five brothers determined to leave for a while their ancestral abodes on the Ganges. They sought shelter in countries about the Indus, and were first protected by Drupdeva, king of Panchalica, at whose capital, Kampilnagara, the surrounding princes had arrived as suitors for the hand of his daughter Drupdevi. But the skill of Arjuna in archery obtained him the fair, who 'threw round his neck the burmala or garland of marriage.' The disappointed princes indulged their resentment against the exile; but from Arjuna's bow they suffered the fate of Penelope's suitors, and the Pandu brought home his bride, who became the wife in common of the five brothers; manners decisively Scythic. This marriage is glossed over, admitting the polyandry, but, in ignorance of its being a national custom, childish reasons are interpolated. In the early annals of the same race, predecessors of the Jeysulmir family, the younger son is made to succeed; also a Scythic or Tartar custom.—*Tod's Rajasthan*, i. pp. 47, 48.

INFANTICIDE.

Kindermord, . . Ger. | Infanticidio, . . It., Sp.

Down to comparatively recent historic times, the Phœnicians, Carthaginians, Aramæans, Syrians, Babylonians, and even Israelites, and their neighbours on both sides of the Jordan, sacrificed their children with the hoped-for object of averting any great and serious misfortune. There is a Phœnician legend of El, the strong, offering up his son Yedud or Yedid, the beloved. El being the Kronos (Bunsen iii. 286), Malekh Bel was the same as the Tyrian Hercules, or Moloch, or Bal-Moloch, to whom, as also to Hecate and Melekhet Artemis, dogs were sacrificed. The principal sacrifices offered to Hercules Usu, as well as to his mythical companion, were human beings, which, in Laodicea of Phœnicia, might be ransomed by a doe. At Carthage, the practice of sacrificing their favourite children, and those of the highest rank, in honour of Hercules, continued down to their latest wars. The legend of the Grecian Hercules is, that he became insane, burned his own children, as well as those of his twin-brother Iphicles, and murdered his guest Iphitus (Bunsen iv. 212, 213). The Greeks exposed their children on the highways to perish with hunger, or to be devoured by beasts of prey, and that barbarous practice was sanctioned by some of their most celebrated lawgivers. Among the Romans, the custom of infanticide also prevailed. It is probable, says Malthus, that when Solon permitted the exposing of children, he only gave the sanction of law to a custom already prevalent. Of all the states of Greece, the Thebans are mentioned by Ælian as the only exception to the general practice of exposing infants at the will of their parents. By the other states of Greece, infanticide was sanctioned and regulated by law, under legal provisions for the regulation of this practice. Malthus (vol. i. p. 291) in a note says: How completely the laws relating to the encouragement of marriage and of children were despised, appears from a speech of Minucius Felix, in Octavio (cap. 30): 'Vos enim video procreatos filios nunc feris et avibus exponere, nunc adstrangulatus misero mortis genere elidere: Sunt quæ in ipsis visceribus medicaminibus epotis originem futuri hominis extinguant et parricidium faciant ante quam pariant.' This crime, he adds, had grown so much into a custom

in Rome, that even Pliny attempts to excuse it: Quoniam aliquarum fecunditas plena liberis tali venia indiget (iv. xxix. cap. iv.).

Among the Canaanites, the Phœnicians, and the Carthaginians, the sacrifice of children was prescribed as a propitiation to their sanguinary deities Moloch and Kronos.

Moses forbade, under penalties of death, the ceremony of passing children through the fire to Moloch; but down to the time of Manassen it was nevertheless practised among the Jews, and king sacrificed his own son. Jephthah consecrated a victory by burning his daughter. The Greek fleet was detained at Aulis till Iphigenia had been murdered. And when Tacitus tells us of the German children being embarked in a shield on the face of the river, he is probably referring to the same act. Female infanticide was common over all Arabia in the time of Mahomed, and is frequently reprobated in the Koran. It was Mahomed who put a stop to the inhuman custom, which had been long practised by pagan Arabs, of burying their daughters alive, lest they should be reduced to poverty, or else to avoid the displeasure and disgrace which would follow if they should happen to be made captives, or to become scandalous by their behaviour; the birth of a daughter being for these reasons reckoned a great misfortun and the death of one as great a happiness. Th manner of their doing this is differently related; some say that when an Arab had a daughter born, if he intended to bring her up, he sent her clothed in a garment of wool or hair, to keep camels or sheep in the desert; but if he designed to put her to death, he let her live till she became six years old, and then said to her mother, Perfume her and adorn her, that I may carry her to her mothers; which being done, the father led her to a well, or a pit dug for that purpose, and having bid her look down into it, pushed her in headlong as he stood behind; and then filling up the pit, levelled it with the rest of the ground. But others say that when the woman was ready to fall in labour, they dug a pit, on the brink whereof she was to be delivered, and if the child happened to be a daughter, they threw it into the pit, but if a son, they saved it alive. This custom, though not observed by all the Arabs in general, was yet very common among several of their tribes, and particularly those of Koreith and Kendeh, the former using to bury their daughters alive in Mount Abu Dalama, near Mecca. In the time of ignorance, while they used this method to get rid of their daughters, Sasaa, grandfather to the celebrated poet Al Farazdak, frequently redeemed female children from death, giving for every one two she-camels big with young, and a he camel; and hereto Al Farazdak alluded when vaunting himself before one of the khalifs of the family of Meya, he said, I am the son of the giver of life to the dead; for which expression being censured, he excused himself by alleging the following words of the Koran:—'He who saved a soul alive shall be as if he had saved the lives of all mankind.'

Europeans, at their settlement in America, found female infanticide still practised among some of the tribes; and the Abbé Dubois mentions that it was customary to expose or put to death children born under stars supposed to possess a particularly malignant influence.

Dillon, who went in search of La Perouse, mentions that the women of Tucopia were at least treble the males; all the male children, except the two eldest, being strangled on their birth, while all the girls were allowed to live.

When Captain Wallis visited Otaheite and the neighbouring islands in the South Sea, the practice was unhesitatingly avowed by the lascivious Eereeoie societies in these islands.

Dr. Bennett tells us (i. p. 122) that infanticide was practised by the women of Australia and New Zealand, on infants born after a severe labour, and on half-caste infants.

Infanticide of female infants has been practised in India from unknown times amongst the ancient Gakkar race in the Panjab, and it has been a constant custom, and has continued in several parts of India down to the latter third of the 19th century. It was long supposed to have been confined to the clans of the Rajkumar or Rajavansa tribe, who inhabit districts in the neighbourhood of Benares; but a larger knowledge disclosed the existence of a similar practice among several tribes in Gujerat, all through Rajputana, also in the N.W. Provinces, in Oudh, Cutch, and west of the Indus in Baluchistan. Mr. Duncan was the first who brought the prevalence of infanticide to the notice of the British rulers of India. He bec acquainted with its existence in 1789 while at Juanpore, and he induced the Rajkumar tribe, who practised it, to enter into a covenant to discontinue the horrid practice, which the covenant recognised to be condemned in the Brahma Bywar Purana as a great crime. The races with whom it has been customary to sacrifice their female children, are the Jut or Jat, the Rahtor Rajputs of Jeypore and Jodhpur, the Jahreja Rajputs of Cutch, and the Rajkumar race, the Sourah of Ganjam, and the polyand Toda race on the Neilgherries.

The Rajkumar and Rajavansa, in a portion of the territories of Oudh and the adjoining provinces, and the Jahreja, in the countries of Cutch and Gujerat, on the western side of th Peninsula of India, alleged that the practice of female infanticide had existed for 4900 years; and the late General Walker, in an account published by Major Moor early in the 19th century, estimated the number of deaths of female children annually, in Cutch and Gujerat only, at no less than 30,000.

The Government of India, during the Marquis Wellesley's administration, in 1802, declared it to be punishable by law. But this proclamation was only partially successful.

In 1821, all surplus of fines levied on the Kattyawar chiefs, was thrown into a fund to provide dowers for unmarried girls, and this was followed by the Gaekwar in 1825. Little success resulted; and in 1834, Mr. J. P. Willoughby arranged to take a census and to put in force measures to prevent the Jahreja and others from destroying their female infants. The practice as a recognised custom ceased, the last conviction having been in 1854, and in 1872 there were in Kattyawar 10,461 males to 9513 females.

After the conquest of the Panjab by the British, Mr. C. Raikes called a public meeting of the sirdars and chiefs at Amritsar; the meeting recognised as the causes for killing their female children, the expenses of marriage, for dowers, and for the exactions for the Bhat, the Rai, the Dut, the Bhand,

the Nai, the Merasi, and other beggars; and the meeting resolved to discontinue and suppress the practice. Indeed, among the many pressing measures of reform stopped by the mutiny, was the passing of an Act, actually draughted, to prevent and punish the crime of female infanticide. In 1856, Mr. Moore, a special commissioner, had made the most startling revelations as to the prevalence of the crime in the Busti district. The subject was overlooked till 1867, when Mr. Hobart was sent into the same district to report whether, as was supposed, the practice had abated since 1856. Instead of this, he discovered that the houses of certain Rajput clans were floored with skulls, and the tanks choked with infants' bones. Sir William Muir at once put repressive measures in force, and applied to the Government of India for immediate legislation. Mr. (Sir John) Strachey accordingly moved for leave to introduce a Bill.

In Cutch in 1840, at the request of the Rao, the chiefs bound themselves to measures of repression. In 1840 there were 4912 males and 335 females, but in 1873 the Jahreja males were 8371 to 4272 females, and the Rao expressed his determination to repress this crime. In Palanpur and Mahikanta, and among the Kunbi of Gujerat, the success was great. In 1840 there were only three girls alive amongst 35 clans residing in 95 villages in the southern portion of the Allahabad district. In 1843 it was found that not a single daughter existed amongst the great dominant clan of Chauhan Rajputs at Mainpuri. In the latter case, shortly after the determined efforts of a collector to put down the vice at any cost, there was a wonderful change effected; and it was found that in the year 1864 there were 1281 Chauhan girls living.

In March 1870 an Act was passed for the repression of infanticide. The rules sanctioned by this Act are very simple and precise. Certain districts or clans are proclaimed. A careful census is taken, and a nominal register is prepared, showing the names of all the members of a family. In this register, each birth, marriage, and death is recorded, the midwife, head of the family, and village night-watchman being responsible for the accuracy of such a record, and for duly reporting any event to the police. A tribe or district is to be held guilty if the female children do not average 40 per cent.—10 per cent. being allowed for certainty's sake, although of course a higher ratio would be more strictly in accordance with the natural proportion. Further, the report tells us, 'the minimum number to which the ratio might safely be applied, was fixed at 25; and where out of that number of children only 40 per cent. are females,—*i.e.* where there are 10 girls to 15 boys,—the ratio may be accepted as a *prima facie* indication sufficient to warrant the surveillance contemplated by the rules.'

But as it was found in some districts that the average of the female population of girls was only 25 per cent., stronger rules were to be at once enforced, every pregnancy was to be reported by the village midwife and night-watchman, and the police were ordered to be on the alert to detect even the attempt to commit crime. Even the heads of families could be obliged to report pregnancies to the Local Government, were such a step necessary to uproot the evil.

In the *N.W. Provinces*, in 1874-75, girls were only 30·9 per cent. of the total infants.

In *Oudh*, from a census of 649 villages in 1875-76, infanticide seems to have been discontinued amongst Rajput children; but in the N.W. Provinces there were 3113 villages, with a population of 393,529 souls, and there were birth reports of 4·08 per cent. more boys, showing a supposed concealment of girls born.

In *Kattyawar*, in the year 1875-76, taking all the Rajput tribes, there were 90·70 females to 100 males. The Jahreja tribe in 1872 had 90·93 females, and in 1875-76, 91·39. The death-rate among male infants in 1875-76 was 15·59 per cent. on the total number of male births, and among females, 15·19 per cent. The number of unmarried Rajput girls in 1874-75 was 15·08, and in 1875-76 it was 15·45.

In *Cutch*, however, in 1875-76, the percentage of infant deaths to births among males was 18·30, and among females, 31·13, against 25·47 and 30·05 in 1874-75.

In *Palanpur* the percentages were 10·52 and 12·90 respectively, against 7·69 and 26·47 in 1874-75; and in *Mahikanta*, 16·32 and 36·66, against 6·15 and 27·45.

In the first half of 1872-73, 150 persons were punished in India under the Infanticide Act. In 1875, 27 districts in the N.W. were under the infanticide rules. On the 1st of April 1875, there were found in the proclaimed villages 80,235 boys to 32,759 girls, in the proportion of 71·1 to 28·9. The returns on 1st September 1874 showed 82,400 boys to 35,137 girls (not including arrivals and removals), in the ratio of 70·1 to 29·9. The minor population has risen from 12,994 to 117,537, the boys having increased by 2·7, and the girls by 6·9 per cent., in the ratio of 28 to 72 per 100.

Female infanticide, by violent measures, has greatly decreased among the Jat tribes, but many children are allowed to die by neglect. With them the great cause of the crime was the excessive expenditure for their marriage, but this has been greatly curtailed.

The phase which the crime once presented in Southern India was quite different from that which is now presented by the same crime amongst the northern Rajputs. Infanticide in Southern India, it is believed, used to be practised chiefly amongst the caste of temple dancing-women, and, strange to relate, led to the murder, not of female, but of male children. This was remarkable. Infanticide in India has always, generally speaking, meant the murder of girls, so that the expense (so crushing to Hindus, to whom marriage means feasting and lavish expenditure) of wedding them to the sons of neighbours might be avoided by poor parents. But in the case of the caste of temple women, females were profitable, whilst male children were useless. So the new-born male infant used to be cast into some particular well or secret receptacle, whilst the girls were trained from infancy to read, sing, dance, adorn themselves, enjoy the emoluments of the temple, and take part in the worship of the god.

It was the custom of the Talpur dynasty of Sind to put to death all children born to the princes of slave women. Dr. James Burnes was informed that one member of the family alone had destroyed 27 of his illegitimate offspring.

Dr. Cooke saw mummy-like bodies of infants in a cave in Bhagwana in Baluchistan, some of which had a comparatively recent appearance.

Infanticide of girl infants was common in Saurrada, by entombing them alive, or wrapping them in cloth, and so burying them. It was put an end to by Colonel (Sir John) Campbell about the year 1848. The Kandh killed their own girls, and then purchased wives from other parts of the country.

Infanticide was greatly condemned by the Sikh Guru Govind, who says, 'With the slayers of daughters whoever has intercourse, him do I curse.' And again, 'Whosoever takes food from the slayers of daughters, shall die unabsolved.' Nevertheless, the Bedee race of the Sikhs, the hereditary priesthood, who are to be found all over the Panjab, adopted this mode of disposing of their daughters, from religious pride leading them to regard with horror the idea of giving their daughters to persons of inferior rank.

In the total population of British India of 253,891,821, the males, in 1881, numbered 129,941,851, and females 123,949,970, or six millions less.

In four provinces or states the females were in excess, viz. :—

	Males.	Females.
Bengal,	34,625,591	34,911,270
Madras,	15,121,043	15,749,588
Mysore,	2,085,842	2,100,346
Travancore,	1,197,134	1,201,024

In every other province the males were more numerous, and in the following four greatly so :—

	Males.	Females.
Coorg,	100,139	77,863
N.W. Provinces and Oudh,	23,297,255	21,552,364
Panjab,	12,322,356	10,389,764
Rajputana,	5,544,665	4,723,727

Under Act viii. of 1870 for the suppression of female infanticide, small sections of the Ahir, Ahar, Taga, Jat, Rajput, Gujar, and Mina, aggregating about 350,000 persons, were proclaimed in various parts of the N.W. Provinces and Oudh.

The suspected castes consist mostly of well-to-do agriculturists, amongst whom the 1881 census shows the following proportion of females to 100 persons :—

Age	Absolute Numbers. Males. Susp. Castes.	Males. Other Hindus.	Female Susp. Castes.	Female Other Hindus.	Percentage of Females to Persons in same Age group. Susp.	Other Hindus
0 to	946,591	3,997,550		3,800,62		48·74
10 „ 19	834,350	3,137,475	599,857	2,438,194	41·8	43·75
20 „ 29	717,686	2,730,552	605,541	2,709,161	45·7	49·81
30, et.	1,452,646	5,502,975	1,307,267	5,484,251	47·3	49·91
Total,	3,951,273	15,368,559	3,346,230	14,432,232	45·85	48·43

The census report of 1881 shows, as under, the percentage of females in age group :-

Caste.	20 and up.	Under 5.	Caste.	20 and up.	Under 5.
Mina,	46·25	52·72	Jat,	44·6	44·9
Ahir,	49·15	49·40	Rajput,	45·2	47·5
Gujar,	42·5	45·4	Ahar,	46·5	47·0
Taga,	43·5	46·8			

Among the last five castes there still is neglect of female infants, though during the last ten years the high mortality amongst the Rajput, Taga, and Gujar must have considerably abated; but among the Ahar and the Jat there has been little, if any, improvement. During the five years 1875 to 1879 inclusive, the birth-rate of the proclaimed castes fluctuated from 32·7 to 48·3 per 1000 of the population.

Infanticide at one time was prevalent in the Kandyan country, from poverty, being born under an evil star, and illegitimate children.

The Chinese have complete power over their offspring, even to life. In China, and also in Japan, infant murder is at the present time prevalent. In the great cities of Pekin and Canton, Sir George Staunton found the exposure of children to be very common. Among the Chinese, however, it is ascribed to their extreme poverty, and it is more prevalent in the southern coast provinces than in the northern and midland. There are towns and districts in China where infanticide is practised, in some instances to an infamous extent, in others to a less degree. There are others, again, where it is not known at all as a habit, and Mr. Medhurst believes that in the majority of cities it is a crime no more frequent than in some European towns, and then only to conceal frailty. The Government of British India, and their officers engaged in the census-takings of 1872 and 1881, have been directing much attention to this subject, and the present position will be found described at p. 237 of article India, and p. 354 of Rajputs.—*Medhurst, Far. INFANTS. Sons are greatly longed for by all the races inhabiting the south and east of Asia. A prevailing feeling regarding them is such as is expressed in Psalm cxxvii. 4, 5, 'As arrows are in the hand of a mighty man, so are the children of the youth. Happy is the man that hath his quiver full of them; they shall not be ashamed, but they shall speak with the enemies in the gate;' for most persons will hesitate to attack a large united family. But the desire in Asia is for male children. Amongst Hindus and Chinese, with both of whom spirit-worship largely prevails, sons are particularly longed for, in order to obtain from them duties to the manes of their parents. The eastern custom of nursing a child from the hip or side, as in Isaiah lx. 4, is still continued, and a child born after vows, is still, as in Proverbs xxxi. 2, called the son of a vow. As in Genesis xxv. 6, the children of Muhammadans, born of a wife of humbler birth, or of a haram woman, are not deemed equal in social rank to the children of a high-born wife. Luke xviii. 15 says, 'They brought unto him also infants, that he would touch them.' When a Hindu spiritual guide (guru) visits a disciple, the latter takes his child to him for his blessing; placing the infant before the guru, and forcing its head down to his feet, the parent solicits his blessing, which he gives in some such words as these—'Live long; be learned; be rich.' The usual blessing of a Muhammadan fakir, man or woman, is Jio-baba, Live, my child; Jio, sahib, Live, sir; Jio-bibi, sahib, hazrat Maryam ka saya, Live, lady, under the protection of the Lady Mary.

Bung-mai-zah, . . BURM. | **Katur konna, . . BURM.**
Ta-nyen, Tan yew,

This tree grows in the Konkans, Nepal, Assam, and Pegu. It is of smaller girth than the I. xylocarpa, but grows to a great height, and has a black wood. Like the I. xylocarpa, it is called iron-wood by the English in Pegu and Tenasserim. In native gardens it is an ornamental tree, with sweet-scented blossoms, and affording a thick, beautiful shade. Its seeds are poisonous when taken internally, notwithstanding which they are sold at a high price in the bazar, and are used by Burmese and Karens as a condiment to their preserved fish.—*Roxb.; M'Clelland; Mason.*

Manilla tamarind, . ENG.	Sima chinta, . . . TEL.
Curkapulli maram, . TAM.	Sima chinduga, . . ,,

This small tree from the Philippines is now grown in India, attains to 12 to 18 inches in diameter, and resembles the hawthorn in general appearance. It was introduced into the Philippine Islands, but was a Mexican tree, which the Spaniards introduced into the Eastern Archipelago. It furnishes a hard wood. It is a most valuable hedge plant, perhaps the best in India, and is now sparingly used along some of the railway lines of the Peninsula. The pulp of the fruit is edible. Pods curiously twisted.—*Voigt.*

Boja of the . GODAVERY.	Konda tangedu,

This valuable and stately timber tree blossoms during the hot season, at which period it is nearly destitute of foliage. It is abundant in the Walliar forests of Coimbatore, also in N. Canara, between Sircee and Yellapore, and is not uncommon in the seaboard forests of the Bombay Presidency, south of Panwell. In Canara and Sunda it is chiefly above the ghats in Soopeh and Dandelee, where it grows large, and is very useful in house-building. It is met with in the Godavery forests, where it grows very large on the mountains, and there is much of it in the Vizagapatam district. In the southern forests of Pegu it is a plentiful large tree, 15 to 18 inches in diameter, very lofty and straight, with 6 to 9 feet in girth, and very abundant in Amherst, Mergui, and Tavoy.

The heart-wood of full-grown trees is of a dark colour, very hard and dense, strong and durable, etc. It is used for house and bridge posts, ploughs, boat anchors, for naves of cart-wheels, crooks for ships; knees and bends, posts, piles, and bridges; and is excellent for railway sleepers, etc. A cubic foot weighs 60 to 66 lbs. An inch bar of the Coimbatore wood sustained 550 lbs. Nails cannot be driven into it. It is as impervious to white ants as teak, and is even more durable in the ground. In the Madras Gun Carriage Manufactory it is used for poles, axle cases, and braces for transport limbers, poles and yokes for water-carts, cheeks, axle cases for transport carriages, light mortar carts. On the Madras Railway it has been employed extensively for piles, transoms, and walling pieces. In small scantlings, it is liable to split and warp under exposure to the weather.—*Drs. Roxb., Wight, M'Clelland, Brandis, Mason, Gibson, Cleghorn; Captain Dance; Mr. Rohde; Cat. Ex.; Voigt.*

INGIE or Engie. BURM. A white linen jacket used by Burmans.—*Winter's Burma.*

ING-LEET-MEN. BURM. An ambiguous expression adopted by Burmese as a salve to their pride, for use when compelled to hold intercourse with a dignitary who is not in their view an anointed king. It may apply to the Queen of England or to the Governor-General.—*Yule's Embassy.* Qu. Englishmen.

INGLIS. HIND. A pensioner. The word is a corruption of 'Invalids.' Wilson says it is meant for English.

INGOT, a small wedge-shaped mass of tin, copper, gold, or silver, etc., of an indefinite size and weight. About 40 ingots of tin go to the ton. In some countries ingots of the precious metals pass current, as silver in China. In Burma, gold and silver ingots, of half an ounce weight avoirdupois, form part of the local currency.—*Simmonds' Dict.*

INGOULETZ. On leaving its banks and travelling eastward over the steppe, are to be observed innumerable tumuli, which vary greatly in size; and one of unusual magnitude is generally surrounded by several of smaller dimensions. There can be no doubt that the larger tumuli are raised over the bodies of princes and heroes, and the minor sort cover the remains of the followers of their armies, or of their state. The expanse occupied by these monuments of the dead extend regularly to the very farthest stretch of sight. Herodotus declares these remote regions of sepulture to be regular places of interment for whole nations, and particularly mentions, that whenever the Scythians lost a king or a chief, they assembled in great multitudes to solemnize his obsequies; and, after making the tour of certain districts of the kingdom with the corpse, they stopped in the country of the Gerrhi, a people who lived in the most distant parts of Scythia, and over whose lands the sepulchres were spread. A large quadrangular excavation was then made in the earth (in dimensions more like a hall of banquet than a grave), and within it was placed a sort of bier bearing the body of the deceased prince. Daggers were laid at various distances around him, and the whole covered with pieces of wood and branches of the willow tree. In another part of the same immense tomb were deposited the remains of one of the late sovereign's concubines, who had been previously strangled; also his favourite servant, his baker, cook, horsekeeper, and even the horses themselves, all followed him to the grave, and were laid in the same tomb, with his most valuable property, and above all a sufficient number of golden goblets. This done, the hollow was soon filled and surmounted with earth; each person present being ambitious to do his part in raising the pile that was to honour his departed lord. About six miles from the ancient city of Sardis, near the lake Gygæus, was to be seen the great tumulus erected in memory of Alyattes, father of Crœsus. It is described by Herodotus as of prodigious height, having a base of stones, on which three classes of people were employed to heap up its enormous bulk. In the time of Strabo, the remains were 200 feet high, and the circumference three-quarters of a mile. Several other tumuli surrounded it. This form of sepulture may be found all over the world; and how

lasting it is, as a monument, may be gathered from the date of this very mound of Alyattes, which could not have been erected much less than 2400 years ago, Alyattes having been contemporary with Nebuchadnezzar, the king of Babylon who destroyed Jerusalem about 600 years before the birth of Christ. In some parts are found tumuli in distinct groups wide of each other; and in other places they appear singly, like solitary and silent watch-towers, at distant stations. About 7 miles S.E. of Hyderabad, in the Dekhan, is an immense plain covered with cairns and kistvaens. —*Porter's Travels.*

INGUVA, also Ingya, and Hingupatri. TEL. Ferula asafœtida; also applied to several Gardenia, some of which yield a medicinal gum, particularly G. gummifera, from which is produced the resin called Dikamali.

INITIATORY rites are practised by Brahmanical Hindus for the admission of a youthful member into their circle, the Gaitri being the sacred and secret words imparted. The Sikh religionists and Muhammadan pirs and fakirs also have their modes of initiation. The Chinese secret societies likewise use sacred rites. Many of the Australian tribes are similarly initiated amongst the men of their clans.—*Macgillivray's Voyage*, i. p. 14. See Tun Surana.

INJADRI, or Satpura, range of low mountains running east and west to the south of the Nerbadda river.

Printing ink, writing ink, marking ink, India ink, etc., are composed of different ingredients,—gall-nuts, copperas, gum, and logwood,—according to the purposes to which it is to be applied. That which is used by the Tamil writers in the Cutcherries is thus prepared. Half a seer of rice, burnt black, is well boiled in a seer and a half of water, till but one seer remains, then strain off the dregs. To this seer of burnt rice water is to be added two pollams of lac; boil them well together, and strain off the dregs. Half a seer of carpoo varnam or lamp-black, and half a pollam of vullam pisin or gum-arabic, are then to be well rubbed into a fine powder, and gradually added to the mixture of lac and burnt rice water, when the whole is rubbed together and well shaken at different intervals for the space of three days.

Muhammadans take of lamp-black and gum-arabic equal quantities, and pound them together into a very fine powder. This powder is then moistened with the juice of the pulp of the kuttalay or small aloe, and well rubbed at intervals for two days together, after which it is formed into little cakes, and dried on plantain leaves in the sun for use.

For a good writing ink, take of nut-galls 2 lbs., sulphate of iron 13 oz., gum-arabic 13 oz.; pound the galls, and take 14 bottles of water, of which take three-quarters and boil the galls in it for three hours in a large pot; cool and pour off the clear liquid, and strain the remainder (careful and repeated straining is the great secret of successful ink-making); take the remaining fourth of water, and dissolve the iron and gum, boil cloves in it to prevent fungi; make all to 15 bottles of fluid. Strain everything well. Black ink for printers is made of lamp-black, linseed oil, rosin, brown soap, and a small quantity of indigo. Blue ink is made with indigo. Red ink, Segapoo mye, TAM., is prepared by adding a little water to Shem pungie (red cotton), Luttooka doodi, TEL., also by steeping and afterwards boiling chips of red dye-woods in vinegar.

Indian ink or China ink is a solid ink from China. That used in England by artists is made in Canton and Ngan-hwui; the best is made at Hwui-chau-fu, in the latter province. Pine branches are burned under a moveable roof of thatch, and the soot is carefully mixed with isinglass or boiling glue. Oil and rock-oil have also been burned to form a finer soot. It is always scented with musk. Corean ink is good. Good Indian (China) ink is put up in plain patterns; the best kinds are gilt all over. It should be bright when broken, free from grittiness when rubbed on the ink-stone, emit a strong scent, and render the writing glazed when dry. Chinese written documents may be soaked in water for some weeks without being washed, and linen marked with Indian ink will bear several washings.—*Ainslie, Mat. Med.* p. 175; *Smith; M. M. C.*

INLAID WORK is an art which dates from a remote period. It has been carried on in Bombay since the commencement of the 19th century, having been originally introduced from Hyderabad in Sind. It is said to have been introduced into Sind about twenty years earlier from Persia; its native seat is supposed to be Shiraz. From Bombay the work has been carried to Surat. The materials used in the work are:—A mineral green dye for dyeing the stag's horn. Tin wire (Kylacenotur), used in the ornamental veneering. Sandal-wood, ebony, and sappan-wood, used in the frame work, and sometimes entering into the ornamental veneer; ivory, always white. Stag's horn, dyed green with mineral dye, verdigris. Glue, for binding; Ahmadabad glue being esteemed far above all other kinds, including English. The tools employed are a wheel for drawing the tin wire into different shapes for the preparation of the ornamental patterns, saws of different kinds, files, chisels, drills, planes, and a square. The only mystery is in the portion of the work which appears inlaid, but which is not inlaid in the first sense of the term. The patterns are veneered on, and may be applied to any flat or gently rounded surface. The ornamental veneer is prepared by binding together rods of ivory, tin, sappan, ebony, and green-dyed stag's horn, of different shapes, often geometric. These rods are usually three-sided, cylindrical, and obliquely four-sided. They are arranged so as when cut across to exhibit definite patterns, and in the mass present either the appearance of rods or of thin boards, the latter being to be sliced down into borders. The primary rods are sometimes bound together before being sliced, so as to form more complex patterns. The patterns commonly found in Bombay ready prepared for use are:—

1st. Chakra (*i.e.* wheel), the smaller being of the diameter of a fourpenny bit, and the larger of a shilling.

2d. Kutkee or hexagonal, being composed of obliquely four-sided rods, of ivory, ebony, or sandal-wood, and of ebony, tin wire, puttung, and green-dyed stag's horn mixed.

3d. Trenkoonia gool (*i.e.* three-sided flower), a three-sided pattern composed of tin wire, ebony, ivory, puttung, and green-dyed stag's horn.

4th. Gul (flower), obliquely four-sided, and compounded as last. These are all for the central veneer. The border patterns are :—

5th. Teekee, round, and varying in size from a twopenny bit to a large pin's head, and used for the central patterns, as well as for bordering.

6th. Gundeerio (plumb, full), composed of all the materials used in this work.

7th. Ekdana (one grain), having the appearance of a single row of tin beads set in ebony.

8th, 9th, and 10th. Porce lehur, Sansoohansio and Porohansio, varieties of border ornaments not easy to distinguish from one another by mere description.

In 1860, about fifty manufacturers were established in Bombay; six had been settled there from periods varying from twenty-five to forty-six years. A few employ workmen, but the majority work for themselves, with the aid in many cases of a brother or son. The inlaid work resembles Tunbridge ware.

At Vizagapatam, in Madras, similar articles are made of ivory and stag's horn, with scroll-work edged in to suit European taste. At Manipuri, in the North-Western Provinces, wooden boxes are inlaid with brass wire. The chief seats of ivory-carving are Amritsar, Benares, Murshidabad, and Travancore, where any article can be obtained to order, from a full-sized palanquin to a lady's comb. Human figures in clay, dressed to the life, are principally made at Krishnagar, in Bengal, Lucknow, and Poona.—*Imp. Gaz.* iv.; *Dr.* (*Sir George*) *Birdwood.*

INOCARPUS EDULIS. *Linn.*

South Sea chestnut, ENG. Maipe, TAHITI.
Otaheite chestnut, Kata,

A native of the Molucca Islands, and from thence introduced into the Botanic Garden at Calcutta in 1798, where in ten years the largest of them was 25 or 30 feet high. They blossom during the hot season, and ripen their fruit in August and September.—*Roxb. Fl. Ind.*

INSCRIPTIONS.

Aufschrift, . . . GER. | Inscripcion, . . . SP.
Inscrizione, ... IT. |

We read in the Old Testament of writings, engravings, pens, and books,—in Exodus xxiv. 7, xxv. 16, and xxxii. 15, 16, at least 1500 B.C.; in Job xiii. 26, xix. 23, 24, perhaps about the same age; and subsequently in Psalms xl. 7, xlv. 1, lvi. 8, and lxix. 28, and in Proverbs iii. 3, at least 1000 years B.C.; but the first authenticated inscriptions in India are those of the 3d century before Christ, engraved at Kapurdigiri, Dhauli, Girnar, etc. In the ten books (Mandala) of 1017 hymns in the Rig Veda, the art of writing is not even alluded to. At the time when the songs of the Rishis were collected, there is no allusion to writing materials, whether of paper (papyrus) or bark (liber) or skins, nor is there any allusion to writing during the whole of the Brahmana period of Vedic literature. Even during the Sutra period all the evidence obtained from them but leads to the supposition that though the art of writing then began to be known, the whole literature of India was still preserved by oral tradition. The statements of Megasthenes, and Strabo, and Nearchus, however, show that, in their times, the art of writing was known in India, and that it was practised before the time of Alexander's conquest; nevertheless the origin of the Indian alphabet cannot be traced back much beyond the date of Alexander's invasion. The Lalita Vistara, however, one of the canonical books of the Buddhists, describes Sakya Sinha's entry into the writing school (li-pi-sala), and the alphabet that he is described as learning is the common Sanskrit alphabet. But in the times even of Nearchus and Megasthenes, letters do not seem to have been a vehicle of literature. Nearchus describes the people as writing on compressed cotton, Megasthenes as making inscriptions on mile-stones, and Curtius says they wrote on the soft rind of trees. The inscriptions generally supposed to have been engraved by Asoka, 300 years before the present era, with a view to promulgate the doctrines of Buddha, are therefore the oldest literary remains of India, but are upwards of 1000 years later than the era when the tablets were engraved on Mount Sinai, and when the Assyrians and Babylonians had formed great libraries, and were recording on tablets their military and civil transactions.

Nearly all that we know of ancient India, and of the countries on its north-western borders, with their former conquerors and rulers, has been obtained by the investigations of learned men into the legends on the numerous ancient coins found in Afghanistan, the Panjab, and India; and from the inscriptions found engraved on rocks and pillars, and in caves, in various places in India, in Kábul, and throughout the ancient empires of Iran and Assyria; through Hadramaut and Oman, in several districts of N. Arabia, and through the north of Africa. These, with the more celebrated remains of Egypt, prove that literature was cultivated in those countries at a time when Europe was inhabited by painted or tatooed barbarians. Amongst others who have laboured to decipher these may be mentioned Wilkins, Jones, Colebrooke, H. H. Wilson, J. Prinsep, Dr. Mill, Norris, Dowson, Thomas, Bayley, Bhau Daji, Rajendra lal Mittra, Rawlinson, Sir Walter Elliot, F. W. Ellis, Colonel Mackenzie, C. P. Brown, General Cunningham, James Fergusson, Dr. Burnell in the Asiatic Researches, and Journals of the Royal Societies, with Grotefend, Lassen, Burnouf, and Oppert.

Many facts in history have been made known by the coin legends and rock inscriptions, and among others the extension of a Macedonian empire over a great part of North-Western India, and the conquest of the island of Ceylon by a Buddhist sovereign of India, three centuries before the Christian era.

Not less interesting are the inscriptions in the ancient Persian language, in the Assyrian or cuneiform character, spread through the empire of the great Cyrus, which throw an important light on sacred as well as profane history. The clue to the discovery of the sense of these Persian records was obtained by Grotefend, Lassen, and Burnouf; and, partly aided by it, though much more by his own ingenuity, Sir Henry Rawlinson was able to decipher many of these ancient historical engravings.

It was Champollion who laid the foundation of the decipherment of the hieroglyphics; Anquetil, Duperron, and Burnouf are the fathers of Zend studies; Arabic and Syriac scholars in Germany are the direct or indirect pupils of Sylvestre de Sacy and Quatremere; in Chinese, Stanislas Julien stands alone; Assyrian was cultivated in France and in England, and subsequently taken up by German scholars. About 1868 the Academie des Inscriptions et Belles-Lettres decided to have its 'Corpus Inscriptionum Semiticarum' to collect in one work the Semitic inscriptions scattered throughout various books and periodicals, and more especially the Phœnician and Punic inscriptions. The first part of this Corpus contains fifty Phœnician inscriptions, with Latin translation and commentary by MM. Renan and J. Derenbourg. Of larger and complete inscriptions, one was found by M. de Vogue at Gebel (Byblos), in which it is reported that the King Yehomelk erected an altar in the temple in the 4th century B.C. Another is the Sidonic inscription on the sarcophagus of King Ashmonezar, which is one of the best preserved; it is also of the 4th century B.C. Most of the inscriptions (ten to fifty) are those found at Cyprus, the greater part of which are now in the British Museum. We find mentioned in them the following kings,—Pumyaton and Melekyaton, kings of Kitti (Cyprus), and Adil (Idalion), and Ptolemy, probably Soter (312 B.C.), to whom the monuments are consecrated, the god Resheph, probably identical with the biblical bené Resheph (Job v. 7), known on Egyptian monuments as the god Raspu. Æsculapius is called in some of those inscriptions Baal Merappe, 'Baal Sanator,' analogous with the Hebrew Raphael.

The inscriptions in Western Media on the Behistun or Baghistan tablets, record the political autobiography of Darius Hystaspes in the old Persian language, in the Babylonian, and also in the language of the Scythians in the Medo-Persian empire; and the translation of the Scythian portion of those inscriptions is distinctly of the Scythian, that is, Turanian group, as spoken in the 5th century B.C., though the people by whom it was spoken are believed by Professor Oppert and Mr. Norris to have been Medians. This Scythian part of the Behistun inscriptions bears a special relationship to the Ugro-Finnish family, which Dr. Caldwell considers to resemble the Dravidian dialects. He thinks that the ancient Scythic race, by which the greater part of Central Asia was peopled prior to the irruption of the Medo-Persians, belonged to the Ugrian stock, and not to the Turkish or the Mongolian.

1. *Rock Inscriptions* have been found, amongst other places, at Shahbazgarhi, Khalsi, Girnar, Dhauli, Jangada (two separate edicts on Dhauli and Jangada rocks), Sahasaram, Rupnath, Bairat, Khandagiri, Deotek slab.
2. *Cave Inscriptions* have been found at Barabar, Nagarjuni, Khandagiri, Ramgarh.
3. *Pillar Inscriptions* have been found:—
   Dehli pillar from Siwalik (Firoz Shah's Lat), five inscriptions, one called Queen's edict, and one the Kosambi edict.
   Dehli pillar from Meerut.
   Allahabad pillar.
   Lauriya-Araraj pillar (Radhia).
   Lauriya, Navandgarh pillar (Mathia).
   Sanchi pillar.

The inscription at Junagarh, discovered by Colonel Tod in 1822, has three paragraphs more than that at Dhauli in Katak (Cuttack), discovered by Lieutenant Kittoe. Others have been discovered at Kapurdigiri and at Ganjam.

The fourteen edicts into which the Junagarh inscription is divided cover considerably over 100 square feet of rock. They are inscribed on the uneven surface of a huge rounded and somewhat conical granite boulder.

The records on the rocks and pillars and caves north-west of India, and in India itself, are in two characters, styled the Aryan or Bactrian, and the Lat or Budh. The term 'Lat' has been given because found on certain pillars (Lat, SANSK., a pillar) in Dehli, Allahabad, etc. The Lat or Budh or early Pali character is the same as the Aryan, but the forms of the letters differ from the Aryan, and the letters are larger. Inscriptions in these characters are engraved on rocks at Kapurdigiri in Afghanistan, at Cuttack, at Dehli on a pillar; also on pillars at Allahabad, Betiah, Muttiah, and Radhia.

A pillar near Dehli has been called the pillar of Firoz, after Firoz Shah, who reigned in Dehli A.D. 1351 to 1388. It has a more ancient inscription, and one with a more recent character below in Sanskrit, to the effect that Raja Vigrah or Visala Deva had, in A.D. 1169, caused this pillar to be inscribed afresh to declare that the said raja who reigned over the Sikambari had subdued all the regions between the Himavat and Vindhya. This pillar was erected to enjoin the doctrines of Buddha, but the reading of it somewhat differs from that of the others. Though resembling the Girnar inscription in general purport, these inscriptions differ considerably in the structure of certain sentences. Both Mr. James Prinsep and Professor Wilson attempted translations of it.

The same Lat or Budh characters found on the pillars at Dehli, Allahabad, and elsewhere, are also found engraved on rocks. The ancient Budh alphabet is really the simpler and more elegant form of the refined Sanskrit.

The Allahabad inscription is similar to that at Dehli, but has four short lines additional. A stone lodged in the museum of the Asiatic Society at Calcutta, found at Bairath near Bhabra, between Dehli and Jeypore, has an inscription in the Budh character.

The same character is also found in two inscriptions at Junir, of which one is on the Nanch Ghat. It is in keeping with the inscription on the Dehli pillar and on the rock at Girnar.

The Girnar inscription was supposed by Mr. James Prinsep to be in the Pali language.

The inscriptions on the pillars at Dehli and Allahabad, and on the Tirhut pillars at Mathya and Radhia, on the rocks at Junagiri in Gujerat, and at Dhauli in Cuttack, were deciphered and translated by the remarkable ingenuity of Mr. James Prinsep. A supposed third version of the rock inscriptions (but in the Ariano-Pali character), which was found at Kapurdigiri, near Peshawur, has been carefully collated with the others by Professor Wilson. Many short inscriptions from Gaya, Sanchi, and Birat, as well as from the cave temples of Southern India, have also been published at different times. The edicts in the rock inscriptions contain the names of Antiochus, Ptolemy, Antigonus, and Magas.

The Aryan or Bactrian character is that used in the inscriptions at Jellalabad, Manikhyala, and Kapurdigiri on topes or tumuli, which are numerous for about 300 miles around.

Jalalabad is in the valley of Kābul, and contains many sepulchral topes, which also occur at Daranta and at Hidda or Idda in its neighbourhood. That at Jalalabad was opened by Mr. Masson, and the inscription makes mention of Kadiphes. It is in the Aryan character.

Manikhyala is situated near Jhelum, on the banks of the river of that name, called by the Greeks the Hydaspes. Many topes are there, one of which is 80 feet high, with a circumference of 320 feet.

These topes or tumuli, it is now admitted, are only cairns regularly built, and this mode of sepulture is supposed to be alluded to in the heaps and graves and tombs spoken of in Job xxi. 32, also xxx. 24, and in Jeremiah xxxi. 21; and cairns are still found scattered over all the northern parts of Europe and Asia, and down to Cape Comorin in Peninsular India.

Inscriptions on stones and on copper plates have also been met with all over Southern India, but few of them are of a date prior to the year 1000 of the Christian era, and the larger portion are much later. Some give valuable facts and the names of kings, but the bulk of them record matters of little importance. The Lat character occurs rarely in the southern part of the Peninsula, still it is the only one used on the sculptures at Amaravati, which have been described by the Rev. William Taylor and Mr. J. Fergusson; and Surgeon-General Balfour, while in charge of the Government Central Museum at Madras, advised the despatch to London of most of the sculptures which are now placed against the wall in the staircase of the British Museum.

An extensive collection of inscriptions was made by the late Colonel Mackenzie, Surveyor-General, which also the Rev. W. Taylor described.

In Malayala, as in other parts of Southern India, inscriptions occur in various ancient characters as well as in modern letters. The translation of the copper plate grant to the Syrian Christians, which is still in their possession, has been given in the Journal of the Madras Literary Society.

The inscriptions found in the south of India are in three alphabets,—the Chera, Chalukya, and Vengi. The first appears in Mysore in the second half of the 5th century; the oldest specimen of the Chalukya is of date about the first half of that century; the third is more modern.

The Portuguese at Goa took some inscriptions on stone to their native country, but Sir Charles Wilkins was the first to explain one (at Cintra), about the end of the 18th century. The earlier volumes of the Asiatic Researches contain several interpreted by Wilkins, Jones, and Colebrooke, and in the later volumes H. H. Wilson contributed many valuable articles on this subject. The Journal of the Asiatic Society of Bengal about 1830 (by the articles by J. Prinsep, Dr. Mill, and others) made immense progress; and of later years the same journal, the Journals of the Royal Asiatic Society and of the Bombay Society, have often done much to advance the study of the Sanskrit inscriptions of India; and Mr. Norris, Professor Dowson, Mr. Thomas, Mr. Bayley, Dr. Bhau Daji, and Babu Rajendralal Mittra have been decipherers. In the south of India an immense number of inscriptions exist in the Dravidian languages, many of which are not inferior in antiquity or interest to most of the Sanskrit and Prakrit inscriptions of the north, though, with the exception of a few articles (in the Madras Journal), published by Sir W. Elliot, and containing the results of his own researches, and those of Mr. F. W. Ellis, nothing has been as yet made public. Colonel Mackenzie, however, at the beginning of this century, made an immense collection of copies of inscriptions, and to the disinterested labour of Mr. C. P. Brown we owe the existence of copies of this collection, which, though purchased by Government for an enormous sum, had been neglected and suffered to rot from want of a little care. Copies of inscriptions collected by Sir W. Elliot in the Canarese country were presented by him to the R. A. Society of London. General Cunningham has made large collections of copies of inscriptions in the north of India. His Archæological Reports contain the result of his inquiries.

To copy inscriptions on stone, brush off all dust or mud, and take a mould by applying to the surface stout unglazed paper, uniformly wetted with water, and forced into the irregularities by repeated and forcible strokes with a hard clothes brush. — *Dr. Burnell, A Few Suggestions; Fergusson.* See Architecture; Dehli; Sculpture.

INSECTIVORA, an order of mammals which in India is represented by genera of the families Talpidæ, Soricidæ, and Erinaceidæ. Talpa micrura, macrura, and leucura of Nepal, Sikkim, Sylhet, Tenasserim, and Japan; Urotrichus talpoides of Japan: Sorex cærulescens, murinus nemorivagus, Griffithii, serpentarius, heterodon, saturatus, Tytleri, soccatus, niger, leucops, Hodgsoni, Perroteti, micronyx, melanodon, Sikkimensis, oligurus, homourus, macrurus, and holosericeus, of various parts of India. The order may also be thus shown:—

Fam. Talpidæ, Moles. Talpa, 4 *sp.*; Urotrichus, 1 *sp.*
Fam. Soricidæ, Shrews. Sorex, 20 *sp.*; Soriculus, 1 *sp.*, Crossopus, 1 *sp.*; Corsira, 1 *sp.*; C. Feroculus, 1 *sp.*; C. Myogalea, 1 *sp.*
Fam. Erinaceidæ, Hedgehogs. Erinaceus, 7 *sp.*; E. Tupaia, 2 *sp.*

Insetto, ...	IT.	Purbu, ...	TEL.
Insecta, ...	LAT.	Bujek, ...	TURK.

Insects are a class of invertebrate articulated animals, forming one of the four divisions comprised in the Arthropoda of naturalists, the four divisions being—

1. *Crustacea.*—Respiration by means of gills, or by the general surface of the body; two pairs of antennæ; locomotive appendages more than eight, borne by the segments of the thorax, and usually of the abdomen also. *Examples*—Crabs, lobsters, shrimps wood-lice, etc.
2. *Arachnida.*—Respiration by pulmonary vesicles, by tracheæ, or by the general surface of the body head and thorax united; antennæ absent; legs eight; abdomen without locomotive appendages *Examples*—Spiders and scorpions.
3. *Myriopoda.*—Respiration by tracheæ; head distinct

the remainder of the body composed of nearly similar segments; one pair of antennæ; legs numerous. *Examples*—Centipedes and millepedes.

Insecta.—Respiration by trachea; head, thorax, and abdomen distinct; one pair of antennæ; three pairs of legs borne by the thorax; abdomen without limbs. The adult form (with a few exceptions) winged. *Examples*—Beetles, bees, wasps, flies, butterflies, locusts, cockroaches, earwigs, dragon-flies, ant-lions, May-flies, bugs.

The Insecta are divided by naturalists into the following sub-classes:—

I. AMETABOLA.—Young not passing through a metamorphosis, and differing from the adult in size only; imago destitute of wings; eyes simple, sometimes wanting.

II. HEMIMETABOLA.—Metamorphosis incomplete; the larva differing from the imago chiefly in the absence of wings, and in size; pupa usually active, or, if quiescent, capable of movement.

II. HOLOMETABOLA.—Metamorphosis complete; the larva, pupa, and imago differing greatly from one another in external appearance. The larva vermiform, and the pupa quiescent.

I. The AMETABOLA are divided into the following orders:—

ORDER I. ANOPLURA.—Minute aptera, with the mouth formed for suction; two simple eyes, or none. This order comprises insects which are commonly parasitic, and are known as lice (*Pediculi*).

ORDER II. MALLOPHAGA.—Minute aptera, in which the mouth is formed for biting, and is furnished with mandibles and maxillæ.

These insects are usually known as bird-lice, being generally parasitic upon birds, though sometimes upon mammals.

ORDER III. THYSANURA.—Apterous insects, usually with a masticatory mouth, and having the extremity of the abdomen furnished with locomotive appendages.

The most familiar members of this order are the *Poduræ*, or spring-tails.

II. The HEMIMETABOLA are divided into the following orders:—

ORDER IV. HEMIPTERA.—Mouth suctorial, beak-shaped, consisting of a jointed rostrum, composed of the elongated labium, which forms a jointed, tubular sheath for the bristle-shaped styliform mandibles and maxillæ. Eyes compound, usually with ocelli as well. Generally provided with two pairs of wings; but these are sometimes wanting.

This order is divided into the following two sub-orders:—

Sub-Order a. Homoptera. The anterior pair of wings of the same texture throughout (membranous). The wings do not fold over one another when the insect is at rest. The three segments of the thorax are united in a mass, and the pro-thorax is generally shorter than the meso-thorax. There are ocelli between the compound eyes, and the antennæ are small, and composed of few joints. The females have an ovipositor of three-toothed blades.

In this section are the aphides, the scale insects (*Coccidæ*); the cicadas, the lantern-flies (*Fulgora*), etc.

Sub-Order b. Heteroptera.—Anterior wings membranous near their apices, but chitinous towards the base, overlapping each other at the apex when at rest. The antennæ are moderate in size, and composed of a few large joints. The pro-thorax is the largest segment of the thorax. They are divided into two groups of the *Hydrocorisæ* (water-bugs), and *Geocorisæ* (land-bugs).

ORDER V. ORTHOPTERA. Mouth masticatory; wings four, sometimes wanting; the anterior pair mostly smaller than the posterior, semi-coriaceous, usually with numerous nervures, the interspaces between which are filled with many transverse reticulations; sometimes overlapping horizontally (cockroach), sometimes meeting like a house-top (grasshoppers). Posterior wings usually having their front portion of a different texture from their hinder portion, this latter being almost always more transparent, and when not in use, folded longitudinally, resembling a fan. Posterior wings mostly wanting in the females of the Blattidæ. Antennæ usually filiform. Metamorphosis semi-incomplete (sometimes, however, the adult is apterous, when it is difficult to distinguish the lava, pupa, and imago).

This order includes the crickets (*Acheïna*), grasshoppers (*Gryllina*), locusts (*Locustina*), cockroaches (*Blattina*), etc.

ORDER VI. NEUROPTERA.—Mouth usually masticatory; wings four in number, all membranous, generally nearly equal in size, traversed by numerous delicate nervures, having a longitudinal and transverse direction, and giving them a reticulated lace-like aspect. Metamorphosis generally incomplete, rarely complete. The larva active, hexapod, rarely with pro-legs.

This order includes the dragon-flies (*Libellulida*), caddis-flies (*Phryganeida*), May-flies (*Ephemeridæ*), the ant-lion (*Myrmeleo*), termites, etc.

ORDER VII. APHANIPTERA.—Wings rudimentary, in the form of plates, situated on the meso-thorax and meta-thorax; mouth suctorial. Metamorphosis complete.

This order comprises the fleas (*Pulicidæ*).

ORDER VIII. DIPTERA. The anterior pair of wings alone developed; the posterior pair of wings rudimentary, represented by a pair of clubbed filaments, called halteres or balancers. In a few the wings are altogether wanting; mouth suctorial. The metamorphosis is complete, the larvæ being generally destitute of feet. In some cases (*e.g.* the gnats) the pupæ are aquatic, and have the power of moving rapidly. In most cases, however, the pupæ are quiescent. The Diptera constitute one of the largest of the orders of the Insecta; the house-flies and flesh-flies (*Muscæ*), gnats (*Culex*), forest-flies (*Hippobosca*), crane-flies (*Tipulidæ*), and gad-flies (*Tabanidæ*), constituting good examples.

ORDER IX. LEPIDOPTERA.—Mouth suctorial, consisting of a spiral trunk. Wings four in number, covered with modified hairs or scales; wanting in the females of a few species. Nervures not very numerous, mostly longitudinal. Antennæ almost always distinct, and composed of numerous minute joints. This well-known and beautiful order of insects comprises the butterflies and the moths.

ORDER X. HYMENOPTERA. Wings four, membranous, with few nervures; sometimes absent. Mouth always provided with biting-jaws, or mandibles; the maxillæ and labium often converted into a suctorial organ. The metamorphosis is complete, but the various parts of the pupa are visible through the delicate enclosing membrane.

The *Hymenoptera* form a very extensive order, comprising the bees, wasps, ants, ichneumons, saw-flies, etc.

ORDER XI. STREPSIPTERA.—Females without wings or feet; parasitic. Males possessing the posterior pair of wings, which are large, membranous, and folded longitudinally like a fan. The anterior pair of wings rudimentary; jaws abortive.

The Strepsiptera are a limited order of parasitic insects of small size, found on bees and other Hymenoptera, generally between the segments of the abdomen.

ORDER XII. COLEOPTERA.—Mouth masticatory, furnished with an upper lip or labrum, two mandibles, two maxillæ, with maxillary palpi (generally four-jointed), and a moveable lower lip or labium, with jointed labial palpi. The four wings are usually present, and the anterior pair are not adapted for flight, but are hardened by chitine, so as to form protective cases (elytra) for the posterior wings. The inner margins of the elytra are generally straight, and when in contact they form a longitudinal suture. The posterior wings are membranous, and when not in use are folded beneath the elytra. The antennæ variable.

This order comprises all the beetles properly so called.

With insects, the principal parts attached to the head are two antennæ, an upper lip (labrum), a lower lip (labium), bearing the labial palpi; a pair of jaws (mandibles), an inner pair of jaws (maxillæ), to which are attached the maxillary palpi. The thorax is divided into three segments, the pro-thorax, meso-thorax, and meta-thorax. The

pro-thorax bears the front pair of legs; the meso-thorax bears the front pair of wings and second pair of legs; the meta-thorax bears the second pair of wings and the third pair of legs. The legs consist of the following principal parts: the coxa, trochanter, the femur, tibia, and tarsus.

The diversified elevations of the countries of the East Indies, with their varied temperatures, cause in localities a greater or less abundance of particular forms; but numerous genera of tropical and temperate climates are everywhere associated together, and the range which the genera enjoy is very considerabl

But the pervading character of Indian entomology is uniformity. We meet with numerous genera, both of tropical and temperate climes, associated together. There is a great intermingling of forms, and the range which genera enjoy is considerable. In part of the Himalayas, at the extreme southern points of India, in the west, and even in the Archipelago, there is one pervading character, evincing everywhere the prevalence of tropical genera. In Nepal and the southernmost extremity of the Mysore, in Ceylon, at Bombay, at Madras, and at Calcutta, also at Singapore, in Japan, and in Java, with the rest of the Polynesian Isles, the majority of the same types abound; and what is of more consequence, a great majority of the same species also occur in most of the above-mentioned regions. Also, if we turn to Africa, we find a considerable similarity in its entomology with that of Asia. Among the Carabidæ occur Anthia, Orthogonius, Trigonodactyla, and Siagona; among the Lamellicornes, Epirinus, and Popillia, the conical Buprestidæ and the extraordinary Paussidæ; and to these may be added the genera Melyris, Megalopus, Sagra, and Adorium; Dorylus among Hymenoptera, and Diopsis among the Diptera. We find precisely the same species in both continents. Among the most conspicuous are Copris sabæus and C. pithecius, Cetonia cornuta and Lytta gigas. Even supposing that no identical species occurred common to Asia and Africa, a very remarkable similarity exists in the representatives of each; one example of which is Ateuchus sanctus, which very closely resembles the celebrated sacred beetle of the Egyptians, the object of their worship, by some regarded as an emblem of fertility, but more probably that of eternity.

This branch of natural history has been largely cultivated by many eminent writers, both in its scientific and economic relations; and among those who are quoted in this article may be named J. C. Fabricius, 1775 and 1803; Donovan; J. O. Westwood, Drury, Exotic Entomology; J. C. Farmer, F. W. Hope, 1837 and 1851; Thomas Horsfield and Frederic Moore; Sir James Emerson Tennent, A. R. Wallace, John Nietner, J. Wood-Mason, Charles Darwin, Sir John Lubbock, Albert Müller, W. H. Benson, R. Thompson, and Miss Eleanor A. Ormerod. John Curtis, in 1824 and 1860, wrote on Farm Insects and the Turnip Crop; and in 1877, and again in 1882, Miss Ormerod produced a very valuable work on the Insects attacking Field and Garden Crops.

The principal authors who have written on the insects of Eastern and Southern Asia, are Horsfield, F. Moore, Drury, Nietner, Wallace, Westwood, Wood-Mason.

Himalayan entomology in character is both Asiatic and European, and the intermingling of forms of temperate and tropical climes is one of its most distinguishing peculiarities. In its valleys southern forms predominate over northern; and to the uninterrupted belts of jungle stretching along the mountain ranges, we may trace several tropical phytyvorous genera far beyond their apparent natural limits. Some carnivorous insects are also found ranging far to the north in the Himalayas, an example of which is Anthia 6-guttata, a well-known native of the tropics; the specimens, however, are mere dwarfs compared with those of Peninsular India. Among the Cicindelidæ, Colliuris appears; among the Carabidæ, we find Desera, Omphra, and Cyclosomus; among the Lamellicornes, Euchlora, Mimela, and Dicranocephalus; and to these may be added Anisotelus belonging to Telephoridæ, and Podontia and Phyllocharis to the Chrysomelidæ; all of these are attached to warm countries, and some, indeed, are seldom found but within the torrid zone. Many genera from the Himalayas evince an affinity to European types; various Himalayan genera closely approximate Siberian forms; and some of the species described by Dr. Gebler from the Altaic chain of mountains, particularly some Chrysomelidæ, are believed to be indigenous in both regions. Some few, however, are worth noticing, such as Broscus and true Carabus, Geotrupes and Pimelia. Several species of the following genera of Coleoptera occur in the Himalayas, as well as in Europe, namely, Elater, Melolontha, Chrysomela, Cassida, and Coccinella. Among the carnivorous insects, Dermestes lardarius and vulpinus, Coryneles violaceus and rufipes, and some of the Staphilinidæ, are essentially the same in Europe and the Himalayas. Of Lepidoptera, Papilio machaon is evidently the same as that met with in England; the same remark will apply to Vanessa Atalanta and Cynthia cardui.

A greater number of species of Lepidoptera are disseminated throughout the world than of any other order. In Asia and Europe, we meet with Papilio machaon, Gonepteryx rhamni; with some species of Colias and Pontia, with Vanessa Atalanta and Cynthia cardui; and to these may be added several identical Sphingidæ, particularly Acherontia Atropos, Deilephila, and Celerio. Among the Noctuidæ, Geometridæ, Tortricidæ, and Tineidæ, many species will also be found inhabitants of both continents. In the Orthoptera, some Gryllidæ are common to countries remotely situated, which may partly be accounted for by their migratory habits. Among the Blattidæ, several tropical species range widely; some of them have become naturalized even in a northern climate; and Indian, Brazilian, and New Holland species live in the houses of London. Among the eastern Neuroptera there occur various Libbelulinæ and Hemerobiidæ, closely resembling English species.

Among the Hymenoptera may be noticed the universal ranger, Evania appendigaster, ever attendant on Blatta, some Ichneumonidæ, Crabronidæ, Apidæ, and Vespidæ,—all of them presenting identical species with those of Britain.

In referring to the Diptera may be mentioned the orange-fly, the same in England, India, and America; the gnats and mosquitoes, common to the four quarters of the globe, alike the pest

of the Indian and Laplander; and, lastly, various species of musca. Passing by the Aptera, and the various parasites of birds, quadrupeds, and of man himself, we find among the Hemiptera several identical species of Pentatoma, Reduvius, Tetyra, besides Cimex lectularius, the scourge of all countries and climates.

Chinese insects were described by Fabricius and Dunovan. Mr. Hope, in March 1842, published half a century of the Coleoptera of Canton and Chusan, collected by Dr. Cantor. Part of Mr. Bowring's Coleoptera and Homoptera of Hong-Kong and neighbourhood, were published in the Annals of Natural History, 1844, by Mr. Adam White.

The following list, although necessarily incomplete, will give an idea of the families and genera occurring in Southern India. It is based on Sir J. E. Tennent's list of Ceylon insects:—

ORDER COLEOPTERA, *Linn.*
Fam. Cicindelidæ, *Steph.*
Cicindela, *Linn.*
Therates, *Latr.*
Collyris, *Fabr.*
Tricondyla, *Latr.*
Fam. Carabidæ, *Leach.*
Omophron, *Latr.*
Calasoma, *Weber.*
Pselaphonax, *Wlk.*
Casnonia, *Latr.*
Ophionea, *Klug.*
Euplynes, *Nict.*
Heteroglossa, *Nict.*
Zuphium, *Latr.*
Pheropsophus, *Solier.*
Cymindis, *Latr.*
Anchista, *Nict.*
Dromius, *Bon.*
Lebia, *Latr.*
Creagris, *Nict.*
Elliotia, *Nict.*
Catascopus, *Kirby.*
Scarites, *Fabr.*
Clivina, *Latr.*
Leistus, *Frahl.*
Isotarsus, *Luferte.*
Panagæus, *Latr.*
Chlænius, *Bon.*
Anchomenus, *Bon.*
Agonum, *Bon.*
Colpodes, *Macl.*
Argutor, *Meg.*
Simphyus, *Nict.*
Bradytus, *Steph.*
Curtonotus, *Steph.*
Harpalus, *Latr.*
Calodromus, *Nict.*
Megaristerus, *Nict.*
Platysma, *Bon.*
Morio, *Latr.*
Barysomus, *Dej.*
Oodes, *Bon.*
Selenophorus, *Dej.*
Orthogonius, *Dej.*
Maraga, *Wlk.*
Helluodes, *Westw.*
Physocrotaphus, *Parry.*
Physodera, *Esch.*
Omphra, *Latr.*
Planetes, *Macl.*
Cardiaderus, *Dej.*
Distrigus, *Dej.*
Drimostoma, *Dej.*
Cyclosomus, *Latr.*
Ochthephilus, *Nict.*
Spathinus, *Nict.*
Acupalpus, *Latr.*
Bembidium, *Latr.*
Trechus, *Clairv.*
Fam. Dyticidæ, *Macl.*
Cybister, *Curt.*
Dytiscus, *Linn.*
Eunectes, *Erich.*
Hydaticus, *Leach.*

Coccus.

Some insects are useful to man and his industries, but some are hurtful, even ruinous; some are of wonderful beauty, and others are of interest from peculiarity of structure or of habits. They are gifted with such senses as love, touch, taste, smell, sight, hearing, and the commanding and governing senses, and in this state the two sexes meet and the propagation of their kind is effected. After impregnating, the males usually die. The females live a short space longer, until they lay their eggs. Their fecundity is generally very great, but their numbers are kept under by many insectivorous creatures,—amongst birds by woodpeckers, by the Sittinæ or nuthatches, by Certhias or true creepers, and by the Parrinæ or titmice. The hard-bodied beetles and other Coleoptera are eagerly seized while on the wing by the shrikes, drongas, crows, rollers, bee-eaters, thrushes, and others. Many bats, carnaria, and civets are insect feeders. The ants, the acari, and ichneumonidæ, among insects, destroy caterpillars and grubs, and some of the ichneumons destroy the larvæ of many species of gall-flies. Genera of the family Mordellidæ are mostly parasites of the Hymenoptera. They abound in tropical climates, and check the increase of the Vespidæ (wasps), and Bombidæ (bees). The lizards, the chameleons, and the geckos eat up great numbers of the Achetidæ (crickets), and the little chip-lak lizard of all India is unceasing in making them its prey.

Very few insects are edible, and from their small size they add little to the food supplies of man. The Greeks ate grasshoppers; even now the aborigines of New South Wales eat them raw, first taking off their wings. Ælian relates of an Indian king, who for a dessert, instead of fruit, set before his guests a roasted worm taken from a plant (probably the larva of an insect), which was thought very delicious. Mites in myriads are consumed in cheese. Negroes in Jamaica eat the Bugong butterflies, after removing the wings, and they store them up by pounding and smoking them.

The Chinese, it is said, thriftily eat the chrysalis of the silkworm, after making use of the silk; the larvæ of a hawk-moth are also relished.

The Palolo viridis or sea-worm, and the grub of the Cordylia palmarum or palm-weevil, are used as food articles. The grub of the palm-weevil is the size of a thumb, and is a favourite with some races of India. The palm-weevil of Burma, quite a large insect, is, according to Dr. Mason, a species of Calandra. Its larva is an odious-looking grub, which is eaten by the Burmese, and esteemed by them a great luxury.

The grub of a species of Cicada of the Homoptera is eaten by the Karens as a great luxury. It is domiciled in a clay tube several inches high, from which the Karens extract it by a thorny branch of a bamboo.

Humboldt mentions ants as being eaten by the Marivitunos and Margueratares, but he does not specify the genus or species. Hottentots and races in the East Indies eat the termites, or white ants, boiled, fried, and raw. Broughton, in his Letters written in a Mahratta camp in 1809, tells us that they were carefully sought after, and preserved for the use of the debilitated Lurjee Rao, prime minister of Sindia. They are delicate eating. The natives mix them with flour, and make a variety of pastry; or they parch them in pots over a gentle fire, with or without ghi, stirring them about as is done in roasting coffee. White ants, at their season of pairing, about the commencement of the rains, take wing, and pour into houses that are lighted up. They almost instantly cast their wings, and are then mere creeping insects, easily caught.

The peasants of Languedoc hold the Mantis religiosa almost sacred; they call it Prega Deori or Prie Dieu.

For man and his industries insects furnish many valuable materials. Galls are employed in dyeing and in tanning and ink-making, and are also used medicinally. They are produced on different species of oak, one of them by the female of the Cynips or Diplolepis piercing the buds of Quercus infectoria, and, it is said, also of Q. ballota; another gall, also, on the tamarisk, Tamarix Indica, is largely gathered on the N.W. borders of India, in Central Asia, and Kurdistan. In China, a gall, which is said to be produced by an aphis, is more bulky than the oak galls, and of very irregular shape, and hollow.

The cochineal insect, the Coccus cacti, is of great value in the arts. There are two species, one yielding the fine cochineal of commerce, the other the Grana sylvestris or wild cochineal. The latter is naturalized in India, but it is of little commercial value, being enveloped in a thick cottony down, which cannot be separated from the insect for the preparation of the dye. The fine cochineal insect lives on several cultivated kinds of thornless Opuntia, and O. cochinilifera, which is employed in the W. Indies for rearing the insect, has been introduced into India. The fine insect will not settle on the wild prickly pear, O. Dillenii. The females alone yield the dye. The young are viviparous; every cochineal mother produces above a hundred young ones. Whilst within the mother they appear to be all connected, one after the other, by an umbilical cord to a common placenta, and in this order they are, in due time, brought forth as living animals, after breaking the membrane in which they were at first probably contained as eggs. The fine cochineal, the Grana fina, is brought to Europe chiefly from Central America, and sells in England at 3s. 6d. It yields a valuable red, crimson, scarlet dye for wool and silk, and colouring material. The best rouge is made from it, and its imports into Britain in 1881 were valued at £355,924.

Another species of Coccus, C. maniparus of Arabia, punctures the Tamarix gallica, and causes the exudation of the Arabian manna. But, in India, the most valuable of the species of Coccus is C. lacca, the female of which becomes the lac of commerce. It is a product of British India, and in the year 1877–78 the exports were,—

Shell-lac, ...	78,875 cwt.	Rs.	28,50,552
Button lac (1878-79),	17,114 ,,	,,	5,46,061
Stick-lac, ...	1,393 ,,	,,	15,807
Lac dye, ...	9,570 ,,	,,	2,90,087
Other kinds, . . .	14,807 ,,	,,	4,64,035

This forest product varies in quantity from year to year.

The trees on which the female Coccus lacca chiefly settle are the Ficus Indica, F. religiosa, Butea frondosa, the cotton trees, Bombax ceiba, Salmalia Malabarica, Gossampinus Rumphii, and Zizyphus jujuba. Lac lake was first made in Calcutta in the beginning of the 19th century, and the lac dye was manufactured afterwards. Another Coccus, C. Sinensis of China, secretes a wax (Peh-la?) from which candles are made; and the Coccus polonicus of High Asia and Europe is also used in its native regions for dyeing wool, silk, and hair of a red colour.

Bees are useful in producing honey, and in Afghanistan they are semi-domesticated, as in Europe. The races on the N.W. frontier of India make openings in the walls of their houses for the bees to shelter in, and their honey is much valued. The Langeh bee of Borneo, and one of smaller size called Nuang, produce valuable honey. They generally place their nests underneath the larger branches, and the Dyaks ascend the trees by means of a rail of bamboos to reach them. A small bee of Borneo is esteemed for the wax of its honeycomb. The Trigona læviceps gathers the pwai ngyet resin of Burma. Bees are not the only insects which produce wax. The Flata limbata, *Hutton*, an insect of the Himalaya related to the Pœciloptera, produces a wax which dissolves readily in water.

Still more valuable than the species of Coccus are the domesticated and wild insects which produce the silks of commerce. They are of the families Saturniidæ and Bombycidæ, of the Lepidoptera. All the Saturniidæ are silk spinners, —Actias, Antherea, Attacus, Caligula, Cricula,

Loepa, Neoris, Rinaca, Rhodia, Salassa, and Saturnia; and there are about 400 species known to naturalists, but only some of the Bombycidæ—Bombyx, Ocinara, Theophila, and Trilocha—produce it. The silk industry has been fostered in China from the most ancient times, the empress taking a personal interest in it, as the emperor does in that of agriculture; and in British India the wild insects yielding tasar are carefully watched. About four million pounds weight of raw silk, value about 17s. the pound, are annually imported into Great Britain, chiefly from China. The exports from India in 1877–78 were 1,512,819 lbs., value Rs. 70,35,193, to Great Britain, France, and Italy. In 1881, Great Britain imported silk to the value of £15,092,201, comprising knubs, or husks, waste, raw, thrown, and manufactured.

The blistering flies, species of Cantharis, Mylabris, and Meloe, though used only in medical practice, are not to be forgotten in the enumeration of insects valuable to man. Cantharis vesicatoria is the Spanish blistering fly. The Indian flies are Mylabris chicorii, Meloe trianthema, Cantharis gigas, and C. violacea; but Mylabris chicorii is that exclusively used.

The beautiful wing-cases or elytra of Chrysochroa, a species of Buprestis of a brilliant metallic green colour, are used in India, and exported to Europe, to ornament cuscus fans, baskets, etc., to be worked on muslins, and to enrich the embroidery of ladies' dresses. A species of Buprestis occurs in Burma of variable copper and green, burnished with transparent golden bronze. They are living gems, and Sgau Karen maidens use the wing-cases for necklaces and chaplets. The Kyen adorn themselves with the elytra of B. ignita. Westwood estimated the species of Buprestis at 1500.

The excreta of animals which would be injurious to man, are buried deep in the earth by the dung-beetles, the useful Copridæ and Dynastidæ. Some of these are of great size, with immense horn-like protuberances on the head and thorax of the males. Some of them cut the masses into round balls, which they roll to a distance, and bury an inch or two deep in the ground.—*Wall. Tr. of a Nat.* p. 95.

The Necrophaga are carrion feeders; and species of Necrophorus, Necrodes, Silpha, and Oiceoptoma occur in the East Indies.

A brown-black scavenger beetle of Burma, and very common, resembling Scarabæus stercorarius or Geotrupes stercorarius, selects for its burrow a bed of ordure, which it excavates two or three feet deep, and at the end of the passage forms a chamber of several inches in diameter. It is not a pellet roller.

Nature protects the otherwise helpless animals in varied ways. They are to be found on leafy plants, on withered branches, or amidst dried grasses on the ground, and so closely resembling the surrounding objects, that even when pointed to they cannot be made out by an unaccustomed eye. One mode or other of protection is followed through all the insect world. Beetles that imitate other Coleoptera of distinct groups are very numerous in tropical countries. The insects which others imitate always have a special protection, which leads them to be avoided as dangerous or uneatable by small insectivorous animals; some have a disgusting taste (analogous to that of the Heliconidæ); others have such a hard and stony covering that they cannot be crushed or digested; while a third set are very active, and armed with powerful jaws, as well as being provided with some disagreeable secretion.

The Phasmidæ abound in Asia, Africa, S. America, the Eastern Archipelago, and Australia. They are numerous in British India. Their varied shapes have obtained for them curious names,—spectres, phantoms, devils' horses, soldiers of Cayenne, walking sticks, walking leaves, or leaf insects (Phyllium), animated sticks, and, like the Bacteria sarmentosa, they mostly are inoffensive leaf-eating creatures, some being broad and leaf-like, while others are long and cylindrical, so as to resemble sticks or bits of withered grass. The imitative resemblance of some of these insects to the plants on which they live, and to the bits of straw and wood around them, is marvellous.—*Wallace, Tr. Nat.* p. 92.

The praying insects, the Mantidæ, are so called because of their habit of sitting with their long fore feet held up as if in prayer. In reality they are real tigers amongst insects, taking that position in wait for their prey, which they seize with their powerful serrated fore feet. They stand motionless, and so closely resemble the leaves as not to be easily perceived.

The true leaf insects of the East Indies are species of the genus Phyllium. They are the size of a moderate leaf, which their large wing-covers, and the expanded margins of the head, thorax, and legs, cause them exactly to resemble. Their green colour and the veining of their wings precisely correspond to that of their food plant.

Hymenoptera comprise the gall insect, ichneumon flies, sand wasps, mason wasps, mining wasps, stinging ants, common ants, wasps, hornets, carpenter bees, honey bees, and dammer bees. They mostly have stings with which to protect themselves, and the pain from the thrust of that of the wasp, the bee, the hornet, or the ichneumon is considerable, death even resulting from the attacks of a multitude of bees. Even large birds like the myna carefully fly off to avoid the hornet's attacks.

Bugs belong to the family Hemiptera, several genera of which occur in India. Amongst others are Cantuo ocellatus, Leptoscelis marginalis, Callidea Stockerius, etc. Of the aquatic species, the gigantic Belostoma Indicum attains a size of nearly three inches. Yet some of them are most attractive in colour; a green one is often seen on leaves. They are quite inoffensive if unmolested, but if irritated exhale an offensive odour.

The larvæ of the genus Adolia are hairy, and sting with virulence.

Another Ceylon caterpillar of the moth Necera lepida, *Cramer*, the Limacodes graciosa, *West.*, short, broad, pale-green, with black spines, which feeds on the Carissa jasminiflora, stings with fury. It occupies also the Thespesia populnea, and at a certain stage of its growth descends by a silken thread and hurries away.

A species of the Hister family, of British India and Further India, a small glossy black beetle, when touched draws up its limbs and counterfeits death to admiration.

One of the Brachinides of Burma, when seized,

emits, with slight snapping noises, successive discharges of aeriform vapour, which blackens the fingers like a strong acid.

Latrodectes lugubris, the kara kurt or black worm of the Kirghiz, is about the size of a finger nail. It can jump several feet, and its bite is very venomous.—*Schuyler*, ii. p. 123.

The running spiders and some of the water beetles, species of Hydrophilus, secure their progeny by carrying their eggs in a cocoon under the abdomen.

The object for which some insects are furnished is not apparent. Many species of the Cerambycidæ beetles emit an odour resembling attar of roses.

Scolopendra phosphorea, *Mason*, of Burma, is a small centipede, which when touched suddenly becomes a living blaze, each lobe glowing like a mass of phosphorus.

All Hindus reverence the cow amongst mammals, also the Brahmany kite amongst birds, and the tulsi (Ocimum sanctum) amongst plants, but to no insect do they attach religious importance. In ancient times, however, the Ateuchus Egyptiorum was the sacred beetle of the Egyptians. It is found in Egypt and Western Asia. It has almost an exact representative of India in Ateuchus sanctus. It was regarded by the Egyptians as an emblem of fertility, or more probably that of eternity.

The most remarkable and gigantic insects of the old world are species of the Scarabæus. S. atlas, *Fabr.*, is said to be a native of Java, and there are four species indigenous to Nepal.

Luminous insects were styled by the Romans Noctilucæ and Luciolæ. They are numerous in the tropics, and greatly so in some parts of the S. and E. of Asia.

The names glow-worm and fire-fly are applied to the Lampyrides, a tribe of the Malacodermous Coleoptera, also to the South American Elateridæ, of the genus Pyrophorus, and to the Homopterous insect Fulgora oculata, which occurs in Penang, and F. spinola' of Assam. Fulgoræ of Burma are said not to be luminous. F. laternaria is of S. America. F. candelaria is said to be of S.E. Asia.

Lampyris fire-fly, the Mouche lumineuse of the French, delights in the warm damp of the jungle. The fire-flies assemble around particular trees. Elater cœnosus, *Hope*, and other species, in Nepal, frequent the oak, the alder, and the willow.

A species of Epeira, a large red and black spider, about Monghir on the Ganges, form gigantic webs, stretching across the paths, sufficiently strong to offer considerable opposition to a traveller. The reticulated part of the webs are of a bright yellow colour, and about five feet in diameter, but have a stretch of ten to twenty feet, including the great guy ropes, by which it is fastened to some neighbouring tree or clump of bamboos. The spider sits in the centre waiting for its prey. One of them when expanded measured six inches across the legs; and Captain Sherwill found a species of Nectarinia entangled in one of their webs.

The beetles which most attract attention from their size and beauty are the Buprestidæ and Longicornes. The Anthribidæ abound in the Malay Archipelago, and, like the Longicornes, have very long antennæ. The Eupholi of the Papuan Islands and the Pachyrhynchi of the Philippines are living jewels.

The butterflies, moths, and sphynxes belong to the Lepidoptera, of which a greater number of species are disseminated throughout the world than of any other insect order, and many of them are of great beauty. Phalena patroclus of Burma is a magnificent moth.

The larvæ of Dipsas isocrates, a lepidopterous insect, occupy the interior of a pomegranate, which they enclose in a woven web to prevent it falling.

Deiopeia pulchella, an insect common in British India, feeds on the kernel of the seed of Phyrostigma venenosum, which contains a poisonous principle, and the excrement of its larvæ contains the principle of the bean unaltered.

The curious wood-moth, the Sack Trager of the Germans, the dalone kattea of the Singhalese, and kundi puchi of the Tamil people, are species of Eumeta, E. Cramerii, *Westwood*, and E. Templetonii, *Westwood*. They gather and cement around them a bundle of thorns, which they bind together by threads so as to form a secure case. The male at the close of the pupal rest escapes from one end of the case, but to the female it is a covering for life.—*Tennent's Ceylon*.

Deticus, an insect of the grasshopper tribe, is kept by the Chinese in cages for fighting. They live for months in captivity.—*G. Bennett*, p. 271.

Crickets are pitted against each other by the Chinese, and largely betted on.

The skip-jack beetle is a species of the Elateridæ, which flies into the houses in the evening. When laid on its back, it suddenly turns itself over with a clicking sound.

The activity, intelligence, and ingenuity displayed by ants have attracted attention in all ages. The curious ant, Drepanognathus saltator, *Jerdon* (or Harpegnathus saltator, *Jerdon*), one of a genus of the Peninsula of India, in Malabar, and Mysore, has the name saltator from its making most surprising jumps when alarmed or disturbed. It is very pugnacious, and bites and stings very severely. It makes its nest underground, generally about the roots of some plant. Its society does not consist of many individuals. It appears to feed on insects, which it often seizes alive.

Œcophylla smaragdina is a green ant of the Malay Archipelago. It is rather large, and a long-legged, active, and intelligent-looking creature. They live in large nests, formed by glueing together the edges of leaves, especially of Zingiberaceous plants. When their nest is touched, a number of the ants rush out, apparently in a great rage, stand erect, and make a loud rattling noise by tapping against the leaves.

The three families of ants, Formicidæ, Poneridæ, and Myrmicidæ, comprise many genera and a large number of species. Their stages of life, egg, larva, pupa, imago, are the same in all, and they have workers, imperfect females (which constitute the great majority), males, and perfect females.

Ants kill off a great number of caterpillars and other small insects.

Forel, examining one large nest, found more than twenty-eight dead insects brought in per

minute, which would be 100,000 destroyed in a day. Many ants collect seeds.—*Sir J. Lubbock on Ants*, p. 60.

Pheidole providens, *Sykes*, collects large stores of grass seeds, on which it subsists from February to October. Colonel Sykes observed these ants bringing up their stores of grain to dry, and they utilize species of aphis, coccus, cercopis, centrotus, membracis.

Ant-lions are not ants, but the larvæ of species of Myrmelon. Their form at the lower part resembles that of a spider, but the head is armed with a sharp, strong pair of claws. These excavate in gardens, and fields, and roadways, small cone-shaped cavities, with exquisitely smooth edges and sides, at the bottom of which the ant-lion lurks, so that any insect approaching the lip of the cone immediately falls to the ambush below, and is seized and destroyed. In its perfect state it resembles the dragon-fly, but it is seldom seen.

The trap-door spider is abundant in many parts of British India, and particularly so about Ghooty in the Ceded Districts. It is a species of the genus Cteniza, and is of considerable size. It excavates for itself a house in the ground, of dimensions quarter the size of this page, and forms a trap lid, which fits with great nicety, and closes the instant the prey falls inside.

No country is exempt from the injuries inflicted by insects. In Great Britain, in 1881, the turnip crop suffered heavily from various insect pests. The 'fly' attack proved a heavy visitation over a large area of both England and Scotland. In some parts of Scotland, a small weevil, the Ceuthorhynchus contractus, was quite as injurious as the fly, and in the south of Scotland this weevil and another closely allied joined with the fly, the result being a very heavy destruction. A ground caterpillar, the caterpillar of the turnip-moth, Agrestis segetum, was very mischievous in Suffolk and Kent. Cabbage also suffered from fly in Kent and Essex. In Scotland, the maggot of the cabbage-fly (Anthomyia brassica, and possibly in some cases Anthomyia radicum) was unusually and seriously injurious to garden crops of cabbage. The beet-fly (A. betæ), which first appeared to any serious extent in 1880, still holds its own. Hops suffered from the froghopper, or cuckoo-fly, Euacanthus interruptus. Planters round Alton made a machine of tarred boards on which the creatures stuck when taking their tremendous leaps, and the damage was checked. Daddy long-legs' attacks in 1880 were disastrous. The customary corn pests are wireworm, red maggot, and aphides. A wheat saw-fly made its appearance, and near Rochdale grass saw-flies of some species of Dolerus appeared in great numbers. The Oscinis frit or frit-fly is at times exceedingly destructive in Sweden. The oak suffered from the leaf-rollers and other caterpillars. Saw-fly caterpillars were injurious to pines; and near Berwick, a small beetle, Orchestes fagi, caused much damage to the beech leaves. Their presence is a constant source of anxiety, not unfrequently of ruin, to the farmers and planters in all parts of the world, but particularly in tropical climates. The injury from insects is not less than that from the several diseases, caries, must, and ergot, which infest the cereal grains, produced by minute cryptogamic plants (mushrooms), which alter the perisperm, and sometimes destroy it altogether. (See Cereals.) Insects in their perfect state are not long-lived, and it is in the early stages of their existence that they cause most destruction.

The Diptera order has many insects which irritate and greatly annoy man, although not destroying life.

The Peepsa is one of these; it is a very small black fly, which floats like a speck before the eye. Its bite leaves a small spot of extravasated blood under the cuticle, very irritating if not opened. In British India they cling in myriads to any hanging thread, and can be destroyed by encircling them by an open cone of paper, and setting fire to its edges.

Midas ruficornis is a dipterous insect of the S.E. coast of the Peninsula of India. But the most troublesome of the mosquitos on the east coast and in Ceylon, is a species of Culex (C. laniger).

Wasps, scorpions, and centipedes often inflict painful stings and bites, which rarely prove fatal, but, except the hornets and wasps, they are rarely aggressive, only attacking man in self-defence, or when alarmed. Some of the scorpions are black coloured, but the usual tints are various shades of brown, and in the forests of the Malay Islands they occur of a green colour, and 8 to 10 inches long. Their numbers in some parts of India are great. On the plain at the Gor Naddy, in 1840, they were multitudinous.

Amongst the insects which infest books in India are two genera, which are usually regarded as accomplices in the work of destruction, but which, on the contrary, pursue and greedily feed on the larvæ of the death-watch and the numerous acari, which are believed to be the chief depredators that prey upon books. One of these maligned genera is a tiny tailless scorpion (Chelifer), of which three species have been noticed in Ceylon,—the C. librorum, *Temp.*, C. oblongum, *Temp.*, and C. acaroides, *Hermann*, the last of which, it is believed, had been introduced from Europe in Dutch and Portuguese books. Another genus of book insects is the Lepisma, the fish insect genus, and called so by Fabricius from its fish-like scales, tiny silvery creatures, which feast on the acari and soft-bodied insects that infest books. There have only been two species described, viz. the L. niveo-fasciatus and L. niger, *Temp.*; it has six legs. As insects are very destructive to books in India, and the pastes or gums employed in the bindings form special objects for the attacks of certain tribes, it may be useful to know that insects refuse to attack the gum of the cashew-nut fruit.

Mother insects deposit their eggs in localities suitable for their reception and future development, selecting the object or substance to which instinct directed them as being the best adapted to serve those ends. Water for a few, and the soil of the earth for very many, but the vegetable kingdom for vastly the greatest number, serve insects as suitable habitations for rearing their young. It is while in the state of larvæ that they consume the greatest amount of food. Those living in the interior of timber or on vegetables, or other hard substances requiring manducation, are furnished with a pair of powerful mandibles or jaws, and another and less powerful

pair of masticatory jaws or maxillæ. Those which chiefly inhabit water are of carnivorous habits, and prey upon insects smaller and softer than themselves, are furnished similarly with jaws, but adapted for seizing and destroying their prey. Such as inhabit the soil are either vegetable feeders, and conform in their structure to that section, or are carnivorous, and are hence provided with the means of obtaining their food similar to those which inhabit the water. A few have suctorial mouths, but these feed upon the juices of animal and vegetable substances, especially when such are in a state of decomposition.

The larvæ of butterflies and moths are known as caterpillars. They remain in the larva state for very varied periods; some for a brief time, others for a fortnight, a month, or several months, and in the larger Coleoptera from three to four years. During this period they are solely occupied in eating, and their voracity is immense. After passing through the pupa state, the perfect insects come forth. They can walk and fly, but have not the same voracious appetite, and do not use the same food as in the larva state. Such is the case with all butterflies and moths, but not with all beetles. Grasshoppers and dragon-flies form a general exception, for they are as voracious and as capable of devouring much food in their perfect state as they were when in the larva condition.

The locust tribe, as defined by Westwood, includes all the grasshoppers, the females of which are destitute of an exserted ovipositor, and which have the antennæ short, filiform, and with twenty or thirty joints. Locusts, at intervals of years, appear in myriads in Central and Southern Asia, Persia, and in Northern India, often after droughts, and eating up every green thing. When their larvæ are advancing along the ground, it is customary in some parts of Northern India to dig a trench in front of the advancing army, and as they tumble in, earth is shovelled in over them.

In Burma, where caterpillars appear at intervals in the paddy fields in immense numbers, devouring plants down to the roots, grass as well as paddy, moving on daily a few miles, the plan adopted in Hindustan could be usefully applied.

The itch insect (Acarus, *sp.*) and other parasites are a plague to man. See Louse.

Œstrus equi, of the south of Europe and Persia, is a dipterous insect. Its eggs are deposited on the hair of the horse, and licked into the stomach, and when complete, the insects pass through the canal.

Cephalæmia ovis (syn. Œstrus ovis), of Europe and the E. Indies, lays its eggs in the nostrils of the sheep, and the worm from it occupies the frontal sinuses, and gives rise to fatal diseases.

Weevils and their allies are in immense numbers, and many species are of extreme beauty, but occasion much loss by their attacks on the cereal grains.

The scarlet mite, Acarus telarius, called also red spider, envelopes the leaves of a plant in a delicately woven web, which so checks the respiration that the plant becomes dry and withered.

The insects in India which are the most destructive to living and dead vegetable substances belong to five families of Coleoptera, or beetles; to two families of Hemiptera, or bugs; to one of the Neuroptera, or lace wings; and to three of the Hymenoptera.

The larvæ of the Colcoptera are armed with formidable jaws for the manducation of the solid portions of wood upon which they feed.

The larvæ of the Buprestidæ, beetles of brilliant colours, after acquiring maturity, bore into the timber to the depth of two or three inches, and then undergo their metamorphosis. These beetles often render timber unfit for use. They have been found in the living Acacia catechu, the Vatica robusta, mango trees, and the Pinus longifolia. They commence underneath the bark.

The larvæ of a species of Buprestis was found by Mr. R. Thompson boring two or three inches into felled logs of sal (Vatica robusta), in the Kotree Doon. He found also another buprestis in the dead timber of a living Acacia catechu tree, and another in the trunk of a living mango tree. A small buprestis of a shining colour is frequently found in the timber of the Cheer pine, Pinus longifolia, quite destroying the logs. It is only in the bark that the females can deposit their eggs, the sapwood and newly-formed bark affording the larva nourishment; and to protect felled timber, the bark should be removed as soon as the tree is felled.

The stag-beetles, species of Lucanus, in India are numerous, and common as to individuals, and are, of the whole order of wood-beetles, the most destructive to living trees. Their larvæ live for three or four years in the interior of trunks of oak, and about Naini Tal barely one in ten of the trees escape their ravages. These and the larvæ of Prionus beetles seem exclusively to attach themselves there to the oak as their habitation. They bore to the heart of the stem, in winding passages. In felled logs they are easily killed by immersing the logs in water, or by pouring boiling water into the apertures.

The Lucanus cervus males often fight for the possession of the female. Their mandibles are prolonged into long horns. Two males will approach, and, entwining their mandibles, try to lift each other off their feet. Accomplishing this, the victor carries off the conquered to a distance of several feet, and then returns to the female.

Male stag-beetles have been found feeding on the renewed bark (after shaving) of Cinchona succirubra trees, in Maskeliya, Ceylon. The female has much shorter mandibles, and is said to use them in forming a hole in the trunks of trees for the reception of its eggs. Westwood says (i. p. 187) the perfect insect feeds on the honey-dew upon the leaves of the oak; they also feed upon the sap exuding from the wounds of trees, which they lap up with their finely-ciliated maxillæ and lower lip. It has been supposed that the larva of this insect, which chiefly hides in the willow and oak, remaining in that state several years, is the animal so much esteemed by the Romans as a delicacy, and named cossus. The injury which it causes is often very considerable, boring not only into the solid wood, but also into the roots of the tree. The stag-beetle received from Maskeliya was a male with immense mandibles, and greatly resembled Lucanus cervus, the common stag-beetle of Europe.

The Euchirus beetles, species of the Lamellicornes, are said to have habits similar to their congener the stag-beetle, Lucanus cervus.

Euchirus longimanus, the long-armed chafer of Amboyna, drinks the sap of the sugar-palms. It is a sluggish insect.

The Xylophagi, xylophagous beetles or wood-eaters, Bostrichus, Tomicus, and species of Hylesinus, called Ghoon or Ghūn by the natives of N. India, live inside wood even in their perfect state, and the timber attacked by them becomes perfectly unsound. The Tomicus monographus is a minute cylindrical beetle of Northern Europe, of a very destructive character to felled oaks. An allied Indian species (Tomicus perforans) bores through the staves of beer and water casks. In 1860–62, it attacked the beer barrels of the Commissariat Department in Lower Bengal and Burma, and caused great loss. A witty subaltern styled it Tippling Tommy. Mr. Thompson has known, in Dehra Doon, a species of Hylesinus attack and so entirely eat the poles and rafters of houses, made of the sal tree, as to cause the roofs of the buildings to fall in; and a similar occurrence in a building in the hills, in which the Cheer or Pinus longifolia was used. The insect in this case resembled the Hylesinus piniperda of European forests, one species of which attacks the elm trees around London. The insects called ghoon in Northern India are omnivorous, eat bamboos, dried drugs, cheroots, pasteboard, books, and even furniture made of the lighter woods. The Calandra granaria is one to which the term ghoon is applied. The species of Botrichus affect chiefly the dead wood of forest trees. They are the largest of the Xylophagi. Other genera, as Scolytus, Hylesinus, and Tomicus, are smaller but more numerous. The Tomici are very destructive to bamboos, which the Hylesini also attack. The powdery excrementitious particles which their larvæ throw out, make their presence known. The injury to the coffee plants, in Ceylon and the Peninsula, from species of Xylotrechus, has been often ruinous. X. quadripes, *Chevrolat*, is the most destructive, and whole estates in Coorg have been ruined by it. It is popularly called the worm or coffee-fly. Under the word 'Coffee' are given the known enemies to that plant.

Cerosterna gladiator, a longicorn beetle, eats the bark of the Casuarina trees, and has caused heavy losses to their planters. Cocoanut trees have great enemies in the shape of two beetles. One of these is a large Curculio (Rhynchophorus, *Sach.*), called the red beetle, nearly as big as the stag-beetle of Britain; the other is the Oryctes rhinoceros, so called from its projecting horn. The red beetle is so called from the red mark on the upper part of its breast. Its attacks are said to be on the nut, but those of the rhinoceros beetle are on the terminal bud of the palm stem. When so injured, the bud dies, and, the crown of the leaves falling off, leaves the cocoanut tree a mere bare stem. The same result occurs to other palms, the palmyra, the betel, in which the top bud or cabbage, as it is called, is destroyed.

Batocera rubus, the Curuminga beetle of Ceylon and S. India, penetrates the trunk of young cocoanut trees near the ground, and deposits its eggs near the centre. The grubs, when hatched, eat their way up through the centre to the top, where they pierce the young leaf-buds, and destroy the trees.

Sphenophorus planipennis, a weevil of Ceylon, is destructive to cocoanut trees.

Mr. Wilson mentions that he found the young of a Lagerstræmia Indica half devoured every morning, yet could not discover a single insect throughout the day; but, on visiting it at night with a light, he found dozens of a small cockchafer beetle, species of Melolonthidæ, eating with great avidity.

The many dialects of Hindi, and the languages and dialects of the Dravidian and Kolarian branches of the Turanian, offer a great obstacle to any attempt to trace through their vernacular names the injurious insects of British India, but some of them may be named. The sursuri of Hindustan is bred in grain, the ghoon is destructive to wood and grain, and the rig is a bird-louse.

Mr. Wright mentions that in the district of Cawnpur, a spider, known as the Agia or Makari, attacks the bud of the Sorghum vulgare before the flower forms, and no grain follows; he says it is chiefly due to want of rain. In the month Bhadon, the pith of the stem is attacked by the thuntha, also due to want of rain, and in drought the lassi attacks it.

The Bangka, also called Katua in Hindustan, is a water-beetle which eats rice plants. It is said to take a leaf for a boat and to paddle itself from stalk to stalk. It is harmless when the water is let off from the field.

The larva of the Heliocopis cupido attacks the cotton plant in its bud.

The larva of the weevil Deprescaria gossipiella, the toka of the natives of Hindustan, attacks the cotton seeds in harvest.

The larva of Heliocopis cupido is dispersed by sprinkling ashes over the plant. That of the Deprescaria gossipiella can be checked before storing.

As the rainy season approaches, the Bhūngo, a hairy caterpillar, preys on the stem leaves. The myna eats and the starling (tilie) destroys multitudes of these insects.

The Thela disease is caused by a viviparous wingless parasite, the Aphis lanigera, with a flask-shaped body, six feet, two antennæ, two tubes at abdominal extremity, a haustellum for puncturing, and a sucker for extracting, and within this transparent sucker a perfect apparatus resembling a hand-pump; the sucker is fixed, the miniature piston plays, and the sap—the life-blood of the plant—is absorbed, and its leaves are destroyed.

The oily (thela) honey-dew on the leaves is greedily eaten by the red and brown ants, Formica rufa and F. fusca; and should the exudation be scanty, the ants, with their antennæ, stroke and fondle the aphis until a supply be secreted. Both sexes only exist in August, and one congress yields the young for six generations. After pairing, the female deposits eggs, which in four days animate. Immediately from every pore in their bodies springs a cottony substance, which covers and protects them, and they eat the leaf. As they grow their white cover vanishes, and pale-orange, wingless insects appear, the Koongnee of the Jats.

The Aphis lanigera does not attack cotton plants growing near hemp. They are destroyed by the lady-bird (Coccinella) and by the lace-wing (Chyrosopus).

The cucumber family of plants is largely preyed upon by a twelve-spotted beetle like a lady-bird, which, alike in the grub and the perfect state, feeds on the leaves and flower-buds.

Some of the Hylesini bore to the centre of the felled Cheer (Pinus longifolia) to the depth of a foot, attacking in vast numbers, but only if the

rk be left on. Ghoon of Hindustan seems a neric term for all beetle-like insects which tack timber, grains, etc. Timber and bamboo ders destroy the timber ghoon by depriving em of air, by immersing the affected articles in ter for a few weeks. They are also killed by ing buried. Tar or paint have no effect on em. The Hylesini are the genus Apate of bricius.

The genera Tomicus and Bostrichus are largely stributed over all India.

A Burma species of the Bostrichidæ, with its væ, is exceedingly destructive to bamboos. In e course of one rain they will sometimes utterly stroy a dwelling the bamboos of which had en felled in the preceding dry season, while mboos felled at the close of the rains remained harmed.

Saw-flies, Tenthredo, and their pseudo-caterllars, never attack wood. They do comparatively tle damage.

The longicornes are a highly-diversified family beetles. They attack dead vegetable matter. remarkable larva, thought to be one of the ionii, was found in the stem of the tea plant in rthern India. The mother beetle punctured e main stem of the plant near the ground, an serted the egg, and the larva, when hatched, red into the pith of the stem, and then bored wn and up, destroying the plant. Mr. Thompson fers no suggestion how to destroy them.

The beetle Cerambyx vatica, *Thompson*, attacks e sal or Vatica robusta when felled. These sects grow to a great size, but never attack the e when its bark has been removed. This and e little buprestis are the only beetles which tack the Vatica robusta. The larvæ, soft-bodied ubs, of the Cerambycidæ and Buprestidæ can sily be destroyed by pouring scalding water to their holes, or by immersing the logs in water r a couple of days. Hot winds which dry the nber, and also much rain, kill them. In their rva state these insects are open to the attacks both the parasitical ichneumons and acari, e larvæ of which feed upon the young grubs. on (Cedrela toona) and sissoo (Dalbergia sso) are both attacked by a larger and more werful Cerambyx than that found on the Vatica busta.

Rottlera tinctoria, the rewneah of Northern dia, is constantly attacked by another Cerambyx, e larva of which is over four inches in length, d as thick as a man's thumb.

The larvæ of the capricorn beetles are called, Hindi, Mukora. There are four kinds of Mukora cognised in Northern India, and they attack the tica robusta and the pine.

A minute species of the Cerambyx attacks the ing bark of the Acacia catechu, and their esence may always be detected by the gummy udation which their presence within the tree casions. Cerambyx vatica, or sal-grub, burrows the wood of that tree, and is sought for by the odpeckers.

A small species of Leptura, in Northern India, tacks the harder woods. They have been found the wood of the goug-creeper, a species of binia.

Species of Saperda also occur in the northern rests of India.

Monochamus soongna, *Thompson*, is one of the Cerambycidæ. It is a magnificent beetle, and its larva is very destructive to the Bombax heptaphyllum (or seemul), also the Soongna or Moringa pterygosperma, and the roongra or Erythrina suberosa. Its larva is very large, and armed with powerful mandibles.

Another Monochamus beetle enters the trunk of the Salix tetrasperma, and bores it in all directions.

A Monochamus attacks the Butea frondosa. Leptura has been found on the Robinia macrophylla, Vatica robusta, the bamboo, and species of Dalbergia.

Pupæ of another Monochamus beetle were discovered underneath the bark of the Butea frondosa, and in logs of the Odina wodier and Bombax heptaphyllum. They were found in solid cocoons made of a substance resembling lime. The shell was fully one-sixteenth of an inch in thickness, quite hard and firm.

Hemiptera are exemplified in the common house bug and all the aphides or plant lice.

Hemipterous insects do not undergo a complete metamorphosis. After being hatched from eggs laid by the parent insect, the larvæ and pupæ remain much alike. Their fecundity is enormous. In the Kamaon forests a large and magnificent red bug, two inches long, has been observed sucking the stones of the Cordia myxa. By piercing the soft stems of young plants, they cause thousands to perish in a single day.

A green bug of Burma, one of the Tingidæ, is very injurious to fruit. They suck the juice of oranges through the skin. The paddy bug of Burma sucks the paddy before the kernel has become hard. It is a species of Cimex, or one of the Scutelleridæ, and whole fields of rice are sometimes abandoned in consequence of the devastation it commits.

Some bugs are beautifully and brilliantly coloured, but bugs, both field and house, emit usually a disagreeable odour.

The Aphides, or plant lice, when in large numbers, injure young shoots and twigs. A very pretty little one is found in Kamaon on the dabree tree. They excrete a white substance of a sweet taste, which cakes on the leaves. Another aphis is found on the sal or Vatica robusta.

Aphis Coffeæ, the coffee louse, is found in small communities on the young shoots, and on the underside of the leaves of the cocoanut tree, but occasion little injury.

Neuropterous insects, like the dragon-flies, are carnivorous or herbivorous. The fecundity of the white ant is enormous, and they have males, females, and neuters. They will not touch fresh Huldu timber, but, on drying, the wood will be attacked.

Hymenopterous insects are exemplified in the bees, wasps, black ants, and flies. Many live in societies, and are divided into three classes,—males, females, and neuters. Of their larva, some are carnivorous, some herbivorous; the perfect insects, however, live chiefly upon flowers and honey. A few are carnivorous and omnivorous, as, for example, black ants.

The Xylocopa, or carpenter bees, bore tunnels in timber, where they gather in honey and the farina of flowers, leaving a lump of this compound in a divided cell for the nourishment of the young larvæ, sub-cylindrical, whitish worms, when they are

hatched. Each cell has, with the egg, a separate supply of this food. In the Kamaon forests there are three species of Xylocopa,—X. purpurea, Xylocopa ficea, *Thompson*, and a species found on the Nauclea cordifolia. This genus lives in colonies. They will not attack wood smeared over with tar, and will leave their habitations if it be applied to the canals.

Of the weevil family, the Rhynchophora, the genera Bruchus, Calandra, Curculio, and Rhyncœnus are extremely injurious to vegetables, boring into the young stems of plants, and living upon their juices. The Curculio also injure felled timber by boring into it. One species or variety of Curculio, one inch in diameter, was found by Mr. Thompson several inches deep in a log of the Butea frondosa. His observations satisfied him that these were bred in the wood. A Burma species of Curculio makes great havoc among the mangoes.

The ravages of some of the smaller weevils, Bruchus and Rhynchites, are highly detrimental to the productiveness of the northern forests of India. In 1863, entire seed crops of the Vatica robusta were destroyed. This family insert their eggs into the stigma of the flower, and the young larva becomes developed in the fruit or pericarp, and the fruit ultimately falls. The common gram beetle is a good illustration of the genus Bruchus. The species of this genus attack most leguminous seed-pods, peas, beans, gram, etc.

Brarrah, a wood-louse in Swat, which infests mosques and houses where old mats are lying about; the place bitten by them becomes red and inflamed. The insect is of the shape of a bug, but larger.—*Lt.-Col. MacGregor.*

Two species of the genus Bruchus attack the poppy seed when stored.

A longish weevil, seemingly a species of Lixus, one of the divisions into which the Longirostres have been made, was constantly found by Mr. Thompson under the bark of felled logs. It bores with facility through the softer parts of wood.

Calandra granaria is known to the people as the Ghoon, also the Ch'heda and Makora; it is a weevil very destructive to grain. Ghoon and Ghoongi in Hindustan seem to be applied as names to several insects destructive to grain and wood.

The enemies of the coffee plant are numerous, and notices of most of them will be found under the word 'Coffee.'

Mr. Haldane, in a pamphlet entitled 'All about Grubs,' mentions several beetles which injure coffee trees. The most important is the Big Patna cockchafer (Lepidista pinguis, *Burm.*). The female of this beetle is nearly white: the male is brown, and was named Melolontha rubiginosa by Mr. F. Walker. Another smaller brown species of chafer mentioned by Mr. Haldane is Ancylonycha pinguis, *Walker*. A third species, pale green with yellow margins, is Mimela xanthorhina, *Hope*.

Lecanium coffeæ, a genus of the order Hemiptera, appears on the young shoots and buds, like small, wart-like bodies. Each of these warts is a transformed female containing about 700 eggs, which are hatched within it. When the young ones come out of their nest, they may be observed running about and looking like wood-lice. Shortly after being hatched, the males seek the undersides of the leaves, while the females prefer the young shoots as their place of abode. The larvæ of the males undergo transformation in pupa beneath their own skins; their wings are horizontal, and their possessing wings may probably explain the fact of the comparatively rare presence of the male on the bushes. The female retains her power of locomotion until nearly her full size, and it is about this time that her impregnation takes place. Each tree on which this bug makes its appearance should be well dusted with a mixture of pounded saltpetre and quicklime in equal parts; by sponging the parts affected with a mixture of soft soap, tar, tobacco, and turpentine. Another species of Lecanium, in another country, put a stop to the cultivation of the orange as an article of commerce. — *Tennent's Ceylon*, pp. 4, 46.

The coffee tree is supposed to have been brought to Ceylon about the middle of the 17th century. The first regularly worked estate was opened in 1825; but the bug does not seem to have appeared in large quantities till 1845, when, however, it began to spread with such rapidity that in 1847 a very general alarm was taken by the planters, about the same time that the potato, wine, and olive diseases began to create alarm in Europe. The coffee bug seems, however, to be indigenous in Ceylon, for the white bug has been found in orange, guava, and other trees, as also on beet-root and other vegetables; and the brown bug attacks the guava, hibiscus, Ixora, Justicia, and orange trees,—indeed, every plant and tree and even the weeds on a coffee estate, particularly such as are in gardens.

Heliothis armigera is an insect of the family Noctuidæ, which, in the seasons 1877-78, in innumerable hordes attacked the coffee crops of Shahabad and Patna. It is equally destructive to the cotton crops. It eats into the capsules of the coffee and cotton. The pupæ become entrapped in the capsules. Its attacks on the coffee plant are principally in February and March. Careful hand-picking is the sole remedy.

Heliocopis cupido or Deprescaria gossypium attacks the cotton plant; it is the Toka of Hindustan.

The larva of the Gracillaria coffeifoliella mines the coffee trees. It is very common.

Hemileia vastatrix, the coffee leaf disease, or leaf fungus, has for several years seriously affected the coffee trees of the island of Ceylon. Though requiring careful inspection for its detection, it was present upon all the coffee trees examined about 1879. With the help of the microscope, it is found at all times to prevade the greater part of the stems and older leaves, in the form of very fine branching filaments, its effects being apparent in numerous somewhat translucent spots, which may be observed when holding one of the older leaves against the light. The direct injury so caused to the coffee tree is, however, very slight, as compared with the effect produced when the fungus attacks the young leaves, causing them to fall prematurely. The presence of the fungus-filaments in such abundance on the outer surface of the tree is quite sufficient to account for phenomena which it was first thought must be attributable to a poisoning of the juices of the tree,

by an absorption of the fungus matter through its roots. The latter idea must therefore be given up, and the disease considered as external, except when it appears within the tissue of the young leaves. Subsequently, from these enclosed masses of filaments short branches are produced, which emerge from the pores, and bear the conspicuous orange-coloured spores or reproductive bodies. Some of these spores have been observed to germinate on the outside of the leaf, producing branched filaments of exceeding tenuity, which grow with marvellous rapidity all over the surface of the leaf, and beyond to the stems. The ends of some of these filaments, too, have been observed to enter the pores of the leaf, to form fresh disease spots and fresh crops of spores. The true Liberian coffee is said to be of hardy habit, and more able to resist the ravages of this disease.

The caterpillars found on the coffee trees of Ceylon are Orgyia Ceylanica, Euproctis virguncula, Trichia exigua, Narosa conspersa, Limacodes graciosa, and a species of Drepana, but they do not cause much injury. One caterpillar, however, the Zeuzera coffeæ, destroys many trees, both young and old, by eating out the heart. It resembles the caterpillar of the great moth of England, and is as thick as a goose quill. It generally enters the tree 6 to 12 inches from the ground, and makes its way upwards. The sickly drooping of the tree marks its presence. Caterpillars of the Boarmia leucostigmaria and B. Ceylanica, also those of Eupithecia coffearia, are found on coffee and other trees in Ceylon from September to December. Some Ceylon caterpillars sting. A greenish one, that occupies the Thespesia populnea (Suriya, SINGH.), at a certain stage of its growth, descends by a silken thread, and hurries away. The moth of this is supposed to be a Bombyx, named Cnethocampa, *Stephens*. Another, short, broad, and pale-green, with fleshy spines, that feeds on the Carissa jasminiflora, and stings with fury, is of the moth Neeera lepida, *Cramer* (the Limacodes graciosa, *West.*). The larvæ of the genus Adolia are hairy, and sting with virulence. Many exactly resemble in tint the leaves they feed upon, others are like little brown twigs, and many are so strangely marked or humped, that when motionless they can hardly be taken to be living creatures at all.—*Tennent's Ceylon.* See Larva.

Bakoli is a small green caterpillar that destroys rice crops.

Many caterpillars avoid cabbages if dill be grown in their beds, others keep aloof from gooseberry bushes if broad beans be grown near, and the use of pyrethrum is said to protect vines from the Phylloxera; and other insects avoid places sown with hemp.

White ants and crickets are the inveterate enemies of the tea plant. Whole acres of young plants have been known to be destroyed by these destructive insects. It has therefore been considered advisable to fire, instead of fell, jungle required to be reclaimed for the purpose of tea-planting.

A beetle, supposed to be one of the Melolonthidæ, about the middle of the 19th century infested the tea plantations in the Dehra Doon. Ten or twenty of them lay concealed two or three inches deep in the earth beneath the bush, and emerged at night to feed on the leaves. The existence of the plantation was threatened. But a party of labourers was told off, each with a hoe, twice daily to dig around the plants, and the beetles were seized and destroyed by boiling water. Bushels of beetles were gathered and destroyed, and the plantation freed from them.

The following insects injurious to the poppy and other crops were collected in the gardens at Deegah, Dinapore, and Bankapore:—

A. Attacking the young poppy plant in November and December, viz.:

Acheta campestris and A. domestica; also other species of Acheta.
Gryllus species, called in Hindi ghudya and phunga.
Gryllotalpa vulgaris, the goorghooria in Hindi.

B. Attacking the maturing poppy in February and March, viz.:

Heliothis armagera.
Noctua species.
Bombyx species, the Buro-bhoua.
" " the Bhoua of Hindi.
" " the Kala-jhanga of Hindi.
Gryllus species.

C. Attacking poppy seeds in granaries:

Tetranychus papaveræ, the poppy seed mite.
Tipula species.
Bruchus "
Sitona "
Calandra "

D. Attacking cold weather or rabi crops:

Species of Aphis, Cassida or tortoise beetles, lady-birds; Haltica, *sp.*; Coccinella, *sp.*; Thyka cucharis; Locusta, *sp.*

Of these, it may be mentioned that the crickets, Acheta, A. campestris, A. domestica, and other species called the Jhengur or Jhanga of Hindustan, attack the poppy plants from November to January, until the stem begins to shoot. A large species of this genus attacks the Casuarina trees. It lodges at the foot of the tree, and at nightfall ascends the tree, and cuts off the young top shoots. The crickets are very destructive to garden and field crops.

The cranefly, a species of Tipula, is allied to a gnat. Its grub is a pest of the young poppy plant, both on and under the surface of the soil.

Bala, HIND., is a grub which eats the young shoots of wheat or barley when about six inches high.

The Girwa or Girwi, HIND., an insect? which turns the grain crop of a brick-dust colour.

Gindar, HIND., an insect very destructive to growing crops of pulse.

Æcidium Thomsoni infests the fir tree Abies Smithiana.

About the year 1879-80, an insect in Monghir threatened to become very destructive to the rice crops. Mr. Wood Mason identified it as belonging to the genus Cecidomyia, and as related to the Hessian fly which ravaged the wheat fields in the United States. This genus, Mr. Wood Mason says, had never before been found in India, and he proposed to call the species Cecidomyia oryzæ, or the rice-fly. He considered it as likely to prove a most formidable pest, and recommended that the district officers should be instructed to make further inquiries, and carefully watch its progress.

The common rice weevil of India is the Sitophilys oryzæ.

The Barar, HIND., is a disease? which attacks the rice crops.

Badhiya, HIND., is a disease? attacking growing sorghum, penicillaria, and zea, which prevents the ear filling.

A species of Cetonia is very destructive to roses and other flowers.

An insect, known as the nutmeg insect, attacks that nut, and to avoid it they are dried in the shells.

The stores of soldiers' coats were much damaged in India by a little beetle, Anthrenus vorax, *Waterhouse.*

The Honourable Mr. Morrison mentions (Compendious Summary) that cargoes of salt cod were brought to China from England, but only for two years, as it was found to breed an insect which bored through the ship's timbers.

The ravages of the Doorkhee or Durkhi insect are very destructive to the young indigo plant.

Gryllotalpa vulgaris is the mole cricket.

The Goorghoorgah or Goorghooriah, HIND., occurs in the temperate and tropical regions of the Old World; it is of nocturnal habits, and is a destructive creature to all vegetable products. In Dinapore and Bankapore it attacks the young poppy plant in November and December.

The most troublesome of the mosquitos on the coast of Ceylon is the Culex laniger.

Two species of Gryllus, called ghudya and phunga in Hindi, in Lower Bengal attack the young poppy plant in November and December.

Of the locusts which at intervals devastate some countries, the Acrydium (Gryllus) migratorium is that of Africa and the south of Asia, and G. gregarius that of Sinai. The migratory locust, Acrydium (or Œdipodium) migratorium, which occurs in Africa and the south of Asia, is greenish, with transparent elytra of a dirty grey, whitish wings, and pink legs. They have the power of inflating themselves with air, and of travelling about eighteen miles a day. They are bred in the deserts of Arabia and Tartary. Cajaput oil protects books.

Insects are easily killed by kerosine emulsion. Pure kerosine, 1 gallon; condensed milk, 1½ pint; water, 3 pints. Mix the water and milk before adding the oil, and churn until the whole solidifies and forms a butter. In using it, dilute the butter with from 12 to 16 times its weight of water, and then apply immediately. If allowed to stand, the butter separates and rises to the surface.—*Bengal As. Soc. Journ.*, No. xxxi. p. 426; *Bennett; Buckland's Curiosities of Natural History*, 1857; *English Cyclopædia; Figuier, Insect Life; Hooker, Himalayan Journal; Mr. Hope in Madras Lit. Soc. Journ.*, 1840; *Kirby and Spence; Huxley, Introduction to the Classification of Animals; O'Shaughnessy, Mat. Med.; Royle, Mat. Med.; Royle on the Productive Resources of India; Tennent's Sketches of the Natural History of Ceylon*, pp. 442-446; *Tennent's Ceylon; Thompson on Insects destructive to Woods and Forests; Wallace, Tropical Nature; Crawfurd's Dictionary; Ceylon Observer.*

INSESSORES, an order of birds, known also as the Perchers, very numerous in India. They form the great bulk of the feathered creation, nearly three-fourths of all known birds belonging to this order, in the tribes dentirostres, conirostres, tenuirostres, fissirostres, and scansores,—swallows, martins, swifts, night-jars, bee-eaters, rollers, kingfishers, wagtails, some of the pipits and larks, stonechats, several warblers, and the thrushes.

INULA CHINENSIS. *Smith.* Siuen-fuh-hwa, CHIN. Grown in China since the 6th century. It has a beautiful, golden-yellow, composite flower. I. Royleana grows in the Kashmir Hills; but the plant is considered poisonous, and is not used.—*Honigberger*, p. 290; *Smith, Mat. Med. Chin.*

INUNDATIONS are of frequent occurrence in India from rainfalls and from storm-waves, and have been noticed under the headings 'Floods' and 'Cyclones.' The most calamitous have been from storm-waves striking the Coromandel coast and the islands at the delta of the Ganges. The cyclones have been examined by Colonel Capper of Madras, Mr. Redfield of the United States, Professor Dove, Lieutenant-Colonel Reid, Mr. Piddington of Calcutta, who suggested the term cyclone; also by Mr. Espy of Philadelphia, and by Messrs. Meldrum, Blanford, Wilson, and Elliot. Those of the Laccadive Islands, in a hurricane of April 1817, were described by Captain Biden in Madras Spectator, 1st, and Bombay Times, 4th October 1847, and in the Bombay Times, 13th August 1850. An account of remarkable inundations in India in 1849 was given by Dr. Buist in Bl. As. Trans., 1851, and Edin. Phil. Jl., 1851; and inundations of the Brahmaputra in Assam were described by Dr. M'Cosh in Topography of 1837. Inundations occurred of the Ganges on 21st August 1838, when it rose at Allahabad 43 feet, and did immense damage at Benares. Hoshangabad was on the same occasion flooded by the rise of the Nerbadda. One of the Indus, in 1841, supposed to have been occasioned by the bursting of a glacier, was described in Bl. As. Trans., 1848, xviii. Those of the Tapti, for the past thirty years, were described in Bombay Times, 1851. Inundations at the mouth of the Ganges, occasioned by hurricanes, occurred in May 1823 and May 1830, Bl. As. Trans. i. p. 25; and the great storm-wave which struck the coast at the estuary of the Megna at 3 A.M. of the 1st November, in which 215,000 persons perished, was described by Mr. J. Elliot.

INVOCATION. The eastern Christians commence their writings with the words, 'In the name of the Father, the Son, and of the Holy Ghost;' the Jews, 'In the name of the Great God;' the Arabs, 'In the name of God, the Compassionate, the Merciful.' The Muhammadans in India, in all letters or memoranda, place the Alif letter, for Allah, God, at the top of the first page of their writings. Hindus invoke the deity Ganesh under the title of Sri. The Persian magi used to begin with 'In the name of the Most Merciful, Just God.'—*Lane's Koran*, p. 86.

IODINE—Iode, FR., Iod, GER., from *Ἰωδης*, violet, the colour of its vapour—was obtained by M. Courtois in 1812 in the residual liquor of the process for obtaining soda from kelp. It is found in sea and several mineral waters, and in sponge corals, some molluscous animals, and amongst the seaweeds in Fucus vesiculosus, *Linn.*, F. nodosus,

Linn., and others. The leaf of a seaweed (a species of Laminaria, *Dr. Falconer*) employed in the Himalaya is called goitre-leaf, gulur-ka-patta. In S. America, the stems of a seaweed are sold by the name of goitre-sticks, because they are chewed by the inhabitants wherever goitre is prevalent. Iodine could be procured by burning large quantities of seaweed, or of the conferva of the salt-water lake near Calcutta; but the process is only economical where the weeds yield enough of impure carbonate of soda to cover the general expense of this operation.—*Beng. Phar.*

IONIA. This name occurs in ancient Sanskrit writings, and is supposed to refer to the Bactrian Greeks. See Javan; Kābul; Veda.

IONIDIUM SUFFRUTICOSUM. *W. and A.*
Viola suffruticosa, *Roxb., Linn.*

Nunbora, . . . Beng.	Nela kobbari, . . Tel.
Ruttun puruss, . Duk.	Purusha ratnam, . ,,
Urela-tamara, Mal., Tam.	Surya kanti chettu, ,,
Charati, . . . Sansk.	

A rugged and somewhat prickly reclining herb, having a small crimson flower. It is common over the Peninsula of India, and is used as a demulcent.

IPECACUANHA.

Amerikanische brech-wurzel, . . . Ger.	Cipo-de-camaras, Port.
Ipecoacanna, . . It.	Raiz de Oro, . Sp.

Cephaelis ipecacuanha, a herb indigenous in the shady forests of E. Brazil, southwards to San Paulo. The root (rhizome) affords the valuable emetic medicine.

IPOMŒA, a genus of plants of the natural family Convolvulaceæ. The species and varieties in India are about fifty, pretty creepers flowering in the morning. In China, many beautiful species are cultivated. Dr. Honigberger received the seeds of I. dasysperma from Hindustan as an antidote to hydrophobia. It is called Kut'te-ki-binj, *i.e.* the seeds for dogs. In October, as soon as the rains close, I. pileata, a pretty little twining species, is seen blushing through every hedge and bush in Tenasserim. It is peculiar for its concave bonnet-shaped involucre, in the midst of which half-a-dozen tiny blossoms hide their rosy lips. I. reniformis, Perretay-keeray, Tam., is a perennial creeper with yellow flowers; the leaves used as greens mixed with tamarind; very common during the cold months. I. sepiaria, Thalee-keeray, Tam., is a climbing perennial plant with rose-coloured flowers, found in hedges; the leaves are eaten mixed with others as greens. I. sessiliflora, *Roth.*, Bhanwar, Hind., occurs sparingly in the Panjab plains, up to the western frontier. It is eaten in India in famines. I. triloba grows both wild and planted in Japan. The roots are either white or black; the latter are used as laxatives. — *Honigberger*, p. 291; *Mason; Jaffrey; Stewart; Thunb. Tr.* iii. p. 63.

IPOMŒA PES-CAPRÆ. *Sweet.*

I. maritima, *R. Br.*	Convolvulus pes-capræ, *Linn.*
I. orbicularis, *Ell.*	
I. carnosa, *R. Br.*	C. maritimus, *Desr.*
I. Brasiliensis, *Meyer.*	C. bilobatus, *Roxb., Rh.*
I. biloba, *Forsk.*	C. bauhiniæfolius, *Salisb.*
Chagul khuri, . . Beng.	Beda tige, . . . Tel.
Goat's-foot creeper, Eng.	Balabandi tige, . ,,
Do-patte-luta, . . Hind.	Chevulla pilli tige, ,,

This is a useful sand-binding plant on the shores of the south and east of Asia, and has the widest range, trailing over the sandy beaches along the coasts of India, and from Hainan to the Chusan Archipelago.—*Williams' Middle Kingdom.*

IPOMŒA PES-TIGRIDIS. *Linn.*

Tiger's-foot ipomœa, Eng.	Pora batul, . Hind.
Kunra, . . Hind.	Mekamu adugu, Tel.

In Tenasserim, the tiger-footed ipomœa, with large palmated leaves, is not uncommon; very common in the rains everywhere in Rajputana.

IPOMŒA REPTANS. *Poir.*

Ganthian, . . Hind.	Vari, Nali, Tam.
Vellay-keeray, Tam.	Tota-kura, Tel.

A creeping annual with rose-coloured flowers, found about the borders of tanks and moist places. The leaves are used as greens, and in some places its root also appears to be eaten.—*Jaffrey.*

IPOMŒA TUBEROSA, *Linn.*, the Malabar creeper, a native of tropical America, is a climbing plant with a woody stem; leaves palmated, seven parted. Flowers yellow and showy, appear in October and November. It is in general use for covering old walls, trellises, etc.—*Riddell.*

IPOMŒA TURPETHUM. *R. Br.* Turbeth.
Convolvulus turpethum, *Linn.*

A native of all the E. Indies, Archipelago, Australia, Polynesia, Tinian, etc. Its root is perennial, and has long been employed in India as a purgative, rubbing up a slip of the bark with water or milk on a stone, and swallowing the emulsion thus formed. A strip 6 inches in length from a root as thick as the little finger, is deemed a sufficient dose. The action of the medicine is extremely uncertain. It is considered beneficial in diseases of the mucous membrane, in leprosy, and paralysis. It contains a purgative resin resembling that of jalap.—*O'Sh.; Stew.; Powell.*

IRAK, a geographical term for part of Persia and part of Arabia, the Irak-i-Ajami and Irak-i-Arabi. The Euphrates and the Tigris have a generally parallel course. At Baghdad they approach most closely before uniting, not far above the outlet in the Persian Gulf, giving the included land the shape of an hour-glass. This included land is the Mesopotamia of the ancients; the northern half being now known to the Arabs as Al Jazirah or the island, and the southern as Irak Arabi, to distinguish it from the neighbouring Persian territory, the Irak Ajami, the ancient Media.

IRAN, a region to the south-east of the Caspian Sea, which extends for 1280 miles from Sumeisat on the Upper Euphrates eastward to Taxila on the Indus, and nearly 900 miles in breadth from the shores of Gedrosia, in lat. 25° N., to the banks of the Oxus near Samarcand, in lat. 40° N. The latter river and the Caspian Sea form the northern limit of this great division; the Persian Gulf is on the southern, whilst the rivers Indus and Euphrates constitute the eastern and western extremities. In this wide expanse of territory, stretching, with various elevation, at least 25° from north to south, such extremes may be looked for as will bear out the remarkable description of the younger Cyrus. 'In the dominions of my father,' said the prince, 'people perish with cold at the one extremity, whilst they are suffocated with heat at the other' (Xenophon's

Anabasis, Book i. pp. 67, 68, Ed. Hutch, 1735). Thus the northern and central portions of the plateau of Iran and Arabia, as well as a great part of Asia Minor, enjoy a temperate climate, whilst an intense cold occurs in the northern parts of Afghanistan, in nearly the whole of Kurdistan, and on the elevated mountain ranges and high valleys on both sides of Ararat. Yet, notwithstanding this difference of climate, throughout the whole a great similarity prevails in the vegetable and animal worlds. The surface of Iran may, in a general way, be described as consisting of a wide-spreading plateau, flanked by mountainous countries on the east and west, and bounded to the north and south by two mountain chains, outside of which are two extensive plains on a much lower level. Of these, Turkomania, with the continuous plain westward of it, between the Caspian Sea and the Elburz mountains, form that which is on the northern extremity; Arabian Irak and Khuzistan, with the rest of the level tract outside the Zagros, form the plain at the southern extremity. In the space intervening between the great mountain chains, the surface in most places is largely impregnated with salt and saltpetre, which prevail to some extent on the plains of Fars and the conterminous provinces of Irak and Kirman. Between Abushahr and Dalaki, crystallized sulphate of lime is found; and a little westward, in Khuzistan, an abundant supply of sulphur; while rock-salt, alum, antimony, and orpiment, as well as mineral waters, are found in abundance in different states, also petroleum and naphtha. Iron is met with in Masandaran, Khorasan, and Bactria, and, with copper and lead ores, more abundantly in the pashaliks of Diyar-Bekr and Sivas, with the addition of gold, silver, and precious stones. Copper and other ores abound in Kurdistan, the Julamerik, and other mountain districts. In the Dumbu Tagh mountains, the granite abounds with topaz, beryl, schorl, and disseminated gold. Extensive salt lakes and streams, impregnated with the same substance, occur. Amongst the former may be mentioned the Caspian Sea, the picturesque Urumiyah, and Van Zerrah or Durrah in Seistan, Bakhtegan in Fars, and others; the fresh-water lakes are only met with in the tracts below Babylon, and again between the Elburz range on the shores of the Caspian.

The language of modern Iran is laden with Arabic and Turkish words; but in the E. th. language is much like that in which Ferdusi wrote his poem, free from words of Arabic origin.

There are four distinct kinds of horses in Iran: 1st, the original Turkoman breed, a large, powerful, enduring animal; 2d, the yaboo, or common carrying hack, which is stouter and rather larger than the galloway; then the smaller Arabian breed (first introduced by Nadir Shah); and lastly, a fourth, between the Arabian and the Turkoman horse, the badpai (wind-footed), which, being the most prized by the Persians, is almost always among the horses of a great man's retinue. Mules, though small, are much used for caravans. This animal seldom goes less than 30 miles in a day, though carrying a load of about 3 cwt., and passing over such kotals or passes as would appal even a Spanish muleteer. Perhaps one-third of the inhabitants of Iran are nomadic, and this section, by its habits as well as mode of life, constitutes a race separate from the other or fixed portion, which consists of Persians, Kurds, Armenians, Arabs, Jews, and Parsees.

IRANIAN RACES, called also Indo-Atlantics, also Caucasians, have always been known for their refinement and high civilisation, from which Europe borrowed through the Byzantine and Greek culture, and the Persians have long and faithfully retained the features of its national characteristics. Though overrun by the Semitic and Turanian races, the Iranian has borrowed little or nothing from them, but has exerted over them a powerful influence. According to Khanikoff, Sur l'Ethnographie de la Perse, the Iranian race of Persia came from the E. of modern Persia, about Segestan and Khorasan, and moved to the W., in pre-historic ages, and though altered by the attacks of the Turko-Tartar tribes from the north, or, where in contact, on the W. and S., with Turanian and Semitic elements, the Mede is everywhere recognisable as the same as described by Herodotus and later Greek writers. The arrow-headed writing at Persepolis enumerates the Iranian people of that day.

The form of the Iranian is spare but elegant, even noble, but there have always been differences between the E. and W. Iranians.

The E. Iranians are—(*a*) the Segestani or Khafi, (*b*) Char Aimak, (*c*) Tajak and Sart; each of which counts many subdivisions.

The principal number of the Segestan people occupy Khaf and its neighbourhood, Ruy, Tebbes, and Birjan.

The people of Khorasan are greatly intermixed with Turko-Tartar elements.

The *Char Aimak* consists of four peoples, the Taimuri, Taimuni, Firoz Kohi, and Jamshidi, all of them of Iranian origin, and all speaking Persian. The Aimak, who graze their flocks in the Paropamisus, are brave and relentless, and Afghans, when travelling, whether proceeding from Balkh, Kabul, Kandahar, or Herat, never enter into the mountain districts of these intrepid nomade tribes. Each member of the Char Aimak knows no greater enemy than the Afghan, and all attempts to form Afghan colonies amongst them have failed.

The *Taimuri* dwell at Gorian and Kuh'sun, on the western boundary of Herat, and in the villages and towns situated E. of Iran, from Tarbat Shaikh Jam as far as Khaf. About a thousand of their families dwell near Herat.

The *Taimuni* dwell in the Jolgha-i-Herat, from Kerrukh to Sabzwar, the few who have extended to Farrah being styled by the Afghans Parsivan. The Taimuni are of a wild, warlike nature, though agricultural.

The *Firoz Kohi*, a small number of people, about 8000, dwell on the steep hill N.E. of Kala-i-No, and from their inaccessible position afflict their whole neighbourhood with their robbing and plundering. Kala-i-No, on the summit of the mountain, and the fortified places of Darz-i-Cutch and Chaksaran, are considered similar to the nests of the Bakhtiari and Luri in the environs of Isfahan. They have a resemblance to the Hazara, but their forehead, chin, complexion, and figure are less Turanian. They are decidedly Iranian. They take their name, the Firoz Kohi, after the city of that name, about 63 miles from Teheran. Timur settled them by force in Masandaran, but they soon returned to their own

country. They have a few cattle, and they sow a little, and plunder the caravans travelling on the Maimani road, or make inroads on the scattered tents of the Jamshidi.

Jamshidi are the only tribe of E. Iranians who are exclusivsly nomades. They derive their descent from Jamshid, and moved out of Segestan to the shores of the Murghab, which they have occupied from pre-historic times. They live in the neighbourhood of the Salor and Sarik Turkoman, and they use the round conical tent of the Tartars, surrounding it with felt and a reed matting; and their clothing and food are Turkoman, as also is their occupation, for they are great man-stealers. They excel the other Aimak as horsemen, and for a chapao, band themselves with men of Herat or with the tribes of Turkomans. It was this cause that led Allah Kuli Khan to transport them from Khiva to the banks of the Oxus, after he had conquered them with the allied Sarik Turkoman. After a residence of 12 years, they fled, and returned to the town of Murghab. The Jamshidi are polite in word and manner. They still retain parts of the Zoroastrian faith, reverence fire, and pitch their tent door to the east.

The *Tajak* is Iranian. He is met with in largest number in the khanate of Bokhara and in Badakhshan, but many have settled in the towns of Khokand, Khiva, Chinese Tartary, and Afghanistan. The Tajak is of a good middle height, has a broad, powerful frame of bones, and especially wide shoulder bones; but they diverge from the Iranian; they have the Turanian wider forehead, thick cheeks, thick nose, and large mouth. The Tajak originally came from the sources of the Oxus in the steppe of Pamir. The term is from Taj, a crown, the fire-worshipper's head-dress. But the Tajak does not so style himself, and regards the term as derogatory. The Tajak is covetous, unwarlike, and given to agriculture and trade; fond of literary pursuits, and polished; and it is owing to their preponderance in Bokhara that that city was raised to the position of the headquarters of Central Asiatic civilisation, for there, from pre-Islamic times, they had continued their previous exertions in mental culture, and, notwithstanding the oppressions which they have sustained from a foreign power, have civilised their conquerors. Most of the celebrities in the field of religious knowledge and belles-lettres have been Tajaks, and at the present day the most conspicuous of the Mullah and Ishan are Tajaks, and the chief men of the Bokhara and Khiva court are Tajak, or, as the Turks style the race, Sart. Vambery considers the Tajak and Sart identical, but he recognises that in their physiognomic peculiarities, the Sart differs greatly from the Tajak, being more slender, with a larger face, and a higher forehead; but these changes he attributes to frequent intermarriages between Sart men and Persian slaves.

In Central Asia, the warrior, the shepherd, the priest, and the laymen, youth and old age, equally affect poetry and reciting of tales. The literature of the Muhammadans or settled nations brought from the S. is filled with exotic metaphor and illustration. In the three khanates, the Mullahs and Ishans have written much on religious subjects, but its mystical allusions are beyond the reach of the people. The Uzbak, the Turkoman, and Kirghiz esteem music as their highest pleasure, and often break out in song, singing soft minor airs. The Uzbak poetry on religious subjects is exotic, derived from Persian or Arabic sources. The Tartar compositions are tales, and relate to heroic deeds, similar to the romances of Europe.

Mr. Farrar (p. 70) gives B.C. 2000 as the period of the Aryans leaving their common home, but in this he differs greatly from Chevalier Bunsen and other authorities. The E. Iranian race came down the valley of Indus and into India, and Central Hindustan or Central India became the Madhyadesa of the ancient Aryans—the middle region or Aryavarta, the Arya country; and a slokam in the Sanskrit work, the Amara Kosha, defines its ancient boundaries thus:

'Ariavartaha punia bhumi hi,
Mad'hiam Vindhya Himava yoho;'

i.e. the Aryan country, the sacred land (lies) between the Vindhya and Himalaya; in this way indicating both the ruling race and the boundaries of the country held by them at the time that Amara Sinha wrote the Amara Kosha.

There would seem to have been two migrations into India of the Aryans, viz. the Earlier Aryans, the ancestors of the most ancient Hindus, a people acute, literary, skilled in arts, but not very warlike, and rather aristocratic than democratic in their institutions. The Later Aryans, a warlike people, probably once Scythians, democratic in their institutions, and rather energetic than refined and literary. The Aryans of India have caste and marriage laws, with strict rules of inheritance resulting from their sacred form of marriage, and subject to none of the caprices of Muhammadan and similar laws. Aryan is the private property in land, as distinguished from the tribal; the property first of the village, then of the family, then of the individual, and a consequence is the attachment of the Aryan to his native soil. Especially Aryan is the form of what we call constitutional, as opposed to patriarchal and arbitrary, government. The Indian village or commune is a constitutional government, common to all the Aryans; but there are two great classes of Indian Aryans, one with aristocratic communes, and one with democratic, and recognising as equal all free citizens, to the exclusion of helots only. Among the non-Aryans the rule of the chiefs seems to be patriarchal and arbitrary. Property in the soil is tribal rather than individual. There is little local attachment to the soil.—*Vambery's Sketches of Central Asia; Bunsen, Egypt's Place in Universal History; Reverend Mr. Farrar; Dr. Pritchard, in the Report of the British Association.* See Aryan; India.

IRAVAN or Ilavan. MALEALAM. A caste whose occupation is the extraction of palm wine or tari from palm trees.

IRAVATI, the same with the river Hydraotes or Ravi.—*As. Res.* ix. p. 53.

IRAWADI, the principal river of Burma and Pegu, rises in the S. slopes of the Patkoi mountains,—one branch in lat. 27° 43′ N., long. 97° 25′ E., and another in the same hills a few days' journey farther eastward. These two, known as the Myit-gyi or large river, and the Myit-nge or small river, respectively, unite to form the Irawadi in about lat. 26° N. The springs are reported to be fed by large snow beds and a few glaciers. In March the river begins to rise, and gradually increases its volume till its waters are forty feet

above their lowest level. They rapidly subside in October, when the rains cease and the N.E. monsoon begins.

It runs nearly N. to S. through Burma and Pegu, and discharges itself by nine different mouths into the Bay of Bengal, after a course of 1060 miles. It receives the Khyendwen, 470 miles; Shwely, 180 miles; and the Moo, 125 miles; and it drains 164,000 square miles. The chief tributaries of the Irawadi, in British territory, are the Ma-htun (or Meng-dun), the Ma-de, and Thai-lai-dan from the W.; and the Kyeni, Bhwotlay, and Na-weng from the E. Its tide is felt as far up as Henzada, and at Puzwondoung it rises 18½ feet at springs. The Bassein branch affords a passage for the largest ships for 60 miles from its mouth. No river of similar magnitude presents so few obstructions to navigation. Amongst the high mountains at its source the rainfall is considerable; at its centre, the fall of rain is comparatively small, but much rain falls at its delta. From the entrance of the Nam Yang downwards, the valley of the Nam Keng is generally very flat, and of some considerable width, and numerous marshy tracts appear on either side of the river. The average length of the Nam Kang, from the mouth of the Nam Yang down to its junction with the Irawadi at Katikyo Nainmo, including the numerous curves, amounts to 52 miles. From the entrance of the Nam Keng to Amarapura, the river has a real length of 269 miles; from Amarapura to the head of the delta at Sakkemun, 370 miles. The delta forms a triangle, nearly equilateral, with sides of 160 miles, the enclosed area consequently amounting to 9742 square miles. Towards Pegu and Sitan the Irawadi widens considerably, in consequence of the accession of the Pan-lan river, and its limits become less sharply defined. The valley of Hukum is stated to be 1000 feet above the level of the sea. The central branch of the Irawadi, at Manchi, in lat. 27° 20′ N., where it was visited by Wilcox, has an elevation of 1800 feet, and runs over a pebbly bed. Its elevation at Bhamo, in lat. 24°, is estimated by the same authority to be about 500 feet. The valley of Manipur is drained by the most westerly tributary of the Irawadi, and it is separated from Cachar by a mountain range, which is 6000 or 8000 feet high, and is pine-clad towards the summit. The valley of Hukum or Hookoom was visited by Griffith; it is more open, but is surrounded on the N. and E. by mountains elevated 5000 and 6000 feet, and is traversed by numerous ranges of low hills. Griffith's own account of the Irawadi above Bhamo is, that it keeps up its magnificent character, as far as he went, to the mouth of the Mogoung river, where it is 900 to 1000 yards across, and he describes the appearance of its vast sheet of water as really grand. At the beginning of the first defile, about five miles above Bhamo, the river is about 1000 yards across, and its course is defined by low-wooded hills which run close to its banks. About two miles farther on, the channel narrows to 500 yards, and the hills become even closer and hang more abruptly over the stream than before, and about another mile beyond, a higher range of hills from the S.W. comes in behind the former one, and both terminate on the bank as two headlands. Upon the right bank of the Irawadi, the mountains opposite Than Yun Yova, in lat. 24° 36½′ N., long. 96° 31½′ E., have an average height of from 6000 to 7000 feet. One of the highest, the summit of which is visible from the valley, reaches apparently 8000 feet. Westward of Let-pan Zin Yova, at a little distance from the right bank, lat. 24° 27′ 2″ N., long. 95° 56′ 15″ E., the summits of the mountains attain a height of 2000 feet. Heights of 800 and even 1000 feet are also numerous on the right bank of the river, only 20 to 23 miles N. of Shue-mut-thophya, lat. 23° 4′ N., long. 96° 15′ E.

The character of the whole river district, including the elevations not above from 3000 to 4000 feet, presents a thoroughly tropical appearance. The declivities of the hills, as well as the valley of the river, are covered with the wildest and most diversified vegetation, in the shape of dense tree and grass jungles.

The bore in this river is occasionally severe, but in the neighbouring Sitang river its fury is great, and occasions much loss of life. Burmans name thirty feet as the height to which it occasionally rises, and this may perhaps be the case in the bends of the river, where the rush has attained its full speed, before being deflected to the next bend. Even in the Hoogly, near the bend at Chandpal Ghat, the pointed curling wave may be seen several feet high. In the Irawadi and Mekong basins, there are remnants of tribes strongly distinguished from the predominant races, and tending, with the evidence of language, to show that the ethnic history of Ultra-India is very ancient, and has undergone repeated revolutions.

Its delta extends for 130 miles from Porian point to Rangoon river. Through its delta run nine principal branches, the names of which are, the Bassein or Negrais, the Thek-ngay-thoung, the Kyun-tun, the Peah-ma-lau, the Irawadi, the Dallah, the Pyapun, the China Buckeer or Tdoo, and the Rangoon rivers. Their mouths are fronted by extensive shoals, formed from the detritus brought down by the rivers. The amount of water which the Irawadi pours into the sea is about two-thirds that of the Ganges.

In the delta there is a maritime vegetation of mangroves, Sonneratia, Heritiera, Excœcaria, and other saline plants, just as in similar salt-marshes along the coast of the tropics. Irawadi is derived from Airavati, the elephant of Indra.—*Schlagentweit, General Hypsometry of India*, ii. p. 101; *Oldham in Yule's Embassy; Hooker and Thomson's Flora Indica.*

IRAWARA, in Mysore, the total produce, before division under the 'batai' tenure.

IRDHI, amongst the Buddhists of Ceylon, a state embracing ten supernatural powers.—*Hardy.*

IRIACEÆ, the Iridaceæ of Lindley, the iris tribe of plants. They are chiefly herbs, and are more remarkable for their beautiful fugitive flowers than for their utility. This order, however, contains the saffron (Crocus sativus) and the iris, more than one species of which affords the orris root of commerce. I. Florentina, *Linn.*, grows around the Mediterranean Sea, and is one species furnishing the orris root of commerce. Many species are grown in Indian gardens. The rhizomes of the Tseh-lan of Hunan in China, and of other species, are eaten or added to the infused tea-leaves to flavour it.—*Roxb.* See Iris.

IRIARTEA, a genus of palms peculiar to the forests of S. America, and might be introduced

into India with advantage. I. Exorrhiza, *Mart.*, the Pashiuba or Pasciuba of Brazil, produces an edible fruit. Iriartea setigera, *Mart.*, is fabricated into blow-pipes. I. Anticola, *sp.*, is the wax-palm of the Andes and Brazil. Its former name was Ceroxylon. See Palms.

IRIS FLORENTINA. *Linn.* Florentine iris.

Sosan, . . ARAB., HEB.	Peh-chi, ... CHIN.
Shoti of . . . BEAS.	Orris root, . . . ENG.

A native of Italy and Asia Minor, furnishes the orris root of European shops. It is a favourite ingredient in hair and tooth powder. Excellent orris root is procurable in the bazars under the name of Bekh-banafsha or violet root, but Royle under this head very confidently refers the putchuk of commerce to this article. A species of iris is cultivated in India, and its roots are used in the same manner as those of the Florentine kind. A broadish-leaved species occurs at various places throughout the Panjab Himalaya from 2500 to 9500 feet. Mr. Powell says the Iris Florentina is entirely distinct from the Kashmir variety, which luxuriates over every grave, and blooms on many a house-top in the far-famed valley, a custom resembling that of the ancient Greeks, who venerated the iris as the messenger between God and man.—*Powell; Winter; O'Sh.; Stewart.*

IRISH MOSS, or Carrageen moss, is the Chondrus crispus, *Lngb.*, and C. mammillosus, *Grev.*, of the W. of Ireland. It is used for cattle-feeding and for dietetic purposes.

IRON. W. of Armenia, on the borders of the Caspian Sea, we find the ancient name of Albania. The Armenians call the Albanians Aghovan, and as gh in Armenian stands for r or l, it has been conjectured by Boie that in Aghovan also the name of Arya is contained. This seems doubtful. But in the valleys of the Caucasus we meet with an Aryan race speaking an Aryan language, the Os of Ossethi, and they call themselves Iron.—*Muller's Lectures*, p. 230. See Elburz; Hindu.

Iron when found native is supposed to be generally of meteoric origin, but extensively in combination with oxygen or sulphur, as a salt of various acids, as carbonate, sulphate, etc., mixed with earths or other metals.

The iron of commerce is extracted from iron ores. Some of the oxides, as magnetic and specular iron-ore, are heated only with charcoal, as in Sweden, Russia, and the E. Indies, when the carbon combining with the oxygen the iron is set free and melted. The carbonate, iron pyrites, clay iron-ore, red and brown hæmatites, and spathose iron, are first roasted, and then exposed to a fierce heat in contact with charcoal, coke, or small coal, and a flux, either lime or clay, according as the ore is argillaceous or calcareous. These earthy matters become vitrified, and form a slag at the surface, while the heavy particles of iron, falling down, run out by a hole at the bottom into moulds, and form pig or cast iron. This is still impure, from the presence of charcoal, sulphur, and portions of silicon and aluminum. It is again twice fused in the refining and puddling furnaces, and exposed to the influence of a current of air at a high temperature, when the whole of the charcoal and sulphur are burnt out, and the other impurities form a slag at the surface. The metal is taken out, beaten or pressed, and then drawn into bars, which form the malleable or wrought iron of commerce.

Iron has long been known in India. From a passage in Kalidasa's drama of the Hero and the Nymph (p. 218), it is clear that the art of welding it was known to the early Hindus.

'You tell me, gentle Nymph, your fair friend pines
With amorous passion. But you do not see
The ardour that consumes this heart for her.
Alike our glowing flame. Then quickly aid
Our union to cement, as close combines
Iron with iron, when each fiery bar
With equal radiance glows.'

The iron-smelters of India are low caste, and humble, poor people. They have small clay furnaces, with charcoal for fuel, and the blast is caused by foot or hand bellows of sheep or goat skins, or even of leaves. The smelting process lasts from 6 to 10 hours, but at 3 or 4 separate charges, at the end of which time from 10 to 20 lbs. weight of iron is produced.

Iron-ores abound in almost every district of India, and the prevailing ore is the oxydulous iron, often magnetic, and with polarity; but specular iron-ore, hæmatite, clay iron-ore, and sulphuret of iron also occur abundantly. Many of the ores are noted for their singular purity, especially the magnetic oxides. Some are distinctly titaniferous, being in this respect similar to the Taranaki iron-sand of New Zealand. But the bulk of the ores of Beypur, Salem, Palamcottah, Penatur, Puducottah, are rich magnetic oxides, and when freed from earthy matter, and ready for the blast furnace, contain about 72 per cent. of iron. They are found in mountain masses, and are obtained by quarrying with a crowbar. They are quite free from sulphur, arsenic, and phosphorus, and upon a large average have been found to yield 68 per cent. of metal in the blast furnace. The Punpara and Honore ores were used for the production of steel by the Bessemer process.

The plan adopted for the production of Indian cast-steel at the Beypur works, by the Bessemer process, was similar to that pursued in Sweden, but differed essentially from the Sheffield method. At Sheffield and elsewhere in Great Britain, where the process was in operation, pig-iron was melted in a reverberatory furnace, and run thence into the converter or Bessemer vessel, which was mounted on axles. But in Sweden, and at the Beypur works in Madras, the crude metal was run direct from the blast furnace into an ordinary founder's ladle, raised to a sufficient height by means of a travelling crane, and then poured into the converter, which is a fixed vessel, lined with a mixture of native fireclay and sand and pulverized English firebrick. Steam was raised to about 50 lbs. in the boilers, giving a pressure of blast of about 6½ or 7 lbs. per square inch, and the air was driven into the converter through 11 tuyeres of ¾ inch diameter, placed horizontally at the bottom of the vessel. No manganese or other metal was added

to temper the steel, the quality of the metal required being regulated by the pressure of blast and the time of blowing. As soon as the metal was sufficiently decarbonized, the vessel was tapped, and the fluid steel run into a ladle provided with an outlet in the bottom. This ladle was swung round over the cast-iron ingot moulds, the fireclay plug withdrawn, and the steel allowed to flow in a clear stream into the moulds beneath. These ingots were then cogged down under a Nasmyth hammer, and drawn into finished steel bars of various sizes.

The iron-ore of the *Salem* districts of the Madras Presidency is a rich magnetic oxide, very heavy and massive. The yield averages 60 per cent. of metallic iron. Much of the ore being a pure black magnetic oxide, would doubtless yield 73 per cent. The ore is, however, often mixed with quartz, which is a very refractory material in the blast furnace. Limestone, and in some places shell-lime, is employed as a flux; and the charcoal of some kind of acacia is the fuel. It occurs there in immense beds 50 to 100 feet thick, and its outcrop can be traced for miles. On one hill six miles from Salem are five bands of magnetic iron-ore from 20 to 50 feet thick.

Magnetic iron-ore of fine quality occurs in Coimbatore, Cuddapah, and Vellore; magnetic hæmatites and magnetic iron-sand also in Cuddapah, in the North Arcot district, in the Vellore taluk, at the villages of Pankam, Pulleputt, Anchenamput, Vannanthangal, Vennembutt, Catharercoopum, Vaniembaddy, Satghar, and Strevelliputur; and magnetic iron-ores occur in the Bellary, Masulipatam, and Mysore districts. Manganese was detected in the iron-ores of Hyderabad, Kurnool, Bellary, the Baba-Booden hills, Mysore, and Vizianagram. Ores of Hyderabad are magnetic. In the Salem district two varieties of iron are obtained, one remarkable for its softness and malleability, the other for its steel-like hardness, which adapts it for the formation of edge-tools, cold chisels, etc. The following names are given to this metal in process of adaptation to its finished manufacture:—Cultics or blooms of iron, Palms or bars of iron, Vuttoms or pieces of cast-steel as it comes from the clay crucibles, Oollies or bars drawn out from the clay crucibles, iron beads which ooze out from the blooms in the blast furnace. Bloom iron from Palghat is readily malleable, and furnishes a hard steel-like iron. It is necessary to subject the bloom to a second fusion and much hammering before they can bring it to the state of the soft malleable iron in which it is met with as an article of commerce.

The iron-ores of *Coimbatore* are of very fine quality, particularly rich in the metal, and highly magnetic.

Dr. Heyne, describing the manufacture of iron in the Karnatic to the south of the Pennar river, says, when first smelted, it is extremely brittle, requiring several operations to bring it into a malleable state. There are two varieties of ore used in the district in which he observed the processes. The one, an iron-sand, collected in the beds of rivers, consists of the protoxide, mixed with much of the peroxide; the other, a red schist, is almost entirely composed of red oxide, but in the centre of the mass it affects the magnet.

The woods used in Southern India for making charcoal for the iron works at Beypur were the vella-marda, karra-marda, Indian-gooseberry, Poohum, nux vomica, and cassia.

Iron-glance of the hills of Cupputral, in the *Ceded Districts*, furnishes an excellent malleable iron. Specular iron-ore occurs in the Sandur hills, about 30 miles W. from Bellary.

The *Bellary* district yields a variety of iron-ores, some of them very rich in the metal, and several of them are associated with manganese. The prevailing ores of iron of this district are the black and grey ores alternating with sandstone, liver-coloured ore (which has been repeatedly sent to Madras as copper-ore), and red jaspery clay iron-stones. They are also associated in the same district, and in the vicinity of Kurnool and Ghooty, with magnesian limestone, grits, conglomerates, aluminous shale, fireclay, and black dolomite.

The principal ores of the *Cuddapah* district are red, brown, and purple in colour, which yield iron of excellent quality and very malleable. Some of the magnetic iron-ores of the same district are particularly rich in iron, and a few of them contain traces of manganese. Of those from Chemur and Pulevendalah, the latter is magnetic, although earthy and dull red in the fracture, and bright red in the streak. The steel-grey and granular iron-ores of Chitwail, Camalapur, and Gurumcondah are all rich in the metal, and more or less magnetic. The yellow ochre and rusty ores of the Muddenpully taluk are said to yield good malleable iron. The steel-grey iron-sand Comarole and Yandapully in the Doopaud taluk are highly magnetic, and contain a little manganese. The micaceous iron-ore and iron-glance of the Doopaud taluk are also rich in the metal.

Gunnygull hill ridge, south of *Kurnool*, is seamed with great veins of very pure specular iron-ore. A great cone-like mass of almost pure specular iron-ore rises out of the base of the northern slopes. Then S.E. of Ramulkota there is a ridge a 'perfect mine of iron;' but the great local drawback is the scarcity of fuel, of which only a small supply is obtainable from the low and thin jungle in the hilly regions to the southwards. Smelting is carried on at Ramulkota. The ore which is brought from an adjacent hill is massive, roughly granular, coarsely crystallized, and very brilliant. Usually the iron-ore is smelted once in a month, during 24 hours. The furnace is charged seven times during this day and night; when seven lumps of smelted metal are obtained. The furnace is charged first (a fire being at the bottom) with powdered charcoal. Two large baskets (six or seven large Madras measures) of charcoal are thrown on the fire; then a small basket of pounded ore (74 seers) and six small baskets of charcoal, that is, about a handful of iron and a handful of charcoal alternately, at about an interval of a minute. Nothing else is put in the furnace. The bellows are kept at work for about two or three hours. Then the soft mass of metal is raked out, beaten for a short time with heavy hammers until it assumes the rounded wedge-shaped form usually given to the lump of iron at native furnaces, a deep cut being made in the mass. This lump of metal is about three-quarters of the weight of pounded ore placed in the furnace, and it is worth three rupees. Afterwards it is reduced to bars of workable iron, by being heated four times in the

forge, and beaten between each heating. The furnace is a small dome-shaped edifice, almost exactly like the furnaces of the Salem district, both in shape and size.

Numerous iron villages and hamlets are found along the western flanks of the *Nullamallays*, and several of these furnaces are always at work, the metal being in demand for ploughshares and other agricultural implements, though not for tires of wheels, for which it is found unsuitable. Besides Nerjee stone, the district abounds in serpentine.

Iron-ore, hard and compact, of a light bluish colour, and of excellent quality, occurs in great abundance at *Timmericottah;* brown iron-ore near the Guticondah; iron-ore in crystals and parallelipods on the surface of rising ground about three miles from Gurjal.

From the neighbourhood of Bomalapur, six or eight miles north of Dorenal in the *Guntur* district, and all the way to Gompedala near Doopaud for seven or eight miles, the ground is nearly all iron-sand. It is washed and smelted at Ramapoliam near Dorenal.

The most prevalent iron-ores of the *Hyderabad* territories seem to be the rusty brown, red, and yellow ochres; iron or steel sands with manganese, and specular or glance ores,—none of the latter, however, are magnetic. The black, brown, and red cellular iron-ores are abundant. Red hæmatite is found in the iron clay near Kondapur, and is used in the manufacture of the Wootz steel.

The magnetic iron-ore employed for ages in the manufacture of the damask steel used by the Persians for sword-blades, is obtained from schist near *Kona-Samudram* around Deemdoortee, where the ore is extensively distributed. The minute scales of iron are diffused in a sandstone-looking gneiss or micaceous schist, passing by insensible degrees into hornblende slate, and sometimes containing amorphous masses of quartz. The strata are much broken up and elevated, so that the dip and direction are in no two places the same, and bear no relation to the mountains in the north. The iron has the remarkable property of being obtained at once in a perfectly tough and malleable state, requiring none of the complicated processes to which British iron must be subjected previous to its being brought into that state. Mr. Wilkinson found it to be extremely good and tough, and considered it superior to any English iron, and even to the best descriptions of Swedish. The Persian merchants, who frequented the iron furnaces of Kona-Samudram, are aware of the superiority of this iron, and informed Dr. Voysey that in Persia they had in vain endeavoured to imitate the steel formed from it.

Ores, powerfully affecting the magnet, exist in great quantity at Taygur, a village of the *Konkan.*

The iron-ore of *Rewa Kanta* was in former times abundantly worked in the Zillahs of Narukot, Palanpur, Simudra, and Bhilod.

The Azuria mines in *Jubbulpur* are situated on a hill consisting of iron-ore found at 1½ feet from the surface, and extending over an area of about 60,000 yards square and 30 feet deep. The ore exists in thin flakes of a grey-iron colour and metallic lustre. The ore and charcoal are thrown in small quantities every half-hour into an earthen furnace 5 feet high and 3 feet diameter. A part of the bottom of the furnace is filled with fuel only; this being kindled, a pair of bellows is applied to raise the heat, and a passage made at the side of the furnace for the melted metal to run out. Four maunds (320 lbs.) of ore and 2½ maunds of charcoal are daily used in a furnace; the fuel is used in the proportion of 5-8ths or 62 per cent. of the ore for smelting, and 1-5th more for refining the metal. A furnace furnishes daily 2 maunds (160 lbs.) or 50 per cent. of the crude iron from 4 maunds of the ore; this, when forged, yields 30 seers, or nearly 19 per cent. of wrought-iron. The entire cost of the pure metal obtained amounts to Rs. 1·13 per maund, including labour and materials.

Iron-ore, in the form of silicious peroxide, occurs at Tendukhera, Narsingpur. The ore actually worked is a large vein or lode in the limestone of the great schist formation, and the only rock in its immediate vicinity is hard grey and blue crystalline limestone. It occurs to the north of the Nerbadda, in the open flat country between the river and the Vindhya Hills, and at one or two other places in the neighbourhood, also at Mohpani, not far from Tendukhera. The iron is smelted in small clay furnaces, blown by goat-skin bellows, worked by the hand. It is obtained in small lumps or blooms called cutcha or raw iron, and is afterwards reheated and hammered, and then sold as pucka or finished iron. Intermixed with the raw iron as it comes from the furnace, is a sort of crude steel, which is carefully selected and used for the manufacture of tools and agricultural implements. The ore is largely smelted at Tendukhera, about two miles from the mines, where, during the eight dry months of the year, about sixty furnaces are worked. About 5 tons 3 cwt. of iron-ore and 5 tons 12 cwt. of charcoal are used for the manufacture of two tons of pucka or finished iron. The ore contains, upon an average, about 40 per cent. of iron; it is very fusible. The ore is obtained by means of pits sunk from 30 to 40 feet, through the alluvium of the valley, to the ore. They are washed in during the rains, and require to be resunk yearly. The pucka iron sells at from 5 to 6 rupees (10 shillings) per goan or bullock-load of 3 maunds, equal to 24 bundles, or from £4, 10s. to £5, 8s. per ton. From the iron of these mines, about 1840, a very good suspension bridge was built near Saugor.

At *Lohara* (Loha, HIND., iron), in the Chanda district of the Central Provinces, there are two localities, five miles apart, where hæmatite abounds. At the eastern one there is a mass of dense red hæmatite, forming an isolated hill 120 feet above the level of the surrounding country, which would probably yield 300,000 to 500,000 tons of iron without going below the surface. The other mass is smaller in extent.

Iron-ore, in the form of magnetite or granulated, is found lying on the surface of almost all the high grounds in *Chutia Nagpur.*

In *Bundelkhand* and in the Nerbadda valley are large quantities of hæmatite.

An iron-ore called Dhaoo is produced in the land lying between Mouzah Sathu Nurwari of the *Gwalior* district and Punehar, also in the hills adjoining. The ore is taken to Dhoa and Bugrowlee and other places, where it is smelted. The iron-ores of Gwalior are remarkable for their purity and richness. They are chiefly red iron-ores and mag-

netite, containing sometimes manganese, but there are also brown iron-ores and silicious hæmatite. The magnetites contain 70 per cent. of metallic iron, the red iron-ore from 60 to 71 per cent. of iron, the brown iron-ores from 42 to 54 per cent., and the silicious hæmatites from 45 to 48 per cent. of metallic iron. Of sulphur there are but few traces, and of phosphorus none. The red iron-ores near Suntoro, Macsora, and Dharoli occur in enormous quantities on the surface of the ground. These ores, it is stated, are especially serviceable for the production of Bessemer cast-steel for rails. There is a large forest in the immediate N.W., which may be calculated to yield 56,000,000 tons of wood, and which, it is estimated, would feed an iron work producing daily twelve tons of finished iron during 900 years.

Abundance of iron-ore is found in the district of *Sumbulpore*, and it is plentiful in the Cuttack tributary states of Talcher, Dhenkanal, Pal-Lohara, and Ungool, and, indeed, throughout the hilly country bordering the settled districts of this province on the N.W. In Sumbulpore the broken iron-ore is mixed with charcoal, and put into the furnace, about 4 feet high, and made of clay. The fire is maintained by a blast, introduced through a fireclay pipe, which is sealed up with clay after the insertion of the nozzle of the bellows. The slag is raked out, through an aperture made in the ground, and which runs up into the centre of the furnace base. Three men—one to serve the fire, and two to work the bellows—are required to tend each furnace. Talcher and Dhenkanal ores are said to produce very excellent metal, without the aid of a flux. The charcoal used is made from the sal or Vatica robusta. The price of the crude iron in Ungool is a trifle less than one anna per seer.

In *S. Mirzapore*, Palamow, Singrowlee, and Rewa the ores yield 70 to 75 per cent. of pig-iron. Each furnace is kept in full play all day. Each day, if the smelters have wives and children to break up the ore into ½ or ¼-inch cubes, and bring charcoal, they will charge the furnace four times, and the day's work will be 4 or 5 small malleable pigs of 2 or 2½ seers each, or in all 12 annas to a rupee's worth of iron. They employ no flux. The furnace is emptied at each charge. The metal never runs liquid from the furnace, but falls to the bottom, below the blast tube, from whence it is taken in a flaming mass by a pair of iron tongs, and while incandescent it is hammered on a hard stone or rough iron anvil into a double wedge-shaped pig, the labour being divided between the smelter and his family.

The fuel employed in the *Ulwar* district in smelting the ore, is charcoal obtained from the dhak tree (Butea frondosa), and costs about 1 rupee for 6 maunds. To smelt 16 maunds of ore, 24 maunds of charcoal are required, and this will yield 4 maunds of iron, valued at 3 rupees per maund.

The part of the *Vindhya* Hills forming the southern portions of Shahabad, and of Mirzapore, N. and N.W. of the Sone river, together with Mirzapore, south of the Sone, Rewa, Palamow, and, in fact, the whole chain and spurs of the Vindhya range in this neighbourhood, is full of mineral wealth of various kinds. Quarries of the peroxide and proto-peroxide of iron, as also of iron pyrites, abound in the most accessible portions of the Kymore range. The Kymore range is the north-easterly spur of the Vindhya range, and fills all Southern Mirzapore and Shahabad. Some of the ores yield 70 to 75 per cent. of pig-iron. Some of the best iron in India is produced in Palamow, Rewa, Bidjugghur, and Singrowlee. The iron from the latter place in particular bears a high character in the market, being tough, flexible, and easily worked.

In *Bengal*, about 6 miles N.E. of the town on the road to Bugodhur, a place on the Grand Trunk Road, is the Silwar Hill, which almost deserves to be called an iron mountain. It stands at the bed of a valley, through which runs the Kunbur river, all along the course of which stream good iron-ore is found in large quantities. About 5 or 6 miles north of Hazaribagh, on the Burbi road, is Sedgua, and here, close to the road, is coal of a very good quality. Iron-ore has been traced in the Kunbur valley for a distance of nearly 30 miles, and the ore is said to have yielded 75 per cent. of the finest metal. So plentiful is the ore, that the Kol and Santal, who work it to procure the material for making kodalies, hatchets, etc., for exportation to the neighbouring districts, never do more than dig a hole to the depth of two, or it may be three feet. Coal, although found near the station, can be procured in any quantity from the banks of the Damuda, and wood can be drawn from the forests and jungles of the Rangurh plateau.

Hazaribagh iron-ore appears to be of the finest quality, and contains not less than 80 per cent. of pure metal. It also contains a slight admixture of manganese, which would be very useful as a flux where the finest steel, such as would be required for guns, is manufactured. There is a surface of 500 square miles of this ore in the Damuda coal-fields, extending from ten miles south of Hazaribagh on to Turi, and underneath this rich deposit is a layer, supposed to be about 20 feet in extent, of the finest coal in India.

The Agaria, Kol, Santal, and other jungle races smelt with charcoal only, and make no use of the enormous deposits of coal; their out-turn perhaps amounting to about a maund in a couple of days. A very large quantity of iron of a very fine description is found near Chuttra, one of the principal towns in the Hazaribagh district. Coal is often found within 5 or 6 miles of this place, viz. in the Mahanadi river.

The iron-ores of the *Panjab* are produced along its N.E. mountain frontier, as well as in the lower hills of the Sulimani and Waziri ranges, and those to the S.E. of the Bunnu district, and to some extent in the Salt Range on the other side of the province, in the hilly portion of Gurgaon district, and in the districts of Simla, Kangra, Dehra Ismail Khan, and Hazara in the Dehli district.

The Mahruli Hill, which yields iron-ore, is one of that group of outliers that forms a continuation as it were of the *Aravalli* range.

Along the Himalaya frontier, the principal places of production are the Hill States of the Simla district, Jubal, Dhami, Bashahr, and Rampur. At Suket, Chamba, and Mandi, iron is largely produced, and the mines at Shil, Kot Khai, Futtehpur, and Bhir Bangal of Kangra are famous. Mines are worked along the whole range, both on the north and south faces, from the Sutlej to the Ravi. Under the Sikh rule, this iron was extensively used for gun-barrels.

At Kanigorum, in the *Waziri* Hills, it is found also as a hæmatite in several parts of the Salt Range, and in the Chichalli range, on the other side of the river. The cutlery of Nizamabad and Gujerat is, however, exclusively manufactured with imported steel.

The *Kamaon* ores are iron an argillaceous band containing large quantities of red hæmatite, the ore-bed being 10 to 20 feet thick, and extending for a long distance. The surface deposits supply the greater proportion of ores used by the smelters, but much labour is necessary in the collection.

Magnetic iron-ore is found in considerable quantity about 30 miles N.E. of Dharmsala, Kangra district, close to the sanatorium of Dalhousie. Of the ores of the Chamba Hills, and in the divisions up to the Hazara district included in the Kashmir territories, the best is found at Reyasi in Jammu; the ore found at Sonf and Kutyar, in Kashmir proper, is not so good.

In the hills due north of *Peshawur* is the source of the fine Bajaur iron which is used in the manufacture of the gun-barrels of Kohat and Jammu, and in the formation of steel for the blades of Bokhara and Peshawur.

At Sikbhar, in the Darjiling district, is a valuable magnetic iron-ore.

Iron is obtained from the ore found in Shoru Cacharri Mehaul, in Gholagat Sub-division, in *Assam*, about 15 or 18 feet under the surface of the ground.

In *Pegu*, ore is found in the slope of a mountain called Popah, about 3000 feet in height, 15 miles inland from the river Irawadi, on its left bank. The ore is found in large quantity in nodules, and is collected and smelted by the inhabitants of the neighbouring villages. They use no flux of any description in smelting. Price 4 rupees per ton, delivered at the neighbouring furnaces.

There is a large variety of ores of iron in the *Tenasserim Provinces*, some of which are uncommonly rich in metal.

Iron-ore abounds in the *Shan* states, and to the south of Mandalay in the district of Pagang. To the west of Sagaing, for miles up the Irawadi river, the ore abounds, a rich hæmatite. Tin is found in the Shan States to the south of Mandalay.

Many of the provinces of *China* yield an excellent iron, equal to the Swedish metal, from red hæmatite; limonite, black magnetic iron-ore, and specular iron-ore occur, but the trade in Chinese iron is petty.

Europeans, in private companies, under Government patronage, and also by Government departments, have made several unsuccessful attempts to establish iron works of the form adopted in Great Britain. The chief of these have been the attempts at Beypur and Porto Novo in 1833 and 1859, in 1874 in the Madras Presidency, with a complete loss to the shareholders; at Dechauri in the N.W. Provinces, and in Bengal. In 1855 the iron works at Dechauri, in the N.W. Provinces, possessed a well-constructed high furnace; forest for the supply of charcoal was growing all round them; they had fair, brown iron-ore at hand, and excellent rich hæmatite and magnetic ores only 25 miles off, but the work was abandoned. In 1882, the Government of India took the Bengal iron-works off the proprietors' hands, paying the shareholders Rs. 4,30,761. Surgeon-General Balfour, in 1855, reported on the iron-ores of the south of India, and showed that in the competition, to be successful, Indian iron must vie with the iron of Sweden and Russia, and that it is the convenient forms of hoop, and bar, and pig—forms in which wrought-iron is imported—which give British the preference.

Iron imported into India—

About 120,000 tons of iron are imported into India, of annual value about 1½ kror of rupees, and almost entirely from the United Kingdom.

The native furnaces throughout India are of the same pattern, small circular structures 4½ to 5 feet high, built of earth, and the product brings in the villages a higher price (£23 the ton) than iron from Europe (£18 the ton). The Kutub near Dehli, 23 feet 8 inches, is a remarkable illustration of what the ancient blacksmiths could do; and the great gun on the ramparts of Bijapur, cast at Ahmadnaggur about the 16th century, is another.

Sulphate of iron is the sulphate of the protoxide of iron, and occurs in the form of green crystals, soluble in water. The salt is formed abundantly by natural oxidation of the sulphuret of iron, a mineral especially common in coal districts. The sulphuret, absorbing oxygen from the atmosphere, is converted into the sulphate of the protoxide of iron; this is apt to be changed into the red-

coloured sulphate of the sesquioxide. It is made artificially on a large scale, for use in the arts, by exposing moistened pyrites to the air. It occurs in the Indian bazars in large masses of green crystals, and in a state of considerable purity. It was known to the ancients, is mentioned in the Amara Kosha of the Hindus, and it is used by them, as by the Romans in the time of Pliny, in making ink. A very cheap green copperas in China is largely used in the mission hospitals as a disinfectant, also in dyeing black, and as an emetic in cases of poisoning. The natives of India have long known the use of acetate of iron, which they prepare by macerating iron in sour palm-wine, or in water in which rice has been boiled.—*Royle, Mat. Med.; O'Sh., Beng. IRON-BARK TREES, a commercial name applied in Australia to several species of Eucalyptus. E. sideroxylon is a valuable timber tree, possessing great strength and hardness, and much prized for its durability by carpenters, shipbuilders, for top-sides, trenails, the rudder stock, and belaying pins; by waggon builders, for wheels, poles, etc.; and by turners for rough work. It is much recommended for railway sleepers, and is extensively used in underground mining work. It somewhat resembles the red gum tree, but it is more difficult to get large trunks of it sound in the heart. See Eucalyptus.

IRON-WOOD.

Iron-wood is a commercial term applied to a variety of woods, in consequence of their hardness, and almost every country has an iron-wood of its own. One, the product of an evergreen tree, Sideroxylon, remarkable for the hardness and weight of its timber, which sinks in water, receives this name; it is of a reddish hue, and corrodes like iron. This tree grows chiefly in the West India Islands, and is likewise very common in South America. Mesua ferrea, a tree furnishing one of the iron-woods, and which, also, has received its specific name from the hardness of its wood, is a native of Ceylon and of the two Peninsulas of India, of Northern India, Malacca, and of the islands. M. pedunculata likewise furnishes part of the timber known under this name. That of Arakan is the Xylia dolabiformis; but in Ceylon, the Maba buxifolia and Mimusops Indica also furnish the iron-woods of that island. The Ceylonese have also an iron-wood tree known under the name of Naw, of the western provinces of Ceylon, perhaps the M. ferrea. It is described as used for bridges and buildings. The timber of the Metrosideros vera of China is called true iron-wood. The Chinese are said to make their rudders and anchors of it, and, among the Japanese, it is so scarce and valuable, that it once was only allowed to be manufactured for the service of their king. The iron-wood of southern China, however, is Baryxylon rufum; of the island of Bourbon, Stadmannia sideroxylon; and of the Cape of Good Hope, Sideroxylon melanophleos, which latter is very hard, close-grained, and sinks in water. That of the Canara forests is from two species of Memecylon (ramiflorum, umbellatum), and on the Coromandel coast the term is occasionally applied to the wood of the Casuarina equisetifolia. In Tenasserim, the term is applied to the woods of Inga xylocarpa and I. bijemina, and to that of a species of Diospyros. The iron-wood of Australia is from a species of Eucalyptus, E. sideroxylon, and that of Norfolk Island from the Notelæa longifolia. The iron-wood of Guiana is from the Robinia panacoco (of Aublet), that of Jamaica is the Fagara pterota, and Erythroxylum areolatum is also called red-wood. Ægiphyla Martinicensis and Coccoloba latifolia are other West Indian trees, to the timbers of which the name of iron-wood has been applied; and Ostrya Virginica, called American hop hornbeam, has wood exceedingly hard and heavy, whence it is generally called iron-wood in America, and in some places lever-wood. Under the name of iron-wood, two specimens were sent by the Calcutta Committee to the Exhibition of 1862. One of them, Pya, *Vern.*, a tree of Akyab, grows to a moderate size, and is plentiful in the Sandoway and Ramree districts. The other iron-wood, Pieng, *Vern.*, also a tree of Akyab, grows to a large size, and is very plentiful in Arakan; its wood is very hard, and used for posts. One of these is perhaps the Xylia dolabriformis, *Benth.* The iron-wood of the South Sea Islands is the timber of the Casuarina equisetifolia. The iron-wood of New Zealand is the Vitex littoralis. The Aki or Lignum vitæ of New Zealand, the Rata and the Pohutu kawa of the same country, are all hard-wooded trees belonging to the genus Metrosideros, *Lindley;* and several other species of Metrosideros have been described, natives of Australia and the South Sea Islands, as furnishing iron-woods of commerce. The Metrosideros buxifolia of Allan Cunningham is the New Zealand plant called Aki, and is a rambling shrub, adhering to trees, and climbing by means of its lateral roots to the summits of the loftiest trees in the forests of Wangaroa and the Bay of Islands.—*Eng. IRRIGATION.

Wasserung, . . .	GER.	Regamiento, ...	IT.
Befeuchtung, . .	,,		

Generous as the Indian soils usually are, and favourable as are the seasons in the plains and valleys of British India, the amount of the rainfall, one year with another, varies by fifty per cent. above and below the average. Rain is frequently absent for many weeks, and without some artificial means of supplying the soil with moisture, no crops could at those periods be taken off the ground. Something can be grown with water, nothing can be obtained without it; and throughout the south and east of Asia the efforts of the rulers and the people have been directed to obtain and hoard the water supply. Of the seven

regions into which British India has been divided for hygrometric purposes, two only have their fill of water from natural sources. In the drier regions the rainfall is precarious as well as scanty, and wide expanses of good soil lie permanently untilled and tenantless. A good part of the Panjab and the whole of Sind would be scarcely habitable without irrigation, and in the south-eastern quarter of the Madras Presidency it is indispensable. The natives of these regions have, from unknown times, been forming tanks, digging canals, and leading off channels from rivers, some of them betokening great skill and great labour; and in the 18th and 19th centuries the labours of British engineers, especially of those of the Madras Presidency, have been conspicuously successful in irrigation. Sir Arthur Cotton, in Tanjore, reconstructed and enlarged the ancient irrigation works with such effect, that during the first sixteen years 50,000 acres of land, previously waste, were brought under tillage, the average produce per acre was increased by one-eighth, and the selling value of the land was doubled. In the delta of the Godavery, where Sir Arthur Cotton next went, notwithstanding its rich alluvial soil and fostering climate, alternate flood and drought had brought famines. The territory is now a luxuriant garden, 265,000 acres having been brought under humid cultivation, and the population is prosperous. The Ganges Canal, which diffuses irrigation over an area 320 miles long by 50 broad, is the most magnificent work of its class in the whole world, having a main channel 348 miles long, primary branches of 306 miles, and minor arms of an aggregate length of 3000 miles. In one place this canal is carried over a river 920 feet broad, and thence for nearly three miles along the top of an embankment 30 feet high.

The irrigation canals of the Tigris and Euphrates have not retained their ancient magnificence, but the oases around Bokhara and Khiva owe their value to the irrigation channels led from the Oxus. In Persia, Karez aqueducts are largely in use for irrigation, and the Nizam Shah dynasty of Ahmadnaggur formed several of these on the north of their capital.

In India, irrigation is carried on from wells and from tanks, and largely from channels led from its rivers, well irrigation being employed for garden culture, and to supplement the rainfall. The efforts made by several of the races to preserve and utilize the water from the rains and rivers, have been gigantic, as in the cyclopean Gorbasta structures of Baluchistan, where dams of huge stones have been drawn across the valleys by a race of whose history nothing is known. In India both Hindus and Muhammadans have made great artificial lakes, with dams or bunds, often highly ornamental. One of the most beautiful is that of Kankroli or Rajnagar in the Mewar or Udaipur State. Its retaining wall is about 2 miles long, and the area is about 12 square miles. It is 376 paces in length, is covered by white marble steps,—a fairy scene of architectural beauty.

The great tank at Cumbum, in the Ceded Districts, is 8 miles in circumference, and covers an area of nearly 15 squares miles; that at Ulsoor, near Bangalore in Mysore, is of equal size. The magnificent lake constructed by Mir Alam, near Hyderabad in the Dekhan, as a famine work, has a steamer on it.

Wells or reservoirs, known as the Bai, Baori, or Baoli, have been formed in many parts of India, with flights of steps and a succession of platforms, enclosed by arches, leading down to the water.

Most of the waterworks constructed by the Muhammadans in India were undertaken to obtain water for their parks and palaces. It is to the Hindu races, Aryan and non-Aryan, and in recent times to the British, that India is indebted for the great tanks and irrigation canals which are now to be seen. The smaller tanks in the south of the Peninsula of India, all of Hindu origin, are multitudinous, and some of them are of great size. To Hindus also India is indebted for the great anicuts or dams which head back the waters of the Cauvery and the Colerun.

Some of the great irrigation works, both in Northern and Southern India, have been so constructed as to be available also for navigation. Navigation on the Orissa canals in 1877-78 yielded £3384; on the Midnapur canal, £10,692; and on the Sone canals, £5965, the aggregate being larger than was derived from irrigation. In Madras, boat tolls in the Godavery delta brought in £4496, and in the Kistna delta (Madras canals), £1718. The works of the Madras Irrigation Company on the Tumbudra were not made available for navigation until 1879. The canal was projected for irrigation and navigation, which should extend from Sunkesala, 17 miles above Kurnool, to the Kistnapatam estuary on the sea-coast of Nellore, and the Madras Irrigation Company undertook that part of it between Sunkesala and the Pennar river at Sumaiswaram, and subsequently to the town of Cuddapah. It was completed in 1871, but it has been financially a failure, attributable to the heavy charges for maintenance and establishment, to the unprofitable outlay on the navigation works, and the scarcity of labour.

In the Bombay Presidency, near Poona, the British have erected a masonry dam to form Lake Fife, one of the finest reservoirs in the world.

The British have drawn one great canal from the Ganges at Hardwar; they have improved and enlarged an old canal which the Muhammadans brought to Dehli from the Jumna; a great canal has been led from the river Sutlej, in the Sirhind division of the Panjab, another from the river Ravi north of Lahore, for the Amritsar district; with many lesser streams for Multan, and for the inundation canals of the Derajats. In Behar a great canal has been taken from the Sone river; in Orissa the Mahanadi has been dammed farther south, as has also the Krishna river at Bezwara, and the Cauvery and Colerun river near Trichinopoly. But what is there accomplished on a very large scale by the British India Government is, throughout many parts of the country, performed by the villagers themselves. For miles the Hindu cultivator will carry his tiny stream of water along the brow of mountains, round steep declivities, and across yawning gulfs or deep valleys, his primitive aqueducts being formed of stones and clay, the scooped-out trunks of palm trees and hollow bamboos. And sometimes, in order to bring the supply of water to the necessary height, the pe-cottah or the bucket-wheel is employed, worked by men, by oxen, by buffaloes, or by elephants,

and in the more level tracts of the south of the Peninsula every little declivity is dammed up to gather the falling rain.

And, independent of the general benefits to the people, great profits have been made by the British Government in several cases, by restoring or repairing tanks and channels which had become ruined, such net profits amounting to from 10 to 45 per. cent., and in one instance to 250 per cent. And it is believed that the construction of large storage reservoirs would return a high percentage on the outlay. The smaller tanks constructed by the people themselves well repay the labour employed, though to the Government the construction of flat country tanks of the second class, or even of the third class, offer a very doubtful return.

The value of water to the cultivator is shown, first, by contrasting the yield of dry crops with that of rice and sugar-cane, from actual experiments. From these it appeared that the net profit per acre on dry crops was 8s. 2¼d.; on rice, £4, 16s. 10½d.; and on sugar-cane, £18, 6s. 6d. In the two last cases a very low rate for the water was assumed, viz. 12s. per acre for each crop of rice, and 24s. per acre for each crop of sugar-cane, as provisionally fixed by Government. A comparison was made between dry crops and rice, and dry crops occasionally flooded, based on the average price of grain extending over five years, and deducting one-fourth from the gross value of the crop in the case of dry crops, and one-sixth in the case of wet crops, to cover loss in bad years. Without deducting the water rate, the difference in the net value of the crops was as follows:—Between dry crops and rice, taking the most unfavourable comparison, 25s. 7d.; between dry crops and the same occasionally irrigated, 30s. 8d.; and between two dry crops and sugar-cane (which occupied ten months of the year), £8, 2s. 8d. But if water be stored, so as to allow a second crop of rice to be grown, the advantages are nearly doubled. Provided a water rate proportioned to the value of the water were fixed, irrigation would benefit the cultivator to the extent of 8s. 6d., or 50 per cent., and yield a gross return on the outlay of 14s. 9d. per acre; and if water were stored for a second crop, the gain to the cultivator would be 19s. 9d., or more than 100 per cent., and the return to the agency supplying the water 37s. 3d. per acre, the cultivator not having to expend any capital in improvements. Of the 37s. 3d. per acre profit, 22s. 6d. was about the sum due to the storage of water, supposing such storage works to be added to distribution works already constructed. The cost of large works of irrigation might be safely reckoned at £7 per acre on an average, or £8, 15s. if 5 per cent. on one-half the capital for ten years during construction were added. If the profits made by the application of the water were divided in the proportion of one-third to the cultivator and two-thirds to the agency supplying the water, works of channel irrigation would benefit the cultivator, as above stated, to the extent of 50 per cent., and yield a net return of 7·4 per cent. on the capital expended. It appears probable that, in the most favourable localities, 7000 cubic yards of water could be stored for £1, and in others 4250 cubic yards.

A committee was appointed by Lord Canning to consider the views as to irrigation held by Colonel Sir Arthur Cotton and Colonel Crofton, and they decided in favour of Colonel Crofton's views against those of Sir A. Cotton. Of the reasons given for its decision one was their objection to the construction of a weir across the Ganges, below the confluence of the Solani, at the estimated cost of £1,128,631, to pass a volume of water over the Ganges of 30,000,000 cubic yards. But the Godavery weir, to pass above 200,000,000, only cost £90,000; the Cauvery weir, to pass the same volume as the Ganges, 30,000,000 cubic yards, only cost £15,000; the Kistna weir, to pass 180,000 cubic yards, only £100,000; the Tumbudra weir, for about double the volume of the Ganges, only £30,000. The average estimate for weirs on similar rivers in Madras is about £500 per million cubic yards of volume per hour; while the estimate of the Ganges Canal Committee was nearly £40,000 per million.

Only rivers of the larger class, which have a continuous flow for several months, are available for extensive irrigation projects. The smaller rivers are merely torrents, which quickly carry off heavy falls of rain, and then become dry again. The water, however, is in many cases intercepted by chains of tanks, of the second or third class, built across these torrents.

The deltas of large rivers, being the most easily irrigated lands, have been so treated for ages, and the works have been much extended and improved under the British Government, by the construction of permanent weirs of great lengths at the heads of the deltas, such weirs being built on the sandy beds of wide rivers subject to heavy floods. This seemed to have been beyond the skill of the ancient native rulers. They, however, built many weirs on the large rivers in the middle part of their courses, the situations being skilfully chosen, but the construction was rude and imperfect. They were generally built on a reef of rocks, with loose rubble, faced with large blocks of granite laid dry, and sometimes fastened with iron clamps. The modern weirs in similar situations are of masonry, with a vertical or slightly battering face on the down-stream side, and with heavy copings. In rivers having sandy beds, it is usual to build the body of the weir on a foundation of brick wells, sunk to the low-water level, and filled with concrete. On the lower side there is an apron, having a slope of 1 in 12 from the crest, with a toe wall; and if the slope be long, intermediate walls are also built on wells, and below all there is a broad layer of rough rubble of large dimensions.

The ancient irrigation channels were generally defective in design, being too small, and having much too great a fall. In consequence of these channels being so near the river, they irrigated only a narrow strip of land; and the current being too great, excessive annual repairs were required. This system necessitated numerous offtakes from the river, involving the expense of many weirs, and a great aggregate length of unproductive channel, from the offtake to the point where the channel reached such a level as to command the surface of the country. On the other hand, a canal of large dimensions, taken off from one head, having a slower current and less fall, would soon so gain on the level of the river that it would reach districts remote from it, and con-

sequently more in need of artificial supplies of water; and it would also command a much larger extent of country than it could supply entirely with water. This was an advantage, because it would be many years before a district could be completely changed from dry to wet cultivation, as it would require to have its population trebled. It also afforded means of assisting dry crops in years of drought, and thus preventing famine. In many districts complete failure of the crops now grown occurred every few years, and a good crop was a rare occurrence. There should therefore be facilities for completely irrigating detached areas at considerable intervals, and of giving occasional irrigation to dry crops.

Distribution was effected from the second class of tanks directly, by means of sluices in the bund. From the third, and more especially from the first class, it was commonly effected indirectly; thus the natural channel of the river or rivers, which had been dammed to form the tank, were used to carry part of the water for irrigation, weirs being built across them at suitable places, and artificial channels taken off from above them. By these means the surplus of the water, which was generally wastefully used by the ryots, was saved, being collected by drainage into the stream, and redistributed at the next weir. Distribution was most economically effected from a canal, when the latter ran along a ridge; but as this could rarely be accomplished in the case of a canal taken off from a main drainage, it was next best effected by leading the main distribution channels down the ridges crossed by the canal. Distribution could be carried out in the Ceded Districts for 5s. per acre, including sluices in the main canal, and all necessary road and water crossings, but excluding the coast of terracing the land to prepare it for wet cultivation, this being done by the occupier. The nature of the ground was occasionally such that the drainage was effected naturally, no works being required for that purpose beyond small open trenches in the rice fields.

Ordinary agricultural works in the Madras Presidency irrigate an area of about 3,365,157 acres, yielding a revenue of approximately Rs. 1,31,04,126. They consist of two kinds, viz. (1) rain-fed tanks or reservoirs, generally of minor individual importance, each deriving its supply directly from rainfall distributed over an area of land, which is called the catchment basin; and (2) channels from rivers and streams providing direct irrigation, or supplying tanks, together with the tanks supplied. In the first case, the rainfall is caught and retained before it reaches natural lines of any importance. In the last, it is diverted from the drainage lines while pursuing its course, and led away by artificial means. In connection with these last are the anicuts or weirs which have been constructed by former governments and under British rule. About 1876, there were in the Madras Presidency 1212 weirs across rivers or streams, 769 of which were in the three districts of Madura, Salem, and S. Arcot. There were 33,318 tanks and irrigation canals, of which the districts of Coimbatore, Vizagapatam, Kistna, Kurnool, and Nellore had only 2590. The irrigated area from all these was approximately 3,365,157 acres, and the revenue Rs. 1,31,04,126. Besides these, there were irrigation works belonging to landlords, also others belonging to the Government irrigation systems, for which capital and revenue accounts are kept. Of these last, the principal are the anicuts or weirs across the rivers Godavery, Kistna, Pennar, Cauvery, Vellar, Palar, and Tambrapurni, and the great reservoir of Chembrumbakam.

It was Lord Canning's opinion that the construction of great irrigation works might be entrusted to private companies; but the Madras Irrigation Company and E. I. Irrigation Company formed at that time (1861) for the Tumbudra and Mahanadi, have been pecuniarily unsuccessful. For the Mahanadi river scheme, for instance, the capital raised in June 1861, nearly a million sterling, was intended to be utilized in certain initiatory parts, amounting to about one-half of the complete scheme, which was estimated at two million sterling. To meet the second half of the scheme a second million was to be raised when wanted, by a second issue of shares. The works began in December 1863. Irrigation was first available in December 1865, but was first taken up in April 1866, giving returns in October 1866. Navigation began to pay in March 1863, but eventually the scheme was bought up by Government in December 1867. The initiatory half of the works was not then perfectly completed, but was nearly so. The estimates having been exceeded, the first issue of one million was very nearly spent. The navigation returns from March 1863 to August 1867 amounted to £5922. The cultivators refused to pay for the water. In the year 1872–73 the total acreage of irrigation was only 4753 acres, yielding £4263 in water rates, and the navigation returns on a tonnage of 154,422 tons amounted to £4750; the total receipts, including £1481 from other sources, amounted to £10,293 for that year.

Mr. Latham, chief engineer of the Madras Canal and Irrigation Company, reported that the expectation, based upon the experience of the north-western canals, that irrigation would not fall off much after its value had once been felt during the famine, has proved delusive. Yet the increase caused by the famine had been but moderate:—

1875–76 (before the famine), . . .	13,928·45 acres.
1876–77 (the year of failure of rain), .	24,545·08 ,,
1877–78 (a year of famine and late rain),	27,922·17 ,,
1878–79 (a year of excessive rain), . .	14,731·49 ,,

The Tumbudra canals were led from a weir, 4500 feet long, across the rocky bed of the river at Sunkesala, and it was intended to reach 250,300 acres of rice cultivation up to the year 1865. The Madras Irrigation and Canal Company had realized less revenue than sufficed to cover the working expenses. Up to the end of 1877–78, the total outlay was Rs. 1,52,73,352. The attempt to make it suitable for navigation added Rs. 36,80,584 to its cost. The canal was designed to irrigate 200,000 acres of wet crops, or a corresponding area of other crops. But the largest area irrigated was in the famine year 1876–77, when it reached 82,477 acres, viz. wet crops 24,545, dry crops 67,932. It is now recognised that canals for traffic must have the same width and depth from their commencement to their termination; but that irrigation canals, by giving off channels along their course, should gradually fine away to their end.

Between 1862–63 and 1872–73 the acreage irrigated by the Western Jumna Canal was from

331,037 to 496,542 acres; in the Eastern Jumna Canal, from 160,355 to 274,101 acres; the Bari Doab Canal, from 126,016 to 287,079 acres; and the Ganges Canal, 205,605 to 1,078,399 acres.

In 1869, the Eastern Jumna Canal irrigated 102,322 acres; in 1877, 103,632 acres; and in 1878 it was 110,722 acres, yielding a revenue of Rs. 18,56,440.

Panjab.—Of the twenty-one million acres under cultivation in an average year in the Panjab, only five and a half million acres (of which four and a half millions are under food crops) are irrigated by artificial means. One and a half million acres more are situated in the beds of the Panjab rivers, and require little rain to bring their produce to maturity. Of the remaining twelve and a half million acres under food crops (making 18½ millions altogether under this description of produce), six and a half are pretty safe, being grown under an abundant and a reliable rainfall in the submontane districts, and six millions produce a more precarious crop, being wholly dependent on the less certain rainfall of the tract farther south. It is roughly estimated that on an average for the whole province an acre of irrigated land produces half as much again as an acre of land wholly dependent on rain. This ratio gives one-third of the total yield of food grains as the produce of irrigated land, and two-thirds as dependent on rainfall or rain-floods. Following out the comparison into more detail, it is calculated that 36 per cent. of the whole supply of food grains is produced by land artificially irrigated, 43 per cent. by land more or less protected by floods or abundant rainfall, and only 21 per cent. by land dependent on a more precarious rainfall. The chief means of artificial irrigation are wells, which irrigate three millions of acres; inundation canals, chiefly from the rivers of the Panjab proper, irrigate one million; and perennial canals, of which the Western Jumna and Bari Doab Canals are the chief, protect only three-quarters of a million of acres.

There are several plans by which, in British India, water is lifted. One of these, from wells, is by means of the 'mot' or 'pur,' a flexible leathern bucket containing from 2½ to 12½ gallons, which is attached by a strong rope to a pulley. In masonry wells in the north of India, from 4 to 20 runs can be worked at one and the same time, and at unbricked or Kach'ha wells more than two runs are seldom worked. The runs—called 'lao,' from Lana, to bring—are worked by men or women, bullocks, and buffaloes, but generally bullocks. Whatever power may be employed in a garden or field of any size, one person is needed to receive and empty the bucket at the mouth of the well, another to drive the bullocks, and a third to distribute the water. In a small patch of land two persons will suffice. Human labour is the most expensive, but is the quickest. About two standard bighas can in one day be irrigated in the above manner by one set of labourers.

Irrigation is sometimes effected by hand labour, two men raising the water by means of a bamboo or leather bucket or basket, swung from ropes. In the Doab of the Ganges and in Rohilkhand, it is called beri, lehari, ch'hapa, boka; in Benares and Oudh, dauri; and in Dehli and Bundelkhand, dal, dugla, dulia. In Sind and in the Panjab, the Persian wheel, a series of earthenware buckets on the periphery of the wheel, is largely used.

In Dehli and the Doab, dal is the name applied to the basket or bucket used for raising water from a deep well. It is made sometimes of leather, but generally of munj (Saccharum munja) or jhau (tamarisk). It is more expensive than the 'tor' irrigation, which consists in merely breaking down the field ridge. Sugar-cane, poppy, and garden crops are irrigated, where possible, from wells only, even when the expense of drawing water from a deep well is fourfold that of shovelling it out of a hollow on the earth's surface; and practical agriculturists entered rates one-fifth higher on lands irrigated from wells than those watered from jhils or ponds.

Where the natural rains are the sole means of irrigating the lands, only one crop can be raised annually, and even that, in difficult seasons, is unobtained. But with artificial irrigation two and three crops can be raised,—a monsoon, a cold-weather, and a hot-weather crop.

In Farrakhabad, where three crops are obtained, Indian corn sown in June—July, and harvested in August and September, is the first crop. In October—November, potatoes or carrots are planted as a second crop, and taken up in February or March; and the third crop is tobacco or melons, sown in April, and gathered in May or June.

Cost.—From the commencement of the Godavery delta irrigation system of works up to 1877–78, the sum of Rs. 78,77,781 had been expended. The area irrigated under the anicut was 541,892 acres, in 1876–77, yielding a revenue of Rs. 22,98,423, divided into a water tax of Rs. 15,91,767, and land assessment Rs. 7,06,656. The total expenditure for the Kistna delta system has been Rs. 48,40,546. This system is intended to irrigate 470,000 acres. Of that extent, 246,000 were irrigated in 1875–76, yielding a revenue of Rs. 10,98,978, viz. water tax Rs. 7,32,756, and land tax Rs. 3,66,222. Out of 321 miles of canal proposed for navigation in this delta, 267 miles had been opened for traffic up to 1877–78.

From the upper parts of the Cauvery river, channels have been conducted through the Trichinopoly and Tanjore districts, and the portions within the reach of the waters are cultivated like gardens. The great Colerun channel, quite like a great river and about a mile broad, is led off from the Cauvery, aids to form the sacred island of Srirangam, and is exhausted in irrigating the lands to the east. The Cauvery delta irrigation system irrigates 796,968 acres, yielding a revenue of Rs. 33,78,442. Up to the end of 1873–74, the sum of Rs. 13,39,641 had been expended on it by the British Government, which outlay has been estimated to yield a return of 85·81 per cent. The total expenditure on the Srivai Kuntham anicut in the Madras Presidency up to 1877–78, was Rs. 9,20,510. In Mysore, there are anicuts or dams at Nundur, Sri Ramadwara, and Maseehully, and a great reservoir is to be established at Mauri Conwai.

IRULAR. At the foot of the Neilgherry mountains, and for a short distance within the forests extending from their base into the plains, live a race commonly known by the name of Irular. They are in two classes,—one called Urali, the other Kurutalei. Iruli means unenlightened or barbarous, from the Tamil word Irul, darkness,

and is a term applied to them by their neighbours. Urali signifies the rulers of the people, and Kurutalei the common people. Captain Harkness met with a group of Irulars all but naked, —men, women, and children dancing, jumping, and amusing themselves. The hair of the men, as well as of the women and children, was bound up in a fantastic manner with wreaths of plaited straw; their necks, ears, wrists, and ankles decorated with ornaments formed of the same material; and carrying little dried gourds, in which nuts or small stones had been placed, they rattled them as they danced, and, with the rustling of their rural ornaments, gave a sort of rhythm to their motion. His unexpected visit disconcerted them at first, but this was soon got over, and the dance again resumed, in front of a little thatched shed, which was their temple. When it was concluded, they sacrificed to their deities a he-goat and three cocks. This was done by cutting the throats of the victims, and throwing them down at the feet of the idol, the whole assembly at the same time prostrating themselves. Within the temple there was a winnow or fan, which they called Mahri, and in front of the temple two rude stones, which they called, the one Moshani, the other Konadi Mahri, but which are subordinate to the mahri or fan occupying the interior of the temple. No great distance from this, he passed their places of sepulchre, there being one for the Urali and another for the Kurutalei. These sepulchres are pits, about thirty or forty feet square, and of considerable depth, over which are placed large planks; above is erected a shed, covering in the whole, and protecting it from the weather. In the centre of the planks is an opening about a cubit square, over which are placed other pieces of wood, and on these is raised a small mound of earth in the form of an altar, the surface being decorated with pebbles, placed there both as memorials of the departed, and as objects of future worship. When a death occurs, the mound of earth is removed, and the body thrown in. Some ten or twelve days after, a mound of fresh earth is raised, in room of the one which had been removed; the pebbles, which in the first instance had been put aside, are again replaced, and another one added to them in memory of the deceased. All this is done with much ceremony, the pebbles being anointed with oil, perfumed with frankincense, and decorated with flowers. Food is also distributed to the assembly, according to the ability of the relatives of the deceased. The Irulars speak a rude Tamil.—*Captain Harkness' Neilgherry Hills.*

IRVINE, ROBERT H., a medical officer of the Bengal army, who rose to the rank of Deputy Surgeon-General. He wrote (1841) an Account of the General and Medical Topography of Ajmir.

IRWIN. Lieut. Irwin accompanied Mountstuart Elphinstone to Afghanistan; the amount of multifarious information he collected is altogether surprising.

IRWIN, EYLES, an officer of the East India Company, author of a Series of Adventures in the Course of a Voyage up the Red Sea, on the Coast of Arabia and Egypt, in the year 1777.

ISA, also called Isana, the Hindu deity, presiding over the N.E. quarter of the heavens; a name of Siva.

ISA KHEL, a town and division in the Banu district on the N.W. frontier of India, 42 miles from Banu, and 28 S. of Kalabagh. The town, with 7440 inhabitants, is 9 miles W. of the main branch of the Indus, opposite the Rokri Ferry. The Isa Khel division is enclosed between the Indus and the Cuttack Hills, and has a population of 46,000 souls, mostly clans of the Niazi, descendants of Niaz Khan, second son of Lodi, the son of Shah Husen, king of Ghor, from whom the Lohani and Ghilzai claim descent. With the Isa Khel, money is never given to the bride's father, as is the custom of all other Pathan tribes, and every woman of the Isa Khel branch, however humble, is strictly Gosha. The other tribes and races are Awan, Baluch, Hindus, Jat, Cuttack, Khudzai, Koreshi, Pathan, Shaikhs, Syuds, Khatak. The Niazi are trusty allies of the British.—*MacGregor.*

ISANI. Colonel Tod describes a lofty three-peaked mountain, on which is a temple dedicated to Aya-Mata, also called Isani, the tutelary divinity of the Kol. This and the effigy of the horse are there the only objects of adoration among this aboriginal race. This was the first time he had seen a personification of mother earth, for such is Isani, from Isa, goddess, and Anani, earth, the universal nurse-mother (Aya-Mata). In their worship of the horse they resemble the other forest tribes, the Bhil, the Gond, and the Surya. Among the many remarkable festivals of Rajasthan kept with peculiar brilliancy at Udaipur, is that called Gangore, in honour of Gouri or Isani, the goddess of abundance, the Isis of Egypt, the Ceres of Greece. Like the Rajput saturnalia, which it follows, it belongs to the vernal equinox, when nature in these regions proximate to the tropic is in the full expanse of her charms, and the matronly Gauri casts her golden mantle over the beauties of the verdant Vassanti. Then the fruits exhibit their promise to the eye, the koil fills the ear with melody, the air is impregnated with aroma, and the crimson poppy contrasts with the spikes of golden grain to form a wreath for the beneficent Gauri. Gauri is one of the names of Isa or Parvati, wife of Siva, Mahadeva, or Iswara, who is conjoined with her in these rites, which almost exclusively appertain to the women. The meaning of Gauri is yellow, emblematic of the ripened harvest, when the votaries of the goddess adore her effigies, which are those of a matron painted the colour of ripe corn; and though her image is represented with only two hands, in one of which she holds the lotus, which the Egyptians regarded as emblematic of reproduction, yet not unfrequently they equip her with the warlike conch, the discus, and the club, to denote that the goddess, whose gifts sustain life, is likewise accessary to the loss of it; uniting, as Gauri and Kali, the characters of life and death, like the Isis and Cybele of the Egyptians. But in the Gangore festival she is only seen as Anna-purna, the food-filler, benefactress of mankind. The rites commence when the sun enters Aries (the opening of the Hindu year), by a deputation to a spot beyond the city, 'to bring earth for the image of Gauri.' When this is formed, a smaller one of Iswara is made, and they are placed together; a small trench is then excavated, in which barley is sown; the ground is irrigated and artificial heat supplied till the grain germinates. By rites known only to

the initiated, having been performed for several days within doors, they decorate the images, and prepare to carry them in procession to the lake. During these days of preparation, nothing is talked of but Gauri's departure from the palace,—whether she will be as sumptuously apparelled as in the year gone by; whether an additional boat will be launched on the occasion, though not a few forget the goddess altogether in the recollection of the gazelle eyes (mirg-aeni) and serpentine locks (nagni zoolf) of the beauteous handmaids who are selected to attend her. At length the hour arrives, the martial nakāra give the signal to the cannonier without, and the guns on the summit of the castle of Ekling-garh announce that Gauri has commenced her excursion to the lake. The cavalcade assembles on the magnificent terrace, and the rana, surrounded by his nobles, leads the way to the boats, of a form as primitive as that which conveyed the Argonauts to Colchis. The scenery is admirably adapted for these fêtes, the ascent being gradual from the margin of the lake.

At length the procession is seen winding down the steep, and in the midst, borne on a pat'h or throne, gorgeously arrayed in yellow robes, and blazing with 'barbaric pearl and gold,' the goddess appears, on either side two beauties wave the silver chamra over her head, while the more favoured damsels act as harbingers, preceding her with wands of silver, the whole chanting hymns. On her approach, the rana, his chiefs and ministers, rise and remain standing till the goddess is seated on her throne, close to the water's edge, when all bow, and the prince and court take their seats in the boats. The females then form a circle around the goddess, unite hands, and with a measured step and various graceful inclinations of the body, keeping time by beating the palms at particular cadences, move around the image singing hymns, some in honour of the goddess of abundance, others on love and chivalry, and embodying little episodes of national achievements, occasionally sprinkled with double entendre, which excite a smile and significant nod from the chiefs, and an inclination of the head of the fair choristers. The festival being entirely female, not a single male mixes in the immense groups, and even Iswara himself, the husband of Gauri, attracts no attention, as appears from his ascetic or mendicant form begging his dole from the bounteous and universal mother. It is taken for granted that the goddess is occupied in bathing all the time she remains, and ancient tradition says death was the penalty of any male intruding on these solemnities; but a late prince deemed them so fitted for amusement, that he even instituted a second Gangore. Some hours are thus consumed, while easy and good-humoured conversation is carried on. At length, the ablutions over, the goddess is taken up and conveyed to the palace with the same forms and state. The rana and his chiefs then unmoor their boats, and are rowed round the margin of the lake, to visit in succession the other images of the goddess, around which female groups are chanting and worshipping, as already described, with which ceremonies the evening closes, when the whole terminates with a grand display of fireworks, the finale of each of the three days dedicated to Gauri.

Gauri, Anna-deo or Anna-devi, and Anna-purna, 'filling with food,' or the nourisher, are the names applied to 'the mother of mankind,' when she places the repast before the messenger of heaven. Considerable resemblance is to be discerned between this festival of Gauri and those in honour of the Egyptian Diana at Bubastes, and of Isis at Busiris, within the delta of the Nile, of which Herodotus says, 'They who celebrate those of Diana embark in vessels; the women strike their tabors, the men their flutes, the rest of both sexes clap their hands and join in chorus. Whatever city they approach, the vessels are brought on shore, the women use ungracious language, dance, and indelicately throw about their garments.' Wherever the rites of Isis prevailed, we find the boat introduced as an essential emblem in her worship. Bryant furnishes an interesting account from Diodorus and Curtius, illustrated by drawings from Pocock, from the temple of Luxor, near Carnac, in the Thebaid, of the ship of Isis carrying an ark; and from a male figure therein, this learned person thinks it bears a mysterious allusion to the deluge. Colonel Tod, however, was inclined to deem the personage in the ark Osiris, husband of Isis, the type of the sun arrived in the sign of Aries (of which the rams' heads ornamenting both the prow and stem of the vessel are typical), the harbinger of the annual fertilizing inundation of the Nile, evincing identity of origin as an equinoctial festival with that of Gauri (Isis) of the Indo-Scythic races of Rajasthan.

'Heavenly stranger, please to taste
These bounties, which our nourisher, from whom
All perfect good, unmeasured out, descends
To us for food, and for delight hath caused
The earth to yield.' *Paradise Lost*, book v. pp. 397, 401.

The German Suevi adored Isis, and also introduced a ship in her worship, for which Tacitus says he has no materials whence to investigate the origin of a worship denoting the foreign origin of the tribe. This Isis of the Suevi was evidently a form of Ertha, the chief divinity of all the Saxon races, who with her consort Teutates or Hesus (Mercury) were the chief deities of both the Celtic and early Gothic races, the Budha and Ella of the Rajputs; in short, the earth, the prolific mother, the Isis of Egypt, the Ceres of Greece, the Anna-purna (giver of food) of the Rajputs. On some ancient temples dedicated to this Hindu Ceres are sculptured on the frieze and pedestal of the columns the emblem of abundance, termed the cumacumpa, or vessel of desire, a vase of elegant form, from which branches of the palm are gracefully pendent. Herodotus says that similar water-vessels, filled with wheat and barley, were carried in the festival of Isis; and the Egyptian god Canopus is depicted under the form of a water-jar or Nilometer, whose covering bears the head of Osiris.—*Tod's Rajasthan* i. p. 570.

ISATIS INDIGOTICA. *Fortune.* A perennial, almost shrubby, dye plant of N. China. It furnishes a product almost similar to I. tinctoria, or dyers' woad. In China, colouring matter for dyeing blue is derived from two species of plants, the Polygonum tinctorium at the south, and the Tien tsing or Isatis indigotica, cultivated at Shanghai and Chusan, and largely in the Kewang-meow district, a few miles to the south.

Isatis tinctoria, *Linn.*, the dyers' woad, is a tall herb of two years' duration, growing from the Mediterranean to Japan, succeeding best in rich limestone ground. Its fermented leaves furnish

, blue dye. The species of Isatis are numerous. —*Williams' Middle Kingdom.* See Dyes.

ISFAHAN, a chief town of Persia, formerly he capital of the country. It is built on the anks of the Zand-rud, and has about 60,000 nhabitants and 100 neighbouring villages. · Isfaan occupies the central part of an oval plain, vhich is enclosed by a range of mountains, preenting a singularly serrated outline. The lowest art is on the N.E. and the highest on the S.W. side f the city. From an elevated pass leading through he rugged and rocky belt on the latter side, there obtained a fine view of this mountain basin, vhose circumference is about 30 miles. A distance f about 12 miles separates the mountains on the vestern side from those of the eastern; the shorter iameter being about 8 miles. It is well watered y the tortuous Zend-rud, which flows through it ather southward of its centre.

Mir Wais, chief of the Ghilji, died in 1715, and vas succeeded by his brother, but shortly afterards Mahmud, son of Mir Wais, became chief f the tribe. He left Kandahar with 25,000 men, narched to Kirman and on to Yezd, from which lace he moved directly on Isfahan. He was pposed at Gulnabad, near that city, but obtained complete victory, and he surrounded and blockded the city, and soon the inhabitants suffered all he horrors of famine. The miseries endured are lescribed by most writers as surpassing the greatst extremities ever known on such occasions.

The horrors of this siege have been described by he Polish Jesuit Krusinski, who personally witessed them, and they are noticed in the Histoire le Perse Depuis le Commencement de ce Siecle (the ighteenth) of M. la Mamye Clairac, on authorities vhich cannot be disputed. The inhabitants of sfahan were compelled by famine to devour not nly mules and horses, but dogs and other creaures, which their religion taught them to consider s unclean. A woman endeavouring to strangle cat, was heard to exclaim at every scratch or bite hat she received, 'Thou strivest in vain, I'll eat hee notwithstanding.' The leaves and bark of rees were ground into a kind of meal, and sold by veight; shoe leather was boiled and used as food; t length human flesh became the chief support of nany miserable wretches, who for a while were ontent with what they could collect from bodies hat filled the public streets; but some were inluced to murder their fellow-citizens, and it is even said that parents killed and devoured their own children. From the MS. memoirs of Ali Hazin, we learn that 'a crust or lump of bread was sold at so high a price as four or five gold shrafi.' A pound of bread, according to Krusinki, attained, in September, the price of thirty shillings; and, in October, of above fifty. Among he calamities of this memorable siege, Ali Hazin aments the destruction of his library, which comprised about 5000 volumes, Arabic and Persian, many enriched with the marginal notes of his earned ancestors.

After a protracted siege, the king, Shah Husen, he last of the Safavi dynasty, went forth with all is principal courtiers in deep mourning, surrendered himself to Mahmud, and with his own hand placed the crown on the head of the conqueror (October 1722). The authors differ as to the numbers who perished, and also as to those whom Mahmud ordered to be slain after the submission. Mahmud, after a brief reign of two years, became insane, and either died or was put to death (A.D. 1724), and was succeeded by his nephew, Nadir Namah.—*Sir W. Jones; Balfour's Memoir of Hazin*, p. 122; *Malcolm's Persia*, i. p. 644; *Elphinstone's Hist. of India*, pp. 631, 632; *History of the Revolution of Persia*, published by the Pere du Cerceau; *Ouseley's Travels*, iii. pp. 44, 45.

ISFANDYAR, the brazen-bodied; his son Bahman, surnamed Ardeshir, a prince of great renown, is one of the most conspicuous names amongst the heroes of the Shah Namah. See Persian Kings.

ISHA. ARAB. Evening prayer. Ishrak, prayer at sunrise.

ISHAA. JAP. A learned race of Japan, practising medicine.

ISHMAEL, son of Abraham, is supposed by Muhammadans to have been the son whom Abraham took to offer up in sacrifice. His lineal descendants were called Arab-ul-Mostaraba, or mixed Arabs. They occupied the Hejaz, and amongst their descendants was the tribe of Koresh. See Adnan.

ISHTAR, a goddess of the Babylonians, the biblical Ashtoreth.

ISINGLASS.

Loo-pa, ...	CHIN.	Hausblase, . .	GER.

Carllock, ...	,,		

The Greek name Ichthyocolla, is from ἰχθυς, a fish, κολλα, glue. Isinglass is from the German Hausenblase, from Hausen, the great sturgeon, and Blase, a bladder, being one of the coats of the swimming-bladder of fishes. Fish-maws or fish-sounds of commerce, exported from Calcutta, Madras, Penang, Mergui, Malabar, and Sind, are the sac-like membrane, slit open; some small, thin, and transparent, others three and four inches across in both diameters, something of the shape of short purses with spring clasps, of a light colour, and semitransparent, resembling in appearance the ordinary qualities of isinglass, especially some of the Brazilian kinds. Fish-maws, under the names Singally and Sozille, had long been carried away by the Chinese from Calcutta, Madras, and Bombay, at the rate of about a shilling a pound, without its being generally known that it was isinglass which was thus exported.

The swimming-bladder of fishes consists of three membranes, the outer or peritonéal coat, the middle membranous and muscular one, and the inner, glossy, highly vascular coat, which has a pulpy appearance, and is the membrane which forms the best isinglass. The fish which yield the European supplies are the great sturgeon, osseter, sevruga, and sterlet, also the Silurus glanis, barbel, Cyprinus brama and C. carpio and Perca lucioperca, which do not belong to the tribe of sturgeons. In the fisheries of the Caspian and Volga, where the system is most complete, and the division of labour the greatest, the sounds and roes of the sturgeon are extracted immediately the fish are caught, and delivered over to the isinglass and caviare makers. The fresh sounds are first split open, and well washed to separate the blood, and any adhering extraneous matter. They are then

spread out, and exposed to the air to dry, with the inner silvery white membrane turned upwards. This, which is nearly pure gelatine, is carefully stripped off, laid in damp cloths, and left in the outer covering, and forcibly kneaded with the hands. It is then taken out of the cloths, dried in the form of leaf isinglass, or rolled up and drawn in a serpentine manner into the form of a heart, horse-shoe, or lyre (long and short staple), between three pegs, on a board covered with them; here they are fixed in their places by wooden skewers. When they are somewhat dried thus, they are hung on lines in the shade in well-arranged rooms till their moisture is entirely dissipated. The oblong pieces sometimes are folden in the form of book isinglass. Though isinglass of the finest quality, and in the largest quantities, is yielded by, it is not confined to, the sturgeon tribe; for even in Russia, the Silurus glanis, species of Cyprinus and barbel, yield it, and are met with in commerce with Brazilian, New York, and Hudson's Bay isinglass. The fishes which produce it on the coast of Brazil, Mr. Yarrell informed Dr. Royle, are probably several species of the genera Pimelodus and Silurus, or of closely-allied genera. The Brazilian isinglass is imported from Para and Maranham. It is very inferior in quality for domestic purposes to the best imported from Russia, which sells for 12s. per lb., and the other from 9d. to 3s. 6d. It is in the form of pipe, block, honeycomb, cake, and tongue isinglass, the last formed of a double swimming-bladder. The isinglass obtained from North America in the form of long ribbons, is produced, according to Dr. Mitchell, by Labrus squeateague, at New York, called weak fish, which is about 15 inches in length, and above 6 lbs. in weight, forming one of their most abundant fish, and furnishing the principal supply for their tables.

An anonymous correspondent in Parbury's Oriental Herald, in 1839, stated that the Chinese had long been engaged in a trade with Calcutta in isinglass, afforded by a fish called Sulleah in Bengal, from half a pound to three-quarters of a pound being obtained from each fish. Dr. M'Clelland (June 1839, J. As. Soc. vol. viii. p. 203) then mentioned that the fish yielding the isinglass is Polynemus sele, *Buch.*, sele or sulea of the Bengalese, common in the estuaries of the Ganges, and often found weighing from 20 to 24 pounds, and that Palogpong ikan or Ari-ari ikan of the Malays, Loo-pa of the Chinese, appears to have formed an article of exportation from the islands of the Indian Archipelago as early as they became visited by the Chinese.

Arius arius, *Buch. Ham.*

Pimelodus arius, *B. H.*	Ikan surdudu, . MALAY.
Ikan saladu, . . MALAY.	

Total length, 1 foot 10 inches. This fish inhabits the sea and estuaries of Penang, Malayan Peninsula, Singapore, Pondicherry, and Gangetic estuaries. At Penang, small individuals of this species are very numerous at all seasons. They form an article of food, and contribute more than any other of the Siluridæ to the exportation of isinglass.

Arius militaris, *L.*

Silurus militaris, *Linn.*	Osteogeniosus, *B. H.*

Length, 1 foot 6 inches. Inhabits the sea and estuaries of the Malayan Peninsula, and of its islands, of Malabar, Coromandel, the Ganges, and Irawadi. Their air-vessels are preserved.

Arius truncatus, *C. and V.* Length, 11 inches. Inhabits sea and estuaries of Penang Malayan Peninsula. Its air-vessel is small, bu very thick, and is transversely divided into tw compartments. The fish is held in esteem by th natives, but at Penang it occurs so rarely that it air-vessel does not contribute much to the genera stock of isinglass.

Capoeta macrolepidota, *Kuhl.* Length, 11 inches. Inhabits Penang, Java, and Tenasserim (fresh water). The air-vessel is very large, thin, white, consisting of two elongated oval portions, of which the anterior is truncated in front.

Corvina chapta, Bola chapta. The Bola inhabits the Malay coast; furnishes isinglass.

Corvina coitor, *H. B.*, Whiting. Inhabits the estuaries of the Ganges and Irawadi. Its air-bladder makes excellent isinglass.

Johnius maculatus, *Bloch., Schneider, var.?*

Sari kulla, TAM., *Russell.*	Corvina maculata, *C. and V.*

Inhabits sea of Penang. The form of its air-vessel resembles that of Johnius belengeri.

Johnius diacanthus, *Lacepede.*

Lutjanus diacanthus, *Lac.*	Corvina catalea, *Belanger and Bleeker.*
Johnius catalea, *Cuv.*	
Nalla katchelee, *Russell.*	Corvina nalla katchelee, *Richardson.*
Katchelee, *Russell.*	
Sciæna maculata, *C. and V.*	Ikan tambareh, MALAY.

This fish grows to 2 feet 9 inches. It inhabits the seas of Penang, Malay Peninsula, Singapore, Malabar, Coromandel, Bay of Bengal, Gangetic estuaries, Tenasserim, Canton, China seas, Madura, and Java. The air-vessel, ¼ of the length of the fish, is of a broad lanceolate shape, tapering behind into a very elongated point. This fish is valuable as an article of food, and its isinglass sells in the China market at from 40 to 45 Spanish dollars per pikul.

Johnius Dussumieri, *C. and V.* Corvina Dussumieri, *C. and V.* Length, 6¾ inches. It inhabits the Sea of Penang, the Malayan Peninsula, Singapore, and Malabar. The length of the air-vessel is about one-fourth the total length. The isinglass is reputed good, but, owing to the small size of the fish, little is procurable.

Lates heptadactylus, *Lacepede.*

Perca maxima, *Sonnerat.*	Coius vacti, *Ham.*
Holocentre heptadactyle, *Lacepede.*	Lates nobilis, *C. and V., Richardson, Bleeker.*
Pandoo menoo, *Russell.*	Ikan Siyakup, . MALAY.

This fish inhabits the sea and estuaries of Penang, Malayan Peninsula, Singapore, and Madras. It yields isinglass, of which, however, in the Straits of Malacca, but little is collected, partly on account of the comparative scarcity of the fish, and partly owing to the thinness of the air-vessel. That of a fish, when dried, weighs upwards of one ounce. At Penang, this kind sells at the rate of 25 to 30 dollars per pikul.

Lobotes erate, *Cuv. and Val.*

L. Farkarii, *C. and V.*	Ikan batu, Ikan pichat priek, . . . MALAY.

Length, 2 feet 5 inches. It inhabits the seas of Penang, Malay Peninsula, Singapore, Java, Madura, Malabar, Ceylon, Bay of Bengal, and estuaries of the Ganges. The air-vessel is very large, about one-third of the total length, silvery white, and of a lanceolate shape. It is excessively thin, and so firmly adhering to the back, that but a small part can be removed. The isinglass is considered by the Chinese dealers to be of good

quality, but the small quantity procurable renders the fish less valuable in this respect.

Mugil cephalotus, *Cuv. and Val.*

Mugil our, *Forskal.* | Sole bhanggan, *Ham.*
M. cephalus, *Russell.* | Jumpul, . . . MALAY.
Boutali, TAM., *Russell.*

Length, 2 feet. It inhabits Penang, Malayan Peninsula, Singapore, Macao, Lancavy, Chusan, Madura, Coromandel, Bay of Bengal, Gangetic estuaries, Malabar. The air-vessel is large, elongated; its parietes very thin, pearl-coloured.

Otolithus biauritus, *Cantor*, Ikan salampæ. Total length, 3 feet. Inhabits seas of Penang, Malay Peninsula, Singapore, Lancavy, Tenasserim Province, and, according to Jerdon, the Malabar coast, where it is called Sille-kora in Malealam. The air-vessel is nearly one-half of the total length, and in shape might be compared with an elongated antique urn with two handles. From the anterior part of each of the latter proceed five branches, four of which give off smaller ones to each side, and the fifth is tortuous and smaller than the rest. It yields a large quantity of isinglass, which in the Chinese market is considered to be of the best quality, and fetches 40 to 50 Spanish dollars per pikul.

Otolithus maculatus, *Kuhl and Van Hassel.* Jaran-gigi, MALAY. The total length of this fish is 2 feet 9 inches. It inhabits the seas and estuaries of Penang, Malay Peninsula, Singapore, and Batavia. It is highly valued for the sake of its air-vessel, which yields a considerable quantity of the best kind of isinglass.

Otolithus ruber, *Bloch and Schneider.* Jarangigi, MALAY. Total length of this fish is 2½ feet. It inhabits the seas and estuaries of Penang, the Malay Peninsula, Singapore, Coromandel, and Malabar. The air-vessel is large, flattened, broad, lanceolate, terminating behind in a single point. The isinglass is considered very good, and sells in the Chinese market from 40 to 45 Spanish dollars per pikul.

Otolithus versicolor, *Cuv. and Val., Russell*, 109. Panna, TAM. The total length of this fish is only 6⅛ inches. It inhabits the sea of Penang. Its air-vessel is one-fourth of the total length. Jerdon says this fish is one foot long, and very common at Madras.

Pempheris molucca, *Cuv.* This fish grows to 3½ inches. It inhabits the seas of Penang, the Moluccas, Batavia, and Japan. Its air-vessel is large and thick.

Platax arthriticus, *Cuv. and Val.*

Ikan bonna, *Bell.* | Chætodon arthriticus, *C. & V.*

Total length, 1 foot 7 inches. It inhabits the seas of Penang, Sumatra, Java, and Singapore. The flavour is excellent, but the large air-vessel is too thin, and yields too little isinglass to become of value.

Polynemus heptadactylus. Total length, 4½ inches. Inhabits Penang, Batavia, Cheribon, and Samarang.

Polynemus Indicus, *Shaw*, Roe Ball.

P. sele, *Buchanan.* | P. lineatus, *M'Clelland.*
P. uronemus, *C. and V.* | P. gelatinosus, *M'Clelland.*
P. ploteus, *M'Clelland.*

Lukway, . . ARAKAN. | Ikan kurow, . . MALAY.
Ka-tha, ... BURM. | Walan kala, . . . TAM.

Total length, 3 feet. It inhabits the seas of Penang, Singapore, Malay Peninsula, Sourabaya, estuaries of the Ganges, Vizagapatam, Madras, and Pondicherry. The air-vessel is silvery, its membrane thick, the general form oval. It occupies the whole length of the abdomen, terminating behind in a very sharp point, which penetrates the thick of the tail over the first interspinal of the anal. At Penang single individuals occur at all seasons; but numbers are taken from June to August. The weight is commonly from 4 to 6 lbs., seldom exceeding 20 lbs. The air-vessel of a good-sized fish, when dried and ready for the market in China, weighs upwards of 2 oz., is considered very good isinglass, and fetches 25 to 30 dollars per pikul. The fish itself is valued as an article of food, though less so than P. tetradactylus. Mr. O'Riley estimated that 2000 lbs. of isinglass from this fish might be obtained annually off Amherst alone. Mr. Blundell said that the largest sounds were exported from Rangoon, and that they sell there at about 8 annas a pound. Major Bogle wrote that about 10,000 of the fish, large and small, were taken annually in Arakan, and that the sounds sold there for about 5 annas per pound to the Chinese, who exported them to Penang, where they are said to bring more than a rupee a pound.

Polynemus plebius, *Broussonet, L., C. and V.*

P. lineatus, *Lacepede.* | P. Commersonii, *Shaw.*
P. niloticus, *Shaw.* | Bynni, *Bruce.*
Pole kala, . . . TAM.

Length, 4 feet. It inhabits the Coromandel coast, Otaheite, Isle of France, and Isle of Tanna. Its value as a fish yielding isinglass unknown.

Pristipoma hasta and Pristipoma olivaceum, of the family Percidæ, are common round the coasts of India, and their air-bladders are largely exported to China.

Umbrina Russelli, *C. and V., Richardson.*

Ikan gulama, . . MALAY. | Qualar katchelee, . TAM.

Total length, 6 inches to 1 foot? Inhabits seas of Penang, Malay Peninsula, Singapore, Vizagapatam, Indian and China seas. Its isinglass is considered of good quality.—*Russell.*

The Indian isinglass is not prepared with anything like sufficient care to obtain a place in the markets of Europe. Good isinglass cannot be made without considerable attention being paid during the processes of washing, beating, scraping, and drying, all of which have a very important influence on the goodness of the finished isinglass. The imperfect solubility of some, and more especially of the thick pieces, is occasioned by the presence of a considerable quantity of albumen, or insoluble membranous matter having most of the properties of albumen, which is not only itself insoluble, but in addition renders much of the gelatine with which it is associated likewise insoluble. It is more than probable that the greater part of this albuminous substance might be readily removed by sufficiently scraping the isinglass during its preparation. Attention should also be directed to the process of drying, as, if not properly dried, it might possibly undergo a slight change or decomposition, and become partially converted into a more insoluble form of gelatine. A more important objection is the smell, which, however, may likewise, to some extent, be traced to the preparation. Much greater care is bestowed on the preparation in Russia than in India. Boiling with fresh-made charcoal would probably have the effect of depriving inferior isinglass of some of the smell and colouring matter when required for the purposes

of a jelly. Isinglass cut into threads is unsuitable for the English commerce, notwithstanding that isinglass for retail is cut into fine threads, as more convenient for general use, and for making jellies and soups, in consequence of the extensive surface which is exposed rendering it more easily and quickly soluble. But there is a great prejudice in the wholesale market to buying things in a cut or powdered state, in consequence of the innumerable methods adopted for falsifying and adulterating almost every drug. Machinery is used in London for cutting the isinglass into threads of any degree of fineness; and as it is impracticable at present to rival this in India, besides having to contend against prejudice if sent in this state, it is preferable, and will be cheaper, to prepare the article and send it as sheet isinglass, that is, the form of the slit sounds themselves, or their purest membrane, washed, cleaned, and dried in the best manner. The Indian isinglass, as at present prepared, is complained of as too thick if intended to come into competition with the superior varieties of Russian isinglass. Some of it may, without difficulty, be rendered thinner, for even in the dried state, layers of membrane which display a fibrous structure may be stripped off, and which no doubt contain the greater portion of the insoluble albumen. It might also be made thinner by beating, or pressing between iron rollers or marble slabs, as is done with American and some kinds of Brazilian isinglass. The extra labour which this would require might be profitably saved, by not tearing it into fibres, in which state it is disapproved of in the market; but it might still be cut or rasped into a state fit for domestic use. The refuse should be turned to account; the soluble parts of the sounds separated from the insoluble, and poured out into thin plates, and dried on nets, as is done with some of the gelatine of commerce. In order to ascertain the value of the article (merely stripped of all impurities calculated to injure its quality, without any regard to appearance), a considerable quantity was sent to England by Dr. M'Clelland. From the account received of the sale, it appears that this isinglass realized only 1s. 7d. per pound, which was considerably under its prime cost.—*Dr. Royle on Isinglass*, p. 11; *Cantor, Malayan Fishes in J. B. As. Soc.; Mason's Tenasserim; Dr. Day on the Air-bladder of Fishes; Jerdon, Fishes.*

ISIS, a goddess of the Egyptians. Macrobius tells us that Isis is worshipped in every religion, being either the earth or universal nature, under the influence of the sun. For this reason the whole body of the goddess is covered with breasts (in this respect resembling the Diana multomamma of Ephesus), because the universe is nourished by the earth of nature. Over the door of the minor temple of this deity at Pompeii, are wreaths of lingam and yoni.—*Milner's Seven Churches*, p. 79; *Tod's Rajasthan.* See Cumbha; Gauri; Isani.

ISKARDO or Skardo, principal town of Balti state, Kashmir, in lat. 35° 12′ N., and long. 75° 35′ E. It is on a plain 7700 feet above sea-level, at the bottom of a valley surrounded by lofty mountains. The fort occupies a rock of gneiss at the confluence of the Indus with its great tributary the Singpar.

Baltistan or Balti (called by British geographers Little Tibet), is a country a good deal to the north-east of Kashmir, and north-west of Ladakh. Gilgit, conquered by Gulab Singh, is to the west-north-west of Iskardo. The Chorbat district is a dependency of the government of Iskardo, which, like that of Leh, is subject to Kashmir. The desert country by which Nubra and Chorbat are separated, has, for the present, acted as a barrier to the further extension eastward of the Muhammadan religion, which is now universally that of the people of the whole of Iskardo (or Balti) district, as well as of Dras. On the Indus, and in the valley south of it, there is no uninhabited tract between the two, so that the Muhammadan and Buddhist populations are in direct contact. The result is, that Muhammadanism is in that part gradually, though very slowly, extending to the eastward. Iskardo is a Muhammadan corruption of the Tibetan name Skardo, or Kardo, as it is very commonly pronounced. The mountains which surround the Iskardo plain rise at once with great abruptness, and are very steep and bare. The houses of Iskardo are very much scattered over a large extent of surface, so that there is no appearance of a town.—*Thomson's Tr.* pp. 204-219; *Mrs. Herrey's Tartary*, i. p. 213.

ISLAM, the Muhammadan name of the Muhammadan religion, derived from the Arabic verb Salm, he gave safety; other parts of the verb being in use, as salam, taslim, salamat, muslim. Its followers style themselves muisalman, the Arabic plural of muslim: and in India, muslim or nao muslim, lit. new saved, is applied to all converts. They also call themselves Muhammadi, also Momin, and style their faith the Din-i-Islam, the saving faith.

Islam is the name that was given to the Muhammadan religion by its founder. Surat-ul-Imran, verses 78, 79, says it is the belief in God, and in what was sent down to Abraham, Ishmael, Isaac, Jacob, and the tribes, and given to Moses, Jesus, and the prophets from their Lord.

The followers claim for it to be regarded as the true faith, comprising obedience to the will of God, submission, humbling one's self. Their sacred book, the Koran, is the foundation of the laws and religion of the Muhammadans. The Shaikh-ul-Islam is the chief legist and jurist of the Turkish empire. Ahl-ul-Islam are the people of the faith.

The doctrine is termed Islam. Faith is termed Iman, and religion, in its practical sense, Din. Muhammadanism enforces the dogma of unity in creed, by the phrase 'ul-Islam malleti wahidun,' All Islamites are one nation. Islamism is regarded by the Jews as the second great heresy of their faith.—*Cal. Rev.*, Feb. p. 387; *Malcolm's Persia*, ii. p. 322.

ISLAMABAD is the ancient capital of Kashmir. Five miles to its west is the temple of Martand. It is built on the Jhelum, and is the seat of the shawl manufacture.

ISM. Arab. A name or attribute. In exorcism, amongst Muhammadans, certain names (Ism, sing.; Isma, pl.) are used, such as the Ism-jallali, or fiery or terrible attribute of the deity, also the Ism-jamali, the watery or air or amiable attribute, and with these they pretend to cast out devils, and command the presence of genii and demons. Ism-i-Azam is the great attribute of the deity. Ism, a noun; Ism-u-nisbah, an adjective; Asma, plural, names or attributes of God.

ISMAIL, called Samani, a Turk, the founder

of the Samani dynasty, A.D. 862. He conquered Transoxiana, Khorasan, and Afghanistan, and fixed the seat of his government at Bokhara. The Samani dynasty ruled for 120 years. It was the fifth of this dynasty who possessed a Tartar slave named Alaptagin, who was made governor of Ghazni and Kandahar, and on the death of his patron assumed independence. Alaptagin was succeeded, A.D. 970, by his purchased Turki slave Sabaktagin.

ISMAIL, the first king of the Suffavean race, ascended the throne of Persia in A.D. 1499, and proclaimed the Shiah faith to be the national religion of that country.

ISMAIL, son of Jafar Sadaq, was the seventh Imam of the Shiah Muhammadans. The Shiah sect look on Ali as the first rightful leader of the Muhammadans, and say that from him and his wife Fatima, Mahomed's daughter, have alone sprung the rightful heirs to the Imamat. In this view, Abubakr, Umar, and Othman, who preceded Ali, and Muawiyah, the fifth khalif, and his son Yezid, are all alike regarded as usurpers. Ali, Hasan, and Husain were first, second, and third. Jafar, the sixth of the Shiah Imams, was a man of superior sanctity, wisdom, and learning. He was the author of the Book of Faith which is still in use. A tradition exists that he did not die, and will reappear. His son Ismail was, during his lifetime, nominated his successor, but, dying before his father, and leaving none but young children, his half-brother Musa Kasim, whose mother was a slave, was elected to the Imamat. Musa's son Ali was eighth Imam; Muhammad-bin-Ali was ninth; Ali, son of Muhammad, tenth; Hasan, the eleventh, was poisoned, and his son Muhammad, born A.H. 255 at Sermenrai, and who was a mere infant at his father's death, was his successor, but disappeared mysteriously at the age of twelve years. According to a legend, he entered a cave at Sermenrai, near Baghdad. On the accession of Musa Kasim, many of Ismail's followers espoused the cause of his children, and formed a sect, who became notorious in history as the Assassins, their ruler being styled the Shaikh-ul-Jabl, or Old Man of the Mountain, whose fortress was Alamut; but with th defeat of Kahir Shah, Ala-ud-Din's son, the demolition of his strongholds, and the slaughter of over 12,000 of his adherents by Hulaku, the power of the Ismaili family came to an end.

ISMAIL ABULFADA, Prince of Hamah in Syria, A.H. 733, which was translated by John Gagnier, Professor of Arabic at Oxford, A.D. 1723, and into English by the Rev. W. Murray, Episcopal clergyman at Duffus in Scotland.

ISMAILI, also Ismailiah, are Shiah sectarians, who take their name from the Imam Ismail, son of the Imam Jafar Sadaq. In Bombay they are known as the Khoja sect. The Ismaili are the sect of the chief known to the Crusaders as the Old Man of the Mountain, the Shaikh-ul-Jabl. The sect in its original form was a branch of the Shiah, but was called Ismailian, from Ismail, the eldest son of the sixth Imam, whom they recognised as his father's successor in opposition to the mass of the Shiahs. Their doctrine took the form of a sort of gnosticism, giving a non-natural sense to all revelation, from which they had the name also of Bathenians, from Batin, ARAB., within, a word signifying esoteric. Hasan Sabah, son of an Arab at Rai, one of their converts in Persia, put himself at the head of the sect in that country, and about A.D. 1090 made himself master of the mountainous part of Irak Ajami, immediately south of the Caspian. This region included many strong castles, and at one time the power of his successors extended to the gates of Isfahan. From its character the country was called by the Arabs Balad-ul-Jabl, the hill country, and hence the chief's title. This was also applied to the head of a branch society which had its seat in Syria, and became well known to the Crusaders. The name of Assassin has been by many supposed to be derived from Hashish, the hemp drug, under the influence of which the emissaries of the society are imagined to have acted, but it is more probably obtainable from Hasan Sabah, hence al-Hasani.

In the western side of India, members of the Ismaili sect are designated Khoja, about 1400 families in and around Bombay, 5000 in Kattyawar, 3000 in Sind, and 800 or 900 in Zanzibar. They are descendants of converted Hindus of Sind, who about 400 years ago were won over by Pir Surd-u-Din, a Dai of the Ismaili.

Aga Khan, a chief of one of the branches, claiming indeed to be a descendant from or the representative or incarnation of Ali, died, aged eighty-one, at Bombay, in April 1881. He had failed in an attempt to obtain the kingdom of Persia, and returned to India, where he obtained fees from all his sect from Zanzibar to Central Asia. The Khoja sect of Bombay alone gave him a lakh of rupees a year, and the Government of Bombay allowed him 12,000 rupees annually, for services rendered during the Afghan war of 1842. His son has since been recognised as his successor.—*Malcolm's Persia*, i. p. 347; *D'Ohsson*, book iv. ch. iv.; *Yule, Cathay*, i. p. 154.

ISOETES COROMANDELINA. *Linn.*

Ghi-ka-gadda, . DUKH. | Gitti gadda, . . . TEL.

Found in great abundance along the edges of tanks in the Karnatic. The tender white shoots immediately above the spore-bearing involucres are a favourite article of diet, and are sold commonly in the bazars after the monsoon.

ISONANDRA, a genus of plants belonging to the natural order Sapotaceæ. The genus consists of large trees growing in Ceylon, and in the two Peninsulas of India. Dr. Wight, in Icones, has I. candolleana, lanceolata, percha, Perottetiana, polyandra, and villosa. In Ceylon, I. canaliculata, *Thw.*, is a middle-sized tree in the Caltura district; I. grandis, *Thw.*, a large tree of the Central Provinces and Saffragam districts, from the seeds of which an oil is extracted, and which is used similarly to that of the Bassia longifolia. I. lævifolia, *Thw.*, is a moderate-sized tree of the Saffragam district of Ceylon and at Reigam Corle. I. pauciflora, *Thw.*, [illegible]erate-sized tree at Ratnapura, in Ceylon. I. obovata, *Griffith*, is an evergreen tree of Tenasserim, yielding a sort of gutta-percha. I. rubiginosa, *Thw.*, is a large tree of the Saffragam district and Hinidun Corle, in Ceylon, growing up to an elevation of 4000 feet.—*W. Ic.; Thw. Zeyl.*

Indian gutta tree, ENG. Pashonti, MALEAL.
Pachonti, MALEAL. Pali, . . TAM.

Grows in the forests of Coorg, the Wynad, Travancore, and in the Animallay mountains. It attains a height of 80 or 90 feet, and furnishes a good wood, and capable of receiving a good polish. It exudes from the trunk a substance having similar characters to the gutta-percha of commerce; this is procured by tapping, but the tree requires an interval of rest of some hours, or even of days, after frequent incision. In five or six hours, upwards of 1½ lbs. was collected from four or five incisions in the tree. When fresh, this is of a milk colour, the larger lumps having a dull-red colour. The gum is hard and brittle at the ordinary temperature, but becomes sticky and viscid on the increase of heat, such as that from friction in a mortar; and when this condition is reached, it does not, until after the lapse of several days, resume its original consistence. Boiled with water it becomes of a reddish-brown colour, rendering the water turbid and slightly saponaceous. With some chemical re-agents, the behaviour of the gum was exactly like that of the gutta-percha, while with others only a slight similarity was observed. After solution in naphtha or turpentine, gutta-percha resumes its original condition, but the pachonta continues viscid and sticky, and if again much cooled becomes brittle and friable as at first. It is not found applicable to all the purposes for which gutta-percha is used, but 20 to 30 per cent. of it may be mixed with gutta-percha, without destroying the qualities of the gutta.—*Surgeon-General Balfour in Report of Madras Government, Central Museum; Madras Conservator's Report*, 1858, p. 6; *Year Book of Facts.*

ISONANDRA GUTTA. *Hook.*

Didropsis gutta, *Benth.*	Gutta percha tree, . ENG.
Mazer wood tree, . ENG.	Taban, Niato, . MALAY.

The gutta-percha tree is a native of the Malay Archipelago, Sumatra, and Borneo. In 1842 the discovery was made that its gum was suited for an infinite number of applications; and now there is scarcely any vegetable product more extensively useful, or one more generally sought after for mercantile purposes. Dr. Montgomerie observed in the hands of a Malay woodsman at Singapore, the handle of a parang, made of a substance quite new to him, and which he found could be moulded into any form, by simply dipping it in boiling water until it was heated throughout, when it became plastic as clay, and when cold regained, unchanged, its original hardness and rigidity. Dr. Montgomerie transmitted specimens of this substance to England on the 1st March 1843, and received the gold medal of the Society of Arts for its introduction, 'as a new and hitherto unknown substance, likely to be useful for various purposes in the arts.'

Gutta-percha, in its crude state, differs in many particulars from caoutchouc; it is of a pale-yellowish, or rather dirty white colour; it is contained in the sap and milky juice, which quickly coagulates on exposure to the air,—from 20 to 30 lbs. being the average produce of one tree. For collecting the sap, the trees are felled, barked, and left dry and useless. Hence forests are soon cleared of the gutta trees, whereas it is believed that a constant and moderate supply might be secured by incisions in the bark, as in the case of caoutchouc. The gutta is received in blocks, or in rolls of thin layers, being, in the first place, freed from impurities by kneading in hot water, when it is left soft, plastic, and of a whitish grey. When thus prepared, the gutta has many curious properties. Below the temperature of fifty degrees it is as hard as wood, but it will receive an indentation from the finger nail. When softened in hot water, it may easily be cut and moulded, and it will harden, as it cools, to its former rigidity; and it may be softened and hardened any number of times, without injury to the material. Unlike caoutchouc, it has little elasticity, but it has such tenacity, that a slip one-eighth of an inch substance sustained 42 lbs. weight, and only broke with a pressure of 56 lbs. When drawn out, it remains without contracting. It has been made subservient to the manufacture of tubings, mouldings for picture-frames, catheters and other surgical instruments, whips, thongs, cricket balls, driving bands or straps for mechanic purposes, soles for boots and shoes; in solution, also, like caoutchouc, for waterproofing cloth. It is likewise employed in mastics, cements, and is burnt and made into printing ink and paint. —*Tomlinson; Cat. Exhib.*, 1862.

ISONANDRA WIGHTIANA. *A. D. C.*

I. Perottetiana, *A. D. C.*	I. lanceolata, *W. Ic.*

Good white fibres, called Googul in Tamil, are obtained from its bark, and are made into excellent ropes; various parts of this plant are employed in medicine; its wood is employed to obtain fire by friction.—*Mad. Ex. Jur. Rep.*

ISPAND. PERS. The seed of the Lawsonia inermis, in Persia burnt at marriages.

ISPRINJI, a town of Baluchistan, occupied exclusively by the Bangolzai Baluch, who also spread into Shal and Mustang, and in winter repair to Talli, near Lehri.

ISPRUK, a coarse powder made from a species of Delphinium, growing in Afghanistan; used in dyeing.—*Simmonds' Dict.*

ISRAFIL, according to Muhammadan belief, the angel who will sound the trumpet at the last day.

ISREE, a cotton fabric. Vizagapatam Isree, Nellore white Percalah, and Jyempettah Soocey are of accurate workmanship.—*Jur. Rep. M. E.*

ISSYKOL LAKE, in parts is 5000 feet above the sea. It is 300 versts in length, and 50 in breadth. Bones are found there, and submerged ruins and statues of men and women.

ISTAKHR, an isolated hill north-west of Persepolis, having a fort which seems to have served as a state prison. This isolated hill is the key of the pass which opens into the plain of Persepolis, from the hilly country of Ardekan. Istakhr or Persepolis was always a favoured spot with the ancients. It was the cradle of the Ahmed race, and it was in its vicinity that Yezdejird, on his return from Khorasan, placed himself for the

last time at the head of his subjects, and was defeated by Abdullah, son of Omar, A.D. 650. The Sharf Namah, a History of Kurdistan, represents the castle of Istakhr as a state prison in which Ahmed was confined during the space of ten years. Among the celebrities of Istakhr may be mentioned Mazdac, who propagated the doctrine of the community of women, which in the early part of the 19th century was renewed by the Saint Simonians. Mazdac was a native of that town, and flourished in the reign of the Kaianian monarch Kobad, in the 6th century of the Christian era.—*Ouseley's Tr.* ii. 404; *De Bode's Tr.* 165.

ISTALIF, a town in the Koh-i-Daman of Kābul, 20 miles W.N.W. of Kābul. The inhabitants are Tajak; they are turbulent and vindictive, but are deemed the best foot soldiers in Afghanistan. It was carried by assault by the troops under Sir John M'Caskill on the 29th September 1842, and totally destroyed. It is one of the most picturesque spots which can be conceived; all that a combination of natural beauties can achieve are beheld here in perfection. The hills produce good pasture. The houses are erected along the skirt of the mountain. Near this place is a beautiful village called Istarghich, on the way to Charikar. This latter place is larger than any other town in the valley, but is not handsome.—*Mohun Lal's Tr.* p. 560; *Masson's Journeys*, iii. p. 120; *MacGregor*, pp. 392, 393.

ISTAQBAL. Arab. The Muhammadan courtesy of advancing to receive a distinguished guest. A deputation is usually sent forward to meet, welcome, and conduct to the lodgings prepared for him, any stranger or guest to whom it is designed to pay high respect; and the more numerous and higher in rank the persons of whom this deputation is composed, the greater is the honour conferred. In the courtesies of Muhammadans, a host advances to receive a visitor, and on his departure convoys him (murajat) to the same spot.—*Fraser's Khorasan.*

ISTAWA. Arab. In the Bombay revenue accounts, the land rent levied at progressively increased rates, until it reaches the full sum imposable on land brought into cultivation.—*Wilson.*

ISTIMRAR. Arab., Hind., Tel. Land granted in perpetuity at a stipulated rent.—*W.*

ISTIOPHORUS GLADIUS, the flying sword-fish of the Cape, has a large dorsal fin.—*Hart.*

ISWARA. Sansk. Lord, master; but is a designation by Hindus of the particular god, Brahma, Vishnu, or Siva, whom they may regard as the Supreme Being. Generally, however, in Southern India, it is accepted as applied to Siva, who is also called Maha-deva. Colonel Tod sees the Osiris of Egypt in the Iswara of India.

ISWARA. In Hindu astronomy, the 11th year of the cycle of Jupiter.

ITALY, a country in the south of Europe, its southern shores washed by the Mediterranean Sea and the Gulf of Venice. Its chief cities are Rome, Milan, Florence, and Turin. The old Italic languages comprehended the Latin, Umbrian, Oscan, and Siculian. The modern Italian is an offshoot from Latin; it is remarkable for its smoothness, and is spoken in its greatest purity at Florence. In 1881–82, Italy sent to India merchandise to the value of Rs. 52,44,334, and received Indian produce of value Rs. 3,10,23,810.

ITIHASA. Sansk. Epic poems of the Hindus, as the Ramayana and the Mahabharata legends of heroes, some of them pictured to have been related by Bhima-sena, as he lay wounded on the field of battle.—*Dowson; Growse.*

ITO, a tree of Tahiti, furnishing a strong, heavy timber, used for posts and the framework of houses.

ITR. Hind. Also written Atr, Otto, and Attar, any strong-scented essential oil.

ITZABU, a square silver coin of Japan, worth about 1s. 6d. or 1s. 8d. It is the common coin of Japan by which prices are fixed.

IVES, EDWARD. A medical officer of the British Navy, who wrote a Voyage from England to India in 1754, and an Historical Narrative of the Operations of the Army in India under Admiral Watson and Colonel Clive, Lond. 1773.

Ivory is mentioned in Homer and Hesiod. The great throne of Solomon was made of ivory (1 Kings x. 18–20, xxii. 39; 2 Chronicles ix. 17–19; Canticles vii. 4). The ivory of commerce is obtained from the tusks and teeth of the elephant, the narwhal, the walrus, and the hippopotamus. The best and largest supply is, however, from the elephant, and that of the slain elephant is preferred. The male elephant, when full grown, has two tusks, varying very greatly in size in different animals, but most valued when they are large, straight, and light in colour. These tusks are hollow at their insertion into the jaw, and for a considerable space therefrom, but become solid as they taper towards the extremity. The principal sources whence they are obtained are the western coast of Africa and the E. Indies; but the African tusks are most esteemed, as being denser in texture, and less liable to turn yellow. By an analysis, the African show a proportion of animal to earthy matter of 101 parts to 100; while in the Indian it is 76 to 100.

The largest pair of elephant's tusks sent to the 1851 Exhibition weighed 138 lbs.; they were obtained from a wild elephant killed in the Travancore forests. One tusk weighed 71 lbs., the other 67 lbs., and showed a fine white compact kind of ivory; of these two, one measured 6 feet 8 inches in length, and the other 6 feet 6 inches, the circumference at the base being 17 inches in each case. The domestication of the elephant is usually attended by deterioration of

the length and quantity of the ivory. At Zanzibar, and on the east coast of Africa, tusks weighing 100 lbs. each are common; those of 175 lbs. are not rare, and a pair has been seen whose joint weight was 560 lbs.

The tusks of the hippopotamus afford a very hard and white ivory. These are usually short and much curved, hollow at the place of insertion, and covered with a glossy enamel. They vary in weight from 3 or 4 to 30 lbs. These are highly prized by the dentists, and are better adapted than any other ivory for making artificial teeth. The thick coat of enamel which covers them has first to be removed, for this entirely resists steel tools, and under it is found a pure white ivory, with a slight bluish cast. The parts rejected by the dentists are used for small carved and turned works.

The hôrn or tooth of the narwhal is also hard and susceptible of a fine polish. The largest size is 10 feet long; at the lower extremity it forms a slender cone of a twisted or spiral figure.

Fossil ivory at one time supplied almost the whole of the ivory-turner's work made in Russia. Along the banks of the larger rivers of Further Siberia, thousands of tusks were annually dug up, which once constituted the weapons of defence of a species of mammoth now extinct. Their substance was as well adapted for use as the ivory procured from living species. One measured 10 feet in length, and was solid to within 6 inches of the root, weighing no less than 186 lbs.; this was cut up into keys for pianofortes. African ivory, when first cut, is mellow, warm, and transparent, almost as if soaked in oil, and with very little appearance of grain or fibre; the oil dries considerably by exposure, and a permanent tint then remains, a few shades darker than writing paper. Asiatic ivory is more dead-white at first, but is more disposed of the two to turn yellow afterwards. Ivory is brought to China, principally from Cochin-China, and from Africa via Bombay, and always finds a ready sale at Canton; the largest and best tusks weigh from 16 to 25 lbs. each, decreasing to 5 or 6 lbs. The cuttings and fragments also form an article of trade, as the workmen can employ the smallest pieces. Bones and horns, especially the long horns of buffaloes, are in China worked into handles, buttons, etc. Rhinoceros' horns are taken from Burma, from Sumatra, and from Africa through Bombay; they are highly valued by the Chinese, from a notion that cups made from them sweat whenever a poisonous mixture is poured into them. A perfect horn sometimes sells high as 300 dols., but those that come from Africa do not usually rate above 30 or 40 dols. each. The principal use of these horns is in medicine and for amulets, for only one good cup can be carved from the end of each horn; and consequently the parings and fragments are all preserved. The hard teeth of the walrus, lamantin, and other cetaceous animals also form an article of import into China from the Pacific, under the designation of sea-horse teeth; they weigh 1 or 2 lbs. a-piece, and the ivory is nearly as compact, though not so white, as that of the elephant.

Ivory of the teeth of the sperm whale is hard, heavy, elegantly marked, and takes a good polish, but is somewhat variable in quality, and often deficient in purity of colour. *F. D. Bennett*, p. 11; *Tomlinson; Holtzapffel; Hon. Mr. Morrison's Compendious Description; Madras Exhibition Juries' Rep.*

IVORY CARVINGS of different parts of India are admired for the elaborateness of detail and for the truth of representation. A set of chessmen from Berhampur at the Exhibition of 1851, carved from the drawings in Layard's Nineveh, were excellent representations of what the workmen could only have seen in the above work, and showed that they are capable of doing new things when required; their representations of an elephant and other animals were true to nature. At the Madras Exhibition of 1855, a very interesting and complete series of carvings in ivory was exhibited by the raja of Travancore. It comprised many of the common animals, reptiles, fruits, and flowers of the country, all carved with taste, and carefully finished. There was a good deal of grace and spirit in the action of the animals, some of which were in natural attitudes, particularly a bull and cow, two deer, a cheeta, and a rabbit. A frog and lizard were well represented, and a pair of paper-cutters with ornamental handles were particularly deserving of notice, one for the judicious adaptation of a common garden flower to the design, and the other of a lizard in a spirited attitude. The whole series evinced a perception of the natural beauties of the objects represented. The delicate carving of Chinese workmen is well known. Few products of their skill are more remarkable than the balls, containing ten or twelve spheres cut out one within another. The manner of cutting these is simple. A piece of ivory or wood is first made perfectly globular, and then several conical holes are bored into it in such a manner that their apices all meet at the centre, which is usually hollowed out an inch or less after the holes are bored. A long crooked tool is then inserted in one of the conical holes, so bent at the end and stoppered on the shaft that it cuts the ivory at the same distance from the surface when its edge is applied to the insides of the cone. By successively cutting a little on the insides of each conical hole, their incisures meet, and a sphericle is at last detached, which is now turned over and its faces one after another brought opposite the largest hole, and firmly secured by wedges in the other holes, while its surfaces are smoothed and carved. When the central sphere is done, a similar knife, somewhat larger, is again introduced into the holes, and another sphere detached and smoothed in the same way, and then another, until the whole are completed, each being polished and carved before the next outer one is commenced. Fans and card-cases are carved of wood, ivory, and mother-of-pearl in alto-relievo, with an elaborateness which shows the great skill and patience of the workmen, but at the same time his bad taste in drawing, the figures, houses, trees, and other objects being grouped in violation of all propriety and perspective. Beautiful ornaments are made by carving roots of plants, branches, gnarled knots, etc., into fantastic groups of birds or animals, the artist taking advantage of the natural form of his materials. Models of pagodas, boats, and houses are also entirely constructed of ivory, even to representing the ornamental roofs, the men working at the oar, and women looking from the balconies. Baskets of elegant shape are

woven from ivory splinths; and seals, paper-knives, chessmen, counters, combs, etc., exceeding in finish and delicacy the same kind of work found anywhere else in the world. The most elaborate coat of arms, or complicated cypher, can also be imitated by these skilful carvers. The national taste prefers this style of carving on plane surfaces; it is seen on the walls of houses and granite slabs of fences, the woodwork of boats and shops, and on articles of furniture. Some of it is pretty, but the disproportion and cramped position of the figures detract from its beauty. When bones are subjected to the action of hydrochloric acid, the phosphate of lime, which forms one of their component parts, is extracted, and thus bones retain their original form, and acquire great flexibility. In the course of drying, the ivory returns to its original hardness, but its flexibility can be easily restored by surrounding it with wet linen, or by placing wet sponges in the cavities of the pieces. The decay of articles in ivory can be effectually checked, even when its progress has advanced so far as to cause the specimens to crumble away under the hands. Some of the works in ivory forwarded by Mr. Layard from Nineveh, were found on their arrival in England to be in a state of rapid decomposition. Professor Owen was consulted on the subject, and he suggested a remedy, which has proved entirely successful, thereby preserving to this country these curious relics of ancient art. Concluding that the decay was owing to the loss of gelatine in the ivory, he recommended that the articles should be boiled in a solution of gelatine. Under this process they became apparently as firm and solid as when they were originally entombed.—*Williams' Middle Kingdom; Yule's Embassy; Hodgson's Nagasaki; Hon. Mr. Morrison's Compendious Description; Mad. Ex. Jur. Rep.* See Carving.

IVORY PALMS.

Palme de marfil, . SPAN.	Homera, Indians of PERU.
Tagua, Indians of DARIEN.	Pullipunta ,, ,,

The ivory palms are the Phytelephas macrocarpa and P. microcarpa, trees of S. America, between lat. 9° N. and 8° S., and long. 70° to 79° W., inhabiting damp valleys, banks of rivers, and rivulets on the lower coast region in Darien, and on mountains 3000 feet above the sea in Ocana, growing generally in separate groves, seldom intermixed with other trees or shrubs. The fruit, a collection of from six to seven drupes, forms clusters which are as large as a man's head, and stand at first erect, but when approaching maturity, its weight increasing, and the leaf-stalk which had up to that period supported the bulky mass having rotted away, it hangs down. A plant bears at one time from six to eight of these heads, each weighing when ripe about twenty-five pounds. The drupes are covered outside with hard woody protuberances. Vegetable ivory was exported chiefly from the river Magdalena, and in some years no less than 150 tons of it were imported into England. The Indians employ the leaves of this most beautiful palm as a covering to their cottages. The fruit at first contains a clear insipid fluid, with which travellers quench their thirst; this fluid afterwards becomes gradually sweet and milky, and at length acquires solidity, so as to be as hard as ivory. If the fruit be gathered while the juice is fluid, the latter soon becomes acid; but when allowed to attain perfection, the kernels are of sufficient hardness to be employed by the Indians as knobs for walking-sticks, reels of spindles, and little toys, which are white, and perfectly hard while dry; if they are put under water they soften, but on drying, their hardness is restored. Bears eagerly devour the young fruit. The vegetable ivory is, in fact, the albumen surrounding the embryo, and which in some other palms, as the cocoanut palm, constitutes a beautiful and firm substance lining the shell. This useful plant might be introduced into India.—*Seeman in Botanical Magazine*, May 1856, p. 192.

IXORA, a genus of plants belonging to the tribe Cinchonaceæ, and the genus is so named, it is supposed, from the Hindu god Iswara. They form shrubs or small trees, with opposite leaves, and stipules arising from a broad base, but acute at the apex. The species are numerous, and chiefly confined to India and the Eastern Archipelago.

IXORA BANDHUCA. *Roxb.* Jungle geranium.

Bandhooka, . . . HIND.	Buckolee, . . . HIND.
Kuktuka, . . . ,,	

A spreading shrub, smaller than I. coccinea, but equally common; in flower almost during the whole year; of a pale crimson colour. In the Kotah ardens and jungles it is a beautiful bush, covered with numerous scarlet flowers all the year, and would be very ornamental.

IXORA COCCINEA. *L.* Flame of the forest. I. grandiflora, *R. Br.*

Pan-sa-yeik, . . . BURM.	Thetti, ... TAM.
Shetti, . . . MALEAL.	

This species of Ixora is sometimes called by the European residents of Tenasserim, the country geranium.

IXORA PARVIFLORA. *Vahl.* Torch tree.

I. alba, *Roxb.*	Webera corymbosa, *Sm.*
I. pavetta, *Andr.*	*Herb.*
I. decipiens, *D. C.*	
Henna gorivi, . CAN.	Shulundu, ... TAM.
Gandhul? . . HIND.	Karang cottay, . . ,,
Runghun? . . . ,,	Korivi pala, . . . TEL.
Jilpai, ... ,,	Komma chettu, . . ,,
Koora, Koorat, . MAHR.	Putta pala, Tedda, . ,,

A small tree, common in the jungles of the S. of India. The flowers are very sweetly scented, and it blossoms in the hot weather. The wood is of a reddish-brown colour, the grain hard, very close, and easily worked. It gives a smooth surface and stands a good polish, is well adapted for the lathe, and is in use for furniture and building purposes. A cubic foot, unseasoned, weighs 78–84 lbs., and 66 lbs. when seasoned, and its specific gravity is 1·056. It burns very readily and clearly, and on that account its branches are often made into torches by people travelling at night.—*Voigt; Gibson; Ainslie; Irvine; M. E. J. R.; Beddome.*

IXOS LEUCOGENYS? the bulbul of Kashmir, is about 7¼ inches length bill, head and legs black; plumage generally olive greenish brown, with a white spot behind the eye, and white tips to tail feathers. Crest black and curved forwards. It is quarrelsome and noisy. Its note resembles that of the English blackbird, but is less full and musical.—*Vigne.*

IYAR-i-DANISH is the Persian version of the Pancha-Tantra.—*Dowson.*

IYAVAN. TAM. An out-caste, a worker in leather.

IYEN, and Puther or Bhutter, in Travancore,

are titles of Tamil Brahmans. Iyengar, properly *Aiyangar*, amongst the Tamil people an honorific title to Brahmans.

IYER means sir, master, lord, and is added to the names of Brahmans as a distinction. Iyer is immediately derived from the Tamil Aiyar, father, more reverentially pronounced Aiyangar. Iyer is used by a Hindu woman to attract her husband's attention,—no Hindu woman ever allowing herself to pronounce her husband's name. In Southern India it is used in the form of Ayah, as a lady's maid or child's maid. It is also assumed by Smartta and other Brahmans, and also by the Satani, a Hindu monotheistic sect who follow the doctrines of Chaitanya; and do not wear the punul or sacerdotal thread. Iyer is also adopted by Christian missionaries, and the Tamil equivalents Kanani and Sangi are added to their names, in addition to that of Iyer.

IZAR. HIND. Trousers; hence Izar-band, the trousers waist-string.

IZNEE, a fakir who acts as a messenger. Iznee Shah, a mohurrum fakir.

IZ-ud-DIN HUSAIN, the founder of the Ghori dynasty, was a native of Afghanistan. The origin of the house of Ghor has, however, been much discussed, — the prevailing opinion being that both they and their subjects were an Afghan race. Ala-ud-Din Ghori, A.D. 1152, completed the overthrow of the Ghaznavi dynasty, by the defeat of Bahram, the last king, who fled into India. The founder of the Ghori dynasty at Dehli was Shahāb-ud-Din, who took the title of Muhammad.

In the English alphabet this letter has only one sound, as in jam, jelly, job, just; and, the Tamil excepted, each of the oriental languages of S. Asia has a letter with a similar sound. But the letter j has a different sound in the languages of the other European nations from that of the English tongue; and the French obtain the English sound by prefixing the letter d, thus, djam'l for jam'l, a camel; djab'l for jab'l, a mountain. The Germans and Dutch give to this letter the sound of y, and have proposed to obtain the sound of the English letter j by using an accented g', or writing it dsch. The people of Egypt often give to this letter the sound of s, and those of Yemen give it the sound of hard g. so that jab'l is pronounced gab'l, and jam'l is pronounced gam'l. Several of the Hindu races give to the letter z the sound of the English j, as jaban, jabti, jor, for zaban, zabti, and zor.

JABAL. ARAB. A mountain.

Jab'l-ul-Ballad, Media, Persian Irak.

Jab'l-ul-Makatib, Mount Sinai.

Jab'l Karim, Mount Olympus.

Jab'l-Sus, Mount Atlas.

Jab'l-ush-Shaikh, Anti-Libanus, the Hermon of the Hebrews.

Jab'l-ul-Taraq, Gibraltar.

Jab'l-ut-Tarush, Mount Nebo.

JABAL-ARAFAT, anciently called Jabal-Ilal, the Mount of Wrestling in Prayer, and now Jabal-ur-Rahmat, the Mount of Mercy, is a low pointed hillock, of coarse granite split into large blocks, with a thin coat of withered thorns, about one mile in circumference, and rising abruptly from the low gravelly plain—a dwarf wall at the southern base forming the line of demarcation—to the height of 180 or 200 feet. It is about 12 miles on the Taif road, due east of Mecca. Near the summit is a whitewashed mosque with a minaret, looking like a small obelisk; below this is the whitened platform, from which the preacher, mounted on a dromedary, delivers the sermon, to be present at which it is an essential part of the Muhammadan pilgrimage to Mecca.—*Hamilton's Sinai*, p. 131; *Burton*, iii. p. 252.

JABAL HAOURAN. The waters of the Nahr-uz-Zerka, the Jabbok of the Scriptures, first collect to the south of Jabal Haouran; at this point they enter the Jabal Belka, and, after winding through the wadis in a westerly direction, finally empty themselves into the Shariat-ul-Kabir (the Jordan).—*Robinson's Tr.* ii. p. 171.

JABAL MIA ALLY, or Quoin Hill, 865 feet high, is near Bab-ul-Mandab.

JABAL MUSA, the Mount of Moses, is the name given by the Arabs to all that range of mountains which rises at the interior extremity of the valley of Faran; and, to that part of the range on which the convent of St. Catherine stands, they give the name of Tur Sina. The hill on which stands the convent of St. Catherine is supposed to be the Sinai of the Jews, on which Moses received the law.—*Niebuhr's Tr.* i. p. 191.

JABAL NAKKOUS, or Mountain of the Bell, is about 400 feet in height, and the material of which it is composed is a light-coloured friable sandstone; but an inclined plane of almost impalpable sand rises at an angle of 40° with the horizon, which, when put in motion, raises musical sounds. At their commencement, the sounds might be compared to the faint strains of an Æolian harp when its strings first catch the breeze; as the sand becomes more agitated by the increased velocity of its descent, the noise more nearly resembles that produced by drawing the moistened fingers over glass. The sounds sometimes fall quicker on the ear, at other times are more prolonged; but this swelling or sinking appears to depend upon the Arabs increasing or retarding the velocity of the descent. It is about 4½ hours' journey from Tur. The same is told of the Goz-ul-Hamman or Moaning Sand-heap in the Wadi Urnub; also of the Reg Rawan in Afghanistan.—*Wellsted's Tr.* ii. pp. 24–26.

JABALPUR or Jubbulpur, a town and district in the Central Provinces, lying between lat. 21° 12′ and 23° 56′ N., and between long. 76° 40′ and 81° 35′ E. During the minority of Prem Narain (1550?) the Gond queen Durgavati administered the government; and Asof Khan, the viceroy of Kara Manikpur on the Ganges, conquered the Gurkha principality. The decisive battle was fought under the castle of Singaurgarh. Stung by her defeat, Durgavati put an end to her life.

The district is one of the largest and most populous in the Central Provinces. The main part of the district is a large plain of rich soil watered by the Nerbadda, the Paret, and the Hiran. About nine miles from Jabalpur on the south-west, a considerable extent of tolerably pure and beautifully saccharine white limestone is seen; the river cuts a deep channel through the mass of this rock, exposing sheer vertical surfaces of the white limestones in places 220 feet high; it

s scarcely possible to exaggerate the picturesque ffect of the varied outline and colour of the hole. The locality is well known as the Marble ocks. Coal is found at Ramghat, Lametaghat, nd near Singapore on the Mahanadi. The latter eam is 18 inches thick, and is said to be poor nd unworkable. The Lametaghat coal promises ell. Iron is found in more than a hundred laces, of which the principal are Simra, Gogri, olia, Agaria, Dalrora, Jauti, Panagar, and ameta. The iron is worked entirely by native rocesses. The people are for the most part Gond, ond Rajput, Kol, Bharia, Baiga, Lodhi, Pon-ar, Kurmi, Kahar, Dhimar, Dher, and Chamar. here are also Brahmans, both from Maharashtra nd from Mathura; Kayasths from Farrakhabad nd elsewhere, and Muhammadans. There are now o Gond landholders of any importance, but there re some Lodhi chiefs who once possessed a local elebrity.

JABALPUR HEMP, Crotalaria tenuifolia, is perennial plant, native of Coromandel, which rows to 6 or 9 feet high, and yields this fibre. is considered equal to Russian hemp, and bears heavier weight.

Kind and quality of rope.	Size.	Government Proof.	Breaking weight.
	Inches.	Cwt.	Cwt. qr.
iled Jabalpur hemp, artillery traces,	3	36	43 2
ntarred do., superior four strand, plain laid,	3½	42	83 0
ntarred Dhunchee (Æschynomene cannabina, *Roxb.*),			
Sesbania aculeata,	3½	49	75 0
ine-apple fibre,	3¼	42	57 0

A good deal of the value of this plant is ıpposed to be the result of the climate and soil ı which it is grown.

JABAL SHAMSAM, the highest wall of the den crater, where Cain is supposed to have been urie'd; elevation, 1775 feet.

JABAL TEER, a small islet with two peaks in ıe Red Sea, in lat. 15° 32′ 30″ N., and long. 41° 0′ 30″ E., 34 miles N.W. from Jabal Zebayer, nd 900 feet high. It is supposed to be volcanic, s smoke is said to have been issuing from it at ıe time of its survey.

JABAL TUR, a mountain near Mount Sinai, or lount Sinai itself.

JABAL TUR, a spur of the great Taurus range, hich forms the watershed of the Tigris, from ardin to its south bend opposite Jazirah-ibn-mar. It is a continuation of Karajah Tagh, and ontinues into the Sinjar Hills.—*MacGregor.*

JABAL-ul-JUDA, Aghri Dagh, or Mount rarat, the Ararat of modern geographers, in the rovince of Erivan, is in height about 16,200 et. In the last volume of Cosmos, Humboldt ecords the height of Demavend at 19,715 feet, hich is 1785 feet under the height attributed to . According to some authorities, Ararat is only 7,112 feet high. General Monteith made it 6,000 feet above the level of the Araxes. Agri-agh is the name given to it by the Turks; but ll unite in revering it as the haven of the great ip which preserved a father of mankind from ıe waters of the deluge. Ararat is called by ıe Armenians, also, Massisinsar, or Mountain f the Ark. Berosus and Alexander both declare ıat in their time it was reported that some planks of the ark remained on this hill at the date of the accession of the Abbasside khalifs, A.D. 749.

The usual Muhammadan tradition places the grounding of the ark, not on Armenian Ararat, but on the Jabal Judi in Kurdistan, whence Benjamin of Tudela says (p. 93), Omar bin Khatab removed the ark from the summit, and made a mosque of it. Demavend is believed to be fully 4000 feet higher than Ararat.—*Yule, Cathay,* i. p. 467; *Porter's Tr.* i. 183; *General Monteith.*

JABAL ZABARAH, the Samaragdus Mons of the ancients. It has the famous emerald mines which were worked B.C. 1650, in the time of the great Sesostris II., by extensive galleries. It was again worked in the early part of the reign of Muhammad Ali. The mines were on the Cosseir road from Koptos to Aenuum (Philoteras). Wellsted thinks (Trav. ii. p. 323) that the locality indicated by Bruce was the island of Wadi Jemal, and that the Arabs had so called it because of its proximity to the only emerald mines on the adjacent continent.—*Bunsen's Egypt; Wellsted.*

JABER, the Killa Husn Jaber of the Arabs, the ancient Roman town of Beles, about two miles from the Euphrates. It is the Ezion-geber of Scripture (1 Kings ix. 26-28).—*Catafago.*

JABRAL. At Amraoti in Berar, the deities worshipped are named as under:—

Male deities.	*Female deities.*
Jabral Abral.	Asra or Asrai.
Massoba.	Meskai.
Bahram.	Amba.
Mahadeo.	Marri.
Shadawal.	Satwai.
Kandoba.	Agachi Panna.
Worba.	Jana Bai.
Yetoba, Vittoba.	

Jabral is worshipped at and near Ellichpur, and seems to be the angel Gabriel, whom Muhammadans style Jabrail. In the alliterative habits of the orientals, the term Jabral Abral is commonly used, and the silver figure, that of a man, is worn around the neck. Near Amraoti, also, is a rag tree, with incense on altars of mud at its foot, which the Dher of Balgaon said was a Jabral. Sakinath is a deity of Amraoti, whose worship protects from snakes. In the Chauki pass, in the Lakenwara range, which forms the watershed between the Godavery and the Tapti, about 10 miles north of Aurangabad, there is a shrine of the deity called Massoba, to which people of all castes resort, from a circle of a hundred miles, Brahman, Sudra, and Dher, but chiefly the Mahratta Kunbi. The Jatra is held in the month Cheita, and lasts for four days, during which many sheep are offered in sacrifice. It is in the southern side of the pass, a mere block of stone, with smaller blocks at its foot, all smeared with red lead. The objects of their visits are wholly personal, beseeching the deity to give, or preserve, their children, their flocks, or their food.

JABRANG, a coarse description of silk, made by a wild tribe, who are the only people in Pegu that rear the silk-worm and cultivate the mulberry. —*Local Committee, Rangoon.*

JABU or Zhobu, a hybrid between a male yak and a cow. It is more valuable than the pure yak or the garjo hybrid between a bull and female yak. It is used for riding, also for carriage, and will carry from two to three maunds; is very sure-footed, hardy, and docile. Its price in Kamaon

is Rs. 20 to Rs. 50; both varieties breed freely together, and also with the pure stock. None of them bear the heat of the plains.

JACANA.

Parra ænea, *Cuv.* | P. superciliosa, *Horsf.*
Dal-pipi, Jal-pipi, BENG. | Kattoi, Karatiya, BENG.

This singular bird, the Metapodius Indicus, *Latham*, is a native of all India, of N.W. Himalaya, and of China, and is distinguished not less by the grace of its form than by its adaptation to the localities for which nature has allotted it. Formed for traversing the morass and lotus-covered surface of the water, it supports itself upon the floating weeds and leaves by the extraordinary span of the toes, aided by the unusual lightness of its body. Like the moor-hen, of whose habits and manners it largely partakes, it is doubtless capable of swimming, the long and pendent tail-feathers being elevated so as not to dip in the water. It may be seen in the N.W. Himalaya squatting on the broad leaves of the lotus, Nelumbium speciosum, and marsh marigold (Calla palustris). Its flight is not strong, and is composed of many flaps; the call is rough, like that of the water-hen. The curved tail-feathers, the brilliant yellow patch on the hind part of the neck, and shining brown of the back, white wings more or less tinged with black, at once serve to distinguish it.—*Adams; Williams' Middle Kingdom*, p. 263; *Jerdon*, p. 708.

JACK. Dr. William Jack was appointed to the Bengal Medical Service in 1813. During the Nepal war of 1814-15, he was attached to the army under General Ochterlony. In 1818, Sir Stamford Raffles, Governor of the British Settlements in Sumatra, offered him an appointment on his staff, promising him every facility for the exploration of the natural history of that island. Jack's descriptions of Malayan plants were published in the Malayan Miscellanies, and were reproduced by Sir William Hooker in the companion to the Botanical Magazine, and by Dr. M'Clelland in the Calcutta Journal of Natural History. He died 15th September 1822, on board the ship on which he had embarked on the previous day to proceed to the Cape of Good Hope.—*H. and T. Fl. Indica.*

JACKAL.

Canis aureus, *Linn.* Lupus aureus, *Kæmpfer.*
C. aureus Indicus, *Hodg.*

Shaghal, ...	ARAB.	Alopex, ...	GR.

Nari, . . .	CAN., TAM.	Srigala, ...	SANSK.
Jackhals, . . .	DUT.	Nakka, ...	TEL.

The jackal is found in Syria, Arabia, Persia, in all India west of the Brahmaputra, and over S.E. Europe. Both the jackal and the hyæna are more or less plentiful, affecting even the mountainous regions to pretty high altitudes. Along the line of the Ganges, in Lower Bengal, they move in packs and eat indiscriminately. In the Peninsula, they are of larger size, are often seen singly or in pairs, and in the Dekhan live much on wild fruits; the coffee-bean of the plantations is largely eaten by them. Their cry when moving at night is very disagreeable, and even when clicketing, their call is unpleasant. Among mammals, the jackal, hyæna, domestic swine, and dog; and among birds, vultures, kites, crows, minas, and the adjutant bird Leptoptilos argala, *Gmel.*, are the chief carrion eaters of S.E. Asia. The swine, the buffalo, the cow, the bullock, and even sheep, in many parts of India, are driven daily to the purlieus of the towns. The jackal and hyæna are of nocturnal, bold, and stealthy habits, and though the hyæna hunts generally singly, the jackal does so in packs, and anything in the way of flesh, putrid or otherwise, is acceptable. The cry of the jackal is peculiar; it is composed of a succession of half-barking, half-wailing cries, on different notes. When properly pronounced, there is no better illustration of it than the following words, set to the tones of the animal's voice:—

'A dead Hindu! a dead Hindu!
Where-where? where-where?
Here-here; here-here.'

The jackal in the Peninsula of India and in the low country of Ceylon sometimes hunts in packs, headed by a leader, and they have been seen to assault and pull down a deer. The small number of hares in the districts they infest is ascribed to their depredations. When a jackal has brought down his game and killed it, its first impulse is to hide it in the nearest jungle, whence he issues with an air of easy indifference, to observe whether anything more powerful than himself may be at hand, from which he might encounter the risk of being despoiled of his capture. If the coast be clear, he returns to the concealed carcase, and, followed by his companions, carries it away. But if a man be in sight, or any other animal to be avoided, the jackal has been seen to seize a cocoanut husk in his mouth, or any similar substance, and fly at full speed, as if eager to carry off his pretended prize, returning for the real booty at some more convenient season.

The following anecdote may be told of a jackal:—'Going homewards I shot a fine buck chitul (or spotted deer), and while following up his prints and blood, as silently as possible, in the hope of getting another shot upon our again starting him, we heard a great stamping and crashing of bushes about forty yards ahead; soon we saw the buck trying to shake off a large jackal that had pinned him by the throat. The chitul in vain tried, by swinging his head backwards and forwards violently, to dislodge the jackal, who, doubled up like a ball, held on as well as the best bull-dog could have done, nor did he lose his hold until, after watching this strange scene for some minutes, I dropped the chitul with another shot. The jackal hastily retreated. Often when walking after a wounded black buck or antelope in the plains, I have seen one or two jackals trotting along in the exact direction the wounded antelope had gone off. There is very little chance of any wounded small animal escaping such watchful creatures.'

The kole balloo is an aged jackal which accompanies a tiger, and feeds on the tiger's prey. Jackals are subject to hydrophobia, and instances are frequent of cattle being bitten by them and dying in consequence. An excrescence or small horny cone, about half an inch in length, and concealed by a tuft of hair, is sometimes found on the head of the jackal. This the Singhalese call narricomboo; and they aver that the possessor of this can command by its instrumentality the realization of every wish, and that if stolen or lost by him, it will invariably return of its own accord. Those who have jewels to conceal rest in perfect

ecurity, if, along with them, they can deposit a narri-comboo, fully convinced that its presence is n effectual safeguard against robbers. The words f Psalm lxiii. 10, 'They shall be a portion for oxes,' appear obscure; but if they be rendered, 'They shall be a portion for jackals,' the anathema ecomes plain and striking to a Hindu, in whose ountry the disgusting sight of jackals devouring uman bodies may be seen every day.—*Tennent's eylon; Eothen's Tr.; Ward's Hindoos; Adams' Naturalist in India.*

JACKDAW, Corvus monedula, of Europe, Siberia, Barbary, W. Asia, Peshawur valley, and Kashmir, may be seen in flocks in winter in the northern frontier of the Panjab, associated with he Cornish chough and the rook.—*Adams.*

JACKETS, coats, and vests are worn by Hindus nd Muhammadans in India. They are called oorta, angarkha, nuna, anga, mirzai, kufcha, kuba, ama, chupkan, dagla, tabada, jora.

JACK-FRUIT TREE, Artocarpus integrifolius. Some varieties bear a fruit from 10 to 60 lbs. in veight, much esteemed as an article of food by the natives in India. The dye obtained from its heart-wood, as prepared by the natives, is a brilliant orange-yellow, and is obtained by the addition of n infusion made from the leaves of the Don-yat, producing a brilliancy of colour not excelled by he best English dyes. The tree is of value for its ruit and its timber. In many places it is found 2½ feet in diameter, and from 30 to 35 feet high. n Canara it was preferred by Tipu Sultan for he grab vessels built at his naval depot, Honore. n Ceylon it is used by the furniture-makers for hairs, couches, etc., for which purpose it answers vell; and, if polished with care, its brilliant olour is superior to that of mahogany.

Jackwood is imported into Bombay from the Malabar coast, and was at one time in great equest there for making furniture. Of late years, owever, it has been entirely superseded by black-vood for this purpose. It is imported into Britain n logs from 3 to 5 feet diameter, and also in planks; the grain is coarse and crooked, and often ontains sand. The wood is yellow when first cut, but changes to a dull red or mahogany colour. It s used in India for almost every purpose of house arpentry and furniture, and in England for abinet-work, marquetry, and turning, and also or brush-backs. Jackwood is sometimes mis-named orange-wood from its colour.—*Baker's Papers; Holtzapffel; Edye, Forests; Faulkner.*

JACOB, grandson of Abraham, the Yakub of he Arabs, a patriarch of the Israelites. Jacob vas father of twelve sons, who founded the twelve ribes of the Hebrews; he went to Egypt B.C. 1747–46.—*Bunsen.*

JACOB, General Le GRAND (1851), Resident at Bhooj. Author of an Account of Gunli or Shumli; Report on the Iron in Kattyawar, its Comparative Value with British Metal; Mines and Means of Smelting Ore, Lond. As. Trans. v. p. 73, viii. p. 98; Brief Historical, Geological, and Statistical Memoir on Okhamandul, in Bom. Geo. Trans. v. p. 157; Report on the District of Babriowar, ibid. vii. p. 700; Inscriptions from Palitana, in Bom. As. Trans. i. p. 56; on the Asoka Inscriptions, Girnar, ibid. p. 257.—*Dr. Buist's Catalogue.*

JACOBABAD, a frontier district of Sind, between lat. 27° 56′ and 28° 27′ N., and long. 68° to 69° 44′ E., which comprises the tract of country bounded by the Bugti Hills on the north, by Kalat on the west, the Bigari canal on the south, and the river Indus on the east. The district attains to from 170 to 257 feet above the sea. From 1865 to 1870 the rainfall ranged from 1·11 to 8·80 inches. At the extreme north is desert plain. The Sind Hollow, a former bed of the Indus, traverses one-third of the district, and between it and the river the country is split up into numerous 'dhund' and 'dhoree.' On its north is a range of barren hills with fertile valleys, occupied by the Murree and the Bugti. Baluch tribes, Jumali, Dumki, Jakrani, Khosa, Mazari, form the population; Burdi, Sindi, Jumma, the nomade Jat, who rear camels, cattle, sheep, and goats, and Hindu cultivators. The Jat are a hardy, good-looking, industrious race, and their women are very comely, and drink largely of camels' milk. The Baluch use jowari (sorghum) flour, and bajra (Penicillaria spicata), and milk. The cultivation is by irrigating canals.

Jacobabad was founded by Major-General John Jacob as an entrenched camp, for the purpose of checking the inroads and forays of the Baluchi. The average annual rainfall is 4·39 inches; in 1869, 12·05 inches, and in 1867, 0·97.

JACOB'S WELL, in the valley of Nablous, a few miles south of Shechem, is 75 feet deep.

JACQUEMONT, VICTOR, born at Paris 1801, died at Bombay 7th December 1832. He was a travelling naturalist to the Royal Museum of Natural History at Paris during the years 1828–29, 1830–31, and 1832. He travelled in India, the Himalaya, Ladakh, Tibet, Panjab, and Kashmir. His travels were published in the form of letters to his relatives.

JACYNTH, a gem owing its deep orange colour to the presence of zircon. It is the gul-maidah of India.

JADABILLAY. Tam. A woman's head ornament in the Tamil country. See Jewellery.

JADDI. Mahr. Land left to grow fodder.

JADE.

Yuh, ...	Chin.	Yashm, Sang-i yashm,	Pers
Khas, ...	Mongol.	Sootash, ...	Turk.

This mineral, called also nephrite and axe-stone, is celebrated in China as the Yuh or gem of gems. It is found in Fung-tien-fu (Shing-king), Lien-chau-fu (Canton), in Shan-tung, near Khoten, Karakash, Yarkand, and other places in Turkestan; in the rivers among the Siansk mountains, to the S.W. of Lake Baikal, in Eastern Siberia, at Mogoung north of Burma, and other places in Eastern Asia; also in N. Zealand, Egypt, Polynesia, and a few localities in the United States. It is of white, blue, yellow, and green colours; but the milk-white and the light-green varieties are most prized. Chemically, it consists of the silicates of magnesia and alumina coloured to the tint of the stone by varying proportions of chromium. Its hardness, weight, sonoriety, and peculiar sombre tint are the foundation of the Chinese taste for this stone. Their wearing of this stone is supposed to impart to the wearer, humane, just, intelligent, brave, and pure qualities, and philosophers and physicians have ascribed all sorts of properties to this substance, which for any medicinal purpose can be no better than soapstone or steatite. Jade mines in the Kouen-Lun mountains have been described by Dr. Cayley in Macmillan's Magazine, October

1871. At a very early date nephrite was sent as a tribute to the imperial court. The emperor Chinnoung (B.C. 2737) delighted in ornaments of nephrite, and the emperor Chau-sin (B.C. 1154) had a pillow made of the same material. A chief source for nephrite is in Khotan. M. Blondin says—'La ville d'Yarkande envoie chaque année à Khotan pour être expédiés à la cour de Peking 6000 kg. de jade. Nous ne comprenons pas dans ce chiffre les pièces taillées et sculptées, on ne peut plus habilement, par les lapidaires d'Aksou, la capitale actuelle de la Tartarie Chinoise, par ceux de Kachghar, et enfin par ceux d'Yarkande, l'ancienne capitale où le travail de jade occupe le plus de bras.'

Mr. John Anderson (Report on the Expedition to Western Yunnan, via Bhamo, Calcutta 1871) visited the bazar of Momien. He says the copper discs used in cutting jade are very thin, bend easily, and measure about one foot and a half in diameter. The centre is beaten out with a cup-shaped depression, which receives the end of the cylinder on which the disc revolves. In one establishment two men were at work, one using the cutting disc and the other a revolving cylinder tipped at the free end with a composition of quartz and little particles resembling ruby dust. Both were driven by the feet. The stone is held below the disc, under which there is a basin of water and fine silicious mud, in which the stone is dipped at intervals, the operator filling his hands with as much of the mud as possible. The stones are cut into discs one-eighth of an inch in thickness, when they are intended for ear-rings, and are then made over to the man at the silicious-tipped cylinder, who bores a round hole in the centre of each. The same course is followed in the case of the larger and thicker rings. Bangles made of jade come from Mogoung, in the north of Burma; the bright green tint seen in these specimens is the characteristic peculiarity of the Burmese jade. It occurs there in the form of rounded boulders, and is exported to China.

The Chinese have probably some sources of green jade unknown to us. Their jadeite, a different mineral from jade, is supplied, though probably not exclusively, by mines in the mountains to the north-west of Bhamo in the Lao State of Burma. Jahanghir and Shah Jahan seem to have taken pleasure in jade cups and ornaments; and the art of inlaid work that found such exquisite expression in the Taj Mahal was copied under their munificent auspices in the most precious materials, rubies and diamonds and other precious stones being inlaid in jade of various colours, which was cut in delicate open-work and adorned with enamels, in the production of which India is still unrivalled. The collection of these beautiful productions of Indian art contained in the India Museum is the finest ever brought together.

Jade possesses the virtue of an extraordinary toughness. Easy to work when freshly extracted, it hardens just sufficiently to do the work of cutting, yet retain an edge. On that account New Zealanders used jade as well for tomahawks as for amulets, and the jade relics disinterred in Switzerland are often in the shape of hatchets.

The Mexicans worked a kind of jadeite. The Maoris work jade, which is a native mineral in their hornblendic rocks; and the inhabitants of New Caledonia, and indeed of Polynesia generally, have fashioned jade or some varieties of jadeite into implements useful, ornamental, and perhaps too, in one sense, sacred.

A cargo of this mineral was imported into Canton from New Holland, but the Chinese would not purchase it, owing to a fancy taken against its origin and colour. The Chinese use it for mandarins' buttons, pipemouth pieces, and various articles of personal ornament and luxury. They estimate it according to the purity of the white and brightness of the green tints.

JADU. HIND. Enchantment; hence Jadugar, a sorcerer.

JADUN, a race on the right bank of the Indus where that river issues from the Himalaya near Torbela. They are Pathans who speak Pushtu. They inhabit a tract below the Husanzai country, and on the right bank of the Indus opposite the British town of Torbela, and thence stretching westward. In this tract the most notable place is Mount Mahabun, of classical celebrity.

Beyond the Judun country on the north-west is Booneer or Bunoor. It is a rugged country, extending from the lower range of the Hindu Kush downwards to hills which command the Chumla valley and the central plain of the Yusufzai. On its western frontier, again, lies the Swat territory.

JAEDAD. PERS. Signifies a place or employment; also, in accounts, assets, funds, resources.

JAETI, gladiators; in the south of India Jetti. Colonel Tod mentions that in one of the courts in Cutch funds were set apart for Jaeti, at one time to fifty thousand rupees per annum. In the akhara (arena), with the prize-fighters Asman dikhlana is their phrase for victory, when the vanquished is thrown upon his back and kept in that attitude.—*Tod's Rajasthan*, ii. p. 589.

JAF, a very large predatory tribe residing near Kanaki, on the Dialla, dependent on Turkey, and numbering about 25,000 families. They inhabit in winter the plains of Sulimania and Zohab, and in summer migrate to the mountain of Ardelan. They are the most warlike and unruly of all the Kurdish tribes; a fine-looking, brave people, but esteemed exceedingly uncivilised and barbarous even by the Kurds.—*Ferrier, Journeys*, p. 68; *Rich's Kurdistan*, i. p. 112.

JAFFA, or Yaffa as it is called by the natives, is the representative of the ancient Joppa, so often alluded to in holy writ. The timber hewn on Mount Lebanon for Solomon's temple was floated to this port (2 Chronicles ii. 16). Here Peter raised Tabitha from the dead (Acts ix. 42), and Simon the tanner resided. In this harbour, Judas Maccabæus burnt the Syrian fleet. The tract of country lying between Jaffa and Gaza westward of the mountains of Judea, was the ancient territory of the Philistines, and included the five cities of Gaza, Askelon, Ashdod, Gath, and Ekron. This district still bears the name of Palestine. It is the nearest seaport to Jerusalem, and is about 30 miles S. of Cæsarea. It is built on a hill jutting into the sea. It has seen St. Paul, Pompey, Salah-ud-Din, and Napoleon. At four hours'-journey is Edzoud, the ancient Azotus and the Ashdod of Scripture (2 Chronicles xxvi. 6).—*Robinson's Palestine*, i. pp. 16, 21.

JAFFERABAD, on the Gujerat coast, in lat. 20° 52′ N., has the best river on the coast. The

hief of Jafferabad, who resides in Gujerat, the li of Janjira, who resides in the Konkan, and e nawab of Sucheen, are all of African origin.

JAFFERI - KASM, Arab., is an oath conlered by Muhammadans to be more solemn than at used in British Indian courts. Its words, ksamto B'Illa hil Jabbar, il Kahar, il Mutakabbir, Muntakim, mean, I swear in the name of the nnipotent, Indignant, High, and Avenging God.

JAFFNA, a district and town in the northern rt of Ceylon. In the sandy parts of Jaffna a llow palmyra is inserted to form a well.

JAG. Amongst the Mahrattás, if a Sudra die ddenly, his family hold a riotous vigil on the)th night after the demise; it is called Jagar, and e object is to compel the spirit of the deceased enter the body of the son or of some other rson to reveal any secret matter desired to be own. Jagla, a night watchman. Jagni, a torch. ie word is from Jagna, to wake.—*Wils. Gloss.*

JAGA or Jaga-Bhat, a division of the Bhat ibe.—*Wils.*

JAGADHRI, town in the Umballà (Ambala) strict, Panjab, and has a considerable manucture of metal work, vessels, and tools; also a finery of the borax brought from the hills, and manufacture of oxide of lead, for use by goldiths and in native medicines.—*Imp. Gaz.*

JAGANATH, Jaganatha, vernacularly Jugrnath, from Yoganatha, lord of the world, is a me now especially applied to Vishnu in the rm in which he is worshipped at the temple Jaganath at Puri in Orissa. All the land within) miles round this pagoda is considered holy, it the most sacred spot is an area of about 650 et square, which contains fifty temples. The ost conspicuous of these is a lofty tower about 84 feet in height and about 28 feet square inside, lled the Bur Dewali, in which the idol and his rother and sister Subhadra are lodged. Adjoing are two pyramidical buildings. In one, about) feet square, the idol is worshipped, and in ie other the food prepared for the pilgrims is istributed. The temple was restored in its pre-nt form in A.D 1198 by Raja Bhim Deo of Orissa, : an outlay of £500,000. It is in a square nclosed by a high stone wall, 250 yards each ice, with the principal gateway on the eastern de. The walls are covered with statues, many f which are in highly indecent postures. The rand entrance is on the eastern side, and close to ie outer wall stands an elegant stone column, 5 feet in height, the shaft of which is formed of single block of basalt, presenting sixteen sides. he pedestal is richly ornamented. The column surrounded by a finely-sculptured statue of lanuman, the monkey chief of the Ramayana. he establishment of priests and others belonging) the temple has been stated to consist of 3900 milies, for whom the daily provision is enormous. he holy food is presented to the idol three times a ay. His meal lasts about an hour, during which ime the dancing girls, the Deva-dasa, belonging) the temple, exhibit their professional skill in n adjoining building. Twelve festivals are celerated during the year, the principal of which is he Rat'h Jatra. In the early years of the 19th entury many statements were made as to the elf-sacrifice of pilgrims by throwing themselves eneath the wheels. But self-immolation is ntirely opposed to the worship of Jaganath, and the rare deaths at the car festival were almost always accidental, though there have doubtless been instances of pilgrims throwing themselves under the wheels in a frenzy of religious excitement. Any death within the temple of Jaganath renders the place unclean. The ritual suddenly stops, and the polluted offerings are hurried away from the sight of the offended god. According to Chaitanya, the Orissa apostle of Jaganath, the destruction of the least of God's creatures is a sin against the Creator. Self-slaughter he would have regarded with abhorrence. The image of the god is a rude block of wood, and has a frightful visage with a distended mouth. His arms, which, as he was formed without any, have been given to him by the priests, are of gold. He is gorgeously dressed, as are also the other two idols which accompany him. In a compartment in the temple of Rama, he is represented in company with Bala Rama and Subhadra, without arms or legs. The temple is built on a low sandy plain about 1½ miles from the shore. The car is painted with obscene figures. In the festivals at this Hindu temple the images brought forward are those of Krishna, his brother Bala Rama and sister Subhadra, and the populace reproach Krishna and his sister for having indulged in a criminal intimacy. In the Mahabharata, Subhadra is stated to have been married to Arjuna. Bala Rama and Subhadra are also similarly accused. Multitudes of pilgrims resort thither, especially at the two great festivals of the Snana Yatra and Ratha Yatra, in the months of Jyaishtha and Ashadha. In the Snana Yatra, the image is bathed; in the Ratha Yatra, or car festival, it is brought out upon a car, with the images of Bala Rama and Subhadra, and is drawn by devotees. Jaganath temple has three prominent classes of servants,—the Parcha or head priests, who superintend the collection and disbursement of the revenues, and see that the worship is conducted in an orderly manner; the Parharri, who dwell within the holy land of the temple, guard the seven inner doors of the pagoda, attend during the day and watch over it at night, and present pilgrims to the idol; and the Panda, who serve chiefly in the pagoda. The vile Pandas of Puri is a saying in every mouth.—*Cole. Myth. Hind.* p. 52; *Carnegy; Dowson; Imp. Gaz.* iv.

JAGAT. Hind., Sansk. The world. Jagat-Narayana, a title of Vishnu. Jagatganj, a place near Benares. Jagat Point, a projecting land in Gujerat.

JAGATI. Karn. A gong. Jagati Dasari, in Mysore, religious mendicants who beat a gong as they move along the streets begging.—*W.*

JAGDALAK, a river, a valley, and defile in Afghanistan. The river rises in the kotal or pass, and after a course of ten miles falls into the Kábul river. The valley is occupied by the Jabr Khel, Ibrahim, and Ghilzai. The defile is steep, narrow, and winding, its width averaging 40 or 50 yards, but at one place is only 6 feet. It was in this defile that on the 12th January 1842, the remnant of the retreating division of the British Indian army were destroyed; only a few pressed on to Gandamak.—*MacGregor*, pp. 395–97.

JAGGERY.

Kund,	Arab.	Guda, Gura,	Sansk.
Coompta sugar,	Bombay.	Kara vellam,	Tam.
Jagari, Gur,	Guj., Hind.	Nalla bellum,	Tel.

Unrefined sugar, produced by evaporating the

juices of palms, the cocoanut, the date, the Caryota urens, the Nipa fruticans, palmyra, and gomuti. In Bengal, it is from the Elate sylvestris or wild date that it is made. In Ceylon three palms yield palm sugar, the cocoanut palm (Cocos nucifera), the palmyra palm (Borassus flabelliformis), and the kittal or jaggery palm (Caryota urens). From each of these palms the juice of the flowering stalk is collected under the name of toddy, and from it jaggery is regularly prepared; but it is from the palmyra palm that nearly all the palm sugar is obtained, and it is from the saccharine matter of the cocoanut palm that arrack is made in Ceylon. This palm becomes productive there in about six or seven years. In collecting its toddy, the spathe is stripped off from the spadix before it has fully expanded; the spadices are afterwards beaten between pieces of hard wood, and slices are cut with a sharp knife so as to allow the juice to flow out. Each spadix continues to yield juice for about 40 days, at nearly the average rate of half a gallon in 24 hours. When it is intended to prepare jaggery from the toddy, great care is taken by burning pieces of wood in the small earthen vessels to be attached to the flowers, and rubbing their interior with charcoal, to remove any impurities likely to promote fermentation; and as an additional precaution chips of the bark of the Vateria Indica are placed in each, in order to retard fermentation.

JAGHIR, the state revenues of a tract of land assigned, with or without conditions, with the power to collect and appropriate the state revenue and carry on the general administration. This tenure was most common under the Muhammadan government. The jaghir given to the English East India Company by the nawab Muhammad Ali, nawab of Arcot in the Carnatic, extended to the Pulicat lake northward, to Alampravé southwards, and westward beyond Conjeveram; that is, about 120 British miles along shore, and 47 inland in the widest part. This jaghir is now the Chingleput collectorate. Jaghirdar, holder of a jaghir.—*Elliot; Rennell's Memoir*, p. 264.

JAG JIVAN DAS, founder of the Sad'h Nami sect, was born at Sardaha in the Bara Banki district, 40 miles E. of Lucknow, in Samvat 1738 (A.D. 1682). His father, Ganga Ram, was a Chandal. Wilson says that he was a Kshatriya. He composed the Agh Binsh (Aghavinsa, sin remover), which is the sacred book of the sect. It is of various metres, and is a thick volume. He also wrote the tracts Inyan Prakas, Maha Pralaya, and Pratham Grantha; these are in Hindi couplets. The sect are found chiefly between Benares and Amritsar. The king of Oudh, about the middle of the 18th century, granted to the sect the village of Katwa, and Jag Jivan Das died there, A.D. 1761 (Samvat 1817). He left five sons. The sect prohibit the use of Masur, all intoxicating liquors, and also the egg plant fruit. He was a Grihastha or householder through life. The Sad'h Nami is a unitarian Hindu sect, who profess to adore the True Name alone, the One God, the Cause and Creator of all things, Nirgun or void of sensible qualities, without beginning or end. Although they profess to worship only the one God, they borrow their notions of creation from the Vedanta philosophy, and recognise accordingly the whole Hindu pantheon.—*H. H. Wilson*, i. p. 357.

JAGLAIN, a Jat clan, proprietors of a few villages in Paniput Bangur.—*Elliot, Supp. Gloss.*

JAH. PERS. Splendour; the second title amongst Muhammadans in India, as Asof Jah, Azim-Jah. See Titles.

JAHAD. ARAB. A religious war of the Muhammadans; generally used to designate a war against other religionists. It is described by the Arabs as Jahad-fi-Sabil Allah, a war on the path of the Lord. Unprovoked war is contrary to the letter and spirit of the Koran; but war against the enemies of El Islam, who have been the first aggressors, is enjoined as a sacred duty; and he who loses his life in fulfilling this duty (if unpaid) is promised the rewards of a martyr. Verses 40, 41, chapter 21st of the Koran, are believed to be the first passage that was revealed respecting religious war. From Mahomed's time there were many small religious wars; but of memorable jahads, two by Harūn-ūr-Rashid in A.D. 902 against the emperor Nicephorus, all those of the Crusades led by Salah-ud-Din and others, and the great Wahabee movement at the close of the 18th century in Arabia, aimed at bringing Islam back to the actual state of things which existed in the prophet's time. This was a jahad pure and simple, and its promoters not only attacked Christians as unbelievers, but drove out their Turkish Muslim masters, and sacked the holy cities of Mecca and Medina, because they had been profaned with foreign rites. The movement was a purely Arab one, but it relied upon precisely the same principles as those of Mahomed himself; and as these are the recognised foundations of Islam, it found an echo elsewhere. Yet when, later on, it was endeavoured to prove that India was a dal ul harb, or enemy's country, and that it was the duty of all Muhammadans, as such, to rise against their Christian rulers, the Ulema, with scarcely an exception, pronounced fatwás adverse to this opinion, and a meeting of doctors at Mecca taking the same view, the jahad was negatived once for all, and made impossible in the future. So far as Wahabeeism appealed to Arab peoples, it was eminently successful; elsewhere the summons was unheeded. Some of the Arab tribes, and with them some of their descendants, are exceedingly excitable, and there have been instances of this excitability among the Turk and Mongol converts; and the proclamation of a jahad would probably have met with response among the Arabs who migrated to Africa, and who set up the rival Muhammadan khalifat in Spain. But the jahad of the Crusades was brought about by the Christians themselves, who took the initiative. The Saracen rulers and inhabitants of the Holy Land, whether of Arab, Persian, or Moghul descent, found their very existence suddenly threatened, and banded together to avert the common danger. How high Muhammadan feeling ran at the time may be gathered from a contemporary Arabic ode, addressed to a grandson of Salah-ud-Din on the construction of extra fortifications at Damietta. The poet says:—

> 'Our holy faith exalteth still in thee,
> With victory's robes endued;
> The miscreant bands of infidelity
> Are driven back subdued.

Thee do we humbly now congratulate
For what thy lord hath given,
For deeds that shall be looked upon as great,
When deeds are weighed in heaven.

Egypt rejoiceth, but not she alone,
Baghdad rejoiceth more;
For had her king less pious ardour shown,
She that was heretofore

The "Abode of Peace" had suffered war's alarm
Nay, but for Kamil's aid,
I swear that Muslims would have dreaded harm
E'en in the Kaabah's shade.

Damietta wreaks her vengeance on the horde
Of foes who filled her strand,
Lo! he hath cleansed her city with the sword,
And with his holy band.

Prayers, to Damietta's altars long unknown,
Hath he restored again:
Ah, how long, yearning for the solemn tone,
Had they in silence lain!

The Benu Asfar with the yellow hair,
If e'er they sleep, meseems
Nought but thy yellow standard's flaunting there
Will haunt them in their dreams.

. . . . . .

Three years and months thou tarriedst to fight,
And holy war didst wage
In thine own person, nor didst thou some wight
As substitute engage.

. . . . . .

Nor didst thou halt till God gave grace and aid
Unto His chosen crew,
Until with joyous victory the face
Of earth all radiant grew.

Thou didst appease, with foeman's life-bl d spilled,
The thirsty sword and lance;
The hungry wolf and vulture, too, were filled
Where'er thou didst advance.'

In India the influence of Muhammadanism has been scarcely more than superficial. Even at the present day an Indian Muslim, in his observances and tenets, is following several Hindu customs. The notion of ceremonial defilement if an Indian Muhammadan even eat out of a vessel which has been touched by Christian hands, is not anywhere sanctioned by Islam, the Koran itself expressly saying that 'the food of those who have received the Scriptures'—that is, Christians and Jews—is lawful for the true believer.

JAHAN. HIND., PERS. The world. Hence, Jahan-gir, world conqueror. Jahan-panah, world protector, meaning 'your majesty.'

JAHANABAD, in the district of Sekooha, governed by a chief of the tribe of Sharegi, the most powerful in Seistan. Sharegi is so called from Shahrek, the residence of this chief's family, and one of the principal places in Seistan.—*Ferrier, Journ.* p. 415.

JAHAN-ARA BEGUM, Roushan-ara Begum, and Surya Begum were three daughters of Shah Jahan. They were all three women of beauty, talents, and accomplishments. Jahan-ara was devoted to prince Dara; Roushan-ara was devoted to Aurangzeb; Surya Begum, the third daughter, kept aloof from the family dissensions. Jahan-ara was in the prime of youth and beauty when her father was dethroned by Aurangzeb (June 1678); but she applied for leave to share his captivity, and continued to wait upon him till his death. Afterwards she was a bountiful benefactress to the poor and to religious men, and died with the reputation of a devout woman. On her tomb is the inscription, 'The perishable fakir Jahan-ara Begum, the daughter of Shah Jahan, and the disciple of the holy men of Chishti, A.H. 1094 (A.D. 1682).' — *Heber*, ii. 293; *Travels of a Hindu*, ii. 223.

JAHANDAR SHAH, emperor of Dehli, A.D. 1712-13, was the eldest son of Bahadur Shah, who died in February 1712. He defeated his younger brother Azim-us-Shan. Farokhsir, son of Azim-us-Shan, met and defeated him on the 1st January 1713, put him to death on the 4th February 1713, and ascended the throne.—*Elphinstone*, pp. 604–5.

JAHANGIR. Selim, eldest son of the emperor Akbar, succeeded his father as emperor of Dehli, October 1605, and assumed the title of Jahangir, world's conqueror. He early remedied some vexatious laws which had escaped Akbar's notice, forbade his officers opening bales of merchandise without the merchants' consent, abolished the punishments of cutting off ears and noses, forbade the use of wine, regulated the sale of opium, and he restored the Muhammadan creed on his coin, together with most of the forms of that religion. In March 1606, A.H. Zi Haj 1014, his eldest son Khusru fled from court towards Lahore, and, being defeated there, attempted to reach Kabul, but was seized and brought in chains before his father, and made to witness the agonies of 700 of his followers, whom Jahangir impaled in a line leading from the gate of Lahore. Jahangir expatiates in his Memoirs on the long duration of their agonies. Khusru was kept under surveillance till his death, which occurred in the Dekhan about A.D. 1621, while under the control of Prince Kurrum, afterwards Shah Jahan. In A.D. 1607 (A.H. 1016) Jahangir sent an army under Muhabbat Khan against the rana of Udaipur, and another army under Khan Khanan to effect a settlement of the Dekhan, but Malik Ambar, an Abyssinian, the Nizam Shahi and Adal Shahi dynasties, and the Mahrattas kept the imperial troops in continuous employ till the close of his reign, which saw the commencement of the rise of the Hindu race that at length put an end to the Moghul dynasty. In the sixth year of his reign (A.D. 1611, A.H. 1020) Jahangir married Nur Jahan, widow of Sher Afghan Khan. She was a high-spirited but artful woman; her name was put upon the coins along with that of her husband, the emperor took no step without consulting her, and in every affair in which she took an interest her will was law. Her father Ghaias-ud-Din was made prime minister, and her brother Asof Khan was placed in a high station. To her influence was due the great improvement in the conduct of Jahangir after the first few years of his reign; he was still capricious and tyrannical, but his barbarous cruelties were discontinued, and he drank only at night and in his private apartments. She was his constant attendant until his death, aiding him with her counsel, but also embroiling him with her intrigues in behalf of her own and husband's relatives. Jahangir had bestowed on Prince Kurrum the title of Shah Jahan, and declared him heir-apparent; and in October 1616 (Zi Kaida 1025) the emperor moved to Mandu to support the prince in his efforts to reduce the sovereigns of the Dekhan, in which he was entirely successful. Sir Thomas Roe, ambassador from James I. of England, accompanied him on the march, and speaks highly of the courtesy and hospitality of the nobles and the magnificence of the

court. But while Jahangir was in Kashmir in 1621 (A.H. 1030), the Dekhan again required Shah Jahan's presence, and while engaged there Nur Jahan used all her influence to secure the succession of her son-in-law Prince Shahriar, the youngest son of Jahangir, who had married her daughter by Sher Khan Afghan. Dissensions arose from this between Jahangir and Prince Shah Jahan, and the prince rebelled, A.D. 1623 (A.H. 1032), retreating at first to Mandu and afterwards by way of Telingana into Bengal (A.D. 1624), of which he obtained possession along with Behar, and then advanced towards Allahabad to oppose Prince Parviz and Muhabbat Khan. But he was overpowered, his army dispersed, and himself constrained once more to seek refuge in the Dekhan, where he united with Malik Ambar, but was deserted by his army, and, A.D. 1625 (A.H. 1034), he submitted to his father, and sent two of his sons, Dara Shekho and Aurangzeb, to court as hostages for his good behaviour. Nur Jahan induced Jahangir to order Muhabbat Khan to the court to answer charges of oppression and embezzlement during the time he had occupied Bengal. When he approached the camp, then on the Hydaspes, he was not permitted to see the emperor, on which he seized on the emperor's person, March 1626 (Jamadi-ul-Akhir A.H. 1035). Nur Jahan at first was separated, but shortly rejoined and released her husband, who marched back from Kābul to Lahore and then on to Kashmir. Jahangir while in Kashmir was attacked with asthma, and for change of air he was moving towards Lahore, but before he had got over a third of the journey he sank under the complaint, on the 28th October 1627 (A.H. 28 Safar 1037), and he was buried at the Shah Darra, 3 miles W. of Lahore, on the opposite bank of the Ravi. Shahriar made an unsuccessful effort to seize the throne, but Shah Jahan arrived from the Dekhan, and was proclaimed emperor at Agra on the 26th January 1628 (A.H. 7 Jamadi-ul-Akhir 1037). Jahangir's tomb is constructed entirely of marble, of fine workmanship, beneath which rests the body of the monarch. The tomb of his wife Nur Jahan has been ruined; precious stones were daily carried away by the restless Sikhs. Jahangir also married the sister of Raja Man, but the Rajputni princess early put an end to her life by swallowing poison, disgusted with the quarrels of her husband and son. His drinking-cup was formed out of a large ruby. A few years ago it had been placed for sale in one of the English jewellery shops at Calcutta by the ex-king of Lucknow. The cup had been scooped hollow out of an uncommonly large-sized ruby more than three inches long, by as many broad, in the fashion of a goblet, with the name of Jahangir inscribed upon it in golden characters. Side by side was placed also a similar but smaller cup, with a leg to stand on, which had belonged to the great Timur. The cup having passed into private property, its whereabouts cannot be any more traced. In his reign, Persian was the court language, but the people spoke Hindustani, and the emperor and some of his ministers spoke Turki. Jahangir's memoirs were written by several authors, and have several titles, amongst others the Wakiat-i-Jahangiri and Doazdah Sala-i-Jahangiri; and Jahangir himself seems to have written the 18 years of his reign, but ceased to record on account of his age, and Muhammad Hdia continued it till the emperor's death. Jahangir wrote in Chaghtai Turki. The Imperial Gazetteer says that in his earlier years he had accepted the eclectic faith of his father. It is said that on his accession he had even permitted the divine honour paid to Akbar to be continued to himself. His first wife was a Hindu princess; figures of Christ and the Virgin Mary adorned his rosary; and two of his nephews embraced Christianity with his full approval. — *Elphinstone*, pp. 483–505; *Imp. Gaz.* iv.; *Mohan Lal's Travels*, p. 17; *Tr. Hind.* v. p. 460.

JAHANGIR, a title of Pir Muhammad, grandson of Timur. He entered India in A.D. 1398 by way of Ghazni, and took Multan, and then rejoined the main army under Timur. Timur gave him the government of all his Indian conquests, and named him his universal heir, but six months after the death of Timur, in 1404, he was assassinated.

JAHANNAM. ARAB., HIND., PERS. Hell, the Gehenna of Scripture. The Muhammadans recognise seven hells, — Jahannam for Muhammadan, Lazwa for Christians, Hutama for Jews, Sair for Sabæans, Sagar for Magi, Jalum for idolators, and Hawia for hypocrites.

JAHEZ, ARAB., or Mayndhi, HIND., a Muhammadan bride's trousseau, which is carried in procession to the bridegroom's house, consisting of clothes, garlands, dressing-cases, trinkets, and a number of articles of furniture. This is the dowry, and is the lady's property, descends to her children, and in case of her dying without issue belongs to her nearest of kin. The settlement made by the bridegroom is called the mahr. The mahr is a religious obligation, without which no marriage is lawful; as, however, the bride is allowed to remit an indefinite portion of it, it is more generally owed than paid.—*Burton's Scinde.*

JAHIL. HIND. A lake, a morass.

JAHNAWI, the sacred thread of Hindus, and called Yadnupavita, also Zandiam. Second birth or twice-born are terms frequently met with in works on the Hindu people, and indicate that the person to whom it is applied has received the zonar or sacrificial cord. The artisan class of Sudras in Southern India, engaged in five avocations — viz. goldsmiths, Komsala; carpenters, Wodla; blacksmiths, Komala; coppersmiths, Konsagara; and stone-cutters, Sungtrash—all wear it. They are Sudras, and are divisions of the same race, for they intermarry. It is also worn by Brahmans, Kshatriyas, Chetties. See Dwaita; Poita; Zandiam; Zonar.

JAHN-NUGGUR is about four miles west of Nuddea, and below which the Ganges formerly held its course. Brahmaditala, in Jahn-nuggur, is a spot where human sacrifices were formerly offered to an image of Durga, and where a great mela is now annually held in July. One of the amusements in this mela is the Jhapan or the exhibition of the skill of snake-catchers and snake-charmers, and purchase of their antidotes.—*Tr. of Hind.*

JAHNU SAPTAMI, the seventh day of the month Vaisakh, when a festival is held in honour of Jahnu, father of Jahnavi.

JAHREJA, a Rajput clan who occupy parts of Cutch and Kattyawar, the different sections of

them who inhabit Hallaur and Mucha-Kanta are as under:—

Jam-zadah, descendants of the Jam.	Kubhur.	Ummur.	Hapa.
	Rewani.	Bharani.	Khumani.
	Weebani.	Bhanani.	Kana.
Hurdol.	Lakani.	Amrun.	Kao.
Doongurani.	Morani.	Dil.	Batach,
Sungeea.	Kunderya.	Halla.	etc.

The Jahreja were long notorious for killing their infant daughters. They obtained in marriage the daughters of any of the numerous races of Rajputs, and even found their facilities such as to allow of their being nice in selecting from the most respectable families. They were furnished with wives by the Jhalla, Wagela, Goil, Chura, Summa, Purmar, Surney, Soda, Jaitwa, Wala, and Wadal tribes; but there was a general preference in favour of the Jhalla. From the Jaitwa the Jahreja could not have obtained any wives for a long time, as it was more than a century since any grown-up daughters had been seen among them, female infanticide being prevalent among them. But in the early part of the 19th century, they, as well as the Jahreja among them, signed the instrument of abolition.—*Hindu Infanticide*, p. 38; *Par. Report*, pp. 161-169; *Cormack's Female Infanticide*, p. 108.

JAI or Jaya, also written Jye. SANSK. Victory; used as an exclamation, also preceding the name or title of a deity or person of rank, as Jai-Rama, Jai-Sita.—*W.*

JAI-CHAND, a Rahtor Rajput, the last Hindu sovereign of Kanouj. He was father of Sunjogata. When the Chauhan Rajput Prithi-raj, the last of the Dehli kings, assumed empire by the sacrifice of the Aswa Medha, Jai-chand, to sooth his mortified vanity, celebrated the Raj shui sacrifice. It was for the last time performed by a Hindu prince, and all the Hindu sovereigns of India attended it, except raja Prithi-raj of Dehli and Samarsi of Mewar, whom Jai-chand represented by effigies of gold, assigning the post of porter to Prithi-raj, and that of scullion to Samarsi. It was at this that Jai-chand brought forward his daughter Sunjogata to select her husband, but she threw the Burmala over the neck of Prithi-raj, and in A.D. 1175 Prithi-raj carried her off to Dehli. In this successful rape he lost the flower of his followers, and his subsequent defeat by the Muhammadans has been partly attributed to this. Jai-chand, though thus bereaved of his daughter, sent her jahez or trousseau after her. Jai-chand closed his career by leaping into the Ganges at Ferozabad, the ancient Chandwar. The raja of Mandu in the Allahabad district is the direct descendant of Jai-chand.—*Report on the N.W. Provinces; Travels of a Hindu.* See Jye; Prithivi.

JAIDAD. PERS. Assets.

JAIESTH. On the sixth day of this Hindu month, about May and June, Hindu women hold a ceremonial festival, called Aranya Shashth (Forest-sixth), in which they walk in a wood. The ceremony is in the hope of obtaining handsome children.—*Wils.*

JAIESTH-ESWARA, a circular temple on the Takht-i-Sulaiman Hill in Kashmir.

JAILS.

Gaol, . . .	. FR.	Carcere, Prigione, .	IT.

Kaid-khana,	HIND.	Zindan, ...	TURK.

The native governments of India had no jails. Their punishments were immediate, and consisted of fine, branding, mutilation, or death. In the reign of Ranjit Singh there were not at any time 100 men in confinement in the Panjab, and the first sanction asked for, when it fell to British rule, was for jails to hold 10,000 prisoners. The general death ratio for the whole of India was nearly 74 per thousand in 1879-80; nearly one-twentieth of the prison inmates are constantly under medical treatment. Death-rate per 1000—

	1878.	1879.		1878.	1879.
Bombay, .	124	112	Madras, . .	126	56

Central Provinces, . .	119	70	Assam, . . .	61	98
			N.W. Provinces,	41	40

The death-rate per 1000 of all classes of prisoners in the jails of the Madras Presidency in the 23 years ending 1879 was—

1857-58,	71·7	1865, . .	129·4	1873, . .	28·3
1858-59,	73·8	1866-67, .	115·6	1874, . .	26·8
1859-60,	82·9	1867-68, .	42·4	1875, . .	39·0
1860-61,	67·4	1868 69, .	35·1	1876, . .	42·4
1861 62,	93·0	1869-70, .	39·0	1877, . .	173·7
1862-63,	89·4	1870, . .	27·4	1878, . .	125·6
1863-64,	109·9	1871, . .	18·4	1879, . .	56·3
1864-65,	127·0	1872, . .	22·1		

In 1877, the famine year, as many as 3593 deaths occurred among 20,678 prisoners. The following table contrasts the statistics of the year 1880 with the three preceding years in the Madras jails:—

	1877	1878.	1879.	1880.
No. in jail, . .	14,242	24,088	19,621	12,443
No. admitted, .	70,802	45,684	29,124	19,606
No. discharged,	60,958	50,151	36,302	20,506
No. remaining,	24,088	19,621	12,443	11,543
Daily average, .	20,678	21,389	15,377	12,202

In British India, the average jail population in 1878 attained 127,914, and in 1882, 94,063. For the five years 1872–76 it had an average of 99,758. According to the census of 1881, for every 10,000 of population, 4·6 persons were in jail. In 1882 there was much sickness throughout the jail population, — 1213 admissions into hospital per 1000,—the death-rate standing at 39·96; the Bombay death-rate, 33·35 per 1000, and 42·56 and 42·62 for Bengal and Madras. In Bengal, bowel complaints gave rise to by far the largest mortality. The jails in the Central Provinces had a death-rate of 89·66 per mille, and those in Lower Bengal and Assam show 59·25 per mille. In Berar the death-rate for 1882 was only 8·5 per 1000. At Mymensing, in Lower Bengal, the ratio was 253·01 per 1000; at Raipur, in the Central Provinces, it was 205·56; and at Thayetmyo, in British Burma, 273·81.

JAIMINI was born at Dwaitavana. His father Shakatayana was author of a Sanskrit dictionary. Jaimini lived at Nilavata Mula, and while residing there he was described in the Skanda Purana as a short young man, of a light complexion, and wearing the dress of a mendicant. He founded the Mimansa school of philosophy. There are about 26 works extant illustrating the Mimansa system, but the Sutras of Jaimini are the best. Jaimini taught that the Vedas are uncreated, and are divine, and that God is to be worshipped only through the incantations of the Vedas, and through them emancipation and final absorption in Brahma. Jaimini's son Krita wrote verses in the Devi Bhagata.

Jaimini is, however, believed to be a historical literary name which must have been assumed by more than one Hindu author.

The Mimansa Sutras are attributed to a Jaimini, so is a Sakha of the Sama Veda; but the former refers to the latter, so they cannot possibly be of the same date. Again, there is a Grihya Sutra attributed to a Jaimini, which is relatively late, and an astrological treatise of a quite recent date is attributed to a Jaimini.

JAIMINI, a celebrated author in the south of India, who lived about the 13th century, wrote a free translation from the Sanskrit of the Aswa Medha Parva of the Mahabharata, detailing the sacrifice of the horse. This work is acknowledged by all to be the finest specimen of Canarese poetry extant. 'He has read Jaimini' is a proverbial saying, equivalent to, He is an accomplished man.—*Garrett.*

JAIN or Jaina, a sect in British India which numbers 1,221,896. Their founder was a Hindu named Rishaba Deva. Their doctrines differ from Buddhism in this, that they recognise in the Jina Pati or Adi Buddha a divine personal ruler of all. They differ from Hindus in denying the divine origin and infallibility of the Vedas, and by their reverencing holy men whom they style Tirthankara, and also by their extreme, even ludicrous, tenderness of animal life.

The provinces of Mewar and Marwar became the cradle of their system, and there, as also in the Dekhan, they have many fine temples. They are to be found in most of the provinces of Upper India, in the cities along the Ganges, in Calcutta, Gujerat, in the northern part of the Malabar coast, and scattered throughout the Peninsula. The Jaina religion seems to have flourished for a time at Conjeveram and Mysore, and appears to have there succeeded Buddhism, after its expulsion in the 7th century. But they have maintained their ground in Rajputana and in parts of Mysore, and followers of their creed hold in their hands a large part of the wealth and trade of India.

Sayana, in the Sarva darsanan graha, expounds the system of the Jaina sect. Their Angas constitute their true Veda. The Kalpa Sutra of Bhadra Bahu and Nawa Tatwa are two works illustrative of the Jaina religion and philosophy. The Yoga Sutra gives a summary of its morals. The Digambara sect regard the Kalpa Sutra as apocryphal. The Chatranjaya Mahatmya is a work of biography and legend.

Their leading religious tenets consist in a denial of the divine origin and infallibility of the Vedas; secondly, in the reverence of certain saints or holy mortals, who acquired by practices of self-denial and mortification a station superior to that of the gods; and thirdly, extreme and even ludicrous tenderness for animal life. The disregard of the Vedas and veneration of mortals are common to the Jain and Buddhist, and the former involves a neglect of the rites which they prescribe, but so far as the doctrines which they teach are conformable to Jain tenets, the Vedas are admitted and quoted as an authority. The Buddhists, although they admit that an endless number of earthly Buddhas have existed, confine their reverence to seven. But the Jain sect extend their number to twenty-four of their past age, twenty-four of their present, and twenty-four of the age to come. The statues of these, either all or in part, are collected in their temples, sometimes of colossal dimensions, and usually of black or white marble.

Their Jinas or Tirthankaras have come to be regarded as verifable deities.

The saints held in highest esteem in Hindustan are Parswanatha and Mahavira, the twenty-third and twenty-fourth Jina of the present era. The generic names of a Jaina saint express the ideas entertained of his character by his votaries. He is Jagat prabhu, lord of the world; Kshina Karmma, free from bodily or ceremonial acts; Sarvajna, omniscient; Adhiswara, supreme lord; Devadi Deva, god of gods; Tirthakara or Tirthankara, one who has crossed over Tiryati anena, that is, the world compared to the ocean; Kevali, the possessor of spiritual nature, free from its investing sources of error; Arhat, entitled to the homage of gods and men; Jina, the victor over all human passions and infirmities.

The last of the Jina was Mahavira, who was born of Trisala, wife of Siddhartha, of the family of Ikshwaku, and prince of Pavana, in Barataksheta, and he married Yasodha, daughter of the prince of Samaravira. He afterwards became a Digambara or naked ascetic, and led in silence an erratic life for twelve years, and during his wanderings in this state he was repeatedly maltreated. He then commenced to lecture at Apapapuri in Behar. His first disciples were Brahmans of Magada, and Indrabhuti or Gautama of the Brahman tribe of Gautama rishi, who is not identical with the Gautama of the Brahmans. Mahavira died B.C. 600, at the age of 72, of which 38 had been spent in religious duties.

According to the Jains, the vital principle is a real existence animating in distinct portions, distinct bodies, and condemned to suffer the consequences of its actions by migration. The reality of elementary matter is also asserted, as well as of gods, demons, heaven, and hell. All existence is divisible into two heads,—Life (Jiva), or the living and sentient principle; and Inertia, or

Ajiva, the various modifications of inanimate matter. Though the forms and conditions of these may change, as they are created they are imperishable. With them Dharma is virtue, and Adharma, vice. The Jain faith is supposed to be amongst the most recent of all the religious systems in India. Hema Chandra, one of their greatest writers, flourished in the end of the 12th century; and the compiler of the Jain Puranas of the Dekhan is said to have written at the end of the 9th century, and the Kalpa Sutra was not composed earlier than the 12th or 13th century. The Jain religion never extended itself into Bengal or Hindustan as a state religion, for two princes of Benares professed Buddhism up to the 11th century. In Western Marwar, and all the territory subject to the Chalukya princes of Gujerat, the Jain faith became that of the ruling dynasty about 1174, and Jain relics and followers are still abundant in Marwar, Gujerat, and the northern part of the Malabar coast. The Jain faith was introduced on the Coromandel coast in the 8th or 9th century, in the reign of Amoghversha, king of Tonda Mandalam. Thus the 8th or 9th century seems to have been the earliest period of the existence of this religion there, and it was no doubt but an offshoot of the Buddhist faith, supposed by some to have been a branch of the Buddhists who escaped the fate of the orthodox followers of Gautama in the 8th and 9th centuries, by conforming somewhat to Brahmanism, and even helping to persecute the Buddhists. Hence many of the Jains acknowledge Siva, and in Mysore and other parts of Southern India they are even divided into castes.

In the reign of Himasitala, the Buddhist king of Conjeveram, about A.D. 800, the Jains and Buddhists entered on a strife for supremacy, in which the Buddhists were defeated; some were sentenced to be crushed to death in oil-mills, others fled to Ceylon. In the reign of Kuna Pandiyan of Madura, about the 10th century A.D., the Jains were in their turn overcome by the Saivas, headed by Sampantar. The Triuviliadal Puranam states that 8000 learned Jainas, rather than recant, 'with obstinate prejudice put themselves on the impaling stakes.'

The Jain are at present divided into the Digambara or Skyclad, *i.e.* naked, and Swetambara, *i.e.* the white-robed. The Digambara are also called Nirgrantha, without a bound, also Nangnatha, naked mendicants. They seem to have the greater claim to antiquity. All of the sect in the Dekhan and in Western India appear to be Digambara Jain. Indeed, the term Jain seems a new appellation, for in the early philosophical writings of the Hindus they are styled Digambara or Nanga, but in the present day the Digambara do not go naked except at meal time, but wear coloured garments. The Digambara assert that the women do never attain Nirvan, but the Swetambara admit the gentler sex to final annihilation.

There are clerical as well as lay Jains, the Yati or Jati, and the Sravaka, the former of whom lead a religious life, and subsist on the alms which the latter supply. The Yati are sometimes collected in mat'hs, called by them Pasala, and even when abroad in the world they acknowledge a sort of obedience to the head of the Pasala of which they were once members. The Yati never officiate as priests in the temples, the ceremonies being conducted by a member of the orthodox priesthood, a Brahman duly trained for the purpose. They carry a brush to sweep the ground before they tread upon it, never eat nor drink in the dark, lest they should inadvertently swallow an insect, and sometimes wear a thin cloth over their mouths, lest their breath should inhale some of the atomic ephemera that frolic in the sunbeams. They wear their hair cut short, or plucked out from the roots. They profess continence and poverty, and pretend to observe frequent fasts, and exercise profound abstraction. Some of them are engaged in traffic, and others are proprietors of mat'hs and temples, and derive a comfortable support from the offerings presented by the secular votaries of Jina. The Jains of the south of India are divided into castes, but in Northern India they are of one caste, refuse to mix with Hindus, and recognise eighty-four orders amongst themselves, between whom no intermarriages have taken place. This classification is called the Gachcha or Got, the family or race, which has been substituted for the Varna, the Jati, or caste. Secular Jains follow the usual professions of Hindus, but collect chiefly in towns, where, as merchants and bankers, they usually form a very opulent portion of the community. There are many in Murshidabad, Benares, and the Doab, but they are most numerous in Mewar and Marwar; numerous in Gujerat, Mysore, and in the upper part of the Malabar coast, and scattered throughout the Peninsula. They form a large division of the population of India, and, from their wealth and influence, a most important one. More than half of the mercantile wealth of India passes through the hands of the Jain laity. The chief magistrate and assessors of justice in Udaipur, and most of the towns of Rajasthan, were of this sect; and as their duties were confined to civil cases, they are as competent in these as they are the reverse in criminal cases, from their tenets forbidding the shedding of blood. To this leading feature in their religion they owe their political debasement; for Komarpal, the last king of Anhilwara of the Jain faith, would not march his armies in the rains, from the unavoidable sacrifice of animal life that must have ensued. The strict Jain does not even maintain a lamp during that season, lest it should attract moths to their destruction.

Mewar afforded a refuge to the followers of the Jain faith, which was the religion of Balabhi, the first capital of the rana's ancestors, and many monuments attest the support this family has granted to its professors in the vicissitudes of their fortunes.

Rajasthan and Saurashtra are the cradles of the Jain faith, and three out of their five sacred mounts, namely, Abu, Palitana, and Girnar, are in these countries. One of the best preserved monumental remains in India is a column in Chitore, most elaborately sculptured, full 70 feet in height, dedicated to Parswanatha. The noblest remains of sacred architecture, not in Mewar only, but throughout Western India, are Buddhist or Jain; and the many ancient cities where this religion was fostered have inscriptions which evince their prosperity in these countries, with whose history their own is interwoven, and to their having occupied a distinguished place in Rajput society; the libraries of Jeysulmir in the desert, of Anhil-

wara, the cradle of their faith, of Cambay, and other places of minor importance, consist of thousands of volumes. These are under the control, not of the priests alone, but of communities of the most wealthy and respectable amongst the laity, and are preserved in the crypts of their temples, which precaution ensured their preservation, as well as that of the statues of their deified teachers, when the temples themselves were destroyed by the Muhammadan invaders, who paid more deference to the images of Buddha than to those of Siva or Vishnu.

The shrine in Hindu temples is always dark, and entered only by the single door in front; Jain temples, on the contrary, have very frequently several entrances. The patterns are very much alike, except in details, and consist chiefly of varieties and combinations of the figure called by the Jains Nandavarta,—a sort of complicated square fret,—the cognisance of the eighteenth Jaina.

The grouping together of their temples into what may be called 'cities of temples,' is a peculiarity which the Jains practise to a greater extent than the followers of any other religion in India. The Buddhists grouped their stupas and viharas near and round sacred spots, as at Sanchi, Manikyala, or in Peshawur and elsewhere; but they were scattered, and each was supposed to have a special meaning, or to mark some sacred spot. The Hindu also grouped their temples, as at Bhuvaneswar and Benares, in great numbers; but in all cases, so far as is known, because these were the centres of a population who believed in the gods to whom the temples were dedicated, and wanted them for the purposes of their worship. The Jains seem, almost more than any other sect, to have realized the idea that to build a temple, and to place an image in it, was in itself a highly meritorious act, wholly irrespective of its use to any of their co-religionists. This is a similar view to that held by their sister Buddhist creed.

Vasi, north of Dwaraka in Kattyawar, has a very ancient Jain temple. In S. Canara, at Karkala, there is a colossal Jaina statue; and Comateswara, a Jain figure of colossal size, is in front of a temple at Sravana Belgola.

The fragment of a little temple at Amwah, near Ajunta, shows it to have been a Jaina shrine of Sri Allat, the twelfth king mentioned in Tod's Rajasthan (i. p. 802).

Sonaghur, near Dutteah in Bundelkhand, and Muktagiri, near Gawilghur, in Berar, show the most modern styles of Jain architecture. Sonaghur is a granite hill covered with large loose masses of rock, among which stand 80 to 100 temples of various shapes and sizes. The sikra is rare, and the foliated pointed Muhammadan arch is the usual opening. Muktagiri is a deep romantic valley, and its largest group of temples are on a platform at the foot of a waterfall that thunders down from a height of 60 feet above them. The temples are only remarkable from showing their adoption of the Muhammadan style. At Dehli is a Jaina temple of much beauty. The background of the strut of its porch has pierced foliated tracery of the most exquisite device. At Khandagiri, near Cuttack, are Jaina caves, and there is one at Badami without any inscription. But there are three Brahmanical caves, one of which has the date 500 Saka (A.D. 579). The Indra Subha and Jaganath Subha groups at Ellora are supposed to be of the same age as the Badami cave temple. At Ajmir the Arhai-din-ka Jompra has been described as a Jaina temple. So also is a great part of the mosque at the Kutub, Dehli.

Mr. Fergusson, however, tells us that the principal Jain works are in Rajputana, Gwalior, and Bundelkhand. Their sculptures almost entirely are restricted to the representation of their twenty-four hierarchs, whom they call Tirthankara, to each of whom, as mentioned at page 402, a symbol is attached, — generally some animal, fish, or flower; in one instance a crescent, in another a thunderbolt. Some of the Jaina temples are of great beauty. They have their shrines on the hills of Palitana, Girnar, Gwalior, Mount Abu, and Parasnath, but also in deep secluded valleys. That at Muktagiri, near Gawilghur, is in a deep, well-wooded valley, traversed by a stream with several waterfalls. At Sadri there is a group of temples, the principal one having been erected by Khumbo, rana of Udaipur, in a lonely silent glen, below his fort of Komulmer, dedicated to Adinatha or Reshabdeva, the first and greatest of the Jaina saints. It covers 48,000 square feet. The rock at Gwalior, in Central India, has one remarkable Jaina structure, dedicated to Padmanatha, their sixth Tirthankara, and the rock on all sides has a series of caves or rock-cut sculptures, most of them mere niches to contain statues, all of them excavated between 1441 and 1474. One of the figures is 57 feet high. In their temples the saint is very numerously represented by images in cells or niches. At Chandravati, a few miles southward from Mount Abu, is a ruined city, with extensive remains of Jaina temples of the same age as those on the mount.

Jaina images are in Canara called Chindeo, a corruption of Jainadeva.

The Jain has been a builder of temples, has cut out cathedrals in the rock, and piled up towers and spires at his great places of pilgrimage for the last thousand years. Their temples are magnificent; the most ancient of them are at Girnar, the most exquisite on Mount Abu, the most extensive and still flourishing at Satrunjaya near Palitana. The last mentioned were beautified and restored by Siladitya, and it is the most ancient and most sacred of the Jain shrines of Gujerat. Almost every Indian city has contributed to its adornment. Palitana, or the abode of the Pali, is the name of the town at the foot of the sacred mount Satrunjaya (signifying victorious over the foe), the Jain temples on which are sacred to Budheswara, or the lord of the Buddhist. Palitana seems derived from the pastoral (Pali) Scythic invaders bringing in their train the Buddhist faith, which appears indigenous to India. Palestine, which, with the whole of Syria and Egypt, was ruled by the Ykos, or Shepherd Kings, who for a season expelled the old Coptic race, may have had a similar import to the Palitana founded by the Indo-Scythic Pali.

The hill of Satrunjaya at Palitana, in the Gohelwar district at the mouth of the Gulf of Cambay, is dedicated to Adinath, the first of the 24 hierophants of the Jains. Each temple contains images in marble of Adinath or of some other of the Tirthankara, and perhaps no fabric of

human workmanship in India is more calculated to arouse wonder, admiration, and lasting remembrance than Palitana in its unique and mysterious perfection.

Abu, in Jain estimation, is the holiest spot on earth. Dilwarra, according to tradition, has been famous from a remote antiquity. Hindu temples are said to have existed, to which, since A.D. 1034, pilgrims have resorted; but all traces of them have disappeared. On their traditional site, however, at Dilwarra, Bimul Sah, a rich Jain merchant, and others, erected the celebrated Jain temples which are now there. The Jain priests of Abu are chosen from amongst the youth of the Ossi tribe or Oswal of the Marwari people. They never marry, but live a sad'hu or pure ascetic life, and are scrupulously careful to avoid destruction of animal life. They move about with a cloth over their mouths to prevent insects entering; they use incessantly a small brush or broom to sweep aside all living creatures; they eat seldom, generally once daily, and they never partake of stale food, lest in the interval since its cooking animalculæ may have formed in it.

The ancient Persian fire-worshippers, like the present Jain, placed a bandage over the mouth while worshipping.

The Jains have five great tirthas, or places of pilgrimage, to which the large bands of pilgrims called Sanghas may be seen slowly marching every cold season. These places are Parisnath, near Calcutta; Mount Abu, the sanatorium of Rajputana; Chandragiri in the Himalaya; Girnar in Gujerat; and Satrunjaya in Kattyawar.

Parasnath is the highest point of the Bengal range of hills south of Rajmahal. It is one of the Jaina pilgrim shrines, and nineteen of their twenty-four Tirthankara are said to have died and been buried there; amongst others, Parswanatha, the last of them but one. The temples on it are numerous. But Jainism never seems to have taken a firm place in Bengal; and when the Pala dynasty of Bengal, about A.D. 1203, left Buddhism, and accepted the Vaishnava and Saiva superstitions, Jainism seems to have disappeared. There seems also to have been a pause, at least in the north of India; but a revival occurred in the 15th century, especially under Rana Khumbo of Mewar, A.D. 1418–1468, who made his capital at Chitore. Though deficient in the extreme grace and elegance that characterized the earliest examples, those of the middle style are bold and vigorous expressions of the art.

The temples on Parasnath are contemptible. But the number of pilgrims, men and women well-to-do in the world, who journey from very distant spots to Parasnath, is considerable. Slowly and toilsomely they may be seen climbing the hill, and presenting their offerings to the figures within the temple, marching thrice round the building with low and not unmelodious chant.

Of the five great places of pilgrimage, Satrunjaya is now the most popular. Like Parasnath, it is a solitary peak. It rises to a height of about 2000 feet, a little to the south of Palitana in Kattyawar. Leaving that town, the visitor passes along a broad and clear road, shaded by the banyan tree, and supplied by wells of pure water, the work of devotees. The steep ascent begins with a wide flight of steps guarded by elephants, and is marked all the way up by miniature shrines covering marble slabs, on which the soles of two feet are carved, with Devanagiri inscriptions. There are frequent resting-places, considered especially holy, which are associated with events in the legends of Bharata and Krishna. The Hindus are represented by Hanuman, the monkey god, and the Muhammadans by the shrine of a saint, both marking the cessation of conflicts with the Jains. From the summit the view is magnificent. That a sect numbering less than half a million of people all over India should send forth so many pilgrims every year to the five tirthas, is explained by the fact that pilgrimage is an essential part of their worship,—is, indeed, the only means by which the devotee may attain to that complete annihilation, which, as distinguished from the Buddhist absorption, is the result of the breath, the only soul which they seem to believe in, leaving the body.

They have an extensive literature, Puranas of their own, works in grammar, astronomy, mathematics, and medicine. They were the first who reduced the Canarese language to writing, and cultivated it to a high degree of perfection. The best epic poem in the Tamil language, the Chintamani, was by a Jaina.—*Barth*, p. 140; *Taylor's Catalogue*, iii. pp. 424–136.

JAINTIA, a tract of country in the province of Assam, divided into the Jaintia hills and the Jaintia plains. Indra Singh, the last raja of Jaintia, was a petty chief whose family had risen to importance amid the ruins of the Kachari kingdom at the close of the 18th century. Previously to the conquest of Assam, in 1824, the inhabitants of Jaintia were in the frequent habit of capturing British subjects in Sylhet, to offer up as sacrifices at the shrine of Kali. In 1832, two British subjects were passing along the high-road in Assam, when they were suddenly seized and carried up into the hills in the neighbourhood of Goba, in the Nowgong district. After having been decked out with new clothes and jewels, they were led away to be sacrificed, together with two other persons, also subjects of the British Government. One of the individuals, however, succeeded in making his escape, and on his return to the plains he gave information of what had occurred; and as no tidings were ever afterwards heard of the three other individuals, little doubt remained but that they were sacrificed. The chief had been frequently required to surrender the guilty individuals, but all to no purpose; and there being strong reason for believing that the chief had wilfully screened the perpetrators of this horrible crime, the Governor-General, Lord William Bentinck, in February 1835, confiscated all his territory situated in the plains. Dantipar consequently became annexed to the district of Nowgong, and these horrible atrocities were put a stop to. The raja voluntarily resigned the hill tract, and of this the British also took possession.

The Jaintia Hills are divided into 25 fiscal divisions, of which 3 are inhabited by Kuki or Lushai immigrants, and 1 by Mikirs. The remainder of the inhabitants are Syntengs, a race akin to the Khasiyas, but reported to have distinct ethnical characteristics and a language of their own.—*Butler's Travels in Assam*, pp. 246, 247.

JAIPALA was raja of Lahore in the times of

Sabaktagin and his son Mahmud. He was defeated by Sabaktagin; and subsequently, at Peshawur, by Mahmud (Ismail?), who took him prisoner. On his release, he made over his kingdom to his son Anang Pal, and, mounting a pyre which he had ordered to be constructed, he set fire to it with his own hands, and perished in the flames.—*Elph.*

JAIPUR, Jayapuram, or Jeypore, a zamindari or tributary estate in Vizagapatam district, Madras, lying between lat. 17° 30′ and 20° N., and long. 81° 20′ and 84° 4′ E. The population is chiefly Kandhs and Sauras.

JAIPUR or Jeypore, the capital of a Rajput State of the same name. It is the most beautiful of the towns of India, situated in lat. 26° 55′ N., and long. 75° 52′ E., and the State lies between lat. 25° 41′ and 28° 27′ N., and between long. 74° 55′ and 77° 15′ E.; area, 14,465 square miles. The military consist of 452 artillery, 4600 infantry, 5142 cavalry, and 4096 Nagha. Its ruler is the chief of the Kachhwaha tribe of Rajputs, and claims descent from Rama, king of Ayodhya in Oudh. Between Rama and Dhola Rao, who founded the Jaipur State in A.D. 967, thirty-four generations are said to have intervened. At the time of the foundation of Jaipur, Rajputana was under petty Rajput and Mina chiefs, owing allegiance to the great Tuar dynasty of Rajputs, who then reigned at Dehli. Dhola Rao and his Kachhwaha clan are said to have absorbed or driven out the petty chiefs, and to have founded a substantial dominion, known as Dhundal. Half a century later, the Kachhwaha chief Hamaji wrested Amber from the Mina, and this place remained the capital until 1728, when Jai Singh II. abandoned it for Jaipur.

The emperor Akbar, in the sixth year of his reign, when on a pilgrimage to Ajmir, honourably received at Sanganir, Bihari Lal, then chief of Jaipur, and married his daughter. Bihari Lal, with three of his sons, entered the emperor's service. One of these sons, Bhagwan Das, attained distinction as a governor and commander; and his adopted son Man Singh was one of the most conspicuous of the imperial generals. He fought in Orissa, Bengal, and Assam; and at a critical period, under great difficulties, he maintained his authority as governor of Kābul.

Jai Singh II., commonly known as Siwai Jai Singh, was remarkable for his scientific knowledge. He began to rule in A.D. 1699. He constructed observatories at Jaipur, Dehli, Benares, Muttra, and Ujjain, by which he was able to correct the astronomical tables of De La Hire, and to leave as a monument of his skill, lists of stars collected by himself, known as the 'Tij Muhammad Shahi,' or Tables of Muhammad Shah, the then emperor of Dehli, in whose favour Jai Singh stood high. He laid out and built the present Jaipur (Jeypore) in A.D. 1728. At a later period, the rajas of Jaipur united with Udaipur (Oodeypore) and Jodhpur to resist the Muhammadan power. And, to regain the honour of intermarriage with the Udaipur family, which his family had lost by giving a princess to the Moghul emperor, the raja of Jaipur consented that the issue of a Udaipur princess should succeed in preference to an elder son by other wives. This attempt to set aside the right of primogeniture brought great disasters both on Jaipur and Jodhpur. Subsequently, at the beginning of the 19th century (1809), the Jaipur ruler was mixed up with a very horrible deed, to Krishna Kumari. The maharana of Udaipur had only one daughter, and the rajas of Jaipur and Jodhpur fought for her hand. The rana was helpless to decide between the two candidates, and the whole country was convulsed by the struggle, for nearly all the chiefs of Rajputana took a part in the war. The Mahrattas and Afghans saw their opportunity, and the progress of their armies through Rajputana was to be traced by blazing villages and ruined harvests. The rana implored the British Government for protection. Even the rival princes of Jaipur and Jodhpur joined in the solicitation. But public opinion in England was opposed to all such intervention. A word would have restored peace to Rajputana, but the British Government declined to interfere. Accordingly, the rana was obliged to purchase the protection of Amir Khan, the Afghan, by the cession of a large territory, and was then compelled by the Afghan to poison his own daughter to put an end to the war. The young Rajput princess accepted her doom, said, 'This is the marriage foredoomed for me,' and drank the opium; but the tragedy filled Western India with shame and horror.

The political relations of the British Government with Jaipur commenced in 1803, when Juggut Singh was then its maharaja; in 1818 he ended a life which had been spent in the grossest debauchery, and regretted by no one. But on the 25th April 1819, a posthumous son was born by one of the ranis, and he was recognised as heir, both by the Jaipur nobles and the British Government. Till the rani's death in 1833, Jaipur was a scene of corruption and misgovernment. The young maharaja, Jai Singh, died in 1835, leaving a young son, Ram Singh, then under two years of age, and the agent to the Governor-General then proceeded to Jaipur, reformed the administration, and assumed the guardianship of the infant heir. The agent's life was attempted, and his assistant was murdered. The larger portion of the Sambur lake belongs to Jaipur, and the salt manufactured from it yields 4 lakhs. Babra, three marches from Jaipur, on the road to Dehli, has one of the edicts of Asoka engraved on a block of stone or rock, on a hill, in old Pali, and of date B.C. 309. It is in the oldest Lat character. It differs somewhat in style and language from the pillar and rock edicts. The subject is the Buddhist commandment forbidding the sacrifice of four-footed animals. The Vedas are alluded to, but not named, and are condemned as mean and false in their doctrine, and not to be obeyed. The Jaipur artisans produce translucent enamels, that is, enamel colours painted on gold, or gold-leaf, which gives light and splendour to the colours.—*Treaties, Engagements, and Sunnuds*, iv. p. 29; *Beng. As. Soc. Jo.* ix. p. 617; *Malcolm's Tr.; R. As. Soc.* i. p. 69. See Rajput.

JAIS, a Rajput tribe of the Solar branch, residing principally about Muttra.

JAISALMIR or Jeysulmir is the capital of the Rajput State of the same name, situated in a broad belt of low rocky ridges, lat. 26° 55′ N., and long. 70° 57′ E. It was founded in the year 1156 by Rawal Jaisal; Elphinstone says A.D. 720.

The State lies between lat. 26° 5′ and 28° 23′ N., and between long. 62° 29′ and 77° 15′ E. It is

almost entirely a sandy waste, forming part of what is called the 'Great Indian Desert.' A well, 32 miles south-east of the capital, is 490 feet deep. Rain-water is used for drinking purposes. The majority of the inhabitants are Yadu Bhatti Rajputs, who claim a very ancient lineage. The ruler of Jaisalmir is styled Maharawal, and holds his position as head of the Bhatti clan. The Maharawal has a force consisting of 651 infantry.

The castle of Jaisalmir is erected on an almost insulated peak, from 200 to 250 feet in height, a strong wall running round the crest of the hill. It has four gates, but very few cannon mounted.

Jaisalmir is separated on the north from Bahawulpur by the Great Desert, and is the modern name of the ancient Marusthali, the Desert of India. It is termed Mer in the traditional nomenclature of this region, from being a rocky (mer) oasis in the heart of the sandy desert. The greater part of Jaisalmir is t'hul or rue, both terms meaning a desert waste. From Lowar, on the Jodhpur frontier, to Kharra, the remote angle touching Sind, the country may be described as a continuous tract of arid sand, frequently rising into lofty tiba (sand-hills), in some parts covered with low jungle. This line, which nearly bisects Jaisalmir, is also the line of demarcation of positive sterility and comparative cultivation. To the north is one uniform and naked waste; to the south are ridges of rock termed muggro, rue, and light soil. There is not a running stream throughout Jaisalmir; but there are many temporary lakes or salt marshes, termed sirr, formed by the collection of waters from the sand-hills, which are easily dammed in to prevent escape. The sirr last but a few months, though after a very severe monsoon they have been known to remain throughout the year. The Kanoad sirr extends from Kanoad to Mohungurh, covering a space of 18 miles, and in it some water remains throughout the year. When it overflows, a small stream issues from the sirr, and pursues an easterly direction for 30 miles before it is absorbed. The salt which it produces is the property of the crown, and adds something to the revenue. The country still dependent on the Rawal extends between lat. 26° 20′ and 27° 50′ N., and long. 70° 30′ and 72° 30′ E., though a small strip protrudes in the N.E. angle, as high as 28° 30′. The Yadu of Jaisalmir, who ruled Zabulisthan, and founded Ghazni, claim the Chaghtai as of their own Indu stock,—a claim which Colonel Tod deems worthy of credit. The first chief with whom the British Government entered into political relations was Maha Rawal Mulraj, who succeeded to power in 1762. In 1818, a treaty was concluded with Mulraj by which the State was guaranteed to his posterity, the chief was to be protected from serious invasions and dangers to his State, provided the cause of quarrel was not ascribable to him, and was to act in subordinate co-operation to the British Government. No tribute was demanded from him. During the lifetime of Mulraj, who died in 1820, the State was virtually governed by his minister, Salim Singh, who put to death nearly all the relatives of the chief. The town of Jaisalmir was depopulated by his cruelty, the trade of the country was interrupted, and the relatives of the Maha Rawal who escaped death fled from the country. In 1844, after the conquest of Sind, the forts of Shagur, Gurseea, and Guttura, which had been wrested from Jaisalmir, were restored to that State. The forts were given over by Mir Ali Morad, by order of the British Government. In 1846, the widow of Guj Singh adopted Ranjit Singh, who, in 1862, received a formal sunnud guaranteeing the right of adoption; he receives a salute of fifteen guns. The area of Jaisalmir is 12,252 square miles, the population about 73,700, and the revenues Rs. 5,00,000. The military force of the State does not exceed a thousand men.

Copper mines are in the neighbourhood of Khetri, but, owing to the want of proper appliances for keeping down the water, the richest veins, which are lowest, cannot be reached.—*Tod's Rajasthan*, ii. p. 284; *Treaties, etc.*

JAISHTHA. Sansk. The second month of the Hindu solar year, when the sun is in the sign Vrisha 8, answering to the Tamil month Viassei.

JAI SINGH II., the royal historian and astronomer of Amber, connects the line with Sumitra, the fifty-sixth descendant from the deified Rama, who appears to have been the contemporary of Vikramaditya, A.C. 56. From his love of science, he was one of the most remarkable persons of his nation. He was appointed by the emperor of Dehli to be viceroy of Malwa, but in public life he was not distinguished for firmness or decision, and in A.D. 1734 he surrendered Malwa to the Mahrattas with the tacit concurrence of the emperor, on whose behalf the territory was still to be held. But, in 1736, Baji Rao claimed as jaghir the province of Malwa and all the country south of the Chambal, together with the holy cities of Muttra, Allahabad, and Benares.—*Elph.* p. 626. See Jaipur.

JAISWAR, a tribe of inferior Yaduvansi Rajputs of the Central Doab. Jaiswara, Jasawara, or Juswar, subdivisions of low-caste tribes, originally from Jais, in Oudh.

JAITWA, Jetwa, or Camari, an ancient tribe, and by all authorities styled Rajput, though, like the Jhala, little known out of Saurashtra, to one of the divisions of which it has given its name, Jaitwa. Its present possessions are on the western coast of the Peninsula. The residence of its prince, who is styled rana, is Porbandar. In remote times, their capital was Gumti, whose ruins attest considerable power, and afford singular scope for analogy, in architectural device, with the style termed Saxon of Europe. The bards of the Jaitwa run through a long list of 130 crowned heads, and in the 8th century have chronicled the marriage of their prince with the Tuar re-founder of Dehli.—*Tod's Rajasthan*, i. p. 113.

JAJMAN, in N. India, a person to whose services Brahmans, barbers, bari, and others have a prescriptive right. The village jajman must be fed, whether employed or not.

JAJU, near the ford of the river Bunganga, is generally called Jaju Sarai; near it the battle was fought between Bahadur Shah, son and successor of Aurangzeb, and his brother the prince Muhammad A'zam.—*Cal. Rev.*, Jan. 1871.

JA'K'HAN. Hind. The wooden foundation of the brickwork of a well. It is generally made of the green wood of the gulur tree (Ficus glomerata), which is less liable to rot than any other kind.—*Elliot, Supp. Gloss.*

JAKO, mountain peak in the Simla district

of the Panjab, overhanging the station of Simla, lat. 31° 5′ N., and long. 77° 15′ E. The ridge, upon which stands the sanatorium and summer capital, culminates eastward in this noble height, 8000 feet above sea-level, and 1000 feet above the general elevation of the houses.—*Imp. Gaz.*

JAKUN. The wild tribes inhabiting the Malayan Peninsula, Sumatra, and a few of the neighbouring islands are divided into three principal classes, which are subdivided into many clans. The first of these divisions includes the Bhatta, who inhabit the interior of Sumatra and a few neighbouring islands. The second is that of the Semang, who are found in the forests of Kedah, Tringanu, Perak, and Salangor. The third division, the Jakun, comprise many tribes, who inhabit the south part of the Peninsula, from about Salangor on the west coast and Kemaman on the east coast, and extend nearly as far as Singapore. All these various wild tribes are ordinarily classed under the general and expressive appellation of Orang Binua, meaning people of the soil. The Malays, in the 13th century, had but a short time inhabited the Peninsula, since we are informed by the Sejara Malaya that Singapore is celebrated in Malayan history as having been the first place of settlement of the early Malay emigrants from Sumatra. In course of time the early Arab trading vessels brought over priests from Arabia, who made a number of converts to Muhammadanism, and those of the Orang Binua who declined to abjure the customs of their forefathers, in consequence of the persecutions to which they were exposed, fled to the fastnesses of the interior, where they have since continued in a savage state. The principal localities of the Jakun are at the upper extremity of the rivers of Johore, Banut, Batu Pahat, and Muar. Those of Malacca are generally as tall as the common run of Europeans; they are darker than any other of the wild tribes; and in which respect there is not much difference between them and the darker of the Indo-Portuguese of Malacca. The Jakun of Johore are a fine race of men; many of them are taller than those of Malacca; the face also is expressive and well characterized, and the expression of the eyes in many of them is a little severe. Their nose does not recede at the upper part, neither is it so flat or so broad at its base as this organ is in the Chinese, Cochin-Chinese, and pure Malay. Several of them have aquiline noses. Some children and young men are beautiful. The women are plump, but not over stout. The Jakun of Menangkabau State are very short, their physiognomy is low, and seems to indicate great simplicity; many of them are ugly and badly made. A Jakun has always his spear, which is both a stick to walk with and an offensive or defensive weapon. The parang, an iron blade of about 1 foot long and 2 or 3 inches broad, with a haft like that of a large knife, they use to cut trees. Their marriages are ordinarily celebrated about the month of July and August, when fruits are plentiful. Amongst some tribes there is a dance, in the midst of which the bride elect darts off into the forest, followed by the bridegroom. A chase ensues, during which, should the youth fall down or return unsuccessful, he is met with the jeers and merriment of the whole party, and the match is declared off. Adultery is punishable by death. It is not allowed to keep more than one wife. A man can divorce his wife and take another. In several tribes, children, so soon as born, are carried to the nearest rivulet, where they are washed, then brought back to the house, where a fire is kindled, incense of kamunian wood thrown upon it, and the child then passed over it several times. The practice of passing children over fire was in all times much practised among ancient heathen nations; and it is even now followed in China and other places. When death occurs, the sumpitan, quiver of arrows, knife, etc., of the deceased are buried with him, along with some rice, water, and tobacco. They are candid and honest, extremely proud, and will not submit for any length of time to servile offices, or to much control. Each tribe is under an elder, chief, or leader, termed the Batin, who directs its movements, and settles disputes. The Jakun hate the Malay, and the Malay despise the Jakun.

JAL. Hind. Water. Jäli dhan, a rice crop sown in marshy ground. Jalkar sair, revenue obtained from water. Jal, a Hindu water ordeal, in which the accused is dipped under water whilst an arrow is shot and a person runs and brings it. If, on his return, the accused be still alive, he is deemed innocent. Jala-Charaniya, any caste from whose hands a Hindu would drink water.

JALAGARA. Karn. A caste who sweep the streets, sift or wash refuse in search of lost money or valuables. Jalagada-guwar, sifters of goldsmiths' furnaces.

JALAL. Arab., Hind., Pers. Splendour; the dread attribute of the Almighty. See Sufi.

JALALABAD, a small town in Afghanistan on the bank of the Kabul river, in a rich country between Peshawur and Kabul. It is in lat. 34° 24′ N., and long. 70° 26′ E. It is 100 miles from Kābul, with about 300 houses of Hindus, Tajak, Ahwan, and Afghans. It is on the high-road from Peshawur to Kābul, and 1946 feet above the sea. Sir Robert Sale occupied it on the 13th November 1841, and held it to the 7th April 1842, when the garrison was relieved by General Pollock.

Jalalabad was long the residence of a chief of the Barakzai family, who had a revenue of about seven lakhs of rupees a year. The Safed Koh or Rajyal, on its south, attains a height of 15,000 feet; and about 30 miles on its north is the famous Nurgil; on the N.W. the lofty peaks of the Hindu Kush appear.

Earthquakes are repeatedly felt at Kābul. Vigne tells us (Pers. Narrat. p. 212) there are usually a dozen in the course of a year. While the British were besieged at Jalalabad, in 1841, its walls were thrown down by an earthquake. The prevailing rock is gneiss.—*MacGregor*, p. 401; *Burnes' Tr.* i. 23; *Mohun Lal's Tr.* p. 343.

JALALABAD, a name given by Akbar to the town of Arail on the banks of the Jumna, after his own title of Jalal-ud-Din. By a public edict, he abolished the salutation of 'Salam Alaikum,' substituting 'Allaho Akbar,' and the reply of 'Jal-i-Jalaliho;' in both of which are parts of his name, Jalal-ud-Din Muhammad Akbar. The Sipah Salar was ordered to see that the same exclamations were made at meals; and the aftabi, the rupee, and several other coins of his

reign, as well as his seal, bore the inscription, Allaho Akbar, Jal-i-Jalaliho. There are several instances of Arail being mentioned prior to Akbar's time. In the Tarikh-i-Budaoni it is stated that the pargana of Arail was, in A.H. 977, before the composition of the Ayin-i-Akbari, given in jaghir to raja Ram Chund.—*Elliot's Supp. Gloss.* See Nagarahara.

JALALI, a sect of fakirs or darvesh, who look on Syed Jalal Bokhari as their founder. He married two daughters of Syed Badr-ud-Din.

JALALPUR, an agricultural village, in lat. 32° 39′ 30″ N., and long. 73° 27′ E., close to the right bank of the Jhelum river. The village has been identified by General Cunningham with the site of the ancient Bucephala, built by Alexander the Great in memory of his charger, which was killed in the battle with Porus at the crossing of the Jhelum. Amusing Porus by marching and counter-marching his troops along the banks of the river, as if searching for a ford, on the arrival of the boats, he passed the river at Jalalpur, 114 miles from Attock, where it is, in the rainy season, upwards of a mile broad and never fordable. In the battle which ensued, Porus was defeated and taken prisoner. It was at this part of the Hydaspes, on its right or western bank, that the conqueror, in commemoration of this event, built the cities of Nicæa and Bucephala. Remains of ancient walls still crown the summit of the hills, which rise to a height of 1000 feet above the village. Coins found among the ruins date back to the period of the Græco-Bactrian kings. Even in the time of Akbar the town covered a site four times as large as that which it now occupies; but since the foundation of Pind Dadan Khan, and the shifting of the river channel two miles eastward, it has undergone a constant decay.—*Imp. Gaz.*

JALAL-ud-DIN, son and successor of Sultan Muhammad, king of Kharasm. On the advance of the hosts of Chengiz Khan, he defended his country gallantly to the last. He gained a victory near Kandahar, and another still farther to the east, but these successes did not even retard his ruin. His last battle was near Bannu, in A.D. 1221, on the Indus, where, after displaying the most obstinate valour, and witnessing the total destruction of his army, he swam the river with seven followers amidst a shower of arrows from his enemies, whom he left in admiration of his intrepidity. In the course of the night and next day, he was joined by 120 of his soldiers, and before many days had passed he had assembled 4000 horse; but on the Moghuls threatening to cross the Indus, he fled towards Dehli, and applied to Altamsh for aid or an asylum. To this he received only a courteous answer; and, after a chequered career, finding the Moghuls withdrawn from Persia, he re-established his power in that country, opposed them with vigour in a new invasion, but was killed at last, in A.D. 1231, in Mesopotamia, ten years after his passage of the Indus.—*Elph.* p. 321.

JALAL-ud-DIN, one of the most celebrated of the Persian Sufi poets. He was a descendant of Abubakr, the khalif who succeeded Mahomed, and was born at Balkh about the beginning of the 13th century A.D. He finally settled at Koniah (Iconium), where he died A.D. 1273. He was a Sufi, a pupil of Shams-i-Tabriz, and instituted the Maulani sect of darvesh. He is usually honoured with the appellation Maulāna, *i.e.* my lord. His poem, Masnavi, is in Persian, and consists of six books. He introduced the flute as a musical instrument in public worship. Ghulam Kādar Ghilani, 50 years before, had introduced the tambourine. Jalal defended the innovation by saying that the Romans might be converted by the aid of sweet sounds. The Maulani darvesh are excellent flute players. His Masnavi, or 'rhyming couplets,' as the name signifies, is a complete exposition of Sufi doctrines, illustrated with numberless tales, apologues, and scraps of history. It is more highly esteemed by the Shiah sect than perhaps any other work. The complete work consists of six books, containing 26,660 couplets, to which some authorities add a doubtful seventh book, to make up the number of the 'seven planets,' the 'seven zones,' and the 'seven heavens.' It is very unequal in merit,—grand and noble thoughts, exquisite language and imagery, and apposite illustrations being mixed up with much that is dull, commonplace, and stupid. The poem opens with some lines in praise of the reed-flute, Jalal-ud-Din having sanctioned the introduction of music and song as an accompaniment to the religious exercises of his followers. The reed is made to sigh for its separation from its home amid the rushes by the river-side, and the plaintive notes which it utters are said to be in unison with absent lovers' passionate moods because of this inherent sympathy. The Masnavi has been translated by Mr. J. W. Redhouse. It not only contains a full exposition of the tenets of that mystical creed which has preserved alive the ancient Aryan religious philosophy down to the present day under the guise of a Muslim esoteric doctrine, but it is a perfect mine of old-world stories, traditions, and striking sayings. The whole of the folk-lore of ancient Persia is, as it were, poured out into these pages, the tales and legends being used as pegs upon which to hang moral reflections, or brought in to illustrate some mystic dogma. He early adopted a life of literary and religious retirement, and founded a darvesh order and college at Iconium. His followers were called after him Mauliviyeh, and are the same as those known to European travellers as the Dancing Darveshes, from the symbolical dance, or rather waltz, with which they commence their services.

JALAL-ud-DIN MUHAMMAD AKBAR, grandson of Baber, and 7th in descent from Timur, was the eldest son of the emperor Humayun and of his wife Hamida Banu Begum. He was born at Amerkot, in the valley of the Indus, on the 14th October 1542. See Akbar.

JALA-MURTTI, SANSK., whose form is water, a name of Siva.

JALANDHAR, a revenue division in the Panjab, comprising the three districts of Jalandhar, Hoshiarpur, and Kangra, in lat. 30° 56′ 30″ to 32° 59′ N., and long. 75° 6′ 30″ to 77° 49′ 15″ E. The royal family of Jalandhar and Kangra is one of the oldest in India, and trace their genealogy from the time of the founder, Susarma Chandra. The scions of this house claim to be of Somavansi descent, and they assert that their ancestors held the district of Multan, and fought in the Great War on the side of Duryodhana against the five Pandu brothers. Since the occupation of the

plains by the Muhammadans, the ancient kingdom of Jalandhar has been confined almost entirely to its hill territories, which were generally known by the name of Kangra, after its most celebrated fortress. The district is also called Katoch, also Trigartta, which is its Sanskrit name in the Puranas and in the chronicle of Kashmir. It is mentioned by Ptolemy as Kulindrine or Ktulindrine. The British district is occupied by Jat, following Hinduism and the Sikh religion, with Rajputs, Brahmans, Banya, Gujar, Kamboh, Pathans, and Sayyid. The higher portion of he Jalandhar is a tract abounding in mineral wells, where the icy stream of the Parbati is close to the boiling fountain of Munnikarn, which rises in a jet at an elevation of 5587 feet. Some are reported to contain iodine or bromine. In this district, also, and on the banks of the Beas, is Bishiht, at an elevation of 6681 feet, with a thermal sulphuretted source. In the neighbourhood of Mundinuggur, in the Bul-Doon or valley of Sukeyt Mundi, in the Kohistan of Jalandhar, the women, gaily dressed, used to assemble in groups to greet the stranger with songs as he entered each village, for which honour he was expected to bestow a rupee on each knot. It was at Jalandhar where Hindus say the breasts of the corpse of Sita fell.—*As. Res.* vi. p. 477; *Rennell; Cunningham.*

JALANGI, one of the three great rivers of the Nadiya district, Bengal; the other two being the Bhagirathi and the Matabhanga. All three streams are offshoots of the Padma.

JALARUPA, the makara or fish on the banner of Kama, the Hindu god of love.

JALAUN, a British district in the North-Western Provinces, lying between lat. 25° 46′ and 26° 26′ N., and between long. 78° 59′ and 79° 35′ E., with an area of 1553 square miles, and a population of Brahmans, who hold as many as 198 villages; Kurmi, with 107; Gujars, with 105; Kachhwaha, with 84; Sengar, 62; Kayasth, 50; and Muhammadans, 34.—*Imp. Gaz.*

JALIKAT. TAM. A sport in Madura in the south of India. It consists in loosing, either from a large pen or from a number of stakes to which they are tied, a lot of cattle with cloths or handkerchiefs tied to their horns, money being sometimes knotted in the cloths. When let go, the spectators shout and cheer, and a tremendous tom-toming is set up. This so far excites the animals that most of them go off at a gallop, and such of the spectators as wish to distinguish themselves in the eyes of their countrymen as swift runners and brave men, go after the cattle and strive to pull the cloths off the beasts' horns, the cloth and any valuable attached to it being the reward of the captor. This may be considered the national amusement of the people of Madura. It was practised at Trichinopoly, Puducottah, in parts of Tanjore, and was as much their passion as horse-racing is that of the people of England, or bull-baiting that of the people of Spain. The rich ryots, zamindars, and headmen are the great promoters of this kind of sport, by running their own cattle, etc. Directly they find that its practice is attended with danger of being tried for an accident, it is probable that they will voluntarily withdraw from actively continuing it, when it will greatly lose its interest and excitement among the people, and they will then probably voluntarily give it up and take to or invent some more harmless amusement. Since the year 1855, a prohibition has existed against the sport being indulged in, and in 1859 certain village servants were dismissed by the presiding magistrate for permitting it within the limits of their jurisdiction.—*Orme.*

JALKAR. HIND. Fowler, hunter; from Jal, a net. Jal-kar, from Jul, water, is a fisherman. Jal-kar and Ban-kar, products of the waters and woods; Jaliya is the right of fishing, from Jul, water. Jali, a net fabric.

JALLAD. ARAB. An executioner.

JALLALI, a masked or mumming devotee at the Maharram. The Jallali mummers adopt fancy dresses, sing Marsiah, satires, and songs. The great bulk of them are low-caste Hindus and Pariahs.

JALMOR, from Balti, a dark, hard, serpentine-like stone, takes a fine polish. It is used like zahr-mohra for cutting into cups, etc. The value of a cup is from Rs. 3 to 4.

JALNA (Jaulnah), in lat. 19° 51′ N., and long. 75° 54′ E., in the Dekhan, a military station, 38 miles E. of Aurangabad, 1652 feet above the sea.

JALOTSARG. HIND. A Hindu ceremony where a pond or well is married to a neighbouring grove. The typical marriage of a newly-dug well or piece of water, the bridegroom being typified by a man holding a salagram fossil, and the bride by another person holding another of that fossil. Banotsarg and Jalotsarg are peculiar marriage ceremonies of Hindus in Northern India. The Jalotsarg is that of marrying a newly-planted orchard to a neighbouring well, without which it would be deemed improper to partake of the fruit. Brikhotsarg is the marriage ceremony performed in the name of the bull (saur-taurus), which the Hindus of N. India liberate on the 11th day of mourning for a near relative. In N. India these are known as the saur (taurus) bijar, and the British call them Brahmany bulls.

JALPAIGURI, the north-eastern district of the Rajshahi Koch-Bahar division, lies between lat. 26° 0′ 35″ and 26° 59′ 30″ N., and between long. 88° 22′ 40″ and 89° 55′ 20″ E., occupying the tract south of Bhutan and north of the state of Koch-Bahar and the Rangpur district. The Western Dwars became British territory as the result of the war with Bhutan in 1864–65. The newly-acquired territory was formed into the Eastern and Western Dwars. The great bulk of the population belongs to the Koch or Rajbansi. The headquarters of this race are in Koch-Bahar; but Koch, Rajbansi, or Pali are thickly scattered through all Northern Bengal, from Assam to the frontier of Purniah.—*Imp. Gaz.*

JALSA. ARAB., HIND., PERS. An assembly, a meeting of men on business or pleasure; also the assembly or reception room. In an upper-storey house, the Jalsa is usually on the ground floor.

JALTARANG, a set of musical glasses or rather bowls.

JAL-TURPUN. HIND. Presenting water to the gods and manes; part of a Hindu's daily devotions.

JALUS. ARAB. Literally accession; the term applied to the ascent of a throne. In the Southern Konkan the Jalus San or San-i-Jalus has formed

an era commencing with the year of Salivahana 1578 (A.D. 1656), and running on henceforward in the ordinary solar manner. It corresponds exactly with the accession of Sultan Ali Adl Shah II. to the throne of Bijapur.—*Thomas' Prinsep.*

JALWA. HIND. The first meeting of the Muhammadan bride and bridegroom after marriage in the presence of relatives, when certain ceremonies are performed.

JAM, a Hindu title, supposed by Colonel Tod to be a corruption of Sambu, a titular appellation from the Sambu of Alexandria. It is, however, a Hindu title borne by the Jam of Bela, the Jam of Nowanagar in Saurashtra, the Jam of Kej, also the Jam of the nomade Muhammadan Jokya, a Samma tribe, west of Tatta, and has no connection with Jamshid, nor has it a Persian origin.—*Elliot; Burnes' Cabool.*

JAMA, an article of Muhammadan dress, an outer coat.

JAMA. ARAB. A place where Muhammadan people assemble to pray, a house of public worship; also an amount, a total.

JAMA. ARAB., HIND. The revenue payable by a cultivator or a zamindar. Jamabandi, the village rent-roll, a statement of the rents fixed on every field in the township; the annual settlement of the rents between landlord and tenant, the collection of the revenue. The word has numerous combinations. Jama-Kharch, receipts and disbursements; account current.

JAMADAGNI, son of Bhrigu, was father of Parasa Rama by his wife Gandara. He wrote a law treatise and a book on religious ceremonies. He taught that God is visible and assumes every variety of form. He is mentioned in the Sri Bhagavata, the Ramayana, the Ekamra, the Nandikeswara, and the Padma Purana.—*Ward*, iv. p. 43.

JAMADAR, the chief or leader of any number of persons, also a native commissioned officer in the native armies of India.

JAMAI (Waziri), an embroidered white scarf worn by young women of the Waziri.

JAMAL-ud-DIN ABDUR RAZAQ, born at Samarcand A.D. 1413, was the son of Kazi Shah Ruh, who, in 1441, sent Jamal-ud-Din as ambassador to the king of Vijayanagar, afterwards as ambassador to Ghilan, and then to Egypt. See Shah Rukh.

JAMA MUSJID is the principal mosque in Indian towns in which Muhammadans meet for prayer and religious services. The Jama Musjid of Dehli cost ten lakhs of rupees, and took six years in its construction. It was begun and completed in the reign of Shah Jahan. Three of the highest, the broadest, and finest flights of steps in Dehli, made of stone, lead to the front and side entrance, whence the spectator comes to a square platform. In the centre of this is a large cistern, which is intended for the performance of the 'wazu,' or ablutions before prayer. While the three sides open inwardly with a corridor and cloisters, the west of the square platform is the cathedral itself, rising in three large domes and two of the most stately minarets within the town of Dehli. Its space admits of a vast congregation, and on the anniversary of a saint of any celebrity, or on any other particular occasion, it is crowded with Muhammadans.—*Tour in India by French*, p. 10.

JAMAWAR. HIND. A shawl fabric with a pattern in stripes, intended, as its name implies, for a gown piece or jama.

JAMBEE, a cane with stiff stems and large knots, imported from China; a species of calamus.

JAMBHA DATTA, author of the Vetala Panchavinsati.

JAMBHAJI, a Hindu who founded the religious sect known in the Dehli district as the Bishno. They regard Jambhaji as an incarnation of Vishnu; they bury their dead in a sitting position in the floors of their houses or cattle-sheds. They abstain from tobacco, and consider even its touch polluting. At their marriages, passages from the Koran and the Hindu Shastras are indiscriminately recited.

JAMBIA. HIND. A dagger.

JAMBOSA AQUEA. *D.C.*

Eugenia aquea, *W. Ill.* | E. sylvestris, *Moon.*
Jambo, ... BENG. | Wal-jamboo, . . SINGH.

Abundant in the Central Province of Ceylon up to an elevation of 5000 feet.—*Thw. Zeyl.*

JAMBOSA CYLINDRICA. *Thwaites.*

Eugenia cylindrica, *W.* | E. pauciflora, *W. Ic.*

A moderate-sized tree of the Ambagamowa district in Ceylon, up to an elevation of 3000 feet. —*Thw. Zeyl.* ii. p. 115.

JAMBOSA SALICIFOLIA. *Gibson.* Pan jambool. MAHR. A crooked tree growing much on the rivers of the Bombay Dekhan country. The stem is generally useless for house purposes, on account of its crookedness, but the straight shoots are eagerly sought after as rafters.—*Dr. Gibson.*

JAMBU-DWIPA. SANSK. In the Hindu cosmogony, one of the seven grand divisions of the earth, including Asia, and so named from the tree called Jambu abounding in it. Modern commentators, however, allege that it refers only to certain parts of the interior of Asia. In this sense Jambu-Dwipa is the central division of the world. India is so called in the Puranas. The golden mountain Meru is the centre of the mythical Jambu-Dwipa. Geographically, Jambu-Dwipa is the name given by the Indian Aryas to all the mountain region on the N.W. of India, including the ancient Indian province of Afghanistan. The basin of the Indus, which was earlier occupied by the Sudras (Cushites or Caucisas), they called Kouca-Dwipa. It had nine varsha or subdivisions, —Bharata, Kim-purusha, Kin-nara, Hari-varsha, Ila-vrita, which contains Meru; Ramyaka Hiranmaya, Uttaru-kuru, Bhadraswa, and Ketu-mala.

JAMBUKESWARAM, a famous temple, 400 years old, on Srirangam Island, Trichinopoly, Madras, lat. 10° 51′ N., and long. 78° 44′ E.

JAMBULGHATA, a town in the Chanda district, Central Provinces, lat. 20° 33′ N., and long. 79° 30′ E. Extensive quarries of soapstone are at a mile from the village, and have been worked over a hundred years; about 50 cart-loads are annually quarried and fashioned into bowls and platters. Near these quarries are others of a very fine black serpentine, where for three years Raghoji III. employed 250 workmen.—*Imp. Gaz.*

JAMDANI. HIND. Silk fabric with woven sprigs of flowers.

JAMES. Commodore James commanded the E.I. Company's Marine Force in India. In 1755, in alliance with the Mahrattas, he sailed from Bombay, to attack the strongholds of Angria, and on the

2d April, unaided by the Mahrattas, he took Severndrug and Goa. Bancoote surrendered on the 8th April, and in February 1756 he attacked Ghcriah.

Colonel Henry James, R.E., author of General Description of the Country of Abyssinia and of the different Routes leading into it.

JAMES AND MARY, a dangerous shoal in the Hoogly. It is an English corruption of the Hindustani words Jahaz marra, a ship struck; also, it is said, of two Bengal words, Jumma marri, confused water. Shifting and dangerous alluvial deposits formed in the channel of the Hoogly by the meeting of the backwater of the Rupnarayan with the discharge of the Damodar, both of which last-named rivers enter the Hoogly at sharp angles from the west, nearly opposite Falta. Lat. 22° 13′ to 22° 17′ N., and long. 88° 5′ 45″ to 88° 7′ 30″ E.—*Imp. Gaz.* v.

JAMESON. Deputy Surg.-Gen. W. Jameson, C.I.E., formerly Superintendent of Botanical Gardens in the North-West Provinces, died at Dehra Doon on March 13. Three years after his arrival in the country, in 1841, he was sent to report on the geology of the Himalayas with a view to the discovery of the cause of the floods on the Indus. While on this expedition he was captured by the frontier tribes, and kept a prisoner until he was ransomed by the Government, who afterwards appointed him Superintendent of the Botanical Gardens in these provinces. Dr. Jameson devoted his energies to the introduction of tea cultivation into the North-West and Panjab. On his retirement in 1875, Government placed on record the opinion that but for Dr. Jameson's exertions this great and important industry would have had no existence in Northern India.

JAMI, the literary title of Maulana Nur-ud-Din Abdur Rahman, who was born at Jam, a small village near Herat, A.H. 817, A.D. 1101. He devoted his life to study and dissemination of the mystic doctrines of Sufi philosophy, for which, towards the end of his life, he abandoned all other occupations. He was unequalled as a grammarian, a theologian, and a poet. The Rubaiyat of Omar Khayyam, and the Salamān and Absāl of Jami correspond in time with western mediævalism, ranging from the latter part of the 11th to about the middle of the 15th century. The earlier of the two poets represented, Omar of Naishapur, in Khorasan, is said to have been a tent-maker. At all events, his takhallus, or poetical name, Khayyam, taken literally, signifies as much. Nur-ud-Din Abdur Rahman, who took the name of Jami from his birthplace, a little town of Khorasan, came into the world more than 300 years after Omar Khayyam; but there is no such apparent chronological difference between Jami's mystical poems and the Rubaiyat, or stanzas, of Omar, as we should expect to find. The philosophy, half-sad, half-merry, of both these poets is as forward an element of their verse as is the fertile imagination which they share by community of race.

JAMI-ut-TUARIKH. This comprehensive history was written by Fazl ullah Rashid, otherwise Rashid-ud-Din, son of Imad-ud-Daulah. Abul Khair was born at Hamadan about A.H. 645, A.D. 1247. Jami-ut-Tuarikh contains a detailed account of some important events and periods of history. It commences with the usual traditional Muhammadan account of the patriarchs and prophets, a history of the kings of Persia from Kayumars to Yezdejird, and a sketch of the life of Mahomed, of his immediate successors, and of the Ommaiyah and Abbassi khalifs of Baghdad. After this, those of the houses of Mahmud-ibn-Sabaktagin, the conqueror of Ghazni, the Seljukian and Khwarazmian Sultans, and of the Salghuri dynasty in Fars. This is followed by a history of the Ismaili. It is divided into two parts, the first treating of the Alawi khalifs of Egypt and Africa. The second deals with the Ismaili themselves, and especially that section of them who, under the rule of Hasan-us-Sabbah, were known as the Assassins, and gained such unenviable notoriety during the Crusades. The next section of the Jami-ut-Tuarikh deals with the history of Ughuz, the legendary head of the Turks, the founder of their world-wide empire, and the progenitor of the Sabaktagin, Seljuki, and Turkoman Sultans. The history of China is also here appropriately introduced, and ends with its final conquest by Uktai Khan in A.H. 631. The volume next contains a general review of the history of India, and a special account of the Moghul sovereigns, prefaced by an account of the origin of the Turkish races themselves. This part contains a minute account of Chengiz Khan, his ancestors, family, character, and history. The careers of Uktai Khan and of the other celebrated Tartar conquerors, including Kablai Khan, Timur, and Hulaku, are also described, and tables given of the contemporary sovereigns in various parts of the east, from A.H. 549 to 693. Rashid-ud-Din began this book A.H. 700, by order of Ghazan, and completed it in ten years. In A.H. 718 he was put to death by Sultan Abu Sadi, having been accused of poisoning Oiljaitu.

JAMMA, in Coorg, feudal tenure of land, for which the tenant pays a small rent and gives military service. Such land cannot be mortgaged or alienated.

JAMMA ALLAH. ARAB. God's assembly.

JAMMADI-ul-AWAL, the fifth month of the Muhammadan year. Jammadi-ul-Akhir is the sixth month, also styled Jamadi-us-Sani.

JAMMALI, the amiable attributes of the deity.

JAMMA MASJID, the great mosque in the towns of India, where the Friday assemblies take place. Those of Dehli, Agra, Madras, Hyderabad, are of great dimensions. See Jama Masjid.

JAMMU, a province and town in Kashmir State, Panjab. Estimated population, about 8000. Situated in lat. 32° 43′ 52″ N., and long. 74° 54′ 14″ E., on the Johi, a tributary of the Chenab. The town of Jammu is 1500 feet above the sea, and the bed of the Chenab is a little above 1000 feet. The boundary mountains of Jammu rise 12,000 to 14,000 feet. Jammu is the capital of a principality of which the rulers are Dogra Rajputs. The town contains 7000 or 8000 people. It is built on the summit of the first wooded sloping ridge that rises from the plains of the Panjab, and on the right bank, at the place where it is divided by a narrow ravine which allows an exit to the river Ravi? in its way to its junction with the Chenab.

General Cunningham (Ancient Geog. p. 133) gives the following as the States attached to the Jammu division of the Alpine Panjab, viz.:—

2 Hindu States, viz.—
Jammu, to east of Chenab. | Bhao.

9 Muhammadan States, viz.—

Rekasi, on Chenab.	Khariali, near Bhimbar.
Aknur.	Kashtwar, on Upper Panjab.
Punach, on the Punach.	Bhadrwar, to south of Kashtwar.
Rajaori, on the Tochi.	
Kotali, on the Punach.	
Bhimbar, at foot of hills.	

8 Hindu States, viz.—

Chanem, to west of Bhadrawar.	Jasrota, to S. of Bandralta.
	Tirikot, near Jasrota.
Bandralta, to S. of Chanem.	Mankot, to S. of Bandralta.
Samba, to S.W. of Bandralta.	Badwal or Vaddiwasa.
	Ballawar or Bisohli.

General Cunningham also gives (p. 136) the names of 12 States attached to the Jalandhar division of the Alpine Panjab, viz.:—

5 Somavansi, viz.—

Kangra or Katoch.	Datarpur.
Guler.	Siba.
Jaswal.	

2 Surajvansi, viz.—

Chamba, on Ravi.	Kullu, on Beas.

5 Pundir or Pandaya, viz.—

Mandi, on Mid Beas.	Kotila, to E. of Nurpur.
Sukhet, to S. of Mandi.	Kotlehar.
Nurpur, between Ravi and Beas.	

Also (p. 131) the 13 States attached to Kashmir or the western division of the Alpine Panjab, viz.:—

1 Kashmir.

4 Khaha Bamba, viz.—

Gingal, on the Behat.	Khagan, on the Kumhar.
Muzaffarabad.	Garhi.

5 Muhammadan, viz.—

Rash, on Pakhli river.	Darband, on the Indus.
Dhanteshwar, on Dor.	Torbela.
Gundgarh.	

3 Gakkar, viz.—

Pharswala, near Behat.	Khanpur, on Haro.
Sultanpur, on Behat.	

—*Vigne; Schl.; Cunningham, Ancient India.*

JAMNOTRI, a mountain in the Himalaya, in lat. 30° 59′ N., and long. 78° 35′ E., in Garhwal, on the left bank of the Jumna, about 8 miles N. of Kharsali. The hot spring Bassu Tarta and the level of the Jumna there is 9793 feet above the sea. The springs occur on the sides of a massive mountain block, known as Banderpūnch, with an elevation of 20,758 feet above sea-level. In the centre stands a lake, in which the monkey-god Hanuman is said to have extinguished his flaming tail. The water rushes up through a granite rock, and deposits a chalybeate sediment. It has a temperature of 194·7° Fahr. Elevation of the springs, 10,849 feet above the sea.—*Rob.; Schl.; Imp. Gaz.*

JAMRUD, ruined fort in Peshawur district, Panjab, situated in lat. 34° N., and long. 71° 24′ E., at the mouth of the Khaibar (Khyber) pass.—*Imp. Gaz.*

JAMRUH or Jamrat. ARAB. A rite at the Kaba, in Mecca, in which pilgrims throw stones, as if at the devil. It originated from Abraham throwing stones at the ram sent to take the place of his son.

JAMSAN. HIND. A kind of earth containing an alkali; useful in alum manufacture.

JAMSETJEE JEJEEBHOY, a benevolent Parsee of Bombay, who rose to great wealth by commerce. He founded schools and hospitals, and endowed charitable institutions. His private bounties were great, and he sought every opportunity for doing good. On the 3d March 1842, the Queen of Great Britain created him a baronet of the United Kingdom. He was born at Bombay 15th July 1783, and died there 14th April 1859. His public benefactions amounted to upwards of £200,000.

JAMSHID. The fifth king of the Peshdadian dynasty of Persia, who, according to Bailey, flourished 3209 years before the Christian era. The Shah Namah describes him as the first to civilise mankind, and Persian writers consider the bas-reliefs at the ruins of Persepolis—still visible in all their pristine beauty after a lapse of 5000 years—to be representations of the court of Jamshid, more especially on the festival of the Nouroz. The celebrated Persian poet Fardusi wrote the Shah Namah about A.D. 1000, containing three heroes, Jamshid, Faridun, and Garshasp, as the three earliest representatives of the generations of mankind. A little way from the gate of the entrance of Toos, there stands a dome ornamented with lacquered tiles, so small as seemingly to form a part of some private house; this dome covers the dust of this celebrated poet, who, after the unworthy treatment he received from Shah Mahmud Ghaznavi, retired there to die, A.D. 1020.—*Fraser's Khorasan*, p. 510.

JAMSHIDI or Djamshidi, a nomade tribe of Persian origin, who have inhabited the valley of the Murghab river from time immemorial. Their habits resemble those of the Turkoman, living in tents, and are equally predatory. Allah Kuli Khan conquered them and the Turkoman Sariks, their allies, and he removed the Jamshidi to Khiva. They remained on the banks of the Oxus for about 12 years, when, availing themselves of a general rising of the Turkomans, they marched across the desert by Hazarasp, Charjui, and Maimena to their hereditary lands on the Murghab. Jamshidi are the only tribe of Eastern Indians who are exclusively nomades. They derive their descent from Jamshid, and moved out of Segistan to the shores of the Murghab, which they have occupied from pre-historic times. They live in the neighbourhood of the Salor and Sarik Turkoman, and they use the round conical tent of the Tartars, surrounding it with felt and a reed matting, and their clothing and food are those of Turkoman, as also is their occupation, for they are as great man-stealers. They excel the other Aimak as horsemen, and for a chapao band themselves with men of Herat or with the tribes of Turkomans. It was this cause that led Allah Kuli Khan to transport them from Khiva to the banks of the Oxus, after he had conquered them with the allied Sariks. After a residence of 12 years, they fled and returned to the town of Murghab. The Jamshidi is polite in word and manner. They still retain parts of the Zoroastrian faith, reverence fire, pitch their tent-door to the east.—*Central Asia, Collett.* See Iranian.

JAMUNA, a river of Assam, rising in lat. 26° 31′ N., and long. 93° 31′ E., in the north of the Naga Hills. It falls into the Kapili river.

JAMUNA, Jamoona, or Janai is the name given to the lower section of the Brahmaputra in Northern Bengal, from its entrance into the plains to its confluence with the Ganges.

JAN. In India, the Jan, the Gin of the Arabian Nights, is only known amongst the Muhammadans. In Sind, the Jan resembles the Pwacca or Puck of Britain. The Jan of the Baluch Hills is wayward and often morose, but not necessarily malignant. He is described as dwarfish, with large eyes, and covered with long hairs, and often

changes to the form of a camel, goat, or other animal. On meeting a Jan, it is essential not to be alarmed, and to use civil language. The Jan can become the servant of man and work hard. The evil ones are devils whose chief is Iblees (that is Satan, the devil); in general properties they are an intermediate class between angels and men. They eat and drink, and are subject to death, etc. Many of the superstitions respecting them form part of the religion of Muhammadans, being sanctioned by the Koran.—*Burton.*

JAN. HIND., PERS. Life, soul, spirit; hence Jandar, brave, spirited. Janwar, animal.

JANAB. HIND. A respectful form of address to Muhammadans, Hindus, and Europeans; it is the equivalent of 'highness.'

JANAKA, king of Vaideha and father of Sita, a wise, good, and devout man, who, with his priest Yajna-walkya, prepared the way for Sakya Sinha. He refused to acknowledge the hierarchical pretensions of the Brahmans, and claimed the right of performing sacrifices independent of priests. In the time of Buddha, and for many centuries afterwards, the people of Vaisali were called Lichhavi; and in the Trikandasesha, the names of Lichhavi, Vaideha, and Tirabhukti are given as synonymous. Vaideha is well known to the readers of the Ramayana as a common name of Mithila, the country of raja Janaka, whose daughter Sita is also named Vaideha. Tirabhukti is the present Tirahuti or Tirhut. Now the modern town of Janakpur, in the Mithari district, is acknowledged by the universal consent of the natives of the country to be the same place as the ancient Janakpur, the capital of Mithila. The correct rendering of the name is doubtful; but if the bearing and distance recorded by the Chinese pilgrims are correct, it is almost certain that the capital of Vriji in the seventh century must have been at Janakpur. Hiwen Thsang gives the name of the country in its Sanskrit form as Foli-shi, or Vriji; but it is also stated that the people of the north called the country San-fa-shi.—*Dowson; Cunningham.*

JANAKHORI, the tribes in the small valley of Janakhwar in the Hasan Khel, Adam Khel, Afridi Hills, with two subdivisions, Tutkai and Barkai, and can turn out 1500 fighting men. They afforded shelter to men fleeing from justice. The Afridi of Janakhwar are the best of the Afridi, bold and intrepid in action.—*H. A. N. W. F. P.* i. pp. 35, 36.

JANAM. TEL. Birth. Purva Janam, a former birth. Janam Patri, a Hindu horoscope at birth, literally birth-tablet, it being indispensable to every Hindu child, being at once his horoscope and the guide throughout life.—*Burton's Scinde*, p. 399.

JANAM ASHTAMI, the nativity of Krishna, held as a festival on the 8th day of the month Bhadra. It is also called Gokal Ashtami, and is a Hindu festival in commemoration of the birth of Krishna, an event which is said to have taken place at Muttra, at midnight, on the 8th of Shravan, about the 22d August. One Vaishnava sect keeps the holiday Janam on the 8th and another on the 9th of Shravan. Krishna is stated to have been born of Devaki, niece of Kans, king of Muttra. Kans having had it predicted that one of his race would destroy him, he endeavoured to compass the death of Devaki's offspring, in which he failed, and on the 9th, Krishna was removed to the house of a cowherd named Nanda. The worshippers abstain during the day from certain articles of diet; at night they bathe and ornament the image, and offer the tulsi, or Ocimum sanctum. On the following day, a Brahman serves as pujari, and afterwards he himself is worshipped. The 8th day is held by the Gaoli or cowherd race as a great jubilee day; from the circumstance of Krishna having been reared by one of their people, they join hands and dance, and shout Govinda, Govinda. The shrines of Kanoba are much visited at night; the Bhagat of the shrine, by self-flagellation, becomes hysterical, which is deemed by the people to be a possession by the deity, on which they prostrate themselves, burn incense, and present sick people to the Bhagat. On the following day, the Bhagat's disciples work themselves into hysterics.—*Bombay Gazetteer.*

JANAMEJAYA, a great king, son of Parikshit, and great-grandson of Arjuna. Parikshi died from the bite of a serpent, supposed to indicate his death in war against the Naga people of Takshasila, and Janamejaya is said to have sacrificed many serpents (Nagas), hence his title Sarpa-sattrin.—*Dowson.*

JANAMI. MALEAL. A hereditary land proprietor.

JANAM SAKHI, a legendary biography of Nanak.—*Cust.*

JANEO. HIND.

Janwez, Jandum, . MAHR. | Yajno pavita, . SANSK.

This cord or string falls over the left shoulder to the right hip. It is worn by the Brahman, Kshatriya, and Vaisya castes, by the Ved or Bed of Bengal, and in the Dekhan by the five artificer castes. — *Wilson's Gloss.* See Yajana; Zonar.

JANGAMA, the priest of the Lingaet sect, who officiates at their religious rites. Where the population of a village consists in any large proportion of his disciples, he is a member of the establishment, and holds rent-free or inam lands, —thence known as Jangama Inam. He is sometimes domesticated in mat'hs or monasteries, and otherwise is a vagrant living on alms. The doctrines of this sect, as given forth in the 12th century by Basava, their founder, are based on the physiological philosophy of reproduction. They honour Siva under his symbol the lingam, and oppose the Tantrica doctrine of reverencing the Yoni, the symbol of Durga. See Lingaet.

JANGATA. TEL. The Satana, Jherra, and Dhasra are three mendicant sections of religious devotees of the Hindus. The Satana keep a god, Permaloo, the image of an incarnation of Vishnu, in their houses, and worship it daily. They perambulate the streets morning and evening, and accept alms from all but the lowest castes. They often demand alms, threatening otherwise to burn themselves with a lamp or torch. The Dhasra play on the Jangata, Tarti, and Sincu, and hold an iron worshipping lamp in their hands. They walk before the corpse when it is carried to the funeral pile.

JANGLI. HIND. A term applied to wild plants, grains, etc., as opposed to cultivated; also to any low forested country, and to any rude, unpolished person.

JANG TANG. BHOT. Uncultivated pasture lands; the uplands of Tibet.

JANIPHA MANIHOT. *Kunth.*

Jatropha manihot, *Linn.*	Manihot utilissimus,	*Pohl.*
Pu-lau-pe-nang myouk, . . .	BURM.	Mara valli kelangu, TAM.
Marachini, CAN., MALEAL.		Aal vulli kelangu,
Tapioca, Mandioc, .	ENG.	Manu valli gadda, TEL.
Cassava, Bitter cassava, ,,		Manu pendalam,
		Karra pendalam,

The Janipha manihot plant grows about six or eight feet high, with a tuberous root weighing up to thirty pounds. The acrid milky juice, when fresh, is poisonous, but the roots are washed, scraped, ground, or grated into a pulp, and the juice pressed out and preserved. The pulp or meal that remains is called Couaque, and is made into cassava cakes or cassava bread. The expressed juice by standing deposits a white powder, which, when washed and dried, forms what the British call tapioca meal or Brazilian arrow-root, by the French Moussache, and in Guiana, Cypipa, and when this is dried on hot plates, the grains of fecula burst and adhere together and form tapioca. The expressed juice is sometimes fermented with treacle into an intoxicating fluid.

Cassareep, the concentrated juice of the bitter cassava, forms the basis of the West India dish pepper-pot. One of the remarkable properties of cassareep is that meat placed in it is preserved longer than by any process of cooking. Sweet cassava is prepared from the Manihot aipi, which is similar to J. manihot, but has no deleterious properties.

From the facility with which the bitter cassava can be rasped into flour, it is cultivated almost to the exclusion of the sweet variety, which contains in its centre a tough, fibrous, ligneous cord. The bitter variety, however, contains a highly acrid and poisonous juice, which is got rid of by heat or by fermentation, so that cassava bread is quite free from it.

The poorer classes of British India use the tapioca flour, but none is exported. The plant thrives in any soil, although a sandy loam is the best. It requires no cultivation whatever, and is occasionally met with in Arakan, growing wild in the jungle. At the Madras Exhibition of 1855, excellent tapioca was exhibited by Mr. Rundall, of Razole, near Rajamundry.

Pearl tapioca is not from this plant, but from potato starch.—*Tomlinson; J. Agri.-Hort. Socy.* xii. p. 175; *Hogg; Birdwood.*

JANIZARI, said to be from Jeni-tcheri, meaning new soldiers, feudal troops of Turkey, but formed by Amurath out of his prisoners and the Christian youth. Down to the reign of Sulimun the Wise, the Janizaries raised and retained the Othoman power to its highest pinnacle, but under his effeminate successors the Janizaries became a burden, and they frequently revolted. Usman II. was killed in one of their tumults. In 1807 Salim III. was deposed by them, and the regular troops, Nizam-Jadid, dispersed. And in 1808 they burned in his palace Mustaffa Bairactar, because he had revived, under the name of the Seimen, the Nizam-Jadid, whom they then massacred. The Janizaries were ultimately destroyed by Sultan Mahmud.

JANJH, Jhanjhi, also Jala, HIND., plants of the order Hydrocharidaceæ, growing in jhils, tanks, and other stagnant waters, as the Ceratophyllum verticillatum, Hydrilla verticillata, Lemna, Pistia stratiotis, Marsilea quadrifolia, Salvinia cucullata, Salvinia verticillata, Vallisneria.

JANJIRA, a Native State within the Political Agency of Kolaba (Colaba). It is in lat. 18° to 18° 31′ N., and long. 72° 53′ to 73° 17′ E., and is bounded on the north by the Rewadanda creek, in the British district of Kolaba; east by the Roha and Mahad subdivisions of the same district; south by the Bankot creek, in the district of Ratnagherry; and west by the Arabian Sea.—*Imp. Gaz.*

JANNAT. ARAB. Paradise, literally a garden; in Persian Bahisht. Its eight regions or doors or stages of glory as named in the Koran are—

Jannat-ul-Khuld, the garden of eternity.
Dar-us-Salam, the dwelling of peace.
Dar-ul-Qarar, the dwelling which abideth.
Jannat-i-Adan, the garden of Eden.
Jannat-ul-Mawa, the garden of refuge.
Jannat-un-Nain, the garden of delight.
Jannat-i-Illiyun, the garden of Illiyun.
Jannat-ul-Firdus, the garden of Firdus.

In addition to these, Muhammadans believe in seven firmaments (asman), viz. of virgin silver, pure gold, pearls, white gold, silver, ruby, and garnet, and of crystal, in which respectively reside Adam, Enoch, and John the Baptist, Joseph, Jesus, Aaron, Moses, Abraham. Muhammadans assign three places for this terrestrial paradise, the garden of Eden,—one near Damascus in Syria; another towards Obollah in the Arabian Irak or Chaldea; a third in a locality watered by the Nilab, and bordering upon the desert of Nanbandijan in Persia, called Shab Bouvan. It has also been fixed at Samarcand. Ancient traditions place it in Ceylon, where they say Adam was interred, and the Portuguese have named there a peak, a grotto, and an island chain after Adam.

JANNAT-ul-BAQIA, the name of the cemetery at Medina where Hasan was buried; literally the paradise of the eternals.

JANPAN. HIND. A sedan chair. In the Himalaya travelling is generally performed in the janpan by those who can afford it. The janpan is like a large tray with a pair of bamboo shafts behind as well as in front. Ladies have theirs covered over with scarlet cloth.

JANTREE or Jantu. HIND. An almanac or register. The word originally meant a perforated piece of metal through which wire is drawn, and may have subsequently been applied to an almanac on account of its having many open compartments or ruled divisions. See Almanac; Josi.

JAPA. HIND. A repetition of the name of Rama, a religious rite of the Dadu Pant'hi Vaishnava. Japa-mala is a Hindu rosary, consisting of 27 beads, which are told over four times, the number of 108 being the most proper for the repetition of such forms as 'Ram, Ram, Ram!' 'Wah, Guru ji ki Fatah!' 'Shri Ganesaya Namaha!' etc. It is adapted for silent devotion. —*Burton's Scinde*, p. 419. See Dadu Pant'hi.

JAPAG. TIB. Chinese brick tea imported over the Chinese frontier.

JAPAN, in the east of Asia, is occupied by a Mongoloid race. The total area of the empire is 148,456 square miles, and population in 1883, 36,700,118, the number of heads of families being 7,684,986. The total foreign residents in the same year was 6187. The population of the capital, Tokio, in 1883 was 823,557, the next

largest being Osaka, with 293,681 inhabitants. In 1884 the reigning monarch or Mikado was Mutsu Hito, born 22d September 1852, succeeded his father 1867. He is the 123d emperor in unbroken descent, the founder of the dynasty B.C. 660 being Jimmu Tenno. It is an absolute monarchy, tempered by the Daijo-Kwan or Great Council, which is nearly as old as the monarchy itself, and whose members mainly form the heads of the executive departments which correspond in name and organization to the ministries of Europe. Then there is the Gen-roin or Senate, established in 1875, to deliberate on legislative matters, its decisions being subject to confirmation by the Cabinet Council, and sanction by the sovereign. The number of senators is at present 37. Further, there is the Sanji-in or Council of State, created in 1881. Its functions are to initiate and frame bills, and discuss matters transmitted by the executive departments, and also to hear and decide cases relating to administrative questions. Each of the 47 districts (three Fus and 44 Kens) has its governor; while each district is subdivided into counties (Gun) and cities or boroughs (Ku), each with its chief (Cho), who manages local affairs.

Nipon, Kiu-siu, Jesso, and Sikoff, four large Japanese islands, together form a group not dissimilar in geographical configuration to Great Britain and Ireland. In the first island are situated Yedo and Miako.

The island of Nipon, popularly called Japan, is known to the Chinese as Yang-hu or Jih-pun-kwo, and its name signifies land of the rising sun. Kiu-siu or Ximo, the most southern of this group, in lat. 32° 44′ N., and long. 129° 52′ 7″ E., has the harbour of Nangasaki on its western side, is 150 miles north to south by 270 east to west. Sikoff is about 100 miles in length by 60 in breadth.

Sagalin Island is a little smaller in extent than Nipon, and was formerly divided between the Chinese and Japanese, the former holding the northern and the latter the southern half. Its native population are the Kuriles, a very hairy, wild, and untutored race. The chief town in the island of Jesso is Matsmai; the second is Hakodadi. Matsmai is an imperial city, built upon undulating ground, and the hills near are covered with oaks, firs, cedars, poplars, the yew, the ash, cypress, birch, aspen, and maple. Nipon or Nifon or Niphon constitutes the main body and strength of the Japanese empire. Ha-da, a port in Nipon, is about 40 miles from Simoda, and is built on a plain, 80 miles from the metropolis; it contains about 8000 people. The town is divided into wards separated by wooden gates. It contains nine Buddhist and one Sintu temple.

In 1882 the exports valued at £7,447,155, and imports £5,833,608. £6,400,000 were exported by foreigners, and of the imports £5,600,000 imported by foreigners. The staple articles of agricultural production were as follows in 1881:—Rice, 155,629,409 bushels; wheat, 62,049,940 bushels; beans, 10,795,717 bushels. The paper money in circulation in 1883 was valued at £19,658,070 as compared with £22,685,558 in 1879. The total debt in 1883, according to official statement, was £67,073,237. The following is a statement of the revenue and expenditure for the years ending June 30, 1881-1884, the first two actual, the last two the budget estimates:—

	1881.	1882.	1883.	1884.
	£	£		£
Revenue,	12,673,450	14,288,343	13,362,824	15,121,220
Expended,	12,628,182	14,269,798	13,362,824	15,121,220

The new army of Japan is modelled on the German system, compulsory service prevailing. In 1883 the active army was constituted as follows: — Infantry, 44 regiments of 32,964 officers and men; cavalry, one regiment of 482 men; artillery, seven companies, 2687 men; engineers, three companies, 1167 men; commissariat, 520;—total, 37,820. In the first division of the reserve are 42,606 officers and men; in the second division, 16,080; the auxiliary forces, 6033; gendarmes, 1286; the total force in 1883 being 105,110. At the Military College and Military School are 1200 pupils. In the navy are 702 officers and 4511 seamen. The navy in 1883 consisted of eight large ships of war (five ironclads), with 122 guns, total tonnage about 15,000, and horse-power about the same; leaving 18 miscellaneous vessels, with 103 guns, 10,340 tonnage, and 6730 horse-power.

From the 16th century the English have had intercourse with Japan, and from 1613 to 1623 the E. I. Company maintained a factory there. The Dutch from the earliest years had a factory, and St. Francis Xavier made many converts to Christianity. By treaties with the American and European Governments, the country has been thrown open to foreigners, and the extraordinary variety and beauty of Japanese scenery, the strange manners and customs of the people, the unparalleled rapidity of the changes which are transforming the social, political, and religious life of the nation, and the archæological remains which are to be found in the country, have been subjects of great and abiding interest; and the Japanese have eagerly cultivated western science. At first they employed learned men from Europe and America, but these have gradually been replaced by Japanese who had been sent to be educated in Europe.

The Japanese school of art has been eagerly examined by the nations of Europe. Dr. Christopher Dresser wrote on the Architecture, Art, and Art Manufactures; Mr. Quin, the British Consul at Hakodadi, reported on the Lacquer industry; the ceramic and ornamental arts of Japan have been illustrated in a work by Messrs. Audsley and Bowes; and M. Gonse issued a work on l'Art Japonais. The Japanese book, the Ko-gei Shiriyo, on their lacquer industry, has been noticed by Mr. Quin. In this, in drawing and painting, in embroidery, in crusted work and enamel, the Japanese have special schools. In their painting of the human figure there is invariably disregard both of drawing and anatomy, but in the place of these there is an exuberance of the most playful and grotesque action. Mr. Wilkinson (Sunny Lands) mentions a bronze image of Buddha at Kama Kura, 15 miles from Yokohama. It is in a sitting posture, and was cast in the year 1252. Its height 50 feet. Sir J. E. Reid also mentions a bronze seated idol, cast A.D. 743; height from the base of the sacred lotus flower on which he sits to the top of the head, 63½ feet; 1,005,361 lbs. of material were used.

The origin of the ceramic art in Japan is referred to the prehistoric era of Oanamuchi-no-mikoto, and the inventor, Oosei-tsumi. But in B.C. 29, when an empress of Japan died, and, according to immemorial custom, a selection from among the slaves of her household were doomed to death, so that she might not descend unattended into the grave, then arose in the province of Idsoumi the worker in stone and pottery, whose name was Nomino-Soukoune. He made images of clay, and, taking them to the widowed emperor, persuaded him to bury them with the body of the august lady, and to spare the lives of her favourite servants. Thereafter the cruel custom was discontinued, and Nomino-Soukoune was allowed, as a title of honour, the designation Haji,—the artist in clay. It seems probable that for 1500 years or more, pottery only, and not porcelain, was made in Japan; but in the time of Henry VIII. of England, about 50 years before porcelain was first made in Europe, an artist who had travelled in China settled at Hizen, and instituted there a manufactory of the finer ware. But the earthenware of Japan is of such a quality that it has sometimes apparently been described as porcelain. 'Raku' ware, which figures in Japan at ceremonial tea-parties, closely resembles china, but is nothing more than a lead-glazed earthenware, introduced by Ameya, a Corean, about the year 1500. It is said that Ameya's descendants, in the 11th generation, still pursue the trade of their ancestor at Kioto,—such is the permanence of Japanese institutions.

In China it was not till the 3d or 4th centuries of the Christian era that fine materials were employed, and that some degree of perfection was attained. Still, taking the later date, the porcelain of China has a high antiquity, and must have been made at least 1250 years before English porcelain. When the Chinese had acquired a certain amount of skill and perfection, they appear to have rested entirely satisfied with the results, and to have continued producing them without variation for ages. So exclusively were the Chinese the manufacturers of porcelain, that it acquired the name of their land, and became universally known (on its introduction to Europe in 1518) as china. The Japanese have acted differently from the Chinese, and have produced porcelain ware of the finest fabric and in the highest artistic forms.

The Japanese are a Mongoloid race of small stature. The women's hands and feet are small, and their necks and shoulders beautifully modelled. The race are gentle, kind to one another and to animals, but insincere, and personal gain overrides all other thoughts. In hot weather men and women go about the country unclothed. Their greatest failings are licentiousness and untruthfulness. The Aino have square and powerful frames; they have a profusion of coarse black hair, and the men wear long beards; they are peaceable, honest, and sociable.

A very large proportion of the Japanese population is engaged in fishing, mostly, however, as an adjunct to other occupations, and mainly for personal supplies, and not as a trade. In 1881 the number of fishermen was 848,288, and women 753,118, the number of boats being 190,045.

The nobles, when sentenced to death, have the right to die by stabbing themselves, and being beheaded by a selected friend. The rite, known as the Hari Kiri, was instituted in the 14th century.

The mass of the Japanese people are Buddhists; and in 1882 there were 76,275 Buddhist priests, besides 21,011 student priests; Shintooism had 17,851 priests and 1302 students.

Japan and China received with Buddhism many of the essential doctrines of Hinduism. On entering a Japanese temple, one is struck by the analogies to the Christian ritual on the one hand, and to Hinduism on the other. The chantings of the priests, their bowing as they pass the altar, their vestments, rosaries, bells, incense, and the responses of the worshippers, are similar to those in the churches of some Christian sects.

The Shin-shiu sect claims more than 10 millions of the 32 millions of Buddhists inhabiting Japan. It traces its origin back to a Chinese priest, Hwui-yuen, who in A.D. 381 founded a new monastery, in which the Buddha Amiātabha (Infinite Light) and his two great apostles were worshipped. This new school was then called the White Lotus school, and has since spread far and wide. Some of the friars belonging to it were sent to India to collect Sanskrit MSS., and several of these containing sacred texts of Buddhism, particularly descriptions of Sukhāvati, or the Land of Bliss, in which the believers in the Buddha Amiātabha hope to be born again, were translated from Sanskrit into Chinese. They form to the present day the sacred books of the White Lotus sect in China, Tibet, and Japan. After the doctrine of the White Lotus school reached Japan in the 7th century, it branched off into different sects. The Shin-shiu sect dates from A.D. 1174.

The sacred books of the Buddhists in Japan are nearly all Chinese translations of Sanskrit originals. Many of these translations, however, are known to be very imperfect, and of one of the principal sacred texts used in Japan, the Sukhāvati-vyūha, the Description of the Land of Bliss, there are no less than 12 Chinese translations, which all differ from each other.

Of late the study of Sanskrit had become completely extinct in that country as well as in China, and two young priests, Bunyiu Nanjio and Kenjiu Kasawara, were sent to Great Britain.

Bunyiu Nanjio, among other useful works which he did during his stay at Oxford, compiled a complete catalogue of the gigantic canon, called the Tripitaka or the Three Baskets. It contains 1662 separate works,—some small, some immense. In each case the original Sanskrit title has been restored; the dates of the translations, and indirectly the minimum dates of the originals also, have been fixed. This has led to a discovery which, according to Professor Muller, has revolutionized nearly the whole of the history of Sanskrit literature, by showing that between the Vedic literature and the later renaissance literature there lies a period of Buddhist literature, both sacred and profane, extending from about the 1st century before to the 5th century after Christ. The catalogue prepared by Mr. Bunyiu Nanjio at the request of the Secretary of State for India, and printed at the Oxford University Press, is a work of permanent utility, a magnum opus, and has been welcomed in every country where Sanskrit is studied.

Nowhere are the foundations of the earth more frequently and dangerously shaken than in Japan. Few months pass without the occurrence of shocks of greater or less intensity; and so persistent are they, that it has been even found necessary to construct the lighthouses which have been recently erected on the coast on a special system, by which, whatever may be the oscillation of the buildings, the lights should always remain stationary. In the towns and villages also the people have been driven to practise a regular earthquake drill. At the first agitation they rush out of doors, if their houses are open, as in summer; but if it is the cold season, or the houses are closed for the night, each man, woman, or child of sufficient size to act independently, seizes one leaf of the shutters that slide in grooves on the edges of the verandah, lifts it tray-wise on to the head, as a protection from falling tiles or debris, and so, gaining the nearest open space, lays it down on the ground and sits on the middle of it, to minimize the liability to fall into cracks or rents in the earth's surface.

Japan is known to have 40 species of mammals, of which 26 are peculiar to the islands. Of its 165 land birds, 40 are common to Great Britain and Japan, 18 are peculiar to the Japan islands.

The Japanese flora is characterized by an unusually large proportion of woody plants, many of which belong to families which are rare elsewhere so far to the north, and by the abundance of maples, laurels, hollies, hydrangeas, figs, evergreen oaks, and remarkable forms of coniferæ. Taken altogether, it presents much affinity with the flora of the Southern United States of Eastern America. Sciadopitys verticillata, one of the most remarkable, and at the same time one of the rarest, conifers of Japan, is usually seen cultivated in gardens and around temples. Specimens met with in the vicinity of Kanagawa and Yedo were in many instances fully 100 feet in height. —*Fortune, Japan and China; A. R. Wallace*, p. 368.

JAPAN-WAX. Jih-pen-lah, CHIN. Obtained by crushing the ripe seeds of Rhus succedanea? and separating the tallow-like covering by heat. It is employed in candle-making.

JAR. In the Durga puja festival of the Hindus, a sacred jar is an essential article in the celebration of the mysteries, and is marked with the combined triangles, denoting the union of the two deities, Siva and Durga. The worshippers of the sakti, or female principle, mark the jar with another triangle. The Vaishnava sect in their puja use also a mystical jar, which is also marked. These marks, Mr. Paterson says, are called Tantra, and are hieroglyphic characters, of which there are a vast number. He hence deduces the identity of this Hindu puja with some Egyptian rites of a corresponding nature. In the kalasi puja a kalasi or water jar is placed in a chamber as a type of Durga or other divinity, and is worshipped.—*Asiatic Researches*, viii. p. 401.

JARA, the hunter who slew Krishna, mistaking his foot for part of a deer.

JARAB was the son of Sultan, the son of Eber, and brother of Peleg, and from him the ancient Arabians derive their ancestry. The Yaharabi, therefore, who claim the nearest approach to the parent stem, trace their genealogy further back than the other tribes in Arabia, and may, undoubtedly, be pronounced the oldest family in the world. Saba, the grandson of Sultan, founded Saba, and the Sabæans are supposed to be identified with the Cushites, who dwelt upon the shores of the Persian Gulf. This was the position which the seceders occupied at the period of the dispute for the khalifat between Ali and Mowaiyah, and it throws a ray of light upon the mist that envelopes the history of this remote period, when we find some direct evidence bearing on a point which has heretofore been a matter of mere conjecture. The name of Arabia, with some show of reason, has also been derived from the Jarab here alluded to.—*Wellsted's Travels*, i. p. 8.

JARAH. HIND. A surgeon. Jarāhat is surgery.

JARAK, a little town on an eminence overhanging the western bank of the Indus, about midway between Hyderabad and Thatha. It is the boundary between Vichalo or Middle Sind and Lar or Lower Sind. Three miles below Jarak is another low hill covered with ruins, which the people call Kafir Kot, and attribute to Raja Manjhira.—*Cunningham's India*, p. 287.

JARAN. JAV. A white wood of Java, taking the tool easily; the natives prefer it to all others for the construction of their saddles, which consist principally of wood.

JARAS, the hunter who accidentally killed Krishna.—*Dowson.*

JARASANDHA, a warrior king of Magadha, of a Turanian dynasty, to whom various deeds and dates are assigned; perhaps several rulers bore this name. He twice waged war against Mathura, the Behar of the present day. Krishna repulsed the first invasion, but after the second invasion Krishna and the Yadava retired to Dwaraka. Jarasandha and Sahadeva, according to Professor Wilson, were contemporaries, B.C. 1400. Jarasandha is supposed by Sir William Jones to have been a contemporary of Krishna and Yudishthra, B.C. 3101. Jarasandha, king of Magadha, is the historical personage amongst the heroic kings of the Mahabharata. It was his wars and conquests which occasioned the great popular movement that took place immediately before the era of the five Pandava kings. He drove the Yadava from their settlements on the Jumna, and brought 86 kings prisoners to his capital. He held imperial sway. It was he who opposed Semiramis, B.C. 1230, defeated and drove her back to the Indus with immense loss. He was son of Brihadratha and grandson of Vasu. He was of the dynasty of the Barhadratha, which Bunsen estimates, B.C. 986, was followed by the following dynasties:—Pradotya, B.C. 646; Bimbisara, B.C. 578. In this dynasty Buddha appeared as a teacher, and died B.C. 543. Seshunaga, B.C. 446; Nand, 378; Maurya, whose first was Chandragupta, 312. After Jarasandha's death, his kingdom fell to pieces, and it was followed by the murderous war amongst the princes of the Kaurava and Pandava.—Jarasandha ka Baithak, a Buddhist tower near Sarnath, 28 feet in diameter and 21 feet high, with a basement 14 feet high. Its total height, when complete, was probably 56 feet. Fergusson says (p. 45) it is also described as a brick st'hupa at Giryek, 7 miles E. of Rajgir; another at Rajgir, the ancient Rajagriha.—*Wheeler's Hist.*

of India, i. pp. 164, 475; *Bunsen*, iii. pp. 547-591; *Ferguson and Burgess, Cave Temples of India*, p. 45.

JARGAH and Nargah, the great circle of beaters in the Mongol hunting parties.

JARIB or Jureeb. HIND., PERS. A measuring chain or rope. Before Akbar's time it was a rope. He directed it should be made of bamboo with iron joints, as the rope was subject to the influence of the weather. In British survey measurements a chain is used. A jureeb contains 60 guz, or 20 gut'ha, and in the standard measurement of the Upper Provinces is equal to five chains of 11 yards, each chain being equal to 4 gut'ha. A square of one jureeb is a bigha. A jureeb in Hebrew and Arabic signified originally only a measure of capacity, equal to 4 qufeez, or 384 mud (Latin, modius), and in course of time came to signify the portion of land which required as much to show it as a jureeb would contain. The pat'ha and nalee of Garhwal and Kamaon have a similar origin. This use of the term must have altered before the reign of Timur, for in the Institutes we have an injunction, which is evidently the foundation of Akbar's division of soil into three classes. The words qufeez and mud are both retained in the Spanish cafiz and almud. Indeed, nearly all the Spanish weights and measures are, like very many administrative words, derived from the Arabic, as the quintal of one hundred pounds, from kintur, of which the fourth (rooba) is the arroba; arralde, a pound, from arrattle; xeme, a span, from shamah; and so on.—*Elliot, Sup. Gloss.; Al Makkari*, i. p. 500; *Asasu-l-Loghat.*

JARID. ARAB. A reed, a javelin, thrown by the hand in the manner of the Roman pilum.

JARIDAH. ARAB. A book, a volume, a register, an account book, a branch of a palm tree stripped of the leaves; a number of horsemen or horses, part of a large body.

JARID-BAZEE. PERS. An athletic exercise, either played by two men on horseback, with a spear-shaft twelve or more feet long, or by a single horseman, with a stick two or three feet in length. In the former, the two opponents alternately gallop after each other, throwing the jarid or spear-shaft with full force; the aim of the thrower is to hit and unhorse his opponent, while he, by his dexterous agility, is not only to elude the blow, but to seize the weapon in the air, and attack in turn. The other game simply consists in putting the horse to its utmost speed, and dashing one end of the short stick on the ground, so that it may rebound upwards and be again caught. In Syria, horsemen armed with these ride at full speed, and throw their jarid against each other from a considerable distance. The assailant, so soon as he has thrown, turns his horse, and his antagonist pursues and throws in his turn. The sport is not unattended with danger. The Mamluks used to make these jarid staffs from the branches of the palm tree stripped of their leaves, about 4 feet long, and weighing 5 or 6 lbs. They are still so made in Persia.—*Pottinger's Travels.*

JARI-PATKA. MAHR. The pennon of the Peshwa's standard, or his flag. Qu. Zari-patka, golden pennon.—*W.*

JARRAH, a wood of Western Australia, Eucalyptus marginata, *Smith*, unsurpassed in soundness and durability; for all works of magnitude, such as dock-gates, wharves, etc., requiring strength, it is without equal. It is applicable for almost all purposes; is highly effective in all ornamental work, and most useful for all the requirements of the house-carpenter, such as window frames, doors, beams, and every description of furniture, and when cut at the proper time of the year, and allowed to season before being used, it has proved almost indestructible. It sets at defiance white ants on land, and the Teredo navalis in water. It is used for roofs, floors, window frames, mantelpieces, tables, and doors, resisting insects like so much marble, and is capable of receiving the highest polish.

JARTIKKA, one of the Arashtra races, the Adraistæ of Arrian, who places them on the Ravi. The Bahika was a tribe occupying the neighbourhood of the Indus near Attock, at the time of Alexander and Chandragupta. The Bahika also were one of the republican races known as the Arashtra (SANSK.), or the kingless, the republican defenders of Sangala or Sakala. The Arashtra were known by the several names of Bahika, Jartikka, and Takka, from which last is the name of their old capital of Taxila or Takka-sila, as known to the Greeks. The Takka people still exist in considerable numbers in the Panjab Hills; and their alphabetical characters, with the name of Takri or Takni, are now used by all the Hindus of Kashmir and the northern mountains, from Simla and Sabathu to Kábul and Bamian.—*Sir H. Elliot.*

JARYA, a tribe in Nepal, south of the Gurung, with whom they are intermixed and intermarry. They are Hindu in creed and manners. They may pertain to the Gurung, Nagar, or Newar tribes. See Newar.

JASHN. ARAB., HIND. A royal ceremony, an entertainment.

Jashn-i-Wazan, the ceremony of weighing a person against money and ornaments, to be afterwards given away in presents or charity.

JASHPUR, a tributary state of Chutia Nagpur, in the Bengal Presidency; area, 1947 square miles. Bounded on the north and west by the tributary state of Sirguja, on the south by Gangpur and Udaipur, and on the east by the Lohardaga district. The population consists of the Oraon, who are of the Dravidian race, with many of Kolarian descent.

JASMINUM. Many of the jasmine genus of plants are very pretty shrubs, with white and yellow flowers, in most cases scented. The Yuthika savala kesi, having golden or auburn hair, brown as the yellow jasmine, was deemed a mark of beauty in ancient India, and in the west of India such hair is even now sometimes seen, but the prejudice in favour of ebon locks is so strong that it is considered a morbid affection of the hair, and the women dye and conceal it. In the Hero and Nymph occur the words,—

'Her voice is music, her long tresses wear
The jasmine's golden hue.'

Jasmínum angustifolium, *Roxb.*

J. vimineum, *Willd.*	N. triflora, *Burm.*
J. triflorum, *Pers.*	Mogorium triflorum, *Lam.*
Nyctanthes angustifolia, *L*

Grows in the forests of the Peninsula of India. Its root is used medicinally.—*W. Ic.; Roxb.*

Jasminum arborescens, *Roxb.* i. p. 95.

Nyctanthes grandiflora, *Lour.*

Buro-koondo, . . BENG. | Munem-manus, . HIND.

Grows in all the south-east of Asia.

Jasminum auriculatum, *Roxb.*

J. trifoliatum, *Pers.* | Mogorium trifol. *Lam.*

Juhi, ... HIND. | Tella adavi malla, TEL.
Yerra adavi malla, TEL. | Mallalu, Sannajajulu,

This small, sweet-flowered species grows in the Mauritius, Bengal, Assam, Ajmir, and is much cultivated.—*Roxb.*

Jasminum chrysanthemum, —?

J. revolutum, *W. Ic.*

Pela chambeli, . HIND. | Pachcha adavi malla, TEL.
Hema pushpika, . SANSK. |

This grows in Bengal and the mountains on the N.E. of India. It is a free flowerer, and highly ornamental.

Jasminum grandiflorum, *Linn.*

Myat-læ, . . . BURM. | Chambeli, Jati, . HIND.

A native of the East Indies, and much cultivated for the flowers. This and another species yield the true essential oil of jasmine of the shops. It is the most exquisitely fragrant species of the genus, and is very generally cultivated, the oil being much prized as a perfume; and the large white flowers, having a most powerful scent, and being in blossom throughout the year, are used in garlands on all festive occasions. In Hindu medicine, the flowers are considered a bitter and cool remedy, and are employed as an application to wounds, ulcers, boils, and eruptions of the skin. They act as an aromatic stimulant, and might be used as a substitute for the sambucus, elder flowers.—*Roxb.*

Jasminum heterophyllum, *Roxb.*

J. hirsutum, *Linn.* | Nyctanthes hirsuta, *Linn.*
J. pubescens, *Willd.* | N. pubescens, *Retz.*

Hazarea mugra, . ,, | Mallai, ... TAM.

There are two varieties of this beautiful and very fragrant twining plant, one is J. sambac, plenum, the great double Arabian jasmine, the rich-lobed branches of which are studded all over like the snowdrop tree with lovely white flowers, the size of small roses, and delightfully fragrant. This variety is probably more cultivated than any other flower, though the single-flowered, with a twining habit, is not unfrequently to be seen. The single variety is called Motiya; but beautiful varieties called Satha, with single and double flowers, which have the odour of fine green tea, are also cultivated. J. sambac is used to decorate the hair of the Chinese ladies, and to garnish the tables of the wealthy. All Chinese gardens, both in the north and south, are supplied with this favourite flower from the province of Tokein. This, J. paniculatum, and Olea fragrans, the orange tree, Murraya exotica, Aglaia odorata, and Chloranthus inconspicuus, are grown for their blossoms, which are used for mixing with the tea. The flowers of the sambac are supposed by the Hindus to form one of the darts of Kama Deva, the Hindu god of love.—*Roxb.; Riddell; Fortune; Stewart; Irvine; Wight.*

JASPER.

Jaspis, . DAN., DUT., SW. | Diaspro, . . . IT.
Jaspe, . FR., PORT., SP. | Jaspis, . . LAT.
Jaspiss, ... GER. | Jaschma, . . RUS.

Jasper, a quartzose mineral of a red and yellow colour. Jasper, onyx, common opal, and bloodstone are found in abundance in many parts of the Dekhan and amongst the Cambay stones. Yellow jasper occurs on the Tenasserim, but it is not of common occurrence. A soft green jasper, also precious green jasper, and striped jasper, are found in the Burmese provinces.—*Mason.*

JAT or Zat. HIND. Caste, clan, tribe, occupation. Jat-bhai, a fellow-countryman, one of the same sect or clan. When a Rajput has children by a Sudra woman, they are called Jat.

JAT, also written Jet, Jit, Jut, and Zjhut, a great race spread throughout all the N.W. of British India, in Afghanistan, the Panjab, all Baluchistan, the valley of the Indus, Sind, the Indian desert, Rajputana, and the N.W. Provinces. Mr. Growse says the Jat are supposed to be the Xanthii of Strabo, the Xuthii of Dionysius of Samos, the Jatii of Pliny and Ptolemy. They have been identified with the Getæ and their great subdivision the Dhe, with the Dahæ, whom Strabo places on the shores of the Caspian. The existing division between the Jat and the Dhe has been traced back to the continuity of the Massa Getæ, or Great Getæ (Massa, PEHLAVI, great), and the Dahæ, who dwelt by the side of each other in Asia Minor. The weight of authority is in favour of a Scythian origin for the Jat, and a similar descent has been claimed for some of the Rajput tribes.

The parent country of the Jat seems to have been the banks of the Oxus between Bactria, Hyrcania, and Khorasmia. In this position there was a fertile district, irrigated from the Margus river, which Pliny calls Zotale or Zothale, and General Cunningham believes this to have been the original seat of the Jat, the Jatii of Pliny

and Ptolemy, and the Xanthii of Strabo. The term Jat is only their tribal name; the general name of their horde is Abar. Taking these two names, their course from the Oxus to the Indus may be dimly traced in the Xanthii of Strabo, the Jatii of Pliny and Ptolemy, the Xuthii of Dionysius of Samos, who are coupled with the Arieni, and in the Zuthii of Ptolemy, who occupied the Karmanian desert on the frontier of Drongiana. Subsequently, the main body of the Jatii seem to have occupied the district of Abiria and the towns of Pardabathra and Bardaxema in Sind or Southern Indo-Scythia, while the Panjab or Northern Indo-Scythia was chiefly colonized by their brethren of the Medes.

In proceeding eastwards by the Bolan pass and other routes, they succeed the Tajak and Dehwar of the west of Afghanistan and the vicinity of Kandahar, and occupy the plains and the hilly country, descending into the plains, spread to the right and left along the Indus and its tributaries, occupying Upper Sind on one side, and the Panjab on the other. But in the Panjab they are not found in any numbers north of the Salt Range, and in the Himalaya they are wholly unknown, which would seem to show that the Jat did not enter India by that extreme northern route. Also, the Jat does not occupy Lower Sind, and they are not found in Gujerat. The Jat is, however, the prevailing population in all Upper Sind, and their tongue is the language of the country. They were once the aristocracy of the land, but latterly have been dominated over by other races, and thus have lost somewhat of their position as the higher classes of society. In the south and west of the Panjab, too, they have long been subject to Muhammadan rulers. But latterly, as the Sikh religionists, they became rulers of the whole Panjab and of the country beyond as far as the Upper Jumna, in all which territories they are still, in every way, the prevailing population. Over great tracts of Hindustan, three villages out of four are Jat, and in each Jat village this race constitute perhaps two-thirds of the entire community, the remainder being low-caste predial slaves, with a few traders and artisans. The Jat extend continuously from the Indus over Rajputana. The great seat of Rajput population and ancient power and glory was on the Ganges; but since vanquished there by Muhammadans, the chief Rajput houses have retired into the comparatively unfruitful countries now known as Rajputana, where, however, the Jat is the most numerous part of the people. They share the lands with the Mina, the remains of the Brahman population, and the dominant Rajput, but they have the largest share of the cultivation. The northern part of Rajputana was partitioned into small Jat republics before the Rajput were driven back from Ajudiah and the Ganges. The southern and more hilly parts of Rajputana are not Jat, but are occupied by the Mhair, Mina, and Bhil; but in Malwa, again, the Jat are numerous, and seem to share that province with Rajputs and Kunbi. Bhurtpur and Dholpur are Jat principalities. Those of Baluchistan are fine athletic men, with handsome features, but rather dark. Those in Upper Sind, up the course of the Indus, and in the South-Western Panjab, are for the most part of the Muhammadan religion. They have been long subject to foreign rule, and seem to be somewhat inferior to their unconverted brethren. In all the east of Baluchistan, the Baluch are but a later wave and upper stratum. There, about the lines of communication between India and Western Asia, in the provinces of Seistan and Cutch Gandava, the Jat form probably the largest portion of the agricultural population, and claim to be the original owners of the soil. In the west, advancing through Rajputana, we meet the Jat of Bhurtpur and Dholpur. Gwalior was a Jat fortress belonging, as is supposed by Mr. Campbell, to the Dholpur chief. They do not go much farther south in this direction. From this point they may be said to occupy the banks of the Jumna, all the way to the hills. The Dehli territory is principally a Jat country, and from Agra upwards the flood of that race has passed the river in considerable numbers, and forms a large part of the population of the Upper Doab, in the districts of Alighur, Merut, and Muzaffarnagar. They are just known over the Ganges in the Moradabad district, but they cannot be said to have crossed that river in any numbers. To sum up, therefore, the Jat country extends on both sides of the Indus from lat. 26° or 27° N. up to the Salt Range. If from the ends of this line two lines be drawn nearly at right angles to the river, but inclining south, so as to reach lat. 23° or 24° N. in Malwa, and lat. 30° on the Jumna, so as to include Upper Sind, Marwar, part of Malwa on one side, and Lahore, Amritsar, and Ambala on the other, then connect the two eastern points by a line which shall include Dholpur, Agra, Alighur, and Merut, and within all that tract the Jat race ethnologically predominates, excepting only the hills of Mewar and the neighbourhood, still held by aboriginal tribes. Advancing eastwards into the Panjab and Rajputana, we find Hindu and Muhammadan Jat much mixed, and it often happens that one-half of a village or one branch of a family are Muhammadans and the other Hindus. Farther east, Muhammadan Jat become rarer and rarer, and both about Lahore and all that part of the Panjab along the line of the Upper Sutlej and Jumna, the great mass remain unconverted. In the Panjab, the Jat all take the designation of Singh, and dress somewhat differently from ordinary Hindu Jats; but for the most part they only become formally Sikhs where they take service, and that change makes little difference in their laws and social relations. The Jat of Dehli, Bhurtpur, etc., are a very fine race, bear the old Hindu names of Mull and such like, and are not all Singhs. In Rajputana, the Jat are quiet and submissive cultivators. They have now long been subject to an alien rule, and are probably a good deal intermixed by contact with the Mina and others.

Captain Postans tells us that the Jat in Sind, like all the tribes in the Sind countries, are divided into innumerable subdivisions, called Koum, and are a hard-working race, occupying themselves in rearing camels, feeding flocks, or cultivating the soil. They are invariably found in large communities, often living in temporary huts or wand, and migrate all over Sind and its confines, as shepherds, in search of pasture. Where this is not the case, they are farm servants either of the Baluchi chiefs or wealthy zamindars,

who repay their labour with a modicum of the produce. The Jat in Sind are a quiet, inoffensive class. Their women are, throughout the country, noted for their beauty, and, to their credit be it also spoken, for their chastity. They work as hard as the men, and the labour of tending, driving home their flocks, milking the cattle, etc., is fairly divided. The Jat are very numerous, and form a large division of the population of Sind, though seldom found in its towns, being dispersed over the whole face of the country, particularly eastward to the desert tract which separates Sind from Cutch, known as the Runn, on which this tribe rear large flocks of camels.

In 416 of the Hijira (A.D. 1026), Mahmud marched an army against the Jat, who had harassed and insulted him when returning from his last expedition against Saurashtra. These Jat inhabited the country on the borders of Multan, along the river that runs by the mountains of Joud. When Mahmud reached Multan, finding the Jat country defended by great rivers, he built fifteen hundred boats, each armed with six iron spikes projecting from their prows, to prevent their being boarded by the enemy, expert in this kind of warfare. In each boat he placed twenty archers, and some with fire-balls of naphtha to burn the Jat fleet. The monarch having determined on their extirpation, awaited the result at Multan. The Jat sent their wives, children, and effects to Sind-Sagur, and launched four thousand, or, as others say, eight thousand boats well armed to meet the Ghaznians. A terrible conflict ensued, but the projecting spikes sunk the Jat boats, while others were set on fire. Few escaped from this scene of terror; and those who did met with the more severe fate of captivity. Many doubtless did escape; and it is most probable that the Jat communities, on whose overthrow the state of Bikanir was founded, were remnants of this very warfare.

The Jat who remain of the Hindu religion are divided into clans, and they marry into their own, usually one wife, or, failing children, take another. Their widows can re-marry, and they can take the wife of a deceased brother if she has not had offspring. They are not strict as to the manner of cooking or eating their food. They are good agriculturists, honest carriers, and are a bold, independent, but not boorish race. In the Merut division, they are considered the most valuable subjects, the most industrious of all the castes, patient and long-suffering as taxpayers, quiet and peaceable generally, but, like the Rajputs, easily roused to avenge a fancied wrong, or in obedience to their chieftain's call. Many eat animal food; they are hardy, amenable to discipline, and make good soldiers. Though professing Hinduism, they are remarkable for their contempt of the Brahmans.

The Jat Singh of the Panjab and Upper Sutlej may probably be taken as the best representative type of the race. Compared to northern races, they are dark; they are tall, large, and well-featured, with plentiful and long beards, fine teeth, and a very pleasant, open expression of countenance. They are larger and taller than the Afghan Pathan, with the upper part of the body especially well developed, but not so stout limbed or quite so robust. They are a fine, remarkably handsome race of men, not excelled by any race in Asia. In courage, energy, and military qualities, they excel the more beautiful non-Pathan races of the northern hills, and they are as energetic in the peaceful arts as in that of war. They are good cultivators, hard-working, and thrifty; they let little land lie waste, and pay their land tax punctually. Their women work as well as the men, and make themselves generally useful. They are not learned, though many men and some women can read and write. They have a great craving after fixed ownership in the soil. They are essentially agriculturists, seldom gardeners, and in Hindustan are never pastoral. They breed cattle largely, and sometimes rear camels when the country is suitable; and in Jat countries both ordinary carts and large mercantile waggons are usually plentiful, and as waggoners they not unfrequently carry their grain and other produce to distant markets on their own account. The Jat formerly dwelt in Rajputana in republics, such as, in the time of the Greeks, were alluded to as democratic institutions, and one recognised republican state, that of Phul or Maraj, came down to the present day, and was the last recognised republican state in India. It was a Jat republic, and gave the chiefs who founded the states of Patiala, Nabah, Jheendca. The old territory of the Phulkian race was recognised by the British, and treated amongst the protected Sikh States, but has recently been brought under the general rule of British dominion. Every Jat village, however, is, on a small scale, a democratic republic, every man having his own separate and divided share of the cultivated land. The union in a joint village community is rather the political union of the commune, so well known in Europe, than a common enjoyment of property. A father and son may cultivate in common, but commonality goes no further. The village site, the waste lands and grazing grounds, and, it may be, one or two other things, belong to the commune, and the members of the commune have, in these, rights in common. For all the purposes of cultivation, the remainder of the land is in every way separate individual property. The government is not patriarchal, but a representative communal council or panchayat. Re-marriage of widows is permitted. All the Jat are subdivided into many gentes and tribes, after the usual fashion of the peoples of the Aryan or Indo-Germanic stock, and the usual fashion is to marry into another gens. The Jat have little of the Hindu ceremonial strictness, and in Panjabi regiments they messed freely like Europeans, and had their two or three meals a day comfortably. The Jat, Rajput, and their congeners are branches of one great stock. Brahmans of Kashmir and the frontier hills are Hindus in an earlier stage of Brahmanical development. The Jat country is just such as would be occupied by a large stream of people issuing through the Bolan pass, in lat. 28° or 30° N., and the Rajput are ranged in a semicircular form around the eastern and northern and south edge of the Jat area, the mass of them occupying the richer valley of the Ganges. Mr. (Sir G.) Campbell's conjecture is that the Rajput are an earlier wave from the same source as the Jat, who came in by the same route, have farther advanced, and been completely Hinduized, while the Jat have come in behind them. Panjabi is the language spoken by the Jat, but which, in

Upper Sind, is called Jati Gui or the Jat tongue; and Mr. Masson calls it Jetki. It is an Indo-Germanic tongue allied to the Sanskrit. In its main grammatical and essential features it is not widely different from the Hindi of the Rajput and other Hindustan people. It is one of the most Prakrit of Indian vernaculars. The Jat are partly Hindu, partly Sikh, and partly Muhammadan. They all refer to the west of the Indus and to Ghazni as their original seats; the Dhe or Pachhade reached India from the Panjab about the middle of the 18th century. The other section is the Hele or Deswale. Sind Jat seem to have entered by the Bolan pass, occupied the high pastoral lands about Quetta, and thence descended into the plains, which they still occupy. The Jat is the great agricultural tribe in the Panjab, and, in Panjab parlance, Jat and zamindar or cultivator are synonymous. There are no Jat in Kashmir or within the hills. The Aodi tribe of Jat dwell in Panipat and Soneput. The Aolania Jat in Panipat claim to be above other Jat, by having had the title of malik or king conferred on them. The race, however, spread throughout the Panjab, down the Indus into Cutch Gandhava, and eastwards to the Jumna and Ganges, is the same, and wherever spread they retain a dialect of their own. Mr. Masson seems to imply that they are descendants of the Getæ who, he says, once possessed the whole of the countries immediately east and west of the Indus. The zamindars or cultivators of the soil at Jell, as throughout Cutchi, are Jat, who there seldom moved abroad but on bullocks, and never unless armed. A Jat might generally be seen half-naked, seated on a lean bullock, and formidably armed with matchlock and sword. In the Panjab they are not found west of the Jhelum, but east of that river the Jat cultivators use waggons. The Jat has been so long settled in Cutch Gandhava as to appear the aborigines. Amongst their numerous subdivisions are the Kalora, Kokar, Hampi, Tunia, Abrah. The custom among the Jat of Curao, also written Karao, seemingly from Karana, to cause to do, is the term among the Jat, Gujar, Ahir, and other races and tribes in Western Hindustan for concubinage generally, but more especially for marriages of widows with the brother of a deceased husband.—*Aitcheson's Treaties; Campbell, Ethn. of India; Beng. JATA. SANSK. A knot of hair on the heads of Hindu and Buddhist devotees. The Jata, or matted hair, was assumed by Rama and Lakshmana on dismissing the royal chariot at the village of Sringavera, to indicate their entering upon a forest or ascetic life. Jata therefore is a twisted braid of hair, worn by Hindu ascetics.

JATAIYU, a fabulous bird killed by Ravana.

JATAKA, the tenth division of the Sutra-Pitaka, or second book of the sacred canon of the Buddhists, has legends relating to Sakya Muni, or Buddha's previous existences, which he is said to have related at various times to his hearers, and in which a good deal of his doctrine is embodied. These legends are still very popular all over the world of Buddhism, and have spread far beyond it, being the oldest source of Æsop's Fables, and of the fairy tales, folk-lore, nursery songs and rhymes of every country in the world. Often they become changed, almost beyond recognition, till Gautama Buddha even figures as a Christian saint in the Romish calendar. The life of Barlaam and Josaf, attributed to St. John of Damascus, has been shown by Professor Max Muller to be the life of Gautama Buddha as told in the Jatakas. Its Latin title is S. Joannis Damasceni Barlaam Eremitæ et Josaphat Regis Indorum Gregorio Trapezuntio interprete, Prince Josaf being none other than Gautama Buddha, and St. Josaphat, who is worshipped by Catholics as a saint on every 27th of November. Colonel Yule believes also (Marco Polo, ii. pp. 304-309) that the story of the Holy Grail (Sangreal) had its origin in the Buddhist legends of the begging bowl of Sakya Muni; and he has been identified by Mr. Rhys Davids with the Man in the Moon, Gautama in a former state of existence having been a hare, and in the Kalmuk version of the Jataka legend the soul of that hare was translated to the moon, where he is still plainly visible to Kalmuk eyes.

The fables included in the Jataka book undoubtedly belong to the oldest Indian folk-lore; but they are universally ascribed by the commentators to Buddha himself. From all that is known of the life of Gautama, it was quite consonant with his method to make use of the household stories of the people in order to bring home to them the practical bearing of his moral teaching. A great deal of the Birth Stories, however, probably grew up after his death, and it is beyond doubt that in its present form the Jataka book represents a long process of accretion. Each story consists of several parts, and these are by no means of equal antiquity. The real Birth Story, or Story of the Past, is introduced by a Story of the Present, and is followed by a conclusion. The introductory story tells some episode of Buddha's life; how some disciple acted in such and such a way, and how Buddha accounted for it by the fact that the same person in a previous existence had behaved in a precisely analogous manner. The Birth Story itself is the account of this passage in the previous birth, put into the mouth of Buddha, who generally utters a stanza pointing the moral. The conclusion establishes the connection between the two episodes and identifies the characters. The introductory Story of the Present is clearly later than the Story of the Past, and is the work of the compiler or commentator; and the verses included in the latter (and sometimes in the former) are older in literary form than the stories, though the stories undoubtedly represent in substance popular fables which existed long before the verses were composed. There is a freshness and simplicity about the Stories of the Past that is sadly wanting in the Stories of the Present; so much so, that the latter (and this is also true of the whole long introduction containing the life of the Buddha) may be compared more accurately with mediæval legends of the saints, than with such simple

stories as Æsop's Fables, which still bear a likeness to their forefathers, the Stories of the Past. The Jatakas so constituted were carried to Ceylon in the Pali language, when Buddhism was first introduced into that island about B.C. 200; and the whole was there translated into and preserved in the Singhalese language (except the verses, which were left untranslated) until the compilation in the fifth century A.D., and by an unknown author, of the Pali Jataka Book.

As an example of the general character of the stories in their several parts, and also of their bearing upon European collections of popular tales, may be noticed the Baka Jataka (No. 38), or The Cruel Crane Outwitted, in which the case of two cheating tailors is told in the Story of the Present. The Teacher, *i.e.* Buddha, thereupon remarks that this was not the first time the one rogue of a tailor had taken in the other, and tells the Story of the Past, in which a crane who had treacherously devoured a pond full of fish, is himself outwitted and killed by a crab whom he had tried to deceive like the fish. Then comes the moral stanza, uttered by the Bodhi-satwa who had been looking on in the form of a tree spirit:—

> 'The villain, though exceeding clever,
> Shall prosper not by his villany.
> He may win, indeed, sharp-witted in deceit,
> But only as the crane here from the crab.'

And, finally, by way of conclusion, the Teacher established the connection and summed up the Jataka by saying, 'At that time he (the crane) was the Jetavana robe-maker, the crab was the country robe-maker, but the genius of the tree was I myself.' This fable can be traced through a numerous progeny; it is found in the Arabic Kalila-wa-Damna, the Persian Anwar-i-Suhaili, the Greek Stephanites kai Ichnelates, the French Livre des Lumières and Cabinet des Fées, in La Fontaine, the Arabian Nights, the Pancha Tantra, Hitopadesa, and many other collections of household stories; but it is not included in the so-called Æsop's Fables. The moral it inculcates is of a well-worn type; but this is not observable with regard to all the series.—*Saturday Review.*

JATAKI, in Baluchistan, a language spoken by the Rind, Talpur, Murree, Chandia, Jemali, and Laghari; they speak either Jataki or the hill tongue of the Baluchi. The Jataki is also called Siraiki, from Siro or Upper Sind, where it is commonly spoken by the people; but also Baluchi from its being used by several of the Baluch clans settled in the low country. The word Jataki, spelt with the cerebral t, and the peculiar Sind j or dj, is an adjective formed by the proper noun Jat, the name of a people. The author of the Dabistan applies the term 'Jat dialect' to the language in which Nanak Shah composed his works. The Journal of the Bombay Branch of the Asiatic Society, 1849, contains a short Grammar, which serves as a specimen of the Jataki tongue. It is extensively used throughout the province of Sind, and is spoken by probably one-fourth of the inhabitants. It abounds in varieties of dialects, and contains little or no original literature, except a few poetical pieces, and short tracts on religious subjects. The Langha or Sindi bards seem to prefer it to their own language, and many well-educated natives, especially Baluchi, have studied it critically, and composed works in it. The celebrated Arabic hymn, generally known by the name of Dua Suryani, the Syriac or Syrian prayer, from which language it was borrowed by Ali, or, as is more generally believed, by Ibn Abbas, has been translated into Jataki, and is learned by heart as a talisman against accidents and misfortunes. The Jataki dialect is usually written in the Nastalik, and sometimes in the Nashki character. In the former, the system of denoting the cerebral and other letters which do not belong to the Arabic alphabet, is the same as in Urdu.

JATA-MALA. SANSK. Wearing matted locks; a name of Siva.

JATAMANSI. HIND. The Cyperus stoloniferus of Heyne, Retz, and Wight, Contr., but the true Jatamansi is the Nardostachys jatamansi, *D. C.*; the Balch'haru or Balchur, HIND.; Sanbal-ul-taib, ARAB.; and Sanbal-i-Hindi, PERS. The true plant is only found at great elevations beyond the tropics, but in South India the term is applied to the sweet-smelling tubers of various species of Cyperus, and in Upper India to the lemon-grass, A. schœnanthus, and other species of Andropogon, which are also known under the names of Askhar and Sikhunas (σχινος). Sir W. Jones identified it as the spikenard of the ancients.

In the Makhzan-ul-Adwiah, four separate articles are described,—1st, Sumbul-Hindi; 2d, Sumbul-Rumi, called also Sumbul-Ukleti and Narden-Ukleti, evidently the ναρδοσ ινδικι of Dioscorides, said also to be called Sumbul-Italion, that is, the nard which grows in Italy; the 3d kind is Sumbul-Jabali or Mountain Nard; and the 4th kind is Sumbul-Farsi, which is a bulbous plant, and is probably a kind of hyacinth. Polianthes tuberosa is described as being one of the kinds of Persian Sumbul. But the first alone, viz. S. Hindi, is that which is valued for its fragrance. The synonyms of it given by Persian authors are—in the Arabic, Sumbul-ul-Tib, or fragrant nard; in the Greek, Narden; in Latin, Nardum; in Hindi, Balchur and Jatamansi. The last is a Sanskrit name, and that which was given to Sir William Jones as the equivalent of Sumbul-Hindi, and which he informs us, like other Sanskrit names applied to the same article, has reference to its resemblance to locks of hair. —*Royle's Ill. Him. Bot.* p. 242; *Elliot's Flora Andhrica.*

JATA VARMA, ceremonies at the birth of a child, on which, before cutting the cord, some ghi is put into the child's mouth.

JATEORHIZA COLUMBA. *Miers.* Columba root, an excellent tonic, used by the Indian physicians in debility and diarrhœa, after fevers. It is often given combined with catechu.—*Murray.*

JATH. HIND. A post placed in a tank to denote that its water has been dedicated to a deity or has been married to a grove.

JAT-HARINI, a goddess worshipped by Bengal Hindus.

JATHI, a coil of dark-brown woollen thread, plaited with the hair by Kulu women.

JATI or Yati, a Jain teacher, an ascetic priest. The jati or yati are usually taken from the Banya tribe, and devoted, in early life, to the purposes of religion. They pass their novitiate with a guru or teacher, and at a proper period are admitted as yati. On this occasion a novice is stripped of his apparel, and, with certain cere-

monies, invested with the dress of his order. A blanket, a plate, and a cloth for his provisions, a water-pot and a broom, are then given to him. It is their duty to expound and read to the Sravaka (laity), the Scriptures, or Sastras, of the Jaina system. Sherring says (p. 265), but seemingly in mistake, that there are three sects of devotees bearing this designation. The first consists of those Gosains, Bairagis, and Udasis who practise celibacy. The second is akin to the jogi devotees. The third professes to be of Buddhist origin, and is also called Sewara. The two latter sects have their bands of disciples. The second at death are burnt; but the third are either buried or thrown into a river.

JATRA. HIND. A religious assemblage at a Hindu temple or shrine. A Hindu pilgrimage to a place of reputed sanctity, a religious festival, a place of pilgrimage where a fair is held. In the S. of India, a festival in honour of a divinity, especially of the tutelary goddess of a village.—*W.*

JATROPHA CURCAS. *Linn.* Physic nut.

Castiglionia lobata, *Ruiz.*	Curcas purgans, *Adans.*
Dundi birri, . . ARAB.	Pahari-arand, . . HIND.
Bag bherenda, . BENG.	Rotenjot, . . . KASH.
Them-bau-kyet-hsoo, BURM.	Kat avanaku, . MALEAL.
	Nepala, ... SANSK.
Mara narulle, . . . CAN.	Ratændaru, . . SINGH.
Tung-shu, . . . CHIN.	Katamanak, . . TAM.
Pignon d'Inde, . . FR.	Adivi amida, . . . TEL.

Grows in New Andalusia, Havannah, China, and is one of the most common small bushes throughout India, and largely used as a fence, taking root readily, and cattle do not eat it. It is in flower and fruit all the year. The seeds are purgative, but very uncertain in their operation; proving sometimes violent like those of the Croton tiglium, though they are naturally milder. Dr. O'Shaughnessy considers it a very dangerous article. Nearly all the Jatropha are powerful cathartics, and Fee cites J. gossypifolia, America; J. glandulosa, Arabia; and the J. multifida, or coral plant (Avellana purgatrix, grand bon purgatif), a native of America and India, a shrub 8 or 10 feet high. Dr. Wight gives also Jatropha peltata and J. villosa. A fixed oil (called in Canarese Mara haralu unnay) is prepared from the seeds by steaming and pressing, and is used in China for oiling boats and woodwork. It is reckoned a valuable external application in cases of itch and herpes; it is also used in chronic rheumatism and for burning in lamps. The milky juice boiled with oxide of iron makes a fine black varnish.

JATROPHA GLANDULIFERA. *Roxb.*
Jatropha glauca, *Vahl.*

Addale, ... TAM.	Dund gapu chettu, TEL.
Nila amida, . . . TEL.	Kati amidapu chettu, „

A native of the East Indies. The pale or whey-coloured thin juice which exudes from a fresh wound is employed by the Hindus as an escharotic to remove flaws from the eyes. Its seeds also yield a stimulating oil, in appearance approaching castor-oil, fluid and light straw-coloured. This is now chiefly used medicinally as a counter-irritant, but if procurable in sufficient quantity seems likely to prove a useful oil. Its leaves yield a green dye.—*Roxb.*

JATROPHA MULTIFIDA, the coral plant, a native of America, with its brilliant carmine corymbs, is common in Indian gardens; the seed is sometimes eaten by children, but is of a deleterious nature, and an emetic should be immediately administered. The inspissated juice forms a substance like caoutchouc.—*Mason; Riddell.*

JATTI, one of the titles given to the headman of a Hindu corporation.

JATUA. HIND. A tribe of the Chamar race in the Upper Doab.—*W.*

JATUKARNA, author of one of the Smriti and a compilation on military tactics, was born at Koch-Bahar, and resided at Chandra Shekhara. He taught that the deity is possessed of form, and that the world consists of matter partly eternal and partly created.—*Ward*, iv. p. 52.

JAU. HIND. Hordeum hexastichum. Jau-Desi, common barley, a barley corn; the primary unit of measure of length.

JAUGADA, in the Ganjam district, 18 miles W.N.W. of Ganjam, and 18 miles N.N.W. of Berhampur, has two separate edicts of Asoka addressed to the rulers of Samapa.

JAUHAR, a personal servant of the emperor Humayun, whose duty it was to carry a ewer for his master to wash his hands. He was in constant attendance on his master, and wrote the Memoirs of Humayun. Although unacquainted with his political relations and secret designs, he was a minute and careful observer of all that came within his reach, and describes what he saw with simplicity and distinctness. He was devoted to Humayun, and anxious to put all his actions in the most favourable light; but he seldom imagined that anything in his master's conduct needed either concealment or apology.—*Elphin.* p. 384; *Elliot.*

JAUHAR. HIND. The practice of some Hindus, and especially of Rajputs, of putting their wives and children to death when unable to resist an enemy, and then sacrificing themselves. It is resorted to by the Tartars of China, and sometimes by Muhammadans. Dhai Bibu was living when the British forces captured Kalat in 1839. Her daughter, married to Shahghassi Nur Muhammad, was put by him to the sword, with his other wives and female relatives, when the town was entered. Mehrab Khan, the ruling chief, fell in the storm at Kalat.—*I* ; *Masson's Journeys*, ii. p. 94.

JAUHAR. HIND. A jewel, a gem. Jauhari, a pedlar, lapidary, jeweller.—*W.*

JAUHAR, water-mark on swords. Jauhar-dar, having a Jauhar watering or water-mark on steel, gun-barrels, etc.

JAULNAH, a large town and a military cantonment of the Hyderabad contingent, in lat. 19° 50′ N., and long. 76° E. The rocks of the country around are the basaltic formation of the Dekhan.

JAUN, ANGLO-HIND., also Office-Jaun or Jaun-Paun, a kind of conveyance, from Jana, to go; a conveyance like a chair, with a high back, and covered in on all sides, with doors, panels, curtains, and canopy. It is carried by four men at a time, on their shoulders, two to each pole. There are a great variety of shapes in the Simla, Mussoori, and Darjiling jaun-paun, the fashionable conveyance in those sanatoria, and the men (Jaun-pauni) who officiate as the carriers of the jaun-paun are gaily attired in many-coloured garments, or different kinds of livery.—*Mrs. Hervey's Adventures*, i. p. 53.

JAVA, an island in the Eastern Archipelago,

the south point of which is in lat. 8° 47′ S., and long. 114° 29′ 10″ E. It is the chief of the islands of Netherland India, the head ruler being styled the Governor-General of Netherland India, Commander-in-Chief of all the forces of His Majesty the King of Holland to the east of the Cape of Good Hope. Java and Madura are separated by a narrow strait, and considered as one jurisdiction, with an area of 2380·7 square geographical Dutch miles, with a population in 1880 of 19,797,077, viz. Europeans, 33,703; natives, 19,542,835; Chinese, 206,914; Arabs, 10,523; others, 3092.

Java the less, of Polo and the Arab geographers, was Sumatra, the Iabadius or Yavadwipa of Ptolemy. Java, locally Jawa, is the name of the original occupants of the eastern part of the island, who in latter years have spread all over the island and have given it their name. The Chinese call it Chi-poo. Marco Polo, who described though he did not visit it, calls it Giaua. Java received a Hindu colony from Kalinga, B.C. 75, and vestiges of Hindu mythology, superstitions, and language still remain. When the Chinese traveller visited Java in the 4th century, he found it peopled by Hindus. The Hindu Government continued in Java till it was overthrown in the 14th century by converts to Muhammadanism.

The Netherland India possessions in the Eastern Archipelago, for their civil government, are divided into provinces or prefectures, known under the names of Residencies. The mode adopted by the Dutch, in governing the people, has been to continue the semblance of authority in their own chiefs, while the real power rests with the Dutch officers, termed residents. During the convulsions in Europe in the early years of the 19th century, Java was taken possession of by the British in 1811, but restored in 1816. Near Samarang is the headquarters of the army of Netherland India, strongly fortified.

Java is traversed by two chains of mountains, from 10,000 to 12,000 feet in height, in which there are about 45 volcanoes, many of them in occasional activity; and it has explosive mud and brine springs, and a poison valley, in which accumulations of carbonic acid gas kill every form of life which penetrates into it. On the 26th and 27th of August 1883 there occurred the climax of the most tremendous volcanic eruption which, perhaps, the world has ever seen during historic times. In the course of it, Krakatoa Island, 3000 feet high or thereabouts, entirely disappeared. The usual volcanic products, including the finest particles both solid and vaporous, were ejected into the air to a height that no man will ever say, since for many miles round the scene of these devastating forces noon was as black as night, and darkness was over all the land for 36 or 40 hours. The scale on which the work was done was such that even the noise, the weakest part of it, was heard at a distance of 2000 miles. The shivering of the island produced a wave of water 100 feet high, which destroyed everything over which it swept, and left its mark on tidal registers nearly all over the world. The mere air pulse produced by the last fearful cataclysm was strong enough to pass with its gradually widening circle nearly three times round the globe.

Krakatoa Island was in eruption on the 26th, but it entirely disappeared on the 27th, and a tidal wave 12 to 30 metres high swept the coast of Mirak as far as Tiyiringen, overwhelming the towns of Anjer, Mirak, and Tiyiringen, destroying about 20,000 people. Soengepen volcano split into five; between the site where Krakatoa had stood and Sibisie Island, sixteen new volcanic craters appeared. A lighthouse in Java and another in Sumatra disappeared. Where once Krakatoa stood, the sea now plays. Ships in the seas sailed through patches of pumice, and Sunda Straits were so much changed as to necessitate resurvey. The craters of the numerous volcanoes for which Java is noted were most of them in active eruption. Madura Island at its east, 500 miles away, also had a share of the terrible effects of this unprecedented convulsion. Sourabaya, in the Straits of Madura, suffered seriously. The steamship Gouverneur General, belonging to Batavia, was at sea at the height of the eruption, and steamed to Anjer to give the alarm, but found that place destroyed. The ship had a layer of ashes 18 inches thick on her deck. In some places masses of floating pumice-stone seven feet in depth were passed. The volcanic action must have been going on in lat. 5° S. and long. 88° E., at least three weeks prior to the terrible catastrophe in Java. S.S. Siam, from King George's Sound to Colombo, in lat. 5° S., long. 88° E., from 3.30 P.M. till dark was steaming through large quantities of lava floating in broad patches, and trending from north-west to south-east, some pieces larger than a cricket ball. 5° S. and 80° E. is in the middle of the Indian Ocean, about equidistant from the Keeling, Chagos, and Rodrigue Islands. The ancient Hindu temples, the Boro Buddor, the Chandi Siwa, and others, were greatly injured.

The volcanoes of Java are in two lines,—one, commencing near Cape St. Nicholas, its N.W. extremity, passes diagonally across the island to its S.E. headland on the Strait of Bali. The other line runs parallel, and extends from Cheribon on the S. coast to the Strait of Sunda. The volcanoes are in two separate fissures in the earth's crust, and the volcanoes in it are cones of elevation, each distinct and separate; their number being 38, and some of them of immense size. They throw out volcanic ashes, sand, and scoriæ, and sometimes trachytic lava. White clouds of sulphuric acid gas continually wreath their peaks, and is destructive to life. Large quantities of sulphur are dug out. A severe earthquake was experienced in Batavia, and over an extensive region in Java, on the 16th of November 1847. In the Courant of the 27th October 1847, it was mentioned that a shower of ashes had fallen at Buitenzorg on the night of the 17th, which came from the Guntur mountain, in the district of Limbangan, Residency of Preangar. On Sunday the 17th October, at 11 o'clock P.M., the earthquake shocks, following each other in quick succession, were felt at Tijandjur, the first of which was very strong, and lasted for fully ten seconds. The shower of ashes began to fall the same night, and on the following morning had already clothed the earth, grass, trees, and buildings with a brown covering. The fall of ashes and sand lasted the whole day, and made it very inconvenient to be in the open air. The eyes of travellers suffered. The earthquakes had not wholly stopped at Tijandjur on the 29th October. The mountain had, however, fortunately begun to

be at rest, and no damage had been caused by the eruption. The shower of ashes had reached as far as the frontiers of the Residency of Bantam, a distance of more than 80 miles to the west. Tengger mountains mean the wide or spacious mountains. There is here an old volcano with its trachyte crater 7500 feet above the sea, in diameter 3½ and 4½ miles. It is the largest crater in Java, and one of the largest in the world. Its bottom is a level floor of sand, which in some places is drifted by the wind like the sea, and is called by the Malays the Laut Pasar or Sandy Sea. Four cones of elevation rise from this sand floor, the smallest of which, called Bromo, in 1866, was active, throwing out ashes. It rises like Monte Somma in the crater of Vesuvius. But trachyte, obsidian, and pumice have been thrown out in succession.

Papandayang volcano, in 1772, in the south of Java, in lat. 10° 8′ S., in a single night threw out scoriæ and ashes which Dr. Jonghuhn thinks made a layer of 50 feet thick for seven miles around. In Dr. Horsfield's account of it, drawn up from the native testimony, it is stated that an extent of ground of the mountain and its environs, 15 miles long and full 6 broad, was by this commotion swallowed up within the bowels of the earth; but such sinking, according to Mr. Bikmore (p. 75), does not seem to have occurred.

Mount Galung-gong, a few miles N.E. of Papandayang, is also a Java volcano. On the 8th July 1822, at noon, not a cloud was seen in the sky, when suddenly at half-past one a frightful thundering was heard in the earth, and from the top of this old volcano a dark, dense mass was seen rising higher and higher into the air, and spreading itself out over the clear sky with such an appalling rapidity, that in a few moments the whole landscape was shrouded in the darkness of night. Through this darkness flashes of lightning gleamed in a hundred lines, and many natives were struck down by falling stones. Then a deluge of hot water and flowing mud rose over the rim of the old crater and poured down the mountain sides, sweeping away trees and beasts and human beings. At the same moment, stones and ashes and sand were projected high into the air, and as they fell destroyed nearly everything within a radius of more than 20 miles. A few villages on the lower declivities of the mountains escaped, from being built on eminences, as they were above the streams of hot water and mud, and the stones thrown out fell beyond them, destroying villages at a greater distance. By 4 P.M. the extreme violence of the eruption had passed, by sunset the sky was again clear, and the sun shining on a scene of desolation. A second eruption occurred five days afterwards, and by that time more than 20,000 persons had perished.

The Javan group of languages embraces Sundan, Maduran (with its dialect Bawian), and Bali. According to Mr. Logan, Javan has a much broader, more forcible aspirate and primitive phonology than Malay. Up to the middle of the 15th century, the people of Java, from Cheribon, in long. 109° to the west, spoke the Sundanese tongue. But in 1811 nine-tenths of all the population of Java spoke Javanese, and the Sundanese was already confined to the mountainous parts of the south and west, and to a small colony near Bantam. The Javanese alphabet, like all others in the Archipelago, is written from left to right, each letter is distinct and unconnected, and the writing is perpendicular and not slanting. It is the character used for the Javanese proper, the Sunda, the Bali, and it is believed the Lombok, and including Palembang in Sumatra, it is current among twelve millions of population. But in prior times other characters to the extent of twelve in number have prevailed in Java.

In the eastern and central parts there may be said to be three Javanese languages,—the popular, the polite (which is a kind of factitious dialect of it), and an ancient tongue, found only in old books and ancient inscriptions. The modern and popular language, as well as the polite dialect, is written in a peculiar character, of which the substantive letters amount to twenty. Sundanese is spoken over about one-third of the island, extending from Cheribon across the island down to its western extremity. This tract is more mountainous than that inhabited by the Javanese, and the people somewhat less advanced in civilisation, but possessing the same amiable and docile character as that nation.

The industrious, peaceful, and numerous people who speak the Madurese language, with its dialect the Sumanap, occupy the island of Madura, divided from Java by a strait, and form in some districts the bulk of the population on the opposite shores of Java, to which, depopulated by long wars for the past two hundred years, they have been emigrating.

In the adjacent island of Bali, which is small but fertile, well cultivated and populous, is the Balinese, with its ceremonial dialect and sacred language, and it is one of the most improved languages of the Archipelago.

The fourth language, which Mr. Crawfurd considers to have a strong affinity with the Javanese, is that of Lombok, a fertile and populous island, divided from Bali by a narrow strait. This is the termination in an easterly direction of the group of tongues which begins with Sumatra.

For nearly nine centuries (603-1479) foreign colonists continued to adorn this island with edifices almost unrivalled elsewhere. Boro Buddor is a great Buddhist temple there. It is a dhagoba with five processional paths and 72 small domical buildings, each containing a statue of Buddha, but combining with it the idea of a nine-storeyed vihara. The bas-relief sculptures which line its galleries extend to nearly 10,000 lineal feet. On the inner face of the second gallery is portrayed, in 120 bas-reliefs, the entire life of Sakya Muni. In the galleries above this are groups of Buddhas, bodhi-satwas, and saints, and many crested snakes. The temple at Mendoet, two and a half miles from Boro Buddor, has three colossal figures, supposed to be Buddha, Siva, and Vishnu, with a figure of Lakshmi. The temple of Tcempang also merits mention, and that of Pantaram (A.D. 1416) is called the serpent temple, because its base is made up of eight great crested serpents. There are temples at Matjanpontik; and on the Djeing plateau there are five or six small temples, also temples at Suku. The ruins of Singha Sari include six principal structures of hewn stone, besides the base of a circular tower, with numerous figures.

The Javanese are of short stature, the men do not average more than 5 feet 3 inches, face lozenge

shaped, cheek-bones high and prominent, mouth wide, and nose short. They all gamble greatly. They profess Muhammadanism, but still follow many Hindu customs; a few are professing Christians. The dress of Javanese ladies differs but little from that of men of the upper class, except in the kabya being buttoned across the breast. No covering is worn for the head, their bright black hair being tastefully arranged in a knot, decorated with bunches of white flowers; the women of the lower class wear a blue sarong, and a wide shirt of the same colour. Both sexes, but more particularly the women, pay great regard to cleanliness, bathing at least once a day. Javans are an agricultural race, attached to the soil, of quiet habits and contented disposition, almost entirely unacquainted with navigation and foreign trade, and little inclined to engage in either. The people of the Tengger mountains may be a relict of an aboriginal race. This race, like a few others in India and the Archipelago, adopt the singular practice of building their villages in terraces, and the practice seems to have once prevailed in the Philippines. The inhabitants of the Serwatty islands select the summits of hills. They are a peculiar people, who speak a dialect of Javanese, and, despite the zealous efforts of the Muhammadans, they still follow the Hindu religion.

The *Kalang* people who reside among the inhabitants of the Tengger mountains are said to have been at one time numerous in various parts of Java, leading a wandering life, practising religious rites different from those of the people, and avoiding intercourse with them; but most of them are now stationary, and have embraced the Muhammadan faith. Whenever the Kalang move from one place to another, they are conveyed in carts, having two solid wheels with a revolving axle, and drawn by two or more pairs of buffaloes, according to the circumstances of the party.

The fishing canoes or flying canoes of Java are long, but very narrow, — just broad enough to enable a man to sit between the gunwales; the crew seldom exceeds four men. They are rendered steady by long semicircular outriggers, one end secured to the gunwale, the other to large bamboos, and of the same length as the canoe itself; and as they are daubed all over with some bright white substance, they have the appearance of huge spiders crawling over the dark blue sea; their speed, when propelled by paddles, is very great, but greater under their large triangular sails.

Among the small groups of islands in the Java sea, the waterspouts are frequent, and not always accompanied by strong winds; more than one is seen at a time, whereupon the clouds whence they proceed disperse, and the ends of the waterspouts bending over finally cause them to break in the middle. They seldom last longer than five minutes. As they are going away, the bulbous tube, which is as palpable as that of a thermometer, becomes broader at the base, and little clouds, like steam from the pipe of a locomotive, are continually thrown off from the circumference of the spout, and gradually the water is released, and the clouds whence the spout came again closes its mouth.

Ginding is the name given to a land wind in East Java, occasioned by the S.E. monsoon blowing right over the land through the gap at Kalakka, 1000 feet above the sea, between the Jyang and Tengger mountains, 8000 and 9000 feet high:

According to the traditions of the Javanese, Sumatra, Java, Bali, Lombok, and Sumbawa were all formerly united, and they give the dates of A.D. 1192, 1282, and 1350, but these are not to be received. The dividing line between Asiatic fauna and that of Australia must be drawn down the Straits of Macassar, and continued southward through the Strait of Lombok between Lombok and Bali.

The wild sand coast of Bantam in Java is annually frequented by large numbers of turtles, where they have often to creep over nearly a quarter of a mile of the beach, to the dry and loose soil at the foot of the sand dunes. In their progress to and fro, they are attacked by parties of wild dogs, birds of prey, and even tigers.

Zoology.—In Java are species of Pteruthius, Arrenga, Myiophonus, Zoothera, Sturnopastor, and Estrelda.

Java has seven pigeons peculiar to itself; a peacock; also the green jungle cock; two blue ground thrushes (Arrenga cyanea and Myiophonus flavirostris), the fine pink-headed dove (Ptilinopus porphyreus); three broad-tailed ground pigeons (Macropygia), and many other interesting birds found nowhere in the Archipelago out of Java.

The Gallus furcatus or green jungle fowl is common in Java; also G. bankiva, Buceros lunatus, and Loriculus pusillus, a pretty little lorikeet, about four inches long. In the western districts of Java are the calliper butterfly, Charaxes Kadenii; the elegant green and yellow Trogon, Harpactes Reinwardti; the gorgeous little minivet flycatcher, Peri Crocotus miniatus, which looks like a flame of fire among the bushes; and the rare black and crimson oriole, Analcipus sanguinolentus. Java has the Babirussa, the Bos sondaicus, Hylobates leuciscus, the Cercopithecus cynomolgus, Stenops Javanicus, Nycticebus tardigradus, Pteropus edulis, Pt. Javanicus.

The Papilio arjuna has its wings covered with grains of golden green, and P. coon also occurs.

The amphitrite or sea-worm of Java lives in holes of the great solid madrepores. The gills of these lovely creatures are in the form of spiral ribbons of brilliant orange-green and blue. These gaudy plumes are alternately extruded and retracted, and, seen through the pellucid water, present a very singular and beautiful appearance. —*Crawfurd; Fergusson; Wallace; Bikmore; Logan.*

JAVALI, a renowned logician of the time of Rama.

JAVAN, the ninth from Yayat, who was the third son of Ayu, the ancestor of the Hindu as well as of the Tatar Indovansi.

JAVAN. In ancient Sanskrit literature, a designation of the western world, generally supposed to be applied also to Ionia, the Isles of Greece, and Asia Minor. In the form of Yavana, it is also held applicable to the Greeks and their descendants who made inroads into India through the N.W. and from the Euphrates, and are said to have reached Orissa through Kashmir; and the term Yavana was applied also to Greeks left by Alexander to garrison the banks of the Indus. Javan or Yavan is, however, now applied by the Hindu both to Greeks and Muhammadans. Ezekiel xxvii. alludes to the Javan and Dan, but Yavana has been used by the Hindus to mean Iones, as it is used in Genesis x., and in the Arabic,

Persian, Coptic, and Armenian languages, to signify Greeks, Iones being once the appellation of all the Greeks.—*Plato de Leg.* iii. 684, *in John's Archipelago*, i. p. 284; *Tod's Tr.* p. 375.

JAVELINS are used in hunting by the Yadu race of Kerrowlee. They are about twice an arrow's length, are held by the feathered end, and are three or four times twirled round the head before being thrown. The ancient German warriors had a custom of crowning their javelins with coronals of leaves from the sacred trees.—*Postans' India*, ii. p. 196.

JAWALAMUKHI, or Flame's Mouth, an ancient town in the Kangra district of the Panjab, in lat. 31° 52′ 34″ N., long. 76° 21′ 59″ E. It is situated on the road from Kangra to the Nadaun, at the foot of a precipitous range of hills, forming the northern limit of the Beas (Bias) valley. It has a temple built over jets of combustible gas, issuing from the ground, and kept constantly burning, as a manifestation of the Hindu goddess Devi. The devotion of centuries has enriched it with many costly offerings, amongst others a gilt roof, presented by Ranjit Singh in 1815. About 50,000 pilgrims attend the great festival in September or October. Six hot mineral springs occur in the neighbourhood, impregnated with common salt and iodide of potassium.—*Imp. Gaz.*

JAWARA, HIND., also Jaya, SANSK., small shoots of rice, which germinate when steeped in water, and shoots of barley forced in earthen pots at the Dashara festival, and presented to friends for good luck.—*W.*

JAXARTES, the Jihūn of the Arabs, the Syr Darya or head-river, has its source in the very heart of the Tian Shan. In its upper course it is called the Narin, which has its chief head-stream at the foot of the Petroo glacier in the Ak-Shiirak Hills. It passes 400 miles westward, then enters the khanate of Khokand, which it crosses for 300 miles in a S.W. direction. Re-entering Russian territory again, it soon turns due north 400 miles, after which it meanders N.W. to its outlets on the N.E. of Lake Aral. Its total length is 1500 miles. In the lower 400 miles of its course to Lake Aral there are many islets, and the country is disposed in long, low undulating surfaces of clay, interspersed with stretches of sand, and dotted with occasional sand hills. Amongst the princes from the Jaxartes are historians, poets, astronomers, founders of systems of government and religion, warriors, and great captains, who claim our respect and admiration. Chengiz Khan and his bands issued from the pastoral lands beyond this river. On the eastern side of Central Asia is a fertile tract, watered by the Jaxartes and the Oxus, and it is in this fertile tract that the conquests of Russia were made between 1864 and 1868. After long years spent in fortifying posts, Russia, in 1864, made a sudden irruption into the upper valley of the Jaxartes, and in that year took three forts of Khokand, viz. Aoulietta, Turkestan, and Chemkend. In the spring of 1865, the chief of Khokand fell in battle, and in June 1865 the city of Tashkend was stormed. On the 20th May 1866, they fought and won the battle of Irdjar, against the Bokhariotes, and later in the year captured the forts of Oratepe and Juzak, within 40 miles of Samarcand. On the 13th May 1868, a great battle was fought under the walls of Samarcand, and the city surrendered, and later in the year Bokhara yielded —*Asia, by Keane and Temple*, p. 406; *Fortnightly Rev.*, July 1868.

JAY, an English name for species of the Garrulinæ, all noisy birds. Garrulus bispecularis, *Vigors*, is the Himalayan jay; G. lanceolatus, *Vigors*, is the black-throated jay. In wooded situations, on the western ranges of the N.W. Himalaya, the traveller is struck with the characteristic and elegant long-tailed jay, Calositta (Urocissa) Sinensis, *Linn.* This graceful creature attracts attention not only by the brilliancy of its plumage, but the loud, harsh screams it utters as the traveller approaches, now jerking up its long tail, after the manner of the magpie, now garrulously chattering, as though reproaching one for intruding on its haunts.—*Adams.* See Birds.

JAYADEVA is the literary name of the author of the pastoral poem the Gita Govinda, and also of the Prasanna Raghava, a drama of five acts. His real name is unknown, and the meaning of his pseudonym is God of Victory. He was a native of Kenduli in Tirhut, and is supposed to have lived about the 12th century, and his tomb was still (1862) to be seen at Birbhum. Though now remembered as a poet, he was a great reformer. He spiritualized the worship of Krishna, denounced the caste system, and has left a lasting impress on Bengal. What Melanchthon was to the early Lutheran Church, that was Jayadeva to the reformation in Bengal. His Herdman's Song is now the devotional work of a great sect. It was translated in full by Sir William Jones, and printed in one of the early volumes of the Asiatic Society. He abandoned his ascetic life for a Brahman girl who had been devoted to Jaganath.

In the Gita Govinda, Jayadeva sings the praises of Krishna as an incarnation of Vishnu. At his time the worship of Krishna was taking a prominent position, and the history of his incarnations was the theme of the wondering praise of every rustic bard; and Jayadeva's poem describes Krishna as Vishnu the preserver, incarnate as man, man in his weakness, divine in his talents, aspirations, and final conquest of earthly desires. The Gita Govinda is the history of his carnal and finally of his spiritual passions.

The plot of the poem describes Krishna as coming to earth in a pleasant land of woods and streams, of fragrant flowers and warbling birds, with the spring fragrance of the jasmine and myrtle, and the prolonged note of the koel (Eudinamys orientalis) coming from among the yellow champa bushes. He is wandering in the forest alone, when his face and form attract the loveliest of the shepherdesses of the surrounding country, and he loves them all. 'He eateth of the ripe fruit of desire till his soul abhorreth its lusciousness.' Then comes penitence, and his soul is sorely troubled. He meditates on the charms of intellectual delight (typified by the single and transcendently beautiful Radha) as contrasted with the charms of carnal pleasure (typified by the thousand fascinating shepherdesses). In time he relinquishes the latter and adheres to the former, and, after many trials, disappointments and hopes, rebukes and deferments, is at length indissolubly united to the incomparable Radha, the flower of the flowers of the garden.

In one respect the Gita Govinda may be likened to the Song of Solomon. Professor Lassen thinks

it puts forth deep spiritual teaching under the guise of extremely plain and often coarsely voluptuous verse; but as no Hebrew youth was allowed to read the Song of Solomon until past the age of eighteen, so Jayadeva's poem should not be read by school-boys. It has been partially translated into English verse by Mr. Edwin Arnold, who, however, modifies much of it and omits a whole canto. The great charm of the Gita Govinda consists in its mellifluous style and exquisite woodland pieces. They exhibit in perfection the luxuriant imagery, the voluptuous softness, and the want of vigour and interest which form the beauties and defects of the Hindu school.—*Tr. of Hind.* i. 56; *Elph.* 156; *Ward*, iv. 376.

JAYADEVI, goddess of victory, worshipped in the Crauncha dwipa under the emblem of a sword.

JAYADRATHA, raja of the Sindhu or Saindhava and of the Sauvira tribes, in the valley of the Indus. He married Duhsala, daughter of Dhritarashtra. While the Pandava were in exile, he carried off Draupadi, but the Pandava, on their return, pursued and made him prisoner, but spared his life. He subsequently took part with the Kaurava in their war with the Pandava, but was slain by Arjuna on the 14th day of the battle of the Mahabharata.—*Dowson.*

JAYANTA, in Hindu mythology, a heavenly chorister, the son of Brahma, transformed into an ass by Indra. He married the daughter of king Tamratsena in that state.—*Asiatic Researches*, ix. p. 148.

JAYANTI. SANSK. The 8th day of the dark half of Sravana, the birthday of Krishna, celebrated as a festival by the Vaishnava sect.

JAYASINHA or Jai Singh II., raja of Amber, a distinguished astronomer of the 17th and 18th centuries. He constructed a large set of valuable tables; erected magnificent observatories at Benares, Dehli, Kotah, and Ujjain. His liberal patronage of science and art, and his attainments in mathematics and astronomy, made him known to European scholars.—*As. Res.* v. pp. 167, 177.

JAYA STAMBHA, the Kutub Minar at Dehli; also at Coel, Dowlatabad, and elsewhere; also at Gaur in Bengal.

JAZAIL. HIND. A long, heavy musket used in forts, etc.; a gingal.

JAZIA. ARAB. A capitation tax authorized by the Muhammadan law on all nonconformists. It was abolished by Akbar in the seventh year of his reign. In Persia, firmans have been issued that the Zoroastrians should henceforth be allowed certain privileges which they had not enjoyed hitherto, such as allowing them to ride, wearing new or white clothes, and building and repairing their dwellings. The Shah, however, has neither abolished nor reduced the Jazia tax, which is levied from the Zoroastrian residents, the Muhammadans being exempted from it. Jazia is from an Arabic word meaning subjugation, conquest, compensation,—a capitation tax levied by the Muhammadans on their subjects of another faith. It appears from the Ayin-i-Akbari that the khalif Umar laid an annual tax upon every one who was not of the Muhammadan religion. A person of high condition paid 48 dirhems, one of moderate means 24 dirhems, and one in an inferior station 12 dirhems. It does not exactly appear when this tax was instituted in India. Tod thought it was imposed by Baber in lieu of the Tumgha, which he solemnly renounced on the field of battle, after the victory which gave him the crown of India; but we read of it long before this, for as early as the time of Ala-ud-Din, only a century after the final subjugation of Hindustan, we find it spoken of as an established tax. The tax was abolished by Akbar in the 9th year of his reign, and was not imposed again till the 22d of Aurangzeb, who, with his wonted intolerance, directed that its levy should be attended with every circumstance of contumely which his ingenuity could devise. From this period it appears to have been regularly levied, and with particular severity in the time of Ferokhsir (in consequence of the appointment of Inayat-Ullah as Financial Minister, who had been Secretary to Aurangzeb), until the time of Rafi-ud-Darjat, when the Barha Syud, or twelve Syuds, abolished it, and the Hindus again recovered their consequence, Ruttun Chund, a Hindu, being appointed Financial Minister, and being possessed even of such influence as to be empowered to nominate the Muhammadan Cazees of the provinces. After the death of Ruttun Chund, the capitation tax was once more levied, as it is stated to have been again repealed by Muhammad Shah, at the intercession of Maharaja Jai Singh and Gerdhur Badahur. Since that period no emperor was possessed of sufficient authority to enforce the Jazia, and this odious tax became extinct for ever; but not till it had operated as one of the most effectual causes of the decline of the Muhammadan power, by alienating the affections of the Hindu population, which the early Moghul emperors had courted, and in some measure obtained.—*Tuwareekh-i-Mahomedshahee; Elliot, Supp. Glossary; Rajasthan*, i. p. 403.

JAZIRAH means an island, but is a term applied to the doab between the Euphrates and Tigris; the Mesopotamia of the ancients. The Sea of Oman or Persian Gulf, called also the Persian Sea and Erythrean Sea, also the Sea of Fars, has several islands,—the Jazira-i-Lafet, called also Jazira-i-Daraz or Long Island, known on maps as Kishm; also Khareg Island, on maps Karrack, a small island, but well watered, not very far from Bushir, and which once belonged to the Dutch, and was held from 1838 to 1846 by the British.

JEDDAH, a town in Arabia, on the borders of the Red Sea. It is the ancient Badio Regium. It is the port of Mecca. There are three gates, the east or Mecca gate being used solely by Muhammadans. The resident population number about 12,000 to 20,000, but 120,000 pilgrims annually pass through it on their way to Mecca. Outside the town on the north, white-washed and conspicuous to the voyager and traveller from afar, is a diminutive dome, with an opening to the west, as is usual in El Hejaz. Haw-wa, Eve, the mother of mankind, is supposed to lie under this, and the outlines of the body is defined by two parallel dwarf walls, six paces apart. The trade of Jeddah is considerable.

JEDDO or Yedo, the capital of the empire of Japan, is situated at the northern extremity of the gulf of the same name in an extensive plain.

JEELUN. HIND. A mode of raising water from tanks; the pe-cottah of the Tamil people.

JEHOIAKIM, for three months king of Israel.

While only 18 years old (in B.C. 598), Nebuchadnezzar burned and pillaged his palace and the temple of Jerusalem, and took the king and his mother and court to Babylon. He was succeeded by his uncle Zedekiah, whom Nebuchadnezzar placed on the throne. But in B.C. 589 Zedekiah rebelled, and in 588 Nebuchadnezzar laid siege to Jerusalem, and B.C. 586 took it by storm, burned the temple and palace, and put out Zedekiah's eyes.

JEHUR. HIND. A pile of water-pots placed one on the other. The word is pronounced also Jeghur, and also written Jehar. To take the water-pots off the head of a divorced woman is to imply consent to marry her. The custom prevails amongst the Jat, Ahir, and Gujar, but principally amongst the former, and more commonly in Rajputana than in the Oudh and Dehli provinces. —*Elliot.*

JEJURI, in the Mahratta country, is famed for its Hindu temple. Jejuri temple is very rich; it is said to expend 50,000 rupees yearly in the expenses and establishment for the deity, Kandeh Rao; horses and elephants are kept for him; he and his spouse are bathed in Ganges water, rose-water perfumed with otto, and are decorated with gems. The revenues, like those of most other temples, are derived from houses and lands given by pious people, and from presents and offerings constantly making by all descriptions of votaries and visitors, according to their means, or their faith, hope, or charity. The Murlidar women, however numerous, are not perhaps any expense, but rather a source of revenue to the temple. At the annual Jatra or fair, which commences on the last day of the dark half of Chaitra (in January), about 100,000 persons visit Jejuri. It is customary for the worshippers to sacrifice a sheep, and the Brahmans assert that 20,000, or, in particular years, 30,000 are slain on this occasion to the honour and glory of Kandeh Rao.—*Moor*, p. 422. See Kandoba.

JELL, a town in the S.W. quarter of Cutch Gandava, in a district replete with monuments, remnants of a former people, which bear a great analogy to the ponderous Cyclopian vestiges of ancient Europe. A hot spring, the Garm-ab, preserves its temperature throughout the year. The sulphurous spring of Lakha is some 20 miles south of Jell; there is another a little below Schwan on the hills west of the Indus, and again other very hot springs near Kurachee. The several springs are found in the same line of hills, and those inferior ones at the base of the superior range dividing Sind and Cutchi from Baluchistan. Under the same hills, north of Jell and west of Suran and Sanni, are sulphur mines, indications of the same geological formation. Jell and Shadia are the chief towns of the Maghassi, one of the Baluch tribes, who have been located for a long time in Cutchi. The Maghassi and the Rind are alike addicted to the abuse of ardent spirits, bhang, and opium. Cultivation in the neighbourhood is extensive, principally of jowar and the cotton plant. The country occupied by the Maghassi is abundantly supplied with water.—*Masson's Journeys*, ii. p. 124.

JELLY-FISH, one of the Rhizostoma. These are hardened in China by means of alum, and eaten. Some are three feet across. It is the only one of the Acalephæ known to be used as food. Cuttle-fish are exported from China, about 3000 pikul yearly, value about 25 Ilk. taels per pikul. Their fishery lasts from March to September, and they are taken with nets and hooks, and are sold fresh or gutted and dried at 21 to 30 dollars the cwt.—*Adams.*

JELUDAR. PERS. Formerly called Rikab-dar or the 'stirrup holder,' a person who, on foot, accompanied a horseman.

JEMADAR, a commissioned native officer in the native army of British India.

JEM KOT has passed into Sanskrit under the form Yama Kota. According to Abul Fazl, it was considered as the eastern end of the habitable world.—*Vambery.*

JENKINSON, ANTHONY, envoy from Queen Elizabeth to Shah Tamasp of Persia, A.D. 1557–1560.

JERABLUS, 90 miles from Aleppo, on the W. bank of the Euphrates, the ancient Carchemish, capital of the Hittites. The total circuit of the ruins is under 3000 yards. Out of its ruins was built the Roman city Hierapolis.

JERBOA RAT of India is the Gerbillus Indicus and G. erythrourus. These are eaten by the Wadara and other races.

JERDON, T. C., a medical officer of the Madras army, who devoted his life to the study of natural science in all its branches. He gave, in the Madras Literary Society's Journal, several contributions on the Fresh-water and Salt-water Fishes and Ants of the Peninsula. Also, in 1839, a Catalogue of the Birds of the Peninsula of India, arranged according to the modern system of classification, with brief notes on their habits and geographical distribution, and descriptions of new, doubtful, and imperfectly described species. The total number of this catalogue was nearly 390, which, however, included 10 of Colonel Sykes', and nearly as many more observed by Mr. (now Sir) Walter Elliot, of the Madras Civil Service, who placed at Dr. Jerdon's disposal valuable notes on birds procured by him, by which, in addition to the new species added, this naturalist was enabled to elucidate several doubtful points, to add some interesting information on various birds, and to give the correct native names of most of the species. Subsequent to this, Dr. Jerdon published a series of supplements to his Catalogue of Birds, correcting some points and adding others. Jerdon's Birds of India in three volumes, printed in 1862 and 1864, has done much to complete our knowledge of this class of the animal kingdom, and his Mammals of India, published in 1867, has been of similar value for that branch.

JERICHO, an ancient city of the Hebrews, now a ruined hamlet. Near its site is Rihab, a Bedouin village. The channels of streams around Jericho are filled with the nebbuk trees, a species of Rhamnus, set down by botanists as the Spina Christi, of which the Saviour's mock crown of thorns was made. The twigs are long and pliant, and armed with small, though most cruel, thorns. The little apples which it bears are slightly acid, and excellent for alleviating thirst.

JERUSALEM, an ancient city of the Hebrews, frequently styled in the Scriptures the Holy City (Isaiah xlviii. 2; Daniel ix. 24; Nehemiah xi. 1; Matthew iv. 5; Revelation xi. 2); and the Jews to this day never call it by any other appellation than

El Qadus, that is, the holy, sometimes adding the epithet As-Shereef or the noble. Muhammadans also style it Bait-ul-Maqaddas or the Holy City. Jerusalem was conquered and destroyed by the Babylonians, B.C. 588, and two tribes, Judah and Benjamin, were carried away captive for 70 years. They were then allowed by Cyrus, king of Medo-Persia, to return to Judea to re-build Jerusalem. Its second temple was completed, B.C. 10th March 515, under Darius, but they remained tributary to Persia until that country was conquered by Alexander, B.C. 330. Jerusalem was built on the hills Zion, Millo, Acra, Bezetha, Moriah, and Ophel, the mountains which 'stand round about Jerusalem.' Its first name was the city of Malik Sadiq, then it was called Salem, and then Jebus, but the tribe of Benjamin called it Jerusalem. The Jews, as in all other eastern towns, are confined to a particular quarter, viz. the hollow space lying between the site of the ancient temple and that part of Mount Zion which is included within the walls. It is called Harat-el-Yahud. The tombs of the kings, situated in a small valley to the north of the city, are without ornaments, either sculptured or painted. There are fragments of sarcophagi in some of them. Jerusalem is the Sylia of the Greeks. Jaffa is the port through which Jerusalem deals with foreign countries. The vicissitudes it has witnessed from the glories of Solomon and Herod, through the violence of Roman conquerors, the neglect of early Christians, and the devotion of Khalifs and Crüsaders, are now culminating in the revived interest which the whole civilised world may be said to take in this most sacred spot. Its destruction by Titus led to a very general migration of Jews from Palestine. It capitulated to the 3d Khalif Umar, A.D. 637. No property was destroyed except in the inevitable operations of the siege, and not a drop of blood was shed except on the field of battle. Umar entered the city conversing amicably with the Patriarch about its history. In 1099, under Godfrey of Bouillon, it fell before the arms of the Crusaders. It was taken by storm after a short siege, and for three days there was an indiscriminate slaughter of men, women, and children. 70,000 Muhammadans were put to the sword, 10,000 of them, it is said, in the Mosque of Umar itself, but this must be a great exaggeration. The Muhammadans under Salah-ud-Din retook it in A.D. 1187. That general had vowed to revenge the slaughter of the year 1099, but retracted his vow; no blood was shed, and captives were allowed to redeem themselves, the Frankish Christians leaving the city, the eastern Christians residing there in peace. — *Taylor's Saracen*, p. 68; *Robinson's Tr.*; *Rich's Kurdistan*, ii. p. 390; *Mignan's Travels*, p. 9; *Townsend's Outram and Havelock.*

JERUSALEM ARTICHOKES.

Helianthus tuberosus.	Erdappfel, ... GER.
Topinambours, . . FR.	Tartufoli, ... IT.

A species of sun-flower, a native of South America. It goes to seed generally in October and November. This vegetable is ripe as soon as the stalk withers, and the best method of preserving them is to let the roots remain in the ground. The stems abound in fibres.

JERVIS. Major Thomas Best Jervis, of the Bombay Engineers, author of an Address on the Progress of Geographical Inquiry in India, in Rep. Brit. Ass., 1839; also Bom. Geo. Trans. iv.; on Surveys in India in Lond. Geo. Trans. vii. p. 129, and Bom. Geo. Trans. iv. p. 133; Geographical and Statistical Memoir of the Konkan, Bombay 1829, Calcutta 1844; Journey to the Falls of the Cauvery and Neilgherry Hills, Lond. 1834; Indian Metrology, or Account of Coins, Weights, Measures, etc., of India; Observations on the Bore in Gulf of Cambay, in Lond. Geo. Trans. viii. p. 202; Topographical Description of Table-land on Cullery Mountain, Bom. Geo. Trans. iii. p. 198.—*Dr. Buist's Catalogue.*

JESSO, a large island, lying between those of Niphon and the Kuriles, subject to Japan. The shores swarm with seals and sea-otters, and the bays with fish. The natives are called Ainos, and life by fishing and hunting; they are strong, robust, and slovenly. Lat. 40° 50′ N., and long. 142° 30′ E.

JESSORE, a district in the presidency division of Bengal, lying between lat. 22° 25′ 50″ and 23° 47′ N., and long. 88° 57′ 33″ and 90° 0′ 13″ E. Jessore forms the central portion of the delta between the Hoogly and the united Ganges and Brahmaputra. It is a vast alluvial plain, intersected by rivers and watercourses.

JESUIT or Society of Jesus, a Christian sect established in Spain by Ignatius Loyola, of whom it has been observed that 'he legislated at once in the spirit of his early and of his later profession,—as a soldier and as a spiritual champion of the Church of Rome.' He designed his order in fact to be the embodiment of the idea subsequently formulated by De Maistre, that 'nothing accords so well with the religious as the military spirit.' And hence from the first its whole conception and aim was essentially Spanish and essentially despotic. The first three generals, who with the fifth—the fourth, Eberhard Mercurianus, was a nonentity—made it what it has been ever since, were Spaniards, and of the twenty-five members of the first General Congregation eighteen were Spaniards, so that the government of the company fell during the first ten years almost entirely into the hands of Spaniards. The three immediate successors of Ignatius, with the omission of Mercurianus, were Laynez, St. Francis Borgia, and Acquaviva. Laynez was an accomplished theologian, and had been specially selected with Salmeron, another Jesuit, to represent the papacy at the Council of Trent. To him the order owes that Molinist, as opposed to the Thomist or Predestinarian, system of theology which it has always consistently maintained. St. Francis Xavier, who came as a missionary to India, Malayana, and Japan, was of this order.

JESUS, an Alexandrian author, son of Sirach, who came into Egypt B.C. 132, and translated into Greek the Hebrew work of his grandfather Jesus, which is named the Book of Wisdom or Ecclesiasticus. It is written in imitation of the Proverbs of Solomon, though its pithy sayings fall far short of the deep wisdom and lofty thoughts which crowd every line of that wonderful work. In this book we see the earliest example that we now possess of a Jewish writer borrowing from the Greek philosophers.—*Sharpe's Egypt*, i. p. 397.

JESUS, the Christ or Messiah, is styled by Muhammadans the Ruh Allah or Spirit of God, born

of the Virgin Mary. They reject his mission as a Redeemer and Saviour, but regard him as one of the prophets whose intercession is of value. According to Mahomed, Jesus was born of a virgin, was a prophet, and the Spirit of God or Ruh Allah. Mahomed in the Koran (p. 37) says, 'The angels said, O Mary, verily God sendeth thee good tidings that thou shalt bear the Word proceeding from himself; his name shall be Christ Jesus, the son of Mary. Verily, the likeness of Jesus, in the sight of God, is as the likeness of Adam; he created him out of the dust, and then said unto him, Be, and he was.' 'God said, O Jesus, verily I will cause thee to die, and I will take thee up unto me, and I will deliver thee from the unbelievers, and I will place those who follow thee about the unbelievers until the day of resurrection.'—*Koran*, pp. 39, 40.

JESWUNT RAO HOLKAR. See Holkar; Mahratta Government in India.

JET.

Sortagat, ...	DAN.	Gagata, Lustrino, . .	IT.
Git,	DUT.	Gagus, Gagates,	LAT.
Zwarte-barnsteen,		Azeviche, . .	PORT.
Jais, Jayet, ...	FR.	Azabache, . . .	SP.
Gagat, . .	GER., SW.		

Jet is imported into India from Europe, but is worn only by Europeans. Large quantities of lignite are found in the tertiary strata along the sea-coast of India, but none of it takes a good polish.—*M'Cull. Dict.* p. 656.

JETEE or Chittee, or 'Rajmahal bowstring creeper,' Marsdenia tenacissima, grows in dry, barren places. Its dried milky juice serves as a caoutchouc. Its fibres are made into thread, twine, bowstring, and rope. It belongs to the family Asclepideæ.—*Royle's Fib. Pl.*

JETTI, in Southern India, a cæstus, which is worn over the first phalanges on the right hand of the boxers, also called Jeti. It is made of buffalo horn, with four sharp projections like knuckles, and the fifth near the little finger, with a greater prominence than the rest. The hitting is by a sharp perpendicular cut.

JETWA, Gumli or Bhumli, in Kattyawar, is the Abpura Hill, the old seat of the Jetwa. Murvi is an old Jetwa capital. The rana of Porbandar, styled Puncheria, represents the Jetwa, one of the four ancient Rajput races still extant in the Kattyawar peninsula. In the days of Mahmud, all the west and north of Kattyawar belonged to the Jetwa Rajputs, but the forays of the Jhala and Jhareja have confined them to their present district, the shaggy range of hills called Burda. The Jhala of Kattyawar, who own the raj of Hulwud Drangdra as their chief, are supposed to have sprung from an offshoot of Anhilwara, on the extinction of which dynasty they obtained large territorial aggrandizement. The thakur of Murvi in Kattyawar is a Jhareja, and was the first in Colonel Walker's time to abandon infanticide. He has possessions in Cutch. See India; Kattyawar; Rajput.

JEU, according to the Gnostics, was Adam, 'the primal man.'

JEW, a broken nation dispersed throughout the world. In Muhammadan countries Jews are known as Ya-hud or Yahudi, but in India this term is regarded alike by themselves and those who apply it as derogatory. On the Bombay coast they style themselves Ban-i-Israel; but this name is used by the Afghan for themselves, as also for Muhammadans and Christians who, as possessors of revealed religions, are regarded as children of Israel. Though Jews were Israelites, yet the Israelites were not Jews. The word Jew (Judæus) is really Judæan, and dates only from the return from Babylon, when the tribe of Judah became the head representative of the nation. The Samaritans always call themselves the children of Joseph, and the Jews Yehudhim or Judathites. While in Egypt they fell into a servile condition. Moses led the Israelites out of Egypt, and the law was delivered on Sinai B.C. 1320. They reached Palestine, but from that time to A.D. 50 they were repeatedly conquered. During the government of the judges they were six times captives, viz. under the king of Mesopotamia for eight years; under Eglon, king of Moab; under the Philistines; under Jabin, king of Hazor, when Deborah and Barak delivered them; fifthly, under the Midianites, from whom Gideon delivered them; then under the Ammonites and the Philistines.

In A.M. 3264 or B.C. 740, Tiglath-Pileser, king of Assyria, took several of their cities, and made many captives, chiefly from the tribes of Reuben, Gad, and the half tribe of Manasseh.

In A.M. 3282, B.C. 720, Shalmanezer, king of Assyria, transplanted the tribes which Tiglath-Pileser had spared, to the provinces beyond the river Euphrates, and it is supposed that the ten tribes never returned from this dispersion.

As to the captivity of Judah, Shishak, king of Egypt, about B.C. 960, sacked Jerusalem. Also Jerusalem was thrice taken by Nebuchadnezzar, king of Babylon,—first in the reign of Jehoiakim, about B.C. 606; again in the reign of his son Jeconias, about B.C. 598; thirdly, in the reign of Zedekiah, about B.C. 587, when Nebuchadnezzar carried them to Babylon, where they remained 70 years; when they returned and continued to be a people (though part of the time under the Roman Government), until the time of the Emperor Vespasian, whose son Titus entirely destroyed Jerusalem, about 50 years after the crucifixion of Christ, since which time they have never recovered from their dispersion.

Josephus, who is considered to have written his work on the ancient history of the Jews about the year 93 of the Christian era, says, in his eleventh book, with reference to the return from captivity of those who came back with Ezra, 'The entire body of the people of Israel remained in that country, wherefore there are but two tribes in Asia and Europe subject to the Romans, while the ten tribes are beyond the Euphrates till now, and are an immense multitude, not to be estimated by numbers.' To the same effect, St. Jerome, in the fifth century, in his notes upon Hosea, says, 'Unto this day the ten tribes are subject to the king of the Parthians, nor has their captivity ever been loosed.'

Jews have a principality at Khaibar in the Hejaz, with a population of about 50,000. They are said to be descendants of the Trans-Jordan tribes of Gad, Reuben, and Manasseh, and said to be brave. In manners and appearance they do not differ from other Arabs, but are held in great disesteem. Khaibar was captured by Mahomed A.D. 628, A.H. 7. Throughout Persia, Bokhara,

and Afghanistan they occupy themselves in petty traffic, and as bankers and spirit distillers; and in the Bombay Presidency they find employment in the subordinate offices of Government, and in the native army. Numbers of black Jews inhabit the interior of Cochin, principally in the towns of Trittur, Parur, Chenotta, and Maleb. The copper grant from the ruler, in their possession, bears a date equal to A.D. 388. They have their place of worship close to the Kotarum or palace of the maharaja at Muttuncherry, at the commencement of what is called Jews' town, the streets of which run south half a mile, the upper part occupied by the white Jews, the lower by the black Jews.

Forster, in a note to Bartolomeo (p. 109), says Erawi Wanmara, emperor of Malabar, in the year of the Kali Yoga 3481, corresponding to A.D. 426, in the 36th year of his reign, gave a charter to Isup Rabbaan (Rabbi Joseph), bestowing vice-regal powers. But that all who went to India prior to 1371 have died out. The white Jews near Cochin went to India at later periods from different countries.

When Wolff reached Cochin, he found there black and white Jews celebrating the feast of Paschal. Those that are called black Jews are, he says, such as became Jews of their own accord at Cranganore, and in other parts of the country they are of black and half-black colour. For this reason the white Jews do not intermarry with them. They have neither priests, nor Levites, nor families, nor relations on foreign coasts. They observe the law as white Jews do. They are most numerous at Cochin. Many of the black Jews, however, assert that their ancestors became Jews when Haman fell, and affirm (though the white Jews deny it) that they were there when the white Jews came to India. They consider themselves as slaves to the white Jews, pay their yearly tribute and a small sum for the circumcision of their children, and for permission to wear frontlets in prayer time. They do not sit down with the white Jews, nor eat with them.

Kukel Kelu Nair is of opinion that at the time of the grant of three of the copperplate documents in the Jews' possession, and possessed by the Christian church there, two towns, viz. Mani-gramman, which Irani Korten of Mahadeva Patnam obtained by No. 1 in A.D. 230, and Achu Vanam, which Joseph Roben, a Jew, obtained by No. 3 in A.D. 186, were chiefly inhabited by Jews and Syrian Christians; and he thinks that document No. 2 was granted in A.D. 316 by the last Perumal to the Tarisa Palli or church. It is obvious that Jews and Syrian Christians must have arrived in Malabar before the date of the documents 1 and 3. The Jews there have not much increased. In the food, the clothing of the men, and language, the Syrian Christians are not to be distinguished from the Hindus, and few of them know the Syrian language. The Jews are in many of these respects similar, and some of them are black in colour. Many of them possess gardens and lands, and follow trades.

One legend of the Afghans is that they were Jews whom Nebuchadnezzar transplanted, after the overthrow of Jerusalem, to the town of Ghor, near Bamian, and that they continued in their faith till Kalid, in the first century of Muhammadanism, summoned them to assist in the wars with the infidels. Another tradition is to the effect that they are descended from Afghan, son of Irmia or Berkia, son of Saul, king of Israel; but the Hebrews have no knowledge of such persons as Saul's descendants. Another tradition is that they are descended from Saul's father Kish. But Muhammad Hayat Khan, C.S.I., in his History of Afghanisan and its Inhabitants, states that the earliest mention of this legendary claim on the part of the Afghans occurs in a history of the Afghans, entitled Makhzan-i-Afghani, drawn up by Khan Jahan Lodi, an Afghan noble of the court of the emperor Jahangir, with the assistance of his secretary, Niamat-Ulahi; that this history was avowedly based on the reports of four servants sent by the author to Afghanistan to make inquiry into the origin of the Afghan race; that this inquiry was made for the express purpose of furnishing the means of confuting the assertions of a Persian ambassador, who had made uncomplimentary statements regarding the descent of the Afghans; that the earlier histories referred to in the Makhzan-i-Afghani — namely, the Majma-i-Insah, the Madan-i-Akbar-i-Ahmadi, and the Guzida-Jahan Kusha—trace the lineage of the Afghan no further than Kais Abd-ur-Rashid, who lived in the time of Mahomed.

All the Jews of Turkestan assert that the Turkoman are the descendants of Togarmah, one of the sons of Gomer, mentioned in Genesis x. 3.

The Jews in Bokhara are 10,000 in number. The chief rabbi assured Dr. Wolff that Bokhara is the Habor and Balkh, the Halah of 2 Kings xvii. 6; but that in the reign of Chengiz Khan they lost all their written accounts. At Balkh the Muhammadan mullahs assured him that it was built by a son of Adam, that its first name had been Hanakh, and afterwards Halah, though later writers called it Balakh or Balkh. The Jews both of Balkh and Samarcand asserted that Turkestan is the land of Nod, and Balkh, where Nod once stood. The Jews of Bokhara bear a mark, by order of the king, in order that no Muhammadan may give them salaam or peace. He thought the general physiognomy not Jewish, but he was wonderfully struck with the resemblance that the Yusufzai and the Khaibari, two of their tribes, bear to the Jews.

Of the Jews in the khanate of Bokhara the greater number live in Bokhara, others at Kattakurghan, Samarcand, and Karshi. In all these places separate quarters of the town are assigned to them, outside the precincts of which they are forbidden to settle, and therefore cannot intermix with the Muhammadans. They dare not wear a turband, but must cover their heads with small caps of a dark-coloured cloth, edged with a narrow strip of sheepskin not more than two fingers in breadth. Neither are they allowed to wear any other apparel than khalats of aledja, nor to gird their loins with a broad sash, still less with a shawl, but must twist a common rope round their waist. To prevent their hiding this distinctive mark, they are strictly forbidden to wear any flowing garment over the girded khalat.

Jews have existed in large colonies in Arabia ever since the captivity. In no country have they preserved their nationality more completely,

though surrounded for centuries by hostile Muhammadan tribes. Their own tradition asserts that during the invasion of Palestine by Nebuchadnezzar they fled to Egypt, and subsequently wandered farther south till they came to the mountains of Arabia, where they permanently established their homes. The fertility of the soil, the salubrity of the climate, and its picturesque scenery, rapidly caused the little colony to increase by attracting fresh emigrants, who sought that peace which their own distracted country no longer afforded. Inured to hardships and nursed in war, these foreign colonists soon gained an ascendency over the wild Arab tribes by whom they were surrounded, and in a little time the exiles of Judea reigned where they had before only been tolerated. Two strong tribes of them settled at Medina; they had a fortified capital in Khaibar, and in the 3d century of the Christian era they succeeded in converting one of the tobbas or kings of Yemen to the Jewish faith. A subsequent tobba, Dhou Nowas, became so ferocious a bigot in the cause of the Jewish religion, that he declared a holy war for the propagation of his creed, and took and destroyed the Christian city of Najran. On the complaint of the victims, and at the suggestion of Justin I., the nedjachi or king of Abyssinia undertook to avenge the cause of his co-religionists, and conquered Yemen, which thus became an Abyssinian dependency, until it was reconquered for the Yemenites by the Kesra or Chosroes of Persia, and governed by a Persian viceroy. During the reign of the Abyssinian kings, however, one of them, Abraha-el-Achram, built a magnificent church at Sanaa, and endeavoured to divert the reverence of the Arabs from the Kaba to worship and pilgrimage to his new cathedral. The Arabs flew to arms in honour of their national shrine, and in the course of hostilities Abraha laid siege to Mecca, but retired in great discomfiture, and died shortly afterwards. His assault of Mecca formed not only a crisis in the history of the Arab races, but the year, A.D. 570, of his expedition has become ever memorable as the year of Mahomed's birth, who was thus said to be born in the year of the Elephant, from the animal on which the king rode in his expedition.

The introduction of Muhammadanism materially altered their position, and severe enactments converted their once prosperous towns and villages into charnel-houses. Notwithstanding this persecution, however, every valley and mountain range still contains numbers of this race, who number in Arabia not less than 200,000 souls. At Aden the Jews are filthy in the extreme in their persons and habitations, and even the more wealthy of the community are nearly as uncleanly and parsimonious as their poorer brethren. The principal trades which they pursue in Aden are those of masons, builders of reed and mat houses, and workers in silver and ostrich feathers. In other parts of Arabia they are the most active, industrious, and hard-working people in the country. Rabbi Alkarce informed Dr. Wolff that the Jews of Yemen never returned to Jerusalem after the Babylonish captivity; and that when Ezra wrote a letter to the princes of the captivity at Tanaan, a day's journey from Sanaa, inviting them to return, they replied, 'Daniel predicts the murder of the Messiah and another destruction of Jerusalem and the temple.' Sanaa now contains 15,000 Jews. In Yemen they amount to 20,000. Wolff baptized there 16 Jews, and left them all New Testaments.

Jews are particular as to food. Animals are killed with a ceremony similar to that of the Muhammadan Halal, and a mark, כשר (Kosher), meaning in Hebrew Lawful, is put on the carcase. The general prohibitions are based on the law laid down in the 11th chapter of Leviticus. No animals may be eaten except such as both part the hoof and chew the cud, as oxen, sheep, and goats. No rabbits, hares, or swine are touched. As to fish, none may come to table that are devoid of scales and fins; and birds of prey and reptiles are absolutely forbidden as food. One restriction forbids the Jews to eat of the sinew of the thigh, a custom introduced in memory of Jacob's wrestling with the angel at Peniel, when his thigh was put out so that the sinew shrank (Genesis xxxii. 25, 32). In many places in Italy and in Germany, formerly (and perhaps now), they did not eat the hind quarters at all because this sinew is in them, and few were able to cut it out with the exactness required. This, indeed, is believed to have been the first distinguishing characteristics of the Jews as a people. In the 17th chapter of Leviticus the eating of any manner of blood is forbidden, necessitating the employment of a separate class of butchers for the slaughtering of animals, who must be specially instructed, have to be provided with a licence from their priest, and have to use a sharp knife, for torn flesh is also forbidden as food, and the blood must fall upon the ground. After the meat has left the shop of the butcher, the custom is to lay it in salt an hour before dressing, and afterwards to wash it, so as quite to cleanse it from blood. A cow and her calf must not be killed on the same day, and the same rule is observed as to sheep and goats. More than ordinary care is taken that the animal presented for food has neither died a natural death nor been afflicted with disease. It involves the necessity of having special examiners, as well as special slaughterers, of animals for Jewish consumption; and the authorities of the synagogue appoint proper persons to the office.

The Jews of China call themselves Tiau-kin Kian, or the sect which plucks out the sinew. They are said to number one million of souls. They have synagogues, and keep themselves perfectly distinct from the other inhabitants of the villages. The earliest record of the Chinese Jews which can be relied upon is that of an Arabian merchant, who, in 877, mentions the Jews that traded with him in China. In the 12th century the Rabbi Benjamin of Toleda visited the east to discover some of the scattered children of Israel, and he states that he found Jews in China, Tibet, and Persia. The Jesuit Ricci, whilst resident at Pekin in 1610, states that there were ten families of Jews residing in Kiang-fu, and they had in their possession a copy of the Pentateuch, which had been handed down from generation to generation for six centuries. Therefore from the whole of these statements it may fairly be concluded that for many ages Jews have been inhabitants of China.

JEWAKI, a pass in Afghanistan, occupied by

the Afridi. Their mountains are very strong. In the settlement of the N.W. Himalaya districts, the British Government was concerned chiefly with the Afridi of the two passes, *i.e.* the Kohat pass or Gullee and the Jewaki pass. For the guardianship of these passes the Afridi received consideration from successive dynasties, Ghiznivide, Moghul, Daurani, Barakzai, Sikh, and British, and broke faith with each and all. These mountaineers are great traders and carriers. They convey salt from mines in the Kohat district to the Peshawur market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation of their rugged hillsides would not alone suffice to afford. The British authorities can, by blockading the mouths of the passes, stop the trade and reduce the Afridi to sore straits. The Gullee or Kohat pass is the direct and best route from Kohat to Peshawur.

JEWELLERY. Jauhar, Zewar. HIND. Working in gold was familiar to the Egyptians before the exodus of the Israelites; and Hindus have long been acquainted with its applications, as in the hymns of Rig Veda golden armour and golden chariots, and decorations of gold and jewels, are frequently mentioned.

The custom of wearing jewellery has doubtless been through all ages, and is alluded to in Isaiah iii. 16, 18. Some jewels of the Hindus are inconveniently massive; and heavy rings, usually of silver set with a fringe of small bells, are often worn by Hindu ladies. Hindu women wear loose ornaments one above another on their ankles, which at every motion of the feet produce a tinkling noise. Armlets and bracelets of gold and silver are worn alike by Hindus and Muhammadans, and by men and women. They are of gold or silver, some in the form of massive carved rings, some as lockets; the more expensive, worn by royalty, are the bazu-band, literally armlets. These are generally worn as ornaments, and since the most ancient times like ear-rings (Genesis xxxv. 4; Exodus xxxii. 3, 4; Hosea ii. 13; Judges viii. 24), the ἐνώτια in aures, often of gold, like those of the Ishmaelites. But they are often caskets containing, as with the Muhammadans, charms, their ta'viz, or, as with the Jangam sect of Hindus, the phallic lingam. Their ornaments are often worn round the neck like the golden bulla and leather torum of the Roman youth, or as in Proverbs vi. 21, and most women have frontlet ornaments such as are alluded to in Deuteronomy vi. 8. Bracelets are also largely worn by all classes, of both ages and sexes, of every material, but those of the humbler women are principally of coloured glass and ornamented with lac and brass. In the East Indies and British India, personal ornaments and armour form the principal subjects for refined decorations. The silver work, filigree, gilt, chased, or engraved,—the koftgari work, iron or steel, inlaid or otherwise ornamented with gold, —bedri work, inlaid with silver, from the Dekhan and elsewhere,—are employed on bracelets, necklaces, shields, sword-hilts, and so on; while the brass from Madras, Benares, and other places, are utensils, goblets, etc., used in worship. In all these, fineness and elaboration, both in design and workmanship, are held in the highest esteem, and secondary qualities of this kind produce good results in small articles of luxury.

Rings for the fingers and toes, rings for the nose and ears; bracelets, armlets, anklets, nose-jewels, neck-chains, a piece of gold for the forehead; ear, hair, and head jewels; chains and zones of gold and silver for the waist, are personal ornaments in daily use amongst the men and women of Muhammadans and Hindus in British India. Several of these are enumerated in Ezekiel xvi. 11, 12: 'I decked thee with ornaments, and I put bracelets upon thy hands, and a chain on thy neck; and I put a jewel on thy forehead, and ear-rings in thine ears,' etc.; and xxiii. 40 says, 'Thou didst wash thyself, paintedst thine eyes, and deckedst thyself with ornaments;' Proverbs xi. 22 speaks of a jewel of gold in a swine's snout; a ring in the septum of the nose being a very common ornament among the Hindu and Muhammadan women; another nose ornament, the nat'h, being placed in the left ala.

No specimen of the art of gold-working has been met with which can with any certainty be attributed to the ancient period of Indian history. The oldest example now extant was found by Mr. Masson about the year 1836 in a Buddhist tope in the neighbourhood of Jalalabad. In the centre of the tope was a small apartment constructed of squares of slate. A steatite vase was found in it, containing, besides mould and the ashes of burnt pearls, a gold casket filled with similar remains. By its side were four copper coins, by which the monument is assigned to one of the dynasty of Greco-barbaric kings who ruled the N.W. of India about half a century before the Christian era.

In carrying on their artistic manufactures, the effect to be produced is the chief aim of the Indian jeweller. He thinks only of the dazzling variety of rich and brilliant colours. 'He must have quantity, and cares nothing for commercial quality; and the flawed "tallow drop" emeralds, and foul spinel rubies, large as walnuts, and mere splinters and scales of diamonds, which he so lavishly uses, are often valueless except as points, and sparkles and splashes of effulgent colouring.' By their consummate skill and thorough knowledge and appreciation of the conventional decoration of surface, they contrive to give to the least possible weight of metal, and to precious stones absolutely valueless, the highest possible artistic value, never, even in their excessive elaboration of detail, violating the fundamental principles of ornamental design, nor failing to please, even though it be by an effect of barbaric richness and superfluity. Megasthenes was struck by the contrast of their love of sumptuous ornament to the general simplicity of their lives.

The rose chains of Trichinopoly, and the snake chains of the Northern Circars, all display great skill in the workmen, as also the silver filigree work for which Cuttack and Dacca are famous, the last named showing greater delicacy and beauty than either Genoa or Malta; the articles usually made in filigree work are bracelets, ear-rings, brooches, and chains, groups of flowers, attardans, and small boxes for native uses. Mr. Taylor tells us that the design best adapted for displaying the delicate work of filigree is that of a leaf. The apparatus used in the Indian jewellers' art consists merely of a few small crucibles, a piece of bamboo for a blow-pipe, small hammers for flattening the wire, and sets of forceps for intertwisting it. The art of making gold wire,

that is, silver covered with gold, is practised in various parts of India. Several varieties of gold and silver thread (badla) are made at Dacca, as kalabatoon for the embroidery of muslins and silks; goshoo for caps and covering the handles of chauris; sulmah for turbands, slippers, and hookah-snakes; and boolun for gold lace and brocades. Much fringe of various patterns is made, and thin tinsel stamped into various forms of flowers, or impressed with excellent imitations of jewels, such as flat diamonds, emeralds, and rubies. Many of the ornaments are made only for the poorer classes, for instance, imitations of precious stones, ornaments in pewter, in shell, and lac, and, still simpler, a bracelet with straw to represent the gold, and the red seeds of Abrus precatorius in the place of garnets. The names and uses of a few of the jewels of Southern India are—Vunkee, or armlet; Jampaloo, or ear jewel; Kutree paval, ear ornament; Vallel, or bangles; Nuthoo, nose jewel; Moothoo coopoo, or ear ornament; Patteel, or bangles; Coopy, head ornament; Mayer Mootha, ear jewel; Jadabillay, head ornament; Adega, neck ornament; Curdapoo, head ornament; Thallysaman, head ornament; Gaya or Geddy gooloosoo, or leg ornament; Jaga undoo, head ornament; Cummul and Jamecka.

Bracelets, anklets, and armlets of gold, silver, brass, copper, deer horn, the metals being solidly massive and as chains, are in use in all eastern countries, and amongst Hindus and Muhammadans. Hindu men may be seen with gold or silver rings, ear-rings, and necklaces, but in general these are restricted to women and children. No Hindu will use gilded ornaments.

The Mahrattas wear the kitak, nag, khandani, phal, and mohr head ornaments, also armlets and chain-like anklets. The silver filigree work of Cuttack is generally done by boys. It is identical in character with that of Arabia, Malta, Genoa, Norway, Sweden, and Denmark, and also with the filigree work of ancient Greece, Byzantium, and Etruria. It is also made at Murshidabad, Dacca, and Ceylon.

The manufacture of shell bracelets is one of the indigenous arts of Bengal, in which the caste of Sankhari at Dacca excel. The chanks of which they are made are large univalve shells of several species of turbinella, from six to seven inches long, and of a pure white colour. They are imported into Calcutta from Rannad, and from the Maldive Islands. In making the large massive bracelets which are worn by Hindu women, they are sawn into semicircular pieces, and these are riveted and cemented to form the bracelets, some of which are elaborately carved and inlaid with a composition of lac and a red pigment. A pair of bracelets of this description frequently costs as high as 80 rupees. Of the thicker pieces of the shells, beads are made to form the necklaces which the Bengal sepoys wear. Some Marwari women and the Binjara women have the entire forearm from the wrist to the elbow covered with heavy massive bracelets, and the lower part of the legs equally covered with anklets. The armlets of the Binjara women are of deer horn, but it looks like ivory. Amongst the Rajputs, the women adopt a brother by the gift of a bracelet. The intrinsic value of such pledge is never looked to, nor is it requisite it should be costly, though it varies with the means and rank of the donor, and may be of flock silk and spangles, or gold chains and gems. The acceptance of the pledge and its return is by the katchli, or corset, of simple silk or satin, or gold brocade and pearls. Colonel Tod was the Rākhi-bānd-Bhāi of the three queens of Udaipur, Bundi, and Kotah, besides Chund Bai, the maiden sister of the rana, as well as of many ladies of the chieftains of rank. Though the bracelet may be sent by maidens, it is only on occasions of urgent necessity or danger. The festival of the bracelet (Rakhi) is in spring. . The adopted brother may hazard his life in his adopted sister's cause, and yet never receive a mite in reward; for he cannot even see the fair object who, as brother of her adoption, has constituted him her defender.

The mosaic work of Agra is chiefly applied at present to ornamental furniture and household objects of art, the inlay being of rock crystal, topaz, pearls, turquoise, carnelian, jade, coral, amethyst, bloodstone, garnet, sapphire, jasper, lapis-lazuli, agates, and chalcedony. It originated in the exquisite decorations of the Taj at Agra (A.D. 1627–1658) by Austin de Bordeaux. The art had almost died out, until about the middle of the 19th century it was revived by Dr. (Surgeon-General) John Murray, of the Bengal Medical Service. It is Florentine in origin and style, but Indian in the forms of its ornamentation. The mirror mosaic work in the Shish Mahal in the palace of Akbar (A.D. 1556–1605), or of Shah Jahan (A.D. 1627-1658), and that of the Shish Mahal of Lahore, is the work both of Shah Jahan and Aurangzeb.

Two things are acting unfavourably on the hereditary skill of the Hindu craftsman in recent years. The authority of the trade guilds has been relaxed under the freedom of English rule, and the importation of British goods has forced many artisans into agriculture and even domestic service. It was under the Indian guild system that the sumptuary arts were carried to a state of perfection, 'until at length the whole bullion of the western nations of antiquity and mediæval times was poured into the east in exchange for them.'

Some of the best workmen of British India are in Dacca, Chittagong, and Katch (Cutch). In Gujerat, at the towns of Dholka, Viragram, and Ahmadabad, working in gold and silver is largely carried on, and the Cutch, Gujerat, and Kattyawar goldsmiths are skilful in the decoration of arms, in silver and parcel-gilt and gold. At the present day, Dehli stands out prominently as the town of jewellers. The chief characteristics of its jewellery are the purity of the gold and silver employed, the delicacy and minuteness of the workmanship, the taste and skill displayed in the combination of coloured stones, and the aptitude for the imitation of any kind of original art on the part of workmen. Panjabi artists have retained a high reputation for skill as goldsmiths. Their best known manufacture is in parcel-gilt water jars, graven through the gilding to the silver below.

Still more pleasing are the copper-hammered work, lotas, from Tanjore, of which Sir G. Birdwood has given several engravings. In its bold forms, the brass-work of the same place recalls the descriptions of Homer of the work of the artists of Sidon. Some are simply etched, others deeply cut in mythological designs, and others diapered all over with a leaf pattern similar to that seen in Assyrian

sculpture. Those encrusted with silver are the most beautiful.

The beaten-gold jewellery of the purest Hindu style is made at Sawuntwari, Mysore, Vizianagram; and Damascus work, in gold, is chiefly carried on in Kashmir, at Gujerat and Scalkote in the Panjab, and is called koftgari or beaten work. Damascening in silver is also called bedri work, which is made at Beder, Purniah. In 1866, only one Hindu family remained in Beder engaged in this tutanague work.

Enamelling, the master craft of the world, is practised in great perfection at Jaipur (Jeypore) in Rajputana. It is champlevé. A round plate presented to the Prince of Wales is the largest specimen ever produced, and took four years in the making. There is an engraving of a native writing-case in the shape of an Indian gondola, which is of admirable workmanship; the colours of the blue and green enamel being brighter even than the natural iridescence of the peacocks' tails. The canopy which covers the ink-bottle is coloured with green, blue, ruby, and coral-red enamels.

Throughout the Madras Presidency and in Mysore, the gold and silver metals are superbly wrought in swami work, the ornamentation consists of figures of the Puranic gods in high relief, either beaten out from the surface or affixed to it, and removeable at pleasure, like the emblemata of the Romans. The metal work for everyday use is in brass, copper, and tin, or their alloys, in the form of lotas, atr-dans, pandans, dishes, bowls, candlesticks, images, bells, sacrificial spoons, censers, and they are made all over India. Kashmir, Moradabad, and Benares are famed sites. Also Bandhua in Oudh, likewise in Nuddeah, Tendukhera, Nasik, Poona, Ahmadabad, Bombay, Madura, Travancore, and Tanjore.

Bracelets are made of chank-shells at Dacca. They are sawn into semicircular pieces, which are joined together and are carved and inlaid with a red composition. The manufacture of shell bracelets in Sylhet gives employment to a large number of people.

In Egypt, anklets (or khulkhal) of solid gold or silver are worn by some ladies. They are heavy, and, knocking together as the wearer walks, make a ringing noise. Isaiah alludes to this, or perhaps to the sound produced by another kind of anklet, viz. a string of bells on the feet, which (amongst the Arabs) is a common custom for young girls or young women to wear.

The Hindu jewellery often is imitations of the flowers of the Michelia champaca, Acacia Arabica, Chrysanthemum, Phyllanthus emblica, Elæagnus koluga, and Mangifera Indica. The bell-shaped ear-ring is from the flower of the sacred lotus, and the cone-shaped of Kashmir, in ruddy gold, represents the lotus flower-bed. The lotus is seen everywhere in Indian, Chinese, and Japanese decoration, and on Assyrian and Babylonian sculptures.

A chopped gold form of jewellery worn throughout India is made of pieces like jujubes, of the purest gold, flat or in tubes, and, by removal of the angles and octahedrons, strung on red silk. It is the finest archaic jewellery in India. Ear-rings of the nail-head pattern are like those represented on Assyrian sculptures.

Necklaces in Western India are often of gold, in form like clubs and knots of grass. Burmese necklaces are tubular beads of ruddy gold strung together, and pendent from a chain that goes round the neck, from which the strings of tubular beads of gold hang down the neck like a golden veil. The gold is sometimes wrought into flowers. The eastern jewellers' art is employed for children of the earliest ages, as rings, anklets, etc.

Hindu girls have as their sole covering a silver leaf, of the shape of the pipal leaf, sometimes suspended from the waist by a thread, but generally by a girdle of twisted silver with a serpent's head, where it fastens in front. In Algeria, girls wear a leaf-shaped silver ornament; and through the Barbary States (Berber) it is the emblem of virginity.

With the ancient Egyptians, the lotus and papyrus were types of ornament, and the Greeks adopted the date tree for their pillars.

Imitations of knotted grass and of leaves seem to be the origin of the simplest and most common form of gold ornament, the early specimens consisting of thick gold wire twisted into bracelets, etc. A second archaic type of decoration is to be found in the chopped gold jewellery of Gujerat. This is made of gold lumps, either solid or hollow, in the forms of cubes and octahedrons, strung together on red silk.

The finest gemmed and enamelled jewellery in India is that of Kashmir and the Panjab, and which extends across Rajputana to Dehli and Central India. It consists of tires, aigrettes, and other ornaments for the head; also ear-rings, ear-chains, and studs of the chrysanthemum flower, nose-rings, nose studs, necklaces, some of chains of pearls and precious stones, others of tablets of gold set with gems, strung together by short strings of mixed pearls and turquoises; armlets, bracelets, rings, anklets, and rosaries, in never-ending variations of form, and of the richest and loveliest effects in pearl, turquoise, enamel, ruby, diamond, sapphire, topaz, and emerald. Like the Assyrian sculpture, the bracelets often end with the head of some beast.

Goldsmiths of India generally stain their work of a deep yellow. In Sind, the goldsmiths and jewellers sometimes give it a highly artistic tinge of olive-brown. The Sind goldsmiths' work is very beautiful, and of purely indigenous design. In Kashmir and in Burma their work is in ruddy gold.

Throughout Southern India, a favourite design with the British consists of figures of Hindu deities in high relief, either beaten out from the surface, or fixed on to it by solder or screws. The Trichinopoly work proper includes also chains of rose-gold, and bracelets of the flexible serpent pattern. The silver filigree work of Cuttack, identical in character with that of ancient Greece, and of Malta at the present day, is generally done by boys, whose sensitive fingers and keen sight enable them to put the fine silver threads together with the necessary rapidity and accuracy. The goldsmiths' work of Kashmir is of the kind known as parcel-gilt, and is further distinguished by the ruddy colour of the gold used. Its airy shapes and exquisite tracery, graven through the gilding to the dead-white silver below, softening the lustre of the gold to a pearly radiance, give a most charming effect to this refined and graceful work. The hammered repoussé silver work of Cutch (Kachchh), although now entirely naturalized, is

said to be of Dutch origin. Similar work is done at Lucknow and Dacca.

In many of the towns of India, the scarlet and black seeds of the Abrus precatorius (gunch), the flat black seeds of the Cassia auriculata (tarwar), the red seeds of the Adenanthera pavonina, the mottled seeds of the Areca catechu, the oval seeds of the Caryota urens, and the seeds of the Elæocarpus ganitrus, set in gold and silver, are all used for personal ornaments.

The goldsmiths' art contributes largely to embroidery. Gold and silver thread is made by being drawn out under the application of heat, and with such nicety, that one rupee's worth of silver will make a thread nearly 800 yards long. Before being used in the loom, this metallic thread is generally twisted with silk. For the manufacture of cloth of gold (sonári), or cloth of silver (rupéri), the wire is beaten flat, so as to form the warp to a woof of thin silk or cotton. A third kind of metallic ornamentation is practised at Jeypore in Rajputana and Hyderabad in the Dekhan, by printing muslins with patterns of gold and silver leaf.

Enamelling, as applied in India to jewellery, consists of an extremely fine pencilling of flowers and fancy designs in a variety of colours, the prevailing ones being white, red, and blue, and is invariably applied to the inner sides of bracelets, armlets, anklets, necklaces, ear-rings, sirpooch, tiara, and all that description of native jewellery, the value depending upon the fineness of the work, and often exceeding that of the precious stones themselves. The finest specimens are only made to order, and the best come from Benares, Dehli, and Jeypore. In the south of India, the manufacture of enamels on articles like the above is almost entirely restricted to Hyderabad. It presents no varieties, but in general consists of a blue coating interlined with white on a surface of silver, and is applied to rosewater sprinklers, spice-boxes, basins, and such like articles. The merit of the manufacture lies in the simplicity of the enamel itself, and in the lightness of the silver article to which it is applied. Though pleasing, it is the coarsest enamel produced in India. At Indore in Central India, it is applied to articles of personal decoration, such as necklaces, armlets, brooches, ear-rings, etc., which are set by native jewellers, according to the taste of the purchaser. The subjects generally consist in a representation of the avatars, or pictures of the metamorphoses of Indian deities; and the work is so perfect that it will stand, not only the influence of climate, but even rough handling. A set of the ornaments, consisting of a necklace, ear-rings, two armlets, and a brooch, in plain gold, contributed to the Exhibition of 1851, was valued at Rs. 1700, or £170. A duplicate forwarded to the Paris Exhibition in 1855, was purchased for Rs. 600, or £60.—*Toy Cart; Tod's Tr.; Rajasthan; Juries' Rep. Ex.* 1851; *Madras Ex.* 1855; *Ex. of* 1862; *Royle's Arts of India; Sir G. Birdwood; Imp. Gaz.*

JHABAR. Hind. Low land on which water lies, and in which rice is grown.

JHALA, a race who own the ruler of Hulwud-Drangdra as their chief, and are supposed to have sprung from an offshoot of Anhilwara, on the extinction of which dynasty they obtained large territorial aggrandizement. The part of the Jhala Makwahana tribe who also inhabit the Saurashtra peninsula, is styled Rajput, though neither classed with the Solar, Lunar, nor Agnicula races; they seem, however, to be of northern origin. It is a tribe little known in Hindustan or even Rajasthan, into which latter country it was introduced entirely through the medium of the ancient lords of Saurashtra, the present family of Mewar. A splendid act of self-devotion of the Jhala chief, when rana Pertap was oppressed with the whole weight of Akbar's power, obtained, with the gratitude of this prince, the highest honour he could confer,—his daughter in marriage, and a seat on his right hand. It was deemed a mark of great condescension of a recent rana sanctioning a remote branch of his own family, bestowing a daughter in marriage on the Jhala ruler of Kotah. This tribe has given its name to one of the largest divisions of Saurashtra, Jhalawar, which possesses several towns of importance. Of these, Bankaner, Hulwud, and Drangdra are the principal. Regarding the period of the settlement of the Jhala, tradition is silent, as also on their early history; but the aid of its quota was given to the rana against the first attacks of the Muhammadans.—*Tod's Rajasthan*, i. p. 113.

JHALAWAN, Saharawan, and Las districts of Baluchistan, west of the Indus, are on a great mountain range or table-land that runs N. and S. Jhalawan, with less elevation than Saharawan, is held by Brahui tribes, amongst whom are the Minghal, Bizunji, and Samalari, in the hills. The fixed population in their little towns does not exceed 10,000, and are greatly exceeded by the pastoral tribes,—the great tribes of Minghal and Bizunji giving them the preponderance. Jhalawan and Saharawan are the two great central districts of Baluchistan, and these districts surround the districts of Kalat which depend on the capital. The plain of Dasht-i-Guran, south of Chappar, is inhabited by the Sunari, a branch of the Jehri tribe of Jhalawan. Many of the Jhalawan tribes are undoubtedly of Rajput origin, and, until lately, the practice of infanticide was prevalent amongst them. Near Bagwana is a cave in a rock, which was seen in the middle of the 19th century filled with the dried mummy-like bodies of infants, some of which had a comparatively recent appearance. See India; Kalat.

JHALAWAR is a Native State in Rajputana, under the political superintendence of the Rajputana Agency and the Government of India. Jhalawar has been a separate dependency from the 8th April 1838, when the Kotah principality was dismembered, and maharaj rana Mudun Singh was established in Jhalawar under a treaty by which he acknowledged British supremacy, and he was vested with the titles of maharaj rana. During the mutinies of 1857-58, Pirthee Singh, his successor, rendered good service by conveying to places of safety several Europeans who had taken refuge in his districts. This state pays Rs. 8000 a year to the British Government as tribute. The area of the state is 2500 square miles, and the population 220,000.

JHANSI, a British district in the N.W. Provinces, lying between lat. 25° 3′ 43″ and 25° 48′ 45″ N., and between long. 78° 21′ 15″ and 79° 27′ 30″ E., with an area of 1567 square miles, and a population in 1872 of 317,826 persons. The Purihar Rajputs are pointed out by tradition as the earliest Aryan immigrants into Jhansi, where

they still possess 24 villages. Their last chief, Gungadhur Rao, died childless in March 1853, and as there existed no male heir of any of the chiefs who ruled Jhansi since the first relations of the British Government were formed with it in 1804, the state was declared lapsed to the British. The rani then attempted to seize the supreme authority. *On the 5th June 1857 the mutiny* broke out at Jhansi, and on the 8th a massacre occurred. The country was held by the rani, whose bitterness against the British was intense. It was captured by Sir Hugh Rose on the 5th April 1858; the rani had previously fled with Tantia Topi, and finally fell in battle at the foot of the rock fortress at Gwalior.—*Aitcheson's Treaties.*

JHAPI, umbrella-shaped hats worn by the lower classes of Assamese, made from the coarse leaves of the toko-pāt palm, the Livistonia Jenkinsiana, *Griffith.* The leaf of the talipot palm, Corypha taliera, is similarly used.—*Simmonds' Dict.*

JHAREJA, a Rajput race in Gujerat and Cutch, with a branch in Kattyawar, descendants of the Yadu, and claiming from Krishna. In early ages they inhabited the tracts on the Indus and in Sewesthan. But at another place Colonel Tod relates that Samba obtained possession of the tracts on both sides the Indus, and founded the Sind Samma dynasty, from which the Jhareja are descended. There is every probability, he states, that Sambus, of Samba Nagari (Minagara), the opponent of Alexander, was a descendant of Samba, son of Krishna. The Jhareja chronicles, in ignorance of the origin of this titular appellation, say that their ancestors came from Sham or Syria. The Jhareja dominions extend over a tract of about 180 miles in length and 60 in breadth; the land is generally poor, indifferently cultivated, and thinly peopled, so much so, that although it contains an area of upwards of 10,000 square miles, the number of inhabitants is only half a million, one-twentieth part of which is confined within the capital, Bhooj, and another twentieth within the sęaport of Mandavi. Except these two places, there is none which merits the name of city, though there are a few towns, as Anjar, Lukput, Moondia, etc., on the coast, which derive importance from their position. Of this population, the number of the dominant race, the Jhareja, fit to bear arms was estimated at only 12,000; the remainder are Muhammadans and Hindus of all sects and classes. The thakur of Murvi is a Jhareja, and was the first in Colonel Walker's time to abandon infanticide. He had possessions in Cutch. In 1818, Captain M'Murdo estimated the number of Jhareja in Cutch at about 12,000 persons, of whom only about 30 were wŏmen. The Jhareja killed their daughters to avoid paying for them heavy marriage portions.

JHARIA, a name applied in the Central Provinces to the older settlers, supposed to be from Jhar, underwood, forest; they are much looser in their observances than later comers of the same caste, eating forbidden food, and worshipping strange gods.

JHARIA, a coal-field in Manbhum district, Bengal, situated in the pargana of the same name, a few miles S. and S.E. of Parasnath Hill, Bengal. —*Imp. Gaz.*

JHARIKARI, also Jharya, a caste who wash and sweep the ashes and dust of a melting-house or goldsmith's shop. The Nyaria of Hindustan.

JHARWA, HIND., also Sawan or Sawain, a grass yielding a grain which is sometimes eaten and made into bread. It ripens in the rains of the month Sawan, hence its other name Sawain.

JHEEL. HIND. A marsh or lake. The jheels of Eastern Bengal owe their origin chiefly to the excessive rainfall of the Khassya and Sylhet Hills, and to the overflow of the Surma. They occupy an immense area, fully 200 miles in diameter from N.E. to S.W., which is almost entirely under water throughout the rainy season, and only partially dry in the winter months. They extend from the very base of the Khassya Hills and E. extremity of the Cachar district southward to the Tiperah Hills and Sunderbans, and westward to the Megna river and considerably beyond it, thus forming a fresh-water continuation of the Sunderbans, and affording a free water communication in every direction. The villages, and occasionally large towns, which are scattered over the surface of the jheels, generally occupy the banks of the principal rivers; these have defined courses in the dry season, their banks always being several feet higher than the mean level of the inundated country. Extensive sandbanks, covered in winter with a short sward of creeping grasses and annual weeds, run along the banks of the largest streams, and shift their position with every flood. The remainder of the surface is occupied by grassy marshes, covered in winter with rice crops, and in summer with water, upon which immense floating islands of matted grasses and sedges are seen in every direction, gradually carried towards the sea by an almost imperceptible current. Near Churra, the common water plants of the jheels are species of Vallisneria serrata, Damasonium, Myriophylla, Villarsiæ, Trapa; blue, white, purple, and scarlet water-lilies; Hydrilla, Utricularia, Limnophila, Azolla, Salvinia, Ceratopteris, and floating grasses. The Pakhal Lake in the Nizam's dominions, to the east of Hyderabad, is said to be the work of a Hindu dynasty, and to be the largest piece of water in India. In the Bengal Presidency, swamps, expanded or contracted according to the seasons, take the place of lakes, except when the latter are formed by old beds of rivers of an oblong character. But the Bhandara district in the Central Provinces has an equal or greater storage of water, in jheels and tanks numbered by thousands, though no one of them singly may equal the dimensions of the Pakhal.—*Hooker and Thomson; Hooker, Him. Jour.* ii. p. 309.

JHELUM, a town in the Panjab, in lat. 32° 55′ 26″ N., long. 73° 46′ 36″ E., with upwards of 5000 inhabitants. It is the headquarters town of a district of the same name. The Kshatriya Hindus here are traders and money-lenders; the Arora are husbandmen. The industrious Jat are largely Muhammadans. They hold the whole central region to the north and south of the Salt Range, the hills themselves being the home of the Janjuahs. They remained loyal during the mutiny in 1857. The Awan are numerous, nearly a hundred thousand. An interest is thrown around them by the conjecture that they represent the descendants of Alexander's army; though they themselves put forward a more apocryphal genealogy from the son-in-law of the prophet. The Gujar, farther south, form a pastoral tribe with a bad reputation for cattle-lifting, but are here a

body of thriving and honest agriculturists, with a fine manly physique, and considerable landed possessions around the town of Jhelum. Large numbers of Kashmiri arrive every winter in search of harvest work, and return home when the summer sets in. The Khokars, though numerically unimportant, possess great social distinction. One of their ancestors founded the town of Pind Dadan Khan, which he called after his own name, and has become the chief centre of the salt trade. The Jhelum river of the Panjab is the Hydaspes of the Greeks, and the Behut, Vehut, Vitasta, and Betusta of the Hindus. It rises in Kashmir, the whole valley of which it drains, and takes its course through the Baramula pass in the Pir Panjal range, entering the plain of the Panjab about 220 miles from its source. Below Jalalpur it runs nearly south, joining the Chenab a little above the Trimo ferry, in lat. 31° 10′ N., and long. 72° 9′ E., after a course of 450 miles. At this confluence the Jhelum is about 500 yards wide; after the union, the channel of the united streams is a mile broad and 12 feet deep.

The Jhelum district of the Panjab river yields gold, coal, marble, soapstone, gypsum, topaz, rock-salt, French chalk, sandstone, limestone. There is a thriving trade in horses and mules. The first thing a zamindar does with any small sum of money he has saved, is to buy a good mare, from which he breeds; and if any single individual is too poor to buy a whole mare himself, he and two or three others in the same condition as himself will club and purchase an animal amongst them. The colts or fillies produced there are largely bought up by officers of the cavalry service in search of remounts. Prices are given for them sometimes as high as Rs. 300 and Rs. 350 for three-year-old colts and fillies. Brass vessels and leather and parchment jars are largely made at Pind Dadun Khan.

JHENGUR. Hind. Species of the cricket genus. See Acheta; Insects.

JHIND is one of the states situated to the east of the Sutlej (Satlaj) river. It consists of three or four isolated tracts. The town of Jhind is situated in lat. 29° 19′ N., and long. 76° 23′ E. In 1857, Swarup Singh, then raja, was the first to march against the mutineers at Dehli. His troops acted as the vanguard of the army, and he remained in the British camp until the re-occupation of the city, and a portion of his troops took part in the assault. For these services he received a grant of additional territory, yielding £11,681 per annum. The maharaja is a Jat, of the Sikh faith, and of the same descent as the maharaja of Patiala.

JHOJHA, an inferior class of Muhammadans who are scattered over different parts of the Doab and Rohilkhand, and are reported to be good cultivators. In pargana Burun of Bulundshuhur, they represent themselves as converted Rahtor, Chauhan, and Tuar; but by others they are considered to be converted slaves of these tribes. In like manner, the Jhojha of Anupshahr are said to be slaves of the Moghul converted to Muhammadanism. Being Muhammadans, they are not restrained by Hindu observances of certain festivals, and thus, while Hindus are waiting for the Dit'hwun before they cut their sugar-cane, the Jhojha have already begun to press their cane and manufacture their sugar.—*Ell. Supp. Gloss.*

JHOOT'HA. Hind. Leavings of food; that which has touched food and is thereby defiled.

JHOW, in Baluchistan, has but one village, Nandara; its tribes are the Mirwari and Halada, the latter Brahui and pastoral. Numerous mounds, here called Daim, exist, where coins and trinkets are found, remnants of some former race. See Kalat.

JHUL. Hind. A saddle-cloth, also elephant's housing. Jhul-baili, a large pair of sacks for grain, carried by a bullock.

JHULA. Hind. A suspension bridge. In the simplest form, a jhula has a single set of ropes, from which a wooden seat is suspended, which is pulled from side to side by means of a rope worked from the rocks on either side of the river. The rudest of the twig jhula are the usual communications across the Ravi; but good wooden bridges (sangla) are kept up for the sake of sheep at Oli, Ulasa, and elsewhere.—*Cleghorn, Pan. Rep.* p. 101; *Dr. Thomson's Tr.*

JHULAN YATRA, a festival in honour of Krishna in the month Bhadra, when images of him and Radha are swung on decorated platforms.

JHUM, in Assam, the cultivation known in the Peninsula as the kumari, where the forest is burned, and one or two crops raised.

JHUNT or Jhunti. Beng. The tuft of hair left on the top of the head of the Hindu, after the head being shaved. A crest, a top-knot.

JI, Hind., from Jiva, Sansk. Life, soul, pronounced in the various tongues of India, jio, jib, and jiv. It means the vital principle, the mind or intellectual action, and enters into many composite words as an affix. Jivagar is a Buddhist teacher and ascetic. Jiva-hothi or Jeokothi, a house for the reception of living animals, such as are at Bombay, and supported by the Jains at Surat. It is usually written jee, and it is applied to names of Hindus, as Krishna-ji, Sita-ji. It is also used alone as a respectful term of assent, or an interrogatory, as yes, your pleasure?

JIMACH, also called Wokhab. Dr. Francis Buchanan Hamilton, in Shahabad district, 'saw a jimach attack a very strong falcon as it was hovering over a bush into which it had driven a partridge. The moment the falcon spied the jimach, it gave a scream and flew off with the utmost velocity, while the jimach equally pursued. They were instantly followed by the whole party, foot, horse, and elephants, perhaps 200 persons, shouting and firing with all their might; and the falcon was saved, but not without severe wounds, the jimach having struck her to the ground; but a horseman came up in time to prevent her from being devoured.' The wokhab, or ukab, as it is also termed, is a small eagle, very abundant in the plains of Upper India, the Dekhan, etc., bearing many systematic names, the earliest of which is Aquila fulvescens; it is not quite so large or robust as the Aq. nævioides of Africa, with which it has been supposed identical. The wokhab is very troublesome in hawking after the sun becomes hot, mistaking the jesses for some kind of prey, and pouncing on the falcon to seize it. Mr. (Sir) W. Elliot once or twice nearly lost shahin (Falco peregrinator) in consequence, they flying to great distances for fear of the wokhab or jimach. The principal hawks employed in Indian falconry are identical with those of Europe, namely, the Bhyri of India, which is the peregrine falcon, or

F. peregrinus, *Gmel.*, of the west; and the Baz of India, Astur palumbarius, *Linn.*, which is the goshawk or 'gentil' falcon of Britain. In a Persian treatise by the head falconer of the emperor Akbar, the various species used are enumerated, and may be recognised with precision; among them is the Shangar, which is clearly the gyr falcon of the north, represented as extremely rare and valuable, taken perhaps once or twice only in a century, and then generally in the Panjab.

JIN. ARAB. A demon, an evil spirit; one of the fabled genii. They are not restricted to any particular region, but the gigantic monsters, called dev, reside peculiarly among the rocks and forests of Masandaran or Hyrcania. In Muhammadan belief there are reckoned five distinct orders of such creatures, viz. jann, jinn, shaitan, ifrit, and marid, whose chief abode is in the Kaf mountains. They are good and evil creatures. Solomon is said to have had power over the Jin. In Arab mythology they are beings created out of smokeless fire, 2000 years before Adam; they are noticed in Suras i. xlvi. lvii. and lxxii. of the Koran.

To Muhammadan views, it is a material, intelligent being, with a body similar to the essence of fire or smoke.

Jin lived in the mountains of Kaf, near the mysterious sea of darkness, where Khidr drank of the fountain of life. And no one could tell when he might come across one of those terrible creatures, incarnate in the form of a jackal, a dog, or a serpent; or meet, perhaps, in his own hideous shape, the appalling Nesnas, who is a man split in two, with half a head, half a body, one arm, and one leg, yet hops along with astonishing agility, and is said, when caught, to have been found very sweet eating by the people of Hadramaut.

JINA. SANSK. A victor over the desires. A teacher of the Jain doctrines, any one of the 24 deified teachers of the system, called also a Tirthankara. The last of the Jina was Mahavira, who was born of Trisala, wife of Siddhartha, of the family of Ikshwaku, and prince of Pavana in Baratakshetra, and he married Yasodha, daughter of the prince of Samaravira. He afterwards became a Digambara or naked ascetic, and led in silence an erratic life for 12 years; and during his wanderings in this state he was repeatedly maltreated. He then commenced to lecture at Apapapuri in Behar. His first disciples were Brahmans of Magada and Indrabhuti, or Gautama of the Brahman tribe of Gautama rishi, who is not identical with the Gautama of the Brahmans. Mahavira died at the age of 72, thirty-eight of which had been spent in religious duties.

JINJIRA, a territory of a family of African origin, and known as the Sidi, also designated Habshi or Abyssinians.

Baji Rao, the first peshwa, waged an unsuccessful war with the Habshi ruler of Jinjira. They were as powerful at sea as Angria, and on the mainland were in the practice of ravaging the Mahratta territory, and had seized some forts. The utmost that the peshwa could obtain was a forbearance from these aggressions (A.D. 1736).

JIN-KIN, or classes of men, is a Chinese book of great authority. In it the sages occupy the first chapter, and in this Confucius is placed high above all others.—*Bowring.*

JIN-RIK-SHA. JAP. A kind of sedan chair.

JINTAWAN, an Urceola tree of Borneo, yielding caoutchouc. Its bark is soft and thick. In Borneo an Urceola grows to the size of a man's body, has a very rough appearance, on being cut emits its sap in the greatest abundance; and without destroying the tree, very large quantities might be obtained from a single trunk. There are three plants in Borneo called by the generic name of Jintawan; two are common in Sarawak, viz. the J. susuh, or milky jintawan, and the J. bulat, or round-fruited jintawan. They equally produce the caoutchouc, which differs in no respect from that produced by the Ficus elastica and other trees. The natives of Borneo use it to cover the sticks with which they beat their gongs and other musical instruments. The fruit, which is large and of a fine apricot colour, contains ten or twelve seeds enveloped in a rich reddish pulp, and though but a jungle plant, is one of the most grateful fruits of the country to the European palate.—*Low's Sarawak*, p. 52.

JIRGAH. PUSHTU. A council of an Afghan tribe, composed of the elders. The government of the tribes is a democracy, their representation and self-government being by their Jirgah, but, like most rude people, no man's nationality extends beyond his own clan.

JIRJIS or Jurjos, the St. George of England, whom Muhammadans rank among the prophets, and confound with the prophet Elias. Mar Jurjos wat-tawnin, St. George and the Dragon, is the name of the place where St. George destroyed the dragon, near the bridge over the Beyrout river. A Christian chapel was erected here, but it has been made a mosque.

JITA or Jit. HIND. Conquered, victorious, as Run-jit, victorious in battle.

JIVA. SANSK. Life, the soul. Jivata means individual spirit. See Ji.

JIVAGAR. TAM. A Buddhist teacher and ascetic.

JIVA GOSWAMI, author of the Vidagdha Madhava, a Sanskrit writer on the loves of Krishna.

JIVA-PITRI, the father of life, a proper epithet for Mahadeva, the creative power, whose Olympus is Kailas.

JIYYARU. TEL. The head of the Vaishnava Brahmans in the south of India.

JNANI, or divine Buddhas, are five,—Vairochna, Akshobya, Ratna Sambhava, Amitabha, Amogha Siddha, the mental creations of Adi Buddha, each of whom produced, respectively, a Bodhi-satwa, viz. (1) Samanta Bhadra, (2) Vajrapani, (3) Ratnapani, (4) Padmapani, (5) Viswapani.—*Fergusson and Burgess.*

JO, a Burmese people speaking a rude dialect of the Burmese, lying east of Chittagong.

JO, a beverage made from rice or millet, and used by the Bodo. The grain is boiled and flavoured by a root called agai-chito. It is left to ferment for two days in a nearly dry state. Water is then added, and it is fit for drinking in three or four days.

JOANNES DAMASCENUS, son of Sergius, a Christian who for many years was treasurer to the khalif Mansur. Sergius had a son, to whom he gave the best education, his chief tutor being Cosmas, an Italian monk who had been taken prisoner by the Saracens and sold as a slave at Baghdad. After the death of Sergius, his son succeeded as chief councillor (protosumbaulos) to the khalif Al Mansur. Such, however, had been

the influence of the Italian monk on his pupil's mind, that he suddenly resolved to retire from the world and to devote himself to study, meditation, and pious works. From the monastery of St. Saba, near Jerusalem, he sent forth the most learned works on theology, particularly his Exposition of the Orthodox Faith. He soon became the highest authority on matters of dogma in the Eastern Church, and he still holds his place among the saints both of the eastern and western churches. His name is Joannes Damascenus, or St. John of Damascus. His knowledge of Greek earned him in after life the title of Chrysorrhoas or gold flowing. He boldly opposed the iconoclastic policy of the emperor Leo. Among the works ascribed to him was that of Barlaam and Josaphat. He wrote a separate work discussing the merits of Christianity and Muhammadanism. In his Barlaam and Josaphat he introduced a number of eastern fables, and took his principal hero Josaphat from the Lalita-vistara, the life of the Buddha or enlightened, a portion of the sacred canon of Buddhists. The story of Barlaam is, in its most striking points, a mere repetition of the story of the Buddha, but Josaphat, the hero of the story, has been raised to the rank of a saint, both in the eastern and western churches. And thus, though under a different name, the sage of Kapela-vastu, the founder of a religion, which in the purity of its morals is nearer to Christianity than any other religion, and counts even now, after an existence of 2400 years, 455,000,000 of believers, has received the highest honours which the Christian church can bestow. If Buddha lived the life which is there described, few saints in the Greek or Roman churches are the equals of St. Josaphat, the prince, the hermit, and the saint.—*Max Muller in Proc. Roy. Inst. Gr. Brit.*, June 1870. See Jataka; Josaphat.

JOASMI. Of the maritime chiefs of the Persian Gulf with whom the British Government have concluded treaties, are the Joasmi chief of Ras-ul-Khyma, and Shargah, the chief of the Ban-i-As tribe of Abu-thabee or Bu Debaye, the chief of the Bu Filasa tribe of Debaye, a branch of the Bahija, and the chiefs of Amalgavine and Ejman. The possessions of these chiefs extend from Ras-ul-Khyma along the coast westward beyond the island of Bahrein. The Joasmi have occupied the province of Seer from the earliest times, and carried on a vigorous and profitable trade by sea, till, in 1805, they succumbed to the influence of the Wahabee religionists, and were drawn into the piratical projects of that turbulent sect. Under their influence the Joasmi plundered two British vessels, and treated the commanders with great cruelty. An expedition was sent to the Persian Gulf to punish them for this aggression, and to co-operate with the Imam of Muscat, who was then at war with them. The expedition resulted in the conclusion of a treaty on the 6th February 1806, binding the Joasmi to respect the flag and property of the British, and to assist vessels touching on their coast. The spread of the Wahabee in Oman soon threatened the Imam of Muscat with destruction, and the British Government determined to support him and to destroy the piratical fleets as the only means of preserving the peace of the Gulf. A strong British force was despatched in 1809, which took Ras-ul-Khyma, Linga, Luft, and Shinar, and destroyed the boats of the pirates. But piracy soon recommenced. In 1814, the Joasmi tribe wished to be at peace with the British provided they were allowed to war with Arabs. But they were quite unable to make good their professions. Even after the negotiation of preliminary articles of peace with the resident at Bushir, the Joasmi attacked and plundered British vessels. Other tribes were soon drawn under the Wahabee influence, and piracy increased beyond endurance. A second expedition was fitted out, and sailed from Bombay on the 1st November 1819. The naval part of it consisted of several British ships of war, the Company's cruisers under the command of Captain T. Collier; and the land forces amounted to about 3000 European and Native troops, under the command of Major-General Sir William Grant Keir. This expedition reduced Ras-ul-Khyma, the principal stronghold of the pirates, which had been carefully fortified and was vigorously defended; and also the hill fort of Zyah, which was likewise well defended by a veteran Wahabee, deeply imbued with the boldness and character of that sect. Ras-ul-Khyma was taken on 9th December, and engagements were made with the Arab chiefs preliminary to the conclusion of a general treaty in 1820. By the 9th article, the carrying off of slaves from the coasts of Africa or elsewhere, and the transporting them in vessels, was declared to be plunder and piracy. Thereafter, it was renewed annually till 1843, when it was prolonged for ten years. On the expiry of the ten years' truce in 1853, a treaty of perpetual peace was concluded, which provided that there should be a complete cessation of hostilities at sea between the subjects of the subscribing parties.—*Treaties*, vii. p. 239; *Fraser's Khorasan; Skinner's Jour.* ii. 223; *Wellsted*, i. 257.

JOB. Close to the village of Es Sadiyen are the tomb and fountain of Job, the former being a mukām or shrine, to which pilgrims from all parts repair. Africans come in great numbers from the Soudan, and the shrine is under the care of some 200 Negroes, who are exempt from taxation. The ruins of an ancient temple stand upon a mound near the tomb of Job, which Mr. Oliphant thinks has been successively a Phœnician temple of Baal, a Roman temple, a Christian church, and a Muslim house of prayer. A monolith, the top of which has been broken off, was formely the well-known emblem of Baal. The name of Astaroth, the principal female divinity of the Phœnicians, survives in the names of two adjacent villages, called Ashtereh and Tell Asherah. This was the country of the Amorites, 'who served Baalim and Asherah.' Ashtereh, a village, was visited by Captain Newbold in 1846. The book of Job is a protest against the accepted Hebrew view which considered all afflictions as tokens of the divine displeasure. It thus runs directly counter to the most cherished Jewish prejudices, and could only obtain admission into the canon by being provided with a prologue and epilogue at variance with the true tendency of the work, and the interpolation of the speeches of Jehovah and Elihu.

JOB'S TEARS. P'i-jin, P'i-jin-mi, CHIN. The hard, bead-like seeds of the Coix lachryma and C. vernica. They make a good substitute for pearl barley, though larger and coarser, and make good gruel. The plant flourishes in the Philippines, where the Chinese settlers make from them

a kind of meal, very nourishing for the sick, and in China it is sold for fivepence the Chinese pound. A wine is made in China by fermenting the seeds, and given in rheumatism. Sail matting and covers for boxes are made from the straw. The Chinese priests use the seeds as their rosaries.—*Smith, M. M. C.*

JODAGIR, or Hill of Strife, called also the Bakur chiria or Bird's Nest, a hill in Rajputana with a castle on it.

JODEL of the mountaineers of Europe is used in India, and sounds Wai-Waooó. In Fiji, He-hăh-hŏ-hŏ-hŏ.

JODH BAI was the daughter of Raja Maldeo, and sister of Oody Singh of Jodhpur in Marwar. In 1569, Oody Singh gave her in marriage to Akbar, whose favourite she soon became, and a few months after their union, she and Akbar made a pilgrimage on foot to the tomb of Moin-ud-Din at Ajmir. They travelled six miles a day. Arrived there, Moin-ud-Din appeared to Akbar in a dream and bid him seek the interposition of Shaikh Salem, a holy old man who dwelt on the top of Futtehpur Sikri. Shaikh Salem assured Akbar that Jodh Bai would bear a son who would live to an old age, and the Bai remained in a hut near the hermit till the promised boy was born. He was named Mirza Selim, and became the emperor Jahangir of Indian history. She died some time after A.D. 1600. Her tomb was to be seen on the artillery practice ground at Futtehpur Sikri, near Agra, till about the year 1810, but the walls and gateways were first taken away and then the tomb destroyed in practising mining. No palliation can ever be urged to defend an outrage on the dead, far less can any plea extenuate the act of blowing up into the air the remains of a woman, no other than Akbar's favourite sultana, the empress Jodh Bai, to whom the people of India owed much of the good they enjoyed under his long reign, by inspiring not only her husband, but the most able Muhammadan minister that India has ever had, with feelings of universal benevolence. Oody 'le gros' was the first of his race who gave a daughter in marriage to a Tartar. Four provinces, yielding £200,000 of annual revenue, viz. Godwar, Rs. 9,00,000; Ujjain, Rs. 2,49,914; Debalpore, Rs. 1,82,500; Budnawar, Rs. 2,50,000, were given to him in exchange for Jodh Bai, at once doubling the fisc of Marwar. With such examples as Amber and Marwar, and with less power to resist the temptation, the minor chiefs of Rajasthan, with a brave and numerous vassalage, were transformed into satraps of Dehli, and the importance of most of them was increased by the change. Truly did the Moghul historian designate them 'at once the props and the ornaments of the throne.'—*Tod's Rajasthan; Tr. Hind.* ii. p. 2.

JODHPUR, the capital of the Rajput State of Marwar, in lat. 26° 17′ N., and long. 73° 4′ E. It was built by Rao Jodha in A.D. 1549. The river Luni is the most marked feature in the physical aspect of Marwar. The only important lake is the famous salt lake of Sambhar, on the borders of Jodhpur and Jeypore. Two other depressions of the same kind exist, one in the north of Jodhpur at Didwana, and the other in the south at Pachpadra. The annual out-turn of salt from these two latter lakes is estimated at about 1,200,000 maunds (say 43,000 tons). The population consists of Rajputs, Charans, Bhats, Jats, Bishnawis, Minas, Bhils, and of the usual mixed Hindu population, with a scanty number of Muhammadans. The ruling chief of Jodhpur holds that position as chief of the Rahtor clan of Rajputs, to whom the territory belongs. The princes of Jodhpur and Udaipur (Oodeypore) term themselves Surjya Vansa or the Solar race, and claim descent from Rama. The founder of the dynasty migrated from Kanouj; and the Rahtor race, from its warlike and aggressive propensities, became the most powerful clan of the Rajputs. Several independent States were founded by offshoots from it, among which are the present States of Bikanir (Bikaneer) and Kishengarh in Rajputana, and Edar and Ahmadnaggur in Gujerat. On the 24th February 1873, Maharaja Jeswunt Singh succeeded to the throne. The installation ceremony was performed in the fort on the 1st March. His forehead was marked with a spot of blood which the thakur of Bugri, a dependency of Jodhpur, had supplied by cutting one of his fingers with a sword, according to custom. After all had taken their seats, it was announced that thenceforth Jeswunt Singh was the ruler of the territory. The brothers of the maharaja and other people then presented nuzzers, and the guns boomed forth salutes. At two in the afternoon the maharaja's sowari rode through the city. The populace turned out to render homage.—*Rast Goftar.*

JOG. SANSK. Union, junction. In Hinduism, amongst ascetics, the practice of religious abstraction, with the object of the individual being united to the universal soul and acquiring similar supernatural powers.—*Wilson.*

JOGADA NAUGAM, in the Ganjam district, is nearly four miles to the west of Purshottapur, a village on the banks of Rushukulia river. Rocks rise to about 150 feet from the plain. An inscription rock there was formerly enclosed by a fort, the remains of which are still traceable, and local tradition has it that the lofty walls were formed of impregnable materials, until a milkmaid revealed the secret, and allowed the besiegers—among whom was the girl's sweetheart—to effect an entrance into the fort. The inscription rock rises about 120 feet from the plain, and on the southern face are found three smoothed tablets filled with inscriptions of the Allahabad and other similar columns, which Mr. Harris believed to be a copy of Asoka's edicts.

JOGI or Yogi is a term properly applied to the followers of the Yoga or Patanjala school of philosophy, which, amongst other tenets, maintained the practicability of acquiring, even in life, entire command over elementary matter, by means of certain ascetic practices, consisting of long-continued suppression of respiration and other puerilities, such as fixing the eyes on the tip of the nose. Individuals are still met with who thus strive to effect a union between the portion of vital spirit residing in the body and that which pervades all nature, and the hysterical hallucinations which follow give airy nothings a local habitation and a name. It was practised in India so early as the 8th century. In the temples of Salsette, Elephanta, and Ellora, the principal figure is mostly Siva, decorated with ear-rings, such as are worn by the Kanp'hata Jogi sect. The walls are covered with ascetics in the various Asana or positions in which the Yogi is to sit. The cells attached to some of

the temples are also indicative of Jogi residence, and one of the caves of Salsette is named that of Jogeswara, or Siva as the lord of Jogi. The Jogi sect of Gorakhnath are usually called Kan'hata, from having their ears bored, and rings inserted into them at the time of their initiation. They may be of any of the Hindu castes, and live as ascetics in mat'hs. Siva is the object of their worship. They officiate, indeed, as his priests, especially at the celebrated Lat of Bhairava at Benares. They mark the forehead with a transverse line of ashes, and smear the body with the same; they travel in a cap of patch-work, and garments died with red ochre. Some simply wear a dhoti or cloth round the loins. The Sarunghiha are a Jogi sect who use the saringhi or lute, and beg in the name of Bhairava. Another sect is the Duri-hara, from their peddling in thread to the housewives of the villages; the Matsyendri or Macchendri, from Matsyendri, whom they regard as their founder, are a third sect; and a fourth is the Bhartihari. They are all errants and mendicants, and many assume the character merely to lead a lazy life; there are even Muhammadan Jogi. In the Dekhan they seem to be arranged into 12 orders—

Dubray Jogi or Bal santa ka Jogi.
Khani Bhai tie heavy stones to their body, beg, and sell medicines.
Launghoti Jogi or Juggai Jogi are merchants, selling beads.
Kanp'hata Jogi or Sonari Jogi live in temples, and are the priests.
Tingri ka Jogi, musicians, performing on the tingri.
Sooe pat bechne-wala Jogi sell beads of coral, etc.
Mendiki Jogi beg by beating on the tambourine.
Shan ka Jogi.
Kulghari bechne-wala Jogi sell the drip-stones, which the Doombur caste make for Brahmans.
Thuggance Jogi sell wooden trays made by carpenters near Dharwar.
Chako or Katti Jogi sell knives and sissors.
Dubbay bajani-wala beat a kind of tambourine.

Their modes of obtaining alms are extremely varied. The Khani Bhai demands alms; if refused, ties his lengthened body to the latch of the door; and many Jogi use musical instruments to sing to and attract attention. The women make rings, beads, and toys for sale. They never devote their women to the gods. Their marriages take place in early youth, and cost about Rs. 50 or 60. Two or three wives are sometimes in one household. The dead of the sect are buried by the Vaisya caste. In Persia, the term Jogi or Yogi is given to all Hindu religious mendicants, and to pilgrims who are occasionally seen there, on their way to Baku and other places of pilgrimage.

Mewar could always muster many hundreds of the Kanfera or Kanp'hata Jogi, or split-ear ascetics, so called from the habit of piercing the ear and placing therein a ring of the conch-shell, which is their battle trumpet. The Bhartrihari Jogi mendicants profess to have been instituted by Bhartrihari, brother of Vikramaditya, in the century before Christ. In the early part of the 19th century was a remarkable Mahapurush at the Ghosaul's of Kidderpur, a man about 40 years of age, with a very fair complexion, and jet-black hair, who did not eat or drink anything, nor speak a word, but remained in a sitting posture, with his legs and thighs crossed, absorbed in meditation. In 1867 there was a Jogi thus sitting in one of the caves of Ellora, who had sat there for five years, and the people said they were unaware who brought him food. Garments coloured with geru, or red ochre, are worn by all classes of mendicants, and a little horn is often suspended around the neck. The Moodra, a round prickly seed, is worn by the ascetics as ear-rings. The Jogi's patera is a hollow gourd; that of the divinity Hari (the god of war) is the human cranium.—*Fraser's Journey into Khorasan*, p. 394; *Wilson; Tr. of Hind.* i. p. 43; *Tod's Rajasthan*, ii. p. 236; *Wils. Gloss.*; *Wilson's Hindu Sects.*

JOGINI TANTRU, a work of high repute in Assam, as its contents are supposed to have been communicated by Siva to his consort Parvati. It states, regarding the king Norok, that though an Asur or infidel, he was in such favour with the gods, that they made him the guardian of the temple of Kamikhya.—*Beng. As. Soc. Journ.*, 1855.

JOHANNA, one of the Comoro islands in the Mozambique channel.

JOHAR or Jauhar, a general sacrifice in war, to which Rajputs resorted when pressed by overwhelming numbers. Colonel Tod relates that on one occasion when Jeysulmir was so pressed, Mulraj and Ruttun repaired to the palace of their queens, and told them to take the sohag, and prepare to meet in heaven, while they gave up their lives in defence of their honour and their faith. Smiling, the Soda rani replied, 'This night we shall prepare, and by the morning's light we shall be inhabitants of swerga' (heaven); and thus it was with the chiefs and all their wives. The night was passed together for the last time in preparation for the awful morn. It came; ablutions and prayers were finished, and at the Rajdwara were convened bala, prude, and bridu. They bade a last farewell to all their kin, the Johar commenced, and 24,000 women and girls, from infancy to old age, surrendered their lives, some by the sword, others in the volcano of fire. Blood flowed in torrents, while the smoke of the pyre ascended to the heavens. Not one feared to die, every valuable was consumed with them, not the worth of a straw was preserved for the foe. This work done, the brothers looked upon the spectacle with horror. Life was now a burden, and they prepared to quit it. They purified themselves with water, paid adoration to the divinity, made gifts to the poor, placed a branch of the tulsi in their casques, the saligram round their neck; and, having cased themselves in armour and put on the saffron robe, they bound the mor (crown) around their heads, and embraced each other for the last time. Thus they awaited the hour of battle, and 3800 warriors, with faces red with wrath, prepared to die with their chiefs. Other instances of the awful rite of Johar, when a whole tribe may become extinct, have been recorded in the annals of Mewar, the object of it being undoubtedly to prevent the women falling into the hands of the enemy. To the women of Europe the fate of the Rajputni must appear one of appalling hardship. In each stage of life, death was ready to claim her,—by the poppy at its dawn, by the flames in riper years; while the safety of the interval depends on the uncertainty of war. The loss of a battle, or the capture of a city, was a signal to avoid captivity and its horrors, which to the Rajputni are worse than death. It is singular that a nation so refined, so scrupulous in its ideas with regard to females, as the Rajput, should not

have entered into some national compact to abandon such proof of success as the bondage of the women. When the foe was the Tatar the Johar might have been pardonable, but the practice was common in the international wars of the Rajputs; and there are numerous inscriptions on stone and brass, which record as the first token of victory the captive wives of the foemen. When the mother of Sisera looked out of the window, and cried through the lattice, Why tarry the wheels of his chariots? have they not sped? have they not divided the prey; to every man a damsel or two? gives a perfect picture of the Rajput mother expecting her son from the foray. The Jewish law with regard to female captives was perfectly analogous to that of Menu; both declare them 'lawful prize,' and both Moses and Menu establish rules sanctioning the marriage of such captives with the captors. When a girl is made captive by her lover, after a victory over her kinsmen, marriage is permitted by law. The forcible marriage in the Hindu law, termed Rac'chasa, viz. the seizure of a maiden by force from her house, while she weeps and calls for assistance, after her kinsmen and friends have been slain in battle, is the counterpart of the ordinance regarding the usage of a captive in th Pentateuch, excepting the shaving of the h ad, which is the sign of complete slavery with the Hindu. When Hector, anticipating his fall, predicts the fate which awaits Andromache, he draws a forcible picture of the misery of the Rajput; but, to prevent such degradation, the Rajput had recourse to the Johar, or immolation of every female of the family. The very term widow (rand) is used in common parlance as one of reproach. The rule for the Jews is in Judges v. 28-30, Deuteronomy xxi. 10–13, 'When thou goest forth to war against thine enemies, and the Lord thy God hath delivered them into thine hands, and thou hast taken them captive, and seest among the captives a beautiful woman, and hast a desire unto her, that thou wouldst have her to thy wife; then thou shalt bring her home to thine house; and she shall shave her head, and pare her nails; and she shall put the raiment of her captivity from off her, and shall remain in thine house, and bewail her father and her mother a full month: and after that thou shalt go in unto her, and be her husband, and she shall be thy wife.'—*Pennant's Hindustan*, i. p. 56; *Tod's Rajasthan*, i. pp. 639, 640; *Menu on Marriage*, Art. 25, 33.

JOHN, DR., the founder of the missionary botanical garden at Tranquebar, into which were introduced many plants, chiefly of the Peninsula, but also from Ceylon.

JOHNIUS, a genus of fishes of the eastern seas, several species of which furnish isinglass.

Johnius diacanthus, *Lacepede.*

Lutjanus diacanthus, *Lac.* Corvina catulea,
Johnius catalens, *Cuv.* *Belanger and Blecker.*
Nalla katchelee, *Russell.* Corvina nalla katchelee,
Katchelee, *Russell.* *Richardson.*
Sciæna maculata, *C. and V.* Ikan tambareh, . MALAY.

This fish grows to 2 feet 9 inches. It inhabits the Sea of Penang, Malayan Peninsula, Singapore, Malabar, Coromandel, Bay of Bengal, Gangetic estuaries, Tenasserim, Canton, China seas, Madura, and Java. The air-vessel, ⅓d of the length of the fish, is of a broad lanceolate shape, tapering behind into a very elongated point. This fish is valuable as food, but also on account of the quantity and quality of its isinglass.

Johnius Dussumieri, *C. and V.* Corvina Dussumieri, *C. and V.* The total length of this fish is 6¾ inches. *It inhabits* the Sea of Penang, the Malayan Peninsula, Singapore, and Malabar. The length of the air-vessel is about one-fourth the total length. The isinglass is reputed good, but owing to the small size of the fish little is procurable.

Johnius maculatus, *Bloch, Schneider, var.?*
Sari kulla, TAM., *Russell.* | Corvina maculata, *C. & V.*

Inhabits Sea of Penang. The form of its air-vessel resembles that of Johnius belengeri.

JOHNSON, FRANCIS, a professor of oriental languages at Haileybury, in England, who printed the complete Hitopadesa, and accompanied it with a copious vocabulary. He afterwards brought out a translation as close to the original text as the necessities of English composition would allow. The above work, and the Arabic and Persian Lexicon which bears his name, gave him a high place in the estimation of orientalists.

JOHORE, formerly the chief city of the empire of that name, and residence of the sultan, is situated about 20 miles up the river so called. The town was founded in A.D. 1511 or 1512 by Sultan Muhammad Shah II. of Malacca, who, after his expulsion from that place by the Portuguese, fled to the river of Johore. From that time the town of Johore has been the capital of the empire which took the name of the empire of Johore instead of that of Malacca, and up to 1810 there had succeeded 14 princes. Johore is the residence of a panghulu, who is appointed both by the sultan of Johore and by the tumungong of Singapore. It is the received opinion that Johore derived its population from Menangkabau. The Menangkabau race are a purely agricultural, mining, and inland trading people, and consequently when they began to emigrate to the Peninsula their proceedings were precisely the reverse of those of the Singapore colonist, and indeed of all other Malays. They passed through the maritime districts, and sought valleys amongst the mountains of the interior. This fallen empire is nominally bounded by the Cassang river on the W. coast, and by Kemaman on the E. coast, in lat. 4° 15′ N. The sultan of Johore's present possessions on the Peninsula are subdivided into several petty states, —first, that of Muar, extending from the Malacca territory to Parrit Siput, including a large river of the same name, and an inland district called Segamet. This is under the immediate rule of the tumungong of Muar, a chief residing at Pancalang Kotah, on the river. Johore river is more than half a mile wide, with 8½ to 12 fathoms water. The Johore Archipelago is formed by the prolongation of the plutonic zone of elevation of the Malay Peninsula from Singapore to Billiton. The islands, with the exception of a few of the most southerly, formed the insular part of the kingdom of Johore from the 13th century till the occupation, in 1820, of Singapore. Several tribes in various stages of civilisation still possess the Johore islands.—*J. I. A.*, August 1848, p. 518; *Oliphant; Newbold*, ii. p. 41.

JOHYA, a Rajput tribe in the tracts about Pakpattan, along the Sutlej. The Johya, Dahya, and Mangalya tribes are now Muhammadan, but are few either in the valley or desert, as also are the Bairowi, a class of Baluch, and the Khairowi,

Jangria, Oondur, and Baggria, descended from the Pramar and Sankla Rajputs. By some authorities the Johya are included among the 36 royal races of India, by others they are considered a mere ramification of the Yadu Bhatti, and Colonel Tod calls them a Jat race. Some of the Joodi and Johya inhabit the range called in the native annals Juddoo-ka-dang, and by Baber the hill of Jud, skirting the Behut. Behera (Rennell calls it Bheera, in lat. 32° N., and long. 72° 10′ E., and Elphinstone, lat. 32° 10′ N., and long. 73° 15′ E.) is often mentioned in the Yadu Bhatti annals. It was one of their intermediate places of repose, on their expulsion from India and migration to Central Asia. Its position was minutely pointed out by the emperor Baber (p. 259), who in his attack on the hill tribes of Jat, Gujar, Guker, etc., adjoining Kashmir, 'expelled Hati Guker from Behera, on the Behut river, near the cave temples of Garkotri at Bikrum,' of which the annotator remarks that they, as well as those of But Bamian, were probably Buddhist. Baber (p. 294) also found the Jat masters of Sealkote, most likely the Salpur conquered from a Jat prince in the 12th century by the Patan prince, and presumed to be the Salbhanpura founded by the fugitive Yadu prince of Gujni. Among the Lahia and Johya Rajputs of the Indian desert, where they founded their first capital, Derrawul, many from compulsion embraced the Muhammadan faith, on which occasion they assumed the name of Jat, of which at least twenty different offsets are enumerated in the Yadu chronicles. Colonel Cunningham thinks that in the time of Alexander the Johya probably extended from Bhatner and Pakpattan to Sabzalkot, about half-way between Uch'h and Bhakar.—*Cunningham's Ancient Geography of India*, p. 245; *Tod's Travels*, xiv. p. 45; *Tod's Rajasthan*, i. p. 19, ii. pp. 233, 289; *Erskine's Baber*, p. 259.

JOKTAN. Arabians are divided by native historians into two distinct races, the posterity of Kahtan or Joktan, the son of Heber, who were termed al Arab al Araba, the pure Arabs, and the race of Adnan, the lineal descendants of Ishmael, who were called mixed Arabs, or Arab al Mostareba. The latter were intermixed with the descendants of Jorhan, one of the sons of Kahtan, and occupied the district of Hejaz, and from them were descended the tribe of Koresh. Kahtan was the first that wore a diadem in the land of Yemen, and his great-grandson Abid Shams or Saba was the first of the Arabian kings who undertook warlike expeditions and enriched his country with the spoil of his enemies, and is said to have received the name of Saba from the numerous captives whom he brought into Yemen. Kahtan was succeeded by his son Yarab, who was the first to speak the language and introduce the ceremonials of Arabia. Amongst the sons of Saba or Abid Shams were Hamyra, Amru, Kahtan, and Ashaar. Hamyar was the first of Kahtan's descendants who reigned over the whole of Yemen. He drove the remains of the tribe of Thamoud out of Yemen into Hejaz, and was one of the bravest, most skilful, and handsomest men of his time. Hamyar signifies red, and he is said to have received this name from the colour of his garment, and to have been the first king of Arabia who had a crown of gold.—*Early Christianity.*

JONAH, a prophet of the Hebrews. The prophet suffered grievously from the eastern wind. This is the sherki so much dreaded in all these countries, which is hot, stormy, and singularly relaxing and dispiriting. The ruins opposite Mosul are called Nabi Yunus and Koyunjik, and a sketch showing the tomb of Jonah is given at p. 131, vol. i. of Layard's Nineveh and its Remains. Ricold of Montecroce also mentions the traces and ramparts of Nineveh, and a spring which is called Fount of Jonah. He adds that as the inhabitants of the neighbourhood pointed out to him the tomb of Jonah upon the summit of one of the mounds, it was natural to conclude that it marked the site of the great Nineveh. But this tradition as to the site of the tomb of Jonah is not supported by Scripture. Mr. Layard tells us that the Jews, in the time of St. Jerome, pointed out the sepulchre of Jonah at Gathhepher, among the tribe of Zabulon. The building, which is supposed to cover the tomb, is very much venerated, and only Muhammadans are allowed to enter it.—*Kinneir's Memoir*, pp. 258, 259; *Layard's Nineveh; Yule's Cathay*, p. 351; *Rich's Kurdistan*, ii. p. 35.

JONAKAN, a titular designation of the Moplah race of Malabar in the S.W. of the Peninsula, supposed to be derived from the Grecian Yavana.

Jonangi, also written Zonangi, Jonagar, and Jonakari, a Muhammadan tribe in the south of the Peninsula, where they are also called Cholia, also Labbi. They are considered to be descended from Arab fathers and native women. The term has been supposed to be from Yunani, Grecian, also from Shonahar, the name of some country.

JONES. Captain Felix Jones entered the Indian navy in 1828, and for the succeeding quarter of a century was uninterruptedly employed in almost every survey of importance on which the officers of his service were engaged. Though a mere boy of seventeen when he commenced work in the Red Sea survey, in the Palinurus, under Commander Moresby, his talents found ample recognition, and the draughting of the northern portion of the Red Sea was entrusted to him, the southern portion being by Capt. Dugald Campbell. On the completion of the survey of the Red Sea, which occupied between 1829–34, Felix Jones was engaged in the survey of the Maldive Islands, again under Capt. Moresby, and drew the original charts, the execution of which was so beautiful that they were submitted for the inspection of the Queen. In 1837 we find him engaged in the Gulf of Manaar and coast of Ceylon on the same laborious duty. Lieut. Jones commanded the steamer Nitocris in the Euphrates Expedition from May 6, 1840; performed the ascent of the Euphrates to Bales, a distance of 1130 miles, in twenty days, in conjunction with three other steamers, commanded by Lieuts. Campbell, Grounds, and M. Lynch; and crossed the Syrian Desert to Beirout, where he communicated with the British fleet, then engaged in operations against Muhammad Ali, and connected the Euphrates and Mediterranean by chronometric measurements for longitude. He then brought the Nitocris down to the Gulf, but remained in Mesopotamia surveying the country under the late Lieut. Blosse Lynch, I.N., until 1846. In the following year, on his being appointed Surveyor-General of Mesopotamia, he returned thither from Bombay, having completed a map of

the countries between the Mediterranean, Kurdistan, Persia, and the Gulf. The journals of the Royal and Bombay Geographical Societies are enriched with many of his memoirs and maps, and others were published by Government. After twenty-five years' continuous service, he proceeded to England on sick leave, and returned by Asia Minor and Constantinople, bringing with him a map, in three sheets, of Babylonia, which was lost in the India Office. The political relations with Persia assuming a threatening aspect, he returned hastily to Baghdad, and on March 1, 1855, was appointed Officiating Political Agent and Consul-General in Turkish-Arabia, and in the following October succeeded Capt. (now General Sir Arnold) Kemball as Political Resident at Bushir. In the capacity of Chief Political Officer to the Persian Expedition he received the repeated thanks of Sir James Outram, who recommended him for honours, which, however, he never received. Again, during the Indian mutiny, he rendered service to his country by keeping in check the disposition of Persia and the warlike Arab maritime tribes to intrigue against British supremacy, and he received the repeated thanks of the Indian and Home Governments. In February 1863, Capt. Felix Jones completed his magnificent map of Assyria, which occupied the declining years of his life, and then died. He wrote a Memoir on the Province of Baghdad.

Sir Harford Jones, Baronet, a civil servant of the East India Company, who was sent by Great Britain on an embassy to the court of Persia, in which he was eminently successful. He left Bombay on the 12th September 1808, and reached Bushir on the 14th October. At Teheran, when the treaty was to be signed, the aged wazir, Mirza Shaffi, accused him of an attempt to cheat him, on which Jones pushed him against the wall, kicked over the candles on the floor, left the room in darkness, and rode home. The treaty was signed 12th March 1809. He wrote an account of the mission to Persia in 1807–11.

Sir William Jones, a judge of the High Court of Justice at Calcutta in the latter part of the 18th century, a learned orientalist, and voluminous writer. Many of his discourses and memoirs appeared in the first to the fourth volumes of the Asiatic Researches. The principal of these were,—A Preliminary Discourse; on Asiatic Orthography; on the Gods of Greece, Italy, and India; on the Sources of the Nile; Second Anniversary Discourse; Third ditto; on the Arabs; on the Tartars; on the Persians; Remarks on Johanna Island; on Hindu Chronology; on the Indian Game of Chess; on the Second Classical Book of the Chinese, ii. p. 198; on the Antiquity of the Indian Zodiac; on the Cure of Snake-Bites; Design of a Treatise on Plants; on the Chinese; Supplement to Indian Chronology; on the Spikenard; on the Borderers, Mountaineers, and Islanders of Asia; Translation of Grant of Land in Carnata; on the Musical Modes of the Hindus; on the Mystical Poetry of the Persians and Hindus, As. Res. iii. p. 165; on the Lunar Year of the Hindus; on the Origin of Families of Nations; on Asiatic History; on the Loris or Lemur; on the Philosophy of the Asiatics, As. Res. iv. p. 164; a Catalogue of Indian Plants; Remarks on Dr. Hunter's Astronomical Observations made on Journey to Ujjain; Remarks on Playfair's Questions on Astronomy of Hindus. On his tomb was engraved the following:—

'Here was deposited
The mortal Part of a Man
who feared God but not Death,
and maintained independence
But sought no Riches;
who thought
None below him but the base and unjust,
None above him but the wise and virtuous.'

JONESIA ASOKA. *Roxb.* ii. p. 220.

J. pinnata, *Willde.* | Saraca pinnata, *Willde.*
J. Indica, *Rheede.* | S. arborescens, *Burm.*

Asok, ...	BENG.	Jassoondi, . .	KONKAN.
A-thau-ka-pho, .	BURM.	Kankeli, . . .	SANSK.
Ashunkar, . . .	CAN.	Diya rat mayl, .	SINGH.
Wu-yu-wha, . .	CHIN.		

The Jonesia genus of plants, of the natural family Leguminosæ, was named by Dr. Roxburgh in honour of Sir William Jones. The species are few in number. They form trees, which are highly ornamental from their handsome, shining, abruptly-pinnate leaves, and from the showy nature of their crowded racemes of flowers.

Asoka is a Sanskrit word, from a, privitive, and Soka, sorrow. The asoka flowers appear in March and April, and the fruit in August and September, and when in full blossom the whole vegetable kingdom does not afford a more beautiful object. Its flowers are diversified with orange, scarlet, and bright yellow tints. In Hinduism, it is consecrated to Siva, and is often planted near temples, —as the lotus flower, called Kamala or Padma, is sacred to Vishnu and his wife Lakshmi. In Hindu poetry, despairing lovers very commonly address objects of nature, clouds, elephants, and birds, on the subject of their lost or absent mistresses, and the asoka tree is often invoked.

In the Toy Cart, translated by H. H. Wilson, Maitreya, describing a garden, says, 'And here the asoka tree, with its rich crimson blossom, shines like a young warrior bathed in the sanguine shower of the furious fight.' Differences in the colour of the flowers arise from their changing during development. When they first expand, they are of a beautiful orange colour, gradually changing to red, forming a variety of beautiful shades. They are fragrant during the night. Hindu men and women of all classes ought to bathe, on a particular day, in some holy stream, especially the Brahmaputra, and drink water with buds of the asoka floating in it. Sita is said to have been confined in a grove of the asoka tree, while in captivity by Ravana; other relaters say she was confined in a place or house, called Asokwan.—*Mason's Tenasserim; Coleman's Mythology; Lady Faulkland's Chow-Chow; Richardson's Flowers and Flower Gardens; Williams' Story of Nala*, p. 117.

JOOGA. HIND. The yoke of a carriage or plough. The word is preserved in many Indo-European languages, thus — Sanskrit, Yug; Persian, Yogh; Greek, Zeugos; German, Joch; Latin, Jugum; Russian, Igum.—*Elliot.*

JORDAN rises a few miles N.E. of Paneas (Cæsarea Philippi), at the foot of Mount Hermon, a branch of the Anti-Libanus. Its apparent source flows from beneath a cave at the foot of a precipice, in the sides of which are several niches with Greek inscriptions. Crossing the bogs and fens of the lake Merom, subsequently called Lamochonitis, after a course of 15 miles, it passes under the city

of Julias, the ancient Bethsaida, it then expands into a beautiful sheet of water, the lake Tiberius, anciently Gennesareth, and, after a winding course of about 60 miles through a hollow valley called El-Ghor, it empties itself into the lake Asphaltites, or Dead Sea, the Bahr-ul-Lut of the Arabs. Its whole course is about 130 miles; its breadth averaging about thirty yards, and in depth three. It is called by the Arabs Sheriat-ul-Kabir. The valley of the Jordan opens to the east, beyond which the eye loses itself in the desert of Hauran. —*Robinson's Travels.*

JOSAPHAT, a corruption of Bodhisatwa. Barlaam and Josaphat, a romance ascribed to St. John of Damascus, has been so completely received into the bosom of the Latin Church, that the names of 'the holy saints Barlaam and Josaphat of India, on the borders of Persia,' have been canonized, and have their proper day, November 27th, as may be read in the Martyrologium of Cardinal Baronius, authorized by Pope Sextus V. for general use in the Catholic world, at page 177 of the 1873 edition, endorsed by His Holiness Pius IX. The Greek Church assigns a different day to the holy Iosaph, son of Abener, king of India, and omits Barlaam. Josaphat or Iosaph is Bodhisat, or the condition of Sakya before he became a Buddha, and the religious romance of St. John of Damascus is simply a Greek version of the life of Gautama. Professor Max Muller pointed out the fact that Gautama, under the name of St. Josaphat, is now officially recognised and honoured and worshipped throughout the whole of Roman Catholic Christendom as a Christian saint! And just as Barlaam and Josaphat is an offshoot of Buddhist literature, so the wide series of tales represented by the Pancha Tantra, Kalila and Damna, Fables of Bidpai, Æsop's Fables and La Fontaine's, are mainly traceable not only to an Indian, but to a Buddhist source. Sindbad the Sailor, and other tales of the Arabian Nights, have their birth in Buddhist Jātakas; Boccaccio, Chaucer, Gower, and Spencer have been indebted to this treasure-house of Buddhist folk-lore; even the three caskets and the pound of flesh in the Merchant of Venice are ideas found in this wonderful old story-book. —*Contemporary Review*, 1870. See Barlaam; Jataka; Lalita.

JOSEPHUS. Flavius Josephus, a Jewish historian. After a visit to Rome, he commanded the troops defending Jotapata against Vespasian, but subsequently joined Vespasian and aided in the siege of Jerusalem, and received great advancement from Vespasian and Titus. He wrote History of the Wars of the Jews, first in Syriac and then in Greek; he also wrote the Antiquities of the Jews, also two books in defence of the Jews, and his own life. Born at Jerusalem A.D. 37, died at Rome about A.D. 93.—*Cataſago.*

JOSHI, HIND., also called Joti, Jotisi, and Jotiaru, is an astronomer, an astrologer, in general; professing astrology and fortune-telling, and employed in casting nativities. In Upper India, the name is applied to an inferior order of Brahmans following this occupation; in the Dekhan, to a caste of Sudras. The term, when restricted to a Brahman conversant with astronomical science, implies considerable respectability, as is the case with the Joshis of Kamaon. Their name is derived from Jotish, astrology, and they are known also by the names of Bhudurea and Dukout. The manner of the employment of the Joshi is described in Exodus xxxii. 5, where Aaron made proclamation, and said, 'To-morrow is a feast to the Lord.' Similarly, before a religious ceremony or festival, the officiating Brahman or an appointed person proclaims, 'To-morrow, or on such a day, such a ceremony will be performed;' and every morning, in Southern India, the joshi goes from house to house to inform the inmates as to the sacred rites of the day depending on the planetary movements.

The Hindu almanacs or panchanga are so complicated that ordinary persons cannot understand them, and every town has a number of men who earn a livelihood by going from house to house to explain the conditions which are to guide their religious rites. Jotidar, in Bengal, a village authority. Jotisastri-karia, SINGH., an astrologer.

Jotish, correctly Jyautisham, in Sanskrit, includes mathematical, astronomical, and astrological science. The treatises on Jotish are all in Sanskrit, but some are written in other characters. The Sanskrit names for the zodiacal signs are—

Mesham, ram.	Tula, scales.
Vrisabham, bull.	Vrischicam, scorpion.
Mithinam, twins.	Dhanas, bow.
Karkatacam, crab.	Macaram, he-goat.
Simham, lion.	Kumbha, vessel.
Kanya, virgin.	Mina, fishes.

Jyotishia, in Sanskrit, is astronomy, astrology. Jyotishi, an astronomer; an astrologer who prepares the calendar, casts nativities, and tells fortunes.

The Jyotisha is a Sanskrit astronomical treatise, one of the Vedanga, detailing the most auspicious days and seasons for the Hindus to perform the Vedic sacrifices and ceremonies. One of its tracts, of 36 verses, is supposed to be of date B.C. 300. —*Elliot.* See Almanac; Panchanga; Vedanga.

JOSHUA, a Hebrew chief who led the Israelites over Jordan, B.C. 1280, and drove the Amorites from their territory near Hebron. Rameses II. was then reigning in Egypt. Joshua divided Canaan into twelve parts, which the tribes drew by lot, according to their families.

JOSS-HOUSE, a Chinese temple. In every Chinese house, without exception, is found the shrine of the special joss or god of the family, with joss-sticks (aromatic pastilles) burning before it; and in some corner is the stove, and on it the tea equipage, ready for use at a moment's notice.—*Frere, Antipodes*, p. 209.

JOT. BENG. The land which a cultivator tills; also his tenure of it.

JOU-KHIAO. The first and most ancient of the faiths in China was that called Jou-khiao, the Doctrine of the Lettered, of which Confucius is regarded as the reformer and patriarch. It was based upon a philosophical pantheism, which has been variously interpreted at various epochs. It is believed that at a remote period, the existence of an omnipotent God, a requiter of human actions, was not excluded from it. — *Huc's Christianity*, i. p. 322.

JOVAKYER, a servile caste of toddy-drawers in Malabar, inferior in social rank to the Jover or Tiyar, with whom, however, they intermarry.

JOWRAH. Ghaffur Khan, the first nawab of Jowrah, was brother-in-law of the Pindara leader Amir Khan, whom he represented at the

court of Holkar when Amir Khan quitted Malwa on his expeditions into Rajputana. The lands which had been assigned to him by Holkar were guaranteed to him by the 12th article of the treaty of Mundisore, on condition of his maintaining a body of 600 horse, the quota to be increased in proportion to the increasing revenue of his districts. In 1842 the existing arrangement was commuted to a yearly contribution of Hali Rs. 1,85,810, when the western Malwa contingent, consisting of the troops furnished by Jowrah, was amalgamated with the eastern Malwa contingent furnished by Holkar and Dewas. The contribution was reduced to Hali Rs. 1,61,810 in 1859, as a reward for the nawab's services during the mutinies. The area of Jowrah is 872 square miles; the population, 85,456 souls; the revenue, Rs. 6,55,240. Jowrah contains the best poppy-growing lands in Malwa, and yields yearly about 1000 chests of opium. The nawab keeps up a military force of 175 horse and 600 foot. The nawab received a sunnud guaranteeing the succession to his State according to Muhammadan law, in the event of the failure of natural heirs. He receives a salute of 13 guns.—*Treaties*, iv. p. 343.

JUANGA, or Patuah, or Patra Saori, a forest race inhabiting the tributary mahals to the south of Singbhum in Cuttack, scattered in the mahals or killahs of Keonjur. Pal Lehra, 30 villages; Dhenkanal, 6 villages; and Hindole, 6 villages. The stature of the men does not exceed 5 feet 2 inches, and of the women 4 feet 3 inches or 4 feet 4 inches. Their forms are slight, with little muscular development, and physique weak. Their face is shorter and broader than that of the Uriya; the nose is flat, and nostril wide. Their colour is not darker than the Uriya peasant. The men are not handsome, but the women are repulsively ugly. The men dress like the peasantry of the neighbourhood, but, until 1871, all the covering of the women consisted of two bunches of twigs, with their leaves attached, one before and one behind, which were changed daily, and kept in their position by a strip of bark or a string of glazed earthenware beads, passed twenty or thirty times round the waist and over the stems of the twigs; hence the name of the tribe, Patuah,—literally people of the leaf; but they call themselves Juanga and Pudhan. The women also wear necklaces of the same kind of beads, and their hair is gathered together in a knot at the back of the head, fastened by a string with a silver or brass button at each end of it. The women wear no blanket or covering at night, but sleep between two fires. Their traditions are to the effect that they were formerly vain of fine dress, and were wont to lay aside their good clothes to prevent their being soiled, and wore such leaves when attending to the cleaning of the cow-houses or other duty, when one day a thakurani, or, according to some, Sita, appeared, and commanded them as a punishment for their vanity always to wear such leaves. They believed that if they violated these commands they would be devoured by tigers. Their villages are in the clearings or openings in the forest; are small, with about six or eight families in poor and mean thatched huts of wattle and daub, each family in its own dwelling. They have no lands, but sometimes assist in the cultivation of the neighbourhood. Their avocations are chiefly those of the chase, using the bow and arrow, and dogs; they kill deer, hogs, and not unfrequently snakes, of the flesh of which, especially that of the Python molurus, they are very fond. Except the cow, they are omnivorous. Their usual food is insipid and nauseous roots (tuga, kurba, and panialu), and the seeds of the jungle grasses. They have no system of caste. They deny that they worship any deity or have any image, but they pay homage to nameless spirits who inhabit the woods and mountains, and make offerings of a fowl, a goat, or rice, or spirits, to the genus loci. In the month Baisakh, they offer libations to the manes of their deceased ancestors. They bury their dead. Marriages are arranged by the parents, and are scenes of revelling and drunkenness. They adhere to one wife, unless she prove unfruitful. Like many of the Hindu races, they will not pronounce their wives' names. Their language is not similar to Uriya, and it shows that they are connected with the Munda of Chutia Nagpur, and that their nearest kinsmen are the Kheriah. But in their present position they are isolated from all other branches of the Kolarian family, and they have no suspicion that they are connected with them. The Juanga women are fond of ornaments, which they wear in the nose, ears, and hair. That for the nose is the ordinary nhut, or nose-ring of other Indian tribes. In the ears are worn two or three rings, and one larger ornament worn in the upper part of that organ; this latter ornament is bell-shaped, and not untasteful. The hair of the women is gathered into a knot at the back of the head, and fastened by a string, each end of which terminates in a brass or silver button. Sometimes, too, a bell-shaped ornament is worn in the hair, and has not a bad appearance. The effect of the Juanga costume on a person who beholds one of these women for the first time is ludicrous enough, but it is in the dance that such appears pre-eminently ridiculous. They dance in a circle to the noise of a large drum, beaten by the men, which marks the time, moving round and round in the same measured step, occasionally advancing towards the musicians, then receding from them, in the performance of which the Juanga ladies evince a strong disposition to attitudinize and make display. In the dance, they bend gracefully forward at an angle of about 45 degrees, the left hand slightly holding the extremity of the long strings of beads, the right hand hanging down towards the knee. In such an attitude, it must be evident that the stiff bundle of twigs in front will press inconveniently against the legs of the dancer as she bends forward; she therefore pushes it between them towards the rear, which necessarily forces up the rear bundle, and as the materials of the sylvan crinoline are about as flexible as a birch broom, the effect of a dozen such tails bobbing up and down together in the dance is ludicrous to European eyes, though the Juanga themselves do not seem to consider the sight at all promotive of laughter.

These people eat the flesh of all animals except the cow, from which they abstain out of deference to the Dhenkanal raja, whose lands they are permitted to live on rent-free, on condition of supplying him, when required, with ardent spirits, which they distil from mahwa flowers and wild honey, which is very plentiful in those jungles. The

men, also, are bound to serve him as coolies for the conveyance of his baggage when he travels through the district, and to beat the jungle when he hunts, which latter duty they consider a pastime; as, next to killing game themselves, their greatest pleasure is to see it killed by others. Their quickness of sight, too, in tracking a wounded animal is quite wonderful; the Juanga will discover a deer's track, even some hours after the animal may have passed over fallen leaves and ground the least calculated for tracking an animal. They also hunt with dogs, of which they possess a very useful breed, but they have no firearms. Their expertness with the bow is quite astonishing, and at 80 yards they will hit a very small mark, and it is considered no feat to shoot a hare at full speed, or a bird upon the wing,—the latter being generally shot with blunt arrows. Their bows are generally of bamboo, and so powerful are they as to send an arrow through and through a wild hog or deer; but they do not care to meddle with the large animals, and have an especial dread of the bear and tiger. This tribe do not hold any land, and appear to have a strong aversion to agriculture, or any other laborious employment. They possess but few domestic animals, and these they rarely kill except for sacrificial purposes; thus they have to depend on the produce of the chase to supply them with flesh, but game of all kind is so plentiful in those jungles that the Juanga need never be in want of animal food. The flesh of snakes is, by them, considered a peculiar delicacy, but their ordinary diet consists of edible grass seeds, and roots, which must be an unpalatable and little nourishing kind of aliment; however, as before stated, the men show no symptoms of insufficiency of diet, for they appear plump and sufficiently fed, but the women have a meagre and half-starved look, though, perhaps, this arises as much from want of clothing as the absence of sufficient nourishment; for a certain degree of warmth is quite as essential as food to maintain either man or beast in healthy condition. The Chenchu of the Guntur and Masulipatam jungles much resemble the Juanga in their habits, and the jungles of Malabar contain the Holier race, whose women, up till A.D. 1830, were in the practice of attending the market of Mangalore in similar vegetable costume.—*Colburn's Journal*, 1861.

JUBHA. HIND. A long outer garment, generally of cloth, worn by learned and respectable Muhammadans; it is a large wrapping gown, with sleeves, tight at the wrists, but wide above, open in front, and so wide as to admit of being folded round the body, the one side lapping broadly over the other; it very much resembles the Persian 'barouni,' but in Persia is commonly made of coarser materials. The Khorasani jubha is most commonly made of brown or reddish-grey woollen, and frequently of camel's hair. It is a very good external covering, its close texture not readily admitting the wet, and in a great measure excluding the wind. In India, it is made of muslin, or cotton, or chintz.—*Fraser's Khorasan*, p. 266.

JUGAR, also Joojar'h. HIND. A monumental tablet raised by Rajputs to the memory of soldiers slain in battle. Colonel Tod, writing of one of these, says, His body was carried to Ranolli and burnt, and he had his cenotaph amongst the joojar'h of his fathers. At another place he says (p. 727), A humble altar of clay marks the spot where the brave Hara fell, having a tablet or joojar'h, representing a cavalier and his steed, armed at all points.—*Tod's Rajasthan*, ii. pp. 416, 727.

JUGGERNATH TURKOPUNCHANUM was Sanskrit tutor to Sir William Jones; compiled the digest of Hindu laws, under the patronage of Lord Cornwallis.

JUGGLERS. See Domba; Jatti; Kollati (Khelati?); Modewar.

JUGGUT COONT, the point of land beyond Dwaraka in Kattyawar, the last stronghold of the Yadu race when their power was extinguished. It was at Juggut Coont, the Jigat Point of English maps, where the Badhail, a branch of the Rahtor, established themselves.—*Tod's Rajasthan.*

JUGHI, Mezeng, and Luli are tribes classed as Musalmans in Bokhara, but they seem to be similar to gypsies; their women go unveiled, and the men are careless in their religious duties. Numbers of them are established at Bokhara and other towns as medical men, and telling fortunes, and horse dealing; such as lead a wandering life encamp in tents of a coarse cotton stuff called Bez. They have permission to halt near all the lakes and rivers of the khanate, whenever those places are not previously occupied by Uzbaks; in consequence of which a great number of them are dispersed along the banks of the Zar-afshan, near Samarcand, while others encamp in the neighbourhood of Karakul.

JUGLANDACEÆ, the walnut tribe of plants, including many valuable timber trees. There are in the East Indies three species of the genus Juglans and three Engelhardtia, viz. E. Roxburghiana, Wallichiana, and Colebrookiana. J. arguta, *Wallich*, Theet-kya, BURM., grows in Burma; J. regia in Central Asia; Engelhardtia Roxburghiana in the mountains on the north-east of India, and E. Wallichii at Penang and Singapore. J. cordiformis, *Maxim.*, a walnut tree of Japan. J. Sieboldiana, *Maxim.*, a large walnut tree of Japan.

JUGLANS REGIA. *Linn.* Walnut tree.

Kas-shin, . . .	BHOT.	Dun, ...	KANGRA.
Hu-t'au, Heh-t'au,	CHIN.	Ka botang, . .	LADAKH.
Kiang-t'au, . .	,,	Starga, . . .	,,
Akrot, . .	HIND., PERS.	Than, Khor, Darga,	RAVI.
Charmaghz,	,, ,,	Ughz, Waghz,	TR.-INDUS.

J. regia extends from Greece and Asia Minor, over Lebanon and Persia, probably all along the Hindu Kush to the Himalaya, and is abundant in Kashmir, Sirmur, Kamaon, and Nepal; and J. arguta was found by Dr. Wallich as far south as Taong Dong.

It occurs wild in the Caucasus and N.W. Himalaya, and in Jalandhar is cultivated. The trunk of a very old tree is from 15 to 18 feet; wood hard, light, and strong, of a dark-brown colour, beautifully veined; receives a high polish, and is used principally for cabinet-making purposes, and for gun stocks; not subject to worms, nor liable to warp. The tree is found in the Sutlej valley, between Rampur and Sungnam, at an elevation of 7000 to 9000 feet. The fruit ripens well at Pangi, but not much higher; its pericarp contains tannic and gallic acid in abundance, and the nut is emulsive, and very rich in a valuable drying oil.

The husks and root of the walnut both yield a

dye, which is much used by gypsies and theatrical performers for staining the skin brown. It is also used by cabinet-makers and joiners to stain white and yellow woods of a dark-brown or black colour, like that of the walnut. In the preparation of the dye from the husks, they should be allowed to rot, and then boiled in water, adding to the decoction fresh water, according to the colour required to be produced by the solution. The sap of the walnut tree contains a large quantity of saccharine matter; and in some countries the trees are tapped for the purpose of obtaining the sap, which by evaporation is converted into sugar. It is also, in many parts of Europe and Asia, fermented and made into wine, and a spirit is also distilled from it. Cowley, in his Plants, sums up the virtues of the walnut in the following lines:—

'On barren scalps she makes fresh honours grow;
Her timber is for various uses good;
The carver she supplies with useful wood;
She makes the painter's fading colours last.
A table she affords us, and repast;
E'en while we feast, her oil our lamp supplies.
The rankest poison by her virtues dies,
The mad dog's foam and taint of raging skies.
The Pontic king, who lived where poisons grew,
Skilful in antidotes, her virtues knew.'

Anglers employ an infusion of the leaves or husks for pouring upon the earth, in order to procure worms, which it speedily brings to the surface.—*Royle's Ill. Him. Bot.* 342; *Voigt; Roxb.*

JUGLANS PTEROCOCCA. *Roxb.* Ta-soung-let-wah. BURM. This tree is found on the banks of the streams in the Pegu district, but is scarce; it is a hard, strong timber. Wood white coloured, adapted to every purpose of house-building.—*M'Clelland.*

JUGMUNDA, an island palace of Udaipur. During the mutiny, the Rao of Baidbah here gave shelter to 60 British women and children.

JUG-RAJ. HIND. Amongst the Hindus of India, the act of abdication confers the title of Jug-raj; or when they conjoin the authority of the son with the father, the heir is styled Jiva-raj. Four instances of this are on record in the annals of Bundi. Jug-rani, HIND., queen of the world. —*Tod.*

JUJUBE TREE, *Zizyphus jujuba.*

Unab (fruit), . .	ARAB.	Liang-tsau, . .	CHIN.
Tsau, Ta-tsau, .	CHIN.	Kung-tsau, . .	,,
Hung-tsau, . .	,,	Mih-tsau, Nan-tsau,	,,

A tree of the south of Europe, Persia, China, India, and other countries, yields a wholesome fruit; preserved in syrup by the Chinese, after the surface has been scratched in numerous fine longitudinal lines.

JUKAN. PERS. A game of ball on horseback. The player, while riding at full gallop, has to catch up the ball from the ground with a bat, and send it in two strokes through two hoops affixed to poles, one behind the other. This game requires more activity than the Turkish game of jarid.—*Vambery, Bokhara*, p. 77.

JUL-JATRA. On the 14th (Sudi), or 29th, is a solemn festival in honour of Vishnu. It is called the Jul-jatra, from being performed on the water, Jul. The rana, chiefs, ministers, and citizens go in procession to the lake, and adore the 'spirit of the waters,' on which floating lights are placed, and the whole surface is illuminated by a grand display of pyrotechny. On this day Vishnu rises from his slumber of four months,'—a figurative expression to denote the sun's emerging from the cloudy months of the periodical floods.—*Tod's Rajasthan*, i. p. 598. See Jal.

JULO. BALUCH. The Bad-i-Simoom, or hot wind of the desert.

JULOSTYLIS ANGUSTIFOLIA. *Thw.* Kydia angustifolia, *Arn.* A middle-sized tree of the south of Ceylon, not uncommon.—*Thw.* p. 30.

JULOTSURG, also written Jalotsarg, is a ceremony which is gone through when a pond, boali, or well is married. The only difference between this and the Bunotsarg is that the bride is personated by an image, instead of the tulsi.—*Elliot.*

JUM, cultivation carried out on land cleared by burning the forests. In Arakan, land cultivated with the hoe. The Kumari of S. India, and Cheena, is a mode of cultivation practised by the wild races in the forests of India. In the Chittagong Hills, in the month of April, a patch of the forest is selected by the Jumahs, and cut down and cleared by burning it in May, after drying in the sun. The ground is sown, a house is erected, and the crops of grain, cotton, and tobacco carefully cleaned and watched. They usually move off to a new site next season.—*Mor. and Mat. Prog.*, 1868-69.

JUMA. ARAB. Friday, the principal day of religious worship among the Muhammadans, when they assemble at the mosque.

JUMMA MUSJID, in India, the common appellation of the principal mosque of a town. That of Dehli, close to the Chaundney Chowk, is built of great blocks of red sandstone, with three domes of white marble, and raised upon a terrace 50 feet high. It is a noble sample of Muhammadan architecture, and one of the grandest temples ever raised by man. It is the second most remarkable building in India, being next in rank to the Taj. Had it been wholly of white marble, the grandeur and effect would have been immeasurably greater; as it is, the red stone of the colonnades, and the pavilions, and the court-yard, and the gateways, seems to be a blemish in the design, though it may have been intended to set off more the beauty of the white marble of the mosque by contrast. It is the highest building in all Dehli, towering above every other object, and seen from every part of the city. The mosque itself rises on the west of the platform, indicating the direction of Mecca. In shape it is an oblong, 201 feet in length, and 120 feet in breadth. The flags are about 3 feet long by 1½ broad, and their number is 900, capable of holding 2000 persons. The Jumma Musjid was commenced in 1629, and finished in 1648. It is said to have cost ten lakhs of rupees.—*Tr. of Hind.* ii. p. 282.

JUMNA or Jamuna, a river of the North-Western Provinces and of the Panjab. It rises in the Himalayas, in the Native State of Garhwal, about 5 miles N. of Jumnotri, and about 8 miles N.W. of the lofty mountain Bandarpanch (20,731 feet), in lat. 31° 3′ N., and long. 78° 30′ E. The Jumna, at its source near Jumnotri, is 10,849 feet above the sea-level; at Kotnur, 16 miles lower, it is only 5036 feet; so that, between these two places, it falls at the rate of 314 feet in a mile. At its junction with the Tons it is 1686 feet above the sea; at its junction with the Asan,

1470 feet; and at the point where it issues from the Siwalik Hills into the plains, it is 1276 feet. The catchment area of the Jumna is 118,000 square miles; its flood-discharge at Allahabad, 1,333,000 cubic feet per second; discharge per square mile of catchment area, 113 cubic feet per second. The Eastern Jumna (Jamuna) canal is an important irrigation work in Saharunpur, Muzaffarnagar, and Meerut (Mirath) districts, North-Western Provinces. The Western Jumna (Jamuna) canal is an important irrigation work in Umballa (Ambala), Karnal, Dehli, and Rohtak districts, Panjab. It takes its supply of water from the Jumna at Hathni Kund, on its western bank.

The spot where the Ganges and Jumna, sister nuddis (Greek Naiades), meet, makes a magnificent prospect. There is scarcely a lovelier spot than the prayag of Allahabad. The broad expanse of waters, the verdant banks, and the picturesque scenery, tell upon the mind, and fascinate the pilgrim. A special great mela is held here every year on the full moon in January,—Maghai Prayagai, as the common Hindu saying goes,—and the holy fair lasts there about two months, and attracts people from far and near.

The Mesopotamia formed by the Ganges there, known as the Doab, is the Anterved of the ancient Hindus. From the narrow point in which it terminates, the valley broadens as it stretches away towards the west, embracing a greater and greater area between the Ganges and Jumna. The whole of its immense superficies forms a vast, populous, and busy hive, enriched by human industry, and embellished by human taste. It is thickly dotted with great townships and cities, and under the sun no country makes up such a highly interesting prospect of green fields, orchards, and gardens in a continuous succession. In this fair savannah were the cities of the pre-Vedic Dasya races. Here rose the first cities of the Arya race. In the plains of the Doab, the rajas of Hastinapur, of Indraprasthra, and of Kanouj exhibited the highest power and splendour of Hindu sovereignty. The rich districts watered by the Ganges and Jumna have always tempted the avarice of the foreign conqueror. Here was the residence of the most famous Hindu sages. From this birthplace of arts and civilisation, wisdom travelled to the west. This Doab is the battle-ground of the Pandu against the Kuru, of the Ghaznivide and Ghorian against the Hindu, of the Moghul against the Pathan, of the Mahratta against the Moghul, and of the British against the Mahratta, where many a spot is hallowed by tradition, and many a ruin is consecrated by history. In this Doab almost every inch of land is under the plough. From Allahabad to Sheeoabad, there are four large cities, and villages at frequent intervals. A similar distance in Bengal is no doubt dotted with the same number of villages, but has not one town equal to Futtehpur, Cawnpur, or Mynpori. Here the rural population is more intelligent and spirited than the same class in Bengal. The humblest Doabi lives upon better food, and covers his body with more abundant clothing, than the humblest Bengali. The cattle here are various. Camels, buffaloes, horses, donkeys, and oxen are all made to assist man in his labours. The fondness of the Doabi women for coloured millinery evinces a more cultivated female taste, and to them may remotely be traced the impetus which is given to the various dye manufactures of Northern India.

The Doab, like Bengal, is flat and alluvial. The vast plain is uninterrupted by a single eminence; the tall and robust figure, the firm step, the stern eye, and the erect bearing of the Hindustani are everywhere to be seen. In Bengal, the oxen alone form beasts of burden. A Hindustani coolie takes the load over the waist, and not upon the head. In Calcutta the Baboos do not know what it is to ride. In Hindustan rural women perform journeys on horseback, and princesses discuss the merits of horsemanship. The people of the Doab have for the most part well-formed features. The rude Jat, however, has a coarse, mean physiognomy. The Western and Eastern Jumna canals, of ancient construction, had fallen into disrepair, but were restored during the administration of Lord Dalhousie.—*Imp. Gaz.*

JUMNOTRI. Near this holy site of the Hindus is seen the junction of three streams. From the bed of the torrent the mountain rises at once to its height, apparently without any very extensive irregularities, and the steepness of the declivity at this point may in some degree be estimated, when it is understood that the avalanches from above fall into the channel of the river. The particular spot which obtains the name of Jumnotri is very little below the place where the various small streams, formed on the mountain brow by the melting of many masses of snow, unite in one, and fall into a basin below. The site is a place of pilgrimage to the Hindus, who perform ablutions at a small stream of warm water, of which there are several. One of them is too hot to allow of the hand being retained in it. The heights of several peaks are as under:—

Jumnotri, .	25,669 feet.	Devadhunga,	29,002 feet.
Nanda Devi,	25,598 ,,	Kangchan, .	28,176 ,,
Dhonlagiri, .	27,600 ,,	Chumalhari,	23,929 ,,
Gosain-thau,	24,700 ,,		

—*Fraser, Himalaya*, p. 428.

JUMPING JOHNNY, the Boleophthalmus Boddærtii, is the leaping fish of the seas of the E. Archipelago. These salamandrine-looking creatures are scarcely distinguishable from the mud on which they lie, but make a series of leaps on being alarmed. They are 3 or 4 inches long, wedge-shaped, with flat, pointed tails, head, and prominent eyes. They are called by sailors Jumpin Johnnies. They leap by means of their ventral fins.—*Collingwood.*

JUMPTI, the state barge of the Amirs of Sind, an immensely long boat, some as much as 120 feet.—*Postans' Pers. Observ.* p. 128.

JUMRA. Arab. Gravel or small stones thrown at pillars, representing the devil, in the valley of Mina.

JUMUL MUDAGU, in lat. 14° 50′ N., long. 78° 30′ E.; here limestone occurs, with layers of muriate of soda.

JUN, a tribe in the waste tracts between the Sutlej and Indus. In the same locality are the Bhatti, Sial, Kurrul, and Kathi tribes. The Jun and the Kathi of Kattyawar are tall, comely, and long-haired races, who have vast herds of camels and black cattle, from which the towns are furnished with ghi or clarified butter, and the people themselves provided with libations of milk. The wild tribes of Chibh and Buhow in

the hills of the Panjab, the Jun and Kathi, and the Dogher and Bhatti of the plains, have different characteristics, but the idle and predatory habits of some, and the quiet pastoral occupations of others, are equally the result of position as of character.—*Cunningham's History of the Sikhs*, p. 18. See Kathi.

JUNAGARH, Native State within the Political Agency of Kattyawar, in the province of Gujerat. Junagarh, lit. old fortress, a town with high land near, is on the coast of Gujerat, near Porbandar, and about 40 miles from Patan, and near Girnar. This ancient city is at the foot of and guards the sacred mount of Girnar. There is little doubt it is the Asildurga or Asilgurh of the Grahilote annals, where it is said that prince Asil, by the consent of his uncle the Dabi prince, raised a fortress called after him near to Girnar. It is now a large Muhammadan town with upwards of 20,000 inhabitants, and is the residence and capital of the nawab, a descendant of Sher Khan, Babi, a soldier of fortune, who seized it in the general anarchy which preceded the subversion of the Moghul rule. Twenty miles to the west are the ruins of Balabhipura. There is here an inscription on a rock with the Pali edicts of Asoka. It is in Sanskrit prose, but with grammatical errors and punning. It has the rock-cut palace of Rah-Khengar, with the caves of Khapara Kodia. When it was visited by Hiwen Thsang, there were some fifty convents (monasteries?), with about 3000 recluses, who followed the doctrines of the Sthaviru sect, which held by the (Mahayana) greater translation. Many of these convents have disappeared.

JUNCACEÆ. *Agardh.* The rush tribe of plants, found in moist places on the mountains of India. The common rush of Europe, Juncus effusus, is employed for making mats, baskets, and the bottoms of chairs, and its pith is employed for the wicks of rush-lights. According to Thunberg, it is cultivated in Japan for making floor mats. J. glaucus, a European species, is found in the Himalaya, and might be employed for all the purposes of the common rush. In China, Jerome observed a species of juncus, the stems of which are woven into beautiful mats, used by the natives for sleeping upon, for covering the floors of rooms, and for many other useful purposes. This is cultivated in water, somewhat like the rice plant, and is therefore always planted in the lowest part of the valleys. In the beginning of July, the harvest of this crop commences.—*Illust. Himal. Bot.* p. 401; *Royle's Fib. Pl.* p. 60.

JUNCAGINACEÆ. *Lind.* The arrow grass order of plants. Potamogeton natans, *W.*, the p'has of Sind, is the broad-leaved pond weed. P. pectinatum, *W.*, also called in Sind p'has and jala, is common in ponds and tanks.—*Murray.*

JUND BADUSHTAR. Arab. Castor, the dried Castoreum, obtained from the glands of the beaver, largely used in Hindu medicine, in hysteria and uterine ailments. In the living animal, the castor is nearly fluid, and in this state, as also when dry, it has a strong, penetrating odour.

JUNG. Hind., Pers. Battle, war; one of the titles of Muhammadan courts.

JUNGAM, the priest of the Lingaet sect, or Vira Saiva. In Southern India, one division of the Jungam worship one lingam, while the Panchabanjeka wanlu worship five lingams.

The Linga balja wanlu sect wear the lingam, the emblem of Siva, in a silver casket on their breasts, suspended from their necks.

The Jaloru balja wanlu wear the lingam on their right arm.

JUNG'HARA. Hind. A large and somewhat turbulent tribe of Rajputs of the Tuar clan, in the south-east of Rohilkhand, whence they appear to have expelled the Kut'herya. — *Elliot's Supp. Gloss.*

JUNGHIRA, a granite rock rising boldly from the river Ganges, between Rajmahal and Monghir. Since many ages it has been considered one of the most sacred places on the river, and Hindu devotees crowd to it on account of its reputed sanctity, and to worship at the shrine of Narayan in one of the pagodas.

JUNGIPORE is 21 miles from Sooty, where the Bhagirath branches off from the Ganges. The neighbourhood of Sooty is remarkable for the battle of Gheriah, fought between Ali Verdi and Sarfaraz Khan in 1740. There was another battle fought here in 1763 between Mir Kasim and the British.

JUNGLE, Hind.; A-yap, Burm. A forest, a scrubby forest, hence Jungli, wild, uncultivated, useless. The jungle in Africa is formed by dense and almost impenetrable gigantic grasses; in Australia by rich dense scrub of species of Eucalyptus, Melaleuca, etc., intertwined with scrub vine, a species of Cassytha; but the jungles of India are of bamboos, canes, and other palms, very difficult to penetrate.

JUNIPER BERRIES.

Hub-ul-huber, . .	Arab.	Cocole-di-ginepro, .	It.
Ab-hul, ...	,,	Juniperus communis,	Lat.
Genever-bessen, .	Dut.	Zimbro, ...	Port.
Baies de genevère, .	Fr.	Enebro, ...	Sp.
Wacholder-biren, .	Ger.	Enbuske, ...	Sw.
Arkenthos, ...	Gr.	Ardich, ...	Turk.

The berries of the common juniper tree have stimulating and diuretic properties, and are used in the distilleries in England and Holland for flavouring gin or Geneva. The berries procurable in the Indian bazars are supposed to be brought from the Himalaya and Kabul. The berries contain sugar, mucilage, and a little essential oil. The oil is white or yellowish. It is prepared on a large scale in Holland, and is often adulterated with turpentine. — *Faulkner, Ben. Ph.; Royle; O'Sh.*

JUNIPERUS CHINENSIS, *Linn.*, grows in the Himalaya up to 15,000 feet, also in China and Japan. It grows rapidly, and attains a height of 75 to 100 feet, with a stem 13 feet in girth; furnishes a reddish, soft, and fine-grained wood, and is perhaps the same as J. religiosa. — *Royle; Mueller.*

JUNIPERUS COMMUNIS, *Linn.*, grows in Britain, Europe, and Asia. The two shrubby species, J. communis and J. squamata, are common in many parts of the Panjab Himalaya, from sometimes as low as 7000 to at times as high as 13,000 feet, and occur near the Safed Koh, Trans-Indus, often forming a belt, or more frequently patches, above the upper limit of trees, although seen at times very much below that. The common juniper was found by Captain Webb on Niti pass, called bilhara, pudma, pumaroa; and by Mr. Inglis in Kanawar, 3 to 6 feet high, forming a dense, diffuse, irregular bush, occasionally tree-

like, and attaining an elevation of 20 feet. Gin and Geneva are derived from the French name of this species, Genevère. The wood burns fairly well, and on the passes it is frequently the only decent fuel to be got within miles. Madden states that a spirit is distilled from the berries, with barley meal, the former being probably only added to impart a gin flavour. The berries are officinal in the plains, and are used in decoction, being considered stimulant.—*Stewart*, p. 223; *O'Shaughnessy*,

JUNIPERUS EXCELSA. *Bieb.*

Apurs, . BALUCHISTAN.	Pencil cedar, . . ENG.
Shukpa, . . . CHENAB.	Chalai, . . . JHELUM.
Shur, ... ,,	Shukpa, . LADAKH, SPITI.
Lewar (deodar), . ,,	Shurgu, . . . SUTLEJ.

The sacred juniper of the Kanawari and Tibetan is common in the upper and more arid and Chenab, likewise in Ladakh, also in some numbers on the Kunhar, a tributary of the Jhelum, and near the Safed Koh (Bellew), and on Chahaltan (Masson, etc.). Cleghorn gives the crest of the Dhauladhar, above Kangra, as a habitat, which is perhaps doubtful, as the climate there is moist. The elevational range may be put at 8000 to nearly 15,000 feet. At the higher altitudes it is only seen as a shrub, but at 10,000 feet acquires a considerable girth. The timber, which has the same fragrance as that (also produced by a juniper) from which pencils are made, is light, and not strong, but is employed as supports for water channels, and the heart-wood when in moist earth is nearly imperishable. In Lahoul it is also used alternating with stones, for the walls of houses, as well as for beams. On the Sutlej some of the temples are built of it. In Kanawar, vessels made of it are much esteemed. The wood is used as incense by the Lamas. The twigs are used in several religious ceremonies, and the fruit is regularly burnt as incense. In Khagan, on the Kunhar, the small branches, under the name of Chalai ka dhup, are burned near the patient as a remedy for delirious fever. It is found in the Sutlej valley between Rampur and Sungnam, at an elevation of 9000 to 12,000 feet, and there yields an excellent, light, odoriferous wood.—*Thomson; Stewart; Cleghorn; O'Shaugh.; Eng. Cyc.*

JUNIPERUS RECURVA. *Desc.*

Khoubair, . . . HIND.	Ubhul, ... HIND.

The weeping blue juniper and arboreous black one (called Tchokpo) yield beautiful wood, like that of the pencil cedar, but are comparatively scarce in Sikkim.—*Hooker.*

JUNIPERUS RELIGIOSA, *Royle*, grows at an extreme height on the Himalaya generally, and is held in reverence by the people.

JUNIPERUS SPHÆRICA. This curiously-formed tree at first sight seems to confirm the old Virgilian tale of apples growing upon plane trees. It is one of those junipers which grow to a considerable size in the north of China, and which the Chinese are fond of planting round graves.—*Fortune; Mueller.*

JUNIPERUS SQUAMOSA, Creeping juniper.

Beter, ... HIND.	Pama, Talu, . . PANJ.
Pethri, Bet'har, . ,,	

This is found at very high altitudes in the Sutlej valley, between Rampur and Sungnam, at an elevation of 12,000 to 13,000 feet, where forests disappear. It is used as firewood in crossing the high passes.—*Cleghorn's Panjab Report*, p. 63.

JUNIPERUS WALLICHIANA, *Hook. and Thom.*, grows in the Himalaya, from the Indus to Sikkim, at 9000 to 15,000 feet elevation.—*Mueller.*

JUNIR is half-way between Nasik and Poona. It has a group of Buddhist caves, and one chaitya is like that at Nasik. They have no figures of Buddha, but one of Sri.

JUNK, a Malay word applied to the larger craft of the Archipelago, used both in war and for commercial purposes. The word is properly Ajong or Jong, corrupted by the Portuguese into Junco, which the English have improved into junk, and apply to the larger Chinese vessels. The Chinese word for the vessels called junk is Wang-kang. The word Ajong is used for boat by the Chinese and Malay. The ships known as cargo junk, called Ta hung t'ou yang ch'uan, are coasting craft of 1000 tons. They are built of soft wood, and have a flat bottom and a large rudder, which enables them to turn easily. The bow is very bluff, and the sterns are elaborately carved and painted. The hull is divided into water-tight compartments. They have four masts of hard wood. The two aftermasts on either side of the vessel are fastened together at the top by three spars placed horizontally. The low-dah or sailing master has a place beneath the poop. Junk are called Ch'ing t'ou chien ch'uan, Ch'ao-yang-pa-chiang-yuan-wei, Hsi ts'ao, and four others.—*Crawfurd.* See Boats.

JUNK SEYLON, or Salang Island, one of the islands of the Mergui Archipelago, and separated from the continent by Papra Strait. It is 8 leagues in length, and about 3 leagues broad. Its S. point lat. 7° 46′ N., and long. 98° 18′ E. It formerly belonged to the Malay raja of Queda, but it has since been forcibly occupied by the Siamese of Ligor. In the entrance of the Strait of Malacca, near the Nicobar and Acheen Islands, and betwixt them and Junk Seylon, there are often very strong ripplings, particularly in the S.W. monsoon. There is no perceptible current, yet the surface of the water is impelled forward by some cause. They are seen in calm weather approaching from a distance, and in the night their noise is heard from a considerable distance, alarming to persons unacquainted with them, for the broken water makes a great noise when the vessel is passing through it. They beat against a ship with great violence and pass on, the spray coming on deck, and a small boat could not always resist the turbulence of these remarkable ripplings.—*Horsburgh.*

JUPITER AMMON, a temple, now in ruins, erected about B.C. 1800 by Bacchus, in memory of his father, in a fertile spot in Upper Egypt called the Oasis of Siwah, about 300 miles south of Cairo.—*Catafago.*

JURA or Joora. HIND. A rope of twisted grass or twine, made to support a round-bottomed jar. It is called also induri, endhua, chukwa, gururi, ginduri, and goduri.—*Elliot.*

JURDUK, a pass in Afghanistan, near which is Bahadur Khel. At Bahadur Khel, Lutumur, and Kharrah are the three Trans-Indus mines.—See Khaibar.

JURI or Jooree, HIND., from Jorna, to join,

a small bundle of sugar-cane. The tops of the Juri are brought home on the Ekadashee of Kartik, and are kept suspended from the roof of the house till the Holi, and burnt during that festival. Jora, a pair; a pair of shoes, a married couple, a suit of clothes. Joru, a wife. See Dit'hwan.

JURZ or Juzr or Haraz, an ancient name given to Rajputana by the Arabs. The merchant Suliman, in A.D. 851, states that Haraz was bounded on one side by Tafek or Takin, which possessed silver mines, and could muster a larger force of cavalry than any other kingdom of India. Rajputana lies to the S.E. of the Panjab, possesses the only silver mine known in India, and has always been famous for its large bodies of cavalry.—*Cunningham, Ancient Geog. of India*, p. 312.

JUSSI. TAGAL. A delicate fibre of the Philippine Islands, of which dresses, etc., are made. Jussi fibre and striped jussi dresses from Manilla were exhibited in the Exhibition of 1851; the plant yielding the fibre was not known. —*Royle, Fib. Pl.; Simmonds' Dict.*

JUSSIEUA REPENS. *Willde.*

A perennial plant grows in Bengal, in both Peninsulas of India, and in Cochin-China. It is employed in medicine.—*Voigt*, p. 33; *Roxb.* i. p. 401.

JUSTICIA, a genus of plants belonging to the natural order Acanthaceæ; 32 species of Justicia were described by Dr. Roxburgh, a few only of which have any medicinal virtues attributed to them, and all but one of his, under the name Hwang-lien, CHIN., are now referred to other genera. The roots of several species are used in China in medicine. A Canton species is stated by Fortune to yield indigo. Some of the species are planted as flowering shrubs.—*Smith, M. M. C.*

JUSTICIA COCCINEA bears a small pink flower. The leaves are of a reddish colour underneath. Natives say the root is an antidote to the bite of a snake, and it is sought after by them when bitten by the cobra.—*Riddell.*

JUSTICIA ECBOLIUM. *Roxb.*

J. dentata, *Klein.*

Oodoo jati, . .	BENG.	Jati, ...	HIND.
Tau-sa-lat, . .	BURM.	Pachcha vadambaram,	T.

A shrubby plant common in most forests of India, and in flower nearly all the year. It is said to be diuretic. Flowers pale blue; tube very long and slender.—*O'Sh.; Roxb.*

JUSTICIA NASUTA. *Linn.*

Rhinacanthus communis, *Nees.*

Kabutar ki jar, . . . HIND.

A shrubby plant with white flowers in axillary and terminal panicles; grows spreading along the ground. The leaves are bruised and used by the natives for curing ringworm. The flowers are sold along with those of jasmine, and the roots are used in medicine as an excitant.—*Riddell; Gen. Med. Top.* p. 173.

JUTE, Corchorus capsularis; C. olitorius.

Ghi nalita pat, .	BENG.	Pat, Koshta, . .	HIND.
Hei-ma, . . .	CHIN.	Bhungi, Isband, . .	,,
Jews' mallow, . .	ENG.	Patta, ...	SANSK.

This fibre has long been known in India, as in use in the manufacture both of cordage and cloths, but only since 1855 largely used in England. It is the product of two distinct plants, Corchorus capsularia and Corchorus olitorius, both of them common all over India, Ceylon, and China, both cultivated for their leaves and under shoots as pot-herbs, and for their fibres; but the fibres of C. fascicularis and C. tridens are also used for making ropes. C. olitorius, the Jews' mallow, is supposed to be the plant alluded to in Job xxx. 4. From Guntur, in the Kistna district, to Ganjam, including Cocanada, Calingapatam, Chittavalsah or Bimlipatam and Gopalpore, the plant is cultivated to some extent, and manufactured by native weavers into ropes and gunny cloth for local use. The chief sites of its cultivation in the Bengal Presidency are Malda, Purniah, Natore, Rangpur, Dacca, Pabna, Dinajpur, Hoogly, Bogra, Julpigori, Serajgunj, Mymensing, and the Twenty-four Parganas.

Formerly indigo was largely grown in many of the Dacca districts, which still abound with ruins of deserted factories, but its place has been taken by jute, the cultivation of which has increased enormously, and now engages a large share of European capital. The great jute mart is Serajgunj, the trade of which place might well excite the envy of most Mediterranean ports. During the busiest season, the river, then swollen by the rains to a breadth of 7 miles, is simply covered with the vast lumbering country boats that are bringing the fibre from the local marts to the great commercial centre, and the sight of many steamers, and the ceaseless whir of machinery from the factories, might almost make a stranger think himself in some commercial city of the north. Besides jute, safflower and mustard are largely grown for exportation.

The first 100 tons of jute, and a small quantity carefully prepared by Dr. Roxburgh and sent home, appear to have drawn the attention of the mercantile community of London to this important fibre; but it was not until 1804 that any recognised trade sprang up, although it is certain that for some years previously it had been exported under the name of hemp and flax. From that date the shipments slowly increased. In 1829 a separate head was assigned to it in the Custom House records, when 496 maunds were exported, which increased to 2442 maunds in the following year. Since that time it has gone on increasing steadily year by year.

	Cwt.	Rs.		Cwt.	Rs.
1850-51,	58,240	19,69,360	1876-77,	4,533,255	2,63,66,466
1855-56,	882,700	32,90,760	1878-79,	6,021,382	3,80,04,263
1860-61,	1,074,320	40,93,710	1882-83,	10,348,909	5,84,69,259
1874-75,	5,493,957	3,24,68,823			

And in the last-named year the value of exported gunny bags, gunny cloths, gunny rope and twine, was Rs. 1,48,78,304.

Eight jute spinning companies in Bengal were quoted in May 1884, of which the shares of two were above par.

The weaving of jute into gunny cloth is an

ıdigenous handloom industry in Northern Bengal, hiefly in the districts of Purniah and Dinajpur. The gunny is made by the semi-aboriginal tribe f Koch, Rajbansi, or Pali, both for clothing and for bags; and, as with other industries practised y non-Hindu races, the weavers are the women of the family, and not a distinct caste.

Jute is used for coarse bags, and such purposes where the strength and colour of the fibre is not important. It can be produced at a very cheap ost; the cultivation of an acre of jute is estimated it Rs. 10 for the labour, and about half a ton of fibre s the usual crop; while by the retting process ne man can prepare for market about two cwt. of fibre in the day. For the more valuable fibres this retting process is not available; a man can prepare only 5 to 12 lbs. of rhea or Manilla hemp fibre in a day by hand-scraping, while the waste is enormous. For the valuable fibres strength and brightness of colour are essential, and the ordinary process of retting or fermentation in stagnant water cannot be followed.

The mills of Dundee consume a larger proportion of this useful fibre than any other in Great Britain,—it is believed nearly one-half of the quantity imported; and yet its introduction in the trade of Dundee is, comparatively speaking, of recent date. About 1830, a well-known merchant brought a small quantity, and wished the spinners to make a trial of it, but he could not prevail upon them to do so. He then employed a person in the neighbourhood to tease it down, at the now fabulous cost of from £4 to £5 per ton, and then induced a spinner to mix it sparingly amongst tow; but it was not till the expiry of years that it was manufactured to any extent by itself. A process was subsequently invented by Mr. Clausen (a Dane), by which flax, hemp, jute, and other substances were converted into a substitute for cotton. The invention seemed to work well, but the Manchester people at that time would have nothing but American cotton on any terms, and the invention fell valueless. He cleaned the fibre from the straw by crushing and beating. The fibre was then steeped in a strong solution of bicarbonate of soda, and afterwards in water acidulated with sulphuric acid, which, combining with the soda, set free the carbonic acid with which the fibre was saturated. The liberated gas split the fibre into a material as fine as floss silk. It was then bleached by being steeped in a solution of chloride of magnesium, then dried and cut into lengths of the required staple, or rather longer, as the staple was ground down during the carding. It then passed to the carding machines, and was treated precisely as cotton, and it was said at the time that it worked perfectly in the ordinary cotton machinery. Jute is easily spun, and is much used to mix with codilla. It is made into gunny cloth (megili), ordage, and paper, and damask cloth made of jute is said to be more durable than that fabricated from cotton. The fibres are subdivisible into very fine fibrils, which are easily spun; they are long, soft, and silky, and, under the microscope, cannot be distinguished from those of flax to all the purposes of which the jute fibre is applicable.

At Dundee the yarn is spun very fine, and used for bags and handsomely-coloured carpets, and also interwoven with silk, linen, and woollen threads into cheap cloths, and it is largely made up into paper. An old papermaker writes in the American Paper Journal, that after several years' experience in using bagging and jute in all its various forms, he is satisfied that it is the cheapest, cleanest, and easiest wrought of any substitute for rags, and possesses the desirable qualities that give to the manufactured article all the qualities of rag-paper, at much less waste and cost. The cuttings and rejections can be reduced by boiling with lime into matter as easily operated on as ordinary rags, and more easily bleached than many of the imported rags.

In its culture the land is prepared as for rice, the plants are weeded when a foot and a half high, and it is cut close to the roots when it has flowered, and before the seeds are ripe, a few plants being left to allow the seeds to come to maturity.

After the Corchorus olitorius plants come to maturity, which is generally considered to be the time when they begin to ripen seed and the lower leaves in the stems begin to turn yellow, or about the second week in October, the whole are simultaneously cut down,—no matter if all have grown uniformly in size or not, or whether the plants be good, indifferent, or bad, the whole is reaped off. After the whole is cropped off, it is staked in bundles of about 200 to 250 sticks in each, and then put down in any convenient place to undergo the process of fermentation, which is generally done within three or ten days, according to the temperature of the weather. The stalks are then immersed in water, keeping the bundles down by any convenient means at disposal, but it is chiefly done with clods of earth, which are most conveniently obtained. The steeping process, if performed in a stagnant pool or pond, decomposes the vegetable matter within eight or ten days, but if it be done in clear water, or a running stream, or in a tank of ordinary depth, having clear water, then the period of time is about seventeen to twenty days. When decomposition approaches completion, a man generally goes down and examines the fibres once a day, and at its close both morning and evening, to see if all is perfected, and this is done by simply feeling the stalks with the thumb and forefinger, to which it readily yields. When the whole is known to be completed, he goes down about knee-deep in water, and takes a handful of the stalks, holding the same with his left hand over the surface of the water, and in his right hand holding a small palmata or a piece of flat wood or plank, with which he gently strikes towards the stem of the stalks, and whilst he does so he whirls the whole, repeating the strokes with the palmata as he does so, which at once separates the fibre from the stalk, or as much of the parts as is struck, which is generally from 15 to 18 inches in length from the lowest end; the whole is then broken, the parts adhering with fibre are then held with the left hand, and with the right the part where the stalks are broken is held, and the whole immersed perpendicularly about 9 or 10 inches in water, and a few jerks are then given in rapid succession, which admits of complete separation of the fibre from the broken stalks; but if any still adhere, the same is gently taken off with the right hand. When this is done, the extracted fibre is then held with the right hand, wrapping a portion round the palm of the hand,

and with his left the operator holds the stalk a little under water parallel to him; he again gives a few slight jerks from and towards him. He also uses his left hand in pushing the stalks forward when drawing towards him. This manipulation can only be done with facility by those who are used to it. The whole of the fibre at once easily separates from the entire stalk and immediately floats up; the fibre is then washed to take off its refuse, and the whole is then wrenched off, and taken up to be dried in the sun.

The quantity of jute and seed produced on an acre depends greatly on the richness of the soil on which it is planted. The plant will not thrive on a lateritic, or on a hungry, gravelly, or sandy soil. Seed planted under such conditions springs up and grows well at first, but for want of moisture and plant-food soon withers away. The plant stands excess of wet better than drought; on rich, loamy lands it thrives perfectly; clayey soils, mixed with a little sand, give a fair return, and even under the conditions of partial submersion the crop is not destroyed.

The same crop will not, of course, yield fibre and seed. It should be cultivated for one or the other. For the former, the plant should be cut just when it is in flower. It is then in its prime, and the fibre will be fine, silky, and glossy; but if left for the seed to ripen, the plant will have begun to decay, and the fibre to get stringy, barky, and coarse.

The seed would be better if sown in drills, as is done in America and in Mysore. It would enable manuring, weeding, planting, and thinning to be carried on better, and a longer and better fibre would probably be the result, and induce more attention to be paid to the growth and selection of seed, on both which points the ryots are said (as may be easily supposed) to be most careless. A commission suggested improvement in this matter, and in the better rotation of crops, and cutting and steeping the fibre, preparatory to its extraction; but the addition of suitable manure, all other conditions being favourable, would enable a farmer to grow the exhausting crop on the same soil annually without alternating it, or letting the land be fallow, as is now so uneconomically done.

It is now successfully grown in America, where a better mode prevails of clearing the bark, and paper is there made of the refuse, which is also a good manure. Jute water has a high value as a manure. Castor-oil cake and cow-dung are its best manures. It has been found that jute does not flourish in the cotton districts of the United States, nor does cotton where jute grows best.

No doubt the fibre can be greatly improved by attending to some essential points. Higher prices would be given for the best kinds that had been cut at the proper time, and carefully cleaned and dried, so as to produce the strength, fineness, silkiness, and gloss so much sought for.

To improve the jute fibre, two things are necessary to be looked after; the first is the process of fermentation, and the second is allowing the time for decomposition of the vegetable matter, and to avoid stagnant pools and ponds for the purpose, which, though it facilitates the object, injures the fibre very much. The process of fermentation is necessary to be carefully looked after, because if this be neglected, instead of obtaining the fibre with a fine, silky, glossy appearance, the whole of the produce becomes of a dark lead or black muddy colour, which is considered bad or inferior in quality.

The next point to be carefully attended to is the time allowed to steep the whole for the purpose of permitting the vegetable matter to decompose; this part of the process, unless properly attended to, does not yield fibre of the usual size, but results as an inferior article, because it yields fibre of a coarse quality. The tender fibre, which otherwise is retained, rapidly decays, and is broken into threads and washed off when extracting the fibres from the stalk. When the bundles are steeped down after the fermenting process, they should be so arranged that the stems are first immersed in water with the top branches above its surface, and allowed to remain for a time, which is considered as sufficient for the stems to be partially decomposed, when the whole is properly steeped down, for the entire stalk to be decomposed at the same time. If this be not attended to, as stated above, the result is a short and coarse fibre, without any silky, glossy appearance.

The next point is to avoid pressing down the bundles with clods of earth, as at the time the decomposition is about to be perfected the mineral substances, being washed down, mix with the fibre, destroying the vegetable substance, and giving the fibre a red, muddy appearance. Stagnant tanks are likewise to be avoided for the impurities they contain, though the decomposition is much facilitated. Native cultivators can rarely avoid these two injuries for want of means and proper resources; but if they be avoided, no doubt the fibre extracted will yield a superior texture.

It was in 1870 that the United States Department of Agriculture began to show an interest in the question of growing Indian jute upon American soil. Experiments were conducted in Louisiana and other Southern States, with encouraging results. The climate and soil proved to be well adapted to the growth of jute; and it was found that, when planted around cotton-fields, the jute was of great service in affording to the cotton plant protection from the ravages of insects; while a most luxuriant growth could be obtained on rice and pine lands.

Notwithstanding, however, the success which has attended the cultivation of jute in America, it has made no perceptible difference in the Indian trade, unless, perhaps, in the matter of gunny cloth. During the last eight years the export business with the United States in raw jute and gunny bags, more especially in the latter, has progressed most satisfactorily. Although the cultivation of jute has passed out of the experimental stage in America, the product has not been able to compete successfully with the Bengal article, owing to the high cost of manual labour employed in the separation of the fibre from the stalk, as compared with the cheap labour available in India. The great need is a cheap and effective mechanical process for this operation. The want of a really good machine for such a purpose is felt very much more in America than in British India, where the manual process of cleaning and preparing the fibre is simple and inexpensive. The plants are steeped in water until the bark

begins to rot and the resinous substance in it is washed away. The bark is then stripped off by beating the stalks against the surface of the water, much in the same way as a dhobi washes clothes. Experiments have been tried, both in India and America, with machines for performing this operation, but the difficulty lies in the expense. From a report, dated Washington, 7th April 1881, which is to be found in the Calcutta Gazette of the 19th July, on the cultivation of jute and other fibrous plants in the State of Louisiana, it appears that a new machine for preparing jute and rami fibre has been invented in America, from which very profitable results are expected.—*Imp. Gaz.; Dr. Hunter in Ed. New Phil. Journ.* No. 2, x. October 1859; *Dundee Advertiser; Annals Ind. Administration; Royle's Fibrous Plants*, p. 244; *J. Manuel in Indian Field*, No. 25, 18th September 1858; *Selec. Records Government of India Foreign Dept.* No. 9, p. 25; *M'Culloch's Commercial Dictionary*, p. 401; *Drs. Mason, Stewart, Royle; M. E. J. Rep.*

JUTIAL, a class of watchmen introduced into the hills near the Bhabar to watch the district under the Siwalik.

JUTTEEL, a pass in the Sind ranges, runs 60 to 75 miles south-west from Sehwan to Dooba, between lat. 25° 32′ and 26° 20′ N., and long. 67° 48′ and 68° 8′ E. Steep, in few places, less than 2000 feet. The road from Sehwan to Kurachee lies between them, and Keertar more to the west.

JYOTISH MATI, Hind., is the Anthistiria anathera or Cardiospermum halicacabum. Jyotish mati, literally light possessing, also Budha basara and Budha kakara, Tel., is Cardiospermum halicacabum, *Linn.* Popular superstition asserts that by eating its seeds the understanding is enlightened, and the memory rendered miraculously retentive.—*Elliot's Fl. Andh.*

K

This letter of the English alphabet has a simple guttural sound, as in kalendar, keep, king, Koran, and has analogous letters in Arabic, Persian, Urdu, Sanskrit, Hindi, Mahrati, Gujerati, Bengali, Uriya, Telugu, Karnata, Tamil, Malealam, Chinese, Malay, and in all the languages of the Further Indies and Eastern Archipelago, and there ought not, therefore, to be any variations in representing the names and words of these tongues by means of this letter. Nevertheless, in writing them, owing to the English letter c as in candour, capture, and the letters ch as in character, chronic, churlish, having the same sound as k, many ordinary words of the East Indies are met with written in various ways, as in Cashmir, Kashmir, Kābul, Cabul, etc.

KA, a people inhabiting the mountainous country lying between Lao and Kambojia. Mr. Crawfurd mentions that the Siamese made no scruples in reducing them to slavery. He adds that the features of one whom he saw differed strikingly from those of a Siamese. They are described by other authors along with the Khong, the Gueo of the Portuguese, as rude tribes in Kambojia either actually pagan or imperfectly Buddhist.—*Crawfurd's Embassy*, p. 177.

KA, Sansk., the interrogative pronoun 'who,' raised in the mythology of the Kaushitaki, the Satapatha, the Taittiriya, and the Tandya Brahmanas to the dignity of a prajapati. Ka, the sign of the genitive in Hindi; in Marwari it becomes ra.—*Dowson.*

KAAT, properly Kat'h. Can., Maleal., Tam. Wild, uncultivated. See Kat'h.

KA'B, a tribe of Arabs near the Persian Gulf, whose capital is Muhamerah. They extend north as far as Shuster and Ram Hormuz; to the east their territory is limited by Bebehan, and including Hindyan in their possessions, the Ka'b Arabs spread along the head of the gulf, touching Basra on the south. Their western territory touches on the wandering Arabs as far as Haniza. The greater part of this territory is watered by the Tab river with its numerous tributaries, and was known to Arab geographers by the name of Daurak. About the close of the 18th century they captured several English vessels. More lately, Muhamerah was taken by Ali Raza Pasha, and in 1857 by the Government of India in their war with Persia. See Fars.

KABA, a former piratical tribe in the Gulf of Cutch, to the north of the Mahratta provinces.

KA'BA. Arab. A cube; also the square building in Mecca, held in reverence by Muhammadans, by whom it is frequented in pilgrimage. Tibban Asaad Abu Kariba or Abu Karib, commonly called Tobba, one of the most warlike of the Himyarite monarchs, was the first who, about A.D. 206, covered the Ka'ba with a tapestry of leather, and also supplied it with a lock of gold. The nawabs of the Carnatic, who claimed to be descendants from the khalif Omar, sent a ladder of gold for the pilgrims to ascend to the door of the Ka'ba. Immediately on arrival at Mecca, the pilgrims perform ablutions and proceed to the mosque, kiss the black stone, and encompass the Ka'ba seven times; commencing on the right, leaving the Ka'ba on the left, they perform the circuit thrice with a quick step, and four times at a slow pace. They go then to the stone near the Ka'ba, bearing the impression of the feet of Abraham, repeat two prayers, and come and kiss the black stone again. In the Arab families, male children, when forty days old, are taken to the Ka'ba, prayed over, and carried home, where the barber draws with a razor three parallel gashes down the fleshy portion of each cheek, from the exterior angles of the eyes almost to the corners of the mouth. These Mashali, as they are called, may be of modern date. The Ka'ba is 24 cubits long from N.W. to S.E., its breadth 23 cubits, and its height 27 cubits; near its door in the east corner is the black stone, Hajr-us-Siah. This is set in silver, and is kissed by pilgrims. It seems to be the stone noticed by Maximus Tyrius, who says 'the ancient Arabians worship I know not whom, but the image I saw was a quadrangular stone.' Until Mahomed's reform, the Ka'ba contained 360 idols, amongst them Hobal, a statue of Abraham, and one of Mary; the white stone, which was supposed to be Ishmael's tomb, and the black stone, the Hajr-us-Siah, which they say fell from heaven in Adam's time. Hobal had the figure of a man carved in red agate, and holding in his hands seven wingless arrows like those used in divinations. The Ka'ba was restored A.D. 1627.—*Burton's Mecca*, iii. p. 327; *Lane.*

KABAB? PHILIP. A measure of capacity.

KABAB. ARAB. Roast meat, or small pieces of meat roasted or stewed on little skewers. They are alluded to in Homer's Iliad in two places, xiv. 87, and line 475—

. . . 'Fixed on forks of wood,
All hasty, on the hissing coals he threw;
All smoking, back the tasteful viands drew,
Broachers and all.
. . . In rolls of fat involved without
The choicest morsels lay, from every part,
Some in the flames, he strewed with flour, then threw;
Some cut in fragments, from the forks they drew.'

Kabab curry is a favourite dish at the tables of Europeans in India, and consists of little pieces of meat with portions of onions, ginger, etc., on skewers. Kabab are generally, in India, spitted on little slips of bamboo, though silver is often used.

KABAIZ, a tribe of the Bulbassi, a Kurd race, composed of the Kabaiz, the reigning family; 2. Manzur; 3. Mamash; 4. Piran; 5. Rummuk; 6. Sinn and Taafah, who together make one tribe.

KABAL, HIND., of Muzaffargarh, the reticulum of the palm.

KABALA. HIND. A bill of sale.

KABAL KHEL, a wild, lawless section of the Utmanzai Waziri, with three subdivisions, Miami, Sacfali, and Pipali, numbering 3500 fighting men. Between 1850 and 1854 they committed over twenty petty raids on British territory, and the British blockaded the whole tribe.

KABAN, a measure of capacity in the Molucca and Philippine islands.

KABANDHA, a disciple of Sumantu, the earliest teacher of the Atharva Veda.

KABAR. HIND. Black soil.

KABAR. ARAB. A tomb. Kabaristhan, a burial-place; also called Rozah, a garden; also Jai Khamush, the silent abode.

KABARAGOYA, a species of Monitor, a reptile of Ceylon, partial to marshy ground, and when disturbed upon land it takes refuge in the nearest water. From the somewhat eruptive appearance of the yellow blotches on its scales, a closely-allied species, similarly spotted, formerly obtained amongst naturalists the name of Monitor exanthematicus, and the Singhalese word Kabara has a similar meaning. The kabara-tel or cobra-tel is said to be prepared from the kabaragoya; and an individual suspected of having this poison in his possession is cautiously shunned by his neighbours. In the Mahawanso, chap. xxiv. p. 148, the hero Tissa is said to have been afflicted with a cutaneous complaint which made his skin scaly like that of the godho, the Pali name of the kabaragoya.—*Tennent's Ceylon*, p. 272.

KABIL. ARAB. A name of Cain. Kabil-Habil, Cain and Abel. The Cain of the Bible is supposed to have been buried at Aden under the mountain Jabl Shamsham.

KABILA. ARAB. A term employed in Arabia and Northern Africa to designate the various tribal bodies. From Taifa to Medina there are ten such, with about 79,000 fighting men; those of Assir-ghi number, with 44,500 fighting men; those of Tat Assir, 11 in number, with 66,000. The term Jylah, amongst the Muhammadans in India, is applied to the family or to the wife of an individual.—*Elmier, India, etc.* See Kabyle.

KABIR, the most celebrated of the twelve disciples of the Hindu reformer Ramanand. He lived at the beginning of the 15th century (1380-1449). He assailed the whole system of idolatrous worship, and, in a style peculiarly suited to the genius of his countrymen, he ridiculed the learning of the pandits, and doctrine of the Shastras. The Bhakta Mala gives an account of his birth and life. His doctrines are contained in the Sūkh Nidan, and do not differ much from those of the modern Vaishnava sect. The moral code is short, but favourable to morality.

Kabir was equally revered by Hindus and Musalmans. He was the founder of the sect called Kabir Panthi, or Nanak Panthi, from which Nanak, founder of the Sikh, borrowed the religious notions which he propagated with success. Kabir is said to have been a weaver, or a foundling reared by a weaver, and subsequently admitted as a disciple by Ramanand. Another account makes Kabir a Muhammadan by birth, and a weaver by profession. Kabir is also fabled to have been the son of a virgin widow of a Brahman. Her father was a follower of, and was paying a visit to, Ramanand. Unaware of her condition, Ramanand wished her to the conception of a son, which occurred, but, ashamed of her condition, she bore the child in private and exposed it, but it was found and brought up by a weaver and his wife. His religious views are very obscurely laid down, but the latitude of usage which he sanctioned, and his employment of a spoken language, have rendered his writings extensively popular among the lower orders of Northern India. His disciples may be either Muhammadans or Hindus. On his death, the Muhammadans claimed a right to bury him, the Hindus to burn him, in consequence of which they quarrelled, and placed a sheet over the corpse, which when they withdrew, according to a legend, they found the upper part of his body to be metamorphosed into a tulsi plant, the favourite nymphæ of Krishna, the lower part into rehan, an odoriferous herb of a green colour, the colour of the prophet Mahomed. Kabir is said to have been originally styled Inyani, the knowing or wise. He died at Magor, near Gorakhpur, which was endowed by Mansur Ali Khan with several villages. Kabir's doctrines and fame attracted the attention of Sikandar Lodi, emperor of Dehli.—*Wilson's Hindu Sects.*

KABIR PANTHI, a sect of Hindus whose founder was Kabir, the disciple of Ramanand. The Kabir Panthi are always included amongst the Vaishnava sects, and maintain friendly relations with these. It is no part of their faith, however, to worship any Hindu deity, or observe any of the rites or ceremonials of the Hindus. The Kabir Panthi are numerous in all the provinces of Upper and Central India. Their quaker-like spirit, their abhorrence of all violence, their regard for truth, and the unobtrusiveness of their opinions, render them very inoffensive members of the state. Their mendicants never solicit alms, and in this capacity they are, in a social view, in a very favourable position compared with many of the religious vagrants of India. The Kabir Panthi use no mantra or ritual, and those who have abandoned society abstain from all outward observances, and address their homage, by the chanting of hymns, exclusively to their invisible Kabir.

The chief guru of this sect lives in Kawarda,

a town of the province of Ch'hatisgarh, where a third of the Hindus are followers of Kabir, but the principal mat'h is at Benares. Kabir Panthi have five commandments,—(1) Life must not be violated,—it is the gift of God; (2) The blood of man and beast must not be shed; (3) Man must not lie; (4) Must practise asceticism; and (5) Obey the spiritual guide.—*Wilson's Hindu Sects.*

KABLAI KHAN, emperor of the Chinese and eastern oriental Tartars, was the sovereign of the most enormous empire that the annals of the world have ever made known. It comprehended the whole of China, Corea, Tibet, Tonquin, Cochin-China, a great part of India beyond the Ganges, many islands of the Indian Ocean, the whole north of the continent of Asia, from the Pacific to the Dnieper; Persia also was a feudatory of his throne, its sovereigns, the successors of Hulaku, receiving their investiture from the emperor of China; and as the dominions of these great vassals extended to the Mediterranean and the frontiers of the Greek empire, it may be said that the whole of Asia was subject to the laws of the Great Khan, who had chosen Pekin as the central seat of his government. The empires of Alexander the Great, of the Romans, or even of Chengiz Khan, were as nothing compared with that of Kablai Khan. Kablai Khan had received a Chinese education; he appreciated the advantages of civilisation; he admired the institutions of China, and protected literature and the sciences. He had some of the best Chinese books translated into the Mongol language; he founded schools for the young people of his own country, and gave much encouragement to their studies. He received with favour learned and literary men of every country and religion, granting them many privileges, and exempting them from taxes and tributes. It was he who established the Han-lin college, the highest academical institution of China. He was assisted in improving the astronomical calculations of the Chinese by Arabian and Christian astronomers. Some Christian families were fixed by him in the city of Pekin, and many Greeks, who had followed the Mongol armies, were retained in his service as men whose attainments were much superior to those of his Tartar and Chinese subjects. Pekin was at the same time raised into an archbishopric by the Patriarch of Baghdad and the Roman pontiff; embassies and missions passed into Tartary, and the Mongol sovereigns of China afforded their protection to every stranger whose talents might be useful to the state. Arghun Khan was Kablai Khan's great nephew. His wife was Zibellina, the Khatun Bulugan, a lady of great beauty and ability. She had been married to Abaka, but, on his demise, according to the marriage customs of the Mongols, she passed to the Urda of her step-son Arghun. On her death, Arghun sent Marco Polo for another wife, out of the Mongol tribe of Bayaut, but Arghun died before the lady, Kuka-Chin, was brought, and she passed to Ghazan, the nephew of Arghun, for Arghun had been succeeded by Kai-Khatu, his brother.—*Quart. Rev.*, July 1868; *Huc's Christianity*, i. p. 320; *Chatfield's Hindustan*, p. 298.

KABLI-GERU or Kabl-Giri, a race occupying the banks of rivers in the Dekhan, employed as ferrymen.

KABONG. MALAY. Any palm, as the cocoa-nut palm, the Cycas circinalis, the gomuti palm, or Arenga saccharifera. The last is cultivated for its sap to make jagari or coarse sugar, and for its strong fibre.

KABOOK. SINGH. Lateritious deposit, in Ceylon said to be the product of decomposed gneiss.

KABUL, the name of a city and a river on the N.W. borders of British India, under the rule of the Barakzai clan of Afghans. The origin of the name Kābul has not been traced. It is not mentioned by any of the Greek or Roman writers, who were familiar with the Aria territory of which Herat is the capital; with Ariana, the general name of the country east of Persia and Media, as far as the Indus; with Bactria, the country watered by the Oxus and its tributaries, and Sogdiana, the mountains which feed the Jaxartes and divide the two rivers. Mr. Masson derives its name from Kapila, a city ruled once by a prince Kanishka.

It is built directly under a rocky hill of gneiss that rises 1000 feet above it, and bends round it from the south-east to the south-west, where, with the dip of another hill opposite, is formed a pass which leads into Char Deh, 150 yards broad. At the eastern extremity of the rocky hills which enclose it on the south is the Bala Hissar, on a neck of land about 150 feet high, which commands the city.

The Bala Hissar comprises two portions,—one is the Bala Hissar Bala, or upper citadel, and the Bala Hissar Pahin, or the lower fortress. The defences of the Bala Hissar are connected with and form part of those of the city, over which it dominates. There is a large open space in the centre, containing the Amir Mahal, with gardens and other places necessary for a chief's residence.

Within the Bala Hissar also are two wells lined with masonry, having been used as state prisons, and receptacles for the corpses of those executed or murdered for political purposes during the stormy periods of Kābul history. On one of the higher points of the Bala Hissar there are two blocks of hewn marble, called Takhts or *thrones*, as they have on each side a flight of three steps for ascending to sit upon them. The Bala Hissar Pahin contains about a thousand houses. It is also divided into its mahalas, or quarters. One is called the Mahala Araba, from an Arabic population; another is the Mahala Habashi, from its inhabitants being the descendants of Negroes; and another is the Mahala Armani, from its Armenian residents. These tell something of the very great variety among the dwellers in Kābul.

Both in a military and commercial point of view, Kabul possesses many advantages. The emperor Baber vaunts the commercial value of the city, and the consequent resort to it of the merchants of all countries, and the display in its markets of the fabrics and produce of all climes.

The secretary to Akbar the Great, writing in the Ayin-i-Akbari, says, 'Kābul is the gate of Hindustan towards Tartary, as Kandahar is towards Persia, and if both places be properly guarded, that extensive empire is safe from the irruption of foreigners. According to the Indians, no man can be called the ruler of Hindustan who has not taken possession of Kābul.'

The eminent advantage possessed by Kābul is

that of locality, happily situate between India and Central Asia, lat. 34° 30′ N., long. 69° 5′ E., at the gorge of the nearest and most practicable passes between the two countries. It is 88 miles from Ghazni, 318 miles from Kandahar, 103 miles from Jalalabad, and 190 from Peshawur. The southern parts of the city are supplied with water from a canal called Bala Jui, which is brought from the river at its entrance into the plain of Char Deh, and is carried on the western face of the hill Koh-i-Takht Shah.

The city is situated at the western extremity of a spacious and fertile plain. It lies in a triangular gorge, formed by the approach of two ranges of hills, which, running from the north and east, meet at the south-west corner of the city. A narrow gorge separates these hills, and through it dashes the Kābul river, bearing away to the north-east; while by its side runs the high road from Kandahar and Ghazni. The range which runs to the south of the city is only separated from the ruins of the old walls by a narrow path. These hills are steep, bare, and rugged, terminating in a commanding eminence, which dominates the south-eastern corner of the city, and on the slopes of which rise the walls of the Bala Hissar. The Kabul river is spanned by a bridge at the gorge which separates the two ranges, and on its left bank the hills trending away to the north-west join in with the lower spurs of the Hindu Kush. Along the crest of both ranges, starting from the Bala Hissar, and conforming to the configuration of the ground, runs a long line of loopholed wall, flanked at short intervals by round towers. This wall is carried up the steep side of the hills and across the narrow gorge which lies between them, and well round the western flank of the city. The town formerly was encircled by ramparts built partly of burnt bricks and partly of mud. It is said that the walls fell into disrepair in the reign of Timur Shah. About the year 1773 this monarch transferred the seat of the Daurani government from Kandahar to Kabul, and from that date the importance of the place largely increased. Prior to the visit of Nadir Shah, the population of Kābul in all probability did not exceed 20,000 souls; but on his death large numbers of foreign tribes domiciled themselves in the place, and their descendants now represent several thousands of people. The houses are slightly and indifferently built, generally of mud and sun-dried bricks; the few of burnt brick are those of old standing. Those occupied by the Shiahs in the Chandol quarter are particularly fine. The city is divided into quarters, called mahalas, and these again into sections, kuchas. The latter are enclosed and entered by small gates, and are invariably occupied by people of the same class or profession. On occasion of war or tumult the entrance-gates are built up, when the city contains as many different fortifications as there are sections in it. This means of defence is called kuchabandi. An insecure state of society has induced this precautionary mode of building the city. The Shor bazar and the Lahore bazar run parallel to each other, from east to west. The western portion of the latter street is occupied by the Charchata. Of this the inhabitants are exceedingly proud. It is ascribed to Ali Mardan Khan (A.D.1637), a man whose name is remembered in these countries from the many visible testimonies to his public spirit extant in various forms. It consisted of four covered arcades, of equal length and dimensions, handsomely constructed and highly embellished with paintings; these were separated from each other by square, open areas, provided with wells and fountains. The shops of the Charchata are tenanted by retail vendors of manufactured goods, who sit perched cross-legged on low counters in front of their shops, on which are displayed their wares. In Kābul, as in most eastern cities, the several descriptions of traders and artisans congregate. Thus the shops of drapers, saddlers, armourers, ironmongers, curriers, etc., are all found in their own quarter. Besides the shopkeepers or fixed tradesmen, a vast number of itinerant traders parade the bazar.

About a mile from the city of Kābul is the tomb of the emperor Baber (obiit 1530), in the sweetest spot in the neighbourhood; he had himself directed to be interred there. It is a brick building 50 feet high. From the hill which overlooks Baber's tomb is a noble prospect over a plain twenty miles in circumference, studded with gardens and intersected by three rivulets.

Its recent history requires to be noticed.

At the beginning of the 19th century the Daurani empire, extending from Herat to Kashmir, and from Balkh to Sind, had been built up by Ahmad Shah Abdallah, and remained undivided in the hands of his grandson Zaman Shah. Having incurred the enmity of the powerful Barakzai clan, Zaman Shah was deposed and blinded by his brother Mahmud, who was supported by Futteh Khan and the Barakzai. He eventually died a pensioner of the British Government at Ludhiana. In 1803, Shah Mahmud was driven out by Shuja-ul-Mulk, the younger brother of Zaman Shah, and Shah Shuja was in possession of the undivided empire of Ahmad Shah at the time of Mr. Elphinstone's mission in 1808. This mission was sent for the purpose of concerting with Shah Shuja the means of mutual defence against the threatened invasion of Afghanistan and India by the Persians in confederacy with the French. Mr. Elphinstone had scarcely left Kabul ere Shah Shuja was driven out by Shah Mahmud, with the aid of Futteh Khan. Wandering about for some years, the sport of fortune, now a captive in Kashmir, now the prisoner of Ranjit Singh at Lahore, in September 1816 Shah Shuja found an asylum in the British territories at Ludhiana. In the meantime, Futteh Khan Barakzai, who was the chief support of Shah Mahmud's power, having incurred the jealousy of that monarch, was blinded and slain. The death of Futteh Khan roused the vengeance of the Barakzai clan. Of the twenty brothers of Futteh Khan, one of the youngest, Dost Muhammad Khan, was foremost in avenging his murder. Shah Mahmud was driven from all his dominions, except Herat, the whole of Afghanistan was parcelled out among the Barakzai brothers, and in the confusion consequent on this revolution, Balkh was seized by the chief of Bokhara, the Dehrajat by Ranjit Singh, and the outlying province of Sind assumed independence. In the partition of Afghanistan, Ghazni fell to the share of Dost Muhammad, but he soon established his supremacy at Kābul also, and thus became the most powerful of the Barakzai sirdars. His kingdom con-

sisted of four subdivisions, Kābul, the Hazara country, Kandahar, and Herat, but he was driven from it by the British in the war 1838 to 1843.

Since the early years of the 19th century, Kābul has been three times occupied by the British. The first occasion was on the 7th August 1839, when Shah Shuja re-entered Kābul as Amir, escorted by a British army; but on the 2d November 1841 the citizens and soldiery rose in rebellion against Shah Shuja, whom they killed. On the 21st December, the British Resident, Sir William MacNaghten, was shot by Akbar Khan, at an interview held to arrange terms for the British troops withdrawing from the city. On the 6th January 1841, the British forces marched out under solemn guarantee of protection,—4500 fighting men, with 12,000 followers,—but of all that number, one only, Assistant-Surgeon Brydon, reached Jalalabad, and 95 prisoners were subsequently recovered from the Afghans. On the 15th September 1842, General Pollock returned to Kābul, took possession of the citadel (Bala Hissar), and remained till 12th October. Previous to the departure of the British Indian army, the great bazar, the Charchata, was destroyed by gunpowder. On the 3d September 1879, the British Residency was attacked by a rabble of townspeople and troops, and the British Resident and his escort killed. In October 1879, a British Indian force marched under General (now Sir Frederick) Roberts up the Kuram, and for the third time occupied Kabul, and shortly after again withdrew.

The Kābul river, a tributary to the Indus, rises in lat. 34° 21′ N., long. 68° 20′ E., near Sir-i-Chashma in Afghanistan, at an elevation of 8400 feet. Its course generally is east through the valley of Kabul and plains of Jalalabad and Peshawur, into the Indus. Its length, about 320 miles. It receives the Punchshir, 120 miles; Tazaó, 80 miles; Alishang, 120 miles; Surkh-Rud, 70 miles; Kooner, 230 miles; Suwat, 150 miles; and about 42,000 square miles are drained. It is not navigable along the north base of Khaibar mountains, except on rafts and hides, but is navigable for boats of 40 or 50 tons to Dobundi.

At Kābul the river passes a gorge by two hill ranges, and flows through the centre of the town. At this gorge the walls and towers of defence come down on each side and join to a fortified bridge, with which is attached the name of Sirdar Jahan Khan, by whom the lines of walls over the hills were constructed. The principal bridge is about the centre of the town; it is called the Pool Khisti, the Brick Bridge. It connects with all the busy parts of the town, such as the bazars, the corn market, and the custom house, etc. Not far from this, to the east, but within the town, is the Pool-i-Nao, the Boat Bridge. It is formed of hollowed trunks of trees fastened together. Outside the walls of the town, and still more to the east, is another bridge, near to which stood Muhammad Khan's fort, which played an important part towards the end of the British occupation of the Residency in the last days of 1841 and the few first days of 1842. Opposite the Residency there was another bridge, and it was at a spot on the left bank of the river, between these two last-named bridges, that Sir William MacNaghten met Akbar Khan by appointment, and was murdered. Immediately after the river passes out from the eastern wall of the city, the canal of Morad Khani begins. This runs parallel to the river, and passes along on the level ground between it and the site of the old British cantonments. Close to this, but slightly westward, are the Bemaru heights, and on the eastern side of the river are the Siah Sang heights.

A few miles below Jalalabad, the Kābul river is joined by a broad stream of considerable volume, which drains the Kuner valley, and is likewise practicable for rafts.

KABULIAT-NAMA. HIND. A deed of agreement.

KABYLE, south of Algiers, are the Berber race, the old Numidians, who differ in language, form, and habit from the Arabs of the plains. Their number is about 700,000. They are a federal republic, the old Quinquegentes who gave so much trouble to the Romans, who tried the soldiership of Maximilian, and sixty years afterwards again revolted. See Kabila.

KACH or Sirsa. HIND. A kilt, a loin and hip cloth; a cloth round the waist, just covering the loins. In Kangra, breeches, the same as safa.

KACH'A, raw, unripe, crude, in contradistinction to Pak'ha, ripe, clever, skilled. Kach'a Ghara, or unbaked pot; as an ordeal, a pot is filled with water and carried to some distance without spilling. Kach'a Khana, with Hindus, consists of cooked food, such as rice and dal, and of a coarse, thick, flat cake, baked. Before partaking of this food, all Hindus, as a rule, wash hands and feet, and remove their garments from their persons, including the turband and skull-cap, leaving only a cloth round the loins. The castes are exceedingly particular in eating this kach'a khana apart. A Brahman and Rajput eating it together would both be expelled from their several castes. Pakka-khana comprises sweatmeats, most kinds of food cooked with ghi, and all dry food; is eaten by Hindus together indiscriminately, and if they choose, with all their clothes on, and also without a previous laving of feet as well as of hands. —*Sherring's Hindu Tribes.*

KACHAHRI. HIND. A court, an office, the cutcherry of the British in India.

KACHAR, a territory in the northern part of the valley of Assam, north-west of Bishnath and north-east of Gowhatty. The Kachari also dwell in the mountains south of the Assam valley, and to the east of Munipur, in lat. 24° 40′ N., and long. 93° E. Kachari, or Borro or Bodo as they call themselves, are numerous along the northern and southern borders of the Assam valley, but found in almost all parts of the valley. Chatghari, a frontier district situated between Desh Darrang and the Bhutan Hills, seems to be their chief locality, and here their numbers are said to amount to about 30,000, which is about half the Kachari population in the valley. A large portion of their vocables are identical with those of the Garo, and almost all the rest may be traced to some dialect of the Tibetan.

The names of Mech and Kachari are indifferently applied to the same people, the latter name being especially used in the extreme east of the district. The tribe is widely scattered over al. North-Eastern Bengal, being able to support life in the malarious tarai that continuously fringes the first slopes of the Himalayas.

The Kachari, the Naga, the Abor, and some

other tribes bordering on Assam, are supposed to be of the same race as the Mechi.

Closely connected with the Kachari, among the inhabitants of the plains, are the Hojai Kachari, the Kochi, which include the Modai Kochi, the Phulguriya, and Hermia, the Mechi, the Dhimal, and the Rabha. Each of these speaks a separate dialect, between which and the Kachari, Mr. Robinson says, the differences are rather nominal than real. Their numbers are about 3,000,000.

Until the middle of the 13th century, the Chutia or Kachari dynasty continued to hold Southern Upper Assam and Saddiya, and part of Naugaon (Nawgong), but were then subjugated by Shans from the south, who, after establishing themselves in Upper Assam, forced the eastern portion of the Ko'cch-Hindu kingdom to submit, whilst the lower or S.W. part of Kamrup fell under the sway of the Muhammadan rulers of Bengal.

The Kachari are a fine athletic race, fond of village merry-making and dancing. Their Mongolian features are strongly marked, no beards or whiskers to speak of, and with little hair on other parts of their bodies. They are found in small distinct settlements all over Upper Assam, and those who have become Hinduized call themselves Soromia. Others in the Eastern Douars call themselves Shargia; and near the Bot country, where they are adopting Lamaism, they style themselves Shargia Butia. They extend from lat. 25° to 27° N., and long. 73° 30′ to 88° E., and are supposed to be more than 200,000 souls. They worship the Sij (Euphorbia), as also do tribes in Central India and Orissa. The Ojha is priest and physician (Ojha, entrails). Their chief deity is Batho, and his wife Mainon; and chief priest, Deoshi. Eggs and hogs are offered in sacrifice. The Kachari and Mechi go through the ceremony of forcibly seizing the willing bride. The Dhimal of the sal forest do not exceed 15,000 souls. The Rabha and Hajong of Goalpara are branches of the Kachari.

Kachar has been largely occupied by tea planters. The soil of the plains of Kachar is a rich alluvial one, formed from the washings of the mountains which surround it on three sides. The country is drained by the river Barak, which runs in a most tortuous direction right through the whole of it from west to east. The banks of this river are the highest parts of the plain country, and are about 200 feet above the level of the sea. The ground slopes inland from these banks for several miles, and then gradually ascends towards the foot of the mountains on either side, leaving a long line of jhils and swamps between the river and high lands. In the cold season the bed of the stream is about 30 feet below the top of the banks, but in the rains the waters overflow the banks and inundate the low tracts. Low ranges of hillocks intersect the country in many places, chiefly at right angles to the river. The soil of these ranges, on which cotton is chiefly cultivated, is a red sandy clay, and rests on a base of conglomerate rock, which in many places is seen to lie exposed. The red clay and the conglomerate also lie below the alluvium of the plains, and are met with in the bed and deep-cut bank of the river.

KACH GANDAVA, a district or section of Baluchistan, on the east of which the capital is Gandava. It is a great level tract, inhabited by three very distinctly-marked races, the Jet (Jat), the Rind (including the Maghazzi), and the Brahui The Jat seem the prior race, and occupy the centre of the province. The Rind, with their lawless sub-tribes, the Jakrani, Dumki, Bugti, and Murree, are a more recent intrusive race, dwelling on the skirts. The Doda, a division of the widely-dispersed great Murree tribe, have, for the last three centuries, occupied the hill ranges east of the plain of Kachi. The Murree are a brave race, and have long been distinguished as daring depredators. Harand and Dajil, in Kach Gandava, but bordering on the Indus, are inhabited by the Gurchani tribe of Rind, and have the Muzari on their south. The great Rind tribes are subdivided into 44 branches. Their traditions affirm them to have immigrated ages ago from Damascus and Aleppo. Their language is the Jetki, in common with that of the other inhabitants of Kach Gandava, and Mard-i-Rind means a brave man. The Rind of Kach Gandava are of the Utanzai division.

Dumki, Jakrani, Bugti, and Doda Murree have always been distinguished by their rebellious and predatory habits. The Murree inhabit the eastern hills of Kach Gandava, and a peaceful and obedient portion of the tribe are in the hills west of the province below Jell. A large portion are at Adam Murree, on the S.E. frontier of Sind. The Murree and the Maghazzi seem to have emigrated from Mekran to Kach Gandava at different periods, and to have become incorporated with the Jat cultivators. The Maghazzi have only four families, the Butani at Jell being the chief. They are enemies of the Rind, but are probably of the same race. They boast of being able to muster 2000 fighting men, and between them and the Rind a blood-feud long existed. The Maghazzi and Rind are alike addicted to the use of ardent spirits, opium, and bhang.

KACHH. Hind. Moist, low-lying country along the banks of the Ganges, as opposed to the bangar or dry upland tract away from the river. It gives a name to the Kach'handan pargana, in the Hardoi district of Oudh, originally in the possession of the Thatheras. In A.D. 1542, Sher Shah, on his proselytizing march from Jaunpur to Agra, compelled the inhabitants of several Chandel villages to apostatize. Their descendants now intermarry with the families of Ahbans, Raikwars, and Gohelwars, who were converted to Islam at the same time.

KA-CH'HA, also Cholna. Hind. A cloth worn round the hips, passing between the legs, and tucked in behind, the Tamil dovati.

KACHHI, a lowland tract on the left bank of the Indus, commences at Mari, opposite to Kalabagh, and extends in one form or other to the sea. In some parts of the lower portions, babul predominates. Tamarisk more or less exists everywhere, and jhand, karil, with other shrubs or trees adapted for firewood, are largely scattered over the entire area in greater or less density. In the upper portion, appertaining to the Miyanwalli tahsil, the shisham or Dalbergia sissoo greatly predominates, and appears to spring up spontaneously wherever the soil deposited by the river is left undisturbed, for a distance of at least 30 to 40 miles below Kalabagh. Almost the whole of the forest worthy of being taken into account is situated on part of the series of low islands, among which meander the numerous and varying channels into

which the Indus is divided for many miles below Mari and Kalabagh. The Kachhi sissoo forest extends over 14 or 15 miles on low alluvial land, upon the left bank of the Indus, between the villages of Bukkri and Futteh Khan, and more sparingly for 15 miles lower down, or, altogether, 30 miles from Kalabagh. There are few trees in India which so much deserve attention as Dalbergia sissoo, the Fali of the Panjab, considering its rapid growth, the durability of the timber, and its usefulness for many purposes; the wood is universally employed when procurable, by Europeans and natives, where strength is required.—*Vleghorn's Panjab Report*, p. 220.

KACH'HI, a race spread throughout Hindustan, in Gujerat, and on the north-west borders of the Mahrattas. They are engaged in the finer branches of agriculture, are industrious market-gardeners, flower-growers, and in Behar are large poppy-growers. They recognise seven branches,—the Kanoujia, Hardiha, Singrauria, Jawanpuria, Baniania or Magahya, Jaretha, and the Kachhwaha, who do not eat together or intermarry. There are, however, other distinctions, and in the Mahratta territory others of them are named from the countries they have come from, as the Bundela and Marwari Kach'hi. Most of the Canarese, Tamil, Teling, and Mahratta nations of the Peninsula of India are engaged in agriculture. In the N.W. Provinces, the Ahir, Kach'hi, and Koormi are similarly occupied. The Kach'hi, Koeri, Morow, Kumboh, and Kisan are gardening and cultivating tribes in Northern India. The Kach'hi of the Mahratta country state that they came as cavalry and infantry soldiers from Bundelkhand, in the times of former kings and of Alamgir, and that they were villagers and servants. In 1869 there were under 100 houses in Begumpur in Aurangabad city. There were many in Poona and a few in Bombay, but only one in Jaulnah. In Aurangabad, Poona, and Bombay they are fruit-sellers, market and flower gardeners, and agriculturists. They are of a bamboo colour, and speak Hindi. They worship Seetla in the form of a stone from the river, offering flowers and betel, and use red lead in sanctifying the stone. They also worship Hanuman and Balaji. After death they burn, but bury those who have died of small-pox, also the unmarried.—*Elliot's Supp. Glossary.*

KACH'HWAHA, a distinguished tribe of the Solar race of Rajputs, who claim descent from Kusa or Kusha, the son of Rama, and form the ruling race in the state of Jeypore, the raja of which is of the Kach'hwaha clan. There are three solar dynasties:—

The Grahilote or Gehlote, with 24 sakha or branches, of which the Sesodia is the most distinguished. The rana of Udaipur is a Grahilote.

The Rahtor, said to be descended from Rama by Kusa, his second son. It has 24 branches, and the raja of Jodhpur or Marwar belongs to this tribe.

The Kach'hwaha also sprang from Kusa. The raja of Jeypore is of this tribe. It has 12 kotri or houses.—*Tod.*

KACHI, the language of Cutch, which has in it elements of the Gujerati. That of the hunters and tanners (dedh) is another dialect, but the language of Lar is purest.

KACHULA CHULA. MALAY. Hard horns, or horn-like parts of animals, believed to possess magical or medicinal properties. Lang limu (ilmu) kahutan katungalam are lines to which the Malays cannot affix any definite meaning. The rendering would perhaps be (magical) science for protection when alone in the forest, or to make the offerer alone as when surrounded by a forest.—*Jour. Ind. Arch.* p. 309, December 1847.

KACSHA, in Hindu astronomy, the orbit of a planet, or the circle which ancient astronomers called the deferent; for the kacsha carries epicycles (paridhi) like the deferent.

KADAM. ARAB., HIND., PERS. The foot, hence Kadam-bosi, feet-kissing; in correspondence, a humble salutation. This word means sometimes a pace, a foot, also a yard measure of 30, 33, or 36 inches. Kadam-rasul, footprints of the prophet Mahomed. In Southern Asia, there is a great reverence shown to saints' shrines and footmarks, amongst these are the tombs of the Pir-i-Dastagir at Baghdad, of Kader Wali at Negapatam, and the footprints of the prophet at the Kadam Rasul Hill, near Secunderabad, to which multitudes annually resort. The footprints of Abraham are shown at Mecca, and those of Adam at the great Buddhist temple in Ceylon.

KADAMBARI, a prose novel written by Vana or Banabhatta in the 7th century, named after a daughter of Chitraratha and Madira.—*Dowson.*

KADAPHES or Kadphises, a dynasty of three rulers, who reigned in Kabul from the downfall of the kingdom of Vikramaditya.

Sir Walter Elliot says the Kadphises and Kanerki were Indo-Scythic invaders who established themselves for a time in the north of India, and even penetrated to the Dekhan. Coins belonging to the Kadphises group, though of a different form, have been found at Joghar in the Ganjam district, and undoubted Kadphises coins have been obtained at Madras, Trichinopoly, and Masulipatam.

Kadphises' name is on the Aryan reverse of the Hermæus coins of Hercules type. The Hercules worship was readily borrowed from the Greeks by the wild Scythians, as a mere reverence of physical strength. The Kohistan is supposed to be the district of the first rise of Kadphises, while Kābul and its valley were subject to Indian rule; and, while there, the chief seems to have retained his Scythian title and rude worship of Hercules. Afterwards overpowering the Indian governor who had followed Vikramaditya into the Kābul valley and Panjab, he or his descendants seem to have adopted the Hindu religion, coining with Greek, and dropping their Scythian title. In a gold coinage by a Kadphises king, Siva occurs in the mixed male and female character, and very generally accompanied by the bull Nandi. Professor Lassen discovered in Chinese history, that Khi-out-chiuhi Kui-tsi-kio, a Yuchi or Yeutchi or White Hun, conquered the Szu or Azes Scythians in about B.C. 40, and dying at the advanced age of 84 years, his son Yen-kao-Ching prosecuted his career of victory, and reduced the Indus valley and Panjab to subjection in about B.C. 20. The names are scarcely recognisable, but the facts and period correspond to the career and supposed era of the Kadphises kings.

Prosoko Kosoulo Kadphises, B.C. 50; in Aryan, Dhamarata Kujula kasa Sabashakha Kadaphasa. His coins are of the Hercules and Hermæus type.

Zathos Kadaphes Khoranos, B.C. 20. On the reverse of the coins is a sitting figure, with the arm extended, and wearing a loose flowing Indian dress. They have monograms the same as the Azes coins. The Siva worship had *not* yet been established as the State religion.

Vohemo Kadphises, B.C. 5. His copper coins have the king standing in a Tartar dress, with coat, boots, and cap, his right hand pointing downwards to an altar or pile of loaves, and having a trident separate on one side and a club on the other. The reverse has the Siva Nandi bull.

The readings of the Aryan inscriptions on coins of the Kadphises kings, by Lassen, James Prinsep, and Wilson, are somewhat different, and it is suggested that the words Koroso, Kosoulo, Koranos, and Zathos were titles short of royalty. Professors Lassen and Wilson carry the dynasty of Kadphises through the whole of the first century of the present era, and consider it to have been then overpowered by a fresh swarm of Scythians under the Kanerki kings. Mr. H. T. Prinsep supposes that during the ascendency of the Kadphises kings, the Græco-Parthian party still held out in cities and communities, abiding their time to re-assert their independence, and rose again about the middle of the first century of our era; amongst these, coins show—

Undopherres, A.D. 40, calling himself king of kings in Greek, and in Aryan Maharajasa Raja Rajasa, Tradatasa, Mahatasa, Pharahitasa.

Gondopherres or Gondophares, B.C. 55, who took the same Aryan name of Pharahitasa.

Abagasus, king of kings, A.D. 70, in Aryan Abakhafasa. Professor Lassen supposes this name to be identical with Vologeses. Mr. H. T. Prinsep supposes these coins to be of Parthians who established for themselves a separate and independent sovereignty in Kabul and the Paropamisus.

Abalgasius, A.D. 80. Captain Cunningham described the Aryan legend on the coins to be of the saviour king Abagasus, younger son of Undopherres.—*Prinsep.*

KADATAM. KARN. A leaf of cloth blackened with a preparation of charcoal and gum, and used as a slate for writing on with chalk or steatite. Leaves of such cloth, folded together, are commonly used as memorandum and account books. The writing may be effaced with a wet sponge or cloth.—*W.*

KADEE, HIND., is one of the stout cotton fabrics made over all India; as also are the fabrics distinguished as do-suti, tin-suti, and char-suti or chau-tari.

KADER, a race occupying the Animallay Hills in Coimbatore, but not higher than 4000 to 5000 feet. They are the lords of the hills, and exercise some influence over the Puliar and Malai Arasar races. They carry a gun, and even loads as a favour, but they do not perform menial labour, and are deeply offended if called coolies. They are expert at stalking game. They are a truthful, trustworthy, and obliging tribe. They are small in stature, and their features resemble the African. They have curly hair, tied in a knot behind, and file the four front teeth of the upper jaw to a point, as a marriage ceremony. The Kader, as also the Puliar, Malai Arasar, and Maravar, who also inhabit these hills, all gather the forest products,—cardamoms, honey, wax, ginger, turmeric, resins, millets, soap-nuts, gall-nuts,—and exchange them in return for rice and tobacco. The Kader formerly located near Toomacadanū in the Animallay, entirely left the British portion of the forest, and went over to the Cochin territory, as the hill produce on the British side became exhausted; they paid the Cochin Government Rs. 100 per annum for the privilege of collecting cardamoms, ginger, etc.; they paid no seigniorage for the hill produce collected in British forests. They were useful as guides, but otherwise they were of no use in the forest, refusing to undertake any labour whatever.

The *Malai Arasar* cultivate a little.

The *Puliar*, about 200, live among the lower plateaux. They worship demons, and are omnivorous.

The *Maravar* are timid and nomadic, have no fixed habitations, but wander over the mountains with their cattle, seldom staying above a year in a place. They worship the idols of the Puliar. They all are keen hunters.

KADER WALI and Khaja Muin-ud-Din, Chisti, Muhammadan saints. Chisti was a Sunni, was born in Sigestan A.H. 527, and came to Ajmir in the reign (A.H. 602-607) of Kuth-ud-Din Aibak, where he married a daughter of Syud Husain Meshedi, a Shiah. He died A.H. 628, and a magnificent mosque was built near his tomb, A.H. 1027, by the emperor Jahangir. He has also a shrine at Nagore, near Negapatam. Kader Wali is held in special reverence by the Moplah. His festival day is on the 11th Jamadi-ul-Akhir.

KADESIA, on the Tigris, the site of the battle fought by Rustam, the lieutenant of the youthful Yezdejird III., against the Arabs. Rustam was surprised and slain. The victory gave the conquerors the province of Assyria, since called Irak-Arabi; and this was followed by the sack of Ctesiphon.

The battle of Kadesia put an end to the Persian empire. It was fought in the fifteenth year of the Hijira (A.D. 632), under the khalifat of Omar, by the Arab general Saad, against Rustam, the commander-in-chief of the Persian army, in the reign of Yezdejird III., the last of the Sassanian race. The battle lasted three days, at the end of which the Arabs were victorious, and the Persian monarchy destroyed.—*Decline and Fall of the Roman Empire; Rich's Residence in Kurdistan*, ii. p. 155; *Thomas' Prinsep.* See Cadesia; Kai.

KADHO-AKHA or Ka-doh-ka. BURM. Ferry hire; a coin placed in the mouth of a corpse; Charon's fee.

KADHYA or Gudhia. HIND. A grasshopper which attacks field and garden produce.

KADI or Kari. KARN., MALEAL. Boiled sour milk eaten with rice, supposed to be the source of the word curry. In Malabar majjige kadi is a curry of rice, sour milk, spices, chillies, etc. Kadipak, leaves of Bergera Konigii. Kadi, in Tamil, is the bazar and the bazar supplies, and is also supposed to be the origin of the word curry.

KADRU, in Hindu mythology, daughter of Daksha, one of the thirteen married to Kasyapa. Her offspring have the metronymic Kadraveya; among them are the mythologic serpents Sesha and Vasuki.

KADSURA CHINENSIS. Wu-wei-tsze, CHIN. A scrambling shrub of China, remarkable for

the viscid mucus which abounds in the fruit and branches. Japanese women dress their hair with it, and the Pi-chi or mulberry bark paper is sized with it. In China the fruit and branches are employed in the form of mucilaginous decoction.—*Smith.*

KADUR, a district of Mysore, forming the south-western portion of the Nuggur division. The centre of the district is occupied by the Baba Booden Hills, the Mulaingiri rising to a height of 6317 feet above the sea. Its forests contain inexhaustible supplies of the finest timber, and also furnish shelter for the coffee plantations. Sringeri or Rishya-sringa-giri is on the Tunga river. It was here that the sage Rishya-sringa was born without a natural mother, by whose intervention alone could the horse sacrifice be celebrated and Rama himself be brought into the world. Here also, in historical times, was the home of Sankaracharya, the great Sivaite reformer of the 8th century; and here at the present day resides the Jagat-guru, or supreme high priest of the Smartta Brahmans.—*Imp. Gaz.*

KADURU, Singh., means forbidden or poisonous trees, and from this word the idea of the forbidden fruits has been attached to the shaddocks and to some other trees. Strychnos nux vomica is the Goda-kaduru; Gon-kaduru, bullock's heart; Mudu-kaduru, sea fruit; Diwi-kaduru, tiger's fruit. Divi Ladner of Lindley's Vegetable Kingdom corresponds with the Diwi-kaduru. The Singhalese say that Paradise was in their island, and that the forbidden fruit of the garden of Eden was borne on the Divi Ladner of their country, probably the Tabernæmontana dichotoma. In support of this they point to the tempting beauty of the fruit, the fragrance of the flower, and show that it still bears the marks of the teeth of Eve. Till the offence was committed which brought misery on man, we are assured that the fruit was delicious; but from that time forward it became poisonous, as it now remains.—*Fergusson's Timber Trees of Ceylon.*

KADYAN, an aboriginal tribe of Borneo, converts to Muhammadanism. They are peaceable and well disposed. They cultivate, fish, and collect forest products. Their women, when young, are very attractive. They are not concealed.

KAEMPFER, ENGELBERT, born 16th September 1651, at Lemgow, a small town in the circle of Westphalia, belonging to the Count de Lippe. His father, John Kaempfer, was minister of the church of St. Nicholas in that town. Kaempfer formed part of the embassy which proceeded through Russia from Sweden to the Persian court, where he resided; but on its return he separated from it, and proceeded to the Persian Gulf. He then entered the service of the Dutch, and was long employed in Japan, and his Amœnitates Exoticæ and History were the result. He seems to have died of phthisis, for blood-vessels burst in November 1715 and at the beginning of 1716; and on the 24th October, having been ever since the last attack troubled with a nausea and loss of appetite, his vomiting of blood returned upon him with great violence, followed by fever, which lasted till the 2d of November, on which day he died, at five in the evening, 65 years and six weeks old. He was buried in the Cathedral Church of St. Nicholas at Lemgow.—*History of Japan*, i. p. 15.

KAEMPFERA, a genus of plants of the order Zingiberaceæ, of which several species are known to occur in the southern parts of the East Indies. The flowers of some species are ornamental, and the roots of several are used medicinally, or as condiments. One species, long supposed to produce the galangal root of commerce, is a native of China, and the Rev. Mr. Williams says that the root is sent from China to India, but that there are two sorts, the greater and the smaller, obtained from different plants. The best of these is the smaller galangal, and is procured from the Maranta galanga. This is of a reddish colour, about two inches long, of a firm texture, though light, and possessing an acrid, peppery taste, and a slight aromatic smell. The larger galangal is from Kaempferia galanga, and is inferior in every respect, but both are used as spicery in Europe as well as in India. Kaempfera candida, Pan-u-phu of the Burmese, is often seen lifting its crocus-like flowers, without a single leaf, on the most arid spots in the jungles of Tenasserim. All the species of Kaempfera are furnished with tuberous roots, like the turmeric and ginger plants. The spikes of the flowers are short and rising from the root, in some species before, in others with, and nestled among, the leaves, and all are highly ornamental. K. parviflora, *Wall.*, and K. Roscoeana, *Wall.*, grow in Burma. K. ovalifolia is a plant of the peninsula of Malacca.—*Williams; Mason; Voigt.*

KAEMPFERA ANGUSTIFOLIA. *Roxb.*

Kanjon-bura, . . Beng. | Mudun nirbisi. . Hind.

Has large, white, purple-lipped flowers. Its roots are used in Bengal as a cattle medicine.—*Roxb.* i. p. 17; *Voigt.*

KAEMPFERA GALANGA. *Linn.*

Alpinia sessilis, *Kan.*, Ar. Kats-julum, . Maleal.
Chandro mula, . Beng. Kats-jolam, . . Tam.
Kha-maung, . . Burm. Kachoram, ... Tel.

Common all over India; rhizoma fleshy, tuberous, with fleshy fibres; the roots are agreeably fragrant, and of a warm, bitterish, aromatic taste. Notwithstanding its specific name, it is not the source of the true galanga root of the druggists, a drug now known to be the produce of the Alpinia galanga. The roots of this plant may be often seen attached to the necklaces of Karen women, for the sake of their perfume. They also put them with their clothes, and use them to a small extent medicinally. It is cultivated by the Mug race of Arakan, by whom it is sold to the people of Bengal, who use it as an ingredient in their betel. The roots possess an agreeably fragrant smell, and a somewhat warm, bitterish, aromatic taste. The Hindus use them as a perfume and medicinally.—*Roxb.; O'Sh.; Mason; Murray; Voigt.*

KAEMPFERA PANDURATA. *Roxb.*

Curcuma rotunda, *Linn.* | Kaempfera ovata, *Roscoe.*

Grows in Gujerat, the Konkans, and the Moluccas; has large, whitish, rose-coloured flowers.—*Roxb.*

KAEMPFERA ROTUNDA. *Linn.*

Kaempfera longa, *Redout.* | Melan kua, . . Maleal.
Mya-ban-touk, . Burm. | Kaha sau-kanda, Singh.
Bhuim champa, . Hind. | Konda kalava, . . Tel.

This is cultivated all over India. It is the finest species of the genus, and is cultivated by

amateurs for its beautiful sweet-scented blossoms. It was long considered to produce the zedoaries, but writers of authority state that zedoary is the root of the Curcuma zedoaria.—*Roxb.; O'Sh.; Mason.*

KAF. HIND. A mixture of emery and oil, used in cleaning metal.

KAF, the Koh-i-Kaf or Mount Kāf of the Persians, is the fabulous mountain which, according to oriental cosmographers, surrounded the world; but since the science of geography has made some progress in the east, the name has been confined to Mount Imaus to the east, and Mount Atlas to the west. The jan or genii, a race intermediate between angels and men, produced of fire, are supposed to have inhabited the earth for several ages before the birth of Adam, and to have been governed by kings, all of whom were called Suleiman (Solomon). They fell into a general state of depravity, and were driven into remote places by Eblis (the fallen angel), and such as remained in the time of Kaiumeras, the first of the Pesdadian dynasty of Persia, were by him driven to Mount Kāf.

KAFAS. ARAB. A hamper artistically made of palm sticks, in which provisions are kept.

KAFFIYEH. ARAB. A square kerchief of cotton and silk mixed, generally of yellow and green colours, worn by the Bedonins. It is folded so that one corner falls backward, and a corner over each shoulder. See Kaifiet.

KAFI. HIND. Onoseris lanuginosa. In Kangra, it is the tomentum of the leaf of Onoseris aplotaxis.

KAFILAH. ARAB. A caravan; a company of travellers. The Baluch and their neighbours consider a number of travellers, with their property, to be a karwan; but where all the goods belong to one merchant, they speak of a kafilah. Kafilah bashi, the conductor of a large caravan.

KAFIR. ARAB. One who denies, an infidel. A term generally applied in India to the thick-lipped, curly-haired Negro races of mid-Africa, but also as an abusive epithet to Christians and all non-Muhammadans.

KAFIR, also called Siah Posh Kafir, are names applied by Muhammadans to a race who occupy the mountainous region on the southern slopes of the Hindu Kush, directly north of Kabul, bounded on the north by the Hindu Kush mountains, on the south by the Kunar range; for its western limit it has the Alishang river with its tributary the Alingar; its eastern boundary, taken roughly, would be the Kunar river from its junction with the Kabul to where the former receives the waters of the Kalashgum, thence, following up this affluent to its source, a line from that point to the Dura pass would be well within the march. It would also take in a small tract north-west of that pass, and subject to Munjan. There are three main tribes, Ramgal, Vaigal, and Bashgal, answering to the three chief valleys of the country. The Vaigal are the most powerful, holding the largest valley. Each has its distinctive dialect. The entire population is estimated at over 600,000. Their country is picturesque, thickly wooded, and wild in the extreme; the men are of fine appearance, but, like all hill tribes, short of stature; they are daring to a fault, but lazy, leaving all agricultural work to their women, spending their days, when not at war, in hunting; passionately fond of dancing, in which both sexes join, indulging in it almost every evening round a blazing fire. It is purely owing to their having no blood-feuds among themselves that they hold their own against the Muhammadans, who hem them in on all sides, and with whom they are always fighting. Towards the British they are exceedingly well disposed. Slavery exists to a certain extent among them, but the trade in slaves would soon die out if human beings were not so saleable at Jalalabad, Kunar, Asmar, and Chitral. Polygamy is rare; mild corporal punishment is inflicted on a wife for adultery, while the male offender is fined so many heads of cattle. The dead are coffined, but never buried. One Supreme Being, Imbra, is universally acknowledged. Priests preside at their temples, in which sacred stones are set up, but to neither priests nor idols is excessive reverence paid. In evil spirits, authors of ill-luck, the Kafirs firmly believe. Their drink is the pure juice of the grape, neither fermented nor distilled. Their arms are bows and arrows; a few matchlocks have found their way among them from Kābul, but no attempts have been made to imitate them. Wealth is reckoned by heads of cattle. There are 18 chiefs in all, chosen for bravery mainly, but with some regard to hereditary claims. Their staple food is wheat.

Judging from the nature of their idolatry and their language, there can be little doubt that they are an Indian people.

Fazl-i-Haqq, in 1864, said, 'A breach of the seventh commandment in any form is not endured for a moment.' But both Syud Shah and Mian Gul assert that they are completely lost to all shame in this respect. Major Biddulph confirms this. He says, 'The women are very immoral, and marital jealousy is satisfied with a short fine.' It has also been ascertained that the Kafirs sell their women as slaves. But it appears that a large slave trade is carried on directly with the Kafirs themselves. When one Kafir tribe defeats another, the women are seized and sold into slavery.

They are entirely independent. The country occupies a commanding position, dominating all mountain passes between the Oxus and Indus basin. It occupies the most western part of the independent highlands, where the chain of the Hindu Kush impinges on the extremity of the Himalaya, capping the mountainous region of Badakhshan, on the Oxus, and overlooking most of the passes at the head of the Kabul river. The people give no quarter to Muhammadans, but spare those who, like themselves, are technically Kafir, or non-believers in the creed of Mahomed, which is associated in their minds with barbarous cruelty from the earliest period of the Muhammadan invasion of Afghanistan.

They have numerous tribal names amongst themselves, that of Kafir, meaning unbeliever, being applied to them by their Muhammadan neighbours, with Siah Posh or Tor, meaning black clothes, from the colour of their apparel, both epithets being taken from their dress, like the Scythian Melanchlænæ of Herodotus (iv. p. 10), for the whole of the Kafir race are remarkable for their fairness and beauty of complexion; but those of the largest division wear a sort of vest of black goatskin, while the other dresses in

white cotton. They are of fair complexion, regular features, shaded hair, with ruddy cheeks, and variously-coloured eye.

The Dara Nuri profess to be Tajak, and take great pride in the antiquity of their race. The language of the Dara Nuri is almost identical with that of their neighbours on the plain of Lughman. In appearance the Dara Nuri differ little from the Afghans.

The Chuguni is a numerous tribe dwelling beyond Shewa. They are of the same race as the Kafir, but have been converted to Muhammadanism. The true Kafir call them, in somewhat contemptuous language, Nimchah, which may be translated half-breed. They intermarry indifferently with Kafir and Afghan. They are principally employed as guides, and have access into Kafiristan. The Chuguni tribe live in the highest habitable parts of the Kund range. Their appearance differs from that of the Afghans, their stature being shorter, and their features softer and more pleasing. The Chuguni are devout and attentive to their religious duties, and their women engage in prayer. They are the only Muhammadans who allow women unconstrained freedom, the women going about among the men as in Europe.

The view from Utchalic Eali pass, 7300 feet, overlooking the Arat valley, is extensive. On the summit of Kund there is a small lake, and it is stated that on its shores still rest the remains, petrified, of Noah's Ark, while in the plain below was the tomb of Lamech, Noah's father.—*C.M.S. Intell.*, 1865, p. 203.

KAFIR KENNA is five hours and a half from Tiberia; it is the Cana of Galilee, so called to distinguish it from another town of this name in the tribe of Asher (Joshua xix. 28). Antipatris of the Greeks is the Kafir Saba, the modern town.—*Robinson's Tr.* p. 236.

KAFIR KOT, in lat. 32° 30′ 55″ N., and long. 71° 21′ 28″ E., 2194 feet above the sea, an ancient fort on the slopes of the Khusir range.—*H. A.* i. p. 56.

KAFIR KOT is a term used in the pretty valley of Khara Tucka, that overhangs Herar, in the hill districts to the S.W. of Mehur in Sind. This valley has regular artificial terraces, formed of huge boulders, which the people believe were lifted into position by a former giant race, whom they designate Kafir; hence these terraces and other ancient remains are called Kafir Kot. The huge boulders must have been arrested in their descent by some artificial contrivance. The practice of terracing is common now all over Afghanistan and the Himalaya, and was so throughout Baluchistan when it was more densely peopled than at present. They catch the rain-water running down the faces of the hills, and the detritus forms slight soil, in which the people sow wheat.

KAFIR KOT, in lat. 33° 10′ 49″ N., and long. 70° 48′ 26″ E., a series of peaks 4004 feet above the sea in the Waziri Hills.

KAFSHI. HIND. Slippers, or half shoes; they have a raised iron piece on the heel underneath.

KAFURI. HIND. A yellow colour, lemon-yellow, the colour of amber. Seoti rang is a pale yellow.

KAGAR, or Dassendi, a people of Cutch, who receive their support from the charity of the Jhareja. They are a tribe of Charon of the Tombel, or, as pronounced by the inhabitants of Cutch, Tümber, and emigrated with the Jhareja into that country.—*Hindu Infanticide*, p. 78.

KAGAYAN, an island of the Archipelago, containing a curious circular lake, and at a height of about 90 feet is another beautiful lake, circular in form, and as nearly as possible similar to the lower one. The two lakes are separated by a sort of natural wall, and the spectator standing on its narrow edge can, by a mere turn of the head, observe them both. Opposite Kagayan are the Five Islands, known also as Babuyan.—*Keppel's Ind. Arch.* i. p. 83.

KAGHAN is a barren dependency of Hazara. It is a long, narrow glen, stretching upwards till it nearly reaches Chelas, the latter outpost of the maharaja of Kashmir's kingdom. It is inhabited by pastoral and aboriginal races, and was given in fiefdom to a Syud family, who were confirmed by the British. These Syuds exercised internal jurisdiction, and kept certain members of the family in attendance on the Deputy Commissioner of Hazara, virtually as hostages for good behaviour. After the British conquest, the Syuds were summoned to answer numerous complaints preferred by the people of Kaghan; they came, but afterwards fled, and assumed an attitude of resistance, and intrigued with the Sitana fanatics and with the Hasanzai, then hostile to the British. See Hazara.

KAGHAZ. PERS. Paper; Akhbar Kaghaz, a newspaper. Kaghaz-tikli-dar, gold-ornamented paper. Kaghazi nimbu, the thin-skinned lemon, Citrus acida, *Roxb.*

KAGMAK, a fabric of camel's hair.

KAH. PERS. Grass, but in combination applied variously. Kah-i-Shutar, a juicy, bitter plant, growing near Jell in Baluchistan, eagerly eaten by camels.

KAHAN, a town in Cutch Gandava, in the hill ranges east of the plain of Cutch. It belongs to the Doda Murree, a division of the great and widely-dispersed Murree tribe, who have been located in the neighbourhood for several centuries. The Murree are a brave race, and have long been distinguished as daring depredators.—*Masson's Journeys.*

KAHAR. HIND. A Sudra race of Hindustan, many of whom, in Behar, are considered impure. They numbered 1,840,856 at the 1881 census. The Kahar are found following agriculture and as palanquin-bearers all through Hindustan and the east of the Panjab, and are strong, hard-working, rather good-looking men. They are water-carriers, fishermen, and cultivators. Hindus drink water from their hands. Near Gya, they are employed as palanquin-bearers, and carry burdens on a yoke over one shoulder. The name is one of the few real Indian words of which Ibn Batuta shows any knowledge.

KAH-GIL. PERS. Thick mud, mixed with chopped straw and other materials, used as plaster throughout Sind and Central Asia; literally straw-mud.—*Burton's Scinde.*

KAH-GYUR, a sacred book of the Buddhists of Tibet, consisting of one hundred volumes, translations from the Sanskrit of stories and tales, many of them very childish, and common to all folk-lore. Tan-Gyur is another book, of which the philologist Csoma de Körös, a Hungarian, obtained

a copy, and it has been translated into German by F. Anton von Schiefner, and part of it from that into English by W. R. S. Ralston. De Körös was born at the end of the 18th century; he studied at Göttingen, and became a Slavonic philologist. He conceived the desire to discover the origin of the Hungarian nation, and went to Tibet, where he studied the language of the country. His existence was that of an ascetic; his only food was boiled rice, his only stimulant tea. He died in Nepal in 1842, when he was on the point of starting for Lhassa, in the hope of finding there rich stores of Tibetan literature.

KAHI. HIND. Earth containing salts of iron in the form of an anhydrous sulphate; in the pure samples it takes the form of a whitish or cream-coloured radiated crystalline mass. Kahi-lal or Kahi surkh is bichromate of potash; Kahi-suja contains iron salts; Kahi-sabz, impure green vitriol; Kahi-matti, sulphate of iron earth; Kahi-safed, white anhydrous sulphate of iron; Kahi-zard, yellowish variety of Kahi-safed.—*Powell, Handbook.*

KAHI-KATEA, or white pine timber tree of New Zealand, is Podocarpus dacrydioides, a tall, gregarious tree.

KAHIRA or Al-Kahira, the city of Cairo, founded by Jauhar, the general of the first Fatimite khalif, who ordered the foundations to be laid, A.D. 968, when the planet Mars was in the ascendant, which Arab astronomers called Kahir or the conqueror. It was completed in five years. It was considerably enlarged by subsequent rulers, particularly by Salah-ud-Din, who enclosed the new and the old town, called Misr or Fasthath, with a wall 26,000 cubits in circumference.

KAHK, ARAB., is a light and pleasant bread of ground wheat, kneaded with milk, leavened with sour bean flour, and finally baked in an oven, not, as usual in the east, upon an iron plate. The Kahk of Egypt is a kind of cake.—*Burton's Mecca*, i. p. 361.

KAHKAR, Ghakkar, or Guker, a martial tribe in the time of Mahmud of Ghazni, inhabiting the Salt Range or Johd mountains between the Indus and the Behut or Hydaspes. The Moghul, and subsequently the Daurani, failed to master them; but the Sikh rulers, after having been frequently foiled, at length nominally accomplished their subjugation, by stirring up internal faction and by the perpetration of acts of cruelty and treachery. At an early period of history they were given to infanticide. It was a custom, says Ferishta, as soon as a female child was born, to carry her to the market-place, and there proclaim aloud, holding the child in one hand and a knife in the other, that any one wanting a wife might have her; otherwise she was immolated. By this means they had more men than women, which occasioned the custom of several husbands to one wife. When any one husband visited her, she set up a mark at the door, which, being observed by the others, they withdrew till the signal was removed. Baber writes the name Guker, but it is also written Ghuka and Khaka. The Guker are not distinguishable from the Awan in personal appearance, both being very large, fine men, but not exceedingly fair, inhabiting as they do a dry, bare, rather low country, hot in summer.—*Rec. Govt. of India; Tod's Rajasthan*, i. 636; *C.* 96.

KAHROR, an ancient town on the S. bank of the old Beas river, 50 miles S.E. of Multan, and 20 miles N.E. of Bahawulpur. It is one of the towns which submitted to Chach after the capture of Multan in the middle of the 7th century, and was the scene of the great battle between Vikramaditya and the Sakas in A.D. 79.—*Cunningham.*

KAHRUBA. ARAB. Amber; also copal, and the pure gum of Vateria Indica.

KAHTAH. BENG. A professional story-teller, who recites traditional poems.

KAHTAN, son of Ebor, is one of the ancestors of the present Arabs in Yemen. In Hebrew he is called Joktan. His descendants are styled Arab-ul-Araba, *i.e.* pure Arabs.—*Sale; Lane; Palgrave.*

KAI. TAM. Kar, TEL. The hand. Idan-kai, the left-hand caste; Valan-kai, the right-hand. Kai-kara, workers in basket work. Extensively combined to indicate handiwork and pecuniary and revenue transactions, as Kai-karan, an artificer; Kai-kilan, a weaver by caste and occupation. Kaikari or Kaikadi, any handicraftsman, in Berar are makers of baskets from stems of cotton plants and palm leaves. They are a migratory and predatory race, whose ostensible occupation is basket-making. They wander through Berar. —*Berar Gazetteer.*

KAI, an ancient Pehlavi title applied to a great king. It was part of the title of Cyrus, the Kai Khusru of Persia, and it has given the Kyanian dynasty its designation.

Kai Bahman, one of the kings of Persia who were known to the Persians by the name of Ardeshir, and to the Romans as Artaxerxes, which was their mode of pronouncing Ardeshir. He was the Ardeshir-daraz-dast, or Ardeshir of the long arm, the Artaxerxes Longimanus of the Romans of the Kyanian dynasty.

Ardeshir Babegan bin Sassan was an officer of the Parthian king Arsaces Artabanus V., who assumed the Persian throne in A.D. 226 as the first of the Sassanian dynasty.

Ardeshir II., the tenth king of the Sassanian dynasty, was the Shapur or Sapor who captured the emperor Valerian. He assumed power in A.D. 381.

Artaxerxes Mnemon was a Persian king, B.C. 426, at whose court Ctesias resided for some years. After Scylax, Ctesias was the next historian of India, and in his Indica (cap. iv. p. 190) he mentions that Artaxerxes Mnemon and his mother Parasatya presented him with two iron swords, which, when planted in the earth, averted clouds, hail, and strokes of lightning. This is the first notice of the lightning conductor.

Ardeshir III., in A.D. 629, was the 25th Sassanian. Under him anarchy prevailed, and the Sassanian dynasty ended in A.D. 641, when Yezdejird or Izdejerd III. was overthrown by the Muhammadans.

KAIF. ARAB. Repose; the savouring of animal existence; the passive enjoyment of mere sense. In a coarser sense Kaif is applied to all manner of intoxication. Sonnini says, The Arabs give the name of Kaif to the voluptuous relaxation, the delicious stupor, produced by the smoking of hemp; and in Morocco the word is applied to the dried flowers of the Cannabis sativa.—*Burton's Mecca*, i. p. 12.

KAIFIET, ARAB., worn in Oman by all classes, is a broad kerchief, striped green, red,

..nd yellow, having the sides hanging down, with knotted strings appended to them, serving by their motion to keep off the flies, which are there excessively troublesome. See Kaffiyeh.

KAIKEYA, an ancient country mentioned as beyond the Saraswati and Beas, whose people took part in the war of the Mahabharata. A Kaikeyi princess married king Dasaratha, to whom she bore Bharata, his third son. She nursed her husband when wounded at the war, and as her reward sought and obtained the exile of Rama, in order that Bharata might succeed.—*D.*

KAI-KHUSRU, whose name was Ghaias-ud-Din, succeeded his father A.D. 1235. He married a daughter of the king of Georgia. During the first difficulties occasioned by the Mongols, with whom he was perpetually at war, he was on the point of concluding a defensive treaty with Baldwin II. of Constantinople, who sent to France for his niece, daughter of Eudes, Lord of Montaigu, to marry her to him. But this affair was not completed, and he formed an alliance with John Ducas Bataze, Baldwin's enemy. He died A.D. 1244.—*Desguigne's Hist. des Huns*, ii. part 2, p. 66.

KAILA. ARAB. A weight of about 12 seers.

KAILASA, in Hindu mythology, the paradise of Siva, but now the name of a mountain near lake Manasarowara. Both Brahmanical and Buddhist cosmogony derive four great rivers of India—the Indus, the Sutlej, the Ganges, and the Sardha—from one holy lake at the foot of Kailas. The Sutlej rises near the sources of the Indus and the Brahmaputra; and the Kailas mountain is thus ascertained by modern investigations to have a real claim to the position which it holds in Sanskrit tradition as the meeting-place of waters. The Brahmaputra, or rather the Tsan-pu, as it is known in Tibet, flows to the east, the Indus to the west, and the Sutlej to the south-west. The Kailas or Gangri range of mountains extends in one unbroken chain from the source of the Indus to the junction of the Shayok, and forms the natural boundary between Ladakh, Balti, and Rongdo on the south, and Ruthog, Nubra, Shigar, and Hunzanager on the north. It has six passes, at heights from 15,000 to 18,105 feet. Gangri, in Tibetan, means ice mountain. Kailas means crystalline or icy, and is derived from Kelas, crystal, which is itself a compound of Ke, water, and Las, to shine. The Kailas or ice mountain is N. of Lake Manasa. It is the Coelus of the Latins; is the Indian Olympus, the abode of Siva and the celestials. The Tibetans look upon Ti-se or the Kailas peak as the highest mountain in the world. It is also called Gana-parvata; also Rajatadri, silver mountain.

KAILAS TEMPLE at Ellora is a great monolithic temple isolated from the mass of rock, and carved outside as well as in. It stands in a great court averaging 154 feet wide by 276 long at the level of the base, entirely cut out of the solid rock, and with a scarp 107 feet high at the back. In front of this court a curtain has been left, carved on the outside with the monstrous forms of Siva and Vishnu.—*Imp. Gaz.* See Kal.

KAILWA, a small territory in Rajputana, famed in Rajput story. When Salumbra of Chitore fell at the gate of the sun, the command devolved on Putta of Kailwa. He was only sixteen. His father had fallen in the last shock, and his mother had survived but to rear this, the sole, heir of their house. Like the Spartan mother of old, she commanded him to put on the saffron robe, and to die for Chitore; but, surpassing the Grecian dame, she illustrated her precept by example, and, lest any soft compunctious visitings for one dearer than herself might dim the lustre of Kailwa, she armed the young bride with a lance, with her descended the rock, and the defenders of Chitore saw her fall fighting by the side of her Amazonian mother. The Rajputs had maintained a protracted defence, but had no thoughts of surrender, when a ball struck Jeimul, who took the lead on the fall of the king of Mewar. He saw there was no ultimate hope of salvation, the northern defences being entirely destroyed, and he resolved to signalize the end of his career. The fatal Johar was commanded, while 8000 Rajputs ate the last beera together, and put on their saffron robes; the gates were thrown open, the work of destruction commenced, and few survived to stain the yellow mantle by inglorious surrender. Akbar entered Chitore, and 30,000 of its inhabitants became victims to his thirst of conquest. All the heads of clans, both home and foreign, fell, and 1700 of the immediate kin of the prince sealed their duty to their country with their lives. The Tuar chief of Gwalior appears to have been the only one of note who was reserved for another day of glory. Nine queens, five princesses (their daughters), with two infant sons, and the families of all the chieftains not at their estates, perished in the flames or in the assault of this ever memorable day. Their divinity had indeed deserted them; for it was on Aditwar, the day of the sun, he shed for the last time a ray of glory on Chitore. The rock of their strength was despoiled, the temples and palaces dilapidated; and, to complete her humiliation and his triumph, Akbar bereft her of all the symbols of regality.—*Tod, Rajasthan.*

KAIMAL. MAL. Amongst the Nair a title of rank, and used by the inferior classes when addressing them.—*Wils.*

KAIM-MAKAM. ARAB. An occupant for the time being, a successor. At Mecca, equivalent to mehmandar of Persia.—*Hamilton's Senai.*

KAIM SALAMI. HIND. A fixed quit-rent in the Bombay Presidency.

KAIMUR, a sect of freethinkers of Persia who deny everything they cannot prove.—*Chesney.*

KAIMUR, the eastern but detached portions of the Vindhyan range, commencing near Katangi in the Jabalpur (Jubbulpur) district of the Central Provinces, and running through the state of Rewah and Shahabad district of Bengal. It contains a deposit of rich vegetable mould in the centre, producing the finest crops. The formation is primitive sandstone, intermixed with schistose limestone. The Kaimur ranges commence in lat. 24° 31′ 30″ N., and long. 83° 24′ E., within the Central Provinces, and occupy more or less continuously the great hilly area which extends from that point to lat. 25° N., and long. 84° 3′ 30″ E., within the Lieutenant-Governorship of Bengal.—*Imp. Gaz.*

KAINCH. HIND. Ornamental cloth, worn by wrestlers.

KAIN KAPALA. JAV. A head-dress cloth, tied round the head like a turband. The Javanese never appear bare-headed.

KAIOA ISLAND is subject to Ternate. Eclectus grandis, the great red parrot, occurs here. The Kaioa people are a mixed race, having Malay and Papuan affinities, and are allied to the peoples of Ternate and of Gilolo. Their language is quite distinct from, though somewhat resembling that of, the surrounding islands. They are now Muhammadans.—*Wall.* ii. p. 12.

KAI PADARU, in Canara, predial slaves, a subdivision of the Dher or Pariah race.—*Wilson.*

KAIRA, a town in Gujerat, in lat. 22° 44′ 30″ N., and long. 72° 44′ 30″ E. It gives its name to a revenue district, which has the Mahi and Sabarmati as parts of its boundary, with population, in 1872, 782,733. The Kumbi of certain villages are held in honour, as descended from the leading men among the original settlers in Gujerat. Koli number 281,252. During the thirty years 1846–76, they increased from 175,829 to 281,252. Idle and turbulent under native rule, they are now quiet, hard-working, and prosperous. They formerly lived in comfort by weaving coarse cotton cloth, but the competition of the Bombay and local steam mills is now shutting them out of the market. At Lasundra, about 24 miles from the Nariad railway station, springs of hot water rise to the surface in ten or twelve cisterns, the hottest having a temperature of 115° Fahr. The water, slightly sulphurous, is used in skin diseases.

KAIRIN, a quality latent in coal tar which resembles that of quinine; likely to prove a blessing to mankind should further experience confirm the result attained by careful experiments up to present time.

KAIRWAN, in the north of Africa, near Tunis, is a city rendered sacred to the Muhammadans from containing the tomb of Syud Abdullah, one of the companions of Mahomed. After the death of Mahomed, Syud Abdullah came to Kairwan, where he died. He was accustomed to wear a lock of Mahomed's hair over his breast. They style him Sidi us Sahib un Nabbi, the lord companion of the prophet. Kairwan rose on the ruins of the Roman Vicus Augusti. It is a place of pilgrimage, and the bodies of the dead are sent from a distance to be interred near.

KAIS or Kish, a legendary ancestor of the Afghan race. They say he was one of Mahomed's early disciples. Kais had the new name of Abd-u-Rashid given to him by Mahomed, with the title of Pathan, Guide, or Rudder. The race, however, claim to be Ban-i-Israel, who were carried into captivity from Palestine to Media by Nebuchadnezzar, subsequently emigrated to Ghor, and finally spread over their present lands. They are known as the Batan, Ghorghasht, Saraband, and Sarabar. Saraband or Sarabar is said to be a change from the term Surya-vansa.—*Bellew.*

KAISAR has been a title for emperor from ancient times, and seems to have been adopted by the rulers in Western Asia from the Cæsars of Rome. Amongst European nations, it is used at present for the German emperor, and Kaisar-i-Rum is a designation in Persia and India of the emperor of Turkey. When Queen Victoria assumed the title of Empress of India, it was rendered as Kaisar-i-Hind. The plural is Kaisarit. Freytag's Dictionary (iii. 453a) gives Cæsar Imperator Græcorum as the meaning. Jones' Persian Grammar (p. 106, ed. of 1809) has a couplet—

پرده داري ميكند در قصر قيصر عنكبوت
بومي نوبت ميزند بر گنبد افراسياب

'Pardahdari mi-kūnad dar kasr i kaisar ankibūt;
Bumi naobat mi-zanad bar gumbaz i Afrasiab.'

'The spider weaves its web in the palace of Cæsar,
The owl stands sentinel on the watch-tower of Afrasiab.'

The troops who embarked at Bombay for Malta shouted 'Victoria Maharani ki Jye,' and did not use the title 'Kaisar-i-Hind.' In Northern India, 'Victoria Maharani ki Jye,' Victory for the great Queen Victoria, is a familiar expression. The war-cry of the Madras soldiery, 'Deen! Deen! Deen! for the faith! for the faith! for the faith!' is suited to their less demonstrative character, and for the several nationalities to which they belong,—Muhammadan, Tamil, Teling, Mahratta, Canarese, Christian, and non-Aryan races.

KAISHAKU, amongst the Japanese, the friend who decapitates the victim in the Hara Kiri.

KAISHK. PERS. The Kurut or Koorut of the Afghans and Turkomans.

KAISI GHAT, a ghat where Krishna, while yet a mere boy, slew Kaisi, a devata of gigantic strength, sent by Kansa to take away his life. The anniversary of that exploit is still observed with great festivities.—*Tr. of Hind.* ii. p. 60.

KAITANGATA. MAORI. Man-eater.

KAIVARTTA, a fisherman, also pronounced Kaivart or Kaibart or Kaibartha.

KAJAL. HIND. Lamp-black, used by women for their eyelids.

KAJANG. MALAY. The leaf of the Nipa fruticans, written Cadjan by Europeans in India.

KAJAR, the tribe to which the reigning family of Persia belong. They are one of the seven Turkish tribes which supported Shah Ismail, one of the first kings of the Suffavi dynasty, about A.D. 1500, when he raised the sect of the Shiah to importance, and made their belief the national religion of Persia. Shiah means sect in Persian, and the name given them as a reproach he took as a title. The Kajar have been distinguished during several generations among the tribes of Masandaran, the ancient Hyrcania. But they have not been traced farther back than A.H. 906, A.D. 1500, when Piri Beg, Kajar, is mentioned in a MS. Mr. Foster says the Kajar are an extensive tribe, chiefly residing in Masandaran and Astrabad; and that the word in the provincial language signifies rebel or deserter. Like the Rajputs of India, they devote themselves principally to the profession of arms.

The greater number of the ancestors of Shah Ismail had been Sufis or philosophical deists, and Malcolm supposes that he raised the sect of Ali because he thought it necessary that the holy raptures in which the devotional men of his time and family indulged, should have some object more comprehensible to the mass of his countrymen than the abstract contemplation of the deity. The names of the other Turkish tribes who supported Shah Ismail were Oostajālu, Shamlu, Nikallu, Baharlu, Zulkudder, and Affshār. Aga Muhammad Khan, 1794, was the first monarch of the Kajar dynasty, and at that time the tribe were principally settled in the neighbourhood of Astra-

ad, where they still remain. He was the son of a petty chieftain, who had been expelled from his state by Nadir Shah. In his youth he had fallen into the hands of a nephew of Nadir, who made him a eunuch. He was avaricious, revengeful, and loved power. In 1797 he was succeeded by his nephew Futteh Ali, in whose reign Persia had two disastrous wars with Russia, which gained the frontier of the Araxes and some territory beyond its mouth. But Persia reconquered Khorasan from the Uzbaks and Afghans. He died in 1834, and was succeeded by his grandson Muhammad Shah, and he again, in 1848, by Nasr-ud-Din.

Colonel MacGregor says the Kajar were brought from Syria by Timur, A.H. 803, and rapidly increased, that they are divided into the sections Yokaribash and Ashagabash, who have each six clans. The Ziadoglu Kajar division of the Kajar were settled at Ganja in Russian Armenia, and remain there still. The Azdanlu section were removed to Merv in the reign of Shah Tamasp I., and held it until conquered by and nearly annihilated by the Uzbak under the Khan of Bokhara. - *MacGregor*, iv. p. 609; *Ferrier's Journeys; Malcolm's Persia; Tarikh Alam Arai; Ouseley's Travels; Foster's Travels; Chatfield's Hindustan.*

KAJARI. MAHR. A caste amongst the Mahrattas who make glass bracelets.

KAJAWAH. HIND. Boxes, panniers, cradles, formed of wooden frames, covered with cloth or leather, from 3½ to 4 feet long by 4 feet high, in which those who travel upon camels or mules are seated. They are partially open in front, and when fitted up with bedding make a conveyance by no means contemptible in a cold night, for those who can sit for many hours together in the Asiatic fashion, with their legs doubled or crossed under them. The traveller becomes soon accustomed to the measured motion of a camel's pace, and thus can enjoy both warmth and sleep, blessings most enviable during the long and wearisome nights of a winter's journey, and of which those who travel on horseback are totally deprived. Each camel carries two of these baskets or cradles, which are hung like panniers one on each side. They are largely used in Balkh by travellers and by Sindian ladies. Mr. Rich says that in a journey to Kurdistan the kajawah for Mrs. Rich's servants were slung on mules.

KAKAR, a tribe widely spread throughout Afghanistan, but their country is in the extreme S.E. corner of Afghanistan, west of the Sulaiman range, and bordering on the Kasrani and Bozdar Baluch, to near the head of the Bolan defile. They claim descent from Sharif-ud-Din, son of Sharaband, eldest son of Keysh, whom Mahomed himself converted. (See Kais.) The Gakkar, a branch of them, are located on the banks of the Jhelum in Kashmir. The whole of the asafœtida trade of Herat is in the hands of the Kakar, who annually send 5000 or 6000 people to collect it. Their subdivisions are — the Jalazai of Kaisar and Bori, 2000 fighting men; the Musa Khel of Sarai, 3000 men; the Kudizai of Darz-i-Karez, 2000; Abdulzai of Mayana, 2000; Kabezai of Tabezai, 1000; Hamzazai of Shahrang, 1100; the Utman Khel, the Khadarazai of Maskat, the Shabozai, Temzai, and Alizai, each 200 fighting men. Small numbers are at Ranizai, also near Kandahar, Ghor, Shall valley.

There are some in the Azimgarh district, and Kakar were in small bodies in the Ceded Districts so late as the year 1845, but by the year 1863 they had disappeared, probably merged into the general population. They were remnants of Pindara marauders, and had little ponies on which they brought grass for sale; they also were carriers, and traded in horses; they were a very dark-complexioned race; they professed Muhammadanism, spoke a Hindi language, which they called Lahaura-ha-Noche, and were under the leadership of a Rissaldar. — *MacGregor; Elphinstone*, p. 452; *Sherring's Tribes*, p. 239.

KAKHETIA, in lat. 40° 50′ to 42° 15′ N., and long. 44° 55′ to 47° E., a district of Georgia. The people are Georgians, Armenians, Tartars, Jalal, and Siknak, and are brave.—*MacGregor.*

KAKHYEN call themselves Ching-pa or Sheng-pa, men. They occupy both banks of the Irawadi, from Bhamo upwards. Each clan is ruled by a hereditary chief called Tsawbwa. The men are hunters. They capture men, women, and children, whom they keep as slaves. The men range from 5 to 5½ feet, and women 4 to 4½ feet in height, with short limbs. They never wash, and the clothes once put on are never changed. Combs are never used. The men smoke opium, but not to excess. The women do all the field and other work, weave and spin. They all drink a beer called Sheroo, from fermented rice. Chastity is not regarded in unmarried, but adultery in the married state is death. The brides are purchased by the bridegrooms. The dead are buried. The race is quarrelsome and revengeful, but not brave. They are a branch of the vast horde of Singpho, who inhabit the mountainous districts of Northern Assam, and stretch round the N. of Burma into Western China. Intermixed with Ka-Ku and other kindred tribes, and the Shans, they extend not only all along the northern frontier of Burma, but occupy large portions of the hilly tracts of both sides of the Irawadi river as far south as Tagoung. Kakhyen are barbarians.— *Fytche*, ii. p. 100; *Mason's Burma*, pp. 97, 641; *Yule*, p. 146.

KAKKOLA, also Kakkoloka. SANSK., TEL. A perfume obtained from a berry. It is oval, with a thick, green, sebaceous, fragrant integument, which dries and shrinks with age, becoming a thin, greyish epidermis. Within this is an aromatic kernel, abounding with a resin which is inflammable, slightly soluble in water, and more so in alcohol. The Kakkola is an esteemed drug, being described in the Raja Nightantu and Bhava Prakasa as pungent, bitter, and carminative.

The Kakkola drug is so called from its colour, which is black like that of the crow. The Hindus enumerate in their medical works a class of eight substances, which they denominate the Ashta varga, or class of eight; they are all roots, and appear to come chiefly from Nepal and the countries skirting the Himalaya. They may be employed either singly or collectively, and are described as cool, sweet, fattening, and aphrodisiac; promotive of digestion, sanative, lactiferous, and tonic. They are further said to possess great efficacy in urinary and phthisical affections, and in removing the sequelæ of fevers. Their names are —Jivaka, Pisanabha, Meda, Mahameda, Kakkola, Kshira kakkola, Riddhi, and Vriddhi. The substance amongst these termed Kakkola is generally

connected with the Kshira kakkola, and these two drugs are procured from Morung and the adjacent districts. Kshira kakkola resembles the root of the Pivari (Asparagus racemosus), and is of a white colour, a fragrant smell, and full of milky sap. The Kakkola is of similar form and character, but of a dark hue. They are both sweet and cooling, they remove fever, and correct a vitiated state of the blood and bile; the root of the Vidari (Batatas paniculatus) and the Aswagandah (Physalis flexuosa) are severally substitutes for the Kakkola and Kshira kakkola.—*Wilson, As. Res.* xiii. p. 411; *Elliot, Fl. Andh.*

KAKO MATI. Gr. Evil eye.

KAKOOL, tufts of hair left on both sides of the head, the middle part being shaved from the forehead to the neck.

KAKORI, a town in Oudh, 9 miles west of Lucknow city. It contains the tombs of several Muhammadan saints, and is the birthplace of distinguished Musalmans, who have served under both the native and British Governments.—*Imp. Gaz.* v.

KAKSHIVAT, a Hindu poet, who was of the race of Pajra. He married ten daughters of raja Swanaya, on the banks of the river Indus. His hymns are found in the first and ninth mandala of the Rig Veda. He is said to have been a Kshatriya. Professor Lassen is of opinion that his father, Dirgha-Tamas, was one of the earliest Brahman missionaries in the southern parts of Bengal, among the Anga and Kalinga.

KAKU-BANS, the great hollow female bamboo.

KA-KUI and Ka-kua tribes are occupants of both sides of the Mei-kong. A tribe of wild Ka-kui dwell on the Man-lo-ho river, in lat. 22° 20′ N., a tributary of, and flowing from the west to, the Mei-kong river. They have the Lilun and and Kak-bal on the east.

KAKUPUR, 10 miles N.W. of Bithur, and the intervening land is called the 'five cos circuit of Utpalaranya.' The ruined mound of Kakupur is said to be the remains of a fort named Chhatrpur, which was founded by raja Chhatr Pal Chandel about the 10th century A.D. Kakupur possesses a temple dedicated to the Kshireswara Mahadeva, and one to Aswatthāma, son of Drona, near which a large annual fair is held.—*Cunningham's Ancient Geog. of India*, p. 386.

KAKUR. Hind. The rib-faced or barking deer, Styloceros muntjac, generally distributed over the lower and cultivated tracts of the Himalaya, being seldom met with at elevations exceeding from 8000 to 9000 feet above the level of the sea. The prevailing colour is a reddish-brown above, white underneath, inclining to ash on the inside of the legs of males, which have two short canine teeth in the upper jaw resembling those of the musk deer, but not so long.—*Adams; Jerdon.*

KAKUSANDA, the third Buddha previous to Gautama.—*Hardy's East. Monach.* p. 437.

KAL. Sansk. Time, age.

15 nimsha	= 1 kashta.	12 kshana	= 1 muhurtta.
30 kashta	= 1 kala.	30 muhurtta	= 1 day and night.
30 kala	= 1 kshana.		

Kal, as time, in the Kailasa temple at Ellora, is represented as a grinning skeleton, with cobra girdle and necklace, seated on two dying men, a wolf gnawing the leg of one, while behind him is Kali and another skeleton.

KALA, from Kal, Sansk., time in general, or any particular time or season; death, destiny. In the Atharva Veda, Kala, time, is addressed as the source and ruler of all things. Kala and Maha Kala are names of Siva. Kala-Bhairava, from Kala, time, and Bhairava, the terrific. Kala-Sutra, from Kala, time, and Sutra, a thread. Kala-Sa, gradation or manifestation of the Mula Prakriti.—*D.*

KALA, in Burma, is a term applied to a native of India, but more extensively to any western foreigner, such as an Arab or a European. Sir A. Phayre supposed it to have been derived from a name given to the aboriginal races of India, which is still traceable in the scattered tribes of Kol, Koli, etc.

KALABAGH, in lat. 32° 57′ N., and long. 71° 35′ E., in the Panjab. The mean height of the town, 790 feet above the sea; Kalabagh peak, above 2357 feet. The Indus is here compressed by mountains into a deep channel 350 yards broad. The mountains on each side have an abrupt descent into the river, and a road is cut along their base for upwards of two miles. The first part of this pass is actually overhung by the town of Kalabagh, which is built in a singular manner upon the face of the hill, every street rising above its neighbour. The Hon. Mountstuart Elphinstone found the road cut out of solid salt, at the foot of cliffs of that mineral, in some places more than 100 feet high above the river. The town is picturesquely situated at the foot of the Salt Range, on the right bank of the Indus, at the point where the river debouches from the hills, 105 miles below Attock. The houses nestle against the side of a precipitous hill of solid rock-salt, piled one upon another in successive tiers, the roof of each tier forming the street which passes in front of the row immediately above. Overhead, a cliff, also of pure rock-salt, towers above the town. An Awan family, who reside in Kalabagh, have a certain supremacy over the whole of their fellow-tribesmen, the representative of the family being known as Sirdar or Khan. The salt is quarried at Mari, opposite the town, where it stands out in huge cliffs, practically inexhaustible. The similar outcrop at Kalabagh itself is not quarried. The quantity turned out in 1871–72 amounted to about 2717 tons, and the revenue to £23,284. Alum shale also occurs in the neighbouring hills.—*Imp. Gaz.*

KALABATUN. Hind. Gold wire and silver wire for making gold and silver thread and tinsel. The silver is called 'safaid' Kalabatun, and the gold 'surkh' Kalabatun. Also, gold and silver thread made by twisting the fine-drawn wire on to red and white silk, according to the metal.

KALADGI, lat. 16° 12′ 9″ N., and long. 75° 29′ 9″ E., a town in the Dekhan. The Dak bungalow is 1744 feet above the sea, and the level of the Gatparba is 1653 feet. The rocks of the neighbourhood are stratified clayslate. Owing to its uncertain rainfall, Kaladgi district is very subject to failure of crops, and consequent scarcity of grain. In 1818–19 a failure of rain caused great distress. Other years of drought and scarcity were 1824–25, 1832–33, 1853–54, 1863–64, 1866–67, and in 1876–77 the failure of rain was more complete and general in Kaladgi than in any other part of the Bombay Presidency.—*Imp. Gaz.*

KALAGOUK, or Curlew Island, an island

pleasantly situated at the mouth of the Moulmein river.

KALAH or Killah. ARAB. A castle, a fortress. Kala-Jabar or Hasn-Jabar, near the Euphrates, the Ezion-geber of the Bible (1 Kings ix. 26, 27). Kalat-ar-Rum, on the Euphrates, south of Edessa. Kalat-ul-Mudik occupies the site of Apameia. Asshur or Assur was originally the name of a city on the banks of the Tigris, the ruins of which are now known as Kalah Sherghat. The name was of Accadian derivation, and signified 'waterbank.' Babylonia was an older kingdom than Assyria, which took its name from the city of Assur, now Kalah Sherghat, the original capital of the country. It was divided into two halves, Accad (Genesis x. 10) being Northern Babylonia, and Sumir, the Shinar of the Old Testament, Southern Babylonia. The primitive populations of both Sumir and Accad were related not to the Semitic race, but to the tribes which continued to maintain themselves in the mountains of Elam down to a late day. They spoke two cognate dialects, which were agglutinative in character, like the languages of the modern Turks and Fins; that is to say, the relations of grammar were expressed by coupling words together, each of which retained an independent meaning of its own. At an early date the Sumirians and Accadians were overrun and conquered by the Semitic Babylonians of later history, Accad being apparently the first half of the country to fall. It is possible that Casdim, the Hebrew word translated Chaldees or Chaldæans, is the Babylonian casidi or conquerors, a title which continued to cling to them in consequence of their conquest. The Accadians had been the inventors of the pictorial hieroglyphics which afterwards developed into the cuneiform or wedge-shaped system of writing.—*Sayce; Fresh Light*, p. 24.

KALAHASTÍ, Kalastri, or Calastri, a town in the North Arcot district, Madras, situated in lat. 13° 45′ 2″ N., and long. 79° 44′ 49″ E., on the right bank of the Suvarnamukki. It gives its name to a zamindari estate, situated partly in North Arcot and partly in Nellore district, one of the largest estates in the Karnatic. Population (1871), 231,527; number of villages, 784; number of houses, 41,551; area, 1127 square miles; peshkash (rent) to Government, £19,000. The revenues of the zamindar are estimated at between £40,000 and £50,000 per annum. The country is in a great measure covered with scrub jungle, from which Madras city is supplied with firewood. —*Imp. Gaz.*

KALAHUNDI is bounded on the north by the Patna State, on the east by the Jeypore State and the Vizagapatam district, on the south by Jeypore, and on the west by Bindra, Nawagarh, and Khariar. The country is high, lying behind the Eastern Ghats, and the soil is fertile and easily worked, yielding heavy crops of almost every description. Villages are numerous but small, and the means of communication are limited; and though the people appear to be well off, the population is thinly distributed. According to the census of 1872, the population numbered 133,483, of whom 72,986 were Hindus, while the remainder mostly belonged to the Khond, who seldom remain long in one place, and the greater part of whom pay nothing to Government, and have but little intercourse with its officers. Both the Khond and the Kolita maintain themselves by agriculture, the former being an aboriginal and the latter a semi-aboriginal tribe. The Kolita, an industrious, hard-working race, have gradually spread themselves over almost every district in the eastern provinces of Central India, and have ousted the Khond out of many of their villages, and this quiet aggression has caused an ill-feeling that has at times broken out in a serious form.

KALAIGAR. HIND. A tinsmith; one who tins copper cooking utensils.

KALAKKAR. TAM. A low caste, the same as the Paleyar, hunters and fowlers.

KALAL or Kalar. HIND. A distiller, a vendor of spirituous liquors, a palm-wine drawer.

KALAM. ARAB., HIND., PERS. A pen, a reed pen, the Roman calamus. Kalam-dan, a pen-and-ink stand. Kalam-band, reduced to writing. Kalam-kari, painting.

KALAM. Arabs divide their spoken and even written language into two orders, the Kalam Wati, or vulgar tongue, sometimes employed in epistolary correspondence; and the Nahwi, a grammatical and classical language. Every man of education uses the former, and can use the latter. And the Koran is no more a model of Arabic, as it is often assumed to be, than Paradise Lost is of English. Kalam is the Word. Animus, in Latin, is the breath of life breathed into man's nostrils, is the Ruah of the Hebrews, the Ruh of Arabia, and among the Greeks and Romans, Animus, Anima, and Spiritus. In their designation of the various prophets, Muhammadans style Moses, Kalām-Allah, the word of God; Abraham, the Kalil-Allah, friend of God; and Jesus Christ is the Ruh-Allah, the Spirit of God. Kalām-Allah, the word of God, is the Koran.—*Burton's Mecca.*

KALAMAH. ARAB. The Muhammadan creed, consisting of five sections,—Taib, Shahadat, Tamhid, Tauhid, and Rad-i-Kufr. The Taib is their La-illaha-il-Ullaho-Mahomed ur-Rasul Ullah, There is no deity but God, and Mahomed is the prophet of God. The Shahadat is, I testify there is no deity but God alone, without companion; and I testify that Mahomed is his servant and prophet, etc. The Kalamah is not found in the Koran.

The words in Arabic are—

لا الٰہ الا اللہ محمد رسول اللہ۔

اول کلمۂ طیب

لا الٰہ الا اللہ ۔ رسول اللہ۔

دویم کلمۂ شہادت

اشہد ان لا الٰہ الا اللہ وحدہ لا شریک

لہ واشہد ان محمدا عبدہ ورسولہ۔

سیوم کلمۂ تمجید

سُبْحَانَ اللّٰهِ وَالْحَمْدُ لِلّٰهِ وَلَا اِلٰهَ اِلَّا اللّٰهُ

وَاللّٰهُ اَكْبَرُ وَلَا حَوْلَ وَلَا قُوَّتَ اِلَّا بِاللّٰهِ

الْعَلِيِّ الْعَظِيمِ -

چہارم کلمۂ توحید

اَشْهَدُ اَنْ لَا اِلٰهَ اِلَّا اللّٰهُ وَحْدَهُ لَا شَرِيكَ

لَهُ لَهُ الْمُلْكُ وَلَهُ الْحَمْدُ يُحْيِي وَيُمِيتُ

وَهُوَ حَيٌّ دَائِمٌ قَائِمٌ قَادِرٌ قَاهِرٌ لَا يَمُوتُ

اَبَدًا اَبَدًا ذُو الْجَلَالِ وَالْاِكْرَامِ بِيَدِهِ

الْخَيْرُ وَهُوَ عَلٰى كُلِّ شَيْءٍ قَدِيرٌ -

پنجم کلمۂ رد کفر

اَللّٰهُمَّ اِنِّي اَعُوذُ بِكَ مِنْ اَنْ اُشْرِكَ

بِكَ شَيْئًا وَاَنَا اَعْلَمُ بِهِ وَاَسْتَغْفِرُكَ لِمَا لَا

اَعْلَمُ بِهِ تُبْتُ عَنْهُ وَاَنَا بَرِيءٌ عَنْ كُلِّ دِينٍ

سِوٰى دِينِ الْاِسْلَامِ وَرَبِّ الْعٰلَمِينَ

اَلْاِسْلَامُ وَاَسْلَمْتُ وَاَقُولُ لَا اِلٰهَ اِلَّا اللّٰهُ

مُحَمَّدٌ رَسُولُ اللّٰهِ

KALAMEKAM, a Tamil poet, supposed to have lived about the 15th century. His real name is not known. He was called Kalamekam, 'the hail-pouring cloud,' from his severe satires upon those who did not, in his opinion, adequately reward his poetry. His conceit was excessive. He declared his ability to write an epic poem in a couplé of days, and other compositions in proportionately less periods. His poetical remains consist of some short poems, the principal of which is a series of verses capable of twofold meaning.

KALANANAS or Kalyana, a Brahman who accompanied Alexander, but, repenting of having left home, he burned himself at Pasargada.—*D.*

KALANDAR, a sect of the Kadiri fakir or darvesh. A kalandar is defined to be a Sufi who has no murshid or religious teacher, but works out his salvation by himself. The orthodox Sufi sect blame the order, but cannot help owning that it has produced some very distinguished saints. The kalandar does not, however, refuse to take murid or followers.—*Burton's Scinde.*

KALA NEMI, uncle of Ravana, who undertook to kill Hanuman for half the kingdom of Ravana. But Hanuman discovered his worthlessness, took him up and whirled him through the air to Lanka, while he was meditating on the offered reward, which he imagined he had won.

KALANG, a people who resided among the inhabitants of the Tengger mountains, said to have been at one time numerous in various parts of Java, leading a wandering life, practising religious rites different from those of the great body of the people, and avoiding intercourse with them; but most of them embraced the Muhammadan faith.—*Raffles' Java*, i. p. 329.

KALANG or Coolen, Hind., is the common European crane, Grus cinerea, now a most rare bird in England, but still breeding somewhat plentifully in Scandinavia, and a winter visitant in large flocks in many parts of India. See Crane.

KALA-NIMAK. Hind. An artificial black salt, made by pounding together five seers of saji khar, two seers of dried anola fruit, and one maund of common salt, adding water, and boiling for some time. Is considered to promote digestion; is much eaten; used in many mesalih. Nimak manyari and Nimak nali are medicinal substances.—*Gen. Med. Top.* 144. See Bit-laban.

KALANJAR, a hill fort in Bundelkhand.

KALANJARA, a fabulous mountain north of Mount Meru.

KALANWAL. Hind. Musician who plays on the tambura.

KALA-PANI. Hind. The deep sea; also any perennial stream. It is the name of a river which falls into the Brahmaputra beyond Meyong, and of a river in the Pandua Hills.—*As. Res.* xvii. pp. 502–505.

KALAPASIKA and Dandapasika, in ancient Hindu times officers of justice; the bearers of the noose of death and of punishment.—*Hind. Theat.* ii. p. 167.

KALA-PATTA. Hind. The Jhareja princes, in making patta or grants, appear never to have had an idea of claiming any reversionary interest; there are no distinctions, as in Mewar, of Kalapatta or Chor-Utar estates, that is, those for life, or resumable at pleasure, of which there was in Mewar a large class. A great moral crime is the sole corrective of this political error; and it was to prevent the destruction of families by following the supreme law of sub-infeudation that the first law of nature and of God is violated, infanticide not being confined to female victims. Mr. Elphinstone, in his report on Cutch, confirmed this, adding that it accounts for the number of single heirs-male in families.—*Tod's Travels*, p. 488.

KALA-PRIYA-NATH is a Hindu deity not known to the pandits of the present day.

Malanka takes no notice of the name. Jagaddhara is content to say it is that of a divinity worshipped in that country. In the Varaha Purana, Kala-Priya is said to be a form of the sun worshipped to the south of the Yamuna; and Kala-Priya-Nath, his lord or god, implies a linga, the construction of which is attributed to the sun. The more usual word in these compounds is Iswara, as Someswara, Rameswara, Visweswara, etc.; but Nath is the term more especially employed by a particular sect, that of the Yogi or Pasupata, the oldest sect probably now existing amongst the Hindus, and with whose tenets and practices Bhava Bhuti appears to have been thoroughly acquainted.—*Hind. Th.* ii. p. 10.

KALAR. SINGH. Saline soil.

KALASA. HIND. A water jar. On the first night of the Dasahara festival at Parvati, a kalasa or water jar is cleansed and consecrated by the officiating Brahmans—this vessel being considered as a symbol of the goddess—for the principal object of worship during the Dasahara, and bears three curious signs, according to the three principal castes of Brahmans; these are hieroglyphic figures, denoting the character and attributes of Durga, and so truly are their forms Egyptian that many learned writers have engaged, from their coincidence, to prove the identity of the Hindu ceremonies of the Dasahara with those which celebrate the inundations of the Nile. Kalasi puja is the placing a water jar in a chamber as a type of, or receptacle for, Durga or other Hindu divinity, and worshipping it. Kalasisthapana, setting up a water jar as an object of worship, a part of the Hindu marriage ceremony, in which offerings are made to the planets in different vessels.—*Postans' Western India*, ii. 165, 166; *W.*

KALA SANKALITA, memoirs on the eras of S. India, collected by Colonel John de Warren, Madrás 1825. See Yojana.

KALASI, an ornamental top of a wall or building.

KALA-SUTRA. MAHR. A puppet showman, a rope dancer, juggler, musician, dancer, athlete.

KALAT or Khelat, chief town of the territories of the khan of Khelat in Baluchistan; situated on the northern spur of a limestone hill, called the Shah Mirdan; lat. 28° 53′ N., and long. 66° 28′ E. It is about 6800 feet above sea-level. The suburbs of Khelat, one on the west and the other on the east side, are extensive, and the Babi portion of the community reside there. The town of Khelat is inhabited by Brahui, Hindus, Dehwar, and Babi.. The Brahui form the great bulk of the inhabitants, but the cultivation is chiefly carried on by the Dehwar communities. See Baluchistan.

KALAT-i-GHILZAI, a fort in Afghanistan, on the right bank of the Tarnak river, 144 miles from Ghazni, 89 miles from Kandahar, and 229 miles from Kābul. It was occupied by a British detachment in November 1841, and on the 20th May 1842 they successfuly repulsed an attack of the Ghilzai, estimated at 5500 strong. Only two small villages are near it. The Tokhi clan of the Turan branch of the Ghilzai are the chief occupants of Kalat-i-Ghilzai. They number 12,000 families.—*MacGregor*, pp. 485, 486, 713.

KALAWANT. HIND. A professional musician and singer. Kalawantin, the female.

KALA YAVANA, a king from the far west who aided Jarasandha in his successful attack on Mathura. His soul is supposed to have animated Aurangzeb.—*Growse*, p. 621.

KALDANI. The Kaldani people, according to their own account, were converted to Christianity by St. Thomas and two of the seventy disciples. By means of a rigidly enforced system of exclusion, they have preserved their freedom as a republic; their religious tenets and simple liturgy have also remained nearly unchanged since the gospel was introduced into their secluded valleys. These Kaldi or Chaldæans are a Christian sect dwelling in the Hakkari district of Kurdistan. Every village has a priest and simple church, and both men and women assemble every Sunday to worship and take the sacrament. Fasts are frequent, and the priests do not take meat. Constantly prepared for or engaged in war, they are ferocious towards their enemies, and even towards peaceable strangers. They have been confounded with the Nestorians. The Kaldani country stretches eastward of the district of Amadiyah, between Lake Van and the Taurus. In the interior are terraces cultivated with rice or other grains, with a succession of deep, dark, wooded valleys, between the high and rugged alpine ranges of Julamerik, the Jawur Tagh, and other chains, which rise to the uplands, situated beyond the backbone of Kurdistan.—*MacGregor.*

KALESAR, the finest submontane forest tract in the Eastern Panjab Himalaya, is the remnant of a once far more extensive tract of sal at Kalesar, in the Ambala district. The forest is on the extreme north-east corner of the district, in a fork of the Siwalik Hills, on the right bank of the Jumna, opposite the Khara head of the Eastern Jumna Canal, and about three miles above the head of the Western Jumna Canal at Haturkhund.

KALGHA. HIND. A crest, a plume, a crest of feathers, an aigrette. Khod, crest for a helmet. Kalghi plumes are made of the black feather of a kind of heron called onkar, peculiar to Kashmir, also of the monal. The royal plume of three feathers is of Moghul origin. The Moghul emperors of India, when they took the field, wore a plume of three black feathers as a symbol of command.

KALHANA, a pandit, who lived about A.D. 1148, author of the Raja Tarangini, a history of Kashmir.—*D.*

KALHORA, a dynasty of Sind, whose rule first began about A.D. 1740. The aristocracy of Sind, as in most oriental lands, was purely one of rank conferred by office, and in Sind consisted either of Sindi or of Jat.

The *Kalhora* and Talpur tribes furnished the last dynasties, and though the one deduced its origin from the Abbassides of Persia, and the other advanced pretensions to descent from the prophet, both were alike Baluch.

Yar Muhammad, Kalhora, assisted by the Rind Baluch, overthrew the Puar Rajputs, who held dominion in Sind. He directed that a number of clubs should be suspended in front of his tomb, as a memorial of the ease with which the conquest was effected. The clubs were still hanging in 1847 in front of his tomb at Khodabad.

The *Talpur* have their name from the town (poora) of palms (tal or tar), and are said to amount to one-fourth of the population of Lohri

or Little Sind, which misnomer they affixed to the dominion of Hyderabad. There are none of the Talpur in the t'hul, They emigrated from Chot to Sind about A.D. 1760, and, after attaining power, ruled from A.D. 1799 to 1843, when they were overthrown by the British. The family have four principal branches,—the Shahwani, the Shahadani, the Khanani, and the Munikhani. A minor branch is the Jumidani. The Talpur are of the Shiah sect, and claim to be Syuds.—*Burton's Scinde*, p. 235. See Kalora.

KALI. In Hindu cosmogony, the last and worst of the four ages of the world,—Krita or Satya, Dwapara, Treta, and Kali, which make a Maha Yoga, or great age. The Kali Yoga is the present age of the world, and is supposed to have begun on Friday the 18th February, B.C. 3102. It is to last 432,000 years, forming a period of progressive iniquity and deterioration, and ending in the general dissolution of existing forms.—*W.*

KALI. ARAB. Barilla; the common Kali salsola, *Linn.*, grows in great plenty along the Arabic Gulf, and in the isles. The maritime plants from the ashes of which soda is obtained by lixiviation; and from the name of this plant, with the Arabic article al, is derived that of a class of substances possessing peculiar properties, which are called alkalies. Kali was also formerly employed to designate the alkali potash.—*Eng. Cyc.; Niebuhr.*

KALI, a branch of the Sardha or Gogra, separating Kamaon from Nepal.

KALI, a goddess of the Hindus, whom their mythology recognises as a form of Parvati, and called also Maha-Kali, Durga, Bhawani, and Devi. Kali is the consort of Siva, in his destroying character of Time. As such, she is painted of a black or dark-blue complexion. In pictures, she is shown (as the personification of Eternity) trampling on the body of Siva (Time). In one hand she holds the exterminating sword, in another a human head; a third points downward, indicating, according to some, the destruction which surrounds her, and the other is raised upwards, in allusion to the figure of regeneration of nature by a new creation. Whatever her gestures may import, the image of this goddess is truly horrid, as are the devotional rites performed in her honour. Her wild, dishevelled hair reaching to her feet, her necklace of human heads, the wildness of her countenance, the tongue protruded from her distorted mouth, her cincture of blood-stained hands, and her position on the body of Siva, altogether convey in blended colours so powerful a personification of the dark character which she is pretended to portray, that, whatever may be thought of their tastes, we cannot deny to the Hindus full credit for the possession of most extraordinary and fertile powers of imagination. Kali is the goddess of cemeteries, under which form she is described dancing with the infant Siva in her arms, surrounded by ghosts and goblins (likewise dancing) in a cemetery amongst the dead; her images, under this form, are worshipped by the Hindus as a propitiation against the destructive ravages of the cholera. To this ferocious goddess sanguinary sacrifices are made. The July (1859) No. of the Calcutta Review (p. 423) remarks that 'in Bengal, in the worship of the bloody Kali, all castes mingle together, and, after a libation of ardent spirits to the goddess, drink spirits and eat flesh, as their fathers did in the Vedic times, said to be practised to this day in the foul and secret rites of the Tantra, too abominable for Christian ears.' A festival held in honour of Kali is called also Kali-puja, as the Dasera in honour of the same deity, under the name of Durga, is called also Durga-puja and Durgotsava. Human sacrifices were chiefly offered to Bhawani in her character of Kali, and no religious rite can be more minutely ordered and detailed than this is in the Kalika Purana, the sanguinary chapter of which has been translated by Mr. Blaquiere, and given in the fifth volume of the Asiatic Researches, Art. xxiii., and the ceremonies, the implements, prayers, etc., used on these horrid occasions are minutely described and recited. In this article, premising that Siva is supposed to address his sons the Bhairava, initiating them in these terrible mysteries, occurs the passage, 'The flesh of the antelope and the rhinoceros give my beloved (*i.e.* the goddess Kali) delight for 500 years. By a human sacrifice, attended by the forms laid down, Devi is pleased 1000 years; and by a sacrifice of three men, 100,000 years. By human flesh, Camachya, Chandica, and Bhairava, who assume my shape, are pleased 1000 years. An oblation of blood which has been rendered pure by holy tests, is equal to ambrosia; the head and flesh also afford much delight to the goddess Chandica. Blood drawn from the offerer's own body is looked upon as a proper oblation to the goddess Chandica. Let the sacrificer repeat the word Kali twice, then the words Devi-Bajreswari, then Lauha Dandayai, Namah! which words may be rendered —Hail, Kali! Kali! Hail, Devi! goddess of thunder! Hail, iron-sceptred goddess! Let him then take the axe in his hand and again make the same by the Calratriya text.' Different mantra are used, in reference to the description of the victim to be immolated; females are not to be immolated, except on very particular occasions; the human female never. Human sacrifices are nevertheless most pointedly prohibited in very ancient books. In the Brahma Purana, however, Nera Medha, or man-sacrifice, is expressly forbidden; and in the fifth book of the Bhagavat Sir William Jones pointed out the following emphatical words: 'Whatever men in this world sacrifice human victims, and whatever women eat the flesh of male cattle, those men and those women shall the animals here slain torment in the mansions of Yama; and, like slaughtering giants, having cleaved their limbs with axes, shall quaff their blood.' Parvati, in the Mahratta countries pronounced Parbat or Parvat, is used as a name for a hill; one is near Poona, commonly called Parvati, on which is a temple of the goddess. In Durga we trace the origin of the names of hill forts in Mysore and other countries of the Dekhan, such as Chittuldroog, Rai Droog, Duri Droog, etc. The bright half of the month Aswini, the first of the Hindu lunar year, seems peculiarly devoted to Durga. The first nine nights, called Navaratri, are, with appropriate names, allotted to her decoration; the fifth is for the preparation of her dress; on the sixth she is awakened; on the seventh she is invited to a bower formed of the leaves of nine plants, of which the Bilwa is the chief. The seventh to the ninth are the great days; on the last of

which the victims immolated to her honour must be slain, as particularly directed in the Kalika Purana. The sacrificed beasts must be killed by one blow, with a broadsword or sharp axe. The next day the goddess is reverently dismissed, and her image is cast into the river, which finishes the festival called Durgotsava and Dasera. On the fifteenth day, at the full moon, her devotees pass the night in sports and merriment, and games of various sorts; it is unlucky to sleep, for on this night the fiend Nicumbha led his army against Durga, and Lakshmi descended, promising wealth to those who were awake. On this night Kuvera and Indra are also worshipped. The goddess Bhawani is supposed to have inspired Sivaji to murder Afzal Khan, the general of the king of Bijapur. At a conference, Sivaji caught Afzal Khan with a wag-nak, and finally despatched him with the beautiful Genoese blade called Bhawani, which he always wore. That sword, down to the time of the British supremacy, had a little temple for itself in the palace of Sivaji's descendants, and it was annually worshipped by them and their household, not as a mere act of veneration for their ancestor's trusty sword, but because it was the chosen instrument of a great sacrifice; and the attendant who watched it used to say that no doubt some of the spirit of Bhawani must still remain in it. Many towns and rivers are named after Bhawani. Kali Koil, temples of Kali, are scattered over the Carnatic, and by tradition a human sacrifice was made at the foundation of each of them.—*Taylor; Cole. Myth. Hind.; Ward.*

KALIAN, a city of great commercial and political importance, mentioned by Arrian, author of the Periplus, in the 2d century, as Kalliana, which had been a famous emporium in the time of Saraganos the elder, and by Cosmas Indicopleustes in the 6th century as the seat of a Christian bishopric, under the name of Kalliana. The name of Kaliyana also occurs several times in the Kanheri cave inscriptions, which date from the 1st and 2d centuries of the Christian era.—*Orme; Tod's Travels*, p. 168; *Cunningham, Ancient Geog. of India*, p. 554.

KALIANI, a fortress in the Dekhan, west of Beder, on the borders of the Canarese, Teling, and Mahratta nations. The Chalukya dynasty of Kaliani disputed the sovereignty of the Dekhan with the Chola dynasty, who held the Ceded Districts. The Chalukya rulers of Kaliani were overthrown by Basava, their minister, who established the Lingaet or Jangama religion. The Kalinga Chalukya capital was at Rajamundry, and they ruled throughout the Northern Circars. Sasanam or grants on copperplates and also sculptured monuments exist, showing several alternations of superiority between them and the Gajapti rulers of Orissa.

KALIAR, a caste of camel-owners and cattle-breeders in Shahpur.

KALI BAORI, a petty state in the Bhil Agency, under the Central India Agency and the Government of India. The chief or Bhumia receives £137 and £12 zamindari, on condition of guarding the pargana of Dharmpur, and being answerable for all robberies. He also receives £15 from Sindia, and is answerable for robberies in 17 villages in Bikanir.

KALI CHAKRAM, an ancient gold coin in the Tamil country, with an image of Kali on it.—*W.*

KALI-CHITRASWARI. Chitpur, in Bengal, on the Hoogly, is so called from the Kali-chitraswari in that village, one of those old images to which many a human sacrifice has been offered under the regime of the Brahmans. It is said of her that a party of boatmen was rowing up the river to the sound of a melodious strain. Heightened by the stillness of the night, the plaintive carol came in a rich harmony to the ears of the goddess. She then sat facing the east, but, turning to hear the song of the boatmen as they passed by her ghat, she had her face ever since turned towards the river.—*Tr. of Hind.* i. p. 2.

KALID, a celebrated general of the early years of the Hijira. See Jew.

KALIDASA, a great dramatist and epic poet of Northern India, and, according to Hindu tradition, the father of the erotic lyric. He lived about the beginning of the 6th century A.D. He is mentioned with Bharavi, another famous poet, in an inscription dated 507 Saka era, or A.D. 585-586. But his era has been supposed by Wilson to have been during the reign of a Vikramaditya. Dr. Bhau Daji supposed it to be that of Harsha Vikramaditya, in the middle of the 6th century; Monier Williams thinks he wrote in the middle of the 3d century; Lassen places him half a century later, and some believe that more than one person bore this name as a literary title.

His most celebrated dramas are Sakuntala, Vikramurvasi, and Megha-duta, but the Kumara Sambhava, the Raghu Vansa, the Malavi Kagnimitra, the Ritu Sanhara, Nalodaya, and Mudra Rakshasa are also attributed to him.

Sakuntala was made known to the west in 1789 by Sir William Jones. This drama relates how a Kshatriya prince, Dushyanta, prevailed on a Brahman's daughter to yield to him, under a promise of marriage, and he gave her his ring as a pledge of his troth. He then went to his own city, leaving the girl behind. She soon found that she was to become a mother, and she then set out to her husband, but lost the ring on the road, and he refused to recognise her until it was found. Vikramurvasi, or the Hero and the Nymph, celebrates Vikramsena, son of Indra and Urvasi, a celestial songstress. His Megha-duta, or Cloud Messenger, has 116 stanzas. In it an exile sends a message by a wind-borne cloud to his love, and the countries beneath its long aerial route are made to pass like a panorama before the reader's eye. The Kumara Sambhava recounts the birth of the war god. It contains passages of much beauty of style and grace of thought. It has been translated into English verse by Mr. Ralph T. H. Griffith.

The Raghu Vansa is an epic poem which celebrates the Solar line of Raghu, king of Ayodhya, but more particularly the ancestry and the life of his descendant Rama, who was the boast and ornament of the race. Rama's story occupies a considerable place in many of the Puranas, and is the sole object of the Ramayana by Valmiki; also in the Bhatti Kavya and the Raghava Pandaviya, all in Sanskrit, and in Hindi the Ramayana of Tulsi Das and the Rama Chandraka of Kesava Das. Portions of it also are in the Tamil and Telugu.

Malavika and Agnimitra recounts the loves of those two. Mudra Rakshasa relates a contest between Rama and his sons Lava and Kusha. The Nalodaya is in four cantos, and tells the adventures of Nala and Damayanti. The long poetical descriptions of his dramatic works have led to the supposition that these plays were written for reading rather than representation; but such was not the case, as the MSS. which have come down to us contain full directions as to the proceedings on the stage. Wit is scarcely cared for by the Hindu, whose great delight is to portray the delicate loves of innocent and bashful youths. In this art none has excelled Kalidasa. No poet is so celebrated and highly esteemed in India; to none have so many poems, epic, lyric, and dramatic, been ascribed. His play Sakuntala is considered the gem of oriental literature, and received the rapturous applause of Goethe. Professor Wilson's list of the Hindu Theatre contains the names of 60 pieces. Of these not more than six belong to the classical age, and two of these are the works of the famous Kalidasa. The most interesting, though it has not the beauties of the Sakuntala, is the Mrichikata or Toy Cart, and it is the only play from any part of India which has been acted on a European stage.

The Kumara Sambhava of Kalidasa, his Raghu Vansa, also the Neshadha of Sri Harsha, the Magha or Sisupala Badha and the Kiratarjuniya by Bharavi, are five of the six recognised excellent compositions in Sanskrit.—*Imp. Gaz.; Taylor; Wheeler's Hist. of India*, i. p. 50; *Ward*, iv. p. 1390.

KALIGHAT, a village situated on the bank of the old bed of the Ganges, a few miles south of Calcutta, lat. 22° 31′ 30″ N., long. 88° 23′ E. It contains a temple in honour of Kali. Her dead body was carried over the world by her husband Siva, until the corpse was cut in pieces by Vishnu with his sacred disc (sūdarsan chakra), and the 52 places where the different parts of the body fell became sacred as places of pilgrimage. One of her fingers is said to have fallen at this spot. The temple was built about the 15th century by a member of the Sabarna Chaudhari family, who allotted 194 acres of land for its maintenance. A Brahman named Chandibar was the first priest appointed to manage the affairs of the shrine; and his descendants, who have taken the title of Haldai, are the present proprietors. They have amassed great wealth, not so much from the endowments as from the daily offerings made by pilgrims. The principal religious festival of the year is on the second day of the Durga-puja, when the temple is visited by crowds of pilgrims from all parts of the district.

A Kalighat is described by Ward as a landing-place on the left bank of the Hoogly at Calcutta, near a temple of Kali, and which gives its name to Calcutta. At Kalighat stands the temple of Kali, the energy of Siva in his destructive character of Kal, or Time. To this temple the collected crowds, from miles round the Indian metropolis, pour, like a living stream, and, till recently, exhibiting the most painful self-inflicted tortures, piercing their tongues and sides, and sticking in the wounds heavy pieces of iron, arrows, canes, living snakes, etc. etc., with which they danced with indecent gestures, to the obscene songs of the surrounding multitude. Mr. Ward says that in one year a man thrust his finger through the tongue of another, and they thus proceeded dancing with much indecency together through the streets; and that another had his breast, arms, and other parts stuck entirely full of pins, as thick as nails or packing-needles.—*Ward's Hindoos; Imp. Gaz.*

KALIKA PURANA, one of the 18 Upa Puranas, a Sanskrit work, in 98 chapters, containing 9000 stanzas, descriptive of the worship of Kali, bride of Siva, in one or other of her forms as Girija Devi, Bhadra Kali, Kali, Maha Maya.—*Garrett.*

KALIKA-VARTTA. General Cunningham says the city of Klisoboras has not yet been identified, but he feels satisfied that it must be Vrindavana, six miles to the north of Mathura. Vrindavana means the grove of basil trees, which is famed over all India as the scene of Krishna's sports with the milkmaids. But the earlier name of the place was Kalika-vartta or Kalika's whirlpool, because the serpent Kalika was fabled to have taken up his abode just above the town, in a kadamba tree, overhanging the Jumna. Here he was attacked by Krishna, and the rapid convolutions of his tail in his dying struggles are said to have caused the eddy which is now known by his name. The Latin name of Klisobora is also written Carisobora and Cyrisoborka in different MSS., from which he infers that the original spelling was Kalisoborka, or, by a slight change of two letters, Kalikoborta or Kalikabarta. In the Prem Sagar this whirlpool of the Jumna is attributed to the poison that was vomited forth by the serpent Kali against Krishna, when he was swimming in the river. In the 18th century, raja Chet Singh of Benares is said to have poured all the milk of the two cities of Mathura and Vrindavana down the hollow kadamba tree, and as the waters of the Jumna were not even tinged, the serpent Kalika's miraculous powers of milk-drinking were established more firmly than ever.

KALIK-KA-TAWA. HIND. A girdle, an iron plate on which wheaten cakes are toasted or the kalik (soot) collected.

KALI-KUTKI. HIND. Picrorhiza kurrooa, in most books on Indian medicine kali-kutki, is termed Helleborus niger, but it is, in the druggists' shops, exactly similar to Kaur, the produce of the Picrorhiza, while the Asarun, which even in the native name attests its resemblance to the Asarum Europeum, is probably a species of valerian. —*Powell*, i. p. 318.

KALILA-wa-DAMNA, an ethical work, which had its origin in the Sanskrit Hitopadesa, which was brought by Barzuyeh from India to the court of Nushirwan, king of Persia, was translated into Arabic during the khalifat of Mamun, afterwards into Persian by Abu-'l-Maali with the title of Anwar-i-Suhaili, and revised by Hasan Kashafi, who was also the author of the Persian Commentary on the Koran. Professor Max Muller says (chap. iv. p. 108), Abdallah-ibn-al-Mokaffah, a Persian, after the fall of the Omeyyades, became a convert to Muhammadanism, and rose to high office at the court of the khalifs. During the reign of al-Mansur, he wrote the Kalila-wa-Damna, a famous collection of fables, which he says were translations from the Pehlavi of Barzuyeh. Bein in possession of important secrets of the state, he became dangerous in the eyes of al-Mansur, and was foully murdered A.D. 760. The Arabic

version was known as Kalila-wa-Damna, after the names of two jackals who play conspicuous parts in the first story of the collection, and the Arabian translator ascribed the work to the sage Bedpai. This version became a prime favourite with the story-loving Arabs, and thus came into contact with Europe. Greek, Hebrew, and Latin translations of it were made, from the 11th to the end of the 13th century, and the Fables of Bedpai soon became famous over all Europe, and were done into Spanish, German, Italian, French, and English, whilst a Persian version, the Anwar-i-Suhaili, is a standard book. The second Latin version bore the title Alter Æsopus, or the New Æsop. The collection of moral tales commonly known as Æsop's Fables is the work of a Byzantine monk of the 14th century, named Planudes; and thus the Latin version of Kalila and Damna had been done half a century before Æsop's Fables came into the world. Many of Planudes' tales have been traced to Indian sources, and enable us to assert that Æsop's Fables, as we now have them, are not Greek at all, but are the descendants of Indian folk-stories of very great antiquity.

KALIN. Hind. Woollen pile carpet.

KALI NADI. Two rivers of this name in Hindustan, the East and the West. East Kali Nadi is a river in Muzaffarnagar and Meerut. The West Kali Nadi, of Saharunpur, the Muzaffarnagar districts, and N.W. Provinces, rises 16 miles south of the Siwalik Hills, at an elevation of about 1000 feet above sea-level.—*Imp. Gaz.*

KALINDI, a distributary of the Jamuna, a river in the Twenty-four Parganas district of Bengal. It branches off from the parent stream at Basantpur. The Kalindi is a fine deep river, averaging 300 feet in breadth.—*Imp. Gaz.*

KALINDI, in Hindu mythology, daughter of the king of the Asura. Another Kalindi was daughter of the Sun, one of the wives of Krishna. Another Kalindi, widow of king Asit, and mother of Sagara.

KALINGA is the Calingæ proximi mari of Pliny. The ancient kingdoms of the Peninsula of India were the Pandiya, Chola, and Kalinga, and, B.C. 75, an expedition left the ancient Kalinga kingdom, and formed a colony in Java.

The Kalinga Chalukya dynasty ruled at Rajamundry and in the Northern Circars. The town of Kalingapatam alone remains to indicate the rule of that dynasty; but the term Kling or Kalen is used in Burma to designate the people of the west of Burma, and the Hindu religion of the Javanese seems to have come from them.

The Gajapati was a sovereign race that ruled in Orissa. The name means Lord of the Elephant. In the Northern Circars, Chicacole and Rajamundry were the capitals of the Andhra sovereigns, who ruled anterior to the Christian era. A more exact knowledge of these and of the early Buddhist princes of Vegi or Vengi Desam, who reigned at Dara Nagara on the Kistna, near Amaravati, and at Vengipuram, are important desiderata.

An early name for the capital of Kalinga was Sinhapura, so called after its founder Sinhabahu, the father of Vijaya, the first recorded sovereign of Ceylon. In the inscriptions of the Kalachuri or Haihaya dynasty of Chedi, the rajas assume the titles of lords of Kalanjjwrapura, and of Tri Kalinga. Kalinjar is the well-known hill fort in Bundelkhand, and Tri Kalinga, or the Three Kalingas, must be the three kingdoms of Dhanaka or Amaravati (on the Kistna), Andhra or Warangal, and Kalinga or Rajamahendri (Rajamundry).

The Kalinga Chalukya dynasty ruled at Rajamundry and throughout the N. Circars. Extant sasanams and sculptured remains exhibit several alternations of superiority between them and the Gajapati of Orissa. The Ganapati or Kakateya dynasty ruled at Warangal, now in the Nizam's territory. It was once the capital of great part of the N. Circars. Of the Reddi rulers of Condavir little is known.

The succession of the Buddhist rulers by the Chalukya of Rajamundry, the subsequent sway of the Ganapati, Vema Reddi, and Rayel of Bijanagar, together with their contests and the various relations between them, are little known.

The Kalinga of Pliny certainly included Orissa, but latterly it seems to have been confined to the Telugu-speaking country; and in the time of Hiwen Thsang (A.D. 630) it was distinguished on the south and west from Andhra, and on the north from Odra or Orissa. The language of the country is Telugu. The pandits derive this name from Tri-linga, 'the country of the three linga temples.' These were at Amaravati, Andhra, and Kalinga. Taranatha, the Tibetan historian, speaks of Kalinga as one division of the country of Telinga.

The Kalinga are mentioned by Pliny as occupying the eastern coast of India, below the Mandei and Malli, and the famous Mount Maleus. This mountain may perhaps be identified with the high range at the head of the Kishikulya river in Ganjam, which is still called Mahendra Malé, or the Mahendra Mountain.

KALINGULA. Tam. A sluice, a weir, or waterway, constructed in the bunds or dams of tanks to permit the escape of surplus water, and thus guard against the accumulating waters overflowing the softer parts of the dam. Chadr (carpet) is the Hindi name for this.

KALINJAR, town and celebrated hill fort in Banda district, North-Western Provinces. The Mahabharata mentions it as a famous city, and states that whoever bathes in its Lake of the Gods is as meritorious as he who bestows one thousand cows in charity. Muhammadan historians mention the king of Kalinjar as an ally of Jaipal, raja of Lahore, in his unsuccessful invasion of Ghazni, A.D. 978. A raja of Kalinjar was also present at the battle of Peshawur, fought by Anand Pal in A.D. 1008, against Mahmud in his fourth expedition. In A.D. 1202, Kutab-ud-Din, the viceroy of Muhammad Ghori, took Kalinjar. In 1554, when besieged by Sher Shah, a live shell rebounded from the walls into the battery where the sultan stood, set fire to a quantity of gunpowder, and Sher Shah died the following day. Before his death, however, he ordered an assault, which took place immediately, with success.—*Imp. Gaz.*

KALI PURUJ. Mahr. A dark race of aborigines in the eastern and southern taluks of the Surat district. They are quiet and inoffensive.

KALI SIND, a river of Central India, rises in lat. 22° 36′ N., and long. 76° 19′ E., on the south side of the Vindhya mountains. After a course of about 225 miles, it falls into the Chambal. There are four rivers called Sind in India,—first, the Sind or Indus, the Little Sind, the

Kali Sind or Black River, and the Sind rising at Latoti, on the plateau west and above Seronge.

KALIYA DAMANA. SANSK. Subduing a snake. Kaliya is from Kala, to move. Kaliya was a serpent king with five heads, who dwelt in a deep pool of the Yamuna. On Krishna stepping into it, Kaliya seized him, but he placed his foot on the middle of Kaliya's head and overcame him.

KALI YOGA or Kali Yug, the iron or fourth age of the Hindus, begins, according to some, 3101 years before Christ. It is estimated by Bunsen to have commenced B.C. 986 or 866, by others is supposed to have begun on Friday, 18th February B.C. 3102; and the Hindus say it is to last altogether 432,000 years, when all existing forms having become delineated are to be dissolved; of 432,000 years, 3101 had expired on the 14th March A.D. 1. The Kali Yoga is the present age of the world. The actual period of the world's existence, according to the astronomical calculation of the Hindus, commenced 3102 years before Christ, on the 20th February, at 27 minutes 30 seconds past two o'clock.

KALI ZIRA. HIND.

Shauniz, ...	ARAB.	Zira-siah, . . .	PERS.
Hab-sindi, . .	EGYPT.	Siah-dana, . . .	,,

These terms are applied to the seeds or fruits of several plants, Cuminum cyminum, Nigella Indica, Vernonia anthelmintica, or Serratula anthelmintica, also Aplotaxis candicans, and Carum carui.

KALKA. The country of the Kalka is ancient Mongolia. The Kalka live under tents along the banks of the rivers which water their country, that of Kalka-pira, though one of the smallest, and at present one of the least frequented, has given its name to the whole nation. The small and picturesque lake of Ikeougoun lies in the mountains to the north of Sanghindalai, and is held in great veneration by the Kalka. They erect a small wooden temple on the shore, and offer up milk, butter, and the fat of the animals, which they burn on the little altars. The large rock in the lake is with them a sacred stone, on which some rude figures are traced. The yourt of these people are constructed like those of the Kirghiz, and covered with felt. The Mongol are divided into several aimak or tribes. The largest is that of Kalka.

KALLAR, a race in the southern part of the Peninsula of India, in the Trichinopoly, Madura, and Tanjore districts. They are known in Orme and older writers as the Collery. They and the Maravar take Dever as a tribal name. Kallar in Tamil means thief. In very early times the Kallar had petty princes of their own,—and still have one at Puducottah,—and they were employed as soldiers by the more powerful kings of the south, and in predatory excursions against neighbouring sovereigns. For these services lands were assigned them. All ancient Tamil writers, when discoursing about land, divide it into five distinct different kinds, namely, Kuransee, Palei, Mullei, Maruthum, and Neythel; and the same writers distinctly state the castes and classes of people residing on each, but not one of these writers mentions the Kallar. The celebrated Jain, Mantala Puraden, in his Dictionary, mentions Kallar as a synonym for robber, not as the name of a caste. The tradition among the Kallar is that they and the Maravar are from the same stock. The legend is as follows:—When the gods churned the ocean, amongst other things brought to the surface was a most beautiful virgin, named Ahalya. After some discussion, it was agreed that the virgin should be given to him that performed the greatest austerity. The sage Gautama won the prize, but the god Indra was enamoured of the beauty, and, availing himself of an opportunity, he seduced her, and, she gave birth to three sons, the Maravar, the Kallar, and the Akumbadiar. In Hindu mythology Indra means the sun, and Ahalya the night. Scholars will discover here the old fable of Acheron and Nox.

KALLAR. HIND. Saline soil, unculturable from reh, saline efflorescence, salt, or other reason detrimental to cultivation. It is also a saline earth yielding saltpetre; also earth impregnated with reh, but also means a soil which remedies the reh, used by dhobis for washing.

KALLAS. HIND. The ball at the top of any pyramidal structure.

KALLI-MEDU. TAM. Lit. Cactus eminence, is the Point Calimere of the English; the Kalligikon of Ptolemy, one of the names given by Ptolemy to the promontory of Koru, or Kallimedu, opposite Ceylon, Point Calimere.

KALLIYUN, a Persian pipe, in which the smoke is drawn through water. They are of two sorts,—the Kurnyee and Dastah, or snake and hand Kallyun; the one having a long pliant snake, similar to the hookah of India, made of leather, and the other being, as its name denotes, held in the hand, and smoked through a short tube, often made of gold or silver, and beautifully enamelled.

KALLU or Kalyanu, TEL.; Tari, HIND.; Kalla, TAM. Palm wine, the fermented sap of different kinds of palm trees. Toddy, ANGLO-HIND., is Tari, from Tar, the palmyra palm. Sendi is from the date palm, tar-ka-jhar, and Nareli is from the cocoanut palm, narel-ka-jhar.

KALM. ARAB. A pen, a reed, a writing character. Kalm-trash, a penknife. In grafting trees, a shoot of a tree.

KALMUK, a branch of Eleuth, call themselves Olot, the peculiar people, or Durban Oirod, the four allies, meaning the Dzangar, Turgut, Choshod and Turbet. A Kalmuk kingdom was founded in 1671, but it lasted less than a century, and then fell under the Chinese rule. The name is sometimes derived from the Turkish word Khalimak, those left behind, sometimes from the Mongol Ghol-aimak, fire horde, and again from Kalmuk, fiery people. Some hordes have swarmed out across the southern border of the Gobi. After the fall of the Yuen dynasty, a swarm of Kalmuk, made up of Dzangar, Turgut, and Choshod, migrated to Koko Nor. They have continued their migratory habits up to the most recent times. They reached European Russia in 1616, and a portion of them wandered back to China in 1771 amid untold perils and hardships. Many of the inhabitants of Turkestan described to Lieut. Burnes their mode of travel. The migrants, reported at 100,000 families, advanced with their herds and flocks, occupying in the breadth of the advancing column a journey of no less than three days, forced its way through all opposition to the Dasht-i-Kipchak, north of the Jaxartes or Syr Darya, and reached the primeval seat of their ancestors at Yarkand and Eela. The Muhammadans of Bokhara captured about 1500, and

made them slaves. The Kalmuk and the Uzbak are said to have sprung from one tribe, and this change of habitations has now mixed it with the Kazak, a great tribe that once lay to the eastward of it; and Kalmuk, Kazak, and Kirghiz are now mingled together. See Kazak.

KALNEH, an ancient town on the Khaibar river. M. de Breses, President, Royal Academy, Paris, supposed that Kalneh stood on the side of Ctesiphon.—*Mignan's Travels*, p. 73.

KALOBIT, a climbing plant of Borneo, which the natives rend into long strips for rough cordage. The juice of this plant is intensely bitter, but the water which distilled itself slowly from the cut end was quite pure and tasteless.—*Burbidge.*

KALORA, a dynastic title of former rulers in Sind. The Kalora, a tribe of wandering religious mendicants, who for nearly three centuries had been settled in Sind; and about A.D. 1450, Adam Shah, a Baluch of this tribe, obtained fame as a devout man, and from him the dynasty arose. They received a jaghir from Aurangzeb in 1705, and were made naibs of Tatta in 1735. Their country was transferred to Persia by the treaty with Nadir Shah. The dynasty ended in 1788 by the succession of the Talpur. *Burnes; Postans' Pers. Narrative*, pp. 161, 165.

KALPA. SANSK. The bright half of a day of Brahma. A creation or formation, a cycle of years. In Hindu theogony, at the end of every Kalpa (creation), all things are re-absorbed in the deity, who, in the interval of another creation, reposes himself on the serpent Sesha (duration), who is also termed Ananta (endless). In Hindu astronomy, a Kalpa is an age of time; a day of Brahma, 4320 millions of years. Amongst the Buddhists of Ceylon, a Kalpa is the period of a mundane revolution.—*Wilson; Warren, Kala Sanhita; Hardy's East. Mon.* p. 437.

KAL PASHI or Kalpasi. TAM. Identified by Ainslie with the Lichen rotundatus of Rottler? It is the Pathar-ka-phul, HIND., or rock flower, and Henna-ul-koresh, ARAB. Its value as a diuretic is especially when applied as a poultice over the kidneys.

KALPA STHANA. SANSK. Toxicology.

KALPA SUTRA. SANSK. Aphorisms of high authority regarding the performance of sacrifices enjoined by the Vedas. Written by human authors, and therefore not Sruti or revealed. It is from Kalpa, time, and Sutra, a thread. The Kalpa Sutra includes 45 Angama, 11 Anga, 12 Upanga, 10 Prakrinaka, 8 Cheda (sections or fragments), and 4 Mula Sutra. Their 14 ancient Purva were lost.

KALPA-VRIKSHA, the tuba or ash tree, in Hindu mythology, the Tree of the Gods which bestows everything desirable; it is the same with the Lakshmi-vriksha, and the same with the Parijata tree. Among the Buddhists, also, a magical tree, that gave whatever was desired; perhaps also same as the Kalpadrum or wishing tree. The Shajrat-ul-Kudus or blessed tree, is a tree of Arabia.—*Hardy's East. Mon.* p. 437.

KALTAR. MAHR. An estimate of the produce of the fields, made while the grain is standing (ubha), or when cut but unthrashed (ogbla).

KALTHEE. MAHR. A grass which grows on salt wastes; its roots are ground and used as flour.

KALTIS, a gold coinage of India mentioned by the author of the Periplus.

KALU and Ak-rohat, two passes in the Hindu Kush, 13,400 feet above the sea, near Bamian. Bamian is on the high road from India to Bactria, lying at right angles to the path, and between the two passes.

KALU RAYA and Dakshin Raya are worshipped in S. Bengal as forest deities. They are represented as mitred trunkless heads set up along with earthen figures of tigers and crocodiles. Goats and ducks are offered in sacrifice.

KALYA-DAH, a famous ghat at Brindaban, where Kalya-nag, the black serpent, infested the waters of the Jumna.—*Tr. of Hind.* ii. 63.

KAL-YAMUN was the foe of Krishna, from whom he fled to Dwaraka, and thence acquired the name of Rinchor, or fleer from the battle-field. Modern Hindus have come to regard this as an honourable title.

KALYAN, chief town, port, and municipality of the Tanna district of Bombay, situated at the junction of the north-east and south-east lines of the Great Indian Peninsula Railway, 33 miles north-east of Bombay.—*Imp. Gaz.*

KAM, HIND., from the Sanskrit Karmma, work, business, affair; largely used in combination, as Kam-gar, Kam-kaj, Kam-dar, a servant, work in general, a man of business.

KAMA, amongst the Hindu deities, takes the place of Cupid. Ananga is a poetical epithet, literally incorporeal; from a, privative, and Anga, a body. Endeavouring to influence Siva with love for his wife Parvati, he discharged an arrow at him, but Siva, enraged, reduced him to ashes by a beam of fire darted from his central eye. Hence his name Ananga. According to the Tattiriya Brahmana, he is the son of Dharma, justice, by Sraddha, faith. Kama was scarcely created before he thought proper to make Brahma enamoured of his own daughter.

In the Tamil country this Hindu deity is usually called Manmatha, or heart agitator; Manasija, or heart-born; Ananga, or the bodyless. This Hindu deity appears to be the same with the Grecian Eros and the Roman Cupido; but the Indian description of his person and arms, his family, attendants, and attributes, has peculiar beauties. He is represented as a beautiful youth, sometimes conversing with his mother and consort in the midst of his gardens and temples; sometimes riding by moonlight on a parrot or lory, and attended by dancing girls or nymphs, the foremost of whom bears his standard, which is a fish on a red ground. His favourite place of resort is a tract of country around Agra, and principally the plains of Muttra, where Krishna also and the nine Gopi, who are clearly the Apollo and Muses of the Greeks, usually spent the night in music and dancing. His bow of sugar-cane or flowers, with a string formed of bees, and his five arrows, each pointed with an Indian blossom of a heating quality, are equally new and beautiful. He has at least twenty-three names, most of which are introduced in a hymn by Sir W. Jones; that of Kam or Kama signifies desire, a sense which it also bears in ancient and modern Persian. And it is possible that the words Dipuc and Cupid, which have the same signification, may have the same origin, since we know that the old Etruscans, from whom great part of the Roman language and religion was derived, and whose system had a near affinity with that of the Persians and Indians,

used to write their lines alternately forwards and backwards, as furrows are made by the plough.

The Rig Veda (x. 129) says that desire 'first arose in It, which was the primal germ of mind.' Greek mythology connected Eros, the god of love, with the creation of the universe, something in the same way.

A curious hymn in the Atharava Veda exalts Kama into a supreme god and creator; another part makes Kama to be desire, then the power which gratifies desire, also identifies Kama with Agni.

The Indian Maya, or, as the word is explained by some Hindu scholars, the first inclination of the godhead to diversify himself by erecting worlds, is feigned to be the mother of universal nature and of all the inferior gods. But the word Maya, or delusion, in the Vedanta philosophy, signifies the system of perceptions, whether of secondary or primary qualities, which the deity was believed, by Epicharmus, Plato, and many truly pious people, to raise by his omnipresent spirit in the minds of his creatures, but which had not, in their opinion, any existence independent of mind. Maya or Ada Maya is a name of Lakshmi. She is thus the general attracting power; the mother of all, the sakti or energy of Vishnu, the personification of spirit; she, as attraction, unites all matter, producing love in animated nature, and in physics, the harmonization of atoms. Kama or Love is her offspring, and is united in marriage to Reti or Affection, the inseparable attendant on the tender passion; and in friendship to Vasant'ha (commonly pronounced Bassanth) or Spring, denoting Love's season, but literally in regard to the time when many animals are impregnated and vegetables burst into existence, and metaphorically touching the early portion of man's passage through life. There is an allegory of Kama being an avatara or son of Krishna, by Rukmeni, other names of Vishnu and Lakshmi, and this is a further instance of the correspondence of that goddess with the Roman Venus, the mother of Cupid. His riding or dancing by moonlight allude to the love-inspiring serenity of the time; such nights, about Agra and in the southern parts of India, affording, after the heat and tumult of the day, a delicious quiet feeling of happiness not easily communicated nor conceivable by the mere experience of the unsettled cloudy skies of northern latitudes. The banner of Kama, a fish on a red ground, and his vahan or vehicle, a parrot or lory, have doubtless their allusions, the former possibly to the stimulating nature of that species of food, stirring the blood to aid Kamdeo's ends; and perhaps the ensanguined colouring and extreme beauty of the lory, and, like the fish (and the dove of western mythology), its supposed aphrodisiac tendency as food may have had a share in guiding a selection of attributes for the ardent deity. The soft affection and fabled constancy of the dove may have weighed with the Greeks, although constancy may not, perhaps, be, in strictness, a striking characteristic of love.

This universal deity through all ages and all climes is the object of the hero's, the blockhead's, and the wise man's invocation; has been represented as Anteros with his leaden arrow, as the beauteous Eros with his golden dart, as the Egyptian Horus with the wings of the Etesian winds, as the Hindu-adored Kamdeo with bee-strung bow and flower-tipped arrow, as the son of Jupiter, of Mars and Venus; of Porus, the god of counsel, and Penia, the goddess of poverty; of Cœlus and Terra, of Zephyrus and Flora; as the son of Brahma, of Vishnu or Krishna, and of Maya or illusion.

As with all Hindu deities, Kama's genealogy is traced upwards to the sun, who is Brahm. Lakshmi, in a divine and mortal view, both as Maya and Rukmeni, is his mother; she is Vishnu's wife and sakti or energy. Vishnu, or Krishna, Kama's father, is the sun, the source, literally and figuratively, of warmth and union, affection and love.

The Makara which Kama bears on his banner is an aquatic monster something like the sign of the zodiac Capricornus.

'What potent god, from Agra's orient bow'rs,
Floats through the lucid air, whilst living flowers
With sunny twine the vocal arbours breathe?
Hail power unknown! . . . . .
Know'st thou not me? . . . . .
Yes, son of Maya, yes, I know
Thy bloomy shafts and cany bow,
Cheeks with youthful glory beaming,
Locks in braids ethereal streaming,
Thy scaly standard, thy mysterious arms,
And all thy pains and all thy charms.
God of each lovely sight, each lovely sound,
Soul-kindling, world-inflaming, starry crown'd,
Eternal Kama! Or doth Smara bright,
Or proud Ananga give thee more delight?
What'er thy seat, what'er thy name,
Seas, earth, and air thy reign proclaim;
Wreathy smiles and roseate pleasures,
Are thy richest, sweetest treasures.
All animals to thee their tribute bring,
And hail thee universal king.
Thy consort mild, Affection ever true,
Graces thy side, her vest of glowing hue,
And in her train twelve blooming girls advance,
Through golden strings, and knit the mirthful dance;
Thy dreaded implements they bear,
And wave them in the scented air,
Each with pearls her neck adorning,
Brighter than the tears of morning;
Thy crimson ensign, which before them flies,
Decks with new stars the sapphire skies.
God of the flow'ry shafts and flow'ry bow,
Delight of all above and all below!
Thy lov'd companion, constant from his birth,
Thev'n clep'd Bessent, and gay Spring on earth,
Weaves thy green robe and flaunting bow'rs,
And from thy clouds draws balmy show'rs,
He with fresh arrows fills thy quiver
(Sweet the gift and sweet the giver!),
And bids the many-plumed warbling throng
Burst the pent blossoms with their song.
He bends the luscious cane, and twists the string
With bees, how sweet! but ah, how keen their sting!
He with five flow'rets tips thy ruthless darts,
Which thro' five senses pierce enraptur'd hearts:
Strong Champa, rich in od'rous gold,
Warm Amer, nurs'd in heav'nly mould,
Dry Nagkeser, in silver smiling,
Hot Kitiecum our sense beguiling;
And last, to kindle fierce the scorching flame,
Loveshaft, which gods bright Bela name.'

The Champa, Michelia champaca, is of two sorts, white and yellow, small, and in its foliage like an expanded rosebud. Gardeners make and expose in the shops chaplets and long strings of the blossoms, with which the Hindu women decorate their hair and wear round their necks; its potency is, however, so great, that nerves unaccustomed to it can scarcely bear its odour within doors. Another flower, commonly called mogri, is of the same description, and may, perhaps, be one of these named in the classic hymn. The fragrance

of the Champa is so very strong that bees refuse to extract honey from it, a circumstance that could not escape the keen eye of the Hindu poets, and they accordingly feign the Champa to be sadly mortified at this neglect. They have, however, afforded it consolation, dedicating it to Krishna, the black deity, as they, contrary to some European poetical naturalists, consider the union of yellow and black peculiarly beautiful. The Champa is further consoled by the preference it has obtained in bedecking the glossy locks of black-haired damsels, also in the following stanza, literally translated from the Sanskrit:—'That thou art not honoured by the ill-disposed bee, why, O Champa! dost thou so heavily lament? The locks of lotus-eyed damsels, resembling the fresh dark clouds adorning the sky, let these embellish thee.'

The Amer, mentioned in the extract from the hymn, is also called Amra and Amla, and is said by some to be the mango flower. Dry Nagkeser is also called Kesara; it is a handsome flower, with yellow and white petals. The Bela is a beautiful species of jasmine. The last days of spring are dedicated to Kamdeva, the Hindu god of love. There is no city in the east where the adorations of the sex to Kamdeva are more fervent than in Udaipur, 'the city of the rising sun.' On the 13th and 14th of Cheyt they sing hymns handed down by the sacred bards: 'Hail, god of the flowery bow! hail, warrior with a fish on thy banner! hail, powerful divinity, who causeth the firmness of the sage to forsake him! Glory to Madana, to Kama, the god of gods; to him by whom Brahma, Vishnu, Siva, and Indra are filled with rapture.'—*Tod's Rajasthan*, i. p. 255; *As. Miscel.* ii.; *Sir W. Jones' Hymn to Camdeo*, xiii. p. 237; *As. Res.* i. p. 221; *Moor*, p. 437; *Hind. Theat.* ii. p. 84.

KAMA, amongst the Singhalese Buddhists, evil desire, the cleaving to sensuous objects. Kamadeva, the Hindu god Kama, from Sanskrit Kama, desire, and Div, to play.

KAMA-DHENU, a cow, called also Surabhi, Savala, Kama-duh, produced at the churning of the ocean; she belonged to the sage Vasishta; this name means the cow which grants desires.

KAMAKSHI or Lust Eye, the sakti of Ekambeswara; she is a form of Durga.

KAMA-KUMBHA, Sansk., or vase of desire, the Hindu cornucopia, a common emblem on Buddhist coins and sculptures. There is amongst the Hindus a festival sacred to the sage Agastya, who presides over the star Canopus, when the sun enters Virgo (Kaniya). The Kamacumpa is then personified under the epithet Kumbhayoni, and the votary is instructed to pour water into a sea-shell, in which, having placed white flowers and unground rice, turning his face to the south, he offers it with this invocation: 'Hail, Kumbhayoni, born in the sight of Mitra and Varuna (the sun and water divinities), bright as the blossom of the kusa (grass), who sprang from Agni (fire) and Maruta.'

KAMALAKARA, author of the Nirnaya Sindhu, a work on Hindu religious ceremonies and law.—*Dowson.*

KAMALAPURAM or Camlapoor, town in Bellary district, Madras, lat. 15° 17′ N., long. 76° 30′ 30″ E.; population (1871), 5145.—*Imp. Gaz*

KAMALAR, Tam.; Kansala, Tel.; and Panchala, the artisan castes. They are mostly of the Saiva sect; they comprise the goldsmith, coppersmith, blacksmith, carpenter, and stone-mason.

KAMAL-ud-DIN ABDUR RAZZAK-bin-JALAL-ud-DIN ISHAK-as-SAMARKANDI. He was born at Herat on the 12th Shaban A.H. 816 (6th November 1413 A.D.). His father Ishák was Kazi and Imam at the court of Shah Rukh. On his father's death, A.H. 841 (A.D. 1437), he wrote a comment on Azd-ud-Din Yahya's treatise upon Arabic propositions. He was sent by Shah Rukh to the king of Bijanagar, and after various adventures returned to Khorasan. He was also sent on an embassy to Ghilan. After the death of Shah Rukh, he served Mirza Abdul Latif, Mirza Abdullah, and Mirza Abul Kasim. He died in the month Jamadi-ul-Akhir 887 (August 1482). The full title of his book is Matla-as-Sadain wa Majma-ul-Bahrain; the rising of the two fortunate planets (Jupiter and Venus) and the junction of the two seas.—*Elliot, Hist. of Ind.*

KAMANCHAH. Hind. A violin with three strings, two of silk and one of wire. The instrument is rested on the ground.

KAMAND of the ancient Persians appears to be the lasso of the modern South Americans, and was employed to snare persons as well as wild cattle.

KAMANDALA. Sansk. The drinking vessel of the Hindu and Jaina ascetics; often a gourd. —*Burgess.*

KAMANGAR, wrestlers and bow-makers, from Kamān, a bow. Manufacturers of bows and arrows. Some of them practise the surgical art in the setting of fractured and dislocated limbs. They are found in several districts, but are a small community.—*Rev. M. A. Sherring*, p. 319.

KAMARAN, an island in the Red Sea, midway between the ports of Lohaia and Hodaida. It is about 11 miles long, and from 2 to 4 miles broad, and 1 mile distant from the mainland. Its occupants are engaged in the pearl and turtle fisheries, and it has on it a Turkish stronghold. There is a small harbour, into which a spring runs. It was once intended to occupy the island before Aden was taken, when Mocha, which has no harbour, was the only available point for supplies, there being none on Perim, which would have been otherwise preferred.

KAMAR KHEL, a small Afridi clan, with about 1470 fighting men, mostly scattered about the hills south of the Dwatawi pass to Tira Maidan:—*N. W. F.* i. p. 95.

KAMARTHI. Hind. A person who carries the water of the Ganges to distant places in vessels cased in basket-work.

KAMARUPA, the north-eastern part of Bharatavarsha (Bengal), also in W. Assam, a place of pilgrimage, celebrated for its temples to Kamakshi, the modern Kamrup.

KAMAT. Mahr. A distinction among the Senaw, usually added as a surname, as Ram-Kamat.

KAMATHI, generally written and pronounced Kompti or Compti, a caste of Sudra. Those in the Mahratta districts are distinguished as Telinga and Karnata-Kamathi, from their country. At Poona they are employed as rice-cleaners, grinders of corn, and cutters of sticks, tent-pitchers, and artillerymen; in Telingana they are petty retail dealers or chandlers. The Kamathi of Canara is

a pioneer, a labourer, one who works with a pickaxe or spade. In Mysore they are chiefly employed in road-making and in repairing public works. In general, they seem to be common labourers, and are probably the same as the Ganges water-carriers of Hindustan.—*Wilson.* See Kamarthi.

KAMAVISDAR. Under the Mahratta government, the chief revenue officer of a district.

KAMAWARU or Gumpe Cumlu. TEL. A caste of Teling husbandmen who permit no strangers to enter their houses.

KAMBACHEN, a pass in Nepal, in lat. 27° 38′ N., and long. 88° E. Its crest is 15,770 feet above the sea. It has a broad shelf of snow between rocky eminences. It was ascended by Dr. Hooker, December 1848. The distance to which the voice was carried was very remarkable; he could hear distinctly every word spoken at from 300 to 400 yards off.

KAMBALI. A tribe of this name was met with on the north of the Lopsha mountain, and was supposed to belong to the Gobi race. The young girls of the village of Lombi associated with the party. Young people have unrestrained intercourse, but when married the couple are faithful.—*Vemukof in Journ. Royal Geog. Soc.* xxxvi. p. 272, for 1866.

KAMBALLU, a product of an umbelliferous plant used by Burmese ladies as a cosmetic for the face.—*Cat. M. Ex.*, 1857.

KAMBAR, author of the Tamil Ramayanam, a popular epic poem written in a metre called the Viruttam. It is sung in every Tamil village, in bazars and houses, on festive occasions, by wandering Kavirayar, native minstrels. It is the folk-song of S. India, but it is not intelligible to ordinary people, and a running comment is kept up by the singer or an assistant. Kambar is the most fertile and brilliant of Tamil versifiers. The author of the Chintamani alone can dispute with him for the palm of supremacy. Dr. Caldwell reckons that he lived in the 11th century A.D. He was brought up by a wealthy farmer at Vennai Nellur. His fame as a poet having reached the ears of Rajendra Chola, he was invited to his court, and honoured with the title of the king of poets. Several poets undertook to prepare a Tamil version of the Ramayana. When recited in the presence of Kulotunga Chola, who had succeeded to the throne, Kambar's translation was preferred. Among other works written by Kambar are the Sarasvati Antati, Erelapatu, and Kangsi Puranam. Some others are attributed to him, but their authorship is doubtful. It is said that Kambar's son was put to death for carrying on an intrigue with the king's daughter, and that Kambar himself was obliged to flee. In his old age he lost his poetical powers, and was obliged to support himself by manual labour. He is said to have listened with rapture to the recital of his own compositions.

KAMBARANI, a Baluch tribe. Kambar in the Baluch language means Abyssinian. The tribe emigrated under a leader called Kambar, hence it is that the chief clan is called Kambarani. They own, however, two distinct families, namely, the aborigines of Mekran, whom some call the Cutch Baluchi, and those Arabs who emigrated from Arabia with Hajjaj, the son of Yusuf, and settled in the conquered provinces of Mekran and Baluchistan, while the rest of the invading army marched into Sind. — *Burton's Scinde*, p. 410; *Masson's Journeys*, ii. p. 45.

KAMBAR KHEL, a section of the Afridi in the maidan of Tira. They have two great divisions, with ten subdivisions.—*H. A., N.W.F.*

KAMBATTAM. TAM. The old Tamil name for a mint.

KAMBO is a long cloth thrown over the right shoulder, and so fastened round the waist as to leave a place for the lambs and kids that are too young to walk.—*Burton's Scinde*, p. 410.

KAMBOH, a tribe of Muhammadans in the Panjab in disesteem. A proverb goes, 'If there occur a scarcity of men, take few of the Afghan, the Kamboh, and the low Kashmiri. From the Afghan comes treachery, the Kamboh practises fraud, and from the Kashmiri comes only grief and sorrow.'

KAMBOJA, a people of ancient Arachosia, or north-eastern province of Persia.

KAMBOJIA, a small territory lying between Siam and Cochin-China, containing about 500,000 people, of whom four-fifths are the native Kho. It contains the four provinces, Potisat, Kampong Suai, Kampong, and Kampot Son. Kambodia, Kamboja, or Cambodia was anciently called Kam-phu-cha; its modern name is Khmer. Its commerce is in rice, ivory, silk, and cardamoms. The whole of the coast, from Kamas in Cambodia quite up to what is called by the Siamese Lem Sam-me-san, the Cape Liant of Europeans, is an uninterrupted archipelago of beautiful islands. The only part of the continent of Asia, the Malay Peninsula excepted, in which the Malays have settled and to which their language has extended, is Cambodia. In that country they seem to have established a little independent principality called Champa, well known both in Malay and Javanese story.

The river Mei-kong of Cambodia is one of the largest in Asia, navigable for boats even before it enters the kingdom of Laos. It falls into the sea by three mouths: the largest is said to have from 14 to 18 feet water on the bar at its mouth at high-water spring-tides. Besides the Annam race, the inhabitants of the present dominions of Cochin-China consist of several other races. The principal of these are the Kambojans, whose name in their own language is Kammer or Khmer, but who are called by the Siamese, Kammen; by the Cochin-Chinese, Komen; by the Chinese, Tang-po-cha; and by the Malays, Kamboja. The Kambojans speak a language distinct from those of all their neighbours; but in physical form, manners, laws, religion, and state of civilisation, they bear a closer resemblance to the Siamese than to any other people.

In Cambodia is the great temple of Na-khon-vat. It seems to have been built in the 10th century. It is 600 feet at the base, and in the centre 180 feet high. Every angle of the roof, every entablature, and every cornice, bears the seven-headed serpent. Ujong is the capital of Cambodia. — *Crawfurd's Embassy; Bowring's Siam; Lubbock's Origin of Civil.* p. 243.

KAMBYSES, one of the ancient kings of Persia, of the Kayanian dynasty, and father of Cyrus. He conquered Egypt B.C. 525 to B.C. 522. He took Memphis by storm, and he visited the tomb of Menes.—*Bunsen, Egypt.*

KAMERI. This appellation of the Indian cuckoo is derived from Kama, the god of love. The bird of Kama, says Colonel Tod, from an umbrageous pipal, poured forth his monotonous but pleasing notes amidst the stillness of a lovely scene, where the last tints of sunset illuminated the dark hues of the surrounding woods. At another place he says, the cuckoo accompanied us as far south as Chirasani. The Kol race call this bird Suk'hi, or ease-giving,—perhaps as expressive as Kameri, the bird of love.

KAMESWARI, styled Kamikhya, situated within the town of Gohatty, originally a Buddhist temple, is now a Hindu temple dedicated to the Yoni. The Yoni is here represented by a trikonakar jantra, or triangular stone, known in Buddhist mythology as Prajna Devi, the universal mother. Kamikhya temple is situated on a hill rising about 700 feet from the river Brahmaputra, just below Pragjyotisha or Gohatty. It is said that the number of young girls attached to this temple was in early times 5000. There are still some hundreds.—*Dalton, Ethnol.* p. 80.

KA-MI, Ku-mi, Ki-mi, Ku-mwi, or Khu-mi, all signifying man, is a tribe in Arakan on the Koladyn river, who assert that they once dwelt on the hills now held by the Khyen. Their name seems the same as that of the Khu-mi of Chittagong. The Ka-mi probably arrived in the hills bordering the Koladyn river, in the middle of the 18th century, expelling the Mru or Myu. See Khami.

KAMI, Jap., seems to be a generic appendage to the names of the men of a certain rank in Japan, just as in Britain all noblemen between the ranks of marquis and baron are styled lord. Kami means noble,—not princely. The governor of Nagasaki and Hakodate style themselves Kami, but it is doubted if they have the right to do so. It is like a Frenchman using a 'de,' or a German a 'von,' to ennoble himself. In former days a Kami was one of the Japanese pantheon, but as a title it was at least either hereditary or only given to very great worthies; but now all the ministers, governors, and princes have usurped the title.—*Hodgson's Nagasaki*, p. 156; *Oliphant.*

KAMIA, an agricultural labourer of some low caste; in South Behar he is sometimes considered as a predial slave, either for a term or for ever; in the S.W. Provinces he is usually a bondsman or bond-slave who has sold his services for life, and may be transferred or sold himself; his children are free. One kind, the Bandhak-Kamia, is a slave only until he can repay the money advanced to him for his services.—*Wilson's Glos.*

KA-MI-DA-NA. Jap. A Sintu shrine, altar.

KAMI-DANDA. Sansk.? Vigne gives this as literally almsgiving, applied in Kashmir to a Hindu woman, who, having lost her husband and being unable to re-marry, is devoted to the service of the gods.—*Vigne.*

KAMIN, in the N.W. Provinces, is the term applied to the artificers and servants of a village. In the Panjab, they are persons who are kept employed in cultivation without being actual hired labourers like the Mulazim.—*Elliot; Powell; Wilson.*

KA-MI-NO-MI-TSI. The original national religion of Japan is called Sinsyn, from the words Sin, the gods, and Syn, faith; and its votaries are denominated Sintu. Dr. von Siebold, however, says that the proper native name of this religion is Ka-mi-no-mi-tsi, signifying 'the way of the Kami,' or gods; that the Chinese translated this compound word into Shin-tao, and that the Japanese adopted the Chinese term, and, according to the genius of their language, softened it into Sin-tu. According to Siebold, the Sintu have some vague notion of the immortality of the soul, of a future state of existence, of rewards and punishments, of a paradise, and of a hell.—*MacFarlane's Japan*, p. 207.

KAMJANG, a Shan race in Saddiya.

KAMKAR, a caste employed chiefly by Hindus as servants in Benares, Allahabad, Azimgarh, and Gorakhpur. In the last-named district they numbered, at the census of 1865, upwards of 14,000 persons.—*Sherring's Hindus.*

KAMLA KARRI. Mahr. Amongst the Mahratta, the handbook for the marriage ceremonial of the Sudra Hindus.

KAMLI. Hind. Small blanket, used as a wrapper, in one piece. Coats are made of the finer sorts, and look very well; much resembling camlet in appearance. The stuff is made of sheep and goat hair; in warm climates the covering of sheep can scarcely be called wool.—*E. M. Hindu Infanticide*, p. 176.

KAMMALAR. Tam. In the singular, Kammalan, artificers, divided into five classes,—stonecutters, carpenters, blacksmiths, goldsmiths, and tinsmiths; all wear the sacred cord. They take the titles of Acharya, teacher, priest; also, of Puthen or Puther. See Kamsalar; Kansalar.

KAMMYA-BAN, near Govardhan, is the famous scene of the incidents of the Vana purva of the Mahabharata, is really a classic spot for the reminiscences of the Pandava brothers. Here they were visited by their great friend Krishna, and beguiled by holy sages with the consolations of their philosophy. None of its ancient features is retained by the place, but while its name lives in the verse of the poet, the pilgrim will bend his steps to Kammya-ban.—*Tr. of Hind.* ii. p. 115.

KA-MOI or Moi, on the opposite side of the Mei-kong, occupy the broad expansion of the Annam chain towards Kamboja, and appear to extend northwards along these mountains, marching with the Lau on the westward. They are said to be black savages, with Negro features. The Kambojan style them Kha-men. They are the Kho-men of Leyden and the Kha-men of Gutzlaff.

KAMOTSAVA, a festival in honour of Kama on the 13th and 14th of the month Chaitra. It has merged, in some places, into the Holi, and so lost sight of.—*W.*

KAMPA, that portion of Tibet lying between the southern bank of the Tsan-pu river and the snowy ridges which separate Tibet from Bhutan.

KAMPILYA, one of the five sons of Haryasha, called the Panchala. The Panchala country was north-west of Dehli, between the Himalaya and the Chambal.

KAMPILYA, the city of king Drupada, in the country of the Panchala, where the swayamvara of Draupadi was held. It is in the doab of the old Ganges, in the modern Kampila.

KAMPONG. Malay. A house enclosure or grounds; the Anglo-Indian compound.

KAMPOT, the principal harbour of Kamboja.

KAMRAN. Timur's titles, in the height of

his power, were Sultan, Kamran, Amir, Kutb-ud-Din, Timur, Kur-khan, Sahib-i-Karan. Sultan means 'lord;' Kamran, 'successful;' Amir, 'commander;' Kutb-ud-Din, 'polar star of the faith;' Timur, 'it shall shake;' Kur-khan, 'of the lineage of sovereign princes;' and Sahib-i-Karan, 'master or lord of the grand conjunctions.' The easterns believe that in all the great conjunctions of the planets, there is a great revolution in the world. Thus Abraham, Moses, Zoroaster, Christ, and Mahomed each came into the world in a grand conjunction. Kayomurs, Solomon, Alexander, Chengiz, and Timur were each in their turn Sahib-i-Karan, or 'masters of the conjunctions,' and of all the great events during their respective reigns. — *D'Herbelot; Markham's Embassy*, p. 47.

KAMRBAND. Hind. A girdle, sash, or scarf, etc., tied round the waist.

KAMR-BASTAH. Pers. Literally, with the loins girt; it signifies on duty, with the body and the mind ready; from Kamr, the waist, and Bastan, to fasten.

KAMR-KHASA (of Peshawur), a hunter's or soldier's belt, holding knife, flint and steel, powder-horn, shot-flask, etc.

KAMRUP, a British district in the central portion of Assam. It lies between lat. 25° 50′ and 26° 53′ N., and between long. 90° 10′ and 92° 2′ E. Its great river is the Brahmaputra, which is navigable by steamers all the year through. Its aboriginal tribes are the Ahom, Cachari, Chandal, Dom, Mikir, Rabha, Saranya. The Cachari, Rabha, Saranya, and Mikir are all wild tribes of Indo-Chinese origin, whose common affinities it would be difficult to trace; they unite in repudiating the caste regulations and the ceremonial purity of living enjoined by Hinduism. In 1872, the Chandals numbered 10,222; the Doms, 9566; the Ahoms, who constituted the dominant race as late as the beginning of the 19th century, at the 1881 census numbered 179,314.

On the northern frontier of Kamrup there are five Doars, and on the north of Durrung, two. Their names are—Ghurkolah, Baksha or Banska, Chappaguri, Chapakhamar, Bijni, Buri Guma, Kulling.

Under the Assam Government, the Kamrup Doars had entirely fallen under the Bhutan authorities, and the Bhutan supremacy continued after the acquisition of Assam by the British Government. But the Durrung Doars were held alternately four months by the British Government and eight months by the Buteahs each year. In 1841, in consequence of aggressions, the whole of these Doars were annexed to British territory, and Rs. 10,000 a year paid as compensation to the chiefs of Kamrup, similarly with the Buteahs of Durrung, and Rs. 5000 a year paid for the Koreapara Doar.

To the east of the Jowang country are the independent clans of the Ruprye and Shirgaih Buteahs, whose custom it was to enter the Char Doar and Now Doar, which have been held by the British Government since the occupation of Assam, and to levy black-mail. But the black-mail was eventually commuted to an annual payment of money.

KAMSALAR, or goldsmith caste, perform marriage of their daughters both before and after the age of puberty. See Kammalar.

KAMSIN. Arab. A dust storm of N. Africa.

KAMTHI or Kamptee, a large town and cantonment in Nagpur district, Central Provinces, in lat. 21° 13′ 35″ N., and long. 79° 14′ 30″ E., on the right bank of the Kanhan river, immediately below the junction of that river with the Pench and the Kolar. The open place near the church is 996 feet above the sea. It is 9 miles from Nagpur.—*Imp. Gaz.* v.

KAMTSCHATKA, on the extreme north-east of Asia, contiguous to Siberia, is inhabited by different nations. Some who live about the middle pay a contribution to the Russians.—*Hist. of Japan*, i. p. 21.

KAMUL, Komul, or Kamil, the Hami of the Chinese, is the station at which the routes eastward from the north and the south sides of the Tian Shan converge, and from which travellers generally start to cross the desert before entering China. The people of Kamil were all Buddhists in Marco Polo's time. In 1419, Shah Rukh's envoys found there the mosque and Buddhist temple side by side.—*Polo*, ii. p. 36; *Benedict Goes in Yule, Cathay*, ii. p. 394.

KAMUNING, Mal. (Camunium, *Roxb.*, Chalcas paniculata, *Lour.*), is a light-coloured wood, close and finely grained, takes an exquisite polish, and is used for the sheaths of krisses. There is also a red-grained sort, in less estimation. The tree is very beautiful, resembling in its leaves the larger myrtle, with a white flower.

KAMUS. Arab. The ocean; mid-sea; the name of an Arabic dictionary compiled by Firozbadi in the 14th century, contemporary with Timur, who presented him with 5000 ducats as a reward for his learning and industry. It was translated into Latin by Giggens, and published at Milan A.D. 1632.

KAN or Kanam. Tam. A forest, a thicket.

KAN. The sun-god, according to Diodorus, is the Minos of the Egyptians. The hieroglyphics at Turin represent him with the head of an ibis or eagle, with an altar before him, on which a shade places his offerings, viz. a goose, cakes of bread, and flowers of the lotus, and awaits in humble attitude his doom.

KANA. According to Hindu law, a person blind of one eye is incompetent to succeed. Kana is the nickname given to a person labouring under this personal defect, which term is merely an anagram of Anka, the eye. The loss of one eye does not deprive an occupant of his rights, of which there was a curious example in the siege of the imperial city of Dehli, which gave rise to the remark, that the three greatest men therein had only the complement of one man amongst them. The emperor had been deprived of both eyes by the brutality of Gholam Kadir; the besieging chief Holkar was kana, and so was the defender, Sir D. Ochterlony. That Holkar's name has become synonymous with kana, and many a horse, dog, and man, blind of an eye, was called after this celebrated Mahratta leader. The Hindus attach a degree of moral obliquity to every individual kana, and appear to make no distinction between the natural and the acquired defect; though to all kana they apply another and more dignified appellation. Sukracharya, the Jupiter of the Hindu astro-mythology, came by his misfortune in no creditable way,—for, although the guru or spiritual head of the Hindu

gods, he set as bad a moral example to them as did the classical Jupiter to the tenants of the Greek and Roman pantheon.—*Tod's Rajasthan*, ii. p. 269.

KANADA is spoken of in the Padma Purana as a devout ascetic. He was the founder of the Vaisheshika school of philosophy.—*Ward*, iv. 10.

KANAIT, an agricultural local tribe, holding most of the land on the Simla Hills. They are inferior in position to Rajputs, more perhaps of the level of the Kurmi and Lodhi, but they are often educated, and are generally ministers to the Rajput chiefs. Their women are very nice looking, and all the tribe who are not (in the upper hills) in contact with Tartars are quite Aryan, though not very large. In certain places is a partial and local practice of polyandry among them, but it is not the general custom of the tribe.—*Campbell*, pp. 88, 97, 123.

KANAKA-DANDAM. SANSK. A golden sceptre, one of the insignia of royalty of the Chalukya dynasty when ruling at Kalyan.

KANAKAN. MAL. Predial slaves in Malabar, also designated Kanaka charma. According to one account, they are a subdivision of the Palayar.

KANAKKAN. MAL., TAM. An accountant.

KANAM. TAM. A titular equivalent of Iyer, but added after that title.

KANARAK, in the Puri district of Orissa, on the sea-shore of the Bay of Bengal, 19 miles north-west of Puri town, in lat. 19° 53′ 25″ N., and long. 86° 8′ 16″ E. Its temple, now in ruins, forms one of the most exquisite memorials of sun-worship in India; it was built between A.D. 1237 and 1282. Sculptures in high relief, but of an indecent character, cover the exterior walls. The nymphs are beautifully-shaped women; the elephants move along at the true elephant trot, and kneel down in the stone exactly as they do in life. Club-men, griffins, warriors on prancing horses, colossal figures of grotesque and varied shape, stand about in silent groups. Each of the four doorways, on the north, south, east, and west, has two lintels of bluish chlorite slate, very hard, and exquisitely polished. On these lintels rest massive beams of iron, supporting the wall above. The eastern entrance was, till some years ago, surmounted, as in other Orissa temples, by a chlorite slab, on which the emblems of the seven days of the week, with the ascending and descending nodes, are carved. The beauty of this elaborate piece proved a more fatal enemy than time, and tempted English antiquaries to try to remove it by sea to the museum at Calcutta.—*Imp. Gaz.*

KANARI caves in the island of Salsette. See Caves; Karli.

KANARY ISLANDS, in the Pitt passage, are an extensive chain of flat, woody, uninhabited islands, stretching along the N. coast of Mysole.

KANASI or Kans. HIND. A sort of bell-metal, of which plate and utensils are made.

KANAT and Karez are subterraneous conduits and trenches or artificial water-courses above ground. The best of these in Shiraz is the Karez which Rukn-ud-Dowla Hasan-ibn-Buiah, a prince of the Dilemite race, first caused to be made; this Karez is denominated the water or stream of Ruknabad.—*Ouseley's Travels*, ii. p. 7.

KANAUJ, a district or province in Hindustan, known also as Kanya Kubja. It takes its name from Kanauj, an ancient city in Farrakhabad district, North-Western Provinces, in lat. 27° 2′ 30″ N., and long. 79° 58′ E. Kanouj for many hundred years was the Hindu capital of Northern India, but the existing remains are few and unimportant. In A.D. 1016, when Mahmud of Ghazni approached Kanouj, the historian relates that 'he there saw a city which raised its head to the skies, and which in strength and structure might justly boast to have no equal.' Just one century earlier, or in A.D. 915, Kanouj is mentioned by Masudi as the capital of one of the kings of India; and about A.D. 900, Abu Zaid, on the authority of Ibn Wahab, calls 'Kaduje a great city in the kingdom of Gozar.' At a still earlier date, in A.D. 634, we have the account of the Chinese pilgrim Hiwen Thsang, who describes Kanouj as being 20 li, or 3½ miles in length, and 4 or 5 li, or ¾ of a mile in breadth. The city was surrounded by strong walls and deep ditches, and was washed by the Ganges along its eastern face.

At the time of Hiwen Thsang's visit, Kanouj was the capital of Raja Harsha Vardhana, the most powerful sovereign in Northern India. The Bais Rajputs claim descent from the famous Salivahan, whose capital is said to have been Dawndia Khera, on the north bank of the Ganges. Their close proximity to Kanouj is in favour of the sovereignty which they claim for their ancestors over the whole of the Gangetic Doab from Dehli to Allahabad. The more important architectural remains are the shrine of raja Ajaipāl, supposed to have lived in the 9th or 10th century; the Jama Masjid; the tombs of Bala Pir and of his son Shaikh Mehndi.

The modern town of Kanouj occupies only the north end of the site of the old city, including the whole of what is now called the Kilah or citadel. The stream which flows under Kanouj, from Sangrampur to Mhendi Ghat, although now chiefly filled with the waters of the Kali Nadi, was originally the main channel of the Ganges.—*Cunningham's Ancient Geog. of India*, pp. 376, 379; *Imp. Gaz.*

KANAUJIA or Canoujia. HIND. A designation of various tribes in Hindustan, implying a notion of their having come originally from Kanouj or Kanya Kubja. It is especially applied to a large and influential tribe of Brahmans. Five chief subdivisions of them are reckoned, all numerous and well known,—Kanaujia proper, Sarwaria, Sanaudha, Jijhotia, Bhumhar,—who are again divided into 16 classes, named either from their reputed founders, who were celebrated sages, as Garga, Gautama, and others, or from their former acquirements, as Dobe, Tewari or Trivedi, Chaube, or as learned in two, three, or four Vedas, or from their having been teachers, as Bhattachari and Upadhyaya, or from other circumstances, as Pande, Dikshit, Bajpeyi, etc.

The Kanaujia proper are found principally in the Central Doab, extending into Bundelkhand on the one hand, and on the other into Oudh, and are divided into 6 or 6½ families, thence termed Khat (for that six) Kol, or, severally Gotes (from the Sanskrit Gotra, a race), as the Sandel gote, Upaman gote, Bharadwaj gote, Katyayana or Viswamitra gote, Kasyapa gote, and Sakrint gote.

They correspond in rank to the Kulin Brahmans of Bengal, and although taking wives from the other tribes, allow their daughters to marry only into one of the Khat-Kul.

The Sarwaria class is also called Saryu or Sarju-paria, living beyond the Saryu or Gagra river, or chiefly in Gorakhpur. The Sanandhas are met with principally in Rohilkhand and the Upper and Central Doab, extending westwards to Gwalior. The Jijhotias are settled to the south-west. The Bunhars are found with the Sarwarias in Oudh, and spread to the hills of Bundelkhand. The term Kanaujia is applied, however, to other than Brahmanical tribes, and we have Kanaujia Kurmis, or agricultural castes, and even Kanaujia Thugs.—*Wilson's Glossary.*

KANAWAR, between lat. 31° and 32° N., and long. 78° E., a province in the Himalaya. The western as well as the eastern chain separate the great Hindu family of India from the Bhot of Tibet. Some mixed races are found to the south of each chain, as the Lahuli and Kanawari in the west, and the Ghurka and Bhutani in the east. In the upper valleys of the Sutlej, in Spiti and Kanawar, are mixed races exhibiting much Tibetan blood, and in religion apparently more Buddhist than Hindu. The Tibetan colony at Mohasu, just above Simla, are powerful, ruddy-looking people, entirely unlike Indians; their women are industrious, but very unattractive. Kanawar produces great quantities of fruit, and from many other places men may be met travelling downwards with kilta or long baskets full of apples of very pleasing appearance, large and well coloured, but though sweet, their flavour is deficient.—*Powell; Campbell*, p. 116. See Kunawar; Polyandry.

KANAWEZ. HIND. A fabric of plain shot silk, that is, with a thread say of green one way and of red the other, the same as the daryai dhupchand of the Panjab, only better. It is made in Bokhara and Persia.

KANCHANI. HIND. A dancing girl by caste and profession, a common woman. Kanchani, a sect among the Gosains who gain their livelihood by dancing and singing. They wear the red cloth as devotees, and observe most of the ceremonies of the Gosains. They marry. At death, their bodies are either buried or thrown into a river. —*Sherring's Hindu Tribes.*

KANCHAR. TURK. A dagger; the Khanjar of Persia and Hindustan.

KANCHARAVITA KARU, a mendicant belonging to the five classes of artificers.

KANCHARI, MAHR.; Kanchkar, HIND., a caste working in glass and crystal, a coppersmith, a tinsmith.

KANCHI or Conjeveram, a holy city, 45 miles west of Madras. It is one of the seven holy cities of India. It has two great Hindu temples, one of the Saiva and one of the Vaishnava sect. The former is poor and neglected, having in recent years been plundered by dacoits. Conjeveram pagoda was taken by Clive on the 29th August 1751, and again in December, and again in 1752. Conjeveram was at one time the capital of the Chola kingdom, one of the most ancient and prolonged of all the Indian dynasties, which held sway in parts of the south of India from the 8th to the 17th centuries, when Shah-ji, the father of Sivaji, totally annihilated every vestige of their once great power. During the pilgrim Hiwen Thsang's stay at Kanchipura, about 300 Buddhist monks arrived from Ceylon, which they had quitted on account of political disturbances consequent on the death of the king. Hiwen Thsang must have arrived in Kanchipura about the 30th of July A.D. 639, and, according to Turnour's list of the kings of Ceylon, raja Buna Mugalan was put to death in A.D. 639. From the information furnished by these monks, the pilgrim drew up his account of Seng Kia-lo or Ceylon, which he was prevented from visiting by the disturbed state of the country. From Malayakuta he returned to Dravida (Conjeveram), and then proceeded to the north-west for 2000 li or 333 miles, to Kong-kien-na-pu-lo or Konkanapura.—*Cunningham's Ancient India*, p. 548.

KANCHINJINGA, a mountain in the Sikkim Himalaya, in lat. 27° 42′ 5″ N., and long. 88° 11′ 26″ E., and 28,176 feet above the sea. It is the second loftiest mountain in the world. Its west peak is in lat. 27° 42′ 1″ N., and long. 88° 8′ E., and the top of the peak is 28,156 feet above the sea. This peak is exceeded in height, as yet, by the Gaurisankar in Nepal, and the Dapsang peak in the Kara-korum chain. The latter, marked by the G. T. S., K. 2, in lat. 35° 41′ N., and long. 76° 48′ E. Gr., attains a height of 28,287 feet. Kanchinjinga forms a central and predominant object in the Sikkim panorama of the Snowy Range. Kanchinjinga presents itself from Falut under a vertical angle of 4° 51′ 10″, and even the lowest point of the junction between Kabru and Kanchinjinga (the curve seen just below the eastern peak) has still in the panorama an angular height of 3° 36′. Kanchinjinga is an immense mountain peak.—*Jo. As. So. Beng.*, 1860; *Hermann; Schlagentweit.*

KANCHUKI. HIND. A eunuch. Kanchukini, a female attendant.

KANCHULI. HIND. A corset or bodice worn by Rajput women.

KANCHULIYA, a sect of Saiva Hindus, worshippers of the sakti, who are said in their rites to have a community of women without regard to consanguinity, and take measures to prevent individual selections.

KANDAHAR, a town in Afghanistan, situated in lat. 31° 37′ N., and long. 65° 30′ E., between the Arghandab and Tarnak river, 89 miles south-west of Khilat-i-Ghilzai, 233 miles south-west of Ghazni, 318 south-west of Kabul, and 380 south-east of Herat. It is said to have been founded by Lohrasp, a Persian king who flourished in times of very remote antiquity, and to whom also the founding of Herat is attributed. It is asserted by others to have been built by Secunder Zul-Kurnin, Alexander the Great; and the traditions of the Persians here agree with the conjectures of European geographers, who fix on this site for one of the cities called Alexandria. The people of Kandahar are supposed to be the ancient warlike Gandhara, a cognate race with the Kshatriya, who fought in the army of Xerxes, B.C. 480, armed with bows of bamboo and short spears.

Kandahar is said to have been called so from the Gandhara (Greek, Gandaridæ) who migrated to the westward from the Gandhara of the Indus in the fourth century. The early campaigns of the Arabs against Kandahar are given at length in the work of Biladeri, in M. Renaud's Fragments of Arab History, published at Paris about 1843. It was taken by Yakūb-bin-Leis A.D. 865, founder of the Sofarides dynasty, who were driven out by the Sassanides, thereafter fell to Mahmud, then to

the Ghori, the Seljuk, the Turkoman A.D. 1153, and in succession to the Ghori again, to the Kharasmians, to Jahangir Khan (A.D. 1222), to Timur (1389), and to Bäber, the Persians, and the Uzbak.

From the remotest times Kandahar must have been a town of much importance in Asia, as its geographical position sufficiently indicates, it being the central point on which the roads from Herat, Seistan, Gour, India, and Kabul unite, and is the commercial mart of these localities. Kandahar was retaken from the Moghuls by the Persians in 1642, during the reign of Shah Abbas the Second.

The ancient city stood till the reign of the Ghilji, when Shah Husain founded a new one under the name of Husainabad. Nadir Shah attempted again to alter the site of the town, and built Nadirabad; at last Ahmad Shah, Saddozai, founded the present city, to which he gave the name of Ahmad Shah and the title of Ashraf-ul-Balad, or the noble of cities; by that name and title it is yet mentioned in public papers, and in the language of the court; but the old name of Kandahar still prevails among the people, though it has lost its rhyming addition of Dar-ul-Karar, or the abode of quiet, or the city of stabilities. Ahmad Shah himself marked out the limits of the present city, and laid down the regular plan which is still so remarkable in its execution. He surrounded it with a wall, and proposed to have added a ditch; but the Daurani are said to have objected to his fortifications, and to have declared that their ditch was the Chaman of Bistan, a meadow near Bistan, in the most western part of Persian Khorasan. Kandahar was the capital of the Daurani empire in Ahmad Shah's time, but his son Timur changed the seat of government to Kabul. The new town is surrounded by a ditch, flanked with a citadel, but the place is commanded on several points by rocky hills, the last slopes of which come up to the ditch of the fortification to be buried amongst gardens, orchards, and plantations of beautiful shrubs, through which flow streams of the clearest water. The citadel is situated on the north of the town, and contains a very good residence.

It has been thrice occupied by the British,—in 1839-42, and again in 1878-79, and again in 1880, and on the first occasion the fortifications were put into a good state by them. They also built large barracks on a great space, situated outside the Herat gate. The town is divided into many mahalla or divisions, which belong to the numerous tribes and nations that form the inhabitants of the city.

Some Persian authors considered Kandahar as an Indian, others as a Persian town; the Afghans themselves include it in Khorasan, to which province they assign the Indus (called also the Attock and the Sind) as the limit. According to them, India commences only on the eastern side, and to the south of this river, from the point in which it receives the Sutlej. The Panjab, comprehending Kashmir and the country of the Sikh, and Zablestan, comprehending Ghazni and Kābul, form another country. The inhabitants of India they call Hindi, and those of Hindustan, Hindustani.

The population of Kandahar is one-fourth of the tribe of Barakzai, one-eighth of the tribe of Ghilji, one-eighth of various other tribes, Afghan, Daurani, half Parsivan, and Hindu. One large quarter of the town, however, the N.E., is entirely inhabited by the Berdurani tribe.

The province of Kandahar is everywhere subject to intense heat. In the fortress of Girishk, on the banks of the Helmand, in the month of August, the centigrade thermometer stood at 48° or 49° in the shade. This principality is bounded on the south by the deserts of moving sand of the Seistan, and is on this side open to violent winds, surcharged with exceedingly fine sand, which is very injurious to animal life.

At the foot of the old town of Kandahar is one of the most celebrated relics of antiquity belonging to the eastern world, the water-pot of Fo or Buddha. It was carried to Kandahar by the tribes who fled in the 4th century from Gandhara on the Indus to escape an invasion of the Yu-chi, who made the irruption from Chinese Tartary with the express purpose of obtaining the pot. It is the holiest relic of the Buddhist world, and still retains among the Muhammadans of Kandahar a sacred and miraculous character. It is called the Kashgul-i-Ali, or Ali's pot. It is formed of stone, and may contain about twenty gallons. A celebrated grotto, known by the name of Ghar-i-Jamshid, is situated 16 miles S.W. of the city, in the range of the Panj Bai Hills, which overlook the left bank of the Arghandab river. The whole of its roof is beautifully marked as if it were artificially carved.—*Elphinstone's Caubul; Ferrier's Journ.; Hist. of Afghanistan; Masson's Journey; Mohun Lal's Tr.; MacGregor.*

KANDARI. Karn. A large kuri or fish creel, with the addition of an upper lip extended forwards and upwards at the angle of 45°. It is put in a natural run in a river, between boulders of rock, and made big enough to fill the whole passage, all minor ways being blocked with huge stones. The long protruding lip comes well out into the air, and prevents fishes from leaping over or being carried over the whole contrivance when coming down the rapids.

KANDELAI or Gan Talana, a tank near Trincomalee, constructed by Maha Seu, between A.D. 275-301.

KANDELIA RHEEDII. *W. and A.* Rhizophora candel, *Lin., Rox.* | Jeru-kandel, Maleal.

A shrub growing in Malabar, in the Sunderbans, in the deltas of the Ganges, Godavery, and Irawadi, and in Tenasserim. Its bark is employed in medicine.—*Voigt.*

KANDESH, a province in the Bombay Presidency, traversed by the Tapti river in its mid course. Adjunta, in Kandesh, is celebrated for its numerous caves, excavated out of the mountain. The period of this gigantic labour seems to have been towards the decline of Buddhism in the Peninsula of India, before or about the 8th century. See Khandesh.

KANDH, written also Kond, Khond, and Ku, a race in the N.E. part of the Peninsula, in the Tributary Mahals lying between the eastern borders of Gondwana and the sea, up to lat. 22° N., and south to Bastar. In 1835, when engaged in suppressing a rebellion in Gumsur, the British officers became aware that this race practised human sacrifice and female infanticide on a scale and with a cruelty which had never been sur-

passed by the most savage of nations, and from that period strenuous efforts of very able officers have been directed to the repression of these most appalling crimes. Major Macpherson reported, in April 1842, that in many villages he did not find a single female child. They killed their own girls, and purchased wives from other parts of the country. The custom was not universal. It was practised in what was called the middle Kandh region, but even there some tracts were honourably excepted, as Digi and Bodo Ghoro.

The Kandhs are strictly an agricultural people. They are divided into two sects. One worship Bura, and hold human sacrifice in abhorrence. The other devote themselves to Tari, the earth-goddess, and periodical human sacrifices were made in her honour. The procurers employed were usually the Pan or Panwa, a low tribe diffused amongst the population of all the Tributary Mahals, under different denominations, as Pan or Panwa, Chik, Ganda, Panka.

Colonel Dalton, the most recent writer, tells us that the Kandh call the victims Toki or Keddi, another term, Meriah, is Uriya. Persons of any race or age and of either sex were acceptable, if purchased, or the children of purchased Meriahs. Numbers were bought and held in readiness, and were well treated and fed. Male and female Meriahs were encouraged to cohabit, and other persons might have intercourse with female Meriahs, and in this manner numbers of children were produced, who were all treated as dedi ted to destruction. If a Meriah had intercourse with the daughter of a Kandh, it was considered a distinction.

Ten or twelve days before the sacrifice, the hair of the victim selected, till then unshaved, was cut off, and the villagers, having bathed, went to the sacred grove with the priest, who there invoked the goddess and implored her favour. The rites varied among the tribes. The ceremonies lasted three days, and it was a time of unbridled licence, drunken feasting, and mad dances. The forms of the sacrifice differed slightly in the villages. On the second morning, the victim, who had been kept fasting from the preceding evening, was carefully washed and dressed, and led forth from the village in procession, with music and dancing, to the Meriah grove. The victim was bound to a post in the middle of the grove, in a sitting posture, by the priest. He was then anointed with oil, ghi, and turmeric, adorned with flowers, and worshi and there was great contention amongst the bystanders to obtain some relic, even a portion of the unguent with which he had been anointed. He was then left all night, during which the licentious feasting of the previous night was resumed. As the victim must not die in bonds, the arms and legs were broken, or stupefaction by opium was produced.

The priest now offered up prayers to the earth-goddess. At noon of the third day, the priest took the branch of a green tree, cleft several feet down the centre. They forced the victim within the rift, fitting it in some districts to his throat, and forcibly closed by cords twisted round the open extremity of the stake. He then wounded the victim slightly with his axe, and on this the crowd threw itself on the sacrifice, and, leaving untouched the head and intestines, stripped the flesh from the bones, and fled with them to the fields. The remains were next day burned on funeral pile, with a further sacrifice of a sheep and the ashes scattered over the fields, or mad into a paste, with which the floors of the house and granaries were smeared. Subsequently bullock was given to the father or procurer of th victim, and another was sacrificed and eaten a the feast, which terminated the rite; but on year after the human sacrifice, the goddess Tar Penna was reminded of it by an offering of a pig Major Macpherson mentions that the Meriah i some districts was put to death slowly by fire the great object being to draw from the victi as many tears as possible, in the belief that Tar would proportionately increase the supply o rain.

In July 1838, Lieutenant Hill, of the Surve Department, described the practice of huma sacrifice as existing in the Kandh Mahal o Gumsur, in Daspala, Boad, and Sohnpur, jus south of the Mahanadi, and in Chinna Kimedy Pedda Kimedy, Jeypore, and Bastar. The Basta raja had the credit of having himself organize the most extensive sacrifice that had ever bee heard of, on which occasion 27 adult males ha been immolated; in fact, it was not suppose that any Kandh Mahal was free from the stain.

The number, however, it was said, had dimin ished from hundreds to ten or a dozen yearly but this improvement was not general, and th Kandhs of Boad had promised acquiescence i the wishes of Government, but as a final sacrific they offered Tari, before they gave it up, a sacri fice comprising 125 victims. On the 1st Apri 1848, Colonel Campbell reported that, with on or two exceptions, all the influential men of Boa had pledged themselves by the most solem oaths (sworn on a tiger skin and on some earth thenceforth to abandon human sacrifices, and i earnest of their sincerity 235 Meriahs were given up

Chinna Kimedy was found to be divided int seven districts, each under a Hindu chief o Pater, subdivided into Muttahs (groups of vil lages or parganas) and villages, each under Kandh headman called Maji. The country i described as in steppes. Throughout this hilly region human sacrifice and female infanticid generally prevailed, the only exceptions being in the districts of Sarangad, Chandraghari, an Degi of Kosadah. The annual season for th sacrifice was about to commence when the agen marched into this country, but 206 Meriahs were given up.

In Jeypore, human sacrifices had been annually offered to Maniksoro, the god of war, as well a to the earth-goddess. The victim was tied to a post by his long hair, assistants to the officiating priest holding out his arms and legs so that the body was supported over a narrow grave, with the face downwards. The priest, standing on the right side, prayed for success in battle and preservation, and as he prayed he at intervals hacked at the neck of the victim, whom he addressed in consolatory words, assuring him that he would soon have the honour of being devoured by the great god Maniksoro for their benefit, and that his obsequies would be performed decorously, and reminding him that they had bought him for this special purpose from his parents. He was then decapitated, the body falling into the

grave, and the bleeding head remained suspended from the post till the birds devoured it.

Colonel Campbell, in Jeypore, succeeded in rescuing 77 Meriah males and 117 females. After the suppression of human sacrifices in the Mahals of Jeypore, it was found that the practice existed in the low country amongst relatively civilised and educated men. The victims were generally of the Tura class, purchased from their parents. At the town of Mulcagherry, 100 of these children reserved for sacrifice were found and were surrendered.

Of the numerous Meriahs recovered from the Kandhs, a large proportion were young girls, who, becoming wards of Government, were brought up with care, and were more or less educated. It was deemed good policy to give some of these damsels in marriage to Kandh bachelors of respectability; but Colonel Campbell ascertained that these married wards had no female children, and, on being closely questioned, they admitted that at their husbands' bidding they had destroyed them. Captain M'Neill found that in the districts of Putiadeso, Sorabisi, Korkapatah, Jhumka, and Ryaghada, infanticide, both male and female, prevailed to an appalling extent. Colonel Dalton says that many of the Bura worshippers practised female infanticide.

The Kandh have serfs, and follow the practice of blood revenge. Over each village an elder presides called an Abbaye, and a number of adjacent villages form a district under a district Abbaye. In each village there is a house assigned to the bachelors as their dormitory and club, and another for the maidens. In Boad, the girls' dormitories are under charge of an elderly matron, who sleeps inside and locks the door. At one of the Kandh festivals, held in November, all the lads and lasses assemble for a spree, and a bachelor has then the privilege of making off with any unmarried girl whom he can induce to go with him, subject to a subsequent arrangement with the parents of the maiden.

Kandhs are as fond of dancing as the Oraons, and, like them, have a dancing-place in every village, surrounded by stones or wooden seats, and shaded by venerable trees. The dancers pay particular attention to their dress and to the arrangement of their hair. The hair, which is worn very long, is drawn forward and rolled up till it looks like a horn projecting from between the eyes. Around this is wrapped a piece of red cloth, and feathers inserted of favourite birds. The clothing of the women is nearly as limited as that of the males. The bosom is invariably exposed, and a kilt-like cloth round the loins, scarcely reaching to the middle of the thigh, is the sole garment.—*Colonel Dalton, Ethnology of Bengal*, p. 290; *Imp. Gaz.*

KANDHAR, an isolated rock in the plain between the Kandhar confluence of the Parbati and Chambal, and the famous Rin-t'humbor. Sagarji held the fortress and the lands of Kandhar. His descendants formed an extensive clan called Sagarawut, who continued to hold Kandhar till the time of Sawai Jai Singh of Amber, whose situation as one of the great satraps of the Moghul court enabled him to wrest it from Sagarji's issue, upon their refusal to intermarry with the house of Amber. Mahabat Khan, the most intrepid of Jahangir's generals, was an apostate Sagarawut. They established many chieftainships in Central India, as Omri Bhadora, Gumesgange, Digdolli.—*Tod's Rajasthan*, i. pp. 331, 355.

KANDH-MALS, a tract of country in Boad Tributary State, Orissa, now under a loose form of British administration. The country consists of a broken plateau, intersected by ridges of low hills, the last refuge of the aboriginal Kandh (Khond) race. The tract contains 826 villages, 10,811 houses, and a total population in 1872 of 51,810 persons, the aboriginal tribes being 35,798, almost all of them Khands, others being Pan (6204), Goala, Sud, and Suri.

KANDI, a measure of weight; its value ranges in various places from 8 to 20 maunds, viz.:—

	Maunds.	Lbs.
Bombay and Poona,	8 to 20	560
Malealam, . .	28	500
Anjengo, . . .	...	500
Malabar, sea customs, . .	...	560
Malabar, land customs,	...	480
Madras, . . .	...	500
Bombay, . .	20	560
Surat, . . .	20	746·6
Travancore, .	20	640

KANDLA. Hind. The cylindrical silver ingot, the basis of works in wire drawing, also a square thin rod of iron, used in gun barrel making; the drawer of silver ingots in their first stage of being made into wire.

KANDOBA, a male deity of Jejuri in the Bombay Dekhan between Sassoor and Satara, also called Kandeh Rao. He is represented as an armed horseman, and is regarded as an incarnation of Siva. About the beginning of December, on the 6th of Margashirsh, a great festival and fair are held, to which pilgrims come from a great distance. Bhandar and champa flowers are sacred to Kandoba, and exorcists shout Elkot and give bhandar. Kandoba, next to Wittoba, is the most popular object of worship among the Mahrattas. The god Byroba, the local deity of herdsmen, is as largely worshipped in the Dekhan as is Kandoba, the deified hero of shepherds. The chief objects of Mahratta worship are certain incarnations or images of deified mortals, known as Etoba or Wittoba and Kandoba, at Panderpur, Jejuri, and Malligaon, but the village deities receive a large part of their attention in times of sickness or peril. Brahmans state that Siva became incarnate in Kandeh Rao for the purpose of destroying an oppressive giant named Manimal, at a place in the Karnatic called Pehmer. The giant Manimal made a most desperate defence against Kandeh Rao, but was at length slain, whereupon all the oppressed subjects of this giant paid adoration to Kandeh Rao, to the number, as the story goes, of seven kror of people, whence this avatara is called Yehl-khut; Yula in Tamil meaning seven, and Khut or Koot being a Mahratta pronunciation of (1,00,00,000) a hundred lakh, or ten millions. A handsome temple, dedicated to the worship of Kandoba, is at Jejuri, a town of some extent about thirty miles to the south-east of Poona. It is situated in a beautiful country, on a high hill, and has a very commanding and majestic appearance; the temple, walls around, and steps up to it, are well built of fine stone. The murlidar, or musical girls attached to it, are said to exceed two hundred in number. A great many Brahmans reside in and about the temple, and many beggars. Kandoba is not an uncommon name with Brahmans and other Hindus, for instance, Lakpat Kandhi Rao.—*Chow-Chow*, p. 262; *Moor*, p. 424.

KANDY, in lat. 7° 17′ N., long. 80° 49′ E., one

of the principal towns in the interior of Ceylon. Bellungallee village, S.W. of Kandy, is 2259 feet; Matina patin, S. of Kandy, is 3201 feet; Peredenia is 1650 feet. Kandy is a table-land with a chief town of same name, and was conquered by the British after the battle of Meyda Maha Nowera, 18th February 1815, where the sovereign Vikrama Raja Singa was taken prisoner and removed to Vellore, where he died. The British entered the Kandyan country, 11th January 1815.

The Kandyan race are mountaineers, and, until the middle of the 19th century, followed polyandry. They are inhabitants of the hill country, and are a hardy, robust race, never till recently intermingling with the low countrymen. Their language is made up of three component parts, Elu (or Singhalese pure), the Pali, and the Sanskrit. They possess an extensive literature, and their religion is Buddhism. The low country Singhalese are either Buddhists, Roman Catholics, or Protestants. Among the Kandyans, polyandry was prevalent till declared illegal in 1856, and the wife had the possession of all the brothers. The children call the eldest brother father. A man could bring in another, not a relation, to have joint marital rights with himself; indeed, the first husband can so introduce as many as the wife will consent to receive as husbands. In the Beena marriage, the husband went to reside in the wife's house, and the woman shared the family inheritance with her brothers. The husband, in this marriage, could be dismissed summarily by the family of the wife. In the Deega, a more respectable marriage, the wife leaves her own house for that of her husband, forfeiting all claim on the property of her parents, but acquiring some claim on that of her husband; and the wife cannot obtain divorce, unless with the full consent of the husband. Divorces were constantly sought for by women on trivial pretences. A child born within nine months of the divorce must be maintained by the husband. The Kandyans are a larger race of men than the Singhalese of the coast provinces, but are exceedingly indolent and thriftless.

KANERKI. At the close of the first century of the Christian era, when the supposed Ario-Parthian dynasty ceased to reign in Kabul and the Panjab, a new race of Scythian kings appeared, who issued gold and copper money of quite a different device and style from anything before current. These bear a title of Kanerkes, at first with the title of Basileus Basileon, but afterwards with the Indian title of Rao Nano Rao. The number and variety of the Kanerki coins indicate a long dominion of kings of the race. The only characters on their coins are Greek, but these became at last so corrupt as to be quite illegible. On their obverse is the king standing, or in bust to the waist, in a Tartar or Indian dress, with the name and titles in a Greek legend round; while on the reverse are Mithraic representations of the sun or moon with ΗΛΙΟΣ, NANAIA, OKPO, MIOPO, MAO, AΘPO, or some other mystical name of these luminaries, also in Greek letters. And on all the Kanerki coins is the same monogram as the Kadphises dynasty used, and which was borrowed apparently from the nameless Soter Megas. This would seem to indicate that the Kanerki dynasty, though interrupted, as Mr. Prins supposes, by the intervention of Ario-Parthiar was yet a continuation of the same tribe a nation as its predecessors of the name of Ka phises. The state religion seems to have be Mithraic, whence derived, not known; but their coins the Siva bull device is also found the reverse, the bull's head being to the left,— the coins of the Kadphises being to the rigl Their power seems to have lasted for more th two centuries. The style and device of the Gree of the gold coins especially, of the coins both Kadphises and the Kanerki, was carried on till grew more and more corrupt, and was at la entirely lost through the deterioration of a under the princes of Hindu race, who succeed to the more energetic Greeks and Scythians.- *On the Historical Results deducible from rece Discoveries in Afghanistan, by H. T. Prinse Prinsep's Antiquities*, i. p. 134.

KANG, Chinese bed-places, built of brick admit of fires being made inside during the co weather; ranged round the walls, leaving tl middle of the room vacant.—*Frere's Antipod* p. 312.

KANGANA. HIND. A bracelet, or a strip or ribbon, tied round the wrist at marriage. T Kangani is a ceremonial part of a Muhammad marriage.

KANGANI. TAM. A ganger who brin native labourers from the Madras districts to t coffee estates of Ceylon.

KANGAROO, pouched quadrupeds of Australi species of the genera Halmaturus, Macropus, a Petrogale. Bennett's kangaroo is Halmatur Bennettii; H. ruficollis is the red-necked ka garoo; H. Derbianus is the Derbyan kangaro the great kangaroo is Macropus gigas; the blac faced kangaroo, M. melanops, and the red ka garoo, M. rufus. Petrogale xanthopus is one six species of the rock kangaroo. The kangar rat of Australia is a species of Hypsiprimnus.

KANG-HI, an emperor of China of the 17 century, who instituted the custom of havi read, on the mornings of new and full moon, homily on the practical duties of life. He pul lished an illustrated cyclopædia of 10,000 books 300 volumes.

KANG-JAI, in Munipur, hockey on horseback

KANGKEYAR wrote a Tamil lexicon in Vent metre, called Urissol Nikandu, much used schools.

KANGO. JAP. A seat for one person slun on a bamboo or pole, and carried by coolies.

KANGRA, a town in the Panjab, in lat. 32° 14″ N., and long. 76° 17′ 46″ E. It is the chi town of a district of the same name, lying betwee lat. 31° 20′ and 33° N., and between long. 75° 3 and 78° 35′ E.; area (1878), 8988 square mile It consists almost entirely of immense mountai ranges, whose three parallel lines, with a trans verse ridge, form the four main basins, in each which a great river takes its rise,—the Beas, th Spiti, the Chenab, and the Ravi. The Beas ha its origin in the Rotang mountains, north Kullu, and, after flowing southward for about 5 miles, traverses the state of Mandi, and the drains the whole valley of Kangra proper. Th Spiti, rising in the Tibetan valley of the sam name, runs due south to join the Sutlej in th native state of Bashahir. The Chenab spring

from the slopes of Lahoul, and runs north of the Central Himalayas into the state of Chamba; while the Ravi, draining the Banganal valley, keeps to the south of the same chain, and flows north-westward also into Chamba. The principal castes in it are Brahmans, Rajputs, Girath, and Kanets, almost entirely confined to Kullu. In Spiti and Lahoul, the majority of the population consists of Tibetans, ruled over by Rajput landlords. Their religion is Buddhist, with a Hinduizing tendency. Throughout the rest of the hills, the substratum consists of aborigines.

The fort is in lat. 32° 5′ N., long. 76° 18′ E., situated on the top of a rock, 150 feet above the Bunganga, near its confluence with the Beas, and 2424 feet above the sea. This eminence is nearly 3 miles in circumference, and is bounded for the most part by precipices nearly perpendicular. The Gaddi are a hill shepherd race about Kangra and elsewhere. The Kangra people are sturdy, honest, and independent. Most of the traders of the snow valleys have some members of their families residing at Daba or Gyani on the Numakhar lake. The great body of the hillmen are Rajputs; there are a few villages of Brahmans, their residences are respectable, and occupy the more elevated portion of the village site, the huts of the Dom or Hali being on a low range. The Dom are hereditary bondsmen to the Rajputs. Basgi also dwell there, and are, both men and women, singers at the temples. The men of all castes in the hills are short and of poor physique; they look worn and get deep lined on the face at a comparatively early age. The young women are often extremely pretty, those living in the higher and colder villages having, at fifteen or sixteen, a complexion as fair as many Spaniards or Italians, and with very regular features. But they grow darker as they advance in years, and become very plain.

Kangra has been famed for centuries for the skill of its people in restoring noses by the rhino-plastic operation, instituted by Budyn, a physician of the emperor Akbar, to whom Akbar granted a jaghir at Kangra.

Dharmsala is divided into two stations, the lower and the upper, the one the residence of the civilians and visitors from all parts of the Panjab, and the other occupied by the officers' houses and lines of a regiment.

Dharmsala stands in the bosom of those mighty hills, circular in its outline, and commanding a view, unequalled in the world perhaps, of the placid and beautiful valleys of Kangra and the noble hills behind. The houses are built progressing up the hill, so that they are at very different elevations, the lowest being at an elevation of 4000 feet, the highest 7000 feet. Lord Elgin died here. The sanatorium is on one of the spurs running south from the great range of Dhaoli Dhar. This range runs east and west, at a height of from 13,000 feet to 19,000 feet, and forms a great wall on the north; it is due to this range that the climate of Dharmsala is so mild and has such a heavy rainfall. Kangra is the most beautiful district in India, excepting Kashmir. It is a most lovely fertile valley, surrounded by lofty mountains, interspersed with undulating hills, and situated between the rivers Ravi and Sutlej. On one side it has the territories of Kashmir and Chamba, on the other the wild but romantic hunting fields of Kullu, Spiti, and Ladakh.

The district produces iron ore in the Mundi Futtehpur mines; antimony in Lahoul, galena at Rupi Kullu, copper pyrites at Pelang, gold from the Beas river, rock-salt, talc, iron pyrites, silver ore? sandstone, and kaolin; also mineral waters of Beshisht, Kullu, Munikurn, Jowallee, Amte, Bassa, Bohun, and Kohalla. Sulphur, borax, from Lahoul. Spiti produces sulphuret of antimony, gold, gypsum, alabaster, marble, garnet, oxide of copper, belemnites, fossil molluses and fishes.

The Kangra district yields wheat, barley, gram, lentil, rape-seed, safflower, mustard, and flax among the spring crops; and rice, maize, millets, buckwheat, cotton, sugar-cane, opium, and tobacco are in the produce of the autumn harvest. Wool, tea, sugar, salt, ghi, honey, beeswax, soap, timber, iron, and slates for roofing are among the staples of the district. The Kangra district has a great export trade in rice, of which the most esteemed kind is the basmati.—*Schl.; H. f. et Thom.; Journal, Asiatic Society of Bengal*, 1840; *Ann. Ind. Adm.* xii., 1870; *Dr. W. P. Dickson*, 1870; *Imp. Gaz.*

KANGRI, of Kashmir, is a small earthen pot used as a warming-pan; it is about six inches in diameter, enclosed in basket-work. Live charcoal is placed within, and the people place it beneath their clothes for warmth.—*Drew, The Northern Barrier.*

KANG-SI, a lexicographer of the Chinese language. The Chinese lexicographers hitherto have not done much more than translate the meanings given in Kang-si's Chinese dictionary. —*Meadow's Desultory Notes*, p. 26.

KANGTISI, a range of mountains in High Asia. The general direction of this range is north and south, and it is said to connect the Himalaya and Mongolia as by a cross-bar. It runs to the east of the Manasarowar and Rawan Rud lakes; its highest point is said to exceed in elevation any portion of the Himalaya, and four large rivers have their sources in different parts of the range, viz. the Singh Khawab or Indus; the Langchu Khawab, which runs through Ladakh; the Marchaa Khawab, which is known as the Gogra; and the Tamchu Khawab or Yaru, the great river of Eastern Tibet.

KANGUE. Punishment xviii. of the Tcha is that usually called by Europeans the Kangue, and is a common punishment in China for petty offences. It consists of an enormous tablet of wood, with a hole in the middle to receive the neck, and two smaller ones for the hands of the offender, who is sometimes sentenced to wear it for weeks or months together. He is suffered, provided his strength will enable him, to walk about, but the burden is so great, that he is generally glad to seek for a support of it against a wall or a tree. If a servant, or runner of the civil magistrate, take it into his head that he has rested too long, he beats him with a whip made of leathern thongs till he rise.—*Macartney's Embassy.*

KANHAR, a caste about Benares who supply water both to Hindu and Muhammadan families. Some of its members also act as servants in respectable Hindu families. Qu. Kahar, of whom in India 1,840,856.—*Sherring, Hindu Tribes.*

KANHEE, a valley to the west of, and which

runs parallel to, that of Quetta, but extends farther south. Its length is about 30 miles, and breadth 5 or 6. It is bounded on the east by the great Chahal tan range, which separates it from the valley of the Quetta, and on the west by a parallel range of much less height, which towards the north separates it from the valley of Peshin.

KANHERI. Near Tulsi Sashti, and a few miles from Thanna, are the Kanheri rock temples, about 100 in number, mostly small. The Kanheri cave on the island of Salsette, in the Bombay harbour, is 88½ feet by 39 feet 10 inches, and was excavated about the 4th century, when Fa Hian was travelling in India. It is a coarse copy of the Karli cave.

KANHERI, a barren hill, 18 miles from Bhandara in the Central Provinces. It yields good hone stones, building stone, and white stone for pottery.

KANI. TAM. Property, possession, hereditary right.

KANI. TEL. The Cawnee of the Madras Presidency, a land measure in the Karnatic and S.E. parts of the Peninsula. The Madras standard is 24 Manai or grounds, each of 2400 square feet, therefore equal to 57,600 square feet, something more (1·322) than an English acre. There is another computation which makes it not quite an English acre, equal to the same number of square adi, or 57,000 native feet, each = 10·47 inches. —*W.*

KANI-ACHI. TAM. The term given by Vellalars to communal rights of villagers, lands, offices, fees, held in free and hereditary property. When the land fell into the hands of Brahmans, it was called Swastium; when the same property was possessed by Muhammadans or Christians, it was called Mirasi, which is the term now usually employed. Pasang-karei in Tamil and Sarwadayan means the same thing. See Mandalam; Mirasi; Tondai.

KANI-AMMA, a goddess of the non-Aryan races in the Peninsula of India. See Hindu.

KANISHKA, a king who ruled in Kashmir and N.W. India in the 1st century, about A.D. 40; but his sway extended to both sides of the Himalaya, from Yarkand and Khok and to Agra and Sind. He was the most famous of the Saka conquerors. Under him was held the fourth and last Buddhist council. Its 500 members drew up their commentaries on the Buddhist faith. These commentaries supplied in part materials for the Tibetan or Northern Canon, completed at subsequent periods. The Northern Canon is called by the Chinese Buddhists, the Greater Vehicle of the Law. It includes many later corruptions or developments of the Indian faith, as originally embodied by Asoka in the Lesser Vehicle or Canon of the Southern Buddhists, B.C. 244.

The Buddhist Canon of China, a branch of the Greater Vehicle, was arranged between A.D. 67 and 1285; it includes 1440 distinct works, comprising 5586 books.

The ultimate divergence between the canons is great, both as to the historical aspects of Buddha's life and as to his teaching. The original northern commentaries were written in the Sanskrit language. Kanishka and his Kashmir council became in some degree to the Northern Tibeto-Chinese Buddhists what Asoka and his Patna council (B.C. 244) had been to the Buddhists of Ceylon and the south. Kanishka, Hushka, and Jushka are three Turushka (Turk) kings, of the Buddhist religion, mentioned in the Raja Tarangini. Th names of the first two are also on inscriptions and on coins in Northern India, that of Kanishka at Mathura, Manikyala, Bahawulpur, and Zeda; that of Hushka at Mathura, and on a metal vase found at Wardak in Afghanistan. The Manikyala tope was built by Kanishka, and a Roman coin, B.C. 33, was found in it. Kanishka founded the Saka era A.D. 79. Kanishka established Buddhism in the province between Kabul and the Indus. He erected a great st'hupa or tope at Peshawur, which Fa Hian (A.D. 400) describes as 470 feet high, but it was in ruins when Hiwen Thsang passed it in A.D. 629–645.

Kanishka's coins have two figures of Buddha, one as the teacher seated, and the other as the teacher standing, in each case with the right hand raised as if in the act of speaking. The word Saka can be read on all the coins.—*Fergusson; Imp. Gaz.*

KANIYA, a name of Krishna, who is also known as Nonita. The infantine appellation of Kaniya, when he pastured the kine of Cesana in the woods of Vindra, whence the ceremony of the sons of Hindu princes assuming the crook, and on particular days tending the flocks. As Muralidhara, or the 'flute-holder,' Kaniya is the god of music. When Aurangzeb proscribed Kaniya, and rendered his shrines impure throughout Vrij, rana Raj Singh offered the heads of 100,000 Rajputs for his service, and the god was conducted by the route of Kotah and Rampura to Mewar. An omen decided the spot of his future residence. As he journeyed to gain the capital of the Sesodia, the chariot-wheel sank deep into the earth, and defied extrication; upon which the Sookuni (Augur) interpreted the pleasure of the god, that he desired to dwell there. This circumstance occurred at an inconsiderable village called Siarh, in the fief of Dailwara, one of the sixteen nobles of Mewar. Rejoiced at this decided manifestation of favour, the chief hastened to make a perpetual gift of the village and its lands, which was speedily confirmed by the patent of the rana. Nat'h-ji (the god) was removed from his car, and in due time a temple was erected for his reception, when the hamlet of Siarh became the town of Nat'hdwara, which now contains many thousand inhabitants of all denominations, who, reposing under the especial protection of the god, are exempt from every mortal tribunal. The site to the east is shut in by a cluster of hills, and to the westward flows the Banas, which nearly bathes the extreme points of the hills. There are *seven* celebrated images in Rajputana, viz. Nonita or Nonanda, the juvenile Kaniya, his altar separate, though close to Nat'h-ji. He is also styled Bala-mokund, 'the blessed child,' and is depicted as an infant with a péra, or comfit-ball in his hand. This image, which was one of the penates of a former age, and which, since the destruction of a shrine of Krishna by the Muhammadans, had lain in the Yamuna, attached itself to the sacerdotal zone (zunu) of the high priest Balba, while he was performing his ablutions, who, carrying it home, placed it in a niche of the temple, and worshipped it; and Nonanda yet receives the peculiar homage of the high priest and his family as their household divinity.

Of the *second* image, Mathura Nath, there is no particular mention; it was at one time at Kamnorh in Mewar, but is now at Kotah. The péra of

Mathura can only be made from the waters of the Yamuna, from whence it is still conveyed to Nonanda at Nat'hdwara, and with curds forms his evening repast. The *fourth* statue, that of Gokul-Nath or Gokul Chandrama (*i.e.* the moon of Gokul), had an equally mysterious origin, having been discovered in a deep ravine on the banks of the river; Balba assigned it to his brother-in-law. Gokul is an island on the Jumna, a few miles below Mathura, and celebrated in the early history of the pastoral divinity. The residence of this image of Jeypore does not deprive the little island of its honours as a place of pilgrimage; for 'the god of Gokul' has an altar on the original site. The *fifth*, Yadu-Nath, is the deified ancestor of the whole Yadu race. This image, now at Surat, formerly adorned the shrine of Mahavan near Mathura, which was destroyed by Mahmud. The *sixth*, Vitul-Nath or Pandurang, was found in the Ganges at Benares, Samvat 1572. The *seventh*, Madhan Mohana, 'he who intoxicates with desire,' the seductive lover of Radha and the Gopi, has his rites performed by a woman.

The precise period of Balba Acharya, who collected the seven images of Krishna now in Rajasthan, is not known; but he must have lived about the time of the last of the Lodi kings, at the period of the conquest of India by the Moghuls. Damodra, the pontiff, at the beginning of the 19th century, was his lineal descendant; and whether in addressing him verbally, or by letter, was styled maharaja or great prince. As the supreme head of the Vishnu sect, his person was held to be Ansa, or a portion of the divinity; and it was maintained that so late as the father of the then incumbent, the god manifested himself and conversed with the high priest. What effect the milder rites of the shepherd god has produced on the adorers of Siva cannot be ascertained, but assuredly Eklinga, the tutelary divinity of Mewar, has to complain of being defrauded of half his dues since Kaniya transferred his abode from the Yamuna to the Banas; for the revenues assigned to Kaniya, who, under the epithet of yellow mantle, has a distinguished niche in the domestic chapel of the rana, far exceed those of Siva. Tod says that the priests of Kaniya are called Chobi, from the club or club with which, on the annual festival, they assault the castle of Kansa, the tyrant usurper of Krishna's birthright, who, like Herod, ordered the slaughter of all the youth of Vrij, that Krishna might not escape.—*Tod's Rajasthan.*

KANJAR, a race amongst the Mahrattas who make baskets and sell strings of cotton and hemp. They are the Yerkal vadu of Telingana.

KANJKI, a running footman attached to the court of the Bahawulpur Daudputra.

KANJUR is the Tibetan translation of the Tripitaka.

KANKA. SANSK. A carrion kite? it is reverenced at Kanka kala or Tirukkazhuk-kunram, a shrine 30 miles S. of Madras, also called Paxitirtha.

KAN-KA-CHUHA. HIND. The large-eared rat of Kaghan, the marmot or arctomys.

KANKAR. HIND. One sort called Rewasa, another Chappar harsaru, consists of irregular and fantastically-shaped pieces of calcareous concrete. In some parts of India it forms the principal material for road-making. From Calcutta northwards, the road was made from kankar; this mineral yields, when burnt, an excellent lime for mortar. Professor Ansted's analysis of it is 72 per cent. carbonate of lime, 15 per cent. silica, 18 per cent. alumina.

KANKROWLEE LAKE, also called Raj Samund, was formed by Rai Singh, rana of Mewar, at a cost of £1,150,000. It was commenced in A.D. 1661, during a period of famine, and was finished in 1668. This great national work is 25 miles N. of Udaipur, the capital, and is situated on the declivity of the plain, about two miles from the base of the Aravalli. The Gumti, a small perennial stream flowing from these mountains, was arrested in its course, and confined by an immense embankment, made to form the lake called after the ruler, Raj Samund, or royal sea. The bund or dam forms an irregular segment of a circle, embracing an extent of nearly three miles, and encircling the waters on every side except the space between the north-west and north-east points. This barrier, which confines a sheet of water of great depth, about 12 miles in circumference, is entirely of white marble, with a flight of steps of the same material, throughout this extent, from the summit to the water's edge; the whole buttressed by an enormous rampart of earth, which, had the projector lived, would have been planted with trees to form a promenade. On the south side are the town and fortress built by the rana, and bearing his name, Rajnuggur; and upon the embankment stands the temple of Kankraoli, the shrine of one of the seven forms (sa-roop) of Krishna. The whole is ornamented with sculpture of tolerable execution for the age; and a genealogical sketch of the founder's family is inscribed in conspicuous characters. The £1,150,000 was contributed by the rana, his chiefs, and opulent subjects, to be expended on this work; the material was brought from the adjacent quarries. But, magnificent, costly, and useful as it is, it derives its chief beauty from the benevolent motive to which it owes its birth, during one of those awful visitations of famine which from time to time recur in different parts of India.—*Tod's Rajasthan*, i. p. 389.

KANNAKKA. MALEAL., TAM. Ciphering, arithmetic, accounts.—*W.*

KANNAKKAPILLAI. TAM. An accountant, the conicopoly of the British.

KANNIMAR. HIND. Virgin spirits. See Bhut.

KANOCHAR or Kanochan, HIND. of Kangra, supposed to be a species of barrera; used as an aromatic expectorant.

KANOJ. HIND. Seed of a small tree brought from Pali and Dehli; considered heating and constipating; taken as a condiment, and also given as a medicine in diarrhœa.

KANON, Kot kasun, Rewapee, Patody, and part of the Baroach jaghir, form a tract of country called Beeghoto, occupied by the Ahir and the Chauhan Rajput.

KANPHATTA JOGI, a class of Hindu mendicants, so called because of their custom of slitting their ears and wearing a small cylindrical object in the incision. The Kanphatta worship Gorakhnat'h. They eat flesh, drink spirits, and partake of food in houses of all castes. They are found only in the temples of Bhairava, but they use the sacred texts both of Siva and Bhairava.

The splitting of the ears is part of the ceremony of initiation. The novitiate is kept closely confined in a house for forty days, when he is brought out and is made a perfect disciple. They wear gerua-vastra, or reddish ochre-coloured cloth, and a head-dress of black ribbons, like the Sutharasain, a sect of Nanak Shahi. They carry a fan made of peacocks' feathers, with which they make passes over the credulous, for the purpose of exorcising evil spirits and of keeping imps and goblins at a distance.—*Sherring's Hindu Tribes.*

KANS, HIND., SANSK.; Kansya, BENG.; Kansamu, TEL. Mixed metal, bell metal.—*W.*

KANSA, the king of Mathura, was the son of Ugra Sena, and cousin of Devaki, the mother of Krishna. He had been foretold that Krishna, a son of Devaki, would kill him, for which reason he caused all her children to be destroyed; but Krishna was preserved, and he ultimately killed Kansa.—*Dowson.*

KANSALA. In the south of India the five artisan classes are called Kammalan, Kamalar, Komsalar, or Kansalar; and Professor Wilson thinks the last word may be derived from the Sanskrit and Hindi Kans, Bengali Kansya, a mixed metal. They form the five left-hand castes of Madras, where the Kansala is the goldsmith, the other four being the Kanchari or brazier, Kammari or blacksmith, Kadlangai or carpenter, Kasi or stone-mason. These intermarry and eat together, and all wear the zonar. The distinction of right and left hand castes is peculiar to the south of India. It is supposed by Professor Wilson to be of modern origin, and to have been introduced at Conjeveram as a part of civil policy to divide the people and modify their power. But Sir Walter Elliot is of opinion that the separation into right and left hand castes had its origin in the violent conversion of the ancient races from Buddhism to Hinduism, and he had been shown a figure of Buddha which the artisan caste worship. At present many worship Viswakarma, but the bulk seem to worship Siva; they bury their dead in a sitting posture, with the head of the dead close to the surface; and their dislike to the Brahmans is intense. They claim, indeed, to be superior to the Brahmans, and Dr. Hunter regards them as Brahmans who have been overlain by more recent arrivals. It is amongst the Tamilian people that the right and left hand sections appear.

KAN-SU, a province of N.W. China, with Tibet and Mongolia on its west and north, and skirted on its north by the Hoang-ho. Chief town, Lan-Chau.

KANTA BHAJA, a Hindu sect, founded about the beginning of the 19th century by Rama Saran Pala, a Goala, and inhabitant of Ghospara, a village near Sukh Sagor in Bengal. They believe in the divinity of the guru as an incarnation of Krishna, and worship him as the creator.

KANTARI. MAHR. A turner, a cabinet-maker, workers with a lathe in wood or ivory.

KANTIRAI VARAHA. KARN. A coin of account in Mysore, value Rs. 2·14·8, equal to 10 gold fanams, each of 6 grains.—*W.*

KANUM, a town in Bashahir State, Panjab, the principal place in the subdivision of Kunawar, lat. 31° 40′ N., long. 78° 30′ E.; situated in a mountain glen, near the valley of the Sutlej (Satlaj), about 9300 feet above sea-level. Thornton states that the houses rise above one another in tiers, the roof of each tier forming the roadway for the next. Contains a celebrated Buddhist temple with an extensive Tibetan library.—*Imp. Gaz.*

KANUN. ARAB. A kind of harp, the κανων of the Greeks. Its strings, 50 or 60 in number, rest upon two bridges, and are touched by both hands, without using any plectrum or bow. It is laid on the knees of the player, who has two plectra attached to the forefingers, each plectrum being placed between the finger and a ring or thimble. There are three chords, of lamb's gut, to each note, and generally 24 treble chords altogether.

KANUN. ARAB. A rule; a law; a psaltery. Kanun-go, ARAB.-PERS., in India, recorders and registrars of land revenues in their respective districts. Literally a rule-teller, a name under Mahratta sovereigns applied to a revenue officer of their governments; but his office was hereditary. Act xiii. of 1882 amended the laws relating to the Kanun-go and Patwari of the N.W. Provinces and Oudh.

KANVA, the earliest writer on Telugu grammar, lived at the court of Andhra raya, in whose reign Sanskrit was introduced into the Telugu country.

KANWA, an ancient teacher of the White Yajush Veda, and founder of several schools for the purpose.

KANWA, a dynasty of Indo-Scythian Turushka, mentioned in the Puranas. The dynasty reigned 45 years. The first was B.C. 66. Kanwa, named Vasu-deva, usurped his master's kingdom, Fergusson says B.C. 76 to 31.—*Wilson; Thomas' Prinsep's Antiquities; Fergus.* 19. See Magadha.

KANYA, the Venetian sequin, from having a figure of the Virgin on one face. Kanya was a name of the mother of Krishna. She was a daughter of Yasuda Kanya, a maiden, a virgin, a girl. Kanyadana, the marriage ceremonial of the giving away of a Hindu bride to the bridegroom by her parents or guardian. Kanya, the astronomical sign Virgo.

KANYA-KUBYA. SANSK. The town of Kanouj. The word means a hunchback maiden, and the name is given in a Hindu legend.

KANYA KUMARI, a name of Durga. In the days of Pliny, her worship extended to Cape Comorin.—*D.*

KAN-YING-PEEN. CHIN. The book of retribution; a moral work often distributed gratuitously by good men.

KAOFU, an ancient name for the region now called Afghanistan. For several centuries, both before and after the Christian era, the Indian language and religion were predominant throughout all Afghanistan, from the Bolan pass in the south, to Bamian and Kandahar on the west. This large tract was then known by the general name of Kaofu, but was divided into ten different states, of which Kapisa was the chief. The Tributary States were Kābul and Ghazni on the west, Lamghan and Jalalabad in the north, Swat and Peshawur in the east, Bolor in the north-east, and Bannu and Opokien in the south.

That Kandahar then belonged to Persia, is proved by the fact that the begging-pot of Buddha, which Hiwen Thsang (ii. p. 106) mentions as having been removed from Gandhara to Persia,

still lies at Kandahar. The removal must have taken place during the 6th century, after the conquest of Gandhara by the king of Kissin or Kipin. It is called the Kashgul-i-Ali. The Kaofu of the Chinese would therefore have embraced the whole of modern Afghanistan. Kaofu was the appellation of one of the five tribes of the Yuchi or Tochari, who are said to have given their own name to the town which they occupied towards the end of the 2d century before Christ. This statement of the Chinese writers is confirmed by the historians of Alexander, who notice the city of Ortospana, without making any mention of Kābul. The latter name is first given by Ptolemy, who describes Kabura or Ortospana as the capital of the Paropamisadæ. General A. Cunningham concludes, therefore, that Ortospana was most probably the original metropolis of the country, which was supplanted by Alexandria during the Greek domination, and restored by the earlier Indo-Scythian princes.—*Cunningham, Ancient Geog. of India*, p. 18.

KAOLIN. CHIN. Porcelain clay.
Kau-ling-t'u, CHIN. Kiri-matti, SINGH.
Peh-ngool, ... ,,

This is the aluminous ingredient of Chinese porcelain, named after a hill near Kin-teh-chin, in the Kiang-si pottery district. It is a silicate of alumina. Petun-tsze is the silicious element in Chinese ware.

For a long period it was erroneously supposed that the fine clay necessary for the production of good porcelain, consisting of silica and alumina in variable proportions, and called by the Chinese kaolin, was peculiar to their land, and that consequently no country in Europe could hope to attain eminence in this manufacture. But kaolin abounds in Ceylon, and in the 15th century was exported to China. Porcelain clay is very abundant in S. and E. Asia, produced by the decomposition of felspar. As it occurs in Ceylon, an analysis in 1867 showed pure kaolin 70, silica 26, molybdena and iron oxide 4 . 100. Kaolin is procurable in great abundance in Southern India.

In a report on the geology of the North Arcot district, Mr. Bruce Foote writes: 'The highly felspathic varieties of the granite gneiss are occasionally so greatly decomposed as to appear to offer sources for the collection of kaolin or China clay. But none of the North Arcot localities show rocks sufficiently rich in decomposed felspar to be of much importance. A very serious disadvantage is the difficulty of a suitable water supply. To insure the preparation of kaolin of good colour, which alone commands a high price, a very large supply of perfectly limpid water is a sine qua non. And in a dry climate like that of the Carnatic, this want could only be met by the construction of special reservoirs of large size, in which the water could be allowed to stand for many months after the rainy season, till all the suspended particles of ferruginous clay had settled, and the water itself had become perfectly limpid. If the great cost of providing such supplies of limpid water free from saline matter in an eminently dry country be taken into consideration, together with the fact that the kaoliniferous decomposed rock occurs in greatly smaller quantity, and is generally much less free from ferruginous staining, due to the filtration through the almost universally overlying red soil, the conclusion seems inevitable that the prospects of establishing profitable China clay works in North Arcot are not very promising.'

KAOORWA. This singular tribe of Rajputs is entirely nomadic, and is to be found chiefly in the thul of Dhat, though in no great numbers. They move about with their flocks, encamp wherever they find a spring or pasture for their cattle; and there construct temporary huts of the wide-spreading peeloo, by interlacing its living branches, covering the top with leaves, and coating the inside with clay. In so skilful a manner do they thus shelter themselves, that no sign of human habitation is observable from without. The roaming Sahrai was always on the look-out for these sylvan retreats, in which the shepherds deposit their little hoards of grain, raised from the scanty patches around them. The restless disposition of the Kaoorwa, who even among their ever-roaming brethren enjoy a species of fame in this respect, is attributed to a curse entailed upon them from remote ages. They rear the camel, cow, buffalo, and goats, which they sell to the charuns and other merchants. They are altogether a singularly peaceable race; and, like all their Rajput brethren, indulge in mul-pani or opium water, which, in Rajputana, is the universal panacea for ills, both moral and physical.—*M. C. B.; Tod's Rajasthan.*

KAOTSCHE. A characteristic feature in Central Asiatic traditions is the derivation of their origin from some animal. According to the testimony of Chinese history, the Goa Gui (Kaotsche), otherwise known as the Telé or Chili people, sprang from a wolf and a beautiful Hun princess. One of the Hun princes had two daughters of such uncommon beauty that he determined not to marry them to any ordinary mortals. Building a high tower in an uninhabited wilderness, he left them in it, exclaiming, 'I pray heaven to take them!' The youngest princess falling a prey to ennui, encouraged the attentions of an old wolf, who for a whole year, night and day, prowled around the tower, and at last made his lair at the foot of it, till the princess, notwithstanding the entreaties of her eldest sister, married the wolf.

The Tugus (called Dulgasses by Père Hyacinthe) professed to derive their origin from a she-wolf, and the Tufans (Tibetans) from a dog. The Chinese assert that Batachi, hereditary chief of the Mongol Khans, was the son of a blue wolf and white hind (Memoires Relatifs à l'Asie, par Klaproth, p. 204). In like manner some of the red-skinned tribes of North America pretend to be descended from beavers, tortoises, etc. It is evident, from these instances, that this kind of tradition in Central Asia, and even in America, is extremely ancient, and even seems to be regarded as a descent to be proud of. The tradition of the origin of the ninety-nine Kipchak branches has been preserved among the Uzbaks and Kazaks in such an indelicate shape, that it is doubtful whether it will ever be possible to present it to the general reader.—*Russians in Central Asia; Captain Valikhanof and M. Vemukof*, p. 96; *Smith, M. M. Ch.*

KAOULI. PERS. The dancing and singing girls of Persia are termed Kaouli, Malcolm says, a corruption of Kabuli or of Kābul, which denotes the quarter from whence they came.—*Persia*, i. p. 117.

KAP, a subdivision of the Varendra Brahmans of Bengal, inferior to the Kulin tribe of the same name.

KAPADI. Guj. A Hindu who has performed pilgrimages to Hinglaj; also a religious mendicant carrying a red flag, and selling rosaries, the sacred thread, and holy water.

KAPALA-MALA. Sansk. Wearing a garland of skulls; a name of Siva. Kapala-bhrit, wearing the garland of skulls; a form of Rudra or Siva. Kapalika, in the fifth century of the Christian era, a Hindu sect who wore necklaces of bone and skulls.—*Dowson.* See Chinna Mastaka; Kerari.

KAPALE, Tel.; Kumpli, Karn., a well from which the water is drawn in a bucket by oxen. —*W.*

KAPALI. Hind. Devotees who adopt the mantra or sacred text of Kali. They are somewhat similar in their habits to the Aghori, but not so shameless and abominable. They eat flesh and drink spirits, but refrain from eating dead carcases.—*Sherring's Hindu Castes*, p. 270.

KAPAS. Malay. Gossypium Indicum, *Lam.* Cotton plant, raw cotton, cotton wool, cotton raw, cotton as a crop. Kapas is cleaned of seed, and prepared for the market by the ryots themselves. But not unfrequently traders buy up the raw material in large quantities, and pay for its cleaning by hired workmen. In this case the workmen are paid in proportion to the amount of clean cotton produced. For producing a maund of clean cotton the rate is sometimes as low as 6 or 8 annas, and sometimes rises as high as one rupee. The cotton seed or benowur obtained by passing the kapas through the charkhee may be valued at about one rupee per maund. Kapasi is the tomentum of the leaf of Onoseris lanuginosus and other plants.

KAPI of 1 Kings x. 22, in the form of the Greek κηπος, an ape, in the Egyptian texts is kafu. Tukhiim is the Hebrew name for peacocks, 2 Chronicles ix. 21.—*Weber.*

KAPILA is said to be the writer of the preface to the Sankhya philosophy called the Sankhya Pravachana. His father's name was Vitatha. The Sankhya Karika of Eshwara Krishna is an exposition of the system of Kapila. The Sankhya Pravachana comprises 526 aphorisms in six books; 72 distichs make up the Sankhya Karika. The system of Kapila given in the Sankhya Karika is the only contribution of India to pure philosophy. The exposition is the oldest in existence, and the most authoritative; but it is doubtful how closely it represents the original teaching of Kapila, who lived before the time of Gautama the Buddha, in the 6th century before Christ. The Sankhya Karika has been several times edited and translated. Kapila is purely a philosopher, and the rites of Vedantic religion are an object of scorn to him; yet he allows gods, but only as emanations from nature, eventually to be reabsorbed like all other forms of matter. The object of philosophy with him is to escape from pain and sorrow, which he regards as inherent in the world of matter. Our present physical life is a mere bondage; it is full of pain, it can never be the source of anything but sorrow and degradation The aim of philosophy is simply to free the soul from this and every other connection with matter for ever. We must seek to cast it away, as men cast off a vile and loathsome garment; and this emancipation must be gained by the soul itself, without the aid, if such can be obtained, of any external power or influence. The Kapila system generally is a form of materialism, in which, however, the soul exists apart from consciousness and the outer world; but it is uncreative, and exists only as light does. In his system there is no place for virtue or vice, duty or sin. The soul has no purpose outside itself; it is passive, unsympathetic. Virtue and vice are little distinguished except as matters of sensation; and, as pleasure and pain, they are to be avoided, because they imply action, and action is imperfection. Virtue and vice do not belong to the soul or in anywise affect it. The sense of guilt, implying a moral law, which in turn implies a higher power to ordain it, does not exist in Kapila's system. Even acquiring knowledge and thus delivering the soul from bondage is not a duty, nor the neglect of it a sin; it is a matter of individual advantage. The system of Kapila, though it could never have been very widely accepted or understood, presents points of interest to the student of comparative philosophy. Little is known of his life. One account calls his father Vitatha. Ward says (iv. p. 2) that he was author of the Kapila Sanghita, that his father's name was Karmada, and his mother's Deva-huti, and that he was born at Puskara, and lived at Ganga Sagara.—*Ward*, iv. p. 2.

KAPILAR is said to have been a brother of Tiruvalluvar, and one of the 49 Madura professors. A small work, Kapila Akaval, is attributed to him, but it is probably spurious.

KAPILAVASTU, the birthplace of the Sakya Buddha, which is known to the Burmese as Kapi-la-wot, was a small principality situated on the banks of the river Rohini, the modern Rohana, about 100 miles N.E. of Benares. It was ruled over by Suddhodana, chief of the Sakya tribe, and father of Sakya Muni. His mother was Maya, daughter of Supra Buddha, chief of the neighbouring tribe of Kolyan. Both tribes were of pure Aryan descent, and branches of the Suryavansi or line of the Sun. The Rohini flowed between Kapila and Koli, the latter being the native town of Maya Devi, mother of Buddha. The present village of Nagara has been surmised by General Cunningham to be the ancient Kapilavastu, and Gautama is still the title of the Rajput chief. Gautama is the name by which Buddha is known to the Burmese. Pawa, between Kapilavastu and Kasinagara, is the place where Buddha died underneath a sal tree (Shorea robusta).—*Cunningham, Ancient Geog. of India*, i. p. 417.

KAPPAR, in Baluchistan, near to Baghwana. Its lead mines are in a hill that seems entirely composed of the metal. About 200 workmen are constantly employed, the Merdui, a peculiar race, not Brahui, nor esteemed people of the country. Lead is a most abundant metal in the hills of Central Baluchistan, but it is said to be extracted only on a singular system at these mines.—*Masson's Narrative*, pp. 56, 57.

KAPU. Tel. A cultivator, a husbandman; in Telingana, the principal husbandman in a village. In 1881 census returns, the Kapu were 107,341.—*W.*

KAPURDIGIRI, a town with Buddhist remains near Peshawur. The Buddhist remains now existing in India are of four distinct classes,—1st, Cave temples, containing topes, sculptures, paintings, and numerous inscriptions; 2d, Vihara

or monasteries; 3d, Inscriptions on rocks and pillars; 4th, Topes or religious edifices. The Vihara or monasteries are of two kinds,—1st, Cave Vihara, of which several magnificent specimens have been published by Mr. Fergusson; and 2d, Structural Vihara, of which some specimens still remain at Sanchi, but in a very ruinous condition. The inscriptions on the pillars at Dehli and Allahabad, and on the Tirhut pillars at Mathiya and Radhiya, were deciphered and translated in the early part of the 19th century by the remarkable ingenuity of the late James Prinsep. The inscriptions on the rocks at Junagiri in Gujerat, and at Dhauli in Cuttack, were also interpreted by him. A third version of the rock inscriptions (but in the Ariano-Pali character), which was found at Kapurdigiri, near Peshawur, has been carefully collated with the others by Professor Wilson. Many short inscriptions from Gaya, Sanchi, and Birat, as well as from the cave temples of Southern India, have also been published at different times. The rock inscriptions contain the names of Antiochus, Ptolemy, Antigonus, and Magas. The inscriptions in the able work of Major Cunningham are of greater interest, and of much higher importance than all that had before been published. The Kapurdigiri inscription is on a rock, on the side of a rocky and abrupt hill, near a village of that name in the district inhabited by the Yusufzai. The mode of reading it was discovered by Mr. E. Norris. It reads from right to left, is in the Aryan or Bactrian character, and is nearly a transliteration of that of Girnar; and the language, he says, was in use for several centuries throughout that extensive line of country over which the Seleucidæ and their successors held dominion, that is to say, from the Paropamisus or Caucasus to the upper part of the Panjab, including all Bactria, Hindu Kush, and Afghanistan.

At least two classes of people seem to have employed the language expressed in this character, the one using the Aryan or Bactrian of Bamian, Kapurdigiri, etc., the other using the Budh or Lat character found on the Girnar rock and on the pillar and in the cave temple inscriptions; and that these two classes of people seem to be the Getæ and Sakæ, the so-called Aryan character being that used by the Getæ, while the so-called Lat character was that of the Sakæ. The Lat character occurs rarely in the southern part of the Peninsula; still it is the only one used on the sculptures at Amaravati, which have been described by the Rev. W. Taylor; and while in charge of the Government Central Museum at Madras, the Editor despatched to England a large collection of its sculptures, which have since been described by Mr. James Fergusson in his Tree and Serpent Worship, and are now arranged into the wall of the great stair of the British Museum.

KAPURTHALA, a Native State in the Panjab, lying between lat. 31° 9′ and 31° 39′ 30″ N., and long. 75° 3′ 15″ and 75° 38′ 30″ E. Area, 800 square miles. The chiefs are Sikhs of the Jat tribe. The chief of Kapurthala at one time held possessions both in Cis and Trans Sutlej, and also in the Bari Doab. The scattered possessions in the Bari Doab were gained by the sword, and were the first acquisitions made by sirdar Jussa Singh, the founder of the family. In them lies the village of Aloo, whence the family spring, and from which the designation Aloowalia is derived. The Trans-Sutlej estates were also acquired by conquest, and from the chief city therein, Kapurthala, the family derives its general designation. Of the Cis-Sutlej possessions, some were conquered, and some were granted by maharaja Ranjit Singh, prior to September 1808. The total value of the Cis-Sutlej possessions was estimated at Rs. 5,65,000. By a treaty of the 25th April 1809, the sirdar of Kapurthala was pledged to furnish supplies to British troops moving through or cantoned in his Cis-Sutlej territory; and by article 5 of the Declaration of the 6th May 1809, he was bound to the British standard with his followers during war. In 1826, the sirdar Futteh Singh fled to the Cis-Sutlej states for the protection of the British Government against the aggressions of Ranjit Singh, and protection was accorded. It was declared that the Aloowalia chief was under British protection in respect to his ancestral possessions east of the Sutlej, but dependent on Lahore for places conferred by the Lahore Government prior to September 1808, viz. Bussi, Narraingarh, and Jugraon. The protection of the British Government, however, extended over both. In the first Sikh war, the troops of Kapurthala fought against the British at Aliwal, and, in consequence of these hostilities and of the failure of the sirdar to furnish supplies from his Cis-Sutlej estates to the British army, the Cis-Sutlej estates were confiscated.

In 1849, sirdar Nihal Singh was created a raja. He died in September 1852, and was succeeded by his son Rundhir Singh. During the mutiny of 1857, and subsequently in Oudh in 1858, the raja Rundhir Singh rendered service to the British. The Government, among other rewards, remitted a year's tribute, and permanently reduced the tribute to its former amount, viz. Rs. 1,31,000. For his services in Oudh the raja received the estates of Baundi and Bithowli in perpetuity, with remission of half the revenue, and he has been guaranteed the right of adoption.

In 1878 its ruler had as titles His Highness, Farzand Dil-bund, Rasukh-ul-Itikad Daulat Englishia, Rajai Rajgan, Jagat Jit Singh Bahadur, Aloowalia, Wali Kapurthala, Baundi, Bathowli, and Acowria.—*Aitcheson's Treaties, etc.*, p. 373.

KAP-WI, a small rude tribe near the source of the Irawadi. See India.

KAPYANG. The Minak kapayang is an oil held in esteem amongst the natives of Borneo for cooking. It is produced by Pangium edule, which grows to about 40 feet high, and is planted by the Dyak race.—*Low's Sarawak*, p. 47.

KAR, Hind., from Sansk. Karya, act, affair, work of any kind, business; largely combined with other words.

Kar-i-chakand, embroidery.
Kar-i-kalamdani, painted ware of Kashmir.
Kar-i-kharat, turned and lacquered ware.
Kar-i-manakkash, painted ware.

KARA, in many of the languages of the south and east of Asia, means black; in Mahratta, a prison. Kara, in Carnatica, a blacksmith. Kara-papak or black-caps, a warlike Turkoman race. The Kara-koiounli or black shepherd clan, with the Ak-koiounli or white shepherd clan,

under the Seljuk dynasty, long ruled over Western Asia. They reside near Alajah Dagh.

KARA or Kura. MAHR. A form of oath with Hindus, in which a leaf of tulsi and a cup of Ganges water, placed upon some sacred book, are held by a person on his head whilst he is giving evidence. *If no domestic affliction befall him* within a few days, his testimony is considered conclusive.—*W.*

KARA. MALEAL. A division of a revenue district in Travancore.

KARA BELA, also Arma-Bel of Arab authors, the modern town of Bela, the chief town of Las, in Baluchistan, which is built on a strong and rocky site on the northern bank of the Purali river. Coins, trinkets, and funereal jars are found near; and in the neighbouring hills are numerous caves and rock-cut temples, now ascribed to Farhad and fairies, but are the earthly resting abodes of former chiefs and governors. There are also old Muhammadan tombs near. One-third of the houses are occupied by Hindus.—*Elliot's India; Masson's Journeys*, ii. p. 28.

KARA-CHI or Kara-tchi, a people in Northern Persia who resemble gypsies in many respects, besides the use of a particular dialect or jargon among themselves. They prefer tents to houses, pilfer eggs, poultry, linen, and other things; tell fortunes by inspecting the palm of the hand, and are nearly, or perhaps altogether, without any religion. A man, with whom Sir W. Ouseley conversed, acknowledged that most of his taifah or tribe had not any certain form of worship or system of faith; but, some Muhammadans being present, he loudly thanked God that he was himself a true believer, a very orthodox disciple of their prophet. The Turkish couriers from Constantinople recognised this man and his companions to be a Chingani or Jingani; and Mustafa, who had been in England, whispered to him that they were the same as the gypsies. Porter tells us that the words mean black race. The men, finely limbed, with countenances sufficiently bold and watchful of what was going forward. The complexions of both sexes appear much darker than the native Persians. Their physiognomy generally seemed to agree with that of most of their brethren and sisters he had met wandering about in various parts of Europe. The men steal, make sieves, hair ropes, etc., from the produce of which they pay an annual tribute to the Government of two tomauns per family or tent. The women, when not occupied in the little domestic affairs of their canvas household, beg and tell fortunes, the latter being generally muttered over a few torn leaves from a Faringi book, or the blade-bone of a sheep, and accompanied with the thread of your life. The general expression of their faces, both in men and women, is that of deep thought, interrupted with rapid turns of observation flashing from their bright and powerful eyes. In some parts they are called Kauli and Susman. Their women, in one respect, differ widely from gypsy females in Europe. Mr. Barrow, in his account of this extraordinary race, has commended the strict chastity of the gypsy women; but the Kara-chi women of Persia are quite independent of any such rigid virtue, and one and all earn money in other ways than by telling fortunes.—*Ouseley's Travels*, iii. 40; *Porter's Travels*, ii. 528.

KARACHI or Kurachee, a seaport town of Sind, in lat. 24° 51′ 9″ N., and long. 67° 4′ 15″ E., at the extreme northern end of the Indus delta, near the southern base of the Pabb mountains in Baluchistan. It is the chief town in the province of Sind. It was a mere fishing hamlet until occupied by the British about 1840, but in 1881 its population was 8922, extensive commerce, splendid harbour works, and numerous flourishing institutions having sprung up since the introduction of settled administration. The supply of water is mainly derived from wells, tapping a subterranean bed of the Layari. Karachi district stretches from the mouth of the Indus to the Baluchi boundary. It possesses a hilly western region, lying in the subdivisions of Kohistan and Karachi. Large forests of babul and other trees fringe the river banks, the Habb forming the western boundary between Sind and Baluchistan. The Manchhar lake, in the Schwan subdivision, forms the only considerable sheet of water in any part of Sind. The hot springs of Pir Mangho, situated about six miles north of Karachi town, among some very barren and rocky hills, gush up from a clump of date trees, which covers the extremity of a craggy limestone knoll in a pretty valley enclosed by considerable heights. A swamp close by is famous for its immense number of crocodiles. Hundreds of them bask lazily in the sun by the side of a green, slimy, stagnant pool, or move sluggishly about in search of food. The greater pond is about 300 yards in circumference, and contains many little grassy islands on which the majority of the crocodiles (Crocodilus palustris) bask. Some are to be seen asleep on its slimy sides, others half-submerged in the muddy water, while now and then a huge monster raises himself upon his diminutive legs, and, waddling for a few paces, falls flat on its belly. The water in the pool feels cold, although fed from two hot springs, one of which is of so high a temperature that a visitor cannot retain the hand in it; yet animal life exists in it, for where the water bubbled up from its sandy bottom, and in the little lade running to the tank, there is abundance of a species of small black spiral shell, which Mr. Woodward reported to be very like Melania pyramis, an allied species of which frequents the river Jordan. The crocodiles dig deep in the sand under the neighbouring date trees, and there deposit their eggs. Quantities of deciduous teeth of various sizes are strewn along the slimy sides of the pond. They seized their food with the side of the mouth, and tossed the head backward, in order that it might fall into the throat. Extensive salt deposits occur in Shahbandar subdivision, on the Sirganda creek, a branch of the Indus accessible for small craft of from 50 to 60 tons burden. Karachi harbour is the most westerly port of India, and it is the only land-locked harbour between Bombay and the Persian Gulf. Though it is a bar-harbour, it has 17 to 18 feet at high water of ordinary tides, and from 20 to 22½ feet at springs. It is easy of access to large ships, by night or day, even during the monsoons.—*Adams.*

KARACHIL, a corruption of the Sanskrit Kuvera-chal, a name of Mount Kailas, where, according to Hindu mythology, lies the city of Kuvera, the Indian Plutus.—*Yule, Cathay*, ii. 411.

KARADAGH MOUNTAIN runs up to Derbend-i-Bazian, and thence, after running a little way

straight like a wall, it runs a little west, and forms the hill of Tchermala, thence it turns more west, and forms that of Khalkhalan. The Karadagh diminishes in height all the way from the Seghirmch, which is very high, and towers above all the other mountains in the distance.—*Rich's Kurdistan*, ii. p. 6.

KARADIYE. KARN. A silver box in which is held the linga of the Lingawant sect.

KARA-GHUZLU, in Persia, the eastern Punch. Kara-ghuz is Turkish, meaning black eye. Karaghuz and Haji Aivat are the two chief characters in Turkish farces. These two characters resemble in appearance, character, and habits the clown and pantaloon of a Christmas pantomime, with this difference, that they talk as well as act. The character and interest of the piece depend, of course, on the latent wit and drollery of the improvising operator, and to a lesser extent on the nature of the audience. The spectacle is made up of a series of trivial incidents loosely strung together without any underlying plot. There are, however, in the dialogue many obscene jokes, and in the pranks of the two worthies much coarse unveiled indecency.

KARAGOLA, a village in Purniah district, Bengal, on the left bank of the Ganges, in lat. 25° 23′ 30″ N., and long. 87° 30′ 51″ E., on the route from Calcutta to Darjiling. The south of Purniah supplies blankets and rugs.

KARAHI. HIND. An open, large, shallow iron caldron, vessel, or bowl.

Karahi-lena, HIND., is the ordeal of taking a piece of gold out of a pot of hot oil. If the accused do so without being scalded, he is deemed innocent. Karahi-lena is common in India.—*Burton, Scinde*, pp. 390, 404; *Tod's Rajasthan*, i. p. 71; *Wilson*.

KARAK, Kharg, or Karrack, in lat. 29° 15′ 2″ N., and long. 50° 18′ 50″ E., an island off the coast of Fars, in the Persian Gulf, 30 miles N.W. from Bushire. It is about 4½ miles long. Its northern extremity is rocky, and about 100 feet high. The people are Arabs, and are fishermen and pilots. The Dutch occupied and fortified it in A.D. 1748, but were driven from it in A.D. 1765 by the pirate Mir Mohanna. The British occupied it in June 1838, but withdrew on the Persians raising the siege of Herat.—*MacGregor*, p. 219.

KARAKAL, meaning Black Stone, is a town in the South Canara district, Madras, in lat. 13° 12′ 40″ N., and long. 75° 1′ 50″ E., on one of the main lines leading from Mysore to Mangalore. Karakal was formerly a Jain town of some size and importance, and the antiquarian remains are very interesting. Chief among them is a colossal monolithic figure of Buddha or Gautama, locally known as Gumpta, after Gunta Raya, once ruler of this country. The figure is placed on a huge black rock, and is within a fraction of 50 feet high.—*Imp. Gaz.*

KARAKALPAK, a subdivision of the Turk race, of which the Uzbak, Kazak, and Turkoman are branches. They are settled in the Bokhara and Khiva districts. In the latter they have from 10,000 to 15,000 tents, which are large and strong, and guarded by a breed of large dogs. Their women are famed for their beauty. They are agricultural, but very poor, being heavily taxed. They do not trade, have but few horses, and hardly any sheep. They have several times rebelled against the Khiva government, and are a wild, unruly race. They have been estimated at from 40,000 to 100,000 families. This race moved from the mouth of the Jaxartes into the khanate of Khiva in the beginning of the 19th century. In appearance and dress they are intermediate between the Kirghiz, Kazak, and Kalmuk. They are tall, vigorous men, with more powerful frames than any of the Central Asian tribes, but clumsy, and with coarse features. They have large head, flat full face, large eyes, flat nose, slightly-projecting cheek-bones, a coarse and slightly-pointed chin. The Karakalpak are considered dull and foolish. They are even less warlike than the Kirghiz; they have seldom appeared as conquerors, and are even less employed as mercenaries. They are largely occupied as cattle-breeders, and they are active, benevolent, and faithful.—*Trotter's Cent. Asia; Collett's Central*

KARAKASH, a river which flows from Pungal to Suget in a westerly direction, then takes a sharp turn to the north, and then flows for the most part in an E.N.E. direction. In its valley are very large quarries and mines, from which is dug the yashm or jade-stone, and which are resorted to by people living at great distances.—*Proceedings of the Magnetic Survey of India*, p. 3.

KARA-KORUM PASS, the name applied to the point where the principal route between India and Eastern Turkestan traverses the water-parting between the river basins of those two regions. Dr. T. Thomson, of the Bengal Army (19th August 1848), describes it as a rounded ridge connecting two hills, which rise somewhat abruptly to the height of perhaps 1000 feet above the summit of the pass. The name Kara-korum has been extended by some geographers to a fancied range occupying the exact line of water-parting between those streams which discharge into the Tarim basin and those which join the Indus; while others have applied the name to the closely-contiguous range usually called Mustagh. Mr. R. B. Shaw has shown the fallacy of the former view; while the appropriateness of the name Mustagh (ice mountain), and the fact that the Kara-korum pass lies some distance northward of this undoubted range, have since induced most geographers to restrict the name Kara-korum to the above pass. Its height above mean sea-level is 18,550 feet; lat. 35° 33′ N. Colonel Yule says Kara-korum was the chief place successively of the Khan of Kerait and of the Mongol Khan till Kablai established his residence in China. Bishbalik, *i.e.* Pentapolis, lay between Kara-korum and Almalik, and had anciently been the chief seat of the Uigur nation. It is now, according to Klaproth, represented by Urumtsi. — *Yule, Cathay*, ii. p. 506; *Imp. Gaz.*

KARA-KUL, a small district in the valley of the Samarcand river, N.W. of Bokhara, of which it is a division, occupied by Turkoman and Uzbak shepherds. Large supplies of lamb-skins, called Kara-kuli, are sent from it to Tartary, China, Persia, and Turkey. They are highly valued in Persia, and are used for caps, which have a beautiful shape, and are much better than those of the Tartars. The rich men of Persia, who are fond of showy dress, generally kill a pregnant sheep, the skin of the young of which is afterwards taken

off, and covered with cloth and cotton, to prevent the effects of the sun and air. The skin of such a young lamb is delicate, soft, and light. The finest lamb-skin cap is valued in Teheran, and other places in Persia, at thirty rupees. The caravan of Bokhara which frequents Mashed during the course of the year, brings considerable quantities of the skins. The shawls of Kirman and the sugar of Yazd are most important articles of sale in Mashed.—*Burnes; Mohan Lal's Travels*, p. 193.

KARA KUM, a sandy desert about 360 miles long, traversed on the route from Merv to Khiva. Its surface is very irregular, with ravines and deep pits and high mounds and ridges, with a few bushes of camel's thorn and wormwood. The cold in winter is very severe, with snow and bitter cold winds.

KARA-LINGI, Saiva mendicants, who go naked, and, to mark their triumph over desire, affix an iron ring and chain on the male organ. It was these ascetics who attracted the notice of Bernier and Tavernier and other of the earlier travellers. Since the beginning of the nineteenth century, they have rarely, if ever, been seen by Europeans.—*Wilson.* See Hindu.

KARAMAN, the town of Caramania, at the foot of the lofty range of Bedlerindagh, a branch of Mount Taurus.—*Catafago.*

KARAMNASA RIVER rises on the eastern ridge of the Kaimur Hills, in the Shahabad district of Bengal, in lat. 24° 34′ 30″ N., long. 83° 41′ 30″ E. It is held in the utmost abhorrence by Hindus, and no person of any caste will drink or even touch its waters. The reason of its impurity is said to be that a Brahman having been murdered by Raja Trisanku, of the Solar line, a saint purified him of his sin by collecting water from all the streams in the world, and washing him in their waters, which were collected in the spring from which the Karamnasa now issues. This spot is near the village of Sarodag, and the river soon becomes a rapid streamlet of beautifully clear water, with deep holes, and abounding in fish. At Chhanpathar, in its course through Mirzapur district, the river forms a waterfall 100 feet high, which, after heavy rains, affords a magnificent sight.—*Imp. Gaz.*

KARA-MUREN. MONGOL. The Black River, called by the Chinese Hoang-ho, or the Yellow River. The embankment of the river is said to date from the twenty-second century B.C. Its regulation has ever been a source of anxiety to the Chinese Government, and there used to be a tax on the Hong merchants at Canton expressly on account of this object. The will of the emperor Kea King, who died in 1820, has the following passage:—'The Yellow River has from the remotest ages been China's sorrow. Whenever the mouth of the stream has been impeded by sand-banks, it has, higher up its banks, created alarm by flooding the country.' This seems to have been eminently the case in 1855 or 1856, when the stream of the Hoang-ho, near the debouchment of the Great Canal, was reduced to a few yards in width, the northern banks having given way far up, and the inundations poured over Shan-tung. On this occasion much of the water was reported to have escaped into the gulf of Peh-chi-li, which the Chinese believe to have been the original exit. During the reign of the last Mongol emperor, a project was adopted for restoring this channel. The discontent created by this scheme assisted in exciting the movement for the expulsion of the dynasty.—*Davis*, i. pp. 137, 190; *De Guignes*, iv. p. 216; *J. R. G. S.* xxviii. p. 294; *Biot in Jour. As. Ser.* iv., i. and ii. in *Yule, Cathay*, i. p. 125.

KARANA. HIND. A doer of anything, hence the kurnum or village accountant, and the terminal syllable of such words as kudrikara, a horse-keeper. The Karana is also a mixed caste, following writing and accounts as an occupation. Hence the Anglo-Bengal word Kerani, a clerk, an accountant. It is from the Sanskrit Kri, to do.—*Wilson.* See Kar.

KARANAM or Curnum. KARN., TAM., TEL. A village accountant, one of the chief officers of a village community in the Tamil country. The Karanam is usually a Sudra, and takes the title of Pillai; in Telingana, a Brahman.

KARANG, a tree worshipped in Chutia Nagpur.

KARANG. MALAY. A reef, a shoal; several of them off the Sumatra coast.

KARANG BOLONG, a district in the Residency of Baglan, division Ambal, on the southerly sea-coast, between the rivers Chinching Golong and Djetis. 4000 able-bodied men of this district find a livelihood by gathering edible birds' nests, as fishers, and in cultivating sawa. Their bird-nesting is accompanied by various local usages, amongst others are a feast, always on a Thursday, and cleaning the cliff; the next morning (Friday) buffaloes are killed. Two hours afterwards they take some pieces of flesh, tongue, entrails, etc., from the slaughtered animals, and place them on small bowls woven of bamboo, called Sadjen. They are then offered to Bolong Watu Tumpang, and near the watch-houses of the cliffs a he-goat is offered with incense. In the afternoon a wayang is performed in the Bolong, generally a piece of seven acts, while the necessary flowers, fruits, ointments, siri, pinang, etc., required for the offerings, are prepared by the Tukang Kembong, and placed on the bamboo bowls, and in the evening are brought by a servant into the Bolong near the seroot tree. A Javanese named Kaki is buried there, and the natives declare that the tree has sprung from his navel. They likewise make offerings on the burial-place, at the waringin tree, and in the overseer's house. After the wayang players have returned from the Bolong, the devil's bed (Nyai Ratu Kidul, which has existed from time immemorial) is put in order by the Tukang Gedong woman, and ornamented with silk and other cloths. Every Thursday this bed is cleaned, and offerings are made to it. Small lamps are lighted, and small bamboo bowls, with flowers, fruits, etc., are placed with particular marks of honour by the Tukang Gedong before the bed on a small couch made for the purpose. At the same time she says in high Javanese, as if addressing some distinguished person, 'By order of Mijinheer, I here bring wherewithal for you alone to eat.' After this speech the Tukang Gedong herself answers, 'Yes, mother Tukang Gedong, say to father Mijinheer that I return my thanks for the food which he has sent me.' At this ceremony the Tukang Gedong further asks Nyai Ratu Kidul if it be agreeable to her that the birds' nests should be collected, and if it shall take place without mischance, to which Yes is the usual answer.—*Journal of the Indian Archipelago*, No. iii. p. 103.

KARANI. BENG. A copyist. See Karana.

KARANIKA. TAM. In the Tamil provinces a Sudra of the Pillai caste, and in the Telugu a Brahman.—*Wilson.*

KARANPURA is the side of a coal-field in the Hazaribagh district, Bengal, between lat. 23° 37′ and 23° 57′ N., and between long. 84° 51′ and 85° 30′ E. Area, 472 square miles; greatest length, 42 miles; breadth, 19 miles. It is divided into two tracts by the Damodar river; and ' ores of good quality occur in abundance in the field, and the manufacture of iron forms one of the chief industrial features of Hazaribagh district. —*Imp. Gaz.*

KARAO, seemingly from Karana, to cause to do, the term given among the Jat, Gujar, Ahir, and other races and tribes in N.W. Hindustan to concubinage generally, but more especially to marriages of widows with the brother of a deceased husband. This practice is known to the eastward of the Panjab by the name of Oorhai, in the Dekhan of But'hee, and in other provinces by the term Dhureecha; it is followed among several races, but is not very openly confessed even among them, as some degree of discredit is supposed to attach to it. Amongst the Jat, it is only younger rothers who form such connections, elder brothers being prohibited from marrying their younger brothers' widows, but among the Jat of Dehli even this is not prohibited. This practice has been common among several nations of the east. The Jews followed it, and in Egypt it was admitted for a childless widow to cohabit with a brother of the deceased husband. At the time that the laws of Menu were compiled, Karao appears to have been a recognised institution; but, as is not unusual with the Institutes, there is much contradiction between the enactments relating to it. From a consideration of all the passages on the subject, it appears that failure of issue was the point on which the legality turned. He who was begotten, according to law, on the wife of a man deceased, or impotent, or disordered, after the due authority given to her, is called the lawful son of the wife (Menu, ix. 176). Amongst the Jat, Gujar, and Ahir, children born to Karao are considered legitimate, and are entitled to inheritance accordingly. Children borne by the women previous to Karao, except in the case of fraternal Karao, are known by the name of Kudhelura, and do not inherit the property of the father-in-law. When a Manji Singh dies leaving no male offspring, his brothers, or his nephews of the full blood, assume the right of succession, to which the widow or widows become competitors. According to the Shastra (if they may be considered applicable to public property and chiefships), the prior title of the widows is held; but, as the Sikhs follow the custom termed karao or chad'r-dala or chad'r-andazi, which obtains in every family with the exception of those of the Bhai, the eldest surviving brother of the deceased places a white robe over, and the nuth or ring in the nose of, the widow, which ceremony constitutes her his wife. This practice accords with the Hindu and Mosaic laws (Deuteronomy xxv. 5–10), and acts as a counter-agent to the many evils attendant on female rule. If the free will of the widow were consulted, it is scarcely to be doubted she would prefer the possession of power, and the charms of liberty, to the alternative of sacrificing her claims to her brother-in-law, and taking her station amongst his rival wives. Judging from the masculine disposition, want of modesty and of delicate feeling, which form the characteristic features of Sikh females, necessity and not choice must have led them to yield to the adoption of a usage which must often be repugnant to their natures, and disgusting to their thoughts. Yajnyawolkya says, 'If a brother die without male

let another approach the widow in the proper season.' And Menu ordains, 'Having espoused her in due form, she being clad in a white robe.' The Bhai tribes of Khytul and other places, although they reject the union by Karawa, yet set aside the claims of a widow in favour of the brothers and nephews of one dying without male issue. The widows of the Bhai tribes receive small jaghirs for their support during life.

KARA OGHLAN, ruins about half a mile S.E. of Kifri in Kurdistan, from which Rich excavated a quantity of earthen jars varnished black in the inside, and perfectly resembling those found at Seleucia and Babylon. He obtained also a small earthen lamp like that now used by the villagers. Gold and silver coins are also frequently found here, which the villagers immediately melt down. The jars, or sepulchral urns, refer to the Sassanians. Farther up the torrent, on the N.N.W., are some excavations in the block, called Gabr houses, and others of the same kind are in the hills, ten minutes' ride from the S. extremity of the ruins, consisting of excavated sepulchral chambers, with very low doors, and, in the inside, three places to lay out bodies, but of small dimensions, about five feet long. The plan of these excavations resembled the Achæmenian sepulchres at Naksh-i-Rustam. Farther on, about three miles from the ruins, on the top of a hill, are some vestiges of building, which the people call Kiz Kalasi, or the Girls' Castle. Here urns and bones are found; the place is nearly opposite Oniki Imaum. S.W. of Kifri is an immense mound like the Majallibah of Babylon. Mr. Rich dug about it, and found immense quantities of small pieces of human bones, and fragments of urns, all of which had a black varnish on the inside; but the pottery was of different quality, some coarse and unornamented. The soil, as deep as he could discover by means of a ravine, was impregnated with black unctuous mould, fragments of urns, and small bits of bones. On the centre of the mound is a burial-place of Arabs, and the Muhammadan now confounds his dust with that of the fire-worshipping Persian; for that this was a Sassanian place of exposing the dead, Rich had no doubt from its appearance and character, and the style of the fragments found.—*Rich's Kurdistan*, i. pp. 18-21.

KARA-SU. There are several rivers of this name,—that of Diarbakr; one in Armenia; one in Trebizond (Tarabizun). One of the Kara-su is the main branch of the Euphrates that flows near Erzerum. Another Kara-su is one of the numerous streams that fall into the Murad or Euphrates.—*Markham's Embassy*, p. 72.

KARATAGIN, a semi-independent Galcha State in the upper part of the valleys of the Surkhab and its tributaries; its chief town is Garm or Karatagin. Its chieftain, like all the Galcha chieftains, claims descent from Alexander the Great. Population, 100,000, chiefly Tajak. It has 22 small Begships or villages, each averaging 30

houses. There is a hot spring at Ab-i-garm Kishlak. Gold is washed at Sarim Sali, and salt is found in the Langar Sha mountains. The people trap martens and otters, make firearms, weave woollens and cottons.—*Tr. C. As.*

KARATEEVO ISLAND, a name of Cardiva Island, about 1½ to 4 miles off the Ceylon coast. The N. point is in lat. 8° 31′ N., and long. 79° 46′ 40″ E. It is a mere sandy ridge thrown up by the sea.

KARAULI or Kerrowlee is the capital of a state of the same name. It is situated about 70 miles equidistant from Muttra, Gwalior, Agra, Ulwar (Alwar), Jaipur (Jeypore), and Tonk, in lat. 26° 30′ N., long. 77° 4′ E. It is said to derive its name from Kalianji, a temple built by Arjan Deo. The maharaja of Karauli is the head of the Jadu clan of Rajputs, who claim descent from Krishna, and are regarded as Yaduvansi, descendants of the Lunar race. The clan has always remained in or near the country of Brij round Muttra (Mathura), and once held Biana, which was taken from them by the Muhammadans in A.D. 1053.—*Imp. Gaz.*

KARAVAN-SARAI or Caravansary or Sarai is a square, enclosed by walls, under which are many rooms or cells for accommodation. The merchandise and cattle are collected in the area. There is a chamber for each person, with strict privacy.

KARAWA, a fisher caste near Bentotte in the N. and N.W. of Ceylon. They originally came from Tuticorin. The Parawa are a section of the Karawa.

KARAWAN or Keerewan, the stone plover, species of œdicnemus? *Linn.*, has a shrill voice, somewhat resembling that of the black woodpecker. The Turks and Egyptians keep it in a cage. It is a very voracious bird, catching and devouring rats and mice. It is often mentioned in the Arabian Nights.—*Lane.*

KARBAJ, or Phancha. HIND. Sacks in which borax is conveyed across the mountains on the backs of sheep and goats.

KARBALA, or Mash'had Husain, a town of Asiatic Turkey, in Irak-Arabi, 50 miles S.W. from Baghdad; population, 20,000. The town is built on a plain about 6 miles west of the Euphrates, with which it is connected by a canal said to be more ancient even than the era of Alexander. Husain, son of Ali and Fatima, was killed near, and is buried here. His tomb is adorned with a gilded cupola and a noble mosque. Muhammadans of the Shiah sect resort in pilgrimage. It is 24 miles from Hillah, is at the extremity of a very noble canal drawn from the Euphrates. Its environs are shaded by extensive plantations, and the walls are upwards of two miles in circumference. Fatima, Mahomed's daughter, was slain near it.—*MacGregor.*

KARBAR, business, etc. Kardar, an agent. Kargah, a workshop. Karkun, a clerk. Karkhana, an office, a manufactory, an arsenal. Karani, a manager, writer. Karigar, a workman. See Kar.

KAR-CHEMISH, the Hittite capital on the Euphrates.

KARCHI. HIND. An iron plate for parching grain.

KAR-CHOB. HIND. Heavy gold embroidery for saddle-cloths, cushions, etc.

KARDAR, a race occupying the Animallay Hills in the collectorate of Coimbatore. They are open, independent, straightforward men, simple, and obeying their Mopen or chiefs. They are strong-built and active, with woolly hair and something of the African features, and they file their front teeth to a point. The women wear enormous circles of pith in the lobes of their ears, which they distend down to their shoulders. A black monkey is the Kardar's greatest dainty.—*Lieut.-Col. Hamilton in literis.* See Kader.

KAREJ. PERS. Three kinds of calcareous earth are found in most situations in the western desert between Babylon, Hit, and Ana. The first, called Nura, is a white powder particularly abundant at Hit and Ana. Mixed with ashes, it is used as a coating for the lower parts of walls, in baths and other places liable to damp. The second is also found in powder, mixed with indurated pieces of the same substance and round pebbles; it is called by the Turks Karej, and by the Arabs Jus. It is very plentiful between Hilla and Felujia, is the common cement of the country, and composes the mortar which is found in the ruins of Babylon. The third species, called Borak, is a substance resembling gypsum.—*Rich's Ruins of Babylon*, pp. 64, 65.

KAREKATTAREARU. KARN. Persons whose occupation is working ornamental borders to blankets.—*Wilson.*

KAREN is a Burmese word applied to many of the mountaineers in Pegu and Southern Burma. Some of them are known as the White, Red, and Black Karen, from the colours of their clothes; also Burmese Karen and Talaing Karen, as dwelling amongst these nations. The Shan call them Yang, pronounced in the different parts of Burma as Yen, Yein, Yen-ban, and Yen-seik. The red-clothed Karen call themselves Ka-ya, and some of the Bghai clans, Kay-ay. They describe themselves as having come from the north, and crossed the great sand desert that separates China from Tibet, and believe that formerly they had books. All the Karen family between the mouths of the Tenasserim and sources of the Sitang arrange themselves into the Sgau tribes, the Pwo tribes, and the Bghai tribes. The Karen people are found within the British, Burmese, and Siamese territories, and extend from about lat. 28° to 10° N. The Karen between Burma and China are independent, with a patriarchal constitution, and reckon themselves by families, not by villages or tribes. They are agricultural. Some of the tribes are Buddhist, but two of them, the Sgau and Pgho, are pagan. Sgau tribes, the Pwo tribes, and the Bghai tribes may be thus arranged:—

Sgau proper.	Bghai-ka-ten.	Pwo proper.
Maune Pgho.	Bghai-mu-htai.	Shoung khie.
Paku.	Bghai ko hta.	Kaya or Ka.
We wa.	Lay may.	Taru or Kho thu.
	Mana manau.	Mopgha.
		Hashu.
		Toung thu.
		Kyen.

The Eastern Bghai, Bghai-mu-htai, or Red Karen, call themselves Ka-ya, their term for man, and are called by the Burmese Kayennee; by the Shan, Yen-laing, or Red Karen, from the colour of their dress, which was originally all red, but a mixture of black garments is now commonly seen. Every man carries a short knife in his belt, many have swords, and those who have not muskets or matchlocks carry from one to three light spears, which are used in war like javelins, and thrown

from the hand. Every man has a pony, so that in time of war they form a body of light cavalry, when all turn out to service, and the cultivation is then carried on by the women exclusively.

The country inhabited by the Red Karen is the finest in the interior of Burma. They are governed by a Saubwa, and have occupied their present locality for forty generations, having been driven down from the north by the Burmese, and separated at Upper Pagan from the Chinese, with whom they were then associated. Here, on the high table-land, they have lived, a terror to both Burmese and Shan, plundering, kidnapping, and killing, as opportunity offered, and selling the slaves they did not need to the opposite nation, Shan to Burmese, and Burmese to Shan. Dr. Mason found the people, with all the savageness which is imputed to them, by far the most civilised Karen known. They are better clad, provide themselves with better food, are better skilled in the arts, are more vigorous, active, and laborious, than any jungle tribe he met. They make their own knives, axes, swords, spears, hoes, bangles, silver ornaments, and earthenware, bits and bridles, saddles and stirrups. Every foot of land they cultivate is hoed with a heavy hoe of the western form, such as is never seen among either Burmese or Karen, but is used by the Chinese. They have cattle in great abundance, which are trained to carry panniers as donkeys are in Europe, and which bring their produce from the fields to the villages. A considerable portion of the population are slaves; but slavery here exists in its mildest form. There seems to be very little difference between master and slave.

The Karen burn their dead, but rescue from the ashes a portion of the skull, which they suspend from a tree, with the clothes, ornaments, and arms of the deceased. They dance, singing beautiful songs, around these relics, which the elders afterwards convey to the foot of distant mountains, and there inter them. Dr. MacGown includes amongst them, the Ka-Khyien, Khyien, Kemmi, Karen-ni or Red Karen, the Pwo and Sgau Karen, who possess characteristics so much in common as to justify them in being regarded as divisions or fragments of one nation.

The Karen dialects of the Lower Irawadi and Tenasserim are more closely assimilated with the Yuma languages than with the Burman. Karen has been more assimilated to the Burman phonology, but it has remarkable affinities with the Mon Anam or Mon Lau alliance. Glossarially, it is mainly Tibeto-Ultra-Indian of the earlier form, or that which characterizes the Yuma and Naga Manipuri languages. A few have become Buddhists, and atheists are met with. They have no priesthood. They are, however, addicted to a considerable extent to Nat worship, demonolatry or pneumatolatry. To propitiate the spirits of the rivers, hills, plains, and trees, they sacrifice buffaloes, swine, and fowls. A portion of them worship their ancestors and make offerings to their manes. They commonly burn their dead.

Karen who dwell in the Shan country north of Mobya, wear a black dress. In Monai, Leg-ya, and Theen-nee, and in the southern part of the last district, their villages are quite numerous. They are much darker than the Shans. The men dress like the Shans, but the women wear a dark-blue skirt gathered at the waist and reaching to the knees, with a shorter over-skirt, and a close-fitting jacket tastefully ornamented with seeds trimming. They are Buddhists, and have Kayoungs, in which the youths are educated to read Shan books. They eat beef and buffalo meat, never pork. The Karen believe that every object of nature has its god, as the god of the sun, or the moon, or the earth, or the ocean. They propitiate evil spirits. They say that formerly they sacrificed oxen. They employ wizards to curse their enemies.

KAREZ, a Persian well or a series of wells, connected to each other by an underground aqueduct, and leading the water to the place required with shafts at intervals to admit of repairs. There are several very valuable karez at Ahmadnaggur in the Dekhan. Pottinger mentions that, but for the karez or aqueducts, the natives of many parts of Baluchistan could not possibly exist. They are met with in great numbers in all the plain country of Persia and Afghanistan. Those of Hezekiah, 2 Kings xviii. 17, seem to be of this kind.

KARG or Kharg. HIND. A sword. Karga-shapna, the Scythian adoration of the sword, is continued amongst the Rajput races as the Khanda-worship, part of the ceremonies of the Nou-ratri, or nine days dedicated to the god of war. The Scythians worshipped their god of war under the form of an iron scimitar. The Fresian Frank adhered to this practice. Charlemagne styled his sword Joyeuse. The Khanda is a double-edged scimitar.—*Tod.*

KARHADE, a clan of Brahmans spread in Bombay Island, in Poona, in the Ceded Districts, Gujerat, and Sind; in 1881, about 23,040 in number. They are agricultural, but take Government service. Many are bhikhshu or mendicants, and serve in Hindu temples; are Purana readers. They were accused of a tendency to sacrifice human beings.

KARHARBARI, a coal-field in the Hazaribagh district of Bengal, lies between lat. 24° 10′ and 24° 14′ N., and between long. 86° 16′ and 86° 23′ E. Area, 11 square miles, of which 8¼ miles are coal-bearing. The miners are chiefly Bhuiya, Bauri, and Santal.

KARI. TAM. A bazar, a market-place; the supposed source of the word curry, as, like bazar in Bengal, it means the market supplies. Karia-paak, Karia beken, curry leaf; leaf of Bergera Konigii.

KARIALAN. TAM. Meaning landlord; a tribal title of the Idaar or shepherd race, in the southern districts of the Tamil country.

KARIANG, Sawa, Ka, and Chong, are wild, migratory races of Further India, the first and second being the same people who inhabit various portions of the Burman dominions. The Ka, a term which in the Siamese language means slave, but who are called by the Kambojans Pa-nong, inhabit the mountains of Lao, bordering upon Kamboja. The Chong, a more industrious and settled people, inhabit the hilly country on the eastern side of the Gulf of Siam, between the 11th and 12th degrees of north latitude.

KARIKA, the metrical aphorisms of Grammar of Bhartrihari.

KARIKAL is the name of a French settlement in the delta of the Cauvery, within the limits of Tanjore district, south of Madras, in lat. 10° 55′ 10″ N., and long. 79° 52′ 20″ E.; population,

92,516; area, 52 square miles. Six miles south of Tranquebar, and about 1½ mile from the Arselar mouth of the Cauvery, the soil is fertile and watered by six small channels from the Cauvery.

KAR-i-KALMDANI. HIND. Papier-maché work, also painted wooden articles; the painted ware of Kashmir; also called Kar-i-manakkash or painted ware, pen-case work; a papier-maché work made at Srinuggur, in the form of paper cases, glove-boxes, tea-caddies.

KARLI, in the Poona district of Bombay, is situated on the road between Bombay and Poona, in lat. 18° 45′ 20″ N., and long. 73° 31′ 16″ E. The rock-cut chaitya at Karli is the finest, largest, and most complete of all the chaitya caves. The eight figures that originally adorned the porch are chiefs with their wives, and all the figures of Buddha that appear there now are long subsequent additions. The caves are close to the high road from Poona to Bombay, about half-way down, on the right-hand side of the valley as you proceed towards the sea. They are not so extensive as those of Ajunta, but they are purely Buddhist. The largest and most splendid chaitya cave-temple in India, which could be selected for reproduction by art, is the principal excavation at Karli, and it is also interesting as the oldest Indian work of the kind known to exist.

Kondane, Jambrug, and Ambivle are in the lower scarps of the Sahyadri range, near the Karjas station at the foot of the ghat; Bhaja, Bedsa, and Karli are in the spurs that strike out from the hills, Karli being near the Lanowli station.—*Fergusson; Burgess.*

KARM. HIND. A sort of cabbage eaten by the Kashmiri and at Lahore.

KARMA. SANSK. In Hinduism, act, work; an act of piety or religion, as sacrifice, marriage ceremony, funeral obsequies; duty or acts obligatory on a tribe or caste. In Buddhism, actions that control the universe. See Vaishnava.

KARMA-KANDA. SANSK. The exoteric doctrines of the Vedas.

KARMANTARA, the end of a Hindu funeral ceremony which continues for sixteen days.

KARMATI sect is an offshoot of the Ismaili heresy, and is often confounded with it. There were some points of doctrinal difference, but the uninitiated were ignorant of them, and unable to distinguish them; so the two names came to b often used indifferently. Orthodox writers, hating and despising the heretics, were prone to speak of them by some general name; or if they attempted to be more specific, their ignorance frequently led to a confusion and misappropriation of terms. Thus the term Ismailian includes Karmatians, Assassins, and others, and for the Ismailians the wider term Mulahida, heretics, is often used.

The Ismailians do not admit the rightful succession of the Imams recognised by the orthodox. They acknowledge Ali, Hasan, and Husain, but maintain that the line closed with Ismail, son of Jafar Sadik, who was the seventh and last Imam. From him they take the name Ismailian, and from him also they are called 'Seveners.' The teaching of the Ismailians put a metaphorical interpretation on the Koran, which tended to explain away and supersede its doctrines, leaving only a negative religion, and substituting licence for morality. The doctrines of the Ismailians were embraced by a man named Abdullah, son of Maimun, a native of Persia, who devoted his powers not only to the overthrow of Arab ascendency, but to the subversion of Islam, and, indeed, of all religion. His mode of action was by secret influence and missionary exertion. The culminating doctrine of his teaching was the vanity of all religions, and the indifference of men's actions, the good receiving no recompense, and the bad no chastisement, either in this world or in the next. Among the followers of Abdullah was one named Ahmad, or, as he was afterwards called, Karmat. He rose about the year H. 278 (A.D. 891), and was the founder of the Karmatians. The term Karmata or Karmat belongs to a kind of Arabic writing in which the letters are very small and the lines very close. This style being well suited for secret communications, was adopted by Ahmad, and hence he was called Karmat, and his followers Karmati or Karamata, Anglicé Karmatians. Teaching the doctrine that everything desirable was allowable, he differed from his predecessors by endeavouring to carry out his views by violence, and began an open unrelenting war upon the ruling powers. In H. 290 (A.D. 903) the Karmatians made a fearful inroad into Syria, and in H. 311 (A.D. 923) they plundered Basra and Kufa. In H. 319 (A.D. 931) under a famous leader, Abu Tahir, they took the city of Mecca with terrible slaughter, plundered the temple, and carried away the holy hajr-ul-aswad, or black stone, which they retained for twenty years. Ar Razi, the twentieth khalif, actually agreed to pay them an annual subsidy to secure the safe passage of the pilgrims to Mecca.

The Fatimite throne of Egypt, founded by an Ismailian in H. 297 (A.D. 909-910), in rivalry of the Arabian khalifat, grew rapidly in power, and became a source of great jealousy and trouble to the occupants of the throne of Baghdad. Political rivalry thus combined with religious hatred to make the war between the faithful and the heretics most savage and unrelenting.

From the Ismailians sprang another sect, which forced itself upon the notice of the Crusaders, and introduced a new word, Assassin, into the languages of Europe. This sect was founded by a native of Re, named Hasan Sabah, who was schoolfellow and companion of Nizam-ul-Mulk, the well-known wazir of the Seljuki government, and author of the Majma-ul-Wasaya. The forcible removal of all foes and rivals by the dagger of the assassin, was the profession and the distinctive practice of this abominable sect. Amongst others, Nizam-ul-Mulk, above referred to, fell under their daggers, and the author of the Jahan-kusha had nearly become a victim to Ismailian assassins. In H. 483, Hasan Sabah obtained possession of the strong fortress of Alah-amut or Alamut (the Eagle's Nest), in the province of Rudbar, about eleven parasangs north of Kazwin, and here he and his descendants maintained themselves for nearly two centuries, when the fortress and many others fell under the iron tread of the Mongols. The excesses of the Assassins had impelled Mangu Khan to determine upon the extermination of the whole sect of Ismailians, and under him and his successor Hulaku, their fortresses were taken, and many thousands of their men, women, and children, and babes at the breast, were put to the sword.

The Karmatians appear to have pushed themselves eastwards into the valley of the Indus, and to have sought a country in Sind about H. 375 (A.D. 985), and seem to have been ruling there at the time of Mahmud's return from the fall of Somnath. From Biruni we learn that the Karmatians destroyed the great idol at Multan, and the heretical chief, whom Mahmud of Ghazni drove away from that town, was no doubt a member of this sect, for the name of Karmatian is applied to him by one or two writers, although the more general name of Mulahida is more frequently used.

Mahmud's wazir, Hasnak, was brought to the stake by Masūd upon the charge of being a Karmatian. The personal enmity of Masūd no doubt precipitated this act; but there is ample proof that the khalif was greatly incensed against the wazir for having received a khilat from the Egyptian khalif, and that he had urged Mahmud so strongly to execute him that the incensed monarch broke out in the indignant words recorded by Baihaki, 'Tell the doting old khalif that out of regard to the Abbassides I have meddled with all the world. I am hunting for the Karmatians, and wherever one is found he is impaled. If it were proved that Hasnak is a Karmatian, the Commander of the Faithful should soon see what had happened to them. But I have brought him up, and he is to me as my sons and my brothers. If he is a Karmatian, so am I.' When Mahmud departed, and Hasnak's enemy succeeded, the khalif's animosity was soon appeased.

Though Mahmud expelled the Karmatian chief from Multan, the heresy was not suppressed; for in H. 571 (A.D. 1175), Muhammad Ghori once more delivered Multan from the hands of the Karmatians. In H. 634 (A.D. 1237) we find them in some force at Dehli, where they made a concerted assault upon the faithful in the Great Mosque, and slew a considerable number; but they were finally overpowered, 'and every heretic and Karmatian was sent to hell.'

The Druse sect adored Hakim, the Fatimite khalif of Egypt, as a god. In the year A.D. 1032, Muktana Baha-ud-Din, the chief apostle of Hamza, and the principal compiler of the Druse writings, was in correspondence with the Karmatian schismatics in Sind, his letter being addressed to Shaikh-ibn-Sumar, Raja Bal, in particular. The Karmatians, after successive defeats and subsequent persecution in Arabia, as refugees from Bahrein and Al Hasan, sought protection in Sind, where their progress amongst the Hindus was rapid. The Karmati, one of the Baluch clans, preserves the memory of its heresy. Independent of the general dissemination of Shiah sentiments in the valley of the Indus, which favoured notions of the incorporation of the godhead in man, the old occupants of the soil must, from other causes, have been ready to acquiesce in the wild doctrines of the heretics, who now offered themselves for spiritual teachers, as well as political leaders. Their cursing of Mahomed; their incarnations of the deity; their types and allegories; their philosophy divided into exoteric and esoteric; their religious reticence; their regard for particular numbers, particularly seven and twelve; the various stages of initiation; their abstruse allusions; their mystical interpretations, and their pantheistic theosophy, — were so much in conformity with sentiments already prevalent amongst these willing disciples, that little persuasion could have been required to induce them to embrace so congenial a system of metaphysical divinity, of which the final degree of initiation, however cautiously and gradually the development was concealed, undoubtedly introduced the disciple into the regions of the most unalloyed atheism. So susceptible, indeed, must the native mind have been of these insidious doctrines, that Hammer-Purgstall and others, who have devoted much attention to these topics, have very reasonably concluded that the doctrines of these secret societies, such as the Karmatian, Ismailian, or Assassin, Druses, Batini, and sundry others, which at various periods have devastated the Muhammadan world, and frequently threatened the extinction of that faith, though originally based upon the errors of the Gnostics, were yet largely indebted to the mystical philosophy and theology of eastern nations, and especially of India, where the tenets of transmigration and of absorption into the deity were even more familiar both to Buddhists and Brahmans than they were to these miserable schismatics.—*Elliot's History of India*, ii. p. 497; *Tr. of Hind.* i. p. 431; *Calcutta Review*.

KARNA, in Hindu mythology, son of Prithi or Kunti. Kunti had received from Dur-vasas a charm by virtue of which she could have a child by any god whom she preferred to invoke. She chose the sun, and the offspring was Karna, who was born equipped with arms and armour. He was thus older than his half-brothers, the Pandava. He became king of Anga, but in the great fight of the Mahabharata he was killed by Arjuna, and the Pandu brothers only then became aware of his relationship to them.—*Dowson*.

KARNA-CHAPARA. The Haft Khaneh, or Satgurh group of caves, is one of the Behar caves in the neighbourhood of Rajagriha, amongst the most ancient caves in India, being about B.C. 200. The others are the Milkmaid's Cave, the Brahman Girl's Cave, the Nagarjun Cave, and in the neighhood are the Karna-chapara and Lomas Rishi Caves.

KARNAK and Luxor are famed for their ancient temples. The sacred enclosure of the Karnak temple comprises a square of 2000 feet each way, with 26 temples within the enclosure. On the walls of these stupendous structures we have the history of Egypt from Sesortesen I., who reigned 5000 years ago, down to the Roman Augustus,—these being the earliest and latest names inscribed on the lithotomes of Karnak. The famous hypostyle court is 170 feet long; its width is 329 feet. It is supported by 134 columns. The centre twelve are 62 feet high in the shaft, and 36 feet in circumference. The remaining 122 columns are 42 feet in height and 28 feet in circumference. The lintel stone of the great doorway is within two inches of 41 feet in length. Every part of the walls, the pillars, and the roof, is covered with coloured sculpture.

KARNAL, a town in the Panjab, in lat. 29° 42′ 17″ N., long. 77° 1′ 45″ E., and 966 feet above the sea. The district is occupied by the agricultural Jat, who are careful and thrifty cultivators. Here, as in most other districts, they are confined to the once sterile uplands, while the Rajputs and Gujars occupy the fruitful Khadar; the Brah-

mans, most of whom are engaged in tillage, being found most thickly in the Jumna valley.

KARNATIC or Carnatic, a term applied by modern geographers to the low country below the ghats on the Coromandel or eastern coast of the Peninsula of India, also known as the Dravida or Tamil country. But the Karnatika, Kannadi, or Canarese language is spoken in the centre of the Peninsula. It is bordered by the Tamil and the Telugu on the east, is spoken throughout the plateau of Mysore and in the S.W. districts of Hyderabad, in the Dekhan as far north as the village of Murkunda, lying 30 miles west of Beder. Also, it is largely spoken in the ancient Telugu country on the Malabar coast, now long designated as Canara, a name which it acquired from having been subjected for centuries to the rule of Canarese princes. But in Canara, the Malealam, the Konkani, and the Telugu are also spoken, though less extensively than the Canarese. The Canarese character differs slightly from the Telugu, from which it has been borrowed, but the characters used for Tamil, Malealam, and Telugu are quite distinct from each other. The ancient Canarese character, however, entirely differs from that of the modern Telugu, and the Canarese language differs even more widely from the Telugu than it does from the Tamil. There is an ancient dialect of the Canarese language current, as well as modern, the latter differing from the former by the use of different inflexional terminations. The ancient Canarese dialect, however, has no connection with the Sanskrit character to which that name has been given, in which, viz. the Hala Kannada, many very ancient inscriptions in the Mahratta country as well as in Mysore are found. The people who speak the Canarese language may number seven millions. This includes the Coor people and the Hyderabad country, where Canarese, Mahrati, Gondi, and Telugu are spoken, the Urdu or Hindustani language being merely known to the Muhammadans there, and to the Hindus and Kayasths from Northern India, the resident population using it as a lingua franca. Of the books in the Karnatika language, mention may be made of the Kavya Sarya, KARN., Gems from the Works of ancient Canarese Poets, by Aggalah, a poet of the 12th century; Rudra Bhatta wrote the Jagannatha-Vijaya; the Bharata Sara is by Chandra Sekhara Kavi; the Abhinava Bharata Sara Sangraha was composed by Bijjalanka Raya of Kalyana pura in the 12th century.

KARNA-VEDHA, a Hindu ceremony of boring a child's ears.

KARNAVEN, in the Malealam, the head of a family community or tarwaad living in the form of Marumakatayam, or descensus ab matrice. See Polyandry.

KARNFULI, the river on the banks of which Chittagong is built.

KARNPHUL. HIND. Bunches of silk and tinsel ornaments worn in the ear.

KARNUL, a town on the right bank of the Tumbudra, near the junction with the Hindri, lat. 15° 49′ 58″ N., long. 78° 5′ 29″ E.; population (1871), 25,579. It gives its name to a revenue district, which was ruled by a Pathan family until 1839, in which year, in consequence of the nawab Alif Khan making preparations for war, he was taken prisoner at the battle of Zorapur, dethroned, and removed to Trichinopoly, where he was assassinated by one of his own people. The district has limestones, shales, and quartzite as the prevailing rocks. The limestone makes very good building material, and is used for lithographic purposes. Lead ore is also found. The Catholics of this place originally belonged to the Kapu caste, and their conversion to Christianity has not made any material change in their manners and customs. They eat and drink with Hindus, and in several cases intermarry with them. They have founded a village named Kothala. The wild tribes or Chenchus live on the Nullamallays in small communities called gudems. Each gudem includes several tribes.—*Imp. Gaz.*

KAROH. PERS. A cos, an Indian itinerary measure of India.

KAROND or Kala Handi, a feudatory chiefship attached to the Sumbulpur district, and lying between lat. 19° 5′ and 20° 30′ N., and long. 83° 50′ and 84° 40′ E.

KARRA. HIND. A bracelet, a metal ring for the wrist, assumed by a Bengali woman on marriage.

KARRACK ISLAND or Kharag, the Icarus of Arrian, was surveyed by Captain Goodfellow, of the Bombay Engineers. It is composed of coral-line sandstone and limestone plentifully mixed with fossil tubipora. In the limestone are numerous oysters, cockles, limpets, and other molluscs. It is four miles long and three broad, and has a range of table-topped hills ending in bluffs.—*Kinneir's Geographical Memoir*, p. 18. See Karak.

KARS, a province in Asiatic Russia, lat. 40° 8′ to 41° 18′ N., and long. 42° 45′ to 43° 34′ E. The capital is in lat. 40° 37′ 1″ N., and long. 43° 9′ 2″ E., and is 6000 feet above the sea. It is of great antiquity. It was taken by Russia in 1828, 1855, and 1877. Kars is the Charsa of Ptolemy, is one of the strongest places in that region, and is the very key of Armenia towards the north. Amurath III. restored the principal fortifications, and a pentagon redoubt was added about the close of the 18th century.—*Porter's Travels*, ii. p. 648.

KARSHA. SANSK. A weight of gold or silver of 180 troy grains.—*W.*

KARSHA, the mountain temple of Karsha of Shekavati, has an inscription in grammatical Sanskrit. It was erected A.D. 961, finished A.D. 9 It mentions the mythology of the Purana. Siva, the Pramahtes, Muni, and Yati are called immortal; Indra, Kama, Nandi, the Naga, Rama, Balarama, Vishnu, Krishna, Sambhu, and Visvakarma. The portico of the temple is graced with the presence of Gaya, the holy Asura. The inscription is at a temple of the Linga (Siva), and Dr. Mill says the character furnishes a definite standard from which the ages of other monuments, of similar or more remotely resembling characters, may be inferred with tolerable accuracy. The temple was built to commemorate the destruction of the Asura, or demon Tripura, who had expelled Indra and the god from heaven; and, on the mountain, Siva was felicitated by the gods, whence the name Karsha (joy). The princes are but donors and benefactors; the Brahmans are represented as the real builders; their spiritual genealogy is traced; one of them is made an incarnation of Nandi, similar in splendour to the great deity himself, and they are called Lords of the Earth. Indra is called Bharata in the inscriptions. Siva is identified with his phallic emblem, and he is

also called the eight formed one. Nudity, clotted hair, and ashes characterize the Brahman teachers. Ganapati, the son of Siva, is not mentioned; seeming to indicate that his worship was not yet established.—*Beng. As. Soc.* iv. p. 367.

KARSHAGNI is a Hindu expiatory ceremony obtained from the use of the cow-dung for the cremation of the living. On one occasion of its performance, it happened, according to a legend, that a crow, named, from her friendly disposition, Mitra Kaka, was present, and immediately flew and imparted the welcome news that a Hindu who performs the Karshagni goes to heaven. This expiation consists in the victim covering his whole body with a thick coat of cow-dung, which, when dry, is set on fire, and consumes both sin and sinner. Until revealed by the crow, this potent expiation was unknown; and it has since occasionally been resorted to, particularly by the famous Sankaracharya. The friendly crow was punished for her indiscretion; was with all her tribe forbidden to ascend to heaven, and was doomed on earth to live on carrion. — *Wilford.*

KARTA, a title added to the names of petty princes and zamindars of Travancore; also the member of a joint Hindu family who manages the estate.

KARTABHAJA, a class of Bairagi who believe in the unity of God.—*Sherring.*

KARTIKA. Sansk. The eighth lunar month of the Hindu year, October and November, when the sun is in Kartika or Pleiades. During the months Asharh, Kartik, and Phalguna, Hindus perform four kinds of sacrifices to the Viswadeva and to Varuna. The sacrifices are called Viswadeva, Varuna praghasa, Sakamedha, and Sunasariya. The materials of sacrifice consist of roasted cakes of rice-flour to Viswadeva, with two figures of sheep made of flour, to Varuna, with vegetables to Agni, and the fourth to Indra.

Kartik Ekadasi is the eleventh, in some years the twelfth, day of the light half of the month Kartik, or about the 8th November. On this day Vishnu is supposed to rise from his four months' sleep, and this has reference to the sun being at the winter solstice.

Kartik Purnama occurs about the 11th November, in the full moon of the month Kartik, when Siva is said to have gained a victory over a monster called Tripurasura, seemingly three cities of the Assyrians; presents of money (dakshina), or of lamps (dip-dan), are made to Brahmans.

Bhrathi-dwitaya is the Hindu festival on the second of the Hindu month Kartik, when Hindu sisters entertain brothers, in memory of Yamuna entertaining her brother Yama.—*Wilson's Gloss.*

KARTIKEYA, or Skanda, the Hindu Mars, the second son of Siva, occupies a prominent place among the Saiva sect of the Tamil country. It is said that the gods, persecuted by giants, implored the help of Siva. The lord of Kailasa then assumed six faces, and caused six sparks of fire to dart out of his six central eyes. The sparks were cast into a pond, which the southern Saiva assert is at Tritani, about 50 miles north-west of Madras. The six sparks became six infants, which were nursed by the six mothers, who form the constellation Kartika (the Pleiades). When Parvati took them in her arms, they assumed one united body, having six heads. The warlike son of Siva afterwards slew the giants. In North India, Kartikeya, he who was fostered by the Kartikas, is his common title. In the Tamil country, Subramaniyan, he who is like the diamond, is the usual epithet. He is also called Murugan, he who has perpetual youth, and Arumugan, the six-faced. Skanda is used in the Skanda Purana, and other of his names are Agni-bhu and Ganga-bhu. Skanda is said to have had two wives, Devayanai, daughter of Indra, and Vallinachi, who was brought up by hunters. The month Kartika (part of November and December) is regarded by the Saivites as sacred to the Pleiades and Kartikeya. When the moon enters the third star of the constellation a great feast is held, and lamps are placed in every doorway. There are other legends.

Kartikeya dipa is the name of the Hindu festival celebrated in the month Kartika, in honour of Subhramanya, when lights are placed at the door and other parts of the house, and fires kindled on hills.

KARTTA. Sansk. Maker, Lord, a name given to the Supreme Being.

KARTTAVIRYA, a king who stole the cow of the gods, and was killed by Parasurama.

KARUMNASSA, a tributary to the Ganges. It rises in the Kymore range, in lat. 24° 38′ N., and long. 83° 11′ E., and runs N.N.W. into the Ganges, near Ghazipur, after a length of 140 miles.

KARUNAIPPIRAKASA TESIKAR, a zealous Vira-Saiva of Kanjipuram. He wrote a poem on the lingam, Ishdalinga Akaval, and commenced a work called Kalatti Puranam, but he died before it was completed.

KARUND, a town in the south of Persia; the inhabitants are Ali Illahi, worshippers of Ali, whom they consider as God; they eat pork, drink fermented liquors, never pray, never fast in Ramzan, and are cruel and savage in their habits. Although almost always in revolt against Persia, it is scarcely possible to subdue them; therefore feuds are compromised and never thoroughly repressed by force. Col. Rawlinson says the religion of the Ali Illahi sect bears evident marks of Judaism, singularly amalgamated with Sabæan, Christian, and Muhammadan legends. The tomb of Baba Yadgar, in the pass of Zardah, is their holy place; and this, at the time of the Arab invasion of Persia, was regarded as the abode of Elias. The Ali Illahi believe in a succession of incarnations of the godhead, amounting to 1001; Benjamin, Moses, Elias, David, Jesus Christ, Ali and his tutor Salman, a joint development, the Imam Husain, and the Haft Tan (the seven bodies) are considered the chief of these incarnations. The Haft Tan were seven pir, or spiritual guides, who lived in the early ages of Muhammadanism, and each, worshipped as the deity, is an object of adoration in some particular part of Kurdistan. Baba Yadgar was one of these. The whole of the incarnations are thus regarded as of one and the same person, the bodily form of the divine manifestation having alone changed; but the most perfect development is supposed to have taken place in the persons of Benjamin, David, and Ali. The Spanish Jew, Benjamin of Tudela, seems to have considered the whole of these Ali Illahi as Jews; and it is possible that in his time their faith may have been less corrupted. Amaria also, where the false Messiah, David Elias, appeared, was certainly in the district of Holwan.—*Journal of Royal Geographical Society*, ix. p. 36; *Ed. Ferrier, Caravan Journeys*, p. 19.

KARUN RIVER rises by many springs in the Zardah Koh (mountains) near Korreng; it is a large river from its source. It receives the Ab-i-Bors river a little above Susan. After leaving the mountains, it is a tranquil river, and would be suitable for navigation but for a dam at Shuster, where numerous irrigation channels are drawn from it. It is joined at Band-i-Kir by the river of Dizfal, a large stream, exceeding in size the Tigris or the Euphrates. It discharges into the sea by the khor or channel of Bahmeh Shir, which is 40 miles long, and part of its waters enter the Shat-ul-Arab by an artificial channel. The town of Mohamrah is built on this channel.—*Chesney*, p. 205; *MacGregor*, iv. p. 225.

KARUR (Caroor or Karuru), meaning black town, is the Karoora of Ptolemy, Κάρουρα βασίλειον Κηροβόθρου; at different periods called Vanji and Garbhapuri. The town is in Coimbatore district of Madras, situated on the left bank of the Amravati river, near its confluence with the Cauvery. Lat. 10° 57′ 42″ N., and long. 78° 7′ 16″ E. During the struggles between the rival dynasties of Chera, Chola, and Pandiya, the town changed hands more than once.—*Imp. Gaz.*

KARWAR or Carwar, a seaport town in the North Canara district of Bombay, lat. 14° 50′ N., and long. 74° 14′ E., 50 miles south-east of Goa.

KARWI, a town in the Banda district, N.W. Provinces, lat. 25° 12′ 10″ N., and long. 80° 56′ 50″ E., situated on the river Paisuni.

KAS, a term applied to several regions in the N.W. Himalaya. Kas-Mer is not the country of the Kas, but the Kasia Montes (mer) of Ptolemy, the Kha (mer) Kas or Caucasus. Mer is mountain in Sanskrit, as is Koh in Persian. Kas was the race inhabiting these; and Kas-gar is the Kasia Regio of Ptolemy. Gar is a Sanskrit word still in use for a region, as Cutchwaha-gar, Gujur-gar, the region of the tortoise race, the country of the Gujar race.

But Kash, Khas, or Kas, a frequently recurring prefix in India, is supposed by Mr. Campbell to have its origin from the rishi Kasyapa, who gave his name to Kashmir, Kashgar, and to the people originally called Kasha or Kassia.—*Campbell*, p. 58; *Tod's Rajasthan*, i. p. 303.

KAS, Tam.; Kasu, Tel., Karn.; corruptly Cash. A small copper coin current at Madras up to 1832; the $\frac{1}{64}$th part of a rupee, formerly rated at 80 to a fanam. In Tamil, Kas means money, coin.

KASAI or Cossye, a river of Bengal which rises in the N.W of the Manbhum district, in lat. 23° 28′ 30″ N., and long. 85° 58′ 15″ E. It flows a very winding S.E. and E. course, through Manbhum and Midnapur, till it falls into the Haldi in the latter district, about 20 miles above the confluence of that river with the Hoogly.—*Imp. Gaz.*

KASAULI or Kussowlee, cantonment and convalescent depôt in Simla district, Panjab, situated on the crest of a hill overlooking the Kalka valley; distant from Ambala 45 miles north, from Simla 32 miles south-west. Lat. 30° 53′ 13″ N., and long. 77° 0′ 52″ E. The land was acquired in 1844 from the Native State of Bija.

KASBI, also Kasbin. Hind. A dancing girl, a prostitute; literally a professional person.

KASERA. Hind. Workers in mixed metals, braziers, also melters and casters in moulds. There are in Hindustan various divisions of these people, and they have a conventional or tribal dialect peculiar to themselves.—*Wilson's Glossary.*

KASHAN, a city of Persia, still tolerably flourishing, standing in one of the plains, southward of Isfahan, about half-way between Isfahan and Teheran, and also about half-way between Sultaniah and Yezd, long noted for its brocades and velvets, and also for its scorpions. It was founded by Zobeid. It contains a palace by Abbas the Great, a fine college, and upwards of 30,000 inhabitants, who are chiefly employed in the manufacture of copper utensils, or silk and cotton stuffs.—*Yule, Cathay*, i. p. 51; *Colonel Chesney, Euphrates and Tigris*, p. 213.

KASHGAR. The city of Kashgar was founded A.D. 1513 by Mirza Abubakr. Kashgar State, in 1877, was estimated by Sir D. Forsyth to have 145,000 houses, with 1,015,000 inhabitants.

Khotan,	129,500	Kara Shahr,	56,000
Yarkand,	224,000	Turfan,	126,000
Yangi Hissar,	56,000	Lob,	70,000
Kashgar,	112,000	Maralbashi,	35,000
Ush Turfan,	14,000	Sarighkol,	17,500
Aksu,	84,000	Kirghiz,	21,000
Kucha,	42,000	Pakhpuluk,	14,000
Kurla,	14,000		

Kashgar, also called Eastern Turkestan, is known to the Russians as the Yatti-Shahr or seven cities. Its northern boundary is the Tian Shan mountains, its southern is formed by the Kouen Lun and Karakorum mountains; to the east its limit is the shifting sand of the Gobi desert, and the eastern slopes of the Pamir plateau bound it on the west, the enclosed area being about 1000 miles from north to south and 500 from east to west, covering 243,750 square miles, the greater part of which is uninhabited waste. In 1876 it was under a ruler styled Atalik Ghazi. The Chinese have held it, and called the country north of the Tian Shan mountains Tian-shan-peh-lu, or the way north of the Celestial Mountains, and known to the Mongols as Zanghar, whence the Zangaria of European writers. The country to the south was called Tian-shan-nan-lu, or the way south of the Celestial Mountains, or Kashgar, whence the term Kashgaria. The rivers of the valleys converge to form four main streams, the Khotan, the Yarkand, the Kashgar, and the Aksu rivers, used for purposes of irrigation. They unite and form the Tarim river, to the south of Aksu. The desert is a vast undulating plain of sand, sloping gradually to the eastward, through which the rivers flow. The banks are fringed by thickets, in which lurk the tiger, wolf, leopard, and lynx. Eastward the Tarim river spreads over the surface, forming lagoons and marshes, and again flows in a clear channel until it reaches Lake Lob, on the edge of the Gobi desert. The desert sand has already buried the ancient cities of Lob and Katak. Each little state of Kashgar, Khotan, Yarkand, Yangi Hissar, Kashgar, Ush Turfan, Aksu, Kucha, Kurla, Karashahr, and Turfan has its own peculiarities of dialect and social customs.

Chinese Kashgar is one of the district towns in the province of Nan-lu (southern country), and may be said to have enjoyed, ever since the days of the Ptolemies, great repute for caravans, particularly through its extensive tea trade. Kashgar stands in the same relation to Central Asia that Kiakhta does to Siberia, and Shanghai and Canton to other European nations. This town, moreover, is famed in the east for the glowing charms of its

'chaukens,' young women, with whom the traveller may readily form an alliance for a certain number of years, or for the period of his stay, be it longer or shorter. Owing to these attractions, Kashgar is the resort of Asiatic merchants from all parts of the continent. Here can be met the Tibetan with the Persian, the Hindu with the Volga Tartar, Afghans, Armenians, Jews, gypsies, and runaway Siberian Cossacks.

Kashgar is one of the largest towns of Eastern Turkestan; it contains 16,000 houses, is situated between the rivers Kizyl and Tumen, surrounded by a clay wall six fathoms high, about ten arshines thick at its foundation, and five at the top, and about eight miles (twelve versts) in circumference. It is defended by six towers. The town has two gates, on the eastern and south-western sides; the first is called Suv-Davsa, the second Kum-Davsa (sandy).

Appak-Hodja was much esteemed by the people; the high reputation of the teacher and saint attracted to Kashgar the Musalman youth of the east, who were eager to follow his footsteps in the path of sanctity; and many rulers of Manero-Inmahar even were numbered among his scholars. His tomb at Kashgar to this day attracts many pilgrims from various Musalman countries; and the Eastern Turkestani, who regard him as their own peculiar patron, call upon his name in moments of peril.

Galdan conquered Little Bokhara in 1678, and appointed Appak his viceroy, with Yarkand for his capital. The family of the Kashgar Khan was carried by Galdan into captivity in the Ili region, and settled in the Musalman town of Kuldja.—*Russians in Central Asia, Capt. Valikhanof and M. Vemukof*, pp. 51, 149, 168; *Ballew.*

KASHGOI, a Turki nomade tribe of about 12,000 families, whose chief is the Il-Khani of Fars, one of the most influential personages in that province. They arrive in spring on the grazing of Isfahan, where they are met by the wandering Bakhtiari, from their warm pastures of Arabistan, near head of the Persian Gulf. At the approach of winter both the tribes return to their respectiv garm-sair or wintering lands.

KASHGUL-i-ALI, or Ali's Pot, a sacred Buddhist relic, the water-pot of Fo or Buddha. It was carried to Kandahar by the tribes who fled in the 4th century from Gandhara on the Indus, to escape an invasion of the Yu-chi, who made an irruption from Chinese Tartary for the express purpose of obtaining it. It is now at the foot of the old town of Kandahar, and is one of the most celebrated relics of antiquity belonging to the eastern world, and still retains amongst the Muhammadans of Kandahar a sacred and miraculous character. It is formed of stone, and may contain about twenty gallons. It is under a tree at the tomb of Mir Wais. The capacity of the bowl is 15 cubic feet, or about 93 gallons, and its weight (10 c.f. × 170 lbs.) about 15 cwt. Its lip has 24 facets, each about 7 inches wide. In 1879 Major le Messurier (p. 241) moved the bowl out from the tree, and raised it on stones. See Kandahar.

KASHIFI, Husain-bin-Ali-ul-Vaiz, surnamed Kashifi. He translated the fables of Bedpai into Persian prose from the Arabic of Ibn Makaffa, and named them Anwar-i-Sohaili, or Lights of Canopus. Kashifi lived about the middle of the 12th century (1150), in the time of Bahram Shah.

KASHMIR, a Native State in political connection with the Government of India. It extends from lat. 32° 17′ to 36° 58′ N., and long. 73° 26′ to 80° 30′ E. Area, 79,784 square miles; population in 1881, about 1,500,000. The State comprises, in addition to the districts of Kashmir proper, Jamu and Punch, the governorships of Ladakh and Gilgit, including the districts of Dardistan, Baltistan, Jeh, Talail, Sura, Zanskar, Rupshu, and others; but the provinces of Kashmir and Jamu form the more important part of the State. The valley of Kashmir is traversed in its whole length by the river Jhelum, which rises at the east end of the valley, and winds from one side of the plain to the other, at one time washing the base of the northern hills, at another receding to a considerable distance from them. The Jhelum flows with a tranquil stream, and being, for boats of considerable burden, navigable throughout the whole of the level country as far up as Islamabad, is the great highway for the traffic of the country. From all times the valley has been the retreat from the heats of India for the conquering races. Its oldest record is contained in the Raja Taringini, composed in A.D. 1125, giving a historical account from B.C. 1182, and describing the draining of the valley through an opening in the Baramoola mountain. A Kaurava or Naga dynasty seems to have ruled there for about 1266 years, with one of whom, Gonerda, authentic history commences. It was annexed to the Moghul empire under Akbar in A.D. 1586. It has since been ruled over by chiefs of the Daurani and Barakzai tribes of Afghans, but was taken in 1819 by Ranjit Singh of Lahore; and on the 15th March 1846, Gulab Singh, ruler of Jamu, a Dogra Rajput, was invested at Amritsar with the title of maharaja of Kashmir.

The ancient rulers have been the Kashmir Kaurava dynasty, 1266 years, B.C. 3714 to B.C. 1217; Gonerdiya dynasty, 1013 years, B.C. 318 to B.C. 28; Aditya dynasty, 192 years, B.C. 10 to A.D. 135; Gonerdiya dynasty, 592 or 433 years; Naga, 260 years 5 months, A.D. 594 to 1296.

The principal ancient cities of Kashmir are the old capital of Srinagari, the new capital called Pravarasenapura; Khagendrapura and Khunamusha, built before the time of Asoka; Vijipara and Pantasok, which are referred to Asoka himself; Surapura, a restoration of the ancient Kambuva; Kanishkapura, Hushkapura, and Jushkapura, named after the three Indo-Scythian princes by whom they were founded; Parihasapura, built by Lalitaditya; Padmapura, named after Padma, the minister of Raja Vrihaspati; and Avantipura, named after Raja Avantiverma.

The Kashmir temples are Marttand, Avantipore, Payech, Bhaniyar, and Waniyat. Marttand, 60 feet by 38 feet, is now in ruins. It is 5 miles east f Islamabad, and is built on an elevated plateau that overlooks the valley. Its exact date cannot be determined, but it is somewhere between the years 370 and 500 A.D. It overlooks the finest view in Kashmir. Its enclosing courtyard is 220 feet by 142 f t. The enclosure was erected by Lalitaditya, who reigned A.D. 725 to 761. General Cunningham, however, thinks that the temple was erected by Ranaditya, who reigned A.D. 578 to 594. The courtyard of this, and of

all the Kashmir temples, was constructed to admit of it being filled with water. The principal Naga figures in the niches have three or five headed snake-hoods at the back of their heads. The Avantipore temples were erected by Avantiverma, who was the first king of the Utpala dynasty, and reigned from A.D. 875 to 904. He was a zealous Saiva. The style is rich in detail.

The Kashmirian sacred buildings are distinguished by great elegance of outline, massive boldness in the parts, and good taste in decoration. Lofty pyramidal roofs, trefoiled doorways covered by pyramidal pediments, and great width of intercolumniation, are among the principal features of the Kashmirian temple. The material generally found to have been used is a blue limestone, capable of taking the highest polish, to which circumstance Captain Cunningham refers the beautiful state of preservation in which some of the buildings exist.

The body of Srinuggur, the former capital, is intersected with a labyrinth of canals. To avoid the necessity of crossing the dangerous Wular lake, through which flows the main stream of the Jhelum, a navigable canal was constructed in early times to connect Sopur with Srinuggur.

The Dal or city lake is situated north-east of Srinuggur, and is connected with the Jhelum by a canal called the Tsont-i-kul, or Apple-tree Canal, which enters it opposite the palace. The Anchar is situated to the north of Srinuggur. It is connected with the Dal by means of the Nalli Mar, which flows into the Sind river near Shadipur. The Manasbal, said to be the most beautiful lake in Kashmir, is situated near the right bank of the Jhelum, and is 1½ miles long, ¾ of a mile wide, and very deep. But the Wular is the largest of all the Kashmir lakes. Its extreme breadth from north to south is 14 miles, exclusive of the marches on the south side; extreme breadth, 10 miles; circumference, nearly 30 miles: average depth, 12 feet; deepest part, about 16 feet. The Jhelum flows into the Wular on its east side, near the middle of the lake, leaving it at its south-west corner in a fine open stream about 200 yards wide.

The valley is singularly free from any modern intermixture of foreign races, and, though now professing Muhammadanism, the features of the Kashmir people proclaim them to be one of the highest and purest races in the world. They are of quite high Aryan type, very fair, handsome, with chiselled features, and a strong, athletic figure, but none of them are of martial proclivities.

The Kashmir people, though long since converted to Muhammadanism, have been of the Brahmanical race. The educated class, who maintained their own tenets, and are still very numerous, are known as pandits. They are exceedingly clever, and are a somewhat oppressive bureaucracy, which has ruled Kashmir under every successive Government, and has sent out colonies to seek their livelihood in Northern India.

The industry and mechanical skill of the stout-limbed prolific Kashmiri are as well known as their poverty, their tameness of spirit, and their loose morality. The few unmixed Rajputs possess the personal courage and the pride of race which distinguish them elsewhere.

The languages of Kashmir are divided into 13 separate dialects. Of these, Dogri and Chibhali, which do not differ much from Hindustani and Panjabi, are spoken in the hills and country of the Punch and Jamu districts. Kashmiri is mostly used in Kashmir proper, and is rather curiously and closely related to the Sanskrit. It is not, however, the court language, and for the purposes of a traveller through Kashmir either Hindustani or Panjabi will serve. Five dialects are included under the term 'Pahari,' a language spoken by the mountaineers in the east of Kashmir. Besides these, there are two dialects of Tibetan, which are spoken in Baltistan, Ladakh, and Champas; and in the north-west three or four varieties of the Dard dialects of Aryan origin.

The Kashmir Brahmans eat meat, and are excluded by the Indian Brahmans, alike from the five Gaur and from the five Dravid, and form a separate Brahmanical class, being more secular than the priestly Brahmans of Hindustan and the Dekhan, than whom they are altogether loose in their observances. The Kashmiri pandits are known all over Northern India as a very clever and energetic race of office-seekers; as a body they excel in acuteness the same number of any other race with whom they come in contact. Almost all the secular pandits use the Persian character freely; they are perfectly versatile, and, serving abroad, will mount a horse, gird on a sword, and assume at a push a semi-military air. The lower classes of Kashmir have long since been converted to Muhammadanism, but they seem to be ethnologically identical with the Brahmans, and tradition asserts that they are of the same race. The Brahmans of Kashmir are regarded by those of Bengal as of an inferior order, and the agricultural Brahmans on the Saraswati banks are similarly looked down upon.

Probably owing to the circumstance that the valley has so often been the resort of pleasure-seekers, the morals of the people are not at a high standard. A satirical Persian couplet runs—

'Dar jahan ast do taifah be pir
Sunni i-Balkh, Shiah-i-Kashmir.'

which may be rendered that there is not an honest man among the Sunni of Balkh or the Shiah of Kashmir.

From Kashmir eastwards, all the easily accessible portions of the Himalaya are occupied by Aryan Hindus, as far as the eastern border of Kamaon and the Kali river separating Kamaon from Nepal,—the Tibetans being here confined to the valleys about and beyond the snow. People of Tibetan blood have migrated into Nepal, throughout its whole length, and have formed mixed tribes whose appearance and language is more Tibetan than Indian, but whose religion and manners are Hindu. East of Nepal, in Sikkim and Bhutan, the Hindu element almost disappears, and the Tibetans are altogether dominant.

The hills westward from Kashmir to the Indus are inhabited by Kukka and Bumba, but towards the river itself the Yusufzai and other Afghan tribes prevail; while there are many secluded valleys peopled by the widely-spread Gujar, whose history has yet to be ascertained, and who are the vassals of Arabian syuds, or of Afghan and Turkoman lords.

In the hills south of Kashmir, and west of the Jhelum to Attock and Kalabagh on the Indus, are found Gakkar, Gujar, Khatir, Awan, Janjuh,

and others, all of whom may be considered to have, from time to time, merged into the Hindu stock in language and feelings. Of these, some, as the Janjuh, and especially the Gakkar, have a local reputation.

Eastward of Kashmir are the Bhot race in Balti and Ladakh. Balti includes Hasora, Rongdo, Rong-yul, Shagar, Iskardo, Bulti, Paykuta, Tolti, Khartaksho, Kiris, Khaybalu, and Chorbat. Ladakh, inhabited by the Bhot-pa, includes Spiti, Zanskar, Purik, Suru, Hembako (Dras), Ladakh proper or Leh, Nubra, Rong, Rupshu, and Hanle. Garhwal is to a large extent Bhot. The language of the Bhutiahs of Tibet is also that of Bhutan, and is a connecting link between the polysyllabic and monosyllabic tongues.

In the valley of the Upper Indus, that is in Ladakh and Little Tibet, the prevailing race is the Bhot subdivision of the great Tartar variety of the human race. Lower down that classical stream, in Gilgit and Chulas, the remains of the old and secluded Dardu and Dungher races are still to be found; but both in Iskardo and in Gilgit itself there is some mixture of Turkoman tribes from the wilds of Pamir and Kashgar. Generally it may be observed that on the north, the Afghan on one side, and the Turkoman on the other, are gradually pressing upon the old but less energetic Dardu. The best and most recent notice of the tribes is the following, given by Mr. Drew in his Northern Barrier.

Dogra.—The maharaja of Kashmir is a Dogra. The Dogra or Dugar race dwell chiefly among the hills surrounding Jamu, 1200 feet above the sea. They are not met with in approaching Kashmir from the Panjab, and extend for about 150 miles, from the river Ravi on the east to the Jhelum on the west, and about 14 miles in depth, from the Daman-i-Koh or skirt of the mountain. The other inhabitants are the Hindu Pahari, the Muhammadan Chibhali, Kashmiri, and Dard, and the Buddhist of Balti, Ladakh, and Champa. The Dogra castes are Brahman, Mian Rajput, Working Rajput, Khatri, Thakur, Jat, Banya, and Karar, small shopkeepers, Nai or barber, Juir or carriers, the Dhiyar, the Megh, and the Dom.

The *Rajputs* are the ruling race, average about 5 feet 4 inches or 5 feet 5 inches, of slim make, with high shoulders, curiously bow-legged, with turn-in toes; they are not muscular, but are active and untiring. They are of a light-brown colour, ... features, nose generally hooked. Their character is simple and childlike, tractable, but very particular in caste observances, avaricious, and close-fisted. The Mian Rajput in particular is overbearing, proud, and conceited, and become spoiled by advancement. They do not learn any trade, and to put their hand to the plough would be deemed a disgrace, so they employ others to cultivate their bits of land. They take to military service, and are expert swordsmen. Many of the Working Rajputs also follow arms as a profession, but they have a low social status. The Rajput clans are Chib, Jaral, Pal, etc.

The *Brahmans* are numerous as cultivators; they are in all employments.

The Kashmiri are false-tongued, ready with a lie, and given to deceit; they are noisy and quarrelsome, ready to wrangle, but not to fight; on the least exercise or threat of force they cry like children. They are talkative, cheerful, and humorous.

The Muhammadan *Manji* or boatmen are numerous; they are greedy and cowardly, but have good spirits, an active imagination, are energetic and versatile.

The *Wattal* of Kashmir are a gypsy tribe which supplies dancing girls and prostitutes; the women are among the handsomest of the valley.

The *Galuwan* of Kashmir are horse-grazers.

The *Bamba* dwell along with the Kukka in the rugged hill frontier beyond the Jhelum. They are of Brahmanical origin, but profess Muhammadanism. And, on the eastern side of the Jhelum, the hills are shared by other races, and by a numerous body of Sikhs, converts from Brahmans prior to the Sikh religion becoming a political power. They are useful soldiers and servants.

The *Khatri* are the higher class of traders.

The *Thakur* of Jamu are the chief cultivating class. They correspond in their avocations to Jat of the Panjab, though not related; they are a well-ma' race, of larger frame than the Rajputs.

The Banya, Karar, and Nai or barber pursue their usual avocations; the Juir are water-carriers, like the Kahar race of the N.W. Provinces.

The *Dom* and *Megh* are numerous in Jamu, and are employed as sweepers, brickmakers, and charcoal burners. They are small limbed, short in stature, and of a dark colour.

The *Chibhali*, people of Chibhal, the region lying between the Chenab and Jhelum rivers, are converted Dogra. The Chibh tribe lying south of Kashmir have been but little reclaimed from barbarism.

The *Jat* is numerous in Chibhal, and is Muhammadanized.

The *Sudan* take a high place among the Muhammadans, and with others have the title of Sahu.

The *Gakkar* are numerous on the right bank of the Jhelum. Those of Rawal Pindi compose the gentry of the hill country in that neighbourhood.

The *Pahari* are a strong, hardy, and active race, of good, powerful frame; they have a straight forehead, good brow, with a nose markedly hooked. Their dress consists of a long or short coat, fastened by a kamrband or waistband; trousers (paijama) loose to the knee, fitting close to the le below. ''' Dom and Megh are mixed amon, them. Many different dialects are current in the region occupied by the Pahari.

The *Gaddi* race in Jamu resemble the Pahari in physical form. Their head-dress is a hat of peculiar form.

The *Batal* of Kashmir do all the dirtiest work, remove and skin dead cattle, and make leather. The better circumstanced follow Muhammadans in their rules as to food; the poorer eat carrion, are musicians, and the dancing girls of Srinuggur are of the Batal race.

The *Dard* are mostly Muhammadan, but some of them between Iskardo and Leh are Buddhist, and are very dirty people. At Rondu, the Dard and Balti are nearly equal, but at Dras the Dard preponderate. The Bhot designate the Dard Brok-pa. Dard are a bold and independent race; they resist oppression; though not caring much for

human life, they are not bloodthirsty. They dress in woollen garments. They have several races or tribes, the Ronu, Shin, Yashkun, Kremin, and Dom. The Dom are musicians, like the Dom of the N.W. Provinces, the Mirasi of the Panjab, the Bem of Ladakh, and Bātal of Kashmir. The Kremin are carriers, potters, millers. The Yashkun are agricultural. The Shin occur mixed with the Yashkun along the Indus valley; they hold the cow in abhorrence, they do not use cow's milk, nor make or eat butter from it. They will not use cow-dung for fuel; they keep cattle for ploughing, but have as little as possible to do with them.

Ladakh is occupied by the Ladakhi or Bhot-pa and the Cham-pa. The Ladakhi has the features of the Mongoloid races; the outer corners of their eyes are drawn out, and the upper eyelids are hung by a fold of the skin above, the nose seems pressed into the face; the mouth large and inexpressive. The men average 5 feet 2 inches, and the women 4 feet 9¼ inches. They are an ugly race; they are cheerful, willing, and good tempered, but simple and clumsy, slow, inapt, and truthful. The choga and a cap and boots and gaiters are the sole articles of men's apparel; the women wear a gown. They are Buddhists.

Bem is the name of the servile races of Ladakh.

Champa are nomades, and inhabit the higher country. They are found in the valley of the Indus above the villages, and in the plains or flat-bottomed valleys of Rupshu, and a few outlying places. In personal appearance and dress they do not differ from the Ladakhi. They are a cheerful, hardy race. They live in tents, occupying a spot for a month or two, and move to fresh pastures.

The *Champan Pal* or Pahal of Kashmir are shepherds who tend the flocks of other people.

The Ladakhi are all engaged in agriculture. A loose-grained barley is their most common cereal; it is cultivated up to 15,000 feet, and at 13,700 and 14,000 are villages depending on its cultivation. Wheat is grown up to 12,800 feet. Barley-meal is the common food, and chang, a light beer, is their national drink. Their women share in the work of agriculture. Polyandry, except among the few richer people, is quite general. The elder brother's wife is common to all the brothers, and the children recognise all as father. The woman may also choose another husband from a different family.

The *Kham-ba* of the Kham country, far to the east of Lhassa, are found in the districts of Zanskar and Rupshu. They are professional beggars; along with their wives and children they wander about some parts of India in the cold months, and to the higher parts of Ladakh in summer; live in small tents, which they carry on goats.

Earthquakes are of not uncommon occurrence. In June 1828, the city of Srinuggur was shaken by an earthquake, which destroyed about 1200 houses and 1000 persons. For more than two months afterwards, lesser shocks were daily experienced.

The deodar is abundant, and is extensively employed in the construction of houses, temples, and bridges. The forests also contain Pinus longifolia and P. excelsa, Abies Webbiana, walnut (the quality of the wood for gun-stocks and furniture being little inferior to that of Britain), maple, poplar, willow, yew, and a species of juniper. The oriental plane or Chunar (Platanus orientalis) is probably found nowhere more abundant or luxuriant than in Kashmir, though it is not indigenous. The absence of oaks, rhododendron, Andromeda, and Pinus Gerardina is remarkable. By order of the Moghul emperors, a grove of chunar and poplar was planted near every Kashmirian village; these were protected by a heavy fine on every tree felled, but the Sikhs destroyed many of them. Fruit of all kinds abounds in Kashmir. There are four varieties of walnut, one of which grows wild in the forest, and the others are cultivated. The former is very tiny, and the scanty kernel is encased in a thick shell. One of the horticultural species is very much superior to the others; it is called Kaghuzee (from Kaghuz, paper), because the shell is as thin as paper, and can easily be broken by the hand. The superiority of this species is attributed to its having been originally engrafted, but though now raised from seed, it does not become deteriorated. The Kashmirian use the walnut as a dye for black and green colours; the former, from the ripe fruit, is a fast or permanent dye, and the latter is furnished from the walnuts which fall to the ground while they are still green. The latter colour is not permanent. From the kernel an oil is extracted, which is used, not only for burning in lamps, but also for culinary purposes. It is said also to be made the medium for extracting the perfume of the jasmine, the yellow rose, and the narcissus.

In Kashmir are two eminences which bear the name of Takht-i-Suliman; one near Kashmir is called Sir-i-Sheo, or Siva's head, by the Hindus, but also Sankaracharar; and the hill on the opposite side of the city is called Hari Purbat, or the hill of Vishnu or Hari. On the latter hill is the fort of Kashmir.

Kashmir has been famed for its woven shawls, also for its painted ware (manakkash), and its embroidery (chikand).

Kashmir yields gold, iron, coal, storax, antimony, borax, sal-ammoniac, sulphur, talc, marble, manganese, rock crystal.—*Cunningham's Ancient Geography of India; Captain Knight's Diary of a Pedestrian in Kashmir and Tibet; Drew's Northern Barrier; Raja Taringini; Calcutta Review*, 1871; *Prinsep's Antiquities; Mr. (Sir George) Campbell; Sir R. Montgomery's Report; Rennell's Memoir; Dr. Thomson's Trs.; Asiatic Researches; Vigne's Trs.; Wilson's Glossary; Baron Hugel's Trs.; Imp. Gaz.*

KASHMIR GHAR, a cave situated in the territory of the Baboozai, on a mountain which cannot be ascended but by a steep passage, hewn in a great measure out of the rock. This place is also called Pelley, and is 16 cos from the town of Soukhor.

KASI. HIND. An encaustic tiling-work seen on old buildings.

KASI, the earliest name of Benares, and still in common use, either alone or joined with the later name, as Kasi-Banaras. It is, perhaps, the Kassida or Kassidia of Ptolemy. The name is referred to Kasi-raja, who was one of the early progenitors of the Lunar race. He was succeeded by twenty descendants, all rajas of Kasi, amongst whom was the celebrated Divodāsa.—*Cunningham, Ancient Geog. of India*, p. 438.

KASIA or Khasiya, a race occupying the hills S of the valley of the Brahmaputra, in lat. 25° 20′ to 28

N., long. 90° 52′ to 92° 11′ E., between Cherrapunji and the Shillong mountain. The Kasia are the ablest bodied of the borderers of Assam, and differ very little from the Garo. They are arranged in petty rajaships. Nat-worship seems the cult of the Kasia. They dread snakes. They build their houses on piles. They trap fish. They distil and drink intoxicating liquors, and between Ringhot and Cherra, and in other places, they have bridges of the fibres of the india-rubber tree. The Kasia is distinguished from all the surrounding languages—Indian, Ultra-Indian, and Tibetan —by its direct and prepositional ideology. It is a fragment of the Mon Kambojan formation of languages, and is a remnant of an older formation which preceded the Burma-Tibetan in Northern Ultra-India.

They have the Mongolian type of features in the highest development. Colonel Yule mentions that porters of the Kasia nation used often to carry down from the coal mines of Cherrapunji to the plains, a distance of 11 miles, loads of two maunds or 165 lbs. of coals. Their strength and bulk of leg were such as he had never seen elsewhere. In the upper parts of the Kasia country, monumental stones are scattered on every wayside. These are of several kinds, but the most common is composed of erect oblong pillars, sometimes almost quite unhewn, in other instances carefully squared and planted a few feet apart. The number composing one monument is never under three, and runs as high as thirteen; generally it is odd, but not always so. The highest pillar is in the middle (sometimes crowned with a circular disk), and to right and left they gradually diminish. In front of these is what English antiquaries call a cromlech, a large flat stone resting on short rough pillars. These form the ordinary roadside resting-place of the weary traveller. The blocks are sometimes of great size. The tallest of a thick cluster of pillars in the market-place of Murteng in the Jaintia country, rising through the branches of a huge old tree, measured 27 feet in height above the ground. A flat table-stone or cromlech, near the village of Sailankot, elevated 5 feet from the earth, measured 32 feet by 15, and 2 feet in thickness. In other instances the monument is a square sarcophagus, composed of four large slabs, resting on their edges and well fitted together, and roofed in by a fifth placed horizontally. In Bell's Circassia may be seen a drawing of an ancient monument existing in that country, which is an exact representation of a thousand such in the Khassya Hills, and nearly as exactly a description of them, though referring to relics on the eastern bank of Jordan, may be read in Irby and Mangles' Syrian Travels. The sarcophagus is often found in the form of a large slab accurately circular, resting on the heads of many little rough pillars close planted together, through whose chinks you may descry certain earthen pots, containing the ashes of the family. Belonging to the village of Ringhot, in the valley of Mausmai, deep in the forest, is a great collection of such circular cineraries, so close that one may step from slab to slab for many yards. Rarely may be seen a simple cairn or a pyramid some 20 feet in height, and sometimes one formed in diminishing stories, like the common notion of the tower of Babel, or like the pyramid of Saccara in Egypt. But the last is probably rather a burning place than a monument, or at least a combination of the two. The upright pillars are merely cenotaphs, and if the Kasia be asked why their fathers went to such expense in erecting them, the invariable answer is, 'To preserve their name.' Yet to few indeed among the thousands can they attach any name. Many of the villages, however, seem to derive their appellations from such erections, as may be seen from the number commencing with mau, which signifies a stone; *e.g.* mausmai, the stone of the oath; mau-mlu, the stone of salt; mau-flong, the grassy stone; and others. Mausmai, the oath stone, suggests that these pillars were also erected in memory of notable compacts. On asking Umauz the origin of the names, his answer was a striking illustration of many passages in the Old Testament: 'There was war,' said he, 'between Cherra and Mausmai, and when they made peace and swore to it, they erected a stone as a witness (Sakhi ke wasté was his expression). Genesis xxxi. 45: 'And Jacob took a stone, and set it up for a pillar.' Genesis xxxi. 47: 'And Laban called it Jegar-sahadutha: but Jacob called it Galeed' (both signifying the heap of witness). Genesis xxxi. 51, 52: 'And Laban said to Jacob, Behold this heap, and behold this pillar, which I have cast betwixt me and thee; this heap is a witness, and this pillar is a witness, that I will not pass over this heap to thee, and that thou shalt not pass over this heap and this pillar to me, to do me harm,' etc. See also Joshua xxiv. 26. The name of maumlu, the salt stone, is probably of kindred meaning, as the act of eating salt from a sword-point is said to be the Kasia form of adjuration. These large stones are also frequently formed into picturesque bridges for the passage of brooks. There is at Murteng a bridge of this kind, consisting of one stone, 30 feet in length. It is stated by Pemberton that Kai is the real name of the people, and Kasia the title bestowed on them by the Bengali. But Kasi is the only name which they acknowledge as that of their country and race. — *Latham; Journal of the Indian Archipelago*, 1853; *Yule Cathay, &c. Embassy; Journ. of Beng. As. Soc.; Postans' Personal Observations*, p. 15.

KASIBEK. The natives in this neighbourhood are of the Ossi tribe, a people of mixed persuasions, Christian, Muhammadan, and pagan. The village of Kasibek, as well as a few others in its immediate vicinity, are inhabited by Christians professing the same faith and observances as the Georgians.—*Porter's Travels*, i. p. 77.

KASIM, an Arab general who invaded Sind during the reign of Dahir, raja of Sind. He was nephew of Walid, the sixth khalif of the house of Ommaya. He conquered Sind about A.D. 711, and sent two of the princesses to Walid. But, on being presented to Walid, the elder burst into tears, and declared she was now unworthy of his notice, having been dishonoured by his nephew before being sent from Sind. The khalif in his anger ordered Kasim to be sewn up in a raw hide, and sent to Damascus; but when he produced the body to the princess, she was so overjoyed at the sight that she exultingly declared Kasim to have been innocent, but that she had now avenged her father's death and the ruin of her family. The two princesses met with a cruel death.—*Brigg's Ferishta; Pottinger's Travels.*

KASIMBAZAR or Cossimbazar, a decayed town in Murshidabad district, Bengal. Lat. 24° 7′ 40″

N., long. 88° 19′ E. Formerly the great silk mart of Bengal, is now three miles from the river, and a wilderness. The Dutch, the French, and the English all had factories here in the 18th century. —*Tr. of Hind.* i. p. 69.

KASINA. Amongst the Buddhists of Ceylon, an ascetic rite, practised to free the mind from all agitation. Kasina mandala is the circle used in the performance of kasina. By its performance it is supposed a miraculous energy may be received. There are ten descriptions of this rite, viz.:—

Prithavi, earth.	Nila, blue.	Odata, white.
Apo, water.	Pita, golden.	Alaka, light.
Tejo, fire.	Lohita, blood-red.	Akasa, space.
Vayu, wind.		

For each of these forms there are various ceremonies.—*Hardy's Eastern Monachism*, p. 437.

KASINAGARA, the town near which Buddha died under a great sal tree.

KASI RAI wrote an account of the battle of Paniput, between the Daurani Afghans, confederate Muhammadans, and the Mahrattas under Sedasheo Rao Bhao. It was published in the Asiatic Researches, iii. p. 97. He was in the employ of Shuja-ud-Dowla, viceroy of Oudh, and was the agent in the attempts made before the battle to compromise the affairs.

KASIS and Kahi. Hind. Earths containing anhydrous protosulphate of iron in white satin-like crystals, and in the form of a sesqui-sulphate. They are obtained from bituminous shales, and are found extensively mixed with the alum shales at Kalabagh and at Pind Dadan Khan; they form a considerable article of internal trade, being much used for dyeing purposes, and in medicine as a styptic and astringent.—*Powell's Handbook.*

KASKAS. Hind. Andropogon muricatum. The fibrous roots are made into tatties, which yield an agreeable perfume.

KASR. Arab. A palace. Pl. Kasur. Madinat-ul-Kasur, the town of Luxor, the ancient Thebes. It is now a small village.

KASR or Al-Kasar, a mound of ruins in the vicinity of Baghdad. This mound of ancient Babylon is supposed to belong to the hanging gardens which were on its western side. There are still to be seen beautiful tiers and buttresses. In one of the corners is a rough stone lion standing over the figure of a man. The mound is irregular in shape, about 700 yards in length and breadth, and in some places about 70 feet above the plain. The ruin, called by the Arabs Al-Kasr, is much smaller than the Majallibah, but is nearly similar in character. The tower of Nimrud is visible from the spot. Here is supposed to have been the site of Ctesiphon, and on the opposite shore are similar heaps where Seleucia stood. Tak-ul-Kesra, or the Arch of Chosroes, possesses no remains of extraordinary taste or ornament, but, in the name it bears, speaks of splendour and of power, now eclipsed by a simple tomb standing close to it, to which thousands flock in honour of the memory of a barber. A mile to the north of the Kasr, or full five miles distant from Hilla, and 950 yards from the river bank, is the ruin, which was described by Pietro della Valle, who determined it to have been the tower of Belus, an opinion adopted by Rennell. The natives call it Majallibah or Mujalibe, meaning overturned.—*Jackson, Journey from India towards England; Ouseley's Travels; Skinner's Overland Journey; Mignon's Travels; Rich's Ruins of Babylon; Ptolemy.*

KASRA-i-SHIRIN, a small village of twenty-eight houses, with a caravansarai-shahi in good condition. It is situated on the side of a mountain, at the foot of which flows the Dialla. General Ferrier hazards the opinion that the ruins of Kasra-i-Shirin might be those of the city of Oppidam, which is placed by ancient authors in the Zagros mountains, between Opis and Ecbatana, and was founded by a colony of Bœotians, who followed Xerxes into Persia.

KASRANI are the most northern of the Baluch tribes on the British frontier. Their hills extend from the Korah pass downwards for a distance of about 50 miles; about half the tribe own lands and villages in the plain, a portion lead a wandering life in the front range of hills nearest the plain and the half desert tract at its base, and the remainder live in the hills. They have 22 sections in Dehra Ghazi Khan district, of which 12 are in the hills. They are about 3000 strong.

The hill Kasrani can muster some 1200 fighting men, of whom 50 are horsemen. They are very thievish, and were in the habit of proceeding through the lands of their brethren in the plain to plunder in the villages near Dehra Ismail Khan. The country round Dehra Futteh Khan was also harassed by them.

KASSAR, a Muhammadan tribe in the Rawal Pindi division, N. of the Salt Range. They are good cultivators.

KASSID. Hind., Pers. A mounted messenger; written Cossid.

KASTHANE. Singh. A sword worn on state occasions.

KASTIRA. Sansk. Tin. It is this word that gave to the British Isles their earliest name, the Kassiterides.

KASUMBO. Malb. An infusion of opium and water, much drunk in Kattyawar.

KASVIN, an ancient Persian town, the capital of the country previous to Abbas the Great. It has many schools. It is also written Kazvin.

KASVINI, the literary name of Zakaria-bin-Muhammad-bin-Mahmud-ul-Kousi-ul-Kazvini. He wrote in Arabic the Ajaib-ul-Makhluqat, or The Wonders of Creation; it treats of natural history, of the qualities of animals, vegetables, and minerals, as also of waters, aerial spirits, fairies, genii, and talismans, but all with a view to confute the Jewish rabbis. His book is much esteemed by Muhammadans, and has been translated into Turkish and Persian. He wrote also the Ghraib-ul-Maujudat, the Asar-ul-Balad, and Akhbar-ul-Balad.—*Hist. of Genghiz Can*, p. 418.

KASVINI, author of the Lubbu-t-Tawarikh, is the name given to Yahya-bin-Abdul Latif, surnamed Kazvini, because born in Kazvin. He was eminent as a theologian and philosopher. In his early career, he was patronized by Shah Tahmasp Saffavi, but his enemies subsequently induced the king to give orders to imprison him and his son Mir Abdul Latif at Isfahan. Kazvini was imprisoned, but died after a year and nine months, A.H. 962 (A.D. 1554–55), at the age of 77. His second son, Ala-ud-Dowla, known by the title of Kami, and the author of the Nafais-ul-Maasir, had given information to his father and to the son Mir Abdul Latif, and the latter

fled to Gilan and on to India, where Akbar had ascended the throne, and became Akbar's teacher. He died at Sikri A.H. 971. The eldest son of Mir Abdul Latif was Mir Ghiyas-ud-Din Ali, who continued in the service of Akbar and Jahangir, and (A.H. 1023) died at Ajmir, and was buried in a marble tomb within the area of Muin-ud-Din Chishti's mausoleum.—*Elliot*, iv.

KASYAPA, a Hindu philosopher noticed in the Mahabharata, the Sri Bhagavata, and the Padma Purana. He was born at Kedara at the foot of the Himalaya. He taught that God is everlasting. He wrote a law treatise.—*Ward*, iv. p. 34.

KASYAPA, according to the Mahabharata, the Ramayana, and the Puranas, son of Marichi, son of Brahma, was one of the prajapati or progenitors of created things. He married thirteen of the daughters of Daksha, from whom descended the twelve Aditya or sun-gods by Aditi; the Daitya or Titans by Diti and the Dhanava; many classes of animals, etc. His son Vivasvat was father of Menu. Hence this family of men became known as the race of Menu, from whom Brahmans, Kshatriyas, and other men sprang. His eldest son, the Daitya named Hiranya-Kasipu, is famous throughout India for his denial of the omnipresence of Vishnu, which led to the manifestation of the Narasingha or 'man-lion' avatar. He was followed by his still more famous son Prahlada, the ardent worshipper of Vishnu, after whom Multan city was named Prahladapura. His great-grandson Bana, commonly called Bana the Asur, was the unsuccessful antagonist of Krishna, who took possession of the kingdom of Multan. Here Samba, the son of Krishna, established himself in the grove of Mitra-vana, and by assiduous devotion to Mitra or the sun, was cured of his leprosy. He then erected a golden statue of Mitra in a temple named Adyasthana, or the first shrine; and the worship of the sun thus begun by Samba has continued at Multan down to the present day.—*Cunningham, Ancient Geog. of India*, p. 232.

KASYAPURA, the modern Multan. According to the traditions of the people, Kasyapa-pura, the Kasperira of Ptolemy, was founded by Kasyapa, who was the father of the twelve Adityas or sun-gods by Aditi, and of the Daityas or Titans by Diti.

KAT. Arab. A reef; pronounced Gad.

KATAI. Hind. A steel punch, used in perforating a wire-drawer's plate.

KATAI. Malb. A caste or individual of it, workers in leather.

KATAIA. Hind. Four plants have this as a terminal name,—the Bhat-kataia is used in veterinary practice; the Bang-kataia is not used; but the Gol-kataia is used in native medicine.

KATAM. Malcal. A league of four nariga, equal to 5 to 6 miles English.

KATAPANG. Malay. A black dye is produced from the rinds of the mangostin fruit, and of the Katapang or Terminalia catappa, with sulphate of iron.

KATAR. Hind. A triangular, heavy-bladed dagger, with a peculiar steel handle.

KATAR. Pers., Turk. A string, a train of beasts of burden; from six to ten camels tied one behind the other. The English expression, 'a string of camels,' best expresses the sense of the word.

KATAS, a holy fountain in the Jhelum district of the Panjab, and, after Kuru-kshetra and Jawala Mukhi, it is the most frequented place of Hindu pilgrimage in the province. Lat. 32° 43′ 30″ N., and long. 72° 59′ 30″ E. Siva, being inconsolably grieved for the loss of his wife Sati, the daughter of Daksha, rained tears from his eyes, and so produced the two sacred pools of Pushkara, near Ajmir, and Kataksha or Katas in the Sind Sagar Doab. The pool is partly artificial, being formed by the enlargement of a natural basin in the bed of the Ganiya Nâla. Below these remains, an enclosure contains the ruined Sat Ghara or seven temples, with another group of twelve in number. The latter resemble in their general style the Kashmir order of architecture, characterized by dentils, trefoil arches, fluted pillars, and pointed roofs.—*Imp. Gaz.*

KATERH, the ancient Rajput name of Rohilkhand, given as a jaghir to Rohillas.—*Campbell*, p. 88.

KATHA or Kahta, Hind., from Kahna, to speak, to relate: a story, a tale, a fable, a recitation or narrative, interspersed with music and singing, of the actions of the gods or of individuals, with allusions to passing events or persons; a public recitation about the gods.—*Wilson.*

KATHAEI of Sangala are stigmatized in the Mahabharata as 'thieving Bahika,' as well as 'wine-bibbers and beef-eaters.' They are also called by a variety of names, as Madra, Bahika, Aratta, and Jarttikka, and not even once by their own proper name, which, as known from Alexander's historians, was Kathæi, and is preserved in the Kathi of the present day. General Cunningham therefore looks upon many of the ethnic appellations which the Greeks have handed down to us as mere nicknames, or abusive epithets applied by the Brahmanical Aryans to their Turanian neighbours. Pliny places the limit of Alexander's career in the territory of the Sudrakas, 'in Sudracis expeditio Alexandri termino,' and the altars on the opposite bank of the Hyphasis or Beas river. On a general review of all the data, General Cunningham thinks that the site of Alexander's altars must be looked for along the line of the present course of the Sutlej. To this point, therefore, the territory of the Sudrakæ or Sudrakas must have extended in the time of Alexander.

KATHAK are professional musicians about Benares. They claim to be of high caste, and wear the janeo or sacred cord. Farther west, the Kathaks do not make a salam in saluting any one, as natives of India commonly do, but give their blessing like the Brahmans.—*Sherring's Hindu Tribes*, p. 273.

KATHARNAVA. Sansk. The Sea of Stories, a compilation in four books; the first two are the originals of the Hindi Baital Pachisi and Singhasan Battisi.—*D.* See Baital Pachisi.

KATHA SARIT SAGARA, the Ocean of the Streams of Narrative, or the Watery Ocean of Stories, reconstructed by Somadeva Bhatta of Kashmir, about the beginning of the 12th century. The lost Vrihat-Katha, 'the large or extended narrative,' was the great collection of Indian tales supposed to have been written in prose by Gunadhya as early as the 6th century. A Sanskrit poem based upon that work, and bearing the same

name, was written by Kshemendra in Kashmir towards the end of the 11th century; but the original has disappeared. Its contents, however, have been to a certain extent made known by the compendium of the Vrihat-Katha, made in Sanskrit verse by Sri Somadeva Bhatta of Kashmir in the 12th century. This extensive poem is divided into eighteen books. It is a work abounding with pictures of national manners and feeling, and as offering the oldest extant form of many of the tales which were once popular in Europe, many of them throw a light on some of the obscurest portions of popular literature. Of such a nature is the account of how king Chandamahasena followed underground an enormous and terrible wild boar, which was a demon, vulnerable only in one spot; and how the king, aided by the demon's daughter, slew the demon and made the daughter his wife. The tale of how Saktideva, after an imprisonment in the belly of a fish, and an escape from a whirlpool into the branches of an overhanging banyan tree, discovered the Golden City, and found three apparently dead maidens in a part of its palace, which he, like Bluebeard's wife, was forbidden to enter. How Sringabhuja wounded a demon-king under the form of a crane, and carried off his charming daughter, and by her aid escaped from his demoniacal father-in-law's pursuit. The tragic story of Sakatala, an Indian Ugolino, who was confined in a dungeon with his sons, food for one only being supplied to the whole party. The Trojan horse stratagem, adopted by a king, who made a large artificial elephant, filled it with warriors, and by its aid overcame a rival monarch. How Jimutavahana gave himself up to be devoured by the bird Garuda, the enemy of Nagas, or gigantic semi-divine snakes, who interrupted his meal to remark, 'Although I am eating him, he is not at all miserable; on the contrary, the resolute one rejoices.' And, above all, it contains some of the most horrible stories about corpse-eating Rakshasas, Vitalas, and other ghoul-like monsters that the most morbid appetite could possibly demand. Namuchi was as devoted to almsgiving as the hero of the Wessantara Jataka, the generous prince who gave away not only all his property, but also his wife and two small children. Having practised asceticism as a drinker of smoke for ten thousand years, and having been rendered by Brahma proof against all ordinary weapons, this charitable Titan made himself extremely annoying to the gods, especially after he had acquired a horse which had the power of restoring to life by a single sniff any of the Titanic brood whom a god had killed. At last Indra appealed to his generosity, and asked for the horse as a gift. Namuchi surrendered it, and Indra killed him with the foam of the Ganges, in which he had placed a thunderbolt. Being born again as a Titan composed all of jewels, he gave the gods more trouble than before. Then the gods took counsel together, and came to him and said to him, 'By all means give us your body for a human sacrifice.' When he heard that, he gave them his own body, although they were his enemies. Also, the account of the loyal sentinel who was ready to sacrifice everything in order to save his lord from death. Viravara, with that aim, cut off the head of his youthful son, who had cheerfully consented. The daughter of Viravara, who was a mere girl, came up to the head of her slain brother and embraced it and kissed it, and crying out, 'Alas! my brother!' died of a broken heart. Whereupon their mother asked for permission to be burnt along with the bodies of her two children, and when her husband had given his consent, and constructed a pyre, she leapt into that burning pyre, with its hair of flame, as gladly as into a cool lake. After which Viravara resolved to cut off his own head, and would have done so if the goddess Durga had not interfered. The widely-spread tale of the ungrateful wife, who attempted to kill the self-sacrificing husband, who had kept her alive when she was suffering from hunger and thirst in a wilderness, by giving her his own flesh and blood. Somadeva's version of the story is very like that which is contained in the Tibetan Kah-gyur. The tenth book contains a number of the fables of Pilpai or Bidpai. The stories and the order in which they succeed agree better with the tales and arrangement of the Kalila-wa-Damna than even the Pancha Tantra; and it would appear, therefore, that we have in the Katha Sarit Sagara an earlier representative of the original collection than even the Pancha Tantra, at least as it is now met with. The Twenty-five Tales of a Vitala have been made well known by the numerous translations of the Baital Pachisi and other eastern recensions of the same story-book. The ninth book contains the legend of Rama and Sita, in which the suspected wife proves her purity by going down with some friendly hermits to a certain lake, and exclaiming, 'Mother Earth, if my mind was never fixed, even in a dream, on any one besides my husband, may I reach the other side of the lake!' Having thus spoken, she entered the lake, and the goddess Earth appeared, and, taking her in her lap, carried her to the other side.

KATHAY. China is called by the western Mongol, Kathay; by the Manchu Tartar it is called Nikan Kourn; and by the Chinese, Tchoung-koue; the last name meaning the Central Kingdom. See China.

KA-THE, the Burmese name for the state and people of Munipur, called by themselves Moi-te.

KATHI or Cutty. MAHR. A land measure varying from 8 to 10 cubits.

KATHIAWAR, or Saurashtra, is the peninsular portion of Gujerat between the parallels of lat. 20° 41′ and 23° 8′ N., and the meridians of long. 68° 56′ and 72° 20′ E. It was known to the Greeks and Romans under the name of Σαυρασ-τρανη. The extreme length of the peninsula is about 220 miles, its greatest breadth about 165 miles, its area about 22,000 square miles, and its estimated population 2,500,000. The Kathiawar peninsula lies between the Gulf of Cambay on the south and the Gulf of Cutch and the Little Runn on the north, and a low isthmus between the Little Runn and the Gulf of Cambay unites Kathiawar to the mainland. In the isthmus is a noted depression, called the Nall. A highland occupies the interior of the peninsula. The highlands are remarkable for isolated mountains, amongst which is Girnar, rising to 3500 feet almost perpendicularly. It occupies the middle of a circular basin, into which admission is gained by four passes at the cardinal points of the compass. The Palitana mountain is another of the detached hills,

1500 feet in height, on which the Jain race have erected numerous temples and images of their tirthankara. Kathiawar is ruled over by 188 separate states, large and small, of which 13 pay no tribute, 96 are tributary to the British Government, 70 to that of the Gackwar as the representative of the Mahrattas, while, of the latter three classes, 132 pay a tax called Zor-Talabi to the nawab of Junagarh. The old territorial prants or districts are ten, viz. Jhalawar in the north, containing about 50 states; Mucha-Kanta, west of Jhalawar; Hallar, in the north-west, embracing 26 states; Okhamandal, in the extreme west, belonging to Baroda; Barada or Jaitwar, along the south-west coast, also known as Porbandar; Sorath, in the south; Babriawar, a hilly tract in the south-east; Kathiawar, a large district near the middle; Und-Sarviya, lying along the Satrunji river; and Gohilwar, in the east, along the shore of the Gulf of Cambay, so named from the Gohil Rajputs, who are the ruling race in it. It comprises the Gogha district, belonging to the Ahmadabad collectorate; Bhownaggar, probably the foremost state in Kathiawar; and many others.

The later senapatis became kings of Saurashtra, who placed their lieutenants at Valabhinagar (identified with the buried city of Wala, 18 miles north-west of Bhaunagar). When the Guptas were dethroned by foreign invaders, the Valabhi kings extended their sway over Cutch, Lar-desa (Surat, Broach, Kheda, and parts of Baroda territory), and Malwa (A.D. 480). It was in the reign of Dhruvasena II. (632–640) that the Chinese pilgrim Hiwen Thsang visited Falapi (Valabhi?). In A.D. 770, Wallabhipur fell before an inroad from the north of a race whom Mountstuart Elphinstone supposes to have been Persians under Nushirwan the Great; supposed by Colonel Tod to have been Scythians, and by another authority to have been Indo-Bactrians.

Kathiawar contains some of the oldest inscriptions in India, as those of Rudra Dama near Junagarh, and the inscriptions of Asoka near Girnar; a number of rock-cut Buddhist caves and temples at Junagarh, mentioned by Hiwen Thsang in the seventh century, and some fine Jain temples on Mount Girnar and Palitana. At Ghumli, a former capital of the Jaitwas, there are extensive ruins.

The principal chiefs are their highnesses the nawab of Junagarh, the jam of Navanaggar, and the rawal of Bhownaggar; also the rana of Porbandar, the raj of Drangdra, and the thakur of Murvi. Junagarh, the most important, is held by a descendant of Sher Khan Babi, a soldier of fortune, who seized it in the general anarchy which preceded the subversion of the Moghuls. The jam is the head of the Kathiawar branch of the great class of Jharija Rajputs which surged into the country from Sind about the middle of the 15th century, and another stem of which is represented by the rao of Cutch. The rawal is at the head of the Gohil Rajputs, a race driven in from Marwar by the Rahtors in A.D. 1200. He is descended from Mokheraju, a sea rover, who in the 14th century occupied Perim Island at the mouth of the Gulf of Cambay, and whose shade is to the present day propitiated by the passing mariner. The rana of Porbandar, styled Puncheria, represents the Jetwa, one of the four ancient races still extant in the peninsula. In the days of Mahmud, all the west and north of Kathiawar belonged to the Jetwa Rajputs, but the forays of the Jhala and Jharija have confined them to their present district, the shaggy range of hills called Burda. The Jhala, who own the raj of Hulwud Drangdra as their chief, are supposed to have sprung from an offshoot of Anhilwara, on the extinction of which dynasty they obtained large territorial aggrandizement. The chief of Murvi is a Jharija, and was the first in Colonel Walker's time to abandon infanticide. He has possessions in Cutch.

The fortified post of Jafferabad or Muzaffarabad is held by the descendant of an African rover, the Siddi of Janjira.

The Kathi of Kathiawar proper immigrated into their present site in the eighth century, and are supposed to be of Scythian origin. Their religion is a Hinduism, mixed with a sun-worship. While the Rajputs have a modified primogeniture, the Kathi inherits by equal divisions. They are innately turbulent, and of all the tribes have ever given the greatest trouble. Although it is divided into such numerous chieftainships, and although the Kathi hold but a small portion, yet this Indo-Getic tribe has given its name to the entire peninsula, completely superseding the ancient title of Saurashtra. There was, however, an intermediate term used to designate it before the irruption of the Kathi, a term familiar to the author of Almagestum, as well as to the Hindu geographers, and this was Lar-des, from the tribe of Lar, whence the Larica or Larice of the Greeks. The Kathi or Katti tribe are supposed to be the nation which so manfully opposed Alexander, and were then located about Multan. Against these Alexander marched in person, when he nearly lost his life, and left a signal memorial of his vengeance. The genealogists of Rajasthan and Saurashtra concur in assigning to this people a place amongst the thirty-six royal races of India. The Kathi claim descent from the Bala, an additional proof of northern origin, and strengthening their right to the epithet of the bards, 'Lords of Multan and Tatta.' The Kathi can be traced from those scenes to his present haunts. In the earlier portion of the annals of Jeysulmir, mention is made of their conflicts with the Kathi, and the Kathi traditions fix their settlement in the peninsula, from the south-eastern part of the valley of the Indus, about the eighth century. In the twelfth century, the Kathi were conspicuous in the wars with Prithivi raja, there being several leaders of the tribe attached to his army, as well as to that of his rival, the monarch of Kanouj. The name of their first settlement in Kathiawar was Kath-kote, from which they were dislodged by the first Jharija colony from Sind. They repeat couplets describing their migration from Multan, and temporary settlement in the tracts called Pawin, north of the Runn, and of Megum Roa, their leader, conducting the first Kathi colony across the gulf into Saurashtra eight hundred years ago.

Captain M'Murdo says the Kathi differs in some respects from the Rajput. He is more cruel in his disposition, but far exceeds him in the virtue of bravery; and a character possessed of more energy than a Kathi does not exist. His size often exceeds six feet; sometimes with light

hair and blue-coloured eyes. His frame is athletic and bony, and particularly well adapted to his mode of life. His countenance is expressive, but of the worst kind, being harsh and often destitute of a single mild feature. The Kathi are herdsmen in the districts of Pawur, Puchur, and Parkur. The Kathi women are large and masculine in their figures, often dressed in long dark garments like the Charan women, but have the character of being always well looking, and often remarkably handsome. They are more domesticated than the Rajput, and confine themselves solely to the duties of their families. They are often not brides till sixteen and seventeen years of age. To become a husband, the Kathi must be a ravisher. He must attack with his friends and followers the village where his betrothed resides, and carry her off by force. In ancient times this was no less a trial of strength than of courage; stones and clubs were used without reserve both to assault and repel, and the disappointed lover was not unfrequently compelled to retire, covered with bruises, and wait for a more favourable occasion. The bride had the liberty of assisting her lover by all the means in her power, and the opposition ceased when her dwelling was once gained by the assailants, and the lady, then bravely won, submitted willingly to be carried off by her champion. The Kathi do not intermarry with any other caste. A Rajput will, however, eat food dressed by a Kathi. Kathi will do nothing of any consequence without consulting his wife and a Charan, and be in general guided by their advice. They are divided into three principal families, named Wala or Wara, Khachar, and Khuman, of each of which there are other subdivisions. The most celebrated is the Khuman Kathi, whose pallia, or funeral monumental pillars, are seen in groups at every town and village. He worships the cow, leaves a lock of hair on his head, and adores Mahadeo and other Hindu deities, although he is more attached to the worship of the Sooraj (Surya or the sun), and to Ambha and other terrible goddesses.

The Jharija are the most powerful and numerous of the Rajput tribes of Gujerat, and possess all the western part of the peninsula. They are a branch of the family of the rao of Cutch, who, in consequence of intestine feuds, left their country about A.D. 800, and, having crossed the Runn at the head of the Gulf of Cutch, established themselves upon the ruins of the Jetwa Rajputs and a few petty Muhammadan authorities which at that time existed in Halar. The Jharija are also said to trace their origin from Jhara, a chief of the Muhammadan tribe of the Samma of Sind. The lands appear to have been divided in common among the whole tribe, the teelat, or eldest branch of the family, reserving to itself the largest portion, whilst the bh'yaud or brotherhood held their respective villages by a pure feudal tenure. The outlaws amongst them, the Bahrwuttia, acted with great violence. If he failed in getting flocks, he seized the persons of such villagers as he could find, and carried them off. These were styled bhan or captives, for whose release sums of money were demanded. The life of a Bahrwuttia was one of blood and rapine, until he was killed, or by the fury of his feud he compelled his chief to grant him redress; and the security of Charan (religious persons) and Bhat (Bards) races having been given on both sides, the outlaw and his family returned to their homes and occupations in perfect security.

Okhamandal is a sterile jungly tract in the extreme west of the peninsula, and contains about 13,000 inhabitants. These are the Wagher. Their only important places are the holy Hindu site of Dwaraka on the west coast, and Beyt, a small island a few miles to the north, with shrines boasting of scarcely inferior holiness. Okhamandal, Umreyli in Kathiawar proper, and Korinar in South Kathiawar, are under the direct rule of the Gaekwar. Thrice, in 1803, 1858, and in October 1859, they repulsed British troops, but seemed in 1860 entirely dispersed or surrendered. Kathiawar is rich in jungle fastnesses. Its population is habitually armed to the teeth, and largely intermixed with mercenaries from Mekran, Arabia, Sind, and Baluchistan.

The Miana of Mallia in Mucha-Kanta, on the banks of Muchu river, have a thakur, but own allegiance only to their own chowhattias or heads of tribes. They are turbulent, take service as soldiers in the neighbourhood, and, formerly, in every boundary fight a Miana or two was killed.

The district of Geer is full of almost inaccessible fastnesses, which for ages gave shelter to outlaws and robbers.

In the Jhalawar district, the property stolen, or the thief, had to be produced, and the paggi, who trace the pag or footprints, were there the most famous.

The Bhonca of Kathiawar still preserve a great portion of that spirit of hospitality for which their ancestors were celebrated.

Outlawry, political and predatory, has been recently suppressed, and life and property are as safe as in British districts.

KATHMANDU, capital of Nepal, is situated in the valley at the junction of the Bhagmutty and Bishmutty, and contains a population of 50,000 inhabitants. A tradition is current in Nepal that the valley was at some former period a lake, and it is difficult to say in which character it would have appeared the most beautiful. The valley is almost unrivalled in its fertility, supporting in comfort and plenty a population of 400,000 inhabitants, being 300 persons to the square mile. Throughout its whole length and breadth not a stone is to be found; it is well watered; its temperature is delightful, the thermometer in the hottest month seldom reaches 75°, in the coldest never falls below 30°, and has a mean annual rainfall of 60 inches. A great vernal festival is held at the capital annually. It is called the Pasupati Kshetra. Numerous visitors attend it from Oudh, Behar, and N.E. Bengal.—*Oliphant's Journey*, pp. 85-87.

KATHOLIKOS, a bishop of the Armenian Church, resides in the convent of Echmiadzin, at the foot of Ala-Goz in Russian Armenia.

KATHURIA. HIND. Makers of catechu from the wood of Acacia catechu.

KATI. MALAY. A weight in the Archipelago and China. A kati weighs 1 lb. 5⅓ oz. It contains 16 tel; and 100 kati make 1 pikul = 133⅓ lbs. avoirdupois.

KATIB, ARAB., from Arabic Kut'b, he did write, a copyist or scribe. In all Southern Asia this profession is followed, and written books are preferred to those that are printed. They write by the juz or portion, and are paid at the rate of Rs. 5 to 15 per juz.

KATIBA, a governor of Khorasan, who conquered Transoxiana A.D. 706–712, A.H. 87–93. He first occupied Hissar opposite Balkh. In the course of the next six years he took Samarcand and Bokhara, overran the country north of the Oxus, and subdued the kingdom of Khārāsm on the Lake Aral. By the eighth year he was able to reduce the kingdom of Farghana, and extend his acquisitions to Mount Imaus and the Jaxartes (Syr Darya). The conquest of Spain took place in the same year, and the Arab empire then reached the greatest extent to which it ever attained. In A.D. 750 the rebellion of the great province of Khārasm gave the last blow to the power of the Ommayad khalifs, and placed in power the descendants of Abbas, the uncle of Mahomed. Spain held out for the old dynasty, and the integrity of the empire was never restored. —*Elph.* pp. 269, 270.

KATIF or Al-Katif, an important town on the S. coast of the Persian Gulf.

KATINA, cloth used in Ceylon for making a Buddhist priest's robe.

KATIOW, a Borneo tree. The seeds are oblong, pointed, and of a shining rich brown colour; the oil which they yield on compression is of a yellow colour, burning with a bright and clear flame. It is produced chiefly on the Sadong Lingah and Kallekka rivers, and exported to Sarawak and other places, under the name of Miniak Katiow. It is good for cooking.—*Low's Sarawak*, p. 17.

KATIRA. HIND. Gum of several plants, viz. of Cochlospermum gossypium, Eriodendron anfractuosum, and Sterculia urens. It is often substituted for tragacanth. The gum of C. gossypium is semitransparent, white, in striated pieces, very much twisted and contorted, and is known as false tragacanth. It is much used as a demulcent in Upper India.—*Birdwood: Powell's Handbook.*

KATS or Kach. PUKHTO. Cultivation on the bank of a stream.

KATTADIA, the devil-priest of Ceylon. There is a class of demi-gods, who are supposed to inhabit the waters and dwell on the sides of Mount Meru, and who are distinguished not only for gentleness and benevolence, but even by a veneration for Buddha, who, in one of his earlier transmigrations, was himself born under the form of a Yakshyo. The malignant spirits of Ceylon are Yakka, who are the authors of indefinite evil; and the Singhalese have a demon or Sanne for each form of disease, who is supposed to be its direct agent and inflicter, and who is accordingly invoked for its removal; and others, who delight in the miseries of mankind, are to be propitiated before the arrival of any event over which their pernicious influence might otherwise prevail. Hence, on every domestic occurrence, as well as in every domestic calamity, the services of the Kattadia or devil-priest are to be sought, and their ceremonies performed, generally with observances so barbarous as to be the most revolting evidence still extant of the uncivilised habits of the Singhalese.

Especially in cases of sickness and danger, the assistance of the devil-dancer is implicitly relied on; an altar, decorated with garlands, is erected within sight of the patient, and on this an animal, frequently a cock, is to be sacrificed for his recovery. Another kind of demon-worship in Ceylon is a debased form of Hinduism, where the kapua priest is the performer.—*Tennent's Christianity in Ceylon*, p. 232.

KATTI. TEL. A land measure of about 14 acres.—*W.*

KATTIKARAN. MALEAL. A tari or toddy-drawer.

KATTUBADI. KARN., TAM., TEL. Holding lands on military tenure, a favourably rated quit-rent.

KATTUN, a mighty demon of the Hindus, feared and worshipped.

KATVANGA. HIND. A staff with a skull, carried by a Saiva sect.

KATYAYANA, a Hindu writer of great celebrity. He came after Panini, whose grammar he is said to have completed and corrected in what he called Varttikas, supplementary rules and annotations. He is generally identified with Vararuchi, the author of the Prakrita Prakasa. He was also the author of the Sranta Sutras which bear his name, and of the Yajur Veda Pratisakhya; as likewise of a Dharma Sastra. He has been supposed to have lived B.C. 25 (Weber); in the first half of the 2d century (Goldstucker). Max Muller places him in the second half of the 4th century B.C. The missionary Ward says, iv. p. 37, he was born near Sumeru, married Sadharmini, and dwelt on Mount Mandara. He taught that in the union of spirit and matter, God existed in unity; also the eternity of matter and a future state. As a boy, he was remarkable for his great talent and extraordinary powers of memory. He wrote a law treatise which bears his name; also the Gauri-shikhara-mahatma, an illustration of Panini's grammar; criticisms on the Sutra of the great grammarian; and he completed and corrected Panini's grammar as we now possess it. He has been identified with Vararuchi, the compiler of the doctrines of Saunaka.—*Ward*, iv. 37.

KAUFMANN, GENERAL CONSTANTINE, a great commander of the Russian forces in Central Asia; obiit 1882. In the successive campaigns which he conducted against Bokhara, against Khiva, and against Khokand, General Kaufmann greatly increased the Asiatic dominions and influence of Russia, while narrowing the zone of debateable ground which separated her from the countries under the government or control of Britain. As the result of his success, he exercised for many years almost unlimited authority in Central Asia. He found no resistance to his advance in any quarter but the British empire; and consequently his whole policy assumed an anti-English complexion, and his court at Tashkend was more than suspected of being the source whence sprang all the difficulties which had beset British policy in the east during the preceding 15 years. General Kaufmann was born at Maidani in 1818, and was therefore only 64 when he died. He served first in the army of the Caucasus, where he rapidly distinguished himself. In 1855 he was selected to settle with General Williams the terms of the capitulation of Kars. In 1867 was transferred to Turkestan, the governor-generalship of which province he held till his death. Shortly after his arrival war was declared by Russia against Bokhara; Samarcand was occupied in June 1868, and the whole country was subjected to Russia. This was the first step in General Kaufmann's plan of bringing the whole of Central Asia under

the influence, if not the actual government, of Russia. The expedition to Khiva was the next act of General Kaufmann's government. In the spring of 1873, General Kaufmann, advanced into the country in two main divisions, one starting from Turkestan on the east, and the other from Orenburg on the west. The former was led by the governor himself, who, after several victorious engagements, reached Khiva at 8 o'clock in the morning of June 10, only to find that the town had been already occupied three hours previously by the Orenburg column, under Generals Verovkino and Lomakino. The Khan fled as the Russians approached, but afterwards returned, and signed treaties by which he undertook to pay an indemnity of two million roubles, to cede frontier territories on the Amu Darya and Syr Darya rivers to Russia and to the Khan of Bokhara, who had assisted the Russian troops, and practically to commit to Russia the direction of his foreign relations. A campaign against Khokand was undertaken by General Kaufmann in 1875, at the close of which all Khokand north of the Syr Darya was formally annexed to Russia, while the independence left to Khokand south of the Syr Darya was merely nominal. The absorption by Russia in succession of Bokhara, Khiva, and Khokand brought her into the close proximity of Afghanistan, and General Kaufmann seems to have next directed his ambitious designs to that quarter. His emissaries were despatched into Afghanistan. The Russian embassy, the reception of which by the Amir precipitated the Afghan war, may be attributed to his instigation.

KAUKARO, or itch plant, is a strange and dangerous growth. Instances have occurred when a man, having ignorantly selected this wood, either as timber from which to fashion his canoe, or a spar suitable for his mast, and incautiously sitting on the wood while carpentering, has discovered, when too late, that the subtle poison had entered by every pore, and that his whole body was rapidly breaking out into angry spots, causing an irritation utterly unbearable, and lasting for months, sometimes years. This needs verification.

KAULA DEVI, wife of a fugitive Hindu prince, ruler of Gujerat. Kaula Devi had been taken prisoner during her husband's flight to Baglana, and been placed in the haram of Ala-ud-Din Khilji; and when Alp Khan, governor of Gujerat, was ordered to proceed to Deogiri to co-operate with Malik Kafur, he was ordered to try to obtain Dewala Devi, a daughter of Kaula Devi, for the raja. Her escort was fallen in with near the caves of Ellora. He and Alp Khan took her to Dehli, where she was married to Khizr Khan, eldest son of Ala-ud-Din. The poet Khusru, in a Persian poem, celebrated their loves.

KAUR. The Kaur form a considerable proportion of the population of Jashpur, Udaipur, Sirguja, Korea, Chand Bhakar, and Korba of Ch'hattisgarh. They all claim to be the descendants of the survivors of the Kaurava, who, when defeated by the Pandava at the great battle of Kuru-kshetra, and driven from Hastinapur, took refuge in the hill country of Central India. The Kaur of Sirguja at one time encouraged widows to become satis, and greatly venerated those who did so. Sati shrines are not uncommon in the Tributary Mahals. Between Partabpur jilmilli in Sirguja, Colonel Dalton saw a grove sacred to a Kaur sati (suttee), now the principal object of the village worship. Annually a fowl, and every three years a black goat, are sacrificed to her. Next to the Jashpur Oraon, the Kaur are the ugliest race Colonel Dalton had seen, being dark, coarse-featured, with wide mouths and thick lips. They are a very industrious, thriving people, about Korea and Udaipur, in the extreme west of the Chutia Nagpur Agency of Nagpur proper. They speak Hindi. They are considerably advanced in civilisation. They eat fowls, and do not reverence Brahmans, but worship Siva. They bury their dead. They claim to be descendants of the Kuru who fought the Pandu.—*Campbell*, pp. 22, 40; *Col. Dalton*, *Ethn* p. 138.

KAURAVA, descendants of Kuru, but commonly applied to the sons of king Dhritarashtra by his wife Gandhari; the Kaurava and Pandava therefore were cousins-german.

The poem of the Mahabharata contains 100,000 verses; the groundwork of the poem, the Kaurava and Pandava war, contains 24,000 verses. This leading story commences with Atri, a flash of light from whose eye produced the moon (which in Sanskrit is male), and that being was the ancestor of the Lunar dynasty of kings. One of these kings was Pururavas, whose love for the heavenly nymph Urvasi is detailed in Kalidasa's drama Vikramorvasi. His descendants in a direct line were Ayas, Nabusha, and Yagati, the last becoming the father of Puru and Yadu. The line of Yadu acquired celebrity through Vasudeva and his sister Kunti or Pritha, and also through his sons Krishna and Bala Rama, who have become reputed as incarnations of the god Vishnu. Puru's son was Dushyanta, who married Sakuntala, and their son was Bharata. From Bharata descended successively Hastin, Kuru, and Santanu. Santanu married Satyavati, already the mother of Vyasa, but their children died without offspring, and Satyavati then asked her son Vyasa to marry her widowed daughters-in-law; by one of them he had Dhritarashtra, born blind, and by another, Pandu, born a leper or an albino. Dhritarashtra married Gandhari, and amongst their many children was Duryodhana, also called Suyodhana, and Duhsasana,—these were the Kaurava. Pandu married two wives, viz. Pritha, sister of Vasudeva and aunt of Krishna, and Madri. By Pritha he had three sons, Yudishthra, Bhima, and Arjuna; by the latter, twins, Vakula and Sahadeva, and these were the Pandava. Both the Kaurava and the Pandava were related to Krishna, but the Pandava more nearly so, owing to their mother Pritha being aunt of Krishna. Vyasa, the compiler of the Mahabharata, is the reputed grandfather of both the Kaurava and the Pandava. It is the series of events which happened in the lives of the Kaurava and Pandava that forms the groundwork of the great epos of the Mahabharata, and they may thus be briefly related.

Santanu had resided in Hastinapur, the ancient Dehli, and after his demise, Dhritarashtra was by seniority entitled to succeed. But as he was blind, he resigned the throne in favour of his brother Pandu. The latter became a powerful monarch, but, after a while, having become tired of his regal duties, he abdicated, and retired to the forests of the Himalaya, to indulge in his favourite sport, the chase. His brother Dhrita-

rashtra then resumed the reins of government, but, being blind, his uncle Bhishma governed for him, and conducted the education of his sons. After a while Pandu died, and his widow Pritha and her five sons returned to Dhritarashtra's court to be educated along with his own children, their cousins. But the Pandava brothers were superior lads, and their cousin Duryōdhana, out of jealousy, tried to destroy them, first by poison, then at trials of arms; subsequently, Drona, a Brahman, who had taught the Kaurava, brought about a reconciliation, and the relatives unitedly attacked Drupada, king of Panchala, who, principally by the Pandava's aid, was defeated. On this the blind king Dhritarashtra resolved to pass over his son Duryōdhana, and named his nephew Yudishthra, the eldest of the Pandava, to the throne, and their cousin Duryodhana made another effort to destroy them, by burning them alive. This, also, they escaped, but they considered it advisable to withdraw in disguise, which they did by assuming the character of mendicant Brahmans, and retired to the forests. After some time, they were informed by Vyasa, that Drupada king of the Panchala would make his daughter Draupadi queen of a tournament, to be won by the most successful competitor, and she was won by Arjuna. On this occurred a civil commotion, in which Drupada nearly lost his life; but Draupadi went with the Pandava brothers, and became their joint polyandric wife.

After the tournament, the Kaurava and Pandava made peace, the former to reign at Hastinapur, the ancient Dehli, and the Pandava at Khandava-prastha, the modern Dehli. Yudishthra, the eldest of the Pandava, reigned so successfully that he resolved to declare himself emperor, by the performance of the Rajasuya sacrifice. This was accomplished with much splendour, but Yudishthra was afterwards involved by his cousin Duryodhana in a game at dice, and Yudishthra lost everything,—kingdom, wealth, and his joint wife Draupadi. Duryōdhana offered to restore their kingdom if they would exile themselves for 13 years. In these 13 years they all took service with king Virata of Matsya, and ultimately defended him against an attack of Duryodhana. On this account, Virata gave his daugher Uttara in marriage to Abhimanya, son of Arjuna by Subahdra. In claiming restoration to their kingdom at the close of the 13 years, the Pandava first tried negotiations, offering to be content with five small towns, but they ultimately resolved to fight it out on the plain of Kuru-kshetra, the rules of battle being duly laid down. In the battle that ensued, and which lasted 18 days, the Kaurava lost successively all their chiefs, Bhishma on the tenth day, Drona on the fifth day, Karna on the second day, and their last commander, Salya, was killed on the first day of their commands. In these battles there was foul play on both sides. After the close of the battle, Yudishthra was elected heir-apparent of the old blind king Dhritarashtra. But the latter subsequently abdicated and led the life of a recluse, along with his wife Gandhari, Pritha, the mother of the Pandava, and their uncle Vidura. Vidura soon died, and all the rest of the royal exiles perished in a forest conflagration. The grief of the Pandava for this was great, and they too, after hearing also of Krishna's death and of the destruction of Dwaraka, resolved to abdicate, and they all set out for Mount Meru, but all save Yudishthra perished before reaching it. According to the story, Yudishthra ultimately entered Indra's heaven, and there found all the Kaurava relatives and his brothers.

Both Professor Lassen and Mr. Wheeler consider that the Pandava story in the Mahabharata conveys a history of India.

Kritavarmam, Aswatthama, and Kripa were the three surviving Kaurava warriors after the battle of Kuru-kshetra.—*Westminster Review*, 1868; *Wheeler's India*; *Bunsen's Egypt*, iii. p. 558.

KAURIE TREE of New Zealand, the Norfolk Island pine, the Araucaria excelsa, attains the height of 200 feet, and yields an invaluable, light, compact wood, free from knots, from which the finest masts in the navy are now prepared.—*St. John's Forest Trees of Britain.*

KAUSALA or Kosala is the modern Oudh (Ayodhya) or Benares.

KAUSALYA, the favourite wife of Dasaratha, and the mother of Rama and Lakshmana.

KAUSAMBI, the capital of Vatsa, the scene of the drama Ratnavali, supposed by Gen. Cunningham to be the modern Kosam or Kosambinagar on the Jumna, 30 miles above Allahabad. According to the Ramayana, it was built by Kasamba, the son of Kusa, a descendant of Brahma. Buchanan, upon the authority of the Bhagavat, ascribes its foundation to Chakra, a descendant of Arjuna. Neither the Bhagavat nor Vishnu Purana state that Nimi Chakra built Kausambi. They only say that when Hastinapura shall be washed away by the Ganges, Nimi Chakra will reside at Kausambi. From which it is to be inferred that Kausambi existed at the time that Hastinapura was destroyed. The site of Kausambi, Buchanan supposed to have been that of the ruins ascribed to Hastinapura, but it was more probably lower down in the Doab, bordering upon Magadha on one side, and Kosala on the other. It is elsewhere intimated that it was possibly about Kurrah, which, according to the inscription found there, was comprised within Kausamba-mandal, or district of Kausambi. The city so termed was probably not far from Allahabad.—*Hind. Theat.* ii. p. 69; *Oriental Magazine, Calcutta*, No. 1, p. 67; *Asiatic Researches*, ix. p. 433.

KAUSIK or Kausika, a tribe of Rajputs, in considerable numbers in Ghazipur, Azimgarh, and Gorakhpur, claiming descent from Kausika, the father of Gadhi, the founder of Gadhi or Ghazipur.—*Wilson's Glossary.*

KAUSTUBHA, an epithet of Vishnu; also a sparkling gem, worn by that deity, elicited by the churning of the ocean; it is in some places taken as an emblem of the sun, but the pandits of the Carnatic do not admit of that allegory.

KAVA or Ava of Polynesia, an intoxicating drink made from the Piper methisticum, now almost ceased to be used. Formerly, in its preparation, the root was chewed by boys, and the fluid spat into bowls, but it is now grated.

KAVADI. Tam. Yoke or pole. The shoulder-stick (cowrie) in use for carrying weights over the shoulder, with a sling at each end. It is the Bhangi of N. India.—*W.*

KAVA-KARAN, pl. Kava-karar, a branch of the Kallar race, occupying the Trichinopoly dis-

trict. They are predatory, but are largely employed as watchmen.

The Kava-karar hold themselves responsible for the safety of everything in their employers' houses, and if a single article is lost or stolen, they invariably contrive, in some unaccountable manner, to detect the theft, and recover the stolen or missing property. The only duty of a Kava-karan is to watch the house of his employer, and protect his property from the professional propensities of those of his own caste or kindred. In its moral aspect, every house is a sort of reformatory where one soul at least is in a sense reclaimed. Trichinopoly is the headquarters of the Kallar caste; and the only way of keeping away thieves is by employing a thief on the premises.

KAVAL, Tam., corrupt Cawel, guarding, protecting. It is variously combined. Kavalali, a village watch, a guard. In Tinnevelly, a prisoner in custody.

KAVASHA, also called Ailusha, son of Husha, a slave girl, author of several hymns in the 10th book of the Rig Veda.—*Dowson.*

KAVELLI VENKATA BORIA, a learned Brahman who aided Colonel Mackenzie in collecting Hindu manuscripts relating to the history of India. In 1817, the Madras Government bestowed on Kavelli Ventaka Latchmiah the grant of a village near Madras, to be held by him and his two next heirs, in recognition of his public services.

KAVERI or Cauvery, a river of the southern part of the Peninsula of India, which rises in the mountains of Coorg. It has been noticed under the spelling 'Cauvery,' q.v. In the Mysore portion of its course it forms the two islands of Seringapatam and Sivasamudram, which vie in sanctity with the island of Srirangam lower down. The island of Sivasamudram is about nine miles long and one mile broad, with a cataract upon each branch of the river, both which are very magnificent during the floods. They are usually known as the Falls of the Kaveri. It is a spot combining many of the wild beauties of nature. The fall on the north side of the island is called Birra Chuki, 460 feet, that on the south, Gangana Chuki, 370 feet. The rock over which the Birra Chuki falls has a curve nearly a quadrant of a circle, from the centre of which the fall is viewed. Over this space ten cascades are distributed, all nearly of the same height, and dashing into the caldron below. The Gangana Chuki is even wilder than this. A little above the fall, this portion of the river is divided into two portions. The larger portion is nearest to the island, and plunges in one cascade, about 130 feet, into the chasm below, while three or four portions leap from ledge to ledge, till at last they reach the stream about sixty yards from the base of the great fall.

KAVERIPAK, town in Wallajah taluk, North Arcot district, Madras, 10 miles east of Arcot, lat. 12° 54′ N., long. 79° 30′ E.; population (1871), 5711. Its irrigation tank is one of the finest in Southern India, which supplies water to about 6000 acres of rice land. It is fed by a channel from the Palar.—*Imp. Gaz.*

KAVI. From Baron Humboldt's researches into the Kavi language, the resemblances between the nations of the Polynesian Islands and the tribes of the Indian Archipelago, Malacca, and Madagascar, are essential affinities, deeply rooted in the construction of these languages. Old Javanese belongs to the Polynesian family and the Malayan branch. It is the parent of modern Javanese, and represents the language as we have it from A.D. 800 to 1400. It has largely borrowed from Sanskrit, just as modern Javanese, Malay, and the Dravidian languages have. When the Muhammadans occupied Java, the Hindu religion found shelter in Bali, which still remains Hindu. The whole of the literature is thoroughly Brahmanical and Buddhist, and original versions of the great Sanskrit epics are found in the Kavi. It has a peculiar character.—*Prichard in Rep. Brit. Ass.*, 1847, p. 241. See Writing.

KAVI, the yellow colour of the dress worn by Hindu religious teachers.—*Abbé Dubois*, p. 5.

KAVI. Sansk. A poet. Kavya, song, poetry, epic poetry, as the Ramayana and the Mahabharata; also the Raghuvansa and Kumarasambhava, said to be by Kalidasa. There are six Maha-Kavya.

KAVILE. Tel. A book made of palm leaves, an account book of slips of palm leaves, such as used by the village accountants in the Teling and Tamil country.

KAVIR, also Kafeh, the salt desert of Central Persia. See Desert.

KAVIRAJA, author of the Raghava-Pandaviya, a poem remarkable for its studied ambiguity, as it may be read as relating the history of Rama and the other descendants of Dasaratha, or that of Yudishthra and the other sons of Pandu.

KAVIRASA PANDITAR was a native of Virai. He wrote a licentious poem, Sauntariya-lakari, in praise of Parvati. It is said to be translated from the Sanskrit of Sankaracharya.

KAVIYARAJ, in Bengal, a physician. Many of them are learned men, actively engaged in their profession, according to the Hindu theory of medicine.

KAWAITNAGAR, zamindari estate in North Arcot district, Madras, situated between lat. 13° 4′ and 13° 36′ 30″ N., and between long. 79° 17 and 79° 53′ E.

KA-WA-KA of New Zealand, Thuja Doniana, *Hooker*, attains a height of 60 to 70 feet, and a girth of 8 to 10 feet. Its wood is elegantly grained, close and heavy, and is used for ornamental purposes.—*G. Bennett*, p. 414.

KAWAN of the Assyrian texts, the Chiun of Amos v. 26, according to Professor H. H. Sayce, was the planet Saturn.

KAWAN. Malay. A solid oil of Singapore, of a pale-greenish colour, a good deal resembling the oils of the Bassia in character, though rather harder, and approaching more in properties to the myrtle wax of the Cape.

KAW-WAS or Cavass. Turki. A police officer, literally an archer, reminding us of les archers de la sainte Hermandade; some spell the word Kawas.—*Burton's Mecca*, i. p. 29.

KAY or Ka, a tribe who dwell east and north of the Shoung, calling themselves Ka, but Kay by the Bghai, the Red Karen calling them Pahtoung, and the Burmese Gay-kho. They are a pugnacious race. They rear the silk-worm and weave and wear silk. When a chief or owner of slaves dies, one slave is said to be buried with him, to be his attendant in the next world. They dwell

on both sides of the boundary at Tounghoo separating British Burma from the Ava territory. They speak a dialect of Pwo.—*Mason, Burmah*, pp. 92, 642.

KAYA. HIND. A compound metal of zinc, tin, and copper.

KAYAMAL, a title added to the names of petty princes and zamindars of Travancore.

KAYAN, according to Mr. Dalton, amount to 270,000 souls; they were greatly addicted to head-hunting. This people inhabit the north-west of Borneo, in the interior of the country comprised between the rivers Baram and Rajang, which, with the small rivers intervening, allow the Kayan access to the ocean. The mongrel Malays occupy the coast, and the country between them and the Kayan is occupied by eleven other tribes, in number each about 500, the majority of whom are subject to the Kayan. The Kanawit tribe closely assimilate to the Dyak of Saribas, whose neighbours they are. The tribes Punan, Sakapan, and Kajaman are the chief collectors of camphor and birds' nests. The Kayan women are immoral. Kayans are not so passionately fond of skulls as to bequeath them as fortunes to their children, as was said of the Dyak. They continue human sacrifices, but to a less extent. The Kayan name for God is Tanangan, whom they hold to be invisible and supreme. From the river Baram, coal is traced to the upper parts of the Bintulu, and thence southward to the Rajang river, on the left bank of which, at Tujol Nang, there is a seam exposed upwards of 13 feet in thickness. The coal and iron fields of the Balawi or Rajang are more extensive than any yet discovered on the island.—*Mr. Burns in Jo. Ind. Arch.*, 1849.

KAYASTH, Kayastha, Kait or Kaest, numbered in India 2,159,813 in 1881. The tribe has twelve divisions, of which the Gaur Kayasth is one. Their habitual language of correspondence is the Persian; they are largely employed as clerks and accountants about native courts. They say that they spring from Chatrgoputr, the secretary of Dharmaraja. They are Hindus, generally worshippers of Siva. They allow their daughters to grow up before wedlock. Many of them drink to excess and gamble. Their features, physical form, and colour are more varied than those of any other section of Hindus. They are acute in business, active, and painstaking. In Northern India, they have adapted themselves to the British forms of administration, and are useful servants. They have become in places considerable landed proprietors. In Bengal, they are more numerous, and form an aristocratic class, have proprietary rights in the soil, and cultivate a great deal. The Chandrasena Kayasth of Bombay and Poona claim to be descendants of raja Chandrasena, a Kshatriya raja of Malabar, but the Brahmans declare them to be of menial origin. They have, however, the honorific name of Puroob (Purvoe, Prabahu, or master), and are distinguished as Patavi and Dawani Prabahu. The race were employed by the Indian princes in the collection and records of their revenues, and their character for a spirit of extortion became proverbial. They appear to have been particularly obnoxious to the Brahmans. Kayastha is the Sanskrit name, from Kaya, the body, and Stha, to be situated.

Mathura Kaits are allowed by all to be a chief class. The Unai is a half-caste, according to Elliot, but is not admitted by the Kayasthas as a Kayastha class at all. The Brahmans allege that the Unai are Brahmans who by trade lost their caste. Kayasthas are perhaps the most clearly demarked of existing castes, both as a whole and in their subdivisions.—*Toy Cart; Wilson's Glossary; Tr. of a Hindu; Sherring's Tribes; Dalton's Ethn.*

KAYE. Charles Turton Kaye, a civil servant of the Government of India, in the Madras Presidency, who distinguished himself along with Mr. Brooke Cunliffe in the examination of the fossiliferous beds in the neighbourhood of Pondicherry. Born in London 1812, died 1846.

John William Kaye, K.C.S.I., F.R.S., went to India as a sub-lieutenant of the Bengal Artillery in 1833. Within a comparatively short time he wrote and published two novels. He became then a regular contributor to a weekly literary journal issuing from the Hurkaru press. Not long after he was installed as editor-in-chief of the Bengal Hurkaru, he retired from the army, and, during the remainder of his sojourn in India, continued its editor. He projected the Calcutta Review, of which he was proprietor and editor. He was the editor of the Overland Mail from its commencement in Cornhill in the year 1855 until the year 1868, and for many years he was also editor of the Homeward Mail newspaper. He was the biographer of Sir John Malcolm, and of Sir Charles Metcalfe, author of the War in Afghanistan, and the Sepoy War. He was employed in the Indian Office from 1855? till October 1874, and died on the 24th July 1875?

KAYEA STYLOSA. *Thw.* Soovanda, SINGH. An elegant tree in the south of the island of Ceylon, at no great elevation. The timber is valued for building purposes. — *Beddome, Fl. Sylv.* p. 102.

KAYLULAH. ARAB. The half-hour's siesta about noon is habitual, and Mahomed said of it, 'Kilu, fa inna sh' Shayatma la Takil,' 'Take the mid-day siesta, for verily the devils sleep not at this hour.' Aylulah is the sleeping after morning prayers, which causes heaviness and inability to work. Ghaylulah is the sleeping about 9 A.M., the effect of which is poverty and wretchedness. Kaylulah (with the guttural kaf) is sleeping before evening prayers, a practice reprobated in every part of the east. And, finally, Taylulah is sleeping immediately after sunset, also considered highly detrimental.—*Burton's Mecca*, ii. p. 19.

KAYN, adjoining Herat, is the first Persian province to the west of Furra, and lies on the frontiers of the kingdom. It is entirely inhabited by Muhammadans of the Shiah sect, which has led the Turkoman tribes to seek for slaves in it during their chapao or forays. The inhabitants are a timid race, and live in small forts, the number of which is very great. The Kayn country is badly watered, and the ber tree, as in all arid countries, is common. Birjind and Kayn are the principal places.—*Papers, East India, Kabul and Afghanistan*, p. 135.

KAYU. MALAY. Wood, timber, a tree. It is always prefixed to the names of timber trees; hence—

Kayu amballo, a timber tree of Bawean.

Kayu-api-api, Rhizophora gymnorhiza, mangrove.

Kayu-arang, charcoal.

Kayu balean wood is the most esteemed amongst the natives of Borneo, on account of its hardness and durability. The tree is of the largest size, of quick and vigorous growth, and abundant in the low damp forests in the neighbourhood of the sea and of large rivers. It is much used by the natives for posts of their houses, which amongst the Dyak are handed down from father to son for many generations. Posts, in the river for ages, are as hard when cut as those fresh taken from the forest. The water worm (teredo) attacks it, but does not cause it to rot. Under the earth it equally resists the effects of the atmosphere and white ants. This is sought after by the Chinese, and is a source of considerable trade.

Kayu bidarru, a beautiful yellow wood of Borneo, of a very agreeable odour. It is plentiful, and, being very hard and durable, is much esteemed for posts of houses and other underground purposes.

Kayu-bin, Terminalia chebula, *Retz.*

Kayu bintangur. Several kinds of the poon of India grow in Borneo. They are called by the natives bintangur, and are valued in shipbuilding. One seems to be Calophyllum inophyllum.

Kayu boka, or Amboyna wood, and the Lingoa wood of commerce, are the produce of the same tree, the Pterospermum Indicum. The tree throws out knotty excrescences or burrs, which are sawn off in slabs 2 to 4 feet long, and 2 to 8 inches thick, which are much esteemed for small boxes, writing-desks, and other ornamental fancy work. Of late years its estimation seems to have decreased in Europe, but it is still much valued by the Chinese. It is brought from Ceram, New Guinea, Aru, and other islands of the Moluccas. It resembles the hue of the yew, is very hard and full of curls, the colour being reddish-brown, varying to orange. In Singapore it is sold by weight. Large slabs are obtainable from the lower part of the tree by taking advantage of the spurs or lateral growths. They can sometimes be had as large as nine feet in diameter. It is very durable, takes a considerable polish, is very abundant, and may be had in any quantity.

Kayu bung ngat of Cochin-China, Emblic myrobalan.

Kayu dungun grows on the banks of rivers, and though the timber is soft, the large buttress-like supports at the base of the tree are very hard, and are valuable for gun-carriages and other purposes.

Kayu gadis wood possesses the flavour and qualities of the sassafras, and is used for the same purposes in medicine. It is very common in the plains near Bencoolen.

Kayu gahru is the eagle-wood, aloes-wood, Aquilaria agallocha, *Roxb.*, agallocha wood, lignum aloes, agala wood, and calambak of commerce. If of good quality it should melt in the fire like wax, yielding an agreeable odour. A very high artificial value is placed on the better qualities of this product by the natives of the east; the first quality selling at £40, 16s. 8d. per 133⅓ lbs. avoird. at Malacca, the second quality at £25, 10s. per 133⅓ lbs., and the third quality at £3, 2s. per 133⅓ lbs.

Kayu-jelutong is a large growing tree of Borneo, with verticillate leaves, and a bark which, on being wounded, emits plentifully a white milk, which is inspissated by boiling, but has not yet been discovered to be of any use. The timber it produces, though large, is not esteemed by the natives, on account of its early decay when exposed to the rain and sun. It is white, and, being very soft and easily worked, it is much used by the poorer Malays for the sides of their houses, which are protected from the rain by the overhanging roofs.

Kayu kapur, a close-grained and durable timber of Borneo, much valued for boat-building purposes.

Kayu kapur barus. The timber of the Kapur barus, or true camphor tree, known to botanists as the Dryobalanops camphora, *Cole.*, is also esteemed, but, excepting when charged with the valuable drug, it does not emit the camphor smell, as does the timber of the Laurus camphora, of which the Chinese manufacture trunks and boxes, which preserve whatever is put into them from the attacks of insects of all kinds, particularly of the small ants, which are so troublesome in hot countries.

Kayu kudrang, a wood of Malacca, furnishes a yellow dye, sells at 12s. 6d. per 133⅓ lbs.

Kayu kutoh, or wooden gong, on which the Malay 'mata mata,' literally 'man with eyes,' or watchman, beats the hour. This instrument closely resembles the 'teponaztli,' an instrument still in use by the Indians in the Cordilleras of Mexico, the deep thudding sound of which may be heard a distance of several miles.

Kayu lakka or Kayu lakah, of Singapore, a red dye-wood, applicable to the same purpose as red sanders wood.

Kayu lakkar and Kerta ambuk are woods of Malacca, burned as incense.

Kayu-legi, Kayu-manis, Cassia lignea, bark of Cassia lignea.

Kayu maranti, MALAY., a quick-growing timber tree of Borneo. In grain it resembles cedar, and, like it, is of a reddish colour. It is much valued for making packing-cases, planks for the sides of houses, etc., and when protected from the weather it is a good and useful timber.

Kayu mencabang, or Mencabang pinang, is one of the trees which produce the vegetable tallow. It is plentiful in the forests, but would be more profitable for its fruit (which is small and produces good oil) than its timber, though for this it is also held in high esteem. The wood is close-grained, hard, of a reddish colour, easily worked, and very durable. This tree differs from the others which produce the vegetable oil, in growing to a much greater height.

Kayu merbau is a fine durable timber, very useful in ship and house building, being easily worked and very durable.

Kayu middang bunga, a fawn-coloured wood of Singapore, not durable if exposed.

Kayu mungris, a fine large tree; is, while fresh, nearly as hard as the iron-wood, and more difficult to work, though it is very durable, but not so much so as the balean or iron-wood.

Kayu nan in Tavoy, Kaiyah in Moulmein, Tavoy red-wood, Syndesmus Tavoyana, is very abundant on the sea-coast from Amherst to Mergui; also on banks of rivers in the province of Martaban near the sea. It is one of the best woods in the country for helves; tough, light, very durable, plentiful; long in the fibre, neither liable to split nor to warp nor to break readily. Used by Burmese for planes, spears, boats, stocks

of guns, and all kinds of purposes. This wood is of a most beautiful colour, a combination of pink, cream colour, and red, and takes a very high polish.

Kayu neri is a very hard wood, growing with the mangrove in salt swamps. Its timber, which has a reddish appearance, is not large, but very abundant.

Kayu pindis or Kapini of Sumatra, a species of Metrosideros, is named also Kayu besi or iron-wood, on account of its extraordinary hardness, as it turns the edge of common tools.

Kayu-putch, white wood, Arbor alba of Van Rumph, the Cajaput oil tree or Kayuputi tree, Melaleuca cajaputi.

Kayu rasak, a wood of Borneo, resembles the bintangur, is close-grained, strong, and tough, and is used for rudders, masts, and oars for the trading boats.

Kayu rungas, a red wood, handsomely veined, which takes a fine polish, and is much used at Singapore for the purposes of furniture-making. Like the ebony, it is only the old wood in the centre of the tree which is of a useful colour.

Kayu sappan, Cæsalpinia sappan.

Kayu sona, a timber tree, much used at Bawean in prahu and house-building.

Kayu umur panjaong, literally tree of long life, grows on Dempo Hill in Sumatra; it is about 6 feet high.

Kay-vang-dee, Cochl.-Chin., sassafras wood.

Kayu wali kukun, a wood of Java, is equal to the kusambi in weight, and exceeds it in hardness. It is employed for anchors, naves of wheels, machinery, etc.

Kayu wrang or bayur, a light and tolerably durable wood, is employed for masts and spars of small vessels; but the surface must be well covered with resinous substances to prevent it splitting.

Kayu-yndban, Cochl.-Chin., Santalum album.

Kay yoob, Burm., a tree of Moulmein. Its wood is used as an ordinary building material. —*Cameron; Dance; Low's Sarawak; Calcutta Review.*

KAZA. Arab. Fate, death. Al-kaza wa-l-kadar, fate and destiny. Many Muhammadans hold that fate is in some respects absolute and unchangeable; in others, admitting of alteration. The former they call Al-kaza al-mahkam, and the latter Al-kaza al-mabram.

KAZA GADDA. Tel. Urginea Coromandelica, *R.*; Scilla Indica, *R.* ii. p. 147. The same name, however, is applied to U. Indica and to Ledebouria hyacurthoides, which all grow abundantly together on the sands near Masulipatam.

KAZAK, a nomade race, known in Europe as the Cossack, and erroneously the Kirghiz, for the people only style themselves Kazak. They are extended through the northern desert lands of Central Asia. Like all the Turkoman, they have many subdivisions, with branches, families, and lines, but the European classification into Great, Little, and Middle Hordes is unknown to them. Love of travel and war have often brought together the most distant branches, and whether on the shores of the Emba, or of the sea of Aral, whether in the environs of the Balkash and Alatau, there is little difference to be found in the dialects spoken by them. The Kazak first appeared in Transoxiana as an independent tribe, under the leadership of Tokel Sultan. Lewchine, in his Description des Hordes et des Steppes Kirghiz-Kazaks, p. 141, calls him Teokel Sultan. The Kazak seem to have assumed a threatening attitude in the steppes north of the Jaxartes some time before this, for as early as A.H. 941 (A.D. 1534) Ivan the Terrible received the following report from his envoy, Danila Gubine:—'Et les Kazaks, sire, sont tres-forts, dit-on, et l'on dit, sire, qu'ils ont fait la guerre à Techkene (Tachkend), et les fils du roi de Techkene, dit-on, se sont battus avec ceux deux fois, et les Kazaks les ont battus' (Lewchine, p. 140). Tokel sent several embassies to Czar Fedor at Moscow, and appears to have been one of the most powerful of the Sultans of the Kazaks.

These rough warriors, who believed in the powers of their Yada tashi (magic stone) to control the elements, cure diseases, and ensure victory in battle, were sincerely devoted to their religion and to its priests.

Kazan, up to the middle of the 16th century, was the advanced guard of the Tartar hordes. These wandering tribes which, profiting by division among the Russian princes, overcame and ravaged all Russia, weakened in their turn by division, fell back from the invaded territory, and only held their own on the Volga, from Kazan to Astracan, till they were utterly routed and brought under Russian sway by Ivan the Terrible. Even then, however, though their strength was broken, their spirit was untamed. The men of high warrior caste who survived their defeat sought a refuge among their kindred tribes farther east, at Samarcand, Bokhara, and Khiva, where the Russians have now overtaken them; but the mere multitude, accustomed to their pastoral life on the steppes, laid aside without giving up their arms, passively accepted without formally acknowledging the Czar's sway, and abided in their tents. Kazan has a population of 90,000 to 100,000 inhabitants, one-fourth of whom are Tartars. They have distinct, if not separate, quarters, and mosques, and a burial-ground of their own. Some of the Kazan Tartars are men of great wealth, enterprising merchants, carrying on important trading operations with Central Asia, Persia, and China. Some of them are also great landowners, and they indifferently employ Tartars or Russians in their field work. The Kazan Tartars of the upper classes are among the best educated and polished of Muhammadans. The Russian civil law does not in any manner interfere with their domestic arrangements.

Shades of differences are perceptible amongst them, scattered as they are so extensively through the northern desert lands of Central Asia. In manner of life and language, the Kazak is hardly to be distinguished from the Burut. In colour the Kazak women and young men have a white, almost a European, complexion, which darkens by exposure. The Kazak have the short neck of the Turanian race, so different from the long-necked Iranian, and they have thick-set, powerful frames, with large bones; head not very large; crown round, and more pointed than flat; eyes less almond-shaped, but awry and sparkling; prominent cheek-bones, pug noses, a broad flat forehead, and a larger chin than the Burut. Beard on chin thin, only hairs on both ends of the upper lip. They deem the Kalun Kazak women more beautiful than their own. The men in

summer wear the Kalpak head-dress, and in winter the Tumak cap of fur covered with cloth and flaps. They are almost all Muhammadans, but, like all nomade tribes, are lax in their observances, for they retain much of the Shamanist belief which they held prior to their conversion some centuries before. Chiromancy, astrology, casting out devils, are common to all Muhammadans; but the Kazak draw omens from the burnt sacrifices, of the shoulder-blade and the twisting of the entrails.

During the campaign of 1812–1816 almost all the population of the Kazaks of the Don capable of bearing arms were called forth; and about 50,000 may be computed to have fallen in that space of time. The quota of force which this branch of the Cossack nation furnished to Russia, for European and Asiatic service, amounted then to 80 regiments, each regiment numbering from 500 to 600 men.

The men of the Don are robust, fair, and handsome; hospitable, brave, honourable, and scrupulously religious. The female is short in stature, face of strong Tartar feature, with eye almost invariably large and dark. The dress of the women consists of a sort of chemisette (or small shift) of coloured linen buttoned round the neck, and with sleeves to the wrist. A pair of trousers of a similar stuff are covered by a silk caftan, reaching as low as the ankles. The waist is bound with a girdle. The heads of married women are adorned with a silken night-cap, which is wrapped about with a gaily-coloured handkerchief in the form of a fillet. The unmarried wear the hair in a long plait down their backs.—*Vambery, Bokhara*, p. 299; *Porter's Travels.*

KAZAMEEN, a town 3 miles N. of Baghdad, and on the W. bank of the Tigris. It was inhabited at the beginning of the 19th century by about 8000 Persians, who had been induced to settle there on account of its being the burying-place of Imam Musa Kassim (the father of Imam Raza) and Imam Muhammad Touky. MacGregor says it is a place of pilgrimage for Shiah Muhammadans from all parts, because of Imam Musa-ul-Kathem, son of the 8th Imam, Ali Raza, and Muhammad Taki, the grandson, being buried there. The town is inhabited by Arabs and Persians, and a few Shiahs from India.—*Kinneir's Geog. Mem.* p. 252; *MacGregor.*

KAZAN, an ancient capital of the Tartar monarchs, now a Russian province. It is inhabited by fragments of nations, Russian, Tartar, Chouvash, Chermes, Mordoa, Votiak, Kalmuk, Kirghiz, Bashkir, Noga, and Kazak.—*Turnerelli's Kazan; Staunton's Narrative.* See Kazak.

KAZEROON, once a considerable place, now in decay, lies in a valley on the road from Bushire to Shiraz. The entire southern region of Fars, bordering on the Persian Gulf, is called the Garm-sair. This region extends from the sea to the latitude of Kazeroon, and runs parallel with the Persian Gulf; from the banks of the Tab to the confines of Luristan, and from Bushire eastward as far as Cangoon, the tract is named the Dushtistan or 'land of plains.' The Tungistan, commonly pronounced Tungistoon, or 'narrow land,' is a small tract of land east of Bushire. The greater portion of the people of the whole Garm-sair consists of an independent and lawless set, many of the tribes being robbers by profession. A huge wall of mountain separates the Garm-sair, or low region, from the Sard-sair, or high table-land of Persia. One of the most conspicuous of these is an abrupt lofty hill, named Hormooj, where coal is said to have been found. —*Yule, Cathay*, ii. p. 487.

KAZI or Kadi. ARAB. The chief judicial officer of Muhammadans. In British India he performs marriages. In a Muhammadan country he decides in all cases of law, religious, moral, civil, and criminal. Kazi-ul-Kazaat, lit. Kazi of Kazis, chief-justice. The first who bore this title was Abu Yusuf under Harun-ur-Rashid. The Kazi or Kadi still retains great power in Turkey, though under the mufti, and among the Muhammadan states in India also he is the chief judge; but in Persia the kazi is considered as under the Shaikh-ul-Islam in all cities where that high office exists. In all patriarchal governments, particularly amongst the Arabs, the kazi has great power. The Imam of Muscat, a powerful prince, is compelled, by the usage of his country, to appear before the kazi, or judge, of his capital, if summoned by any one of his own subjects who deems himself aggrieved.—*Malcolm's Persia*, ii. pp. 248, 445; *H.*

KAZI AHMAD-bin-MUHAMMAD-al-GHAFFARI-al-KAZWINI. He went from Persia on a pilgrimage to Mecca, and returned to Daibal in Sind, where he died A.H. 975 (A.D. 1567). He wrote the Nusakh-i-Jahan Ara, a useful compendium of history down to A.H. 972.—*Elliot, Hist. of India.*

KAZZAKI. HIND. A daka or burglary or highway robbery.—*History of the Panjab*, i. 143.

KAZZILBASH, a martial tribe, numbers of whom have settled in Kābul. Their native country is the neighbourhood of Tabreez, Meshid, Kerman, and Shiraz, where they are horse-breeders, shepherds, and cultivators. A body of them were serving in Nadir Shah's army at the time of his assassination, and on this event they retreated successfully to Kābul, under the command of Ahmad Shah, as he fought his way from Nadir's army. They are about 150,000 in number, a strength sufficient to hold their own in the many revolutions since Ahmad Shah's death. Lying to the west of the old city, between it and the river, lies the Chandol, once a village, now a suburb of the capital, and embraced within the limits of its defensive system. It is peopled by Kazzilbash. They are violent Shiahs, and bitterly opposed to their Daurani rulers, who are Sunnis; but for all this they exercise great influence over the Afghan Sirdars. They constitute the bulk of the cavalry and artillery forces of the Amir, and a large number are found in British service. They possess some political power likewise, and as they are more or less educated, they are largely employed in secretarial duties by the various Sirdars. In the war of 1838–42, the Kazzilbash were uniformly friendly to the British. A body of horse raised exclusively from this tribe accompanied Sir Richmond Shakespeare on his errand of mercy to the relief of Akbar Khan's captives.

KEANE. Lord John Keane, an officer of the British army, born 1781, was Commander-in-Chief, Bombay army, from 2d July 1834 to 14th February 1840. In 1839, commanded the army sent by the British against Afghanistan, then ruled by Dost

Muhammad Khan. He led the army through the territories of Bahawulpur, skirted the Sikh possessions, crossed, near Sabzalkot, the frontier of Sind, and passed the Indus at Bukkur. The army was then led north-westerly though Shikarpur, Baug, Dadur, to the north of the Bolan pass, entering which it was harassed by Mehrab Khan, the chief of Kalat. The army with Shah Shuja-ul-Mulk was favourably received at Kandahar, and, after a halt there of two months, it recommenced its march on the 27th June 1839. On the 23d of July it captured the fortress of Ghazni between 3 and 5 A.M., and on the 6th August it appeared before Kabul. Shah Shuja was declared ruler, and Dost Muhammad Khan fled. After this Sir John Keane returned to India, leaving an army of 8000 British sepoy soldiers at Kabul, and garrisons at Ghazni and Kandahar. In December 1839 he was raised to the peerage of Great Britain as Baron Keane. Died 24th August 1844.

A. H. Keane, in the latter part of the 19th century, a voluminous learned writer on educational, geographical, philological, and ethnological subjects, mostly relating to the countries of Eastern and Southern Asia, and to the races inhabiting them. Amongst others, on India and Further India, Afghanistan, Baluchistan, Persia, Turkey, Arabia; in 1882, an encyclopædic work on Asia, containing the results of the most recent researches; on the Indo-Chinese and Inter-Oceanic Races and Languages, Types and Affinities; Philology and Ethnology of the Inter-Oceanic Races, with papers on Khorasan, Khuzistan, and Baluchistan; Korean, Aino, and Afghan Ethnology; Malayo-Polynesian Linguistics; Hindustani Notes; on the Georgians, Kazak, Laos, and Turkoman; the Samoan Language,—as Sir Richard Temple says, all evincing a remarkably comprehensive knowledge of the ethnology and geography of Asia.

J. F. Keane travelled to Mecca in 1877–78 as Haji Muhammad Amin; subsequently to Medina.

KEANG-SE is the eastern portion of the ancient province of Keang-nan, or Nankin, as known to Europeans. This ancient province was estimated to embrace a surface of 81,000 square miles, and its population was seventy millions. But now, in extent it is about three-fifths of the ancient province. The imperial canal traverses the whole extent from north to south, and the Yang-tze-kiang from east to west.

KEAOU. The Chinese begin the day an hour before midnight, and divide the twenty-four hours into twelve parts of two hours each. Instead of numbering their hours, they give a different name to each period of two hours. The names and corresponding time, according to the English mode, are as follows:—

Tsze,	11 to 1	Morning.		Woo,	11 to 1	Afternoon	
Chow,	1 to 3	,,		We,	1 to 3	,,	
Yiu,	3 to 5	,,		Shin,	3 to 5	,,	
Maou,	5 to 7	,,		Yew,	5 to 7	,,	
Shin,	7 to 9	,,		Seo,	7 to 9	,,	
Sze,	9 to 11	,,		Hae,	9 to 11	,,	

The word Keaou is added when the first hour of each period is intended, and Ching for the second. Thus, Keaou tsze is 11 at night, and Ching tsze 12 at night; Keaou chow, 1 in the morning, Ching chow, 2, etc. The word K'hih, 'quarter,' is used after the hour with the numerals yih 1, urh 2, or sau 3, to subdivide the hours into quarters, which is the smallest division commonly employed: example, Ching maou yih k'hih, a quarter-past 6; Keaou woo urh k'hih, half-past 11.

KEDAH or Quedah is called in Siamese Muang Sai, or the Sai kingdom. It extends from Trang river, in lat. 7° 20′ N., to the Krian, in lat. 5° 10′ N. The Trang formerly divided it from Siam. Several tribes are within its limits. The Semang and Udai reside in the forests of the north; the Rayat Utan, the Jakun, the Sakkye, Hala, Belanda, Besisik, and others to the south; while the Akkye or Rayat Laut dwell upon the shores and islets of the Peninsula. Wherever scattered, they live totally apart from the Malays, and differ from them widely in person, habits, and religion. The Malays sometimes class them all as Orang Binua, men of the soil. The Panghulu of Rumbowe is chosen alternately from the Bodoanda Jakun and a Malay tribe.

The complexion of the Semang and Bila is black or sooty, the hair woolly, the features approaching to the African, and the stature dwarfish. An adult Semang male was found to be only 4 feet 9 inches high. Some of the Semang or Bila have fixed habitations, and practise a rude agriculture, but the majority lead an erratic life, gathering the rude products of the forest to exchange with the Malays for the necessaries of life, or subsisting by the chase. The hair of the Semang is spiral, not woolly, and grows thickly on the head in tufts. They have thick moustaches, the growth being much stronger than in the Malay race. The expression of the face is mild, simple, and stupid. The voice is soft, low, nasal, and hollow, or cerebral. A line of tattooing extends from the forehead to the cheek-bones.

Semang Paya reside on the plains or edges of morasses; the Semang Bukit are the occupants of hills; the Semang Bakow are near the sea, in the creeks, and where the mangroves grow; the Semang Bila are partly civilised.

The Sakai and Allas tribes of Perak have curly but not woolly hair.

The Semang use the sumpitan, are skilful fowlers and hunters, and subsist on their game and on forest roots. They capture and eat the elephant, rhinoceros, monkeys, and rats.

Newbold (i. p. 421) remarked that the Semang and Udai are said to resemble the Papuan in colour, features, and hair, but adds that among all the tribes of these aborigines that had fallen under his notice, he had never met with the peculiar features that distinguish the Negro of Papua. In this remark he is not in accord with other observers.

According to Sir S. Raffles and Mr. Anderson, the Semang of Kedah has the woolly hair, protuberant belly, thick lips, black skin, flat nose, and receding forehead of the Papuan.

The people of Kedah more often approximate to the eastern Negro type than in southern Malaya, and Mr. Logan was particularly struck with the repeated occurrence of the deep nasal depression of the Semang, the Australians, and Papuans. Small heads, with all the features as it were contracted or compressed, were common.

KEDARIVATA, a fast for Hindu women in honour of Eswara.

KEDAR-KANTA, a mountain peak in Garhwal, elevation 12,541 feet, in lat. 31° 1′ N., long. 78°

14′ E. It separates the headwaters of the Jumna and the Tons.

KEDARNATH, in Garhwal, in lat. 30° 44′ 10″ N., long. 79° 5′ 50″ E., has a Hindu shrine devoted to Sadasheo, an incarnation of Siva, and situated within the Himalaya. Its rawal, like him of Badarinath, is a Namburi Brahman. Pilgrims were wont to devote themselves to destruction here, by precipitating themselves from the summit of a small rock, called by the people the Bhairah-Jap, or by penetrating within the Himalaya until overwhelmed with snow. It is at the source of the Kali-Ganga, a stream far smaller than either the Bhagiruttee or Alacnunda, which joins the latter at Rooder-Prague. It is from Ke, SANSK., water, and Dar, abounding with. It has one of the twelve great lingas of the Hindus, a shapeless mass of stone. With Kedarnath are included the four temples of Kalpeswar, Madmaheswar, Tungnath, and Rudranath, forming the Panch Kedar containing the scattered portions of Siva's body.—*Fraser's Himalaya Mountains*, p. 381; *Dr. H. H. Wilson's Hindu Sects.*

KEDARNATH, a temple at Porbandar. It has a linga which was carried off from the temple of Naolakkha at Gumli.

KEDDAH. HIND. Corruption of Kheda, an enclosure into which wild elephants are driven; an elephant trap.

KEDGEREE, a hamlet on the left bank of the Hoogly river, in lat. 21° 50′ 8″ N.

KEDISH of Galilee was a bāst or refuge city; sanctuary. See Bast.

KEDRON, a brook in Palestine, crossed by a bridge leading to the garden of Gethsemane. Kedron is a Hebrew word, signifying 'darkness' or 'sorrow;' Gethsemane signifying 'wine-press.' On passing over the brook Kedron, and leaving the valley of Jehoshaphat on the right hand, the visitor ascends the Mount of Olives.—*Robinson's Tr.* i. p. 121; *Skinner's Journey*, i. p. 210.

KEEAR, in Cachar a land measure. 28 jeyt 1 keear; 12 keear 1 hull or koolba.

KEELING, CAPTAIN, commanded in the third voyage of the English East India Company's fleet in 1607. He first went to Surat, where he landed Mr. Finch to form a factory, and sent Captain Hawkins, his second in command, on an embassy to the Great Moghul at Agra.

KEELING ISLANDS, also called Cocos, in the Indian Ocean, south of Sumatra, were discovered in 1608–9 by Captain W. Keeling, E.I.C. Service. Till 1823 they were little known, but then Alexander Hare established himself on the S.E. island with a party of Malays and Malay women. He was afterwards joined by Captain J. C. Ross. The South Keeling is a cluster of skeleton islets, rising about 20 feet above the sea, encircling a shallow lagoon of an oval form, about 9 miles long and 6 wide. The other islands are North Keeling, Selema or Fairlie Island, Burial, Ross, Water, Direction, and Horsburgh Islands. North Keeling is in lat. 11° 50′ S., and long. 96° 51′ 3″ E. Fresh water is not scarce on the larger islands, and cocoanuts, pigs, poultry, pumpkins, turtle, maize, and sugar-cane may be procured. Captain, afterwards Admiral, Fitzroy observes that in these singular islands crabs eat cocoanuts, fish eat coral, dogs catch fish, men ride on turtle; shells are dangerous man-traps, the greater part of the sea-fowl roost on branches, and many rats make their nests at the tops of high palm trees. Mr. Darwin found here evidence of subsidence; earthquakes have been repeatedly felt; on every side of the lagoon, in which the water is as tranquil as in the most sheltered lake, old cocoanut trees were undermined and falling. The foundation posts of a stone house on the beach, which the inhabitants said had stood, seven years before, just above high-water mark, were then daily washed by the tide. The cocoanut crab, Birgus latro, hermit or robber crab of the Keeling Islands, is a kind of intermediate link between the short and long tailed crabs, and bears a great resemblance to the Paguri; they live on the cocoanuts that fall from the trees. The story of their climbing these palms and detaching the heavy nuts is merely a story. Its front pair of legs are terminated by very strong, heavy pincers, the last pair by others narrow and weak. To extract the nourishment, it tears off the fibrous husk, fibre by fibre, from that end in which the three eyes are situated, and then hammers upon one of them with its heavy claws until an opening is effected. It then, by its posterior pincers, extracts the white albuminous substance. It dwells in deep burrows, where it accumulates surprising quantities of picked fibre of cocoanut husks, on which it rests as on a bed. Its habits are diurnal, but every night it is said to pay a visit to the sea, perhaps to moisten its branchiæ. It is very good to eat, and the great mass of fat accumulated under the tail of the larger ones sometimes yields, when melted, as much as a quart of limpid oil. They are esteemed great delicacies, and are fattened for the table.—*Figuier; Bikmore*, p. 149; *Darwin, voyage; Findlay.*

KEENE, HENRY GEORGE, C.I.E., author of the Fall of the Moghul Empire; also the Administration of Indian Districts during the Revolt of the Bengal Army.

KEENGGREE, a musical instrument having three or four pumpkins, and only two steel strings; generally used by Hindus.

KEFFI, a green and yellow striped kerchief worn on the head by the Jehen tribe of Bedouin Arabs at Yambavi.—*Mrs. Ellwood's Letters.*

KEFFING ISLANDS, a group of 17 islands in the Molucca sea, encircled by very extensive reefs projecting into deep water, rendering approach difficult. The cachalot or spermaceti whale abounds in the ocean, and might support an extensive fishery. Some of the islets are low, sandy, girdled by reefs, and, as in Ghissa, with a lagoon in the centre absolutely swarming with fish, while the shores are peopled by ducks and snipes. Keffing is also called Pulo Manok or Bird Island, and lies midway between Ceram and the Serwatty group. It is a high solitary mountain, resting on the bosom of the sea, with a truncated cone, desert, and the refuge only of myriads of birds, which deposit such vast quantities of eggs that many of the natives of the neighbouring isles visit the place and subsist for whole days on this wholesome food. Sulphur is also found on the rocks. The inhabitants resemble those of the S. coast of Ceram, and are not of the Papuan or Negro race; they are great traders, and constantly visit New Guinea and purchase birds of paradise, lory, crows, pigeons, megapodiidæ, and scented woods. The inhabitants of Motir are a gentle, tranquil, sober tribe, following the occupation of

potters, and supplying the neighbouring islands with vessels and utensils of various kinds made of red clay, elegantly moulded and of good quality. These compete in the markets of the Molucca sea with the plates and pans brought by the traders of Keffing from the Ki Islands.—*Kolff's Voyage; Darwin's Coral Reefs; Crawfurd's Ind. Arch.; Temminck; As. Journ.; St. John's Ind. Arch.* i. 142.

KEHAMA, a Hindu raja whose name is immortalized in Southey's Curse of Kehama. By penance, he acquired supernatural power. His son Arvalan attempted to force Kaliyal, daughter of Ladurlad, and her father slew him with a stake, on which Kehama cursed him, but father and daughter escaped to Mount Meru, where Yedillian, wife of Ladurlad, rejoined him.

KEI. This group of ten islands adjoining the Aru Islands, is inhabited by the Arafura race, and the word Key, Kei, or Ki is prefixed to the names of all their villages. The Great Kei is about the size of Tanakeka, an island near Macassar. The men profess Muhammadanism, but eat hog's flesh. In the island of Dori, the Papuans are called Myfore. They are about 5 feet 3 inches high, few attain 5 feet 6 inches. They wear their crisped hair its full length, and generally uncared for, which gives them a wild, scared appearance. The men, not the women, wear a comb. Amongst the Arafura or Papuan of Ke, the women are not secluded, the children are merry, noisy, and have the nigger grin, and amongst the men is a noisy confusion of tongues and excitement on every occasion. The Ki form the northern of the south-easterly islands. The islands are covered with luxuriant forests, and produce maratigo and banyaro woods, well adapted for masts. They are occupied by two races, and it is the Papuan who make cocoanut oil, build boats, and make wooden bowls. Their boats are from small planked canoes to prahus of 20 to 30 tons burden. They build the skin first, and afterwards fit in the knees and bends and ribs. Money is not used, but every transaction is in kind. The Papuan wears a waist-cloth of cotton or bark. The other race are Muhammadans who were driven out of Banda, and wear cotton clothing. They are probably a brown race, more allied to Malays, but their mixed descendants have great varieties of hair, colour, and features, graduating between the Malay and Papuan tribes. The Cyphogastra calepyga, a beautiful species of the Buprestidæ, occurs here. The Carpophaga concinna occurs here, and in Banda, where it is called the nutmeg pigeon; also the butterfly orchis, here Phalænopsis grandiflora, and two large beetles, Therates labiata and Tricondyla aptera. T. labiata is ever on the watch, and from time to time emits an odour like otto of roses. T. aptera of the Malay Islands resembles a large ant more than an inch long, and is of a purple-black colour. It is wingless.—*Bikmore; Wallace.*

KEIFIAT. Arab. A kerchief used by the Arabs as a head covering. The aba or cameline, as it is styled in the Persian Gulf, and the Keifiat, are worn in Oman by all classes. It is a broad kerchief, striped green, red, and yellow, having the sides hanging down, with knotted strings appended to them, serving by their motion to keep off the flies, which are here excessively troublesome.—*Wellsted's Tr.* ii. p. 210.

KEILAMUHURTA, a Coorg festival held in July and August, when all their arms are worshipped.

KEISH ISLAND, in the Persian Gulf, is 21 miles in circumference, well wooded, and from the sea the prettiest in the Gulf. There is plenty of good water, and some cultivation of barley and vegetables. The island is subject to the Shaikh of Canack on the mainland. The goats on this island were consecrated to Venus and Mercury in the time of Alexander, when Nearchus, with the Grecian fleet, cast anchor here; for the Catæa of his journal (preserved by Arrian) is Keis or Keish in the nomenclature of oriental geography. It is, however, said to have been named Keish since the 10th century, when one Keis, the son of a poor widow in Siras, embarked for India, with his sole property, a cat. There he fortunately arrived at a time when the palace was so infested by mice or rats that they invaded the king's food, and persons were employed to drive them from the royal banquet. Keis produced his cat, the noxious animals soon disappeared, and magnificent rewards were bestowed on the adventurer of Siras, who returned to that city, and afterwards, with his mother and brothers, settled in the island, which, from him, has been denominated Keis, or, according to the Persians, Keish. In countries widely separated, and in various languages, the same story has been related of different persons.—*Ouseley's Travels*, i. p. 170.

KEJ, the most western of the Kalat territories. Kej is called Mekran, sometimes also Kej Mekran, and is supposed to be the Gedrosia of the Greeks. It is inhabited by many tribes, of whom the Gitchki is the most numerous, but about half the population is a Muhammadan tribe called Ziggar. The maritime and fishing population of the little ports on the coast of Mekran from Sanmiani to Charbai, are denominated Med, and comprise four divisions,—the Guzbur, Hormari, Jellar-zai, and Chelmar-zai. Although often overrun by armies from Kalat, its subjection has been more nominal than real. A treaty was made with the naib of Kej, fakir Noor Muhammad, of the Bezunjo tribe, in 1862, by which he agreed, for an annual subsidy, to protect the Mekran telegraph which passes through his territories. The subsidy granted was Rs. 6000, of which Rs. 1000 are paid to the chief of Pusnee. If the term Kej was in use anciently, it is likely to have given rise to the name Gedrosia.—*Rennell's Memoir*, 183; *Treatics.*

KEKIK, in lat. 1° 83′ S., and long. 128° 37½′ E., is a high island in the Gilolo passage.

KEK-KIEO, of Ramree, is a lichen, doubtless Alectoria jubata, the Cornicularia jubata, *Achard.* It is gelatinous, and is eaten by the natives with rice.

KELA, a migratory people amongst the Uriya, who live by catching snakes, basket-making, etc.

KELAART, Dr., a British medical officer of Ceylon, who paid much attention to the natural history of the island.

KELINGU, Singh.; Tamil, Kurung. In planting the seeds of the palmyra fruit, the germinating plant, in the first stage of its growth, is of the shape and dimensions of a parsnip, but of a more firm and waxy consistence. These are dried in the sun, and when dressed in slices form a palatable vegetable; esteemed a delicacy in the Tamil country, in Southern India, and in the south of

Ceylon. The kelingu is reducible to a farina. It is an article of food in Ceylon, and is cultivated for that purpose; the seeds being sown in six to eight layers, under loose sandy soil. When fresh they are roasted, boiled, or sliced and fired like the bread-fruit. When it is to be kept, the parchment-like covering is removed, and they are dried in the sun, and kept under the name of Odial, and this when boiled is called Poolooc odial. When the odial is reduced to flour or meal, it is used to form the preparation of Cool of the Singhalese. The Singhalese also prepare from kelingu meal a dish called Putoo, which is occasionally eaten with rice, and also with jagari. It is made of prawns or fish, scrapings of cocoa-nut kernels, and unripe jack-fruit. It is the first shoot from the palmyra fruit, and is known locally as Ponnam kelingu. It is about the size of a common carrot, though nearly white. It forms an article of food among the natives for several months in the year; but Europeans dislike it from its being very bitter. Recent experiments have proved that a farina superior to arrowroot can be obtained from it, prepared in the same way; and 100 roots, costing 2½d., yield one and a half to two pounds of the flour.—*Tennent; Simmonds; Seeman.*

KELI-SHIN, a pass over the Kurdistan mountains leading from the plains of Azerbijan to the Rowandiz district of Kurdistan, and is the only line of intercommunication. The culminating point at Shaikhiwn is 10,568 feet. Great snow drifts occur in winter. Rowandiz is 75 miles N.E. of Mosul.—*MacGregor.*

KELLEK, Arab., is a raft in use on the Tigris and Euphrates, nearly as long as it is broad. It is composed of goat-skins blown up, and fastened close together by reeds; this is strengthened by cross pieces of wood, and over these again are laid others to keep the bales of merchandise out of the water. The only fastenings of this raft are twigs. The skins are repaired and inflated afresh every evening, and during the day care is taken to keep them continually wet, which prevents their bursting. Those used by the Yezdi ferrymen on the Zab rivers, as described by Niebuhr, are composed of 32 bladder-shaped sheepskins, inflated with air; four of these are placed lengthways and eight in breadth, and on the oblong square thus formed a covering of planks is formed. The Kellek rafts are conducted by two long oars, the blades of which are made of pieces of split cane fastened together. The passengers arrange themselves as they can on the bales of goods; and if a person wish to be very much at his ease, he procures a wooden bedstead covered over with a felt awning, which stands in the middle of the kellek, and serves him for a bed by night and a sitting-room by day. The historians of Alexander mention that the rafts on which that hero crossed the rivers of Central Asia were buoyed up with skins stuffed with straw; they were then, no doubt, as now, inflated with air; and it is thus that the Euphrates, the Tigris, the Karun, the Indus, the Oxus, and other rivers in Asia are crossed. Besides the Kellek or raft, the Kufa or Gufa, a round-ribbed boat or coracle, is used on the Tigris and Euphrates, covered, not with skin, but bitumen. But of this the only valuable article is the bitumen; the ribs are of thin willow rods or the midrib of the frond of the date tree, and are useless if the boat be broken up. The rivers of the Peninsula of India, the Kistna, and Tumbudra are usually crossed in basket boats or coracles, with a framework of rattan covered on the outside with skins. But a single inflated skin, such as are used as buoys for nets on the east coast of Scotland, or a dried pumpkin, or a bundle of dry rushes, is used by individual travellers. On the Godavery, near the delta, a small double canoe is in use, the passenger sitting astride the connecting beam. The strata of rushes are evidently of the same kind as the vessels of bulrushes upon the water, alluded to in Isaiah xviii. 2. This peculiar mode of navigating that river is the same as was known to the ancients as the Navigia Conacia.—*Rich's Kurdistan*, ii. p. 128; *Ferrier's Journ.* p. 429; *Mignan's Tr.* pp. 23, 423.

KELON, of Kulu and Kangra, is the Cedrus deodara. The Kelon turpentine of commerce, or Kelon ka tel, is the oily product. The deodar or Himalayan cedar grows on the north slope of Dhaola Dhar, is a native of Kulu, and is also found in the Bunghalla forests. It is a tree of fast growth, and grows to a great height. Its wood is fragrant, of a reddish-yellow colour, highly resinous and inflammable; very durable, yields valuable timber; it is also not subject to warp. A thin oil exudes from the roots of the tree, which is held in much esteem as a cure for sores; it is also rubbed over inflated skins and on wood to preserve them. The wood is also used for flambeaux. In Kanawar it is the most valuable timber tree. It grows to 20 or 30 feet in circumference, and Gerard measured two trees of 33 and 34 feet, and had seen trees 150 feet high, and they may be 200. He supposed it to be the cedar of Lebanon. It is almost indestructible, and is used for beams of houses, temples, and especially granaries, as no insect touches it. This wood has an agreeable smell.

KELP or Barilla.

Wudasch, Kelp, . .	Dut.	Sal de soda, . . .	Port.
Soude, ...	Fr.	Sosa, ...	Sp.
Aschensalz, . . .	Ger.	Skottlandok soda . .	Sw.
Soda, ...	It.		

Kelp, the ash of the common sea-wrack (Fucus vesiculosus, *L.*), with other species, burnt in the open air. It contains from 5 to 8·5 per cent. of carbonate of soda. The best kelp has an acrid, caustic taste, a sulphurous odour, is compact, and of a dark-blue greenish colour. It is used in the composition of soap, glass, etc.

KELT. Ernest Curtius is of opinion that the ancestors of the people of India, and of the Persian, Greek, Italian, German, Slave, and Kelt races, were originally one people dwelling in the uplands of Asia; and that the first to separate themselves from this united Aryan or Indo-European family, and to push their way into Europe, was the Kelt, who were followed by the German, and these by the Slave and Lett. The next great swarm that deserted the hive and left behind them the progenitors of the Medo-Persian and the Indian, was composed of the common ancestors of the Greek and Roman.

KELUMPIT. Malay. A very large tree of Singapore; sections are employed by the natives for cart-wheels.

KEM, a Turkoman clan in the valley of the Ettrek; formerly of the Yomut [illegible]

independent. They are greatly predatory. — *Collett, Khiva.*

KEMANCHAH, the sitar of India and Persia. Those made at Shiraz are of tut or mulberry tree wood; the body (about eight inches in diameter) is globular, except at the mouth, over which is stretched and fixed by glue, a covering of parchment. But they are of various materials; often the body is merely a hollow gourd, or every part is richly inlaid and ornamented. They are sometimes made of the girdu or walnut tree wood.

KEMMENDINE, a village near Rangoon, taken 9th December 1824 by the British Indian army. It is now a part of the Rangoon cantonment.

KEMP, also Kempty, the coarse rough hairs of wool, which are avoided by the manufacturer in his purchases of wool, deteriorating as it does the appearance of even common fabrics by their inferiority and harshness, and not taking dye readily. The kemp of the Kashmir goats' wool is, however, made into coarse cloth.—*Simmonds' Dict.*

KEN, an Egyptian goddess of Assyrian origin, the Astarte, Astaroth, and Mylitta of the Assyrians, Syrians, and Arabs. This divinity appears to have been introduced into the Egyptian pantheon in the time of the 18th dynasty, or at the commencement of the close connection between Assyria and Egypt. On comparing a representation of the goddess in the rock sculptures of Malthaigah with an Egyptian bas-relief in the British Museum, the mode of treating the subject is seen to be nearly the same. In both we have a female standing on a lion. The Egyptian figure holds two snakes and a flower, the stalks of which are twisted into the form of a ring; the Assyrian carries a ring alone. The flower resembles that borne by the winged figures in the place of Khorsabad, and is not found in the edifices of the first Assyrian period, where the flowers in the hands of a similar figure are of a different shape. For instance, the goddess Athor or Athy, Dr. Hinks reads, the same name as that of the presiding divinity on the monuments of Assyria. Dr. Birch admits, in his observations on the cartouches, that the introduction of the Assyrian gods Baal and Astarte, of Renpu or Reseph, of Ken and Anata or Anaitis, can be traced to the 18th and 19th dynasties, and is coeval with the epoch of the great conquests of Egypt in Central Asia. On a tablet at Turin she is called Atsh or Adesh, the name of the chief city of the Khitae, a Mesopotamian people attacked by the Ramessids (Prisse. Mon. Pl. xxxvii.). She usually appears in a triad with Renpu and Khem or Chamno, also deities of Semitic extraction. The worship of the Sakti seems to have been introduced into India from the Egyptians and Assyrians, and the image of the Hindu Durga is unquestionably a modified type of Ken and Astarte. The image of Kali is an original of the Hindus, the worship of which is inculcated in the Upa Puranas, written at a considerably later period than the Puranas which first originated the present form of the idolatry of the Hindus.—*Layard, Nineveh*, ii. p. 213; *Tr. of Hind.* i. p. 37.

KENDULI, a village in the Birbhum district of Bengal, situated on the north bank of the Ajai, in lat. 23° 38′ 30″ N., long. 87° 28′ 15″ E. It is the native village of Jayadeva, a Vaishnavite reformer and Sanskrit poet, the author of the celebrated Gita Govinda, a Sanskrit poem in praise of Krishna. An annual fair in honour of Jayadeva is held in the village on the last day of Magh (the commencement of February), and is attended by upwards of 50,000 persons.—*Imp. Gaz.*

KENERI (Kundari) is in the large island of Salsette, to the north of Bombay. Amongst the Buddhist caves in India, those of Keneri in Salsette are remarkable. They are purely Buddhist, but inferior to those of Ajunta or Karli. They are excavated in a hill in the midst of an immense tract of forest country, and Mr. Fergusson supposes their date to be about the 9th or 10th century of the Christian era. The great chaitya at Keneri is regarded by him as a bad copy of that at Karli. A copper plate found in the relic chamber of one of the Keneri caves contains inscriptions in Old Pali. It is of the 2d century B.C., about 100 years of the reign of the Trukudaka dynasty.

KENISAT-ul-KIAMAT, the Church of the Resurrection, commonly called the Holy Sepulchre. By the Arabs it is called Kenisat-al-Komamat. This last word means a lay stall, in allusion to the place where the Holy Cross was found.—*Robinson's Travels*, i. p. 40.

KENJIU KASAWARA and Bunyiu Nanjio, two Buddhist priests of Japan, of the Shin-Shiu sect, of the monastery at Kioto, who about the year 1879 came to Oxford University in England to study Sanskrit. Kenjiu Kasawara returned to Japan in 1883, and died there, and Bunyiu Nanjio also returned in 1884. He had distinguished himself as a student in his monastery at Kioto by his knowledge of Chinese, which he speaks and writes like his native language. Some of his poems in Chinese are highly spoken of. He was selected, therefore, with one of his fellow-students, Kenjiu Kasawara, to proceed to England in order to learn English, and afterwards to devote himself to the study of Sanskrit, which took a great deal of time. While at Oxford he compiled a complete catalogue of the gigantic Canon of the Tripitaka or Three Baskets. It contains 1662 separate works. Besides this work, Bunyiu Nanjio and his friend Kenjiu Kasawara had prepared several Sanskrit texts for publication. Kenjiu Kasawara died soon after his return. Some of the shorter and more popular sacred texts have been published already by Mr. Bunyiu Nanjio and Professor Max Muller in the Anecdota Oxoniensia, such as the Vagrakkhedika, the Diamond-cutter, the Sukhavati-vyuha, the Description of the Land of Bliss.

KENKRA. HIND. The carapace or shell of the crab, used as a drug.

KENNEDY, GENERAL VANS, an officer of the Bombay army, born in Edinburgh in 1784, and died in Bombay 29th December 1846. In 1825 he published his Researches into the Origin and Affinities of the Principal Languages of Europe and Asia. Three years afterwards he put forth his Researches into the Nature and Affinity of Ancient and Hindu Mythology. Most of his other writings appeared in the Journals and Transactions of Societies.

KENSHI. JAPAN. A sheriff or witness to an execution.

KENTIA EXHORIZA, the Niu Sawa palm tree of Fiji. There are several other species of Kentia in New Guinea and Australasia.

KEONTHAL, one of the Panjab hill states.

It lies around Simla station, between lat. 30° 35′ 30″ and 31° 6′ N., and between long. 77° 10′ and 77° 25′ E.; area, 116 square miles; estimated population in 1875, 50,000; the revenue in 1876 was estimated at £6000. Principal products, opium and grain After the Gurkha war of 1818, a portion of the Keonthal territory was sold to the maharaja of Patiala. The chief claims a Rajput origin. He is bound to render feudal service. In 1858 the chief was created a raja, and received a dress of honour worth 1000 rupees for his services during the mutinies. —*Treaties, etc.; Imp. Gaz.*

KEORI, in the N.W. Provinces, a caste of gardeners, cultivating the poppy, sugar-cane.

KEPPEL'S ISLE is from 10 to 12 miles in circumference, and distant from the mainland 6 miles. There are numbers of a singular fish, of the genus Chironectes, which leap with great activity over the mud, among the arched roots of the mangroves, among which are small crabs, Ocypoda, and Macrophthalmus.—*Macgillivray's Voyage*, i. p. 65.

KERAIT, the royal dynastic tribe of Tartars to which Prester John belonged. Aung Khan of the Kerait Mongols, celebrated in Europe under the name of Prester John, was a contemporary of Chengiz Khan, whom, at the instigation of jealous enemies, he attempted, but failed, to destroy. Marco Polo states that Tenduc was the chief seat of Prester John when he ruled over the Tartars, and also the residence of his descendants in their reduced and subordinate position. Marco Polo says the Great Khans often gave their female relations in marriage to the kings of the Kerait or Prester John's line. And other intermarriages were frequent, *e.g.* the Christian mother of Gayuk Khan, and Dokuz-khatun, the Christian queen of Hulaku, were both princesses of the Kerait royal family, *i.e.* apparently of Prester John's. The mother of Hulaku was of the same family, and Chengiz, as well as several of his sons, took wives from it. On the destruction of the kingdom of the Kerait, a Kouriltai, or general assembly of the chiefs of all the hordes, was convoked. Vambery (p. 120) is inclined to regard Kerait as a Persian corruption of Kirit, meaning grey dog. Abul Ghazi says the word means whirlwind, but the names of most Turk tribes are taken from animals.—*Elliot*, p. 498; *Marco Polo*, ii. p. 50; *Yule, Cathay*, i. pp. 146, 147; *Vambery*.

KERALA, the land of cocoanuts. Keram, Malear., a cocoanut tree, a cocoanut; an ancient kingdom which extended from the Kangarote river in Canara in the north, to Cape Comorin in the south, with the Western Ghats as its boundary on the east. It thus included Malabar and Canara. This country, according to tradition, was miraculously reclaimed from the sea by Parasurama. In the 3d century B.C. (Asoka's edict), its king is called Keralamputra (Celobotras, Pliny; Kerabothrus, Ptolemy; Cerobothrus, the Periplus). About the first or second century of the Christian era, a prince of the northern division of Kerala introduced into it a colony of Brahmans from Hindustan, who divided it into sixty-four districts, and governed it by means of a general assembly of their caste, renting the lands to men of the inferior classes. The executive government was held by a Brahman, elected every three years, and assisted by a council of four of the same tribe. After a time, they appointed, as a chief, one of the military class, and seem afterwards to have been under the protection of the Pandiyan kings. The language of the Kerala district is of the same stock as the Tamil, but the country does not appear ever to have been subject to the Chola kingdom. In the course of the 9th century, the southern part, that known as Malabar, revolted from its prince, who had become a Muhammadan, and broke up into many petty principalities; among the chief of which was that of the Zamorin, whom Vasco da Gama found in possession of Calicut in the end of the 15th century. Canara northern division seems to have established a dynasty of its own soon after the commencement of the Christian era, which lasted till the 12th century, when it was overthrown by the Bellal dynasty, and subsequently became subject to the rajas of Vijayanagar.—*Elphin.* pp. 219, 220.

KERAN or Kran, a Persian silver coin worth about ninepence.—*Simmonds' Dict.*

KERANOH. Hind. Charity lands.

KERARI, Hindu worshippers of Devi in her terrific forms, and the representatives of the Aghora-Ghanta and Kapalika, who, so late as the 10th century, sacrificed human victims to Kali, Chamunda, Chinna Mastaka, and other hideous personifications of the Sakti of Siva. They are said, also, to have lacerated their own bodies, piercing their flesh with hooks, etc.—*Wilson, Hindu Sects.*

KERBA. Pushtu. A coarse cotton fabric manufactured in Afghanistan.

KERGUELEN LAND, a sterile island in the Southern Ocean.

KERKHAH is the ancient Choaspes. One of the most important of the water-courses of Khuzistan is the Kerkhah or Kerah, which begins to flow in three branches, all springing considerably eastward of Kermanshah. The first, and most inconsiderable, has its commencement about 25 miles west of Hamadan. A little south of the spot where the Kerkhah is joined by the Ab-i-Zal, are the remains of a bridge, and at one mile and a half from the celebrated ruins of ancient Shus or Sus, the Kerkhah bends a little west of south, and continues in this direction through the rich plain of Khuzistan, passing through the extensive marches which surround Hawiza, a commercial town of about 12,000 inhabitants; from thence it winds S.W., and falls into the Shat-ul-Arab, below Kurna, after a course of upwards of 500 miles.

KERKOOK, the Korkura of Ptolemy, is two miles to the north of Baghdad. Baba Goorgoor is the name given to a spot three miles from Kerkook, where, in a little circular plain, white with naphtha, flames of fire issue from many places. There appears to be little doubt, as D'Anville conjectures, that this is the Korkura of Ptolemy. The people of Kifri say that on the eve of Friday a little lamp is seen to burn of itself on the summit of the hills overlooking the plain: it is most probably a similar phenomenon to that of Baba Goorgoor. A celebrated doctor of Muhammadan law, surnamed Azam, or the honoured, is buried at this place.—*Rich's Kurdistan*, i. 44.

KERMANSHAH, in lat. 34° 26′ N., is a handsome town, exhibiting the glittering domes of mosques within, and the battlements and towers of lofty walls without. Being erected on a south

western slope of the mountains, it commands a wide view of the vale; it is famous for an excellent manufactory of firearms; and the villages in its vicinity, for carpets of the most beautiful colours and fabric. Luxurious gardens surround the town, abundant in fruits of all kinds, but particularly in grapes of an exquisitely delicious muscatel flavour. The population amounts to about 15,000 families, some few of which are Christians and Jews. The mountain of Takht-i-Bostan forms a part of the chain of Be-Situn; and, like it, is craggy, barren, and terrific.—*Porter's Tr.* ii. pp. 167-201; *Ferrier's Journey*, 26.

KERMES, Coccus ilicis, *Latr.*, is found in many parts of Asia. It lives on the Quercus coccifera, a small evergreen oak. With a solution of tin, its scarlet colour is equal to that of cochineal, but one part of the latter is equal to 10 or 12 parts of kermes.—*Dr. T. L. Phipson*, 40.

KEROSINE OIL is pre-eminently useful in the skin diseases of India, in itch, scald-head, lice in the head, ringworm, plant fly, and insects.

KERREH SAIDEH, known in Arabian geography as Khandak Sabur, Shahpur's ditch, is a bifurcation of the Euphrates, from near Hit, and after a course of several hundred miles enters the Persian Gulf by a separate mouth, rendering culturable a vast tract of ancient Chaldæa. Shahpur Dholactuf, in the 4th century, either cut or re-opened this channel. He is said to have intended it as a defence against the Arabs.—*Rawlinson*, i. p. 17.

KERROWLEE. This petty state, which paid a tribute of Rs. 25,000 to the peshwa, was ceded to the British Government by the 14th Article of the treaty of Poona in 1817. The maharaja had made over the village of Machulpore and its dependencies to the management of the peshwa in lieu of the tribute. In 1825, when Bulwant Singh, the legitimate heir to the state of Bhurtpur, was rebelled against by his cousin Durjun Sal, the rebel was supported by the maharaja of Kerrowlee. After several disputed successions, maharaja Mudden Pal succeeded in 1854. He rendered good service in the mutinies, in consideration of which the sum of Rs. 1,17,000 due by him to the British Government was remitted, and the maharaja received the right of adoption. The area of his state is 1878 square miles, and the population about 188,000. The revenue from all sources is only about Rs. 3,00,000. The whole military force of the state is about 2000 men.—*Treaties*, iv. p. 99.

KESAR. HIND. Crocus sativus, saffron. Kesara, a saffron-coloured robe worn by a Rajput when resolved to conquer or die. Kesari rang, a saffron colour.—*Wilson.*

KESARI. BENG. A coarse grain of Hindustan, said to cause paralysis.

KESARI. The first glimmering of authentic history of Orissa occurred A.D. 473, when the Yavana are said to have been expelled by Yayati Kesari, and in the following 650 years, until A.D. 1131, thirty-five rajas of the Kesari family follow. Their capital was then taken by a Ganga Vansa prince, whose dynasty occupied the throne until near the Muhammadan conquest. The Ganga Vansa seem to have been a dynasty from near the Ganges about Tamluk and Midnapur. They seem to have attained their highest prosperity towards the end of the 12th century. They were succeeded by a Rajput family, and in the middle of the 15th century the Government of Orissa sent armies as far south as Conjeveram, near Madras, and about the same time their raja advanced to the neighbourhood of Beder to aid the Hindu princes against the Muhammadans. The Orissa Government was invaded by Muhammadan armies from Bengal and from the Dekhan; it fell into confusion, was seized on in 1550 by a Teling chief, and ultimately was annexed to the Moghul empire by Akbar in 1578.—*Elphin.* p. 223; *Stirling; As. Res.* xv. p. 254.

KESARIYA. To the N. and N.W., distant 30 miles from Besarh, and somewhat less than two miles to the south of the large village of Kesariya, stands a lofty brick mound capped by a solid brick tower of considerable size, supposed to be remains of ruins, occurring after the commencement of the Christian era. The Kesariya mound is 20 miles N. of Bakhra, in sight of the Gandak river. It has an inscription in Sanskrit, of about the date of the Bakhra image inscription. The character used in the inscription is the same as the Sarnath and Bakhra character. The avatars and the sakta hymn of the Rig Veda are mentioned, but no invocation of Hindu gods named. Chandradatta, son of Suryadatta, is mentioned. The inscription is imperfect, but the everliving Chandradatta was born on the Sunday appropriated to the reading of the sakta by his father Suryadatta. The sakta has for one of its verses the holy Gayatri. At Lauriya Ara-Raj, between Kesariya and Bettiah, at the distance of 20 miles to the N.W. of the Kesariya stupa, and one mile to the S.W. of the Hindu temple of Ara-Raj Mahadeo, there stands a lofty stone column which bears in well-preserved and well-cut letters several of the edicts of king Asoka.—*Beng. As. Soc. J.* iv. pp. 128, 286.

KESAVA, a name of Vishnu or Krishna, means having fine hair or much hair. The word recurs in the Persian as Kesu, ringlet or forelock.

KESAVA or Kesi-raja, a Jaina; author of the S'abda-mani-darpanam, CAN., lit. the jewelled mirror of words, the most ancient and esteemed grammar of classical Canarese.

KESH, a town 36 miles south of Samarcand, 120 miles E. of Bokhara. It is the birthplace of Timur. Timur's famous descendant Baber, the first Great Moghul, tells us that in spring the walls and terraces of the houses at Kesh are always green and cheerful. Timur and Baber both mention Kesh as Shahr Sabz, or the verdant city. Up to the time of the Samanides it was chiefly inhabited by Arabs of the tribe of Bekr-bin-Vail.—*Markham's Embassy*, p. 120; *P. Arminius Vambery, Bokhara.*

KESHAB CHANDRA SEN, born A.D. 1838, a theistic reformer of Hinduism. He joined the Adi Brahma Samaj in his 20th year. He worked at first, for about five years, along with Debrendrahnath. He objected to caste and to caste restrictions, also to child marriages and polygamy. He acknowledged God as the first cause, and the immortality of the soul, and future rewards or punishments. He visited England in 1870. In 1879 he alleged having had a vision of Jesus, John the Baptist, and St. Paul. He died 8th January 1884. During his life, his eloquence, earnestness, and mysticism led to the formation of many sects amongst the youth of India who

had been educated in Government schools. They were known as the Adi Samāj, the Sidhāran Samāj, the Bidhan Samūj, and in 1884 were 173 in number, sects diverging from the Brahma Samāj which Ram Mohun Roy founded. This may be only one of the many monotheistic movements which have occurred in India.

KESHKUL, the half of a cocoanut shell, in which alms are gathered. This and the Asi, or pilgrim's staff, are part of the insignia of a darvesh.—*Vambery, Bokhara*, p. 267. See Jhula.

KESRA or Kesri, a title which seems to have been indiscriminately applied to the later princes of the house of Sassan, and was probably derived from the Cæsars of the Romans, or the Khusru or Chosroes of the Persians. The title was certainly given to two dynasties of Persia.

KESTREL, Tinnunculus alaudarius, and the sparrow-hawk (Accipiter virgatus), are common in India. The former may be observed hovering over the plains, and at dusk, not unfrequently in numbers, perched on stones and tufts of grass. Both prey extensively on mice, lizards, and beetles. The latter hawk is trained for quail-hunting. About Dugshai, the lesser kestrel, Tinnunculus cenchris, may be seen in numbers hovering over the sides of the mountains and the little terraced fields in quest of beetles and large insects.—*Adams.*

KETAS. Singhapura, mentioned by the Chinese pilgrim Hiwen Thsang, is supposed by General Cunningham to be the modern Ketas. Ketas is situated on the north side of the Salt Range, at 16 miles from Pind Dadan Khan, and 18 miles from Chakowal, but not more than 85 miles from Shahdheri or Taxila. And as there are no clear pools swarming with fish in the Balnath Range, he had little hesitation in identifying the place described by Hiwen Thsang with the beautiful limpid pool of Ketas, which has been esteemed holy from time immemorial.—*Cunningham, Ancient Geog. of India*, p. 126.

KETU, in astronomy, the descending node, represented by a dragon's tail. Ketu, in Hindu popular belief, an imaginary planet, said to cause the eclipses of the sun and the moon. See Graha; Rahu.

KEU JIN. Chin. A literary degree, equal to M.A., meaning elevated man.

KEUNJHAR, a tributary State of Orissa, lying between lat. 21° 1′ and 22° 9′ 30″ N., and long. 85° 14′ and 86° 24′ 35″ E. Bounded on the north by Singbhum district, on the east by Morbhanj State and Balasor district, on the south by Cuttack district and Dhenkanal State. Its river, the Baitarani, takes its rise in the hilly north-western division. There are peaks rising from 1818 to 3479 feet. The Hindus numbered 113,207. The aboriginal tribes in the year 1872 numbered 44,438, about a fourth part of the population; and the semi-Hinduized, 49,294. 37·5 per cent. of the population are aborigines, who retain their primitive forms of faith.

Bathudi,	7,898	Kol,	10,990
Bhuiya,	18,481	Pan,	19,827
Brahmans,	8,583	Saont,	7,172
Gond,	10,407	Savar,	5,125
Khandait,	22,225		

It is one of the chief seats of the Bhuiya or Bhumiya, who are still dominant there. The Bhuiya of the plains, including the Saont, a thoroughly Hinduized portion of the tribe, hold their lands on conditions of service. They maintained themselves in a state of preparation for taking the field at a moment's notice.

In Keunjhar, the Bhuiya are divided into four clans, viz. the dominant Raj-Kula Bhuiya, the Mal or Desh Bhuiya or Desh-log or Desh-lok, the Dandsena, and the Khatti. The Pawri claim to be the prior settlers in Keunjhar, and the prerogative of installing every new raja on his accession belongs to them. As a part of the form of installation, a sword is placed in the raja's hands and one of the Bhuiya comes before him, and kneeling sideways, the raja touches him on the neck with the weapon. The family of the Kopat hold their lands on the condition that the victim when required, shall be produced. The victim hurriedly arises after the accolade, disappears, and must not be seen for three days; then he presents himself again to the raja as miraculously restored to life.

The sixty chiefs of the Pawri Desh, the Bhuiya highlands, have from time to time assumed the government, and the country may be said to be then ruled by an oligarchy. In their name, a knotted string is passed through the country, and the verbal message communicated in connection with it is implicitly obeyed.

A Government elephant (Kheda) establishment is maintained at Keunjhar (1875) under the superintendence of an English officer, and a large number of valuable animals are captured.—*Imp. Gaz.; Dalton's Ethnology.*

KEWOT, in Bengal, a fowler, a fisherman. A Hindu may fish for sport without loss of dignity, and people of caste may catch fish for their meals in baskets, traps, etc., but the man who makes it his profession is a degraded creature.

KHA-CHAN-YUL, Tib., Snow-land, or Ladakh, is the A-Khassa regio of Ptolemy. It is supposed by Major Cunningham to be the Kie-Chha of the Chinese pilgrim Fa Hian. Ladakh is also known as Kha-pa-Chan, abounding in snow, or Kha-Chan or snow-land, and the people as Kha-pa-Chan-pa or Kha-Chan-pa, men of the snowy land.—*Cunningham's Ladakh.*

KHACHEE. Hind. The flats of Sind.

KHAD. The Sherwani occupy exclusively Khad and Kishna, and reside with other tribes in Shal and Mastung. They take their name from their belief that they came from Sherwan on the Caspian. See Baluch.

KHAD. Hind. A precipitous hollow or ravine.

KHADAR. Hind. Lowlands with alluvial soil, lying along the banks of rivers, especially suitable for rice cultivation, easily irrigated, and more or less subject to overflowing.

KHADI. Tam. A kind of coarse cloth.

KHADIJAH, Ayasha, Maria, and Zainab, the wives of Mahomed.

KHADIM. Arab. Servant; and in India applied to persons in charge of tombs, mosques, etc. In Arabia, it is a term applied to the servile races, and thereby denoting that they are politically and socially inferior to the native Arab. They are only to be found in Yemen, and do not extend farther than the country of the Aseer on the north, and Balad-ul-Jehaf on the east,—in fact, in that part of the country which included the dominions proper of the ancient Himyarite

Tobba. Physically, they differ considerably from the Arabs, and bear a resemblance to the races which inhabit the African coast. They have smooth hair, with a very dark complexion; their nose is aquiline, their lips thick; their stature is greater than that of the Arab; the latter are thin and angular, the former rounded, with a predisposition to obesity. They are considered in Yemen in the same light as are the Pariah of India. They are not admitted to eat with Arabs, nor can a Khadim marry an Arab woman. They are musicians, blacksmiths, public criers, etc., and their women have usually a lower stamp of character than the men; considerable numbers flock to Aden. It has been suggested that they are the remnant of the ancient Himyarites, or the descendants of the Persian conquerors of Yemen, but the legend related to M. d'Arnaud is probably more near the truth. It is as follows:

'When the Arabs succeeded in shaking off the Abyssinian yoke (which they did with the assistance of the Persians), a number of Ethiopian families were scattered over the country. The Arabs, in order to perpetuate the remembrance of their victory, condemned them to the condition of serfs. Their chief men were subjected to a more infamous degradation,—they became barbers from father to son.' Khadima, a woman-servant.

The wages of such male servants are in many eastern countries very small, but they receive many presents, and this habit of irregular remuneration in lieu of fixed wages has been held by some observers to lead to the preservation of those domestic relations that exist there between masters and servants. In some respects they are often familiar in their manners to their master, even laughing and joking with him. In others, they are very submissive, paying him the utmost honour, and bearing corporal chastisement from his hand with childlike patience.—*D'Arnaud's les Akhdam de l'Yemen in Playfair's Aden; Lane's Modern Egyptians; Urquhart's Spirit of the East.*

KHAF, a town in Khorasan, 112 miles west of Herat, and 88 miles south-east of Turbat-i-Haidari. It is between Turskish and Herat, and south of the road which leads from Mashed to that city, is the district of Khaf. It is a miserable tract, with a climate very uncongenial from high winds. It has been nearly depopulated by the Turkoman. The east Iranians are (*a*) the Segestani or Khafi; (*b*) Char Aimak; (*c*) Tajak and Sart, each of which counts many subdivisions. The principal number of the Segestan people occupy Khaf and its neighbourhood Ruy, Tebbes, and Birjan.

KHAFTAN. Pers. A short cloak worn in Kābul and on the frontier, with a hood.

KHAG. Hind. The horn of a rhinoceros; also a village boundary mark, of a pillar or mound.—*W.*

KHAGAN, a village in lat. 34° 46′ 45″ N., and long. 75° 14′ 15″ E., in a mountain valley in the Hazara district of the Panjab, 60 miles long and 15 broad, stretching into the mountain region. It is the most northern part of British India.

KHAH. Panj. A stout cloth made of asses' hair in Amritsar.

KHAIBAR or Khybar, a pass leading from the Peshawur district of the Panjab into Afghanistan; centre of pass being in lat. 34° 6′ N., and long. 71° 5′ E. The Khaibar pass commences near Jamrud, to the west of Peshawur, and twines through the hills for about 33 miles in a north-westerly direction, till it debouches at Dhaka. Jamrud is 1670 feet above the sea; Ali Masjid, 2133; Landi Khana, 2488; Landi Kotal, 3373; Dhaka, 1404. Mr. Scott, of the Survey, says the elevation of Jamrud is 2133 feet, and if so, all these figures would be increased by 763 feet.

The Khybar (Khaibar) pass is the most northerly of the passes leading between Afghanistan and British India; those to the south are the Kurum, the Gumal, and the Bolan. The Khaibar pass rises gradually from the east, but has a steep declivity westward. At Ali Masjid it is merely the bed of a rivulet, with precipices rising on each side at an angle of 70°. Near Landi Khana, it is a gallery 12 feet wide; on one side a perpendicular wall, and on the other a deep precipice; and as it approaches the Kābul territory it becomes more formidable. Nadir Shah paid a sum of money to secure his passage through it. It was forced by General Pollock on the 5th April 1842, and has been repeatedly occupied by the British since then.

Upon Ranjit Singh's excursion to Peshawur, the Khaibari opened the bands or barriers of the Bara river, and inundated his camp by night, and, profiting by the consequent confusion, they carried off much spoil and many horses. The maharaja then precipitately left for Lahore, having made only a stay of three days. Of the Khaibar tribes proper there are three great divisions,—the Afridi, the Shinwari, and the Orakzai. Of these, the Afridi, in their present locality, are the more numerous; the Shinwari, more disposed to the arts and traffic; and the Orakzai, the more orderly. The Afridi occupy the eastern parts of the hills nearest Peshawur, and the Shinwari the western parts looking upon the valley of Jalalabad. The Orakzai reside in Tirah, intermingled with the Afridi, and some of them are found in the hills S.W. of Peshawur. It was a malik of this tribe who conducted Nadir Shah and a force of cavalry by the route of Chura and Tirah to Peshawur, when the principal road through the hills was defended against him. The Shinwari, besides their portion of the hills, have the lands immediately west of them, and some of the valleys of the Safed Koh range. More westerly still, under the same hill range, they are found south of Jalalabad, and are there neighbours of the Khogani. There are also some of them in Ghorband, and they dwell in great numbers bordering on Bajor to the north-west, where they are independent, and engaged in constant hostilities with the tribes of Bajor and of Kafiristan. The Khaibari, like other rude Pathan tribes, have their malik or chiefs, but the authority of these is very limited, and every individual has a voice in public affairs, and it often happens that a nanawāti, or deliberation on any business, terminates in strife amongst themselves. The portions of the Afridi and Shinwari tribes who inhabit the defiles of Khaibar, through which the road leads from Peshawur to the Jalalabad valley, are but inconsiderable as to numbers. Under the Saddozai princes, they received an annual allowance of Rs. 12,000 on condition of keeping the road through their country open, and abstaining from plunder. They called themselves, therefore, the servants of the king. It is boasted that the Afridi tribe can muster 40,000 fighting

men. On various occasions, when their strength has been exhibited, from 2000 to 5000 men assembled. The Khaibar mountains appear at first irregularly grouped, but the distinct arrangement of a chain is afterwards observable. The hills generally consist of slate and limestone, with overlying sandstone. There are four passes through this range. Like all roads through ranges of mountains, the Khaibar pass is chiefly the bed of a torrent, liable to be filled by a sudden fall of rain, but at the other times dry, with the exception of a winding rill supplied by springs. The water is said to be unwholesome.

The Shinwari have eight clans. Of these, the Zakha are the more powerful in fighti strength, and the Kuki can bring into the field more than 3000 men. The combined force of these two clans would muster close on 10,000 men; but they are scattered over a very considerable tract of country. The Kuki dwell nearest the frontier, their permanent home is in the Bara valley, which would afford an admirable hill station for European troops. During the winter the Kuki move down from this exposed position and establish their quarters at and near the eastern entrance to the Khaibar, which they occupy as far as Ali Masjid and the caves of Kajurnai. The Kuki have earned during the last 20 years a reputation for friendliness. Their principal trade consists in supplying frontier stations with firewood. The Zakha have always been noted for their cunning and boldness as marauders. Holding the northern sides of the Khaibar to as far as Landi Kotal, they have ever taken the lead in all the hostile acts to travellers and trade which have earned for the Khaibar such a sinister reputation. The treaty of Gandamak, in May 1879, left the Khaibar tribes for the future under British control.—*H. and N.W. F.* ii. p. 126–135; *Imp. Gaz.*; *Vigne's Personal Narrative*, p. 232; *Masson's Journey*, i. pp. 171–181; *Moorcroft's Travels*, i. p. 358; *Mohun Lal's Travels*, p. 343.

KHAI-KHIEW of Assam, a bright yellow root of a creeper.

KHAIRABAD, the principal town of the Sitapur district of Oudh, situated 5 miles south-east of Sitapur, the civil station and cantonment of the district, in lat. 27° 31′ 30″ N., and long. 80° 47′ 35″ E. The pargana was originally in the possession of the Pasi tribe, who were ousted by the Bais and Kayasths; but their descendants still hold many villages in the pargana.—*Imp. Gaz.*

KHAIRABAD, a large village, now in ruins. The river of Khairabad issues from the Snowy Range in an E.N.E. direction. It has a broad and pretty deep bed. It is the Ab-i-Shirin (sweet water) mentioned in Timur's route, perhaps the Arosis of the ancients, and the river of Hindian of the present day; the Hindian also, but erroneously, is called the Tab. From the Khairabad river to Behbehan is a distance of three farsang (eleven miles); the first in a north-west direction, across a very rugged country, abounding in selenite or foliated gypsum; the two last, westward, over a level, well-cultivated country.—*De Bode's Luristan*, pp. 260, 261.

KHAIRAGARH, a tributary State in the Raipur district of the Central Provinces; the ruling family is Raj Gond, related to the Garha Mandla family. Area, 940 square miles; population, i 1872, 122,264.—*Hunter.*

KHAIRAT. Arab., Hind., Pers. Charity alms.

KHAIRPUR, chief town of the Khairpur State Sind, situated on the Mirwah canal, about 1 miles east of the river Indus; lat. 27° 31′ 30 N., and long. 68° 48′ 30″ E. The State belongin to the Talpur family is 120 miles long and 7 broad. It consists of a great alluvial plai bordering on the Indus, and watered by canals Population (1872), 130,350. With the exceptio of the fertile strip watered by the Indus and th Eastern Nara (a canal which follows an old be of the Indus), the remainder of the area is continuous series of sandhill ridges covere with a stunted brushwood, where cultivation i altogether impossible. The country generall is exceedingly arid, sterile, and desolate i aspect.

The Hindu inhabitants are principally Sod Thakurs or Rajputs, who inhabit the extrem eastern part of the State.—*Imp. Gaz.*

KHAISA GHAR, or the Takht-i-Suliman, i seen to the west of Dehra. It is a magnificen hill, famed in traditionary lore as the spot o which the ark rested, and for being the paren seat of the Afghan races. Its habitable parts ar occupied by the Sherani, who also hold th inferior hills between it and the plains. They hav for neighbours the Mikrani, their colleagues i marauding expeditions, and of equally infamou reputation.—*Masson's Journeys*, i. p. 47.

KH'AJA. Pers. Often written and pronounced Kh'waja and Khoja, a man of distinction, a rich merchant, a doctor, a teacher, a schoolmaster. Kh'aja-sara, a domestic servant, a eunuch. Kh'aja kardan, to castrate. It is sometimes prefixed to an individual's name, as the English word master, or is addressed to a person, as we should say, sir. It is the Cojia of the Arabian Nights, often now written Khoja. The term has not been much introduced into the Hindustani language of India, and is only used as a prefix to the names of certain Muhammadan saints, and under the pronunciation of Khoja to all eunuchs, who are also styled Aga.

KHAJA or Khoja is a titular appellation of a sect of Muhammadans, who say that they emigrated from Persia. They are a sect of Ismaili Muhammadans, are therefore heterodox Shiahs; for, while the Ismaili believes only in seven Imam, the Khaja continues the line down to the present day. Aga Khan, who was a pensioner of the British Government at Bombay, was their Imam. He died April 1881, aged 81, and was succeeded by his son. They reject Abubakr, Umar, and Usman, and reverence Ali, Hasan, Husain, Zain-ul-Abidin, Muhammad-i-Bakr, and Imam Jafar-i-Sadiq. They are in general illiterate, but have invented a written character for themselves, in which they have transcribed the Koran. Sir Erskine Perry, however, says the Khaja race, by their own traditions, were converted from Hinduism about 400 years ago by a Pir named Sudr Din (Qu. Sadr-ud-Din), and it is stated that the Bhattya is the Hindu clan from which they were converted. Aga Khan, who claimed to be head of the tribe, was a pretender to the throne of Persia, and afterwards headed a body of free lances, with whom he did good service along with

the troops under Sir Charles Napier. When he claimed tribute as head of the Khajas, he had to show his pedigree and prove his descent. It was men of this sect who so kindly assisted Mr. Stanley when on his search for Livingstone.

The Shiah branch of the Muhammadan creed, whenever settled amongst anti-religionists, always hold as a tenet, and rigidly adhere to the practice called Takeyyah, *i.e.* the systematic concealment of everything that concerns their faith, history, customs, and, in a word, any peculiarities the disclosure of which might be attended with unpleasant consequences. In Bombay they are, generally speaking, wealthy traders, and their influence is not to be measured by their numbers, which are only estimated at 1400 families in and around the city of Bombay. In Kattyawar they have some 5000 families, in Sind 3000. Cutch is another great Khaja centre. They have 800 or 900 families at Zanzibar, the trade of which thriving island is mainly in their hands; and all along the seaboard of Eastern Africa, Eastern Arabia, and on both sides of the Persian Gulf, the Khaja have established themselves in regular colonies. The book which from the beginning has been their accepted scripture, was given them by Pir Sudr Din, through whom they were converted, and contains in its ten chapters an account of ten incarnations. The first nine treat of the incarnation of Vishnu, the tenth of the incarnation of the Most Holy Ali. Their religion is consequently a strange jumble of creeds, and it is said that the majority of Khaja refuse to believe in the efficacy of prayer. The idea of the incarnation of Aga Khan had of late years been almost entirely confined to the women of the community, and had led, it is rumoured, to curious customs.

The annual tribute Aga Khan received from his followers in Bombay alone amounted to a lakh of rupees. From time to time an effort to escape this heavy tax has been made by the more venturesome members of the community. About 1850, four Khojas, who disputed the supremacy of the Aga, were murdered in the streets of Mahim. But the murderers were hanged, and since then the Khoja people have fought for their rights only with such weapons as bills in the English Supreme Court of Bombay, replications and rejoinders drawn up by English counsel learned in the law, caste meetings and out-castings after the orthodox Hindu fashion. In a famous trial of 1866 the rights of Aga Khan as spiritual head of the Khaja community were established, as well as his power to initiate sentences of excommunication. But the question was revived with reference to a Khaja murder case of 1878, and a Commission was then appointed by Government to examine the claims of the increasing body of dissentients, and to draw up fresh rules and regulations for the guidance alike of the ruler and the ruled. The Commission had no very practical result. Aga Ali Shah succeeded to the anomalous position occupied by his father.—*Burton's Scinde; Bird's Eye Review.*

KHAJA, a pedlar race of the Panjab, probably the Khoja sect of Sind and the Bombay Presidency, industrious and straightforward dealers. The first of them established a good business by selling cloth among the villages on the Simla road. Then, with introductions from Ambala native firms, they began a connection with wholesale merchants in Dehli. The Khaja travel in small bands under a jemadar or headman, who is usually allowed credit to the extent of 25 per cent. on his cash purchases. They visit the villages in the winter months, and give credit to any villager to whose identity and respectability the patel testifies. In the harvest time they return to collect their accounts, and by May they are to be found at home, —in Gujerat and Sialkot. The Khaja are said to be scrupulously punctual in their payments to the Dehli firms, and their agents in Calcutta and Bombay, to whom they introduce themselves by letters from the imperial city. Should a jemadar fail to meet his obligations, his brother-traders subscribe the amount. No accusation of usurious practices is made against them, and their books are freely open for inspection. There are eight hundred pedlars in the trade.

KHAJA APPAK. The rulers of Eastern Turkestan have always been Muhammadan from the time of Taghalaq Timur, who was, we are told, the first Muhammadan sovereign of Kashgar of the lineage of Chengiz. Buddhism indeed was found still prevalent in the cities of Turfan and Kamil at the time of the embassy of Shah Rukh in 1419, and probably did not become extinct much before the end of the century. But, in the western states, Muhammadanism seems to have been universal from an earlier date, and maintained with fanatical zeal. Saintly teachers and workers of miracles, claiming descent from Mahomed, and known as Khaja or Khoja, acquired great influence, and the secretaries attached to the chiefs of these divided the people into rival factions, whose mutual hostility eventually led to the subjugation of the whole country. For, late in the seventeenth century, Khaja Appak, the leader of one of those parties called the White Mountain (having been expelled from Kashgar by Ismail Khan, the chief of that state, who was a zealous supporter of the opposite party or Black Mountain), sought the aid of Galdan Khan, sovereign of the Eleuth or Kalmuk of Zangaria. Taking the occasion so afforded, that chief in 1678 invaded the states south of the Tian Shan, carried off the Khan of Kashgar and his family, and established the Khaja of the White Mountain over the country in authority subordinate to his own. Great discords for many years succeeded, sometimes one, sometimes another, being uppermost, but some supremacy always continuing to be exercised by the khans of Zangaria. In 1757 the latter country was conquered by the Chinese, who, in the following year, making a tool of the White party, which was then in opposition, succeeded in bringing the states of Turkestan also under their rule.—*Yule, Cathay,* ii. p. 357.

KHAJA BAHA-ud-DIN, of Nakshband, instituted a class of Muhammadan mendicants or fakirs, who go about with a lighted lamp in one hand and sing verses in honour of their prophet. They are called Nakshbandi fakir. He took the appellation of Khaja Nakshband, and was the founder of the order of Nakshbandi darveshes which still prevail in India, Turkey, and Tartary. His descendants to this day generally prefix the word Khaja to their names, and distinguish themselves by the appellation of Nakshbandi. Khaja is a

term of honour usually applied to persons who are eminent either for their sanctity or learning. The literal meaning of Nakshband is fixing an impression; and the term was figuratively adopted by Baha-ud-Din.—*Wils.*

KHAJA BANDA NAWAZ, the name of a Muhammadan saint.

KHAJA KHIZR. In Bengal, Muhammadan women, on the last Thursday of the month Bhadon, set afloat a small raft, bearing a paper or tinsel boat, in honour of Khaja Khizr, in fulfilment of a vow. It is sometimes a small lamp filled with cocoanut oil, and placed in an earthen dish adorned with a wreath of flowers. The lamp is lighted and committed to the stream, while the fair devotee anxiously watches its progress down the current. On the banks of the Ganges and Hoogly, along the strand at Calcutta, great numbers thus make their offerings,—

'The maid or matron, as she throws
Champac or lotus, Bel or rose,
Or sends the quivering light afloat,
In shallow cup or paper boat,
Prays for a parent's peace or wealth,
Prays for a child's success or health,
For a fond husband breathes a prayer,
For progeny their loves to share,
For what of good on earth is given
To lowly life, or hope in heaven.'

—*H. H. Wilson; Travels of a Hindoo*, ii. p. 404. See Khizr.

KHAJA KUTUB-ud-DIN, of Ouse, in Persia, has a great name in the chronicles of Muhammadan sainthood. He was the guide and apostle of Altamsh.—*Travels of a Hindoo*, ii. p. 181.

KHAJA MU'IN-ud-DIN, the oldest Muhammadan saint in India. His dargah is in Ajmir. He was born in Segistan, and died in A.D. 1239, at Ajmir. He belonged to the Chishti sect of Muhammadans. The Moghul emperors often visited his tomb, especially Akbar and Jahangir. His tomb was visited by the emperor Akbar to implore male offspring. The shrine is of white marble, and is visited alike by Hindus and Muhammadans.—*Calcutta Review*, January 1871, p. 72.

KHAJAN. HIND. Marshy or meadow land on the sea-coast.

KHAJUNAH, a dialect spoken on the N.W. frontier of British India, where three dialects are in use, called Shina, Khajunah, and Arniya. The Shina dialect is spoken by the peoples of Astor, Gilgit, and, lower down, in Chelas, Darel, Kohli, and Palas, on both banks of the Indus; the Khajunah, by the people of Hunza and Nager; and the Arniya in Yasan and Chitral. Astor has an area of 1600 square miles on the left bank of the Indus. Gilgit, in Tibetan Gyilgyid, has an area of 2500 square miles on the right bank of the Indus. The Dard or Durd are supposed by Vigne to be the Dadicæ (Δαδίχαι) of Herodotus, and the people who now occupy the county called Dardu. See Dard.

KHAJUR. ARAB., HIND., PERS. A date; also the date tree, Phœnix dactylifera, and the wild date, Elate sylvestris or P. sylvestris. Khajuri, HIND., is the Phœnix humilis, and Pindi-khajur is P. acaulis. Khajur munj is the fibre of the palm leaf. Khajuran, HIND., a sweetmeat.

KHAJURA. HIND. A concrete or tuffa of pe.

IAJURAHU, an ancient and now decayed town in Ch'hatarpur State, Bundelkhand, N.W Provinces, famous for its magnificent architectur remains. Population about 900. It is situate at the south-east corner of the Khajur Sagar o Ninora Tal lake. It was the ancient capital of th Chandel dynasty, is about 125 miles W.S.W. o Allahabad, and 150 miles S.E. from Gwalior. I has in and around it about thirty temples, th most beautiful in form as well as the most elegan in detail of any of the temples now standing i India. They were erected simultaneously in th 11th century, and are nearly equally divide among three religions,—Jaina, Saiva, and Vaish nava. Each group has one shrine greater tha the rest, round which the smaller ones are clustered In the Saiva groups it is the Kandarya Mahadeva in the Vaishnava it is the Rama Chandra; and i the Jaina group it is the Jinanatha. The Pars wanatha Jaina temple has a rich base, the Gantha is the Bell temple, and the Chaonsat Jogini ha sixty-four cells. Numerous inscriptions of th Chandel kings have been discovered at variou places in the neighbourhood. Upwards of twenty temples still stand in the town, and the ruins o at least as many more bear witness to its forme greatness. On one side General Cunningham counted over eight hundred statues of half life size, and eight sculptured elephants of like pro portions. The inner shrine of this edifice con stituted in itself a splendid temple, and wa crowded with figures. Captain Burt notice seven large temples of exquisite carving, whos mechanical construction adapted them to last fo almost indefinite periods. Most or all of thes noble buildings must be referred to the grea Chandel dynasty, who ruled at Khajurahu, appar ently from A.D. 841 to A.D. 1157. The moder village contains only about 160 houses. The firs part of one inscription is of date Samvat 1010 A.D. 962; the last part, Samvat 1173 or 1060 The character used in the inscription is calle the Kakuda, and in the 11th and 12th centuries appears to have prevailed from Cuttack to Sheka wati. It contains an invocation to Siva and othe of the Hindu deities. The inscription is chiefly in honour of Banga (by his son). The kings o Oudh and Ceylon attend to do him homage, and his captives are the wives of the kings of Andhra, Radha, and Anga! (Banga, of course), eulogized by the Brahmans, because he built dwellings for them, and gave them lands, and piously ended his days, aged 109, by drowning himself at the junction of the Jumna and Ganges, as did also the Brahman minister of his father and grandfather. The inscription had twice before been engraved in irregular characters, and it was only in A.D. 1016 that it was put into proper Deva Nagari. The story of creation from Brahma and the egg is told. The influence of the moon on the tides is alluded to. The inscription alludes to a passage in the Mahabharata, in which Siva is represented to have given his own flesh to a hawk, instead of a bird which had sought refuge with him. This story is told of Buddha more than 1500 years before this time. —*Imp. Gaz.; As. Soc.* viii. p. 176.

KHAK. PERS. Earth, dust. Khaki and Khaki-dud'hia, of the colour of earth, grey colour. Khak-i-Balkh, two mounds near to the Bala Hissar in Kābul. Khakrob, a sweeper, a menial servant of the lowest class, also the

sweeper of a village, acting at times as a watchman, a guide, a police spy, one of the village establishment.

KHAKAN. TURK. A khan, a chief, identical with the Greek Xaganos.

KHAKI, a sect of Vaishnava Hindus founded by Kil, a disciple of Krishna Das. They apply ashes of cow-dung to their dress and persons. They are not numerous, and seem to be confined to the vicinity of Farrakhabad, at Hanuman-Ghur in Oudh; but the Samadh or spiritual throne of the founder is at Jaipore. The residents in towns dress like other Vaishnava, but those who lead a wandering life go either naked or nearly so, smearing their bodies with the pale grey mixture of ashes and earth. They wear the Jata or braided hair, after the fashion of the votaries of Siva. They are derived from Ramanand, but not immediately.—*Wilson.*

KHAKI. HIND. A kind of hemp resin or charras.

KHAKSI, of Nepal, a shrub the leaf of which answers the purpose of emery or sandpaper, giving a fine polish to the harder woods.—*Smith's Nepal*, p. 68.

KHAL, a Ladakh land measure, being land for which one Khal of seed is sufficient. The word seems to mean only a load of any kind, and is apparently the same as the Indian Khara or Khari, a measure of 20 bhara.

K'HAL, also K'hala. HIND. A water-course, natural or artificial, a lagoon. Khalari, a saltpan.

KHAL. HIND. A skin or hide. Khal-po, a tanner.

KHAL. HIND. Oil-cake, the refuse of the mill after expression of the oil.

KHALA. HIND. A threshing-floor.—*W.*

KHALAJ. TURK. Properly Khalij, a sword.

KHALASI. HIND. A sailor, tent pitcher, Muhammadan labourer.—*W.*

KHALASSAT-ul-AKHBAR, or Epitome of History, a book written by Khondamir, the literary name of Ghaias-ud-Din-bin-Humam-ud-Din. One of his books is entitled Habib-us-sayar-fi Afrad-ul-Bashar, that is to say, 'the curious part of the lives of illustrious men.' It is a history which he extracted from that which his father Mirkhond had composed, and entitled Rauzat-us-Safa, but to which he made augmentations. He dedicated this book to the secretary of state of the king of Persia, Shah Ismail Safavi, who gave him the name of Habib-Allah; and for that reason the book had the name Habib given to it in the year A.D. 1508, Hijira 927, in the reign of Lewis XII.—*History of Genghiz Can*, p. 422.

KHALATA-TCHOLI, a sandy desert on the route from Khiva to Bokhara, and about 100 miles from Khiva. It is also styled Jan-Batirdigan, or life-destroyer. It is only traversed in the winter when the Karakol route is infested by Turkomans, who, when the Oxus is frozen, traverse the country in all directions.—*Collett, Khiva.*

KHALAUTI. HIND. A low-lying rice country.

KHALFAH. Hajji Khalfah, a learned Muhammadan, author of a great bibliographical lexicon, containing an account of every work of importance in Arabic, Persian, and Turkish, with brief notices of the authors. It was edited by Flugel.

KHALGI or Khulgi. PERS. The ornament of the bridle of a man of rank, is usually of silver with a feather, and stands on the head-stall between the horse's ears.—*Malcolm's Central India*, i. p. 229.

KHALI, under the jinswar system of revenue, a large rick-yard, where the produce of all the village fields is collected and threshed.

KHALID, a Bedouin tribe. The Beni Khalid in Niebuhr's time were one of the most powerful tribes of Arabia. They conquered the country of Lachsa, and advanced to the sea.

KHALID-ibn-ul-WALID was the conqueror of Syria. He joined Muhammad in the 8th year of the Hijira. See Masailma.

KHALIFAH. ARAB. A ruler, king, deputy, a title assumed by the successors of Mahomed, who possessed absolute authority in civil and religious matters. Abubakr, who succeeded Mahomed, was the first to adopt it, styling himself Khalifah Rasul Allah, Vicegerent of the Apostle of God; and this, together with Amir-ul-Momanin, Commander of the Faithful, which the khalif Omar assumed, was the principal title of all the reigning princes from the Hijira in A.D. 622 till the taking of Baghdad A.D. 1258. Khalifat is the dominion.

A. The four first khalifs.

Abubakr,	A.D. 632	Osman,	A.D. 644
Omar,	634	Ali,	656

B. House of Ommaya.

Muawia,	A.D. 661

Abdallah-ul-Mutasim,	do.	do., . .	1242
Destruction of Baghdad by Hulaku, grandson of Chengiz Khan, ...			1258

The Shiah sect of Muhammadans hold as a tenet that on Mahomed's demise Ali ought to have been elected the first khalifah. Many of this sect regard Ali as having so succeeded, and smaller sub-sects of the Shiah religionists believe in the incarnations of Ali up to the present day.

The Muhammadans of the Sunni sect have largely adopted the belief that in A.D. 1263 a descendant of Abu Jafar (ob. 1226) appeared in Egypt, and was recognised by Bibars, the Mamluk sovereign, as khalifah. And that in A.D. 1517, when Selim I. of Constantinople overthrew the Cairen khalifah, Matawakkal b' Allah, Selim obtained the transfer to himself of the khalifat, and with it the sword and mantle of Mahomed, from which time the mantle has been a standard. This point has been discussed as regards British India, because the Muhammadans there have never introduced into their Friday service at the mosque, nor yearly at the Idgah, the name of any British sovereign, but sometimes have prayed for the emperor of Dehli, the Sultan of Rum (Constantinople), the Sharif of Mecca, or, indefinitely, the ruler of the age. On these points it may be remarked that it is held to be an essential principle in the establishment of the office that there shall be only one khalifah at the same time, and the office is acknowledged by all parties to be elective and not hereditary. Also the Sunni sect and the Wahabee consider that the khalifah should be of the Quraish tribe, and the Shiah sect even hold that he should be a descendant of Mahomed.

The Wahabee sect, when Sana took Mecca and Medina in 1801, regarded the Sultan of Turkey as a usurper. This question has divided Muhammadans up to the present day.

On the death of Mahomed, the people of Medina suggested that they should elect one leader, and Mecca another; but this was not adopted; and under the three khalifs, who were successively acknowledged by the whole Muhammadan world, Arab armies poured across the northern sandy waste into Syria and Palestine. A few sieges, a few fierce battles, and these rich provinces were lost to the empire of Byzantium, the ancient Sassanian dynasty was crushed on the field of Kadesia, and Persia was added to the khalifat. In less than three years the Arabs were masters of Egypt.

The elected successor of Mahomed was Abubakr. Omar was the second khalif. His time was a period of great extension of Muhammadanism. The battle of Kadesia was fought and won by his general Saad, and put an end to the Persian empire of the Parsee. He imposed the khiraj on Syria, and died and was buried at Jerusalem, where his tomb still is.

When Omar had achieved the triumphs which consolidated the power of El Islam, an ambassador from the Byzantine emperor came to Arabia to pay homage to the great conqueror on the part of his master. Arrived at Medina, he was directed to the presence of the khalif, who, dressed in simple Arab garb, was reclining fast asleep and unattended beneath a palm tree. The simple life of one whose fame had filled the whole world, and still more the discourse which Omar addressed to him on waking up, made so profound an impression upon the Greek ambassador, that he there embraced the Muhammadan faith. The contrast between the unassuming manners of the early khalifs and the arrogance and luxury of the later commanders of the faithful in their palaces at Damascus or Baghdad, was striking. Arabic annals are full of examples of this, and the incident of the entry of Umar into Jerusalem clad in a rough mantle, and leading his own camel, like the poorest desert Arab, is familiar to all readers of the history of the Holy City.

The third khalif was Osman or Othman, on whose murder Ali succeeded. Ali was surnamed 'the ever-victorious lion of God,' but his succession marked the beginning of troubles. He was accused of having instigated Othman's assassination. Othman's bloody shirt was conveyed to Syria, and displayed on the principal mosque of Damascus, to incite the Syrian army to revenge. 50,000 men, said the messenger who conveyed these tidings to Ali at Medina, are assembled about the robes of Othman, whose cheeks and beards have never been dry from tears, and whose eyes have never ceased from weeping blood since the hour of that prince's atrocious murder. They have drawn their swords with a solemn pledge never to return them to the scabbard, nor cease from mourning, until they have extirpated all concerned in that detested transaction. Simultaneously with this movement in Syria, Telha and Zobeir, two of the most renowned warriors among the Arabs, and Ayasha, the favourite wife of Mahomed, repaired to Bussora, and raised the standard of rebellion against the authority of Ali. But Ali, though deficient in political ability, and wanting in the tact requisite to conciliate rival and turbulent factions, was an unrivalled soldier on the field of battle. He placed himself at the head of 30,000 men, and advanced in the direction of Bussora. In the battle of the Camel, 17,000 Arabs are said to have fallen. Telha and Zobeir were both killed, and Ayasha became a prisoner in the power of Ali. He treated her with the utmost courtesy and forbearance, and caused her to be escorted to Mecca. This signal victory made Ali the undisputed sovereign of Irak, Egypt, Arabia, Persia, and Khorasan; but the Syrian army remained implacable; and Amru, the conqueror of Egypt, in the presence of the whole army, acknowledged Moawyah, son of Abu Sussian, as the lawful khalif and prince of the muslmin. Ali attacked the Syrian host on the plain of Suffein. Victorious again and again in the battlefield, he allowed himself to be outwitted in diplomacy, and in the month of Ramzan A.H. 40, the career of Ali was brought to a close by the dagger of an assassin, and Moawyah became the undisputed khalif. In all the mosques wherever the Muhammadan doctrines prevailed, the names of Ali and of all his family were regularly cursed upon all occasions of public worship. His death was followed nine years after by that of his eldest son Hasan, poisoned by his own wife, at the instigation, it is said, of Moawyah; and

after a lapse of two years, his second son Husain crowned the misfortunes of his family by his bloody death on the plains of Karbala, on the tenth day of the month Maharram A.H. 61. Yezid, son of Moawyah, was the reigning khalif at the time of the murder of Husain. That event was the signal for rebellious outbreaks in all parts of his dominions. The martyred Husain became a watchword which again and again deluged with blood the empire of the khalifs, and ultimately brought it to ruin, and has ever since separated the Muhammadans into two sects, embued with a bitter hatred, which up to the present moment, even under the strong power of the British, is ever liable to evince itself in outbreaks, needing armed intervention to be ready at hand. At present the only ruling house of the descendants of Ali is the Asof Jahi in Hyderabad in the Dekhan, which has been in existence for nearly 200 years.—*Gibbon; Lane; Osborn's Islam; Osborn's Khalifs; Sir G. Birdwood; Dr. Badger; Bjornstjerna's British Empire in the East*, p. 97; *Bunsen*, ii. p. 150. See Ali Ilahi; Ismaili; Khaja; Khutbah; Mahomed.

KHALIFAH-ul-AKBAR, God's vicegerent, a title given to Adam.

KHALIJ. HIND. The pheasants, Gallophasis albocristatus, Horsfieldii, and Melanotus.

KHALIL, a grandson of Timur, on whose demise Khalil, at Samarcand, declared himself emperor.

KHALIL, an Afghan tribe near the mouth of the Khaibar pass. Peshawur and the hills which surround it are peopled by various Afghan races, as Yusufzai and Mohmund in the north and west, Khalil and others in the centre, and Afridi, Khattak, and others in the south and east. Arbab, plural Arabic of Rab, lord, is the title assumed by the chiefs of the Khalil, Mohmand, and other tribes on the Peshawur frontier.

KHALIL-ALLAH. ARAB. Friend of God, the reverend designation of Abraham. The Messiah is the Ruh-Allah or Spirit of God, and Moses the Kalam Allah or Word of God.

KHALI MAHAINA, a term for the tenth month of the Muhammadan year, without festival.

KHALIS, a district and a canal which is cut from the Diala to the Tigris. The district of Khalis is situated to the north of Baghdad, and takes its name from the canal, which supplies sixty-two villages, most of which are now become mere nominal ones, with water for agriculture, the Tigris itself being unfit for that purpose. The principal of these villages are Yenghijeh, 20 miles from Baghdad, on the banks of the Tigris, in Rich's time almost abandoned on account of the great oppression under which the peasantry laboured. Howeish was a village of a hundred houses, famous for its fruit gardens.—*Rich's Kurdistan*, ii. p. 156.

KHALPA or Kalpo, a low caste in Gujerat, who dress skins and prepare leather; they are sometimes village servants.—*Wilson.*

KHALSA. HIND. The Sikh people; the Sikh theocracy established by the Guru Govind; the old prominent division into Khalasa, meaning of Nanak, and Khalsa, meaning of Govind, which is noticed by Forster, is no longer in force; the former term Khalasa is almost, indeed, unknown in the present day. The word Khalsa, meaning select, is a term equivalent to a state or commonwealth, but was supposed by the Sikh to have a mystical meaning, and to imply that theocracy or superior government under the protection of which they lived, and to the established rules and the basis of which, as fixed by Guru Govind, it is their civil and religious duty to conform. The Khalsa sect of Sikhs believe in the Adi-Granth of Nanak, but do not conform to the institutions of Guru Govind. The word Khalsa is from Khalis, pure or select, and taken to mean the purest or the most select; by others it is derived from Khalas, free, and meaning the freed or exempt, alluding to the sect being exempt from the usages imposed on the other Sikhs.

The principal of the religious institutions of Guru Govind is that of Pahal, the ceremony by which a convert is initiated and made a member of the Sikh Khalsa or commonwealth. The forms which Govind employed are still observed. The neophyte is told by the officiating Granthi or priest that he must allow his hair to grow. When it has grown a month or two, he dresses himself in blue from head to foot, and is then presented with five weapons, a sword, a firelock, a bow, an arrow, and a pike. The candidate and the initiator wash their feet with water in which sugar is put, and this nectar (called pahal) is stirred with a steel knife or dagger, five quatrains from their scriptures being read. Between each quatrain the breath is exhaled with a puff, and the beverage stirred as before. The hands of the convert are then joined, and the Granthi or initiator pours some of the nectar into them, of which he drinks five times, rubbing a little on his head and beard, exclaiming, 'Wah! Guru ji ka Khalsa! Wah! Guru ji ki Fatah!' or 'Wah! Govind Singh, ap hi Guru chela!' Govind, who instituted the Pahal, it is said, went through this form with five of his followers, drinking of the water which had washed each other's feet. Women are made Sikhs in the same manner as men, except that the nectar is stirred with the back instead of the edge of the knife. The children of Sikhs go through this ceremony at an early age.—*Cunningham's Sikhs*, p. 96; *Malcolm's Sikhs; Hist. of the Panjab*, i. pp. 101, 126; *Forster's Tr.* i. p. 309.

KHALSA, properly Khalisa. HIND. Land under the direct administration of Government. Under Muhammadan domination in India, the revenue office, containing the records of the Government lands revenue.

KHALSI, on the west bank of the Jumna, is famed as possessing one of the rock inscriptions of Asoka. Khalsi is just where the Jumna leaves the higher range of mountains to pass between the Duns or valleys of Kyarda and Dehra.

KHALWAT. ARAB. Retirement, privacy. Khalwat-gah, women's apartments, private apartments.

KHAM. HIND. Raw, crude, unfinished. Revenue is said to be collected kham, or land held kham, when done so direct by Government, and not through the medium of a farmer or other under-holder. It is the equivalent of Kach'ha.

KHAMAN, a word, meaning well done, shouted by the Rajput race. The Persian and Hindustani exclamations are Shahbash; fabahah, jio raja jio, jye.

KHAMAR. BENG., URIYA. A threshing floor.

KHAMGAON, a town in Akola district, Berar,

lat. 20° 42′ 30″ N., and long. 76° 37′ 30″ E.; pop. (1867), 9432. Khamgaon is the largest cotton mart in Berar, perhaps in all India.—*Imp. Gaz.* v.

KHA-MI, the most important tribe in the Arakan Hill tracts. The population of the district is estimated at 12,000, viz.:—

Rakhaing called Khyoung-tha, Sons of the River,	1219	Shandu, Khyeng, Anu or Khoung-tso,	2162
Kha-mi or Khwe-myi,	7172	Khyaw or Kuki, Mro, ...	2126

The *Rakhaing* or Khyoung-tha (Sons of the River) are of the Burmese stock, and speak a dialect akin to Arakanese. They have seven clans, all of whom live on the Kuladan. Some of the clans are said to be descended from the Mon of Pegu. They have rough paper books of palm-leaf shape, and are Buddhists.

The *Shandu* language is monosyllabic; they dwell north and north-east of the Blue Mountain, are polygamic. Their clans are always at war.

The *Kha-mi* or Khwe-myi are the chief tribe of the district. Their clans have each a toung meng or hill chief. Kha-mi means man. Their Burmese name, Kwe-myi, means dogtail, because their dress hangs down behind like a tail. They are wary and deceitful, but are inclined to trade.

The *Mro* live on the Mi. Formerly they used to construct a nest in a high tree, to which they ascended by a bamboo ladder.

The *Anu* or Khoung-tso dress like the Kha-mi, but speak a distinct dialect.

The *Khyeng* inhabit the Yoma Hills east of the Le Mro river. Their language varies, but all acknowledge themselves of one tribe. They are shy, and averse to improvement. They tattoo their women.

The *Khyaw* or Kuki inhabit a small village on the Tsala river, and are of the Kuki family.

The religion of the tribes is spirit (ka-nie) worship, with bloody sacrifices to the spirits of the hills and the rivers, at seed-time and harvest. Also, with the Kha-mi and Khyoung-tha, annually the hpalaw or spirits of the dead, when the dead-house is opened, and food and rice spirit (a-mu) are placed near the ashes of the departed. Raiding murderers, when caught red-handed, are beheaded, and their heads stuck up in the village. All other crimes are punished by fine. The intercourse before marriage is unrestricted; after marriage divorce is easy.

The jum or toung-ya kind of cultivation is practised. They weave cotton blankets, etc.

An armed police force guards the frontier.

KHAMIR. Hind., Pers. Yeast, leaven. Khamira, a smoking mixture, of tobacco compounded with fragrant spices.

KHAMITIC or Turanian race was the earliest ruling power in Asia, and Nimrud was of that race.

KHAM MITTI. Hind. In Karnal, a product obtained in the process of making sal-ammoniac or naushadar.

KHA-MOUNG-NEE. Burm. In Tavoy, a heavy wood, not attacked by insects.

KHAMPA, wandering Tartars in Kanawar, who are in some respects similar to the Jogi of Hindustan. They visit the sacred places, and many of them subsist wholly by begging. Some are mummers, very humorous fellows; they put on a mask, perform a dance, singing and accompanying it with a drum, or they play, sing, and dance all at once, holding the fiddle above the head, behind the back, and in a variety of other strange positions. After the British Government got possession of the hills, the Khampa came down in crowds to visit the holy places to the westward.—*Gerard's Kunawar*, p. 117.

KHAMPTI, a Shan clan who occupy a tract of country on the extreme eastern frontier of Assam, bordering on Lakhimpur district. The Khampti are a hill tribe of Shan origin, akin to the Ahams. About the middle of the 18th century, owing t internal dissensions, a colony of Khampti migrated into Assam, and established themselves in the division of Saddiya. They came from the country known to the British as that of the Bor-Khampti, near the sources of the Irawadi. According to their own annals, they had occupied that country for many centuries; but Captain Wilcox found them a divided people. Two great clans had been at feud for 50 years. Captain Wilcox found amongst the Bor-Khampti, the Muluk, the Khalong, the Kumong, cognates of the Singpho, and the Khapok, whose language is allied to the Singpho, were the labourers.

The *Siamese* are now the most important branch of the Shan, Tai, or Thai race, and the Khampti belong to the same stock as the Siamese. Their language contains nearly all the Siamese words, and their creed and alphabet are Siamese. There was once a great nation of this people, occupying a tract known by the Manipuri as the kingdom of Pong, which touched Tiperah, Yunnan, and Siam, and of which the city, called Mogong by the Burmese, and Mongmarong by the Shan, was the capital. This kingdom was finally broken up by the Burmese king Alompra, about the middle of the 18th century; and on its dismemberment, branches of the Shan race migrated to and settled in Assam. The Phaki or Phakial, on the Dihang river, the Kanijang of Saddiya, and the numerous settlements of Khampti, are all colonies of this race, retaining the costume, customs, and religion they brought with them into the valley.

The Khampti are very far in advance of all the north-eastern frontier tribes in knowledge, arts, and civilisation. They are Buddhists, and have regular establishments of priests, well versed in their religion, and a large proportion of the laity can read and write in their own language. Their houses are built of strong timber, with raised floors and thatched roofs contiguous to each other, a trough of wood being fixed under the junction of the two roofs to carry off the water. The interior is divided into chambers, and the whole terminates in a railed open balcony. The roof of the houses comes down so low, that externally there is no appearance of wall. The temple and priests' quarters are also of timber, and thatched, but the temples are elaborately carved, and fitted with great taste and neatness.

The priests have shaven heads, and amber-coloured garments, and rosaries. The office is not hereditary; any person may enter upon it after the necessary novitiate and instruction in the bapuchang, as the priests' quarters are called; but so long as they wear the sacerdotal habit they must renounce the world, and live a life of celibacy. Every morning the priests move

quickly through the villages, preceded by a boy with a little bell, holding a lacquered box, in which he receives the offerings of the people, generally presented by the women, who stand waiting at the door with a portion of their ready cooked food. In their hours of relaxation the priests amuse themselves by carving in wood, bone, and ivory. In making ivory handles of weapons they evince great skill, taste, and fecundity of invention, carving in high relief twisted snakes, dragons, and other monsters, with a creditable unity and gracefulness of design. It is customary also for the chiefs to employ themselves in useful and ornamental arts. The Khampti work in gold, silver, and iron, forge their own weapons, make their wives' jewellery, and manufacture embossed shields of buffalo or rhinoceros hide, gilding and lacquering them with skill and taste. The women, although very clever in elaborate embroidery, and making embroidered bands for the hair and other pretty things, are not the less capable of bearing a very severe share of the outdoor farm work.

The Khampti are not a handsome race; they are darker of complexion and coarser of feature than other Shans, the Mongolian peculiarities being more strongly developed in them than in their reputed brethren. After settling in Assam, however, the Khampti chiefs frequently took to themselves Assamese wives, and the effect of this mingling is very marked in softening and improving the features of the later generations.

The Khampti have two great religious festivals in the year,—one to celebrate the birth, and the other the death, of Gautama. At these ceremonies, boys dressed up as girls go through posture dances. They are not restricted to one wife; and the Khampti women are allowed every freedom and independence of action, paying and receiving visits, going to market, etc.

The dress of the Khampti consists of nether garments of coloured cotton of a chequered pattern, or of silk, more or less ample, according to the rank of the wearer; tight-fitting jackets of cotton cloth, dyed blue, with a white muslin turband, so twisted as to leave exposed the top-knot into which their long hair is twisted. The costume of the women is like that of the men,—plain, but neat. They wear the hair drawn up from the back and sides in one massive roll, which rises four or five inches so much in front as to form a continuation of the frontal bone. The roll is encircled by an embroidered band with fringed and tasselled ends; the lower garment is folded over the breasts and under the arms, reaching to the feet; sometimes, in addition, the Khampti women wear a coloured silk scarf round the waist, and a long-sleeved jacket. Their chief ornaments are necklaces of coral and other beads, and cylindrically-shaped pieces of bright amber inserted in the ears.

The most common weapon among the Khamptis is the dhao, a heavy short sword, plain or ornamented, according to the condition of the wearer, hanging in its sheath by a sling made of split rattan. It is worn somewhat in front, so that the hilt is readily grasped in the right hand; this, and the defensive round shield of buffalo hide, are sufficient for a Khampti to take the field with, but many of them now carry muskets or fowling-pieces. They are very useful auxiliaries in mountain warfare, capable of endurance and full of resources.

The burial-ground of the Khampti is generally a tidily-kept spot apart from the village. The graves are surmounted by conically-shaped tumuli, which, when first constructed, diminish from the base to the apex in a series of steps, the earth being kept in position by bamboo matting round each step. Some of these graves when opened have been found to contain coffins of massive timber, with gold and silver ornaments, and outside the coffins various utensils, arms, and implements of agriculture.

The *Phakial* tribe, with the exception of a few particulars, answer to the description given of the Khampti. They also are Thai emigrants, their original habitat being the valley of Hukong.

The *Muluk*, who dwell in the Hankhati Mouza, south of Saddiya, are a tribe subordinate to the Khampti. Their dress is similar to that worn by the Khampti, except that it is of ruder fashion and of inferior texture. There is another tribe about Saddiya known as the Khanijang, but in manners and customs they do not differ from the Muluk.

..... *Singpho* have settled in Assam within the memory of man. Their first settlements were on Tengapani river east of Saddiya, and on the Buri Dihang in the tract called Namrup. They are of a race called by the Burmese Ka-khyen or Kaku, whose original settlements were on the eastern branches of the Irawadi river; they are there in contact with the Kunung, with whom they are closely allied in language and origin. They assumed the name of Singpho, which in their own language means 'man,' only after emigration into the Assam valley. They occupy large villages on the frontiers, often in somewhat unassailable positions, and their villages usually consist of sixty or more large houses, each from 80 to 100 feet long and about 20 feet in breadth, with raised floor throughout, and an open balcony at one end, where the ladies of the family sit, and spin, weave, and embroider. The house is divided into different apartments on both sides of a long passage, open from end to end. Over the hearths are large bamboo racks hanging from the roof, on which are placed meat or fish requiring to be smoked.

They are generally a fine athletic race, above the ordinary standard in height, and capable of enduring great fatigue; but their energies are greatly impaired by their free indulgence in opium and spirits. Their features are of the Mongolian type, and their complexion varies from a tawny yellow or olive to a dark brown. Hard labour tells on the appearance of the females, rendering them coarse in feature and awkward in gait; but in the families of the chiefs fair skins and pleasing features sometimes are seen.

The men tie their hair in a large knot on the crown of the head, and wear a jacket of coloured cotton, and a chequered under-garment of the same material or of silk. The chiefs assume the Shan or Burmese style of dress, and occasionally short smart jackets of China velvet, with gilt or amber buttons. The dress of the women consists of one piece of cotton cloth, often in large, broad, horizontal bands of red and blue, fastened round the waist, a jacket, and a scarf. The married women wear their hair in a large broad knot on

the crown of the head, fastened with silver bodkins, chains, and tassels. Maidens wear their hair gathered in a roll resting on the back of the neck, and similarly secured. They are especially fond of enamelled beads and bits of amber. The men tattoo their limbs slightly, and all married women are tattooed on both legs from the ankle to the knee.

The national weapons of this tribe are the dhao or dha, the spear with a short staff, and a strong crossbow with bamboo arrows. They affect the use of the musket whenever they can get one, and are sometimes seen with Chinese matchlocks. They use shields of buffalo hide four feet long, and helmets of the same material, and sometimes of thick plaited rattan work varnished black, decorated with boars' tusks, etc. In warfare their attacks are confined to night surprises, which are speedily abandoned if they meet with steady opposition. They are skilled in fortifying naturally difficult positions, using freely the panji, a bamboo stake of different lengths, sharpened at both ends, and stuck in the ground, by which the sides of the hills and all approaches to their position are rendered difficult and dangerous. Sometimes they use muskets on these occasions; the weapons are generally fixed in loopholes of breastworks, ready loaded, and fired when the enemy reaches the point of the road covered by them. If they fail by such means to beat off the attacks at once, they abandon the position for another behind it. In travelling they carry a haversack of very neat appearance, cleverly adapted to the head and shoulders, and made of very fine plaited fibre, on a frame of wood, covered with the skin of the large grey monkey. They are also provided with handsome bags, woven and embroidered by the women, in which they carry their pipes and tobacco, opium, etc.

For several generations the Singpho were the terror of the inhabitants of the Assam valley, and were in the habit of making constant irruptions into the plains in conjunction with the Moamaria, and these repeated raids have won for them the lowlands they now occupy. These inroads were put a stop to when the British took possession of Assam, but for some time afterwards this wild people made attempts to revert to their old habits. One officer of the British force had 5000 Assamese captured slaves returned to him, and it was then estimated that there were 100,000 Assamese and Manipuri still held in slavery among these people in Burma.

The Singpho understand the smelting of iron; and their blacksmiths, with no implements but a lump of stone for an anvil, and a rude hammer, forge weapons, especially dhaos, which are highly prized all over the frontier for their temper and durability. The Singpho manufacture their own wearing apparel; the thread is dyed previous to being woven, and thus are produced the checks and coloured garments of which they are so fond.

The Singpho repudiate all affinity with the Shan. Their language is entirely different, approximating more to the Karen, Manipuri, Naga, and Abor dialects, and their religion is a rude paganism. The Singpho propitiate three spirits called Nats, by sacrificing fowls, pigs, and dogs to them, and when about to proceed on important expeditions a buffalo is offered. They have no regular priesthood, but they pay great deference to the Pugyees or priests of the Buddhist Shans. Some among them are supposed to possess powers of divination, and Col. Hannay mentions having witnessed the process. The diviner sat himself down at some distance from the crowd, and had beside him a small fire and a bundle of nal grass. Taking a piece of nal containing several joints, he held it over the flame until one of the joints burst with a sharp report; the fracture on each side threw out a number of minute, hair-like fibres, which were carefully examined and put aside. Another piece was then put into the fire and similarly treated. This continued for at least an hour, when the result was disclosed, namely, that a certain chief, whose arrival was awaited, would make his appearance in three or four days; and so it happened.

Polygamy prevails amongst the Singpho. The girl is bought with a price, and a feast completes the ceremony. They bury their dead, but the body of a man of note is kept for two or more years, in order that all the friends and relations of the deceased may have time to attend his funeral; the body being removed to some distance during the process of decomposition, after which it is placed in a coffin, and brought back to the house, where it remains in state, decked out with all the insignia of rank used during life. When finally committed to the earth, a mound, sometimes of considerable dimensions, is raised to mark the spot. This custom they appear to have taken from their neighbours the Khampti. In succession to patrimonial property, the eldest son takes the landed estate with the titles, the youngest the personalities; the intermediate brethren, if any exist, are excluded from all participation, and remain in attendance on the chief or head of the family, as during the lifetime of their father.

The *Doanniya*. From the intercourse of the Singpho with their Assamese female slaves, a mongrel race has sprung up, well known in Upper Assam under the denomination of Doanniyas. They have been found very useful auxiliaries in frontier wars, from their knowledge of the Singpho language and tactics, and from their fidelity to the Government that relieved them from the Singpho yoke.—*Homeward Mail*, Sept. 1881; *Mr. (Sir. G.) Campbell*, p. 149; *Colonel E. T. Dalton, Ethn. of Bengal.*

KHAMSIN. Arab. The climate of Egypt is characterized by extreme dryness, rain is almost unknown in the upper country, but falls occasionally in the Delta. The cold season extends from October to March; north winds then prevail, and the climate is favourable to the tourist; boats ascend the river with facility. The hot season commences in April, and lasts till September. In May and June, the Khamsin, called in Arabic the Simoom, a pestilential south wind of 50 days' duration, blows with violence. The natives of El-Hijaz assured Captain Burton that in their district the Simoom never kills a man, but he saw the dead body of an Arnaut, which was swollen and decomposing rapidly, the true signs of death by a poison wind. Injurious winds, exactly resembling the Khamsin of Egypt, are common throughout the east of Persia, Afghanistan, and the regions lying to the south and east of the Indus as far as Cutch; but they do not

extend southwards of the latter province.—*Burton's Scinde*, p. 376; *Pilgrimage*, ii. p. 2; *Bellew.*

KHAN, a large tray. Khancha, a small tray. Khan-posh, or Toraposh, a tray lid.

KHAN, a title in use in Turkey and in Asia. It was seemingly first used by Tartar races in High Asia. It was adopted by, or granted to, Chengiz, and his successors were known as the Kablai Khan. It was in use prior to their conversion from paganism. In Turkey it belongs to the emperor alone; in China it is a title of the emperor; in Persia it is borne by nobles. It is the title of the Baluch and Afghan rulers, but every Afghan assumes it as his birthright. It has been granted by rulers to many of the Muhammadans of India, and it is as often conceded to others as Esquire is to the people of Britain. Afghans, called Pathans in India, when at Muhammadan courts, are prohibited the adoption of this title, lest doing so might interfere with its grant by the ruler. Khanam is a lady's title, and Khan Khanan, lord of lords, was a title of Mirza Khan, son of Bahram Khan, and was a Muhammadan title at the Dehli court. Khan Khel amongst the Afghans is the tribe furnishing the chief.

KHANA. HIND. A house. Khana Shumari, a census. The Khan of Asiatic cities is a caravansari or place for travellers to put up. In general they are substantial, handsome buildings, with arcades opening into an interior court.

Khana-zad, PERS., house-born, is the name usually given to the sons of slaves born in the family; and, among the Muhammadans, persons of this description are almost deemed relatives. The term is derived from Khana, a house, and Zaidan, to be born. In Baluchistan they are always kept near the persons of their chiefs, and employed on all affairs of great trust. Their character and station is considered highly respectable, and even after they are enfranchized, and rewarded with a portion of soil, they retain the designation. The ordinary term for a slave is ghulam, but for those born in the house Khana-zad is a respectful appellation. There are various kinds of emancipation,—complete and immediate, gratuitously, or for a future pecuniary compensation; or future emancipation on the fulfilment of certain conditions, more frequently when the owner dies, in which case his heir cannot sell the slave to whom the promise was made.—*Malcolm's Persia*, i. p. 456; *Pottinger's Travels.*

KHANAM, an ordinary Muhammadan suffix for a Pathan lady, as Khadijah Khanam. Khanam. Khatun, Bi, Begum, Beebee, Nissa are honorific suffix appellations for Muhammadan women. Malik Khanam was the daughter of Kazan, sultan of Samarcand, and mother of Shah Rukh. Harm women usually have the names of flowers, as Nirgis, Zaffran, Susan. The ordinary women have the designation of Bi, as Khadijah Bi. The higher classes are styled Begum, Khanam, Khatun, Nissa, as Fakkr-un-Nissa Begum, Jamilah Khanam. In countries where Arabic is spoken, the equivalent of Khanam is Site, the mistress or the lady.—*Markham's Embassy*, p. 118. See Harm.

KHANATE, a dominion, of which are several in Central Asia. The khanates of the Uzbak populations are Maemana, Sar-i-Pal, Shibbargham, Andkhui, and Akcheh. Khiva and Bokhara also are khanates.

KHAN BABA, literally lord-father, a title bestowed on Bahram Khan, the counsellor of Humayun and his son Akbar. It is equivalent of the Turki Atabek. See Beg.

KHANBALIG. This city, now called Pekin, was founded or at least rebuilt by Kablai Khan after his conquest of Northern China, about A.D. 1280. Marco Polo calls it Cambalu, and says that in magnificence it surpassed every other city he had visited. Khanbalig are two Mongol words signifying the Khan's city. The Chinese capital was still so called by the Turks in the time of P. Ricci. The city on this site was originally (multum est vetus et antiqua, as Odoric says) the capital of the kingdom of Yan, B.C. 222. This was conquered by the Thsin sovereigns of China, and the city lost its importance A.D. 936. It was taken by the Tartar Khitan, and became their Nan-king or Southern Capital. In 1125 it fell to the Kin, ancestors of the Manchu, who gave it the name of Si-king or Western Capital. In 1153 it received from the fourth Kin sovereign the name of Chung-tu or Central Court. It seems also to have been known as Yen-king under this dynasty. It was captured by Chengiz in 1215, and in 1264 his grandson Kablai made it his chief residence. In 1267 he built a new city, three li to the north-east of the old one, to which was given the name of Ta-tu or Great Court, called by the Mongols Daidu, the Taydo of Odoric and Taidu of Polo, who gives a description of its dimensions and the number of its gates. The Chinese accounts give only eleven gates. The circumference of the present Tartar city appears from the plans to be about 15 miles. Martini speaks of it as having still twelve gates in his time, but he was almost certainly wrong. It has three on the south side, and two on each of the others. The circuit of the two cities together is about 22 miles, according to the scale on the plan given by Panthier, though Timkowski states it at 40 versts, or 26⅔ miles. The route followed on the second journey of the Polo relatives into China was up the Oxus, to its sources, through Badakhshan, whence, crossing the Pamir table-land to Khotun, they went across the Hamil or Shamil desert to Cambalu (Khanbalig) or Pekin. The return was by sea to Singapore, and round Ceylon to the Persian Gulf.—*Yule, Cathay*, i. p. 127; *Prinsep's Tibet.*

KHAND, Khund, written Kund, Cund. HIND. A piece, a portion, a district, a province, as Bundelkhand. Also the divisions or portions of the Skanda and Padma Puranas, and of the Bharata Varsha.

KHAND, a race in the Cuttack (Khatak) Tributary Mahals, until after the middle of the 19th century addicted to female infanticide and human sacrifices. See Kandh.

K'HAND. HIND. Saccharum officinarum, sugar-cane; Khandchi, one of the men at a sugar press.

KHANDA. HIND. A double-edged sword. The devotion of the Rajput is still paid to his arms, as to his horse. He swears by the steel, and prostrates himself before his defensive buckler, his lance, his sword, or his dagger. The worship of the sword (asi) may divide with that of the horse (aswa) the honour of giving a name to the

continent of Asia. It prevailed amongst the Scythic Getæ, and is described exactly by Herodotus. To Dacia and Thrace it was carried by Getic colonies from the Jaxartes, and fostered by these lovers of liberty when their hordes overran Europe. The worship of the sword in the Acropolis of Athens by the Getic Atila, with all the accompaniments of pomp and place, forms an admirable episode in the history of the decline and fall of Rome; and had Gibbon witnessed the worship of the double-edged sword (khanda) by the prince of Mewar and all his chivalry, he might even have embellished his animated account of the adoration of the scimitar, the symbol of Mars.—*Tod's Rajasthan*, i.; *Royle's Arts, etc., of India*, p. 460. See Kharg.

KHANDA. SANSK. In Buddhism, the elements of sentient existence, of which there are five constituti, viz. the organized body or the whole of being, apart from mental processes; sensation, perception, discrimination, consciousness.

KHANDAGA, also Khandi, in Coorg, a land measure of varying dimensions.

KHANDAGIRI, a hill in the Puri district of Orissa, situated about 12 miles west of the road from Cuttack to Puri, and 5 miles east of Bhuvaneswar. It is in lat. 20° 16′ N., long. 85° 50′ E. Two sandstone hills, Khandagiri and Udayagiri, stand abruptly out of the jungle, separated by a narrow gorge, each of which is honeycombed by caves and temples cut out of the rock, and which are believed to form the earliest memorials of Buddhism in India. The oldest of them consist of a single cell, little larger than a dog-kennel, cut in the face of scarcely accessible precipices, and with no signs of even the primitive carpentry architecture. Others of a somewhat later date are shaped into strangely distorted resemblances of animals. One has from time immemorial been known as the Snake Cave, another as the Elephant Cave, a third as the Tiger Cave. These sandstone caves, as a whole, represent ten centuries of human existence, or from B.C. 500 to A.D. 500. The oldest are on Udayagiri Hill, the more modern ones being on Khandagiri, whose summit is crowned by a Jain temple erected by the Mahrattas at the end of the 18th century.—*Imp. Gaz.*; *Beng. As. Soc. Journ.* vi. 1085.

KHANDAIT, from Khanda, a sword, military retainers in Orissa, Cuttack, and Northern Circars, holding lands for service. In the Balasor district in Orissa, in 1881, the population was 770,232, the aborigines and semi-Hinduized being—

Bhumij,	1,675	Chamar,	1,383
Santal,	1,176	Brahmans,	101,509
Pan,	36,546	Khandait,	135,671
Kandara,	18,485		

The Khandait are descendants of the soldiers of the ancient rajas of Orissa, who kept up large armies and allotted the land on strictly military tenures. The officers were men of birth, but the ranks were filled from all classes. They all came to be ranked with the military classes, but are now not distinguishable from ordinary agriculturists.

KHANDALA, in lat. 18° 46′ N., long. 73° 23′ E., a large village on the north-eastern foot of the Bhor Ghat. The Dak bungalow is 1768 or 1744 feet above the sea; a spring, three miles east of Khandala, is 1928 feet; Magfanni Hill, two miles S.W. of Khandala, 2601 feet.

KHANDAN. HIND., PERS. A term in use in India to designate the relatives of princes.

KHANDAR, a termed used in the Peepree, Rambaj, and Garvee Dang by the Bhil and Kunbi cultivators, signifying lopping the trees of their tops and branches for cultivation. By this destructive system acres of young trees were mowed down.

KHANDAVA, a forest district occupied by the Naga at the time of the Vedic Aryan. It was set on fire by Arjuna, and all the Naga were destroyed, except their raja Takshaka, who escaped.

KHANDESH, a district in the northern part of the Bombay Presidency, lying between lat. 20° 15′ and 22° N., and long. 73° 37′ and 76° 24′ E., with an area of 10,162 square miles, and a population in 1872 of 1,028,642 souls. It is divided into two parts by the river Tapti, the southern portion being drained by the Girna. Khandesh is an extensive and well-watered plain, interspersed with ranges of low barren hills, at the base of which run numerous rivers and rivulets, flowing from the table-land into the river Tapti. It is surrounded by lofty mountains clothed with trees, and very unhealthy. On the north are the Satpura mountains, clothed with forest; on the west is the steep and stony Sukhein range, with tangled masses of bamboo; and on the south are the ranges of Chandore Saatmulla and Ajunta, with babul jungle in the dells; and on the east low sterile hillocks separate it from Berar. Under Muhammadan rulers, Khandesh attained to much prosperity, but it was ravished by Holkar's army in A.D. 1802, followed in 1803 by a famine. Up to this, the Bhil race had mixed with the other inhabitants, and been watchmen and policemen of the district, but they then withdrew to the surrounding mountains. The Kunbi are the main body of the cultivating population of Gujerat, Khandesh, Maharashtra, and the Central Provinces. The settled agricultural people are chiefly Kunbi, with large numbers of Rajputs and Hindus from Northern India.

Besides the Mahratta cultivators, who are Kunbi by caste, large numbers of Pardeshi and Rajputs have long been settled in the district. Gujars are the most industrious and well-to-do of the agricultural population. — Banya from Marwar and Gujerat, and Bhatia, late comers from Bombay. Wandering and aboriginal tribes form a large section of the population, and Bhils, 11·87 per cent. of the whole, are the most important, with Banjara or Lamani, the pack-bullock of former times.—*Imp. Gaz.*

KHANDOBA, an incarnation of Siva, largely worshipped in the Mahratta country.

KHANDPARA, a Native State in Orissa, lying between lat. 20° 11′ 15″ and 20° 25′ N., and long. 85° 1′ and 85° 24′ 40″ E. Its people, mainly composed of Kandhs and Savars, with semi-Hinduized aborigines, consist principally of Pans, Mihtar, and Kandara.

KHANDURI of Garhwal is a principal Brahman tribe.

KHANDWA or Khundwa, the chief civil station of the district of Nimar. The G. I. P. Railway has a station there, and here the whole

traffic of Central India towards Bombay meets the line. The area of the district is 1553 square miles, and population in 1872 was 109,622.

KHANDY, a measure of weight, and according to locality and the articles sold varying from 500 to 821 lbs. See Candy.

KHAN-i-AZIM, a title of the poet Aziz. See Aziz.

KHANJAR. HIND., PERS. A dagger, a short curved sword.

KHANJRI. HIND. A tambourine with bells.

KHAN-KHANAN, Lord of lords, a Muhammadan title at the Dehli court. It was the title of Mirza Khan, son of Bahram Khan. In Persia, the title of Khan is also borne by noblemen. In Turkey and in China it belongs to the sovereigns alone.

KHANWAH, an inundation channel in the Lahore and Montgomery districts of the Panjab. It supplies 173 estates.

KHANZADA, in Oudh, a Muhammadan convert from Hinduism. The Bachgoti of Faizabad and Sultanpur have three Khanzada chiefs, Hasanpur being at the head of all. The Bhale-Sultans have also three, and the Bhartawan clan one. Kheri has two Abhan Khanzada chiefs. Sitapur or Gaur and Barabanki or Bisen. Conversions in Oudh were common under the Jounpur dynasty, A.D. 1394-1457, to which period most of the Oudh Khanzadas trace back. Qu. Khanazad.—*Carnegy.*

KHAR. HIND. Prosopis spicigera. The soda plant, Caroxylon Griffithii; also soda. potash, barilla, dry alkali; hence Khara, saline. Parkhar, from Par, beyond, and Kar or Khar, saline, is synonymous with Looni, the salt river. There are several Khari Nadi, or salt rivulets, in Rajputana, though only one Looni. The sea is frequently called the Looni-pani, the salt water, or Khara-pani, metamorphosed into Kala-pani, or the black water. Khara-pani also means saltish or brackish water. Khari-matti, saline soil. Khari-namak, medicinal sulphate of soda, glauber salts. Khara-matchi, salt fish. Khara-sajji, an inferior kind of carbonate of soda.—*Tod's Rajasthan*, ii. p. 304.

KHAR. PERS. A donkey. Gor-khar, the wild ass, the Equus onager. Khar-gosh, the hare, literally the ass-eared.

KHARACH. HIND. Expenditure, outgoings. The word is variedly combined: war-kharach, waste, extravagance.

KHARADI. HIND. A wood turner; also the colours and colour-sticks for lacquer ware, used in the Panjab by the wood turner to colour his ware when the turning process is complete. The stick consists of shellac, melted down with a certain proportion of wax and sulphur, and coloured by various simple or compound colours. They are applied by the hand. The operator holds the colour-stick against the turned wood object while revolving rapidly; the heat produced by the friction melts the lac, and the colour is deposited on the surface of the wood. The skill and fancy of the operator direct him either in laying on a uniform layer of colour, or else putting it on in little spots or touches, by allowing the colour-stick only very lightly to touch the revolving wood, thus producing either a smooth uniform colour, or the pretty mottled appearance so often observed in lacquered ware. Two or three different colour-sticks are often applied, giving the whole a marbled appearance of great beauty. The colour thus applied is spread, fined, and polished, by pressing the edge against the turned object while revolving. The final polish is given by a rag with a little oil. The principal colours are of lac, crimson, orpiment, red lead, green made of orpiment and Prussian blue, dark blue, indigo or Prussian blue, black, white, brown or gold colour, light blue or ultramarine. They also bear the names of Kamair, Kundera, and Kundaira.—*Powell's Handbook; Sherring's Hindu Castes*, p. 316.

KHARAGORA, a small village on the outskirts of the lesser Runn of Cutch, where salt has been manufactured since 1872. The Kharagora salt is in beautiful crystals, about the size of an almond, and so hard that the wastage caused by removal is insignificant. Ordinary sea salt is made by solar evaporation of the sea water all round the coasts of India, in pans laid out near the sea, all along the western side of the Bay of Bengal from the Sunderbans to the southernmost point of Ceylon, all through the islands of the Archipelago, and on the west side of India, north and south of Bombay. At Kharagora, the cost of production is only a few annas per maund of 82 lbs., but is a Government monopoly, and is sold at about 2 rupees 13 annas per maund.

The Runn of Cutch for miles and miles presents nothing to the eye but brown, barren waste. The Runn is supposed at one time to have been an arm of the sea, and if wells are sunk in almost any part of it. there filters through the sand a salt brine. But there are three or four kinds of soil in the Runn, all lying in different layers, and it is only through one of them that brine percolates. This layer is found at a very great depth, and sometimes not at all. The salt manufacture there only lasts from the beginning of October to the end of April; and the Agria transform themselves into cultivators during the rains.

The salt works consist of between three and four hundred pans in ten rows, with a railway siding running between each two rows, and the whole is surrounded by a cordon of police stations. Each pan is 250 feet in length and 60 in breadth, and has at one end a well; and where the brine in the well is not of sufficient strength, a shallow reservoir is built by the side of the pan, and in it the water from the well is allowed to stand for two or three days, that it may settle and concentrate before it is poured into the pan. The pan is a work of art. There must be no soft mud left in it. The Agria work up the mud with their feet into a stiff paste, and then beat it down with heavy wooden mallets until it presents a smooth, tough surface; and this process takes two or three months. The sides of the pans are lined with grass, so as to prevent loose earth from falling in, and the sides of the wells are protected by matted basket-work. The mode of raising water consists of two long levers resting on fulcrums fixed by the side of the well, and the short arm of each is heavily weighted with hardened clay so as to bear it down and send the other end towering up over the well. Earthen pots are suspended from the higher ends by ropes, and two men standing on planks above the well draw down the pots until they have gone down into the depths and been filled; then, letting go

the ropes, the beams fly upwards, the pots come up with a rapid swing to the top of the well, and are emptied into an earthen channel which communicates with the pans. When the pans have been filled with water and allowed to stand, the formation of minute crystals begins to take place, and from then until the crystals are fully formed, or, technically speaking, until the 'salt is ripe,' the pans must be raked from end to end, and fresh brine passed through them every day. If this is not done, all sorts of salt get mixed with the table salt, and the result is an unsaleable mixture. The raking is done by a man with a rough wooden rake made of twigs, too pliable to injure the bottom of the pan. During the earlier hours of the day, before the heat is great, each Agria trudges up and down his pan with this instrument behind him until no crystal has been left unshaken. By the end of March the salt is ripe, and is piled up by the side of the pans; from these it is removed along the sidings in railway waggons to the great godown which has been built for its storage during the wet months, and from thence it is distributed over the length and breadth of the land.

KHARAJ. ARAB., PERS. Tax, tribute, land revenue, the tribute levied by Muhammadans on non-Muhammadans. La-Kharaj, untaxed.

KHARAK, an island 100 miles from the Persian Gulf, in sight of the Persian coast, and 100 miles from the Arabian coast. It is a small island 4½ miles long, where the pilots for the Euphrates river are obtained. Its population, which amounted to 100 poor fishermen and pilots when Baron Kniphausen first established himself in 1748, increased within the eleven years that the Dutch held it, to upwards of 12,000 souls. It was neglected and lost in 1765, because it was not worth preserving to the nation by whom it had been acquired. It is situated within 30 leagues of the Shat-ul-Arab, and half-way between the coast of Arabia and Persia. Ships proceeding to Bussora generally call here for a pilot; it is 5 miles in length, and between 2 and 3 miles in breadth. The fort is in lat. 29° 14′ N., and long. 50° 14′ E. The British occupied it for a few years about 1838-41.—*Taylor's Tr.* i. p. 353; *Niebuhr's Tr.* ii. p. 154; *Malcolm's Persia.*

KHARAL, a quarrelsome Jat tribe in the Googariah district of the Panjab, between the Ravi and the Sutlej; also, a tribe of Sunni Muhammadans in the Multan district.

KHARAN, a western province of Baluchistan, in which lie two small towns. It is occupied by a tribe of Persian origin called the Nushirwani, of whom the Alifzai are one branch. They cultivate a little wheat and barley. They claim a descent from Nushirwan, similar to the Udaipur Rajputs.

KHARASM, the ancient Chorasma and modern Khiva, is the country on the east of the Caspian Sea, the capital of which was Gurganj. The Arabs converted the name of the country into Jurjan, and that of the capital to Jurjaniya. The Mongol form of the name was Organj. Noshtigin, a Turki slave of Malik-Shah Seljuk, was made governor of this province, and contrived to secure his independence. His son Kutub-ud-Din extended his dominions, and acquired the title of Kharasm-Shah, a name which had been borne by the rulers of the country before the Muhammadan rule. This empire of the Kharasm kings rose upon the ruins of the Seljuk dynasty, and their territories extended from Azerbijan and the Caspian Sea to the Indus, and from the Persian Gulf to above the Jaxartes or Syr Darya. A succession of nine princes reigned for 138 years, from Hijira 491 to 628 (A.D. 1097 to 1230); but in H. 618, the last of them, Jalal-ud-Din, was driven by Chengiz Khan beyond the Indus.

Bodies of the Kharasmian troops had approached the Indus, but Chengiz Khan fell on the sultan of Kharasm, defeated his armies, demolished his cities, laid waste his country, and massacred or reduced to slavery a great part of his subjects. He himself died of a broken heart in an inaccessible retreat on an island in the Caspian, and his son and successor, Jalal-ud-Din, was driven into the eastern extremity of his dominions. He gained a victory at Kandahar, and another farther to the east. His last battle was on the Indus, where his army was destroyed, and he swam the river with seven followers, amidst a shower of arrows from his enemies. After various changes, he was, ten years afterwards, killed in Mesopotamia.—*Collett.* See Khiva.

KHARA-TUCKA, in the hill districts to the S.W. of Mehar, in Sind, is a pretty valley that overhangs Herar. This valley must have been early inhabited, and curious remains of a bygone age are seen in the Kafir Kot, regular and evidently artificial ranges like river terraces. The popular belief is, that their huge boulders were lifted into position by the giant race then inhabiting the earth, but they must have been arrested in their descent from the higher ridges by accident or by some artificial contrivance. They are strange and imperishable memorials of an age and race long since passed away. These terraces were for purposes of cultivation; they caught the rain-water running down the face of the hill, also detritus, thus forming slight soil, in which the people sowed jowari or wheat, according to season. The practice is common now all over Afghanistan and the Himalaya, and was so throughout Baluchistan when it was more densely populated than at present. The extinct inhabitants of these days are always styled Kafir, hence these terraces and other remains are called Kafir Kot.—*Major Mercerther in Bombay Med. Tr.*, 1860, p. 273.

KHARDA, 56 miles E. of Ahmadnaggur, in lat. 18° 38′ N., and long. 75° 31′ E. In 1795, the Nizam's army defeated here the Mahratta general.

KHARDAR, HIND., also Kar-i-Khardar, the work of points, the gold work of Kābul and Dehli.

KHARDOUR. In the villages of Upper India, the Khardour or Hardoul are mounds studded with flags to avert disease.

KHARG. HIND. A sword. Kharg band'hai, or binding of the sword, is a ceremony performed when a Rajput is fit to bear arms, as amongst the ancient German tribes, when they put into the hands of the aspirant for fame a lance. Such are the substitutes for the toga virilis of the young Roman. The rana of Mewar himself is thus ordained a knight by the first of his vassals in dignity, the chief of Salumbra. If we couple this martial rite with the demand of jūddan, there is an additional reason for calling the Yadu Indo-Scythic. Their worship of the sword is Kharg-thapna. Kharga, a Hindu sacrificial sword.

—*Tod's Rajasthan*, i. pp. 159, 583, ii. p. 259. See Khanda.

KHARI, a rude pagan tribe on the hills of Assam, on the eastern frontier of the Mikir and Cachar. Near them are the Angami, another rude pagan tribe. These are associated with the Namsang, Joboka, Mulung, Tablung, Tengsa, Khari, and Mozome Angami.

KHARI, a slate-stone of Cuttack, used for the manufacture of pencils and balls for writing on the ground or floor in all rural schools, and by native accountants.

KHARIF, crops sown at the commencement of the rains, ripening in autumn. In India there are two principal harvests, the spring and autumn, with, at some places, an intermediate crop. For the spring harvest, the Rabi or Fasl-i-Rabi, the seed is sown in September or October, at the close of the periodical rains. The grains sown consist of wheat, barley, and other cereals, different kinds of pulse which do not require irrigation or much water, and these crops are cut in February or March. The autumn or Kharif crops consist of rice and other grains requiring irrigation. For these the seed is sown at the commencement of the rainy season, and reaped about October or November. Other millets and pulses of quick growth are sown at the beginning of the rainy season, and form the Bhadoni or intermediate crop.

The Bhadoni includes sawan, urdi, kakun, makra, bagri-dhan, and sathi-dhan; the Kuari crop includes dhan, kodo, til, patua sanai, maize, and cotton; and the Agahni crop includes jarhan, sorghum, urd, mothi, mung, patna; for seed, ramdana, lobiah, and bhatwans.—*Carnegy*; *Burton's Scinde*, p. 381; *Wilson's Gloss.*

KHARIK, also Khar-khanda. HIND., MAHR. A tribe employed in cultivating salt marshes or saline soils.

KHARI MATTI. HIND. Fire-clay, pipe-clay, white earth. That of the Lahore bazar is a pale-coloured clay, almost the same as chikni mitti, and used to make crucibles of. The term khari mitti is also applied to chalk.—*Powell's Handbook.*

KHAR-i-SHUTR. PERS. Camel's thorn, Alhaji maurorum; in Arabic it is called Agul, and all the deserts of the east are covered with it. It is the Jouz of Afghanistan. It is a prickly bush on which the camels browse, and is called jowassa in the Upper Provinces of India, and Shinz in Baluchistan, and is often used to make tatties, or screens placed at the windows, and wetted, for cooling the apartments by evaporation in the hot winds. Pottinger says the Shinz, though to be seen in Baluchistan, is not in such plenty as in the lower countries.—*Pottinger's Tr.* p. 102; *Ferrier's Journ.* p. 378; *Fraser's Khorasan*, p. 91.

KHARITA. PERS. The ornamented or embroidered bag of embroidery or khimkhab in which eastern letters are despatched. Khariti, a sort of chatelaine.

KHARJ, the key-note of musical scale.

KHARJI. PERS. Schismatics; the Sunni Muhammadans are so called by the Shiah sect. A Kharji is a person who separates himself from a community or religious faith; a seceder. The Shiah sect regard Ali as the immediate successor of Mahomed; the Sunni accept Ali as the fourth khalif. Sunnis designate all other Muslims by the term Shiyaees, signifying separatists or sectarians.

KHARMA, properly Khurma. ARAB. In Persia, certain trees are reckoned mubarak or blessed, such as the zeitun or olive, and the nakhl or khurma, the date-palm tree. Some Muhammadan tradition respecting the angel Gabriel seems to have consecrated the olive; and the date is said to flourish only in the regions of Islam, the land of true believers. — *Ouseley's Travels*, ii. p. 330.

KHARRAH, or Indian mackerel, a species of Thynnus, is found in abundance off the Burmese coast, and from thence great numbers, in a dried state, are annually imported into Bengal.

KHARRIA, a tribe in Singbhum in a very wild state, living much in backwoods and on the tops of hills apart from the Ho and Bhumij, who are somewhat in dread of them, as these isolated Kharria have the reputation of being great wizards. They are found also, under the same name, in the Manbhum Hills. The Kharria are also seen in villages with other tribes as farm labourers, but in the Chutia Nagpur estate they are far more civilised, living near the southern Koel river, one of the streams that rise on the Chutia Nagpur plateau, the principal source of the Brahmani. This river the Kharria venerate as the Santal the Damūdar, and into it they throw the ashes of their dead. Their ancestors, they say, were formerly settled between Rohtas and Patna. They quarrelled with their relations, and wandered away to the Koel. Part of them seem, however, to have reached the Koel from the south. They worship the sun under the name of Bero, and whom in prayer they address as Parmeswar. Every head of a family should, in his lifetime, make not less than five sacrifices to this divinity; the first of fowls, the second of a pig, third of a white goat, fourth of a ram, and fifth of a buffalo. Their sacrificial altar is an ant-hill, which was also formerly used by the Ho and Mundah. They are said to have no word for marriage, but after certain festivities the bride and bridegroom are left to themselves, and the following morning are carried to the river to bathe, and the bride conveyed to her husband's home by her own friends. A dance is then got up, and the bride and her groom are carried through it seated on the haunches of two of their companions. Like all Kolarian races, they are fond of dancing. The women have three parallel lines tattooed on their foreheads, with marks on their temples. Those of Manbhum are said not to eat sheep. They burn their dead, and place the ashes in a pot, which they throw into the river. It is said that they do not allow their women to cook. —*Dalton, Ethn. Beng.* p. 161.

KHARRI BOLI, the Hindi taught in Government schools.—*Cust.*

KHARTRA signifies true, an epithet of distinction which was bestowed by Sidraj, king of Anhilwara Patan, on one of the branches (gatcha) of the Buddhist and Jain faith in a grand religious disputation (badha) at that capital in the 11th century. The celebrated Hemachandra Acharya was head of the Khartra-gatcha; and his spiritual descendant honoured Udaipur with his presence in his visit to his dioceses in the desert, in 1821. Colonel Tod's Yati tutor was a disciple of Hemachandra, and his patravali, or pedigree, registered his descent by spiritual successions from him. This pontiff was a man of

extensive learning and of estimable character. He was versed in all the ancient inscriptions. His travelling library was in the charge of two of his disciples remarkable for talent. The letters of invitation written by his flocks in the desert were rolls, some of them several feet in length, containing pictured delineations of their wishes. One from Bikanir represented that city, in one division of which was the school or college of the Jain, where the Yati were all portrayed at their various studies. In another part, a procession of them was quitting the southern gate of the city, the head of which was in the act of delivering a scroll to a messenger, while the pontiff was seen with his cortege advancing in the distance. To show the respect in which these high priests of the Jain are held, the princes of Rajputana invariably advance outside the walls of their capital to receive and conduct them to it,—a mark of respect paid only to princes. On the occasion of the high priest of the Khartra passing through Udaipur, as above alluded to, the rana received him with every distinction.—*Tod's Rajasthan*, i. p. 518.

KHARVAR, a measure of 100 Tabreez maunds, which is equal to 6 maunds and 10 seers of India, or about 520 lbs. avoirdupois. — *Mohun Lal's Travels*, p. 262.

KHARWA. HIND. A red-dyed cotton cloth of Mirzapore, used for lining dresses. It is also made at Bhaonagar, Surat, and other places.

KHARWAR, a race in Chutia Nagpur whose four clans are the Bhogta, Manjhi, Raut, and Mahato. The Bhogta are in the hills of Palamau skirting Sirguja, in Tori and Bhanwar Pahar of Chutia Nagpur, and in other places. In the middle of the 18th century, the head of the Bhogta clan was a freebooter, but he surrendered and kept to his engagement. His two sons, however, joined in the mutiny of 1857–58; one was hanged, the other transported, and the estate confiscated. The low Kharwar in feature resemble the Santal. They are very dark, with pyramidal-shaped low noses, thick protuberant lips, and the cheek-bones project so as to make the temples hollow. They claim to be Kshatriya, and wear the poita or sacerdotal cord. They have been for ages mixed up with the Cheru, and subject to them. They claim affinity with each other, and have some customs in common. The rajas of Rangarh and Jashpur are members of this family, who have nearly succeeded in obliterating their Turanian traits by successive intermarriages with Aryan families. The Jashpur raja wedded a lady of pure Rajput blood, and, by liberal dowries, obtained a similar union for three of his daughters. The Kharwar worship Kali, also the goddess Chandi, to whom they sacrifice human victims, and some prisoners who fell into their hands during the rebellion of 1857–58 were so dealt with. They sacrifice every second year to Chindol, a male spirit, to Chanda, a female spirit, and to Parvin. Buffalo, sheep, and goats are offered to all these promiscuously.—*Dalton, Ethn. of Bengal.*

KHAR ZAHRA. PERS. Lit. Ass-poison, very common over all India, probably oleander?

KHAS. ARAB. Own, particular, select, private. Khowas, plural, are kept women, slaves. It is largely combined.

KHAS, a dialect of Hindi, spoken between Kamaon and Nepal. In Nepal it is called Parbatiya or Parbati.

KHAS, Khus, or Kus, the ruling tribe in Nepal, are also called Parbattiah or highlander, from the circumstance of their residence in the hills. Until the year 1816, they ruled the entire tract from the Sutlej to the Tista river. They are of Turanian origin, and had a distinct language, but the Brahmans converted them to Hinduism, gave them the rank of Kshatriya, and imparted to them the Hindi tongue, with which their own language became mixed. They possess masculine energy of character and love of enterprise, are excellent soldiers, and form a considerable part of the Nepalese army. They will carry several days' provisions on their backs, can despatch their meals in half-an-hour, and laugh at the pharisaical rigour of the Bengal sepoys, who must bathe from head to foot and worship their god before they begin to dress their dinner, must eat nearly naked even in the coldest weather, and cannot be in marching order in less than three hours, and would deem the carrying of a load intensely degrading.

KHASA. HIND. Soft calico, a fine cloth.

KHASA, a people who inhabited Persia and Northern India before the Aryan immigration. There is still a race in the Indian desert, now Muhammadan, and called Khosa. Elphinstone mentions the Khasa Khel. Kashgar is in the region of the Khasa, the Casia regio of Ptolemy. Menu says that the Saca, Yavana, the Pahlavi, and the Khasa of Central Asia, were all Kshatriya or Rajputs.—*Birr.*

KHAS-AAL, a powerful tribe of husbandmen on the east of the Euphrates.

KHAS-BARDAR, a matchlock-man in a great man's retinue.

KHAS-CHELA. HIND. Literally chief disciple. The chief disciple and destined successor of the mahant or head of a religious establishment of ascetic or mendicant Hindus.—*Wilson's Glossary.*

KHAS-DES, a term formerly applied to all the hill country in the N.W. Himalaya, of which the inhabitants were of mixed caste and impure to the Hindus of Lower India. The Khasiya people do not acknowledge the name as applicable to themselves, but apply it to the Bhotia.

KHASHI. HIND. The frame which supports the fine screen or strainer used in making paper.

KHASHKHA, PERS.; Tika, HIND. The sectarian mark on the foreheads of Hindus. Qu. Khushka.

KHASH KHASH. GUJ., HIND. Poppy seeds of Papaver somniferum. Khash-khash ka-tel, poppy seed oil.

KHASH RUD. The geographers describe this river as taking its rise in the mountains of Siahband, and trace its course from north to south until it falls into the Helmand at Kernasheen, whereas it flows in this direction only as far as Koh-i-Duzdan, a village situated between Washir and Ibrahimi; there it forms an elbow, turning suddenly south-west, and runs from that point straight to the Seistan lake. At the cold season of the year its bed is generally dry and full of reeds, in which are numbers of wild fowl.—*Ferrier's Journ.* p. 401.

KHASIYA, a great tribe in Kamaon and Garhwal, who claim to be Rajputs, but this is doubtful, and Rajputs do not acknowledge the connection. The people of Kamaon consist of the Bhotia on the borders of Tibet, the Khasiya

or original hill population, and settlers from the plains. The mass of the population south of the snows consist of the Khasiya, whose country is called Khas-des, in distinction from Hundes, the country of the Hun, and Bhot, the country of the Bhotia. The Khasiya are now Hindu in religion, in language, and customs. They are identical with the Khasa Hindus inhabiting the hills, who were mentioned by Menu 2500 years ago. Until British occupation, the Doms were the predial slaves of the Khasiya proprietors. In Kamaon the hill dialect is in the main Hindi, but has some curious grammatical affinities to the Bengali.—*Campbell*, p. 67.

KHAS-KHAS. Beng. Andropogon muricatus, the cuscus of Europeans, remarkable for its agreeable odour. It is the Anatherum muricatum f Beauvois, a fragrant grass, the roots of which are made into door and window screens. Is much used as a packing material. The grass of the plant is called khavi and panni, and the flower izkhar.—*Powell's Handbook*, i. p. 518.

KHAS-KHELI. Hind. A slave race at the Bahawulpur court, whose daughters associated first with the nawabs before being married to other persons. The Gola were another class of slaves, and were principally from Africa, and of the Sidi Habshi, Khas-kheli, Sindi, and Zenghar races.

KHASRA, a written record of the particulars of a rough map or plan of a village. A field book, day book, or journal.

KHASSYA HILLS with the Jaintia Hills form a British district in Assam, between lat. 25° 1′ and 26° 14′ N., and between long. 90° 47′ and 92° 52′ E., of an area of 6157 square miles, and with a population, according to the census of 1881, of 169,113 souls. These hills form the central section of the watershed between the valleys of the Brahmaputra and the Surma. The Khassya Hills are occupied by a collection of States, each governed by an elective ruler on democratic principles. The Khassya States are 25 in number, of which five, viz. Cherrapunji, Khyrim, Nustung, Sungree, and Nuspoong are commonly called the semi-independent States. The chiefs exercise civil and criminal jurisdiction over their own people in all matters pertaining exclusively to them. The minor States, known as the dependencies, of which the chief of which

Nungklow.	Mowseuram.	Mowyang.
Moleem.	Mowdun Punji.	Nobo Sopho.
Murriow.	Mahram.	Jeerung.
Ramrye.	Mullai Chummet.	Syung.
Mowlie.	Bhawul.	Moflong Punji.
Cheyla.	Seemai Punji.	Mowlong Punji.
Dowarrah Notoormen.	Lengkhan Punji.	Lyksom Punji.

Moleem was conquered in 1829, and the raja of Khyrim ceded, to the British, the territory to the S.E. of the Oomeam or Booga Pane river. In 1861, the raja was deposed, and Malay Singh, a new chief, installed. No engagements have ever been made with Nobo Sopho, Syung, Moflong Punji, and Lyksom Punji, but agreements were entered into with Mowyang in 1829, Dowarrah Notoormen in 1837, Soopar Punji in 1829, and in 1860 with Bhawul. The whole tract of the hill country occupied by these confederates embraces an area of about 3800 square miles between Khassya, Sylhet, Acsam, and the country of the Garo. Some of the hills attain a height of 6000 feet, but the country includes belts of arable soil about 2000 feet above the plains, on which grow, in great luxuriance, oranges, limes, pine-apples, the jack-fruit, and mangoes, betel-nut, and plantains, with the raspberry and strawberry.

The census of the Khassya and Jaintia Hills of 1872 showed 73,245 females to 68,593 males, and that of 1881 gives 88,710 of the former to 80,403 of the latter: that is, the district contains 1103 women to every 100 men. In the Garo and Northern Cachar Hills the excess of females is trifling. In the Neilgherry Hills the excess of males is so great that polyandry is practised, and female Todas have a plurality of husbands.

Khasiya women are at the head of the family, hold property in their own right, and property descends in the female line. The sister's son inherits property and rank.

Marriages are made without ceremony. If the proposal of a youth is accepted by the young lady and her parents, he enters the household of the latter, or sometimes only visits his wife there occasionally; the union thus loosely made is easily broken. Separations are frequent; and when they mutually agree to part, they publicly intimate their wish by throwing away a few shells taken from each other; the children remain with the mother.

The Khasiya race deem a twin-birth unlucky, and, when twins were born, used to kill one of the infants. They deemed the twin-birth degrading, as assimilating them with the lower animals. The Aino of Japan, also, if a twin-birth occur, always destroyed one of the infants; and this idea likewise prevails amongst the Bali population, and the Australian indigenes.

The Khasiya tribe habitually erect dolmens, menhirs, cists, and cromlechs, almost as gigantic in their proportions, and very similar in appearance and construction, to the so-called Druidical remains of Western Europe.

The undulatory eminences of the country, some 1000 to 6000 feet above the level of the sea, are dotted with groups of huge unpolished squared pillars and tabular slabs, supported on three or four rude piers. In one spot, buried in a grove, were found a nearly complete circle of menhir, the tallest of which was 30 feet out of the ground, 6 feet broad, and 2 feet 8 inches thick; and in front of each was a dolmen or cromlech of proportionately gigantic pieces of rock; while the largest slab measured was 32 feet high, 15 feet broad, and 2 feet thick. The method of removing the blocks is by cutting grooves, along which fires are lighted, and into which, when heated, cold water is run, which causes the rock to fissure along the groove; the lever and rope are the only mechanical aids used in transporting and erecting the blocks. The objects of their erection are various,—sepulture, marking spots where public events had occurred, etc. The Khassian word for a stone, 'man,' occurs as commonly in the names of their villages and places as that of man, maen, and men does in those of Brittany, Wales, Cornwall, etc. Thus Mansmai signifies in Khassya the stone of oath; Mamloo, the stone of salt; Manflong, the grassy stone, etc.; just as in Wales Penmaen mawr signifies the hill of the big stone, and in Brittany, a menhir is a standing and a dolmen a table stone, etc.

The Khasiya are commonly classed with the neighbouring Synting, Garo, Naga, Kachari, etc., as a subdivision of the Indo-Chinese branch of the human family. The British stations, Shillong, Cherrapunji, and Jowai are the only large places in the Khassya and Jaintia Hills.

The ashes of a tribe are deposited under one vault or in one burial-ground. The remains of man and wife are never mingled, because they belong to different tribes. A husband is therefore in death separated from his wife and children, as the latter belong to the tribe of the mother, and their ashes are deposited with hers.

The climate of Khassya is remarkable for the excessive rainfall. Major Yule stated that in the month of August 1841, 264 inches fell, or 22 feet, and that during five successive days, 30 inches fell in every 24 hours! Dr. Thomson and Dr. Hooker also recorded 30 inches in one day and night, and during seven months of Dr. Hooker's stay at Cherrapunji, upwards of 500 inches fell, so that the total annual fall perhaps greatly exceeded 600 inches, or 50 feet. From April 1849 to April 1850, 502 inches, or 42 feet, fell. It is reported that in 1861 the total fall at Cherrapunji was 805 inches, 366 of them in July. This unparalleled amount is attributable to the abruptness of the mountains which face the Bay of Bengal, from which they are separated by 200 miles of jhils and sunderbans.

At 4000 to 5000 feet elevation in the Khassya, Dr. Hooker collected upwards of 50 species of Gramineæ alone, in an eight miles' walk, and 20 to 30 Orchideæ. There is only one pine in the Khassya mountains, Pinus Sinensis, which is not known as a native of the Himalaya. As in all very humid climates, orchids occur in very great abundance in the Khassya mountains, constituting at least a twelfth part of the vegetation, and being by far the largest natural order of flowering plants. They are equally abundant at all elevations. There are upwards of twenty kinds of palm in the Khassya district, including Chamærops, three species of Areca, two of Wallichia, Arenga, Caryota, three of Phœnix, Plectocomia, Licuala, and many species of Calamus. Besides these there are several kinds of Pandanus, and the Cycas pectinata.

Cherrapunji is a sanatorium in the Khassya Hills, in lat. 25° 15′ 58″ N., and long. 91° 46′ 42″ E., 4588 feet above the level of the sea. It is 40 miles north of Sylhet, and 60 miles south from Gowhatty.

The Jaintia Hills, on the other hand, are purely British territory, being a portion of the dominions of the raja of Jaintia annexed in 1835. The first treaty with Jaintia was concluded in 1824. The raja Ram Singh rendered no assistance during the Burmese war, but he agreed to acknowledge allegiance to the British, and his country was taken under protection. The population of the Jaintia and Khassya Hills is about 150,000.

The inhabitants of the Jaintia Hills, who call themselves Synting, have a less interesting history than the Khasiya. They first became British subjects in 1835. In that year, the last raja of Jaintia, Indra Singh, was deposed, on the charge of complicity with certain of his tribesmen who had carried off three Bengalis, and barbarously immolated them at a shrine of Kali.—*Campbell*, p. 149; *Col. Yule in Bengal Asiatic Journal for* 1844; *Schlagentweit's General Hypsometry of India*, ii pp. 95–98; *Hooker's Him. Jour.* ii. p. 282 *Lubbock, Origin of Civilisation*, p. 21; *Treatie and Sunnuds; Dalton's Ethnology.*

KHAT. Arab., Hind., Pers. A letter. Khat-i-sharif, a royal letter.

KHATA-BANDI. Hind., Mahr. A system of assessment by Khatas or distinct estates; in this the tax or rent is paid, whether cultivated or left fallow.

KHATAK HILLS, a range or series of ranges in the Kohat and Peshawur districts, Panjab, so called from an Afghan tribe who inhabit them. They bound Peshawur district to the south, and extend from the Safed Koh system to the Indus. Between the plain of Peshawur and the Salt Range at Kalabagh lies the country of the Khatak and Sagree Afghans. The Khatak are divided into the chiefships of Akora and Teri. Akora lies east of the plain of Peshawur, on the river of Kābul. The Khatak of Akora live in the hills. The southern division is under the chief of Teri, who is able to assert his independence. Part of the Kohat district consists of the Khatak country, and in the Kohat valley they are the predominating tribe. They hold the Khushalgurh pass, leading from the Indus into Kohat, and offering the easiest entrance to the valley. On the whole, the Khatak have been loyal subjects. They are good soldiers, and can muster 12,000 fighting men. Many of them are in the British service. They are considered the best conducted and most respectable tribe on this frontier. The Teri Toi river divides the Khatak Hills into two main groups, the southern of which contains the famous salt mines of Narri, Bahadur Khel, and Kharrak, while the mines of Malgin and Jatta lie among the spurs of the northern range. The peaks of the south-eastern group seldom attain a height exceeding 3000 feet; but Swanai Sir, in the opposite range, has an elevation of 4785 feet above sea-level. The salt, which gives these mountains their chief importance, occurs as a solid rock, uncovered and exposed in many places, so as to be quarried rather than mined. The deposit may probably rank as one of the largest in the world. The total quantity of salt extracted from the five mines in 1870–71 amounted to 407,098 maunds, and the duty realized to £8556. The Sikhs never managed these mines at all. They farmed them out to some local chief, and left him to collect what he could. Under British rule, the control and working of the mines is in the hands of Government officers. The salt is excavated and sold at the mine at a fixed duty of two, three, and four annas per maund of 80 lbs., covering all expenses. The first Khatak of note and influence regarding whom there is any information, is Akore, the founder of Akora, lying one march on the Peshawur side of Attock. The Khatak tribe is said to trace its descent from the Kurtani, from whom also the Orakzai of Thyruh, the Afridi, Bungush, Mohmund, Khuleel, and Daudzai claim descent. The Kurtani were called also Burdurani, in contradistinction to the Daurani, now divided into Popalzai, Bamizai, Saddozai, Nurzai, Alikuzai, Yusufzai, Alizai, and Barakzai (divided into Muhammadzai and Hassanzai). Akore came from Shuwal, near the Waziri country, to a place called at that time Hassan Tungi, and now known as

KHATRI are a scattered Hindu race; a Khatri village is unknown. They, however, monopolize the trade of the Panjab, of the greater part of Afghanistan, and farther to the west in Central Asia, and even to St. Petersburg. They are the only Hindus in Central Asia. In the Panjab they are almost the sole people who perform the scriptory work, and there they are the chief civil employés of Government, and in the villages they keep the village accounts, act as bankers, and buy and sell the grain. They are also the gurus of the Sikh sects; both Nanak and Govind were Khatri, and the Sodi and Bidi of the present day are so. They do not usually engage in military pursuits, but the dewan Sawan Mull, governor of Multan, and his successor Mulraj, and very many of Ranjit Singh's chief functionaries, were Khatri. It is said that a Khatri was dewan of Badakhshan or Kunduz, as was the Peshkar Chandoo Lal of Hyderabad. Under the Afghans, a Khatri was governor of Peshawur, and Akbar's famous minister, Tudar Mull, was a Khatri; Joti Persad, a well-known Agra contractor, was a Khatri. The Khatri claim to be descendants of the old Khetrya, written also Chetriya and Kshatriya. They are Hindus; none, or very few, have ever become Muhammadans, and few have become Sikhs. The Khatri of Northern India are a very fine, fair, handsome race. Those of the western part of Peninsular India, about Bombay, are equally fair.

In Benares they arrange themselves into the two sections, Purbiya or eastern, and Pachhainya or western Khatri, both of whom point to the Panjab as the country from which they came. Some of the Kapur clan of the Pachhainya are, however, said to have adopted Muhammadanism.

In Gujerat and in Kattyawar, the Khatri are so largely engaged in dyeing that the name is applied to all dyers, Hindu and Muhammadan. The Hindu Khatri engaged in dyeing on this side of India, speak the Gujerat language; they were originally natives of Sind, but they have adopted the manners and customs of the places in which they reside. The old Khatri of Diu and several other places have all the look and manners of the Sindi. It is said that to avoid persecution an emigration from Sind took place in various directions. Those of them who settled at Lowaragad became the well-known caste of Lohana, and those that proceeded to Hingalaj became turners and dyers. From thence they emigrated to different places in Kattyawar and Gujerat.

In Benares they are closer observers of the ancient customs of Rajputs than that which is practised by modern Rajput tribes.

In Ludhiana there is a large number of thriving merchants of the Khatri race. They wear the sacred cord, which is put on their boys at the age of eight years, are taught the gayatri, and read the Vedas.

In Bombay and the adjoining districts, they are part of the writer class, whom Europeans style Purbho, and the Ror or Rora of Northern India are said to be Khatri. The Kukka, a handsome race on the east of the Jhelum, are said to have been Khatri originally; and of the Gaddi, an interesting race of fine patriarchal-looking shepherds in the interior of the Kangra Hills, the most are Khatri. In Behar is an agricultural class called Kshatri, Khatri, or Chatri, who sometimes serve as soldiers or as the darwans or doorkeepers in Calcutta. In Ludhiana there is a large number of thriving merchants of the Khatri race, with a numerous colony of Kashmir shawl-weavers. Multani is a term applied to several trading classes in the north-west of India, wandering Pathan merchants and others.

Thevenot, speaking of the people of Multan, says: 'There is a tribe of Gentiles here, called Catry or Rajput; and this is properly their country, from whence they spread over all the Indies.' Diodorus Siculus marks them by the custom of their women burning themselves alive on the funeral piles of their husbands; which continued a practice among them, as well as some other Hindu tribes, down to the middle of the 19th century. We find by Arrian, that the Cathei were confederated with the Malli and Oxydraceæ, that is, the people of Multan and Cutch, and which lay to the south-west of the place where Alexander might be supposed to cross the Hydraotes (or Ravi) on his way to India. After Alexander had crossed the Acesines (Chenab) and Hydraotes (Ravi), he appears to have been drawn out of the direct route towards the Ganges, to attack the city of Sangala. Sangala occurs only in Arrian, and is said to have been a city of great strength and importance in the country of the Cathei. Diodorus Siculus calls the same people Cathei or Kathei; and these may posssibly be recognised under the name of Catry of Thevenot, that is to say, the Khatri or Kshatriya tribe.

In A.D. 1000, Mahmud entered Hindustan, but in the course of eight years he made no farther progress than Multan. The people of Multan, who were the Malli and Catheri (that is the Khetry or Rajput tribe) of Alexander, must have preserved their ancient spirit, to be able to oppose, for so long a time, such formidable armies, headed by so furious an enthusiast. In 1008 we find the confederate Hindus defeated; and Mahmud's first essay towards effecting the downfall of their religion was the destruction of the famous temple of Nagarkot, in the mountains bordering on the Panjab country. His next expedition, being the sixth, was in 1009, when Tannasar, a more celebrated place of Hindu worship on the west of Dehli, experienced a like fate with Nagarkot; and the city of Dehli itself was taken at the same time. In 1018 he took Kanouj, and also destroyed the temples of Matra or Matura (the Methora of Pliny). His twelfth expedition, in 1024, was fatal to the celebrated temple of Somnat, in the peninsula of Gujerat, adjoining to the town of Puttan, on the sea-coast, and not far from the island of Diu, now in the hands of the Portuguese. The Khatri of the Panjab is, however, said by some authorities to be dissimilar to the Kshatriya of the Rajput. In the Panjab their avocations are looked upon as effeminate; but these writers and traders are not much inferior in courage and firmness to the ruder tribes, while they are superior in civilisation, refinement, and capacity for affairs. The Khatri and Urora of their cities and towns are enterprising as merchants and frugal as tradesmen. They are the principal financiers and accountants of the country. And even yet the ancient military spirit frequently reappears amongst the once royal Kshatri, and they become able governors of provinces and skilful leaders of armies. The Kathri of Berar claim to be Rajput,

and to be of the ancient Kshatriya, though many of them are weavers of nakki, kor, and kinara. In reality the Khatri of India are a fragmentary people, from some ancient stock now untraceable, but spread all through India, and actively engaged in peaceful avocations. In the Panjab they are designated Kirar.—*Rennell's Memoir*, pp. 123-133; *Records of Government of India*, No. 2; *Gita; Cunningham's Sikhs*, p. 22; *Wilson's Hindu Drama*.

KHATTA. HIND. Sour; the acid lime or citron, Citrus medica. Khatta-mitha is Oxalis corniculata.

KHAWA. HIND. A pass in the Salt Range, scarcely frequented, yet may be considered the most practicable. Timur crossed it on his march into Hindustan.

KHAWAK, a pass in the Hindu Kush, in lat. 35° 38′ N., long. 70° E. About 15 miles long. The crest is 13,200 feet. The ascent on the north side is a uniformly inclined plane.

KHAWAS. ARAB. Plural of Khas. Nobles, grandees, personal servants. In Puranya, slaves in general. In the west of India, the children of a female slave belonging to a Charan or Rajput, the property of the owner of the slave, but treated as members of the family.

KHAYYAM, the takhallus or literary title of Omar, a native of Naishapur in Khorasan, a celebrated poet and astronomer.

In the days when Alp Arslan ruled in the stead of his father Toghrul Beg, three lads, each of whom was destined to rise to eminence or notoriety, might have been seen day by day meeting to learn wisdom from the instructions of the famous Imam Mowaffak of Naishapur. Every lad who studied under a master so renowned amongst the doctors of Islam, was deemed most fortunate, for his success in life was no longer a matter of doubt. One of the three was Nizam-ul-Mulk, afterwards vizir to Alp Arslan. Another was Hasan-bin-Sabbah, the founder of the sect of the Assassins, whose leader was known to the Crusaders as the Old Man of the Mountains. The third was Omar Khayyam, afterwards astronomer and poet. Nizam-ul-Mulk, in the Wasiyah, tells the story how Hasan one day, alluding to their good prospects, said, 'Let us make a vow, that to whomsoever good fortune falls, he shall share it equally with the rest, and reserve no pre-eminence for himself.' 'Be it so,' the others replied. Nizam-ul-Mulk was the first to rise to eminence, and when he became vizir, Hasan received a good appointment, but, entering on a course of intrigue, he was degraded and disgraced, became the head of the Ismaili sect, which for a while was the terror of the eastern world, and Nizam-ul-Mulk fell a victim to their cruelty. Omar Khayyam received a pension from the royal treasury, and busied himself in 'winning knowledge of every kind, and especially in astronomy.' In the reign of Malik Shah he settled at Merv. He was one of eight scientific men employed in reforming the calendar. The result was the Jalali era, of which Gibbon says, 'It surpasses the Julian, and approaches the accuracy of the Gregorian style.' He also wrote a treatise on algebra. But he is better known as a poet, and his Rubaiyat or quatrains have been translated into several European languages.

He wrote very little, but what he has written will live when the lengthy poems of inferior men are forgotten. By some he is thought to have been a Sufi; but though he uses Sufi forms of expression, his language is more in keeping with his position as a leading scientific man.

Those who place Omar among the Sufi quote the following verse:—

'In synagogue and cloister, mosque, and school,
Hell's terrors and heaven's lures men's bosoms rule;
But they who pierce the secrets of "the truth,"
Sow not such empty chaff their hearts to fool.'

In one verse is a grave and serious rebuke, in a second is sarcastic ridicule:—

'Some feed false hope on that vain fantasy
Of houris feigned in Paradise to be;
But when the veil is lifted, they will see
How far they are from Thee, how far from Thee.

In Paradise are houris, as you know,
And fountains that with wine and honey flow;
If these be lawful in the world above,
What harm to love the like down here below?'

Another verse says:—

'Pagodas, just as mosques, are homes of prayer;
'Tis prayer that church bells chime unto the air;
Yea, Church and Ka'aba, Rosary and Cross,
Are all but divers tongues of world-wide prayer.'

Omar Khayyam loves to balance antitheses of belief. He formulated no system, but only scattered forth in elegant verse his doubts and difficulties. He lived and died a sceptic. He cannot understand the nature of things. He regrets that he has appeared on the scene at all:—

'I never would have come, had I been asked:
I would as lief not go, if I were asked;
And, to be short, I would annihilate
All coming, being, going, were I asked.'

He appears as lost in unbelief. Fatalism settled on his mind:—

'The "tablet" all our fortune doth contain,
Writ by the "pen" that needs not bliss nor blame;
'Twas writ at first whatever was to be,
To grieve or strive is labour all in vain.'

Moral responsibility is utterly denied:—

'The potter did himself these vessels frame:
What makes him cast them out to scorn and shame?
If he has made them well, why should he break them?
And though he marred them, they are not to blame.'

The figure of a game at chess is introduced to show how helpless a creature man is under the inexorable rule of a pitiless fate:—

'We are but chessmen, who to move are fain
Just as the great Chessplayer doth ordain,
He moves us on life's chessboard to and fro,
And then in death's box shuts us up again.'

Omar had not always been thus resigned. He says—

'I put my lips to the cup, for I did yearn
The secret of the future life to learn;
And from His lip I heard a whisper drop,
Drink! for once gone you never will return.'

—*Madras Mail*, 23d March 1882; *Saturday Review*, 5th January 1884.

KHAZERIJ (Khezerj), a very ancient Arab tribe, in possession of Medina when Mahomed fled there. Abu Osaibi was of this tribe. The Rubina, once the most celebrated tribe in Arabia, is now a small broken clan. The Anizeh Arab come of this race.—*Rich's Kurdistan*, ii. p. 258.

KHEDA, HIND., written Kheddah and Khadah, an enclosure into which wild elephants are driven and caught, from Khedna, to chase.

KHEDA, a village in the Cutch State, situated 13 miles south of Bhooj. To the S.E. of Kheda is a small village on a rising ground, above which stands the mausoleum of Pir Ghulam Ali. Inside the dargah is the tomb, under a canopy, supported by 12 small columns. Against the pall lies a representation of a Moghul pir, a water-colour portrait of Ali, with a nimbus round his head, and below him, Hasan and Husain, also with aureoles; and in a third frame, Mahomed in a blue choga, but the face left blank,—a curious compromise between the prohibition in the Koran and the desire for a palpable representation of the objects of reverence. —*Imp. Gaz.*

KHEDIVE, a Turkish word signifying prince, ruler. It was conferred on the hereditary ruler of Egypt by an imperial firman dated 26th May 1866, from the emperor of the Turkish dominions. The previous title was Wali or Vali, viceroy, and had been conferred on Muhammad Ali, the first hereditary ruler.

KHEE. HIND. Kotaha land broken upon the steep slopes of hills.

KHEEL, the iron pillar of the Pandu race, mentioned in the poems of Chand. A legend relates that an infidel Tuar prince wished to prove the truth of the tradition of its depth of foundation; blood gushed up from the earth's centre, the pillar became loose (dhili), as did the fortune of the house from such impiety, and this is given as the origin of the name of Dehli.—*Tod's Rajasthan*, ii. p. 31.

KHEESAH. HIND., PERS. A flesh glove. The importance of the condition of the skin to the maintenance of health and the comfort of the individual has been demonstrated by physicians. To preserve its surface free from all extraneous substances, to dislodge all concreted matter, collected dust, the deposit of the fatty secretions, etc., a glove made of burruk or Persian glove cloth, and called kheesah, has been in use from time immemorial throughout the east. It is applicable alike to the bath and the dressing-room. The hair-glove in India is used only for rubbing down horses.

KHEL. PUSHTU. A subdivision of a tribe; also a collection of tents, a village community, a portion of or even an entire tribe. It is a usual term with all Afghans and Baluch. Some Baluch live in mud huts, others in fortresses, but the usual lodging is a black felt or camlet tent, called gedaun, which is stretched over a tamarisk framework. An assemblage of gedaun constitutes a tumun or village, common to the Khel, and a number of Khel form a tribe.

KHEL, a boat in use in Assam. Its roof is covered with the leaves of the Livistona Jenkinsiana palm.—*Simmonds' Dict.*

KHELAT, properly Kalat, in lat. 28° 53′ N., and long. 66° 28′ S., is 6800 feet above the sea. It is the capital of Baluchistan, and the seat of government of the Khan, among whose subjects are many tribes of Brahui and Baluch, some Afghans, with sects from Persia, Arabs on the coast line, and Hindus engaged in commerce. The Khan is of the Brahui. The better known tribes are all situated along the Dehra Ghazi frontier, and along Sind. From thence the country extends inwards to the Indian Ocean from above Kurachee to the border of Persia.

The Baluch believe that they came from Aleppo, and are descended from Mir Hamera, son of Abdul Mahtab, who died in the reign of Hazrat Imam Husain about A.D. 646. Leaving Arabia, they first came to Kerman in Persia, and thence to Makran, where they remained 500 years. One of their chiefs, Yakub Khan, had four sons and a daughter, named respectively Rind, Hot, Lashari, Korai, and Massamat Yatoi. From these sprang the tribes called by these names. After some time the Rind and Lashari quarrelled, and the latter took refuge in Sind. The Brahui were supposed by Pottinger to be a nation of Tartar origin. The above are the great divisions, but there are many subdivisions. The aggregate number of men that could be brought into the field by all the tribes is calculated at 38,000 men; but not more than 8000 or 10,000 could be induced to go out of the country, even when their most popular rulers were in power. With the certainty of pay, the British should be able to get 8000 at least, and they would form a splendid body of troops. There are two great sirdars, hereditary heads of the districts of Saharawan and Jhalawan; to these sirdars the khan is supposed to submit all his intentions before he can carry out anything lawfully. Besides these, there is a wazir chosen by the Tajak, or merchant community, who has a voice in the government. The language spoken in Kalat is Brahui, and is quite different from the Baluchi, though neither is written; nearly all the official documents being in Persian.

The Baluchi women are treated better than other Musalman women. The more independent tribes, such as the Murree, have women slaves amongst them, though not many.

Raids are latterly confined to their Pathan neighbours, for Sir W. Merewether (then Captain Merewether) at Shagur in 1847, and Captain Raitt when he took Bugti Dehra (vide General T. Jacob's book on the Bugti campaign), gave them very sharp lessons. Sir W. Merewether killed 700 of them, and the Bugti have not recovered that punishment yet. Amongst themselves they are great sticklers to custom. For instance, in a fight between two tribes, one of them brought up a gun that had before been taken from the Khan of Khelat, and fired three or four stone shot at their opponents' village. Hardly had they done so when out rushed a whole crowd of women from the village, and, going up to the assailants, asked them how they could do so low a thing as fight with weapons that had never been used by their fathers. Curious to say, even in the heat of their passions, this argument prevailed, and the cannon being sent off to a place of security, the fight was continued with sword, shield, and matchlock. Since then, when a son of the Katran chief, Imam Bux, used rifle skirmishing with the Murree, the same argument induced him to lay aside his rifle and take to his sword. One thing specially noticeable is how on both these occasions the women took the office of intermediaries, and in both cases no idea seemed to be entertained of interfering with them, while it is equally certain that if they had been caught after the fight was decided they would have become the prize of the victors.

A very large portion consists of barren hills and sandy plains, while only a small portion is culturable. About Khelat, Mustang, and Quetta the maximum and minimum temperature in summer is about 105° and 48°; in winter, 70° and 4°. In the sandy

deserts of Makran, the cold is not nearly so great, but the heat is so intense that during the Khurma păz, or date ripening, as it is called, a period of about three weeks, even the inhabitants keep close and do not go out.

The Baluch mare is a raw-boned animal of about 13 to 14 hands. These horses have considerable endurance, and can go 50 to 60 miles a day for several consecutive days. One man rode in and out with a letter just 80 miles in 24 hours, and his mare had the same wretched broken-down appearance as when it started, neither more nor less. Sometimes an extra good one appears on the scene, but such cases are rare. The Baluchi have the same habit as the Kurd of Central Asia, namely, they do not often take the saddles off their horses. The saddles are made of wood, and are very narrow; the stirrups are short, so that the knee goes well forward, and the foot back in a line with the hip. See Baluchistan.

KHENGAR, the most celebrated man of the Yadu line in Saurashtra, was the personal opponent and rival of the celebrated Sidraj for the hand of the Deora princess. Mandalica, though a proper name, is also titular, viz. Lord of the Region; this and Khengar are the two names best preserved by tradition, and to one or other many things at Junagarh - Girnar are attributed. Khengar is the name of the prince who erected the palace there.—*Tod's Travels*, p. 511.

KHER, also known as Ganga-Khair and Khair, in lat. 18° 59′ N., long. 76° 46′ E., in the Dekhan, on the high bank of the Godavery. The mean height of the village is 1293 feet; level of the Godavery is 1245 feet. It is enclosed by a strong wall, and was a place of importance until the middle of the 19th century, when it was plundered by Rohillas.—*Cullen.*

KHERA. Hind. A village; often compounded, unabbreviated and abbreviated, and variously spelled, as in Holal Kaira, Umar Kher, Hewerkeir, Ganga-Kher.

KHERD'HUR, the land of Kher, also called Kheralu, but more properly Kherala, the abode of Kher, the Kher being a shrub of great utility in these regions. It is a remote part of Rajputana, in which the Rahtor Rajputs first established themselves, expelling the Gohil tribe. Kherd'hur is named, in all probability, from the super-abundant tree of the desert termed kher, and d'hur, land. Its astringent pods, similar in appearance to those of the laburnum, are used in food. Its gum is collected as an article of trade; the camels browse upon its twigs, and the wood makes their huts.—*Tod's Rajasthan*, ii. p. 303.

KHERI, a district in Oudh, between lat. 27° 41′ and 28° 42′ N., and long. 80° 4′ 30″ and 81° 23′ S. Area, 2963 square miles, and population (1869), 746,350 persons. In Paila and Kheri parganas are some large lakes. Population chiefly Chamar, Ahir, Kurmi, Murao, Kisan, with small numbers of the Brahman, Kshatriya, Kayasth, and Vaisya.

KHERIAH, an aboriginal tribe settled on the plateau of Chutia Nagpur. The Kheriah build substantial, comfortable houses. They say that their first settlement was Pora, a village on the Koel river. Their language, customs, and appearance is sufficiently approximate to those of the Mundah to evidence a consanguinity, and they are regarded as an offshoot of the Santal or Ho race. They worship their river, the Koel, with rites similar to those with which the Santal or Ho adore the Damuda. The Kheriah, Bendkur, Birhor, and Bhuihar are described as regularly wild inhabitants of the hills and jungles, who have no fixed villages, but move about from place to place, burning down the jungles, sowing in the ashes, and after the harvest moving elsewhere. — *Dalton*, p. 155; *Campbell*, p. 36; *W. W. Hunter.*

KHES. Hind. A wrapper. Of these there are several kinds, — Khes-bafi, Khes-chandana, Khes-gadra. Khes-dabba is one with a large check; Khes-do-rukha has two right sides; Khes-tukridar is made of pieces of different colours joined together. At Hyderabad in Sind, the Khes is a chintz scarf. See Clothing.

KHEZAIL, a powerful and warlike tribe inhabiting the banks as far as the large village of Semavah, on the Euphrates, where the women are proverbial throughout the country for beauty of feature and perfect symmetry of form.—*Mignan's Travels*, p. 194.

KHIDMAT. Hind., Pers. Service. Peshkhidmat, also Khidmatgar, a servant, a lackey, a personal attendant. Khidmati, a sweeper, an attendant of a mosque.

KHILA HARIVANSA PARVA, a modern supplement to the Mahabharata, containing legends about Krishna.

KHILAT. Pers. A robe or dress bestowed by rulers in Southern Asia on persons whom they desire to honour. It usually consists of a set of shawls, pieces of silk, kimkhab, etc., but it may be any article—arms, horse, elephant—presented by the ruling or superior power as a mark of distinction.

KHILJI or Khalji, according to Elphinstone, p. 274, a Turki tribe, part of which, in the 10th century, was still near the source of the Jaxartes (Syr Darya), but of which a portion had even then been long settled between Seistan and India (*i.e.* in the Afghan country). In the 10th century they still spoke Turki. They seem very early to have been closely connected with the Afghan, with whom their name is almost invariably associated. Lieutenant Leech, in his valuable vocabulary of the languages west of the Indus, advances the opinion that the Afghans were originally a Turki or Moghul nation, but that at present they are a mixed race, consisting of the inhabitants of Gaur, the Turki tribe of Khilji, and the Perso-Indian tribes dwelling between the eastern branches of the Hindu Kush and the upper parts of the Indus.

KHILTA. Hind. A basket covered with leather, used for travellers' baggage in the N.W. of India.

KHILWAT. Arab., Hind., Pers. Privacy, retirement. Khilwat-khanah or Khilwat-gah, a private apartment, the women's apartments.

K'HINDRAY SHAH, a Maharram fakir.

KHI-NIE, a Chinese traveller in India. There was much intercourse between the Buddhists of India and China for some centuries after the introduction of Buddhism into China, but if the 10th century, after A.D. 975, the religious visitors from China became greatly more numerous. Chinese pilgrims had passed years in India in studying their religion, and wrote narratives of their travels. Of these there have been published the travels of Fa Hian, A.D. 399-414; of Hiwen

Thsang, A.D. 628-645; of Hoei Singh, who set out A.D. 518. The later traveller, Khi-Nie, who journeyed A.D. 964-976, was sent by the emperor of China at the head of 300 monks to seek relics of Buddha, and to collect palm-leaf books. These pilgrimages continue; and Colonel Yule had met pilgrims at Hardwar, who had crossed the Himalaya from Maha-chin to visit the holy places at Jawala Mukhi in the Panjab.—*Yule, Cathay*, i. p. 22, ii. p. 411.

KHIOU-PING. In China, the first civil and military mandarins who distinguish themselves in the administration or in war, receive the titles of koung, heon, phy, tze, and nan. All the officers, civil and military, of the Chinese empire, are divided into nine orders, the Khiou-ping, distinguished one from the other by certain buttons, or rather balls, of the size of a pigeon's egg, which are worn above the official cap. This distinctive ball is of plain red coral for the first order, of carved coral for the second, of a transparent deep blue stone for the third, of pale blue for the fourth, crystal for the fifth, of some opaque white stone for the sixth, and for the seventh, eighth, and ninth, of gilt and wrought copper. Every order is subdivided into two classes, the one active and official, the other supernumerary; but this makes no difference in the balls. All the official personages comprised in these nine orders, are designated by the generic term Kouang-fou. The term mandarin is unknown to the Chinese; it was invented by the first Europeans who visited the country, and is probably derived from the Portuguese word Mandar, to command, which they made Mandarin. See China.

KHIR. Hind. Rice boiled to a porridge with milk.

KHIRAJ. Arab. Tax, tribute, land tax, generally the largest item of revenue. In Timur's Institutes, the land tax was fixed at a third of the produce on all irrigated land, besides a certain due for using water from the public reservoirs; the land tax has, from the most remote ages, been the chief source of revenue in all Asiatic countries. The Sassanian kings of Persia established the tax at a third of the value of the produce; but when calamity overtook the crops, the cultivators received advances from the treasury. These are still continued in Southern India, and are called Takkavi, or support. By Muhammadan law the produce of the land is liable to two imposts, namely, the Ashr or tithe, a poor-rate due only on the actual produce of the soil; and the Khiraj or tribute, generally imposed on land within reach of irrigation or running water. No land can be subject to both Ashr and Khiraj at the same time. The Khiraj was imposed on Syria by Umar, and on Egypt by Amru; but Arabia is Ashr, a very small part of it being under the influence of running water. The Khiraj is of two kinds, Mukassiamah and Wazeefa. The former is due on the actual produce only, and resembles the Ashr; the latter is due whether there be any produce or not. The khalif Umar levied the Khiraj in Syria and Persia, the rate varying according to the value of the produce. Kings of India exacted one-sixth of the produce, besides a poll-tax, which was Mukassiamah; but the Muhammadans converted it into Wazeefa in the time of Sher Shah; and the emperor Akbar, while adopting the same system, carried it into effect with greater precision and exactness. In Persia, in the days of Timur, the land tax amounted to one-tenth of the produce of the soil; but the husbandman was loaded with a number of other taxes, which altogether exceeded half the produce. In India, Timur's descendant, the emperor Akbar, abolished all arbitrary taxes, and fixed the revenue according to the value of the different lands, which were divided into four classes—

1. Poolej, which never lies fallow.
2. Perowty, kept out of cultivation a short time, for the soil to recover its strength. The Poolej and Perowty were each of three kinds,—best, middling, and bad. The produce of a bigha of each sort was added together, and a third of the sum was considered as the average produce of Poolej or Perowty land; one-third of it being the revenue. Sher Shah exacted rather more.
3. Cheeher was land which had suffered from inundations or excessive rains, and received grants of remissions for five years.
4. Bunjer was land which had suffered from great inundations, and enjoyed still larger remissions.

Rewards were granted by Akbar for high cultivation, and the land settlement was made for periods of ten years.—*Ayin-i-Akbari; Neil Baillie on the Land Tax, quoted in Markham's Embassy*, p. 31.

KHIRD AFROZ, the Urdu version of the Pancha-tantra.

KHIRGAH, amongst the Hazara, a hunting match in which all the tribe take part; they surround a mountain, and, by firing matchlocks, drive the deer and other game to a place where some good shots are posted.

KHIRGAH, a circular tent. Moorcroft relates that after his first interview with the pirzada of Talikhan, he was lodged in a khirgah near Kunduz, the only furniture of which was a few mats and a clay stand for a lamp. The wants of a Turkoman are few in number: a tent, called a khirgah, shelters the whole family, and this is of a superior manufacture to anything of the kind made by the nomadic tribes of Persia. They can make these khirgah warmer than the best built houses,—a matter of some consequence to them, seeing how severe the winters are in the country they inhabit. The khirgah is conical in form, the framework being made of laths of hard wood interlaced one with the other, which can be opened or folded up at pleasure, according as they wish to camp or decamp; a camel, or at most two, is able to carry this tent. Thick felts are stretched either entirely or partially across this framework, according as the Turkoman may wish to avoid the burning rays of the sun or protect himself from the rain or cold; they are very commodious, are of all sizes, and a high price is given for them by some of the Persian nobles.—*Moorcroft's Tr.* ii. p. 480.

KHITAI, the Cathay of the nations of Europe, is the name by which China is styled to this day by all or nearly all the nations who know it from an inland point of view, including the Russians, the Persians, and the nations of Turkestan; and yet it originally belonged to a people who were not Chinese at all. The people of Khitai were a Manchu race who inhabited for centuries a country to the north-east of China, lying east of the Khingan mountains and north of the river Sira, and whose allegiance was rendered alternately to the khakans of the Turk and the emperors of China. In the beginning of the 10th century, the chief of one of their tribes made

himself supreme, first over his own entire race, and then successively over the adjoining nations of Asia from the sea of Korea to the Altai. The son of this conqueror having assisted to place on the throne Kao-tsu, of the brief dynasty of the later Tcin, this prince in return not only transferred to the Tartar a large tract of Northern China, but agreed to pay him yearly tribute, and to acknowledge his supremacy. The next Chinese sovereign protesting against these degradations, the Khitai ruler overran all the provinces north of the Yellow River, and established his own empire within them, under the name of Leao or the Iron Dynasty. This Khitai empire subsisted for two centuries in Northern China and the adjoining regions of Tartary.—*Yule, Cathay*, i. p. 116.

KHIVA is the ancient Kharasm, the Corasmia of European writers, which was famous between the 10th and 13th centuries, but was overthrown by Chengiz Khan, and its last sovereign, Jalal-ud-Din, fell in Mesopotamia (Kharasm), since which events the area of the territories have remained as at present, comprising a region along the Caspian from Persia north to the Kirghiz country and east to the Oxus and Lake Aral.

Khiva city lies about 40 miles west of the Oxus, distant from Merv 432 miles, from Herat and Orenburg 600. It is situated on a fertile plain near the Oxus, in lat. 41° 22′ 40″ N., and long. 60° 2′ 57″ E., and is about half a mile square, containing about 1500 houses, clay built and arranged in narrow streets, with a population of about 12,000 permanent inhabitants. It is surrounded by a wall and bastions and a broad belt of gardens. It has a few schools. The oasis is well watered by canals from the Oxus (Amu Darya), lying in a bend of both sides of that river at the southern shore of Lake Aral at the Kizil Kum steppe, Bokhara on the S.E., and on the W. the Ust Urt and desert of the Tchaudor Turkoman. It is 120 miles from N. to S., and 115 from E. to W. = 13,800 square miles.

The dominion subject to the Khan of Khiva is more extensive, viz. from the Caspian to the Aral, *i.e.* from the Russian fort of Alexandrovski to a little south of lat. 44° N.

The area of these boundaries is about 410,000 square miles, but, except the oasis of Merv and banks of the Oxus, the entire country is an unbroken expanse. The climate in winter is cold for five months, frost intense, 4° to 8° F. below zero. In summer the heat is intolerable, rain seldom falls; and in the autumn violent gales blow off the steppes and fill the air with impalpable dust, darkening the face of the land; in a few hours new sandhills are heaped up and former ones disappear; whole caravans are sometimes engulfed or suffocated in such sand storms, called Tebbad. The camels refuse to move, and lie stretched along the ground, and the travellers shelter themselves behind their beasts.

The population of the khanate consists of tribes of Uzbak, Turkoman, Karakalpak, Kazak or Kirghiz, Sart or Tajak, Persian, and Kurd slaves, mostly Persian and Kurd, with a few Russians, Jews, and Hindus. The settled population of the khanate resided in 60,000 houses, and amounted to 300,000 individuals. The nomade population dwelt in 12,000 Karakalpak huts, and were 160,000 in number.

The Ilayat families tributary to Khiva were 195,000, viz.:

Yamut,	15,000	Kazak, ...	40,000
Goklan,	20,000	Ihdar, ...	15,000
Chosdar,	2,000	Sarokh, ...	15,000
Kalpak,	30,000	Uzbak, ...	40,000

Khiva, in 1874, had 5000 population. The Chosdar are said to have been brought from the further borders of the Oxus by Muhammad Rahim Khan. The silver tenga is 5·375 pence. The tila, a gold coin, is worth 12s. 6d.—*Markham's Embassy; Fraser; Ferrier; Wolff's Bokhara; Vigne's Narrative; Moravief; Vambery's Bokhara; Collett's Khiva; Captain Valikhanof's Russians in Central Asia; Invalide Russe.*

KHIZDE. PUSHTU. The tent of the nomade Afghans near Herat and amongst the Hazara.

KHIZR, also written Khidjer and Khidr, is the Khaja Khizr of Muhammadans of Persia and India. The Hebrew notions about the identity of Phinheas and Elias have been adopted and expanded by the Muhammadans, who also identify in some way with them their mysterious prophet Khidr or Khizr. Hermitages or chapels dedicated to Khidr and Elias appear to have been very numerous in Muhammadan countries, especially on hill-tops, and the oriental Christians and semi-Christians also always associate Elias with mountain tops. There seems to be scarcely a prominent peak in the Greek Archipelago with which the name of Elias is not connected. Throughout India, Khizr is a popular Muhammadan saint. He is supposed to be immortal; having on one occasion drank of the waters of immortality, said to be situated in regions of darkness in a remote corner of the world, and some identify him with Enoch, some with Elijah. He is supposed to perambulate the world, like the wandering Jew, and to have occasionally appeared to different people. He is always clad in green, as his name in Arabic indicates. The government of Kassan terminates, and that of Sulmania in Kurdistan commences, at the river Leilan; near this is a small building, a ziyarat or place of pilgrimage, called the Makan of Kidder Elias, or resting-place of the prophet Elias. The Muhammadans believe that Elijah never died, and that he is still on earth, where he is to remain until the coming of Jesus Christ. They call him Khizr or evergreen, on account of the everlasting life which he enjoys, and by which he is kept ever in a flourishing condition, in a paradise which, say they, might be taken for heaven itself. In reference to this, a Turkish poet observes, 'Keep yourselves from believing that this world is your home, your home is in heaven alone; strive therefore by the means of virtue to reach that home where Elias dwells, and where a place is prepared for you.' These notions of the Muhammadans are derived from the Jews. Jesus himself was taken for Elias, re-appearing after nine centuries of concealment. The prophecy that Elijah should come before the great and terrible day of the Lord, has probably given rise to the notion that he had not yet completed his part on earth. In Northern India, on the Fridays of the month Shaban, along the banks of the Jumna and Ganges, Muhammadan women launch tiny boats on the rivers in his name. Heber (i. p. 166) mentions that the legends in Lower Bengal regarding Khizr are made up of different Rabbin-

ical fables concerning Eliezer, the servant of Abraham, and the prophet Elijah. He is by some supposed to be St. George of England, whom they call Khizr Elias. A legend is to the effect that he was vizir and general to Kai Kobad of Persia, and discovered and drank of the fountain of life, and will never die, but will await the last trump. —*Ibn Batuta; Burton's Scinde*, ii. p. 249; *Rich's Kurdistan*, i. p. 52; *Yule's Cathay*.

KHO is a population of about 400,000 people occupying the delta of the Mei-kong, in Kambojia, between Siam and Cochin-China, the remaining 100,000 of the population being Chinese, Cochin-Chinese, Siamese, Malays, Portuguese, and mixed races. See Kambojia.

KHOGILU. According to the Jahan Numa, one of the earlier divisions of the province of Fars was into the five Kureh, circles or departments,—Istakhr, Darabjird, Shahpur, Ardashir, and Kobad. At present it consists of three principal parts, viz. — 1. Fars proper (Persis proper); 2. Luristan, near the Persian Gulf; and 3. Behbehan, or the country of the Khogilu, which represents the Kureh of Kobad. Behbehan is bounded on the north by the great belt of mountains which separate Irak Ajam from the southern provinces of Persia; the northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram Hormuz and the Ka'b country lie to the west, while Shulistan separates Behbehan on the east from the direct dependencies of Fars. On the E. and S.E., Behbehan is surrounded by the Mamaseni tribe, on the N. and N.W. by the Bakhtiyari, and on the W. and S. by the Ka'b Arab. Besides the Khogilu, several other tribes inhabit these mountains, such as the Jarumi, the Yusufi, and upwards of a thousand families occupy the plain of Behbehan, settled in villages or dispersed in tents. These are the Juma-Buzurg, the Afshar, and some Arab settlers. The names of the Turkish tribes are—the Karabaghi, Agbaghi, Begdeli, Golebi, and Sheiri, speaking the Turkish language; while the Afshar, although of the same origin, have forgotten their mother-tongue. The Doveti, Ghesti, Mayaz-kuli, Barash, Milosi, and Juleki are of the Lur race, and speak the Lurish dialect.—*De Bode's Tr.* p. 275.

KHOGIR. HIND. A native saddle, a pack-saddle. Khogir Shah, a Maharram fakir.

KHOJ. HIND. Information, search. Khoji, a tracker. In the Panjab, professional trackers are employed to trace stolen cattle, by their foot-prints (kori or pyra). They do this even for a hundred miles, and their success, even through unpromising places, as sandy plains and gravel and kankar beds, and over rivers and swamps, is very extraordinary. The Panjab Khoji is similar to the Paggi of Gujerat. The system of tracking criminals to their homes and haunts rests in India solely on the responsibility of village headmen for the good behaviour of their charge.—*Calcutta Review*, No. lxxiii., Sept. 1861, p. 11.

KHOJA, corrupt. of Khaja, a respectable man, a respectable term for a eunuch. Also the Khaja, name of an Ismaili sect of Sind and the western parts of India. See Ismaili; Karmati; Khaja.

KHOJA AHMAD YESEVI is to this day the patron saint of the wandering nomades in the steppes of Central Asia. His moral and religious poems, of which some examples are given in Vambery's Tchaghataian Studies of Language, are as highly venerated by the Kirghiz and Uzbaks as the Koran itself.—*P. Arminius Vambery, Bokhara*, p. 246.

KHOJAK, a tribe of Pathans, an offshoot of the Kakar of Mekhtar.

KHOJEND has a turquoise mine, but the stones are of a greenish hue, and far less esteemed than those of Naishapur, in Khorasan. There is another of very insignificant note somewhere in Kerman. —*Fraser's Khorasan*, p. 105.

KHOKAND, the ancient Farghana. The khanate of Khokand is an almond-shaped valley about 160 miles long, from Makhram to Uzgend. It is surrounded on all sides by mountains and mountain plateaux. Khokand town is modern, with 75,000 inhabitants. Paper is largely made. Goitre is very prevalent.

KHOLA. BENG. The drier parts of the islands in the delta of the Ganges and Brahmaputra.

KHOMAN RASA, a Hindi work, descriptive of the last sack of Chitore.

KHOMASEE, a particular kind of magic square.

KHONBEE. HIND. A cotton and silk cloth bordered with gold and silver thread.

KHONDAMIR was born at Herat about A.H. 880 (A.D. 1475). He was the son of Mir Khond. His name was Ghaias-ud-Din Muhammad-bin-Humam-ud-Din, and he wrote the Khalasat-ul-Akhbar, which is an abridgment of the Rauzat-us-Safa, written by his father. From his early youth he devoted his life to the study of history, and had the benefit of the large library collected by Ali Shir. He accompanied an embassy to Khusru Shah, the chief of Kunduz, and was afterwards appointed to the ecclesiastical court. In the year 913 (A.D. 1507–8) Khorasan was overrun by the Uzbaks, and Khondamir went to Georgia, where he wrote the Maasir-ul-Muluk, the Akhbar-ul-Akhyar, the Dastur-ul-Wazra, the Makarram-ul-Akhlak. He left Persia about A.H. 935 (A.D. 1528–29), he was introduced to the emperor Baber at Agra, and accompanied him to Bengal. On Baber's death he attached himself to Humayun, in whose name he wrote the Kanun-i-Humayuni, Elliot says the Humayun Nama. He accompanied Humayun to Gujerat, and died in his camp A.H. 941 (A.D. 1534–35), aged 61 or 62. At his own request, his body was conveyed to Agra, and buried at the side of Nizam-ud-Din Auliyand the saint, and Amir Khusru the poet. The Khalasat-ul-Akhbar brings Asiatic history down to A.D. 1528. Khondamir's larger chronicle was the Habib-us-Siyar, or Friend of Travels.—*Elliot's Hist. of India; Ouseley's Travels*, ii. p. 400.

KHONE, Kone, or Konar. TAM. Meaning king, a title of the Idayar or great shepherd race of the south of India.

KHONE. ARAB. Brotherhood, the tribute claimed from time immemorial by the Bedouins in return for their protection. Each village pays Khone to one shaikh in every tribe, who then acknowledges the tribe as his ukhta or sister, and is bound to protect it against all the members of his own tribe.

KHONG-BONG, a musical instrument of the Siamese, composed of a semicircle of suspended tongues.

K'HOPRA. HIND. Dried kernel of the cocoanut. K'hopra ch'hilni ki chouki, an instrument for rasping the kernel of the cocoanut. K'hopra, also small leather caps (shaped like the end

or point of the cocoanut shell), used to blind cattle turning the Persian well-wheel.

KHOR, a territory south-east of Ladakh and eastward of the Byltæ of Balti or Little Tibet. Its people are supposed to be the Chauranœi Scythæ of Ptolemy.—*A. Cunningham.*

KHORAN, a tribe who, a little before the birth of Christ, ruled over Afghanistan, the Panjab, and Khorasan.

KHORASAN may be regarded as comprising the whole of Persian territory lying between the Caspian and the Afghan border near Herat. On the north it is bounded by the Aral Caspian desert, from which it is now separated by the long narrow strip of Akhal Tekke Turkoman territory occupied by Russia; on the south it is severed from the rest of Persia by the Great Salt Desert; on the east a strip of savage, though fertile country, overrun by Turkomans, separates it from Afghanistan; and on the west the decrepit province of Astrabad, already half-Russianized, connects it with the Caspian portion of the Iranic empire. Its length is about 500 miles, its breadth 400, and its superficial area about 200,000 square miles. MacGregor's calculation that the population of Khorasan is about a million and a quarter may be right. Perhaps it would not be a very erroneous calculation to fix the entire population of the region lying between the Caspian and Herat at two millions, consisting of scraps of various races, and all as much inflamed against the Persian as they are favourably disposed to Russian rule. The tribes are numerous, Arab, Baluch, Beyat, Chulai, Karai, Khurshahi, Lek, Jalayer, Mardi, Muzdurani, Nekhi, and Timuri. The country is essentially mountainous; and of the rivers, the Atrek is the only one that does not waste its waters upon the desert. The fertility of the province has long passed into a proverb, and no travellers exalt it more strongly than the Russians. Previous to the fall of Geok Tepe, General Skobeleff made a reconnaissance into the country to the south of the Kopet Dagh, which used to belong to Khorasan, but of late years fell under the sway of the Tekke Turkomans. This district is by no means the most favoured portion of Khorasan, according to Petroosevitch and Baron Bode. General Annenkoff, however, who was on Skobeleff's staff at the time, writes in the most enthusiastic strains of the district, praising it for its forests, its vines, and its magnificent pastures.

Khorasan contains many fruitful plains, some lofty ridges of mountains, and several wide tracts of desert. It is, except in its most fertile districts, but partially supplied with water; and from local position has, perhaps, been more exposed to predatory invasions than any country in the universe. Its boundaries have greatly varied with the altering power of its rulers, and even at present surrounding nations use the name differently. The emperor Baber tells us, in his Commentaries, that in his time the people of India applied the term Khorasan to all the regions west of the Indus.

Whenever Persia was distracted by internal factions, or had to sustain foreign attack, the tribes of Tartary crossed the Oxus and spread themselves over Khorasan. It was this province which the valour of Rustum had to defend against the continual inroads of Afrasaib. The Seljuk chiefs invaded it long before their rule was extended over the other parts of the empire to which it belongs. It suffered greatly from the ravages of Chengiz and of Timur; and during the reigns of the first Suffavean kings, the Uzbaks, who had conquered the country of Bokhara, made annual attacks upon its fields and cities. The genius of Abbas the Great checked these ruinous inroads, and Nadir made this race of plundering Tartars tremble for their own possessions. But the death of that conqueror left his native province more exposed than ever to hostile invasion; for while his descendants, spite of the vast inheritance which he had bequeathed them, exercised a mock sovereignty over the city of Mashed, several military chiefs, taking advantage of the distracted state of the empire, seized upon the different forts of Khorasan, and, aided by the confusion of the times, succeeded in establishing a number of small principalities, over which they exercised an almost regal sway, making war or concluding peace with their petty neighbours as it suited their interest, and sometimes defying, and at others paying homage and tribute to, the powerful monarchs by whom they were surrounded. Mashed, the capital of the Persian division of Khorasan, is situated about two farsang from the ruins of the ancient city of Tous, and is celebrated for a very superb sepulchre, in which repose the relics of Imam Raza, and those of the khalif Harun-ur-Rashid. Khorasan is peopled by many races; its warlike inhabitants boast their descent from Arabian, Kurd, Turkish, and Afghan tribes, who came into the province at different periods to subdue or to defend it; but neither their having so long inhabited the same soil, nor a sense of common danger, has softened those inveterate prejudices, or abated that rooted hatred, with which these races regard each other; and it had been the policy of the monarchs of Persia to increase divisions, which enable them to keep in subjection a country whose inhabitants, if united by any feeling that resembled patriotism, would have been dangerous; for the men of Khorasan, from the robustness of their frame, and from their being continually inured to war, are proverbially brave; and Nadir Shah used to term this fine province 'the sword of Persia.' The Kayn Arabs have long enjoyed the reputation of being the hardiest and the bravest of the infantry of Khorasan. A part of the district of Kayn borders on the desert of Seistan, while it is bounded in another quarter by the territories of the Afghans.

Khorasan is the name by which the Afghans, Baluch, and Brahui designate the region known to Europeans as Afghanistan and Baluchistan. It is a softened pronunciation of Khoresthan, or country of the sun or the place of light, in other words and thus corresponding to the German Morgenland, the east, the orient, as being the easternmost province of the ancient empire of Cyrus and Darius. The Afghans, however, now distinguish their own land as Pukhtun Khwa or Pathan country, and Watan Khwa or native country. The ancient Khorasan stretched far into Chinese Tartary, and was occupied by several colonies. It had the Indus on the east, the desert of Yeza on the west, the river Amu Darya (Oxùs) on the north, and the Arabian Sea on the south.—*Markham's Embassy; Kinneir's Memoir; Malcolm's Persia; Khanikoff sur l'Ethnographie de la Perse; MacGregor; Bellew.*

KHOREWAH, also written Kharawa, a considerable tribe dwelling near the Oraon and to the north of the Larka Kol, in the highest hills to the north of Jushpur, and in those between Sarguja and Palemow. They speak much the same language as the Ho, Santal, Bhumi, and Mundah, and they appear to be of the same stock, though much less civilised. They are a considerable, ugly, and ill-favoured tribe, in the district of Palemow, in Singrowlee, the hilly country of Mirzapur and Rewah, and on the borders of Benares and Behar, and westwards in parts of Sarguja and Jushpur, and they are numerous to the N.E. in those parts of the plains adjoining the hills. They are also found on the outskirts of the Patna and Arrah districts. A division of the Kharawa tribe is the Bhogtah. The Kharawa are the dominant tribe of Palemow and Singrowlee. They are labourers, palanquin-bearers, and porters. The rajas of Singrowlee and Jushpur are Kharawa, though claiming to be Rajput. They have no caste distinctions, and eat anything. The Kharawa of Sarguja do not use the plough. The race are mostly short of stature, but with well-knit muscular frames, complexion brown, not black, sharp, bright, deep-set eyes, noses not deficient in prominency, somewhat high cheek-bones, but without marked maxillary protuberances. The Kharawa of the hills are wild savages, armed with battle-axes, bows and arrows. They are nomadic, and migrate every second or third year. Their villages are therefore mere standing camps, consist of about forty houses built round a large square, in the centre of which is the dancing area.—*Dalton*, p. 176; *Campbell*, pp. 36, 40, 378; *Captain Blunt in Bengal As. Soc. Res.* vii.

KHORFAKEN. The date trees on the coast of Oman form a continuous grove to Khorfaken, a distance of 150 miles, and the Arabs have a saying that a traveller may proceed the whole distance without ever losing their shade. Dates form a principal export from Oman, large quantities being taken to India. The middle classes of the Muhammadan and Hindu population of India are very partial to them. The best are brought from Basrah and Bahrein, those from Oman being classed next in excellence. Some are simply dried and then strung on lines; others, which is the usual plan, are packed in baskets.—*Wellsted's Travels*, i. p. 188.

KHOSA. PUSHTU. A piece of fine pashmina cloth, very soft, worn as a shawl, at either end there is a slight border woven; also mufflers for feet of cattle, used by thieves.

KHOSA. There are in the delta of the Indus other pastoral and peaceable classes besides the Jat of Muhammadan persuasion, such as the Khosa in Upper Sind, the Sikh Lohana, and immigrants from the Panjab, who have in many instances become amalgamated with the people of the country. The Khosa occupy the sandy tract called the Thal between Hindustan and Sind, and become a predatory tribe on the eastern confines of Sind, verging towards the Cutch territories, where they are very troublesome. There are, also, on the eastern boundaries, Rajputs located as wandering herdsmen. The Daoudputra, who inhabit generally the country of that name in the north, are to be met with in various parts of Sind. The Sumah are Jat, though they are generally known by the former title; such also are the Machi and numerous other subdivisions of the Jat tribes. Up till the early part of the 19th century, the Mair in the south, the Larkhani in the north, and the desert Sahrai and Khosa in the west, carried on a system of pillage in the Rajput countries.—*Tod's Rajasthan*, ii. p. 155.

KHOTEN, Iltsa, Ilchi, or Ili, lies to the south-east of Yarkand, in lat. 37° 15′ N., and long. 79° 25′ E., and is situated between, or rather above, the junction of the Khoten and Karakash rivers. It is surrounded by a low wall, and has 18,000 houses, with eight serais for the use of foreign merchants and traders from Ilchi, Karakash, and Yurunkash. Khoten is nearer than Yarkand is to Kashmir, but the routes from and to the latter place are more generally adopted by traders. From Yarkand to Leh in Ladakh the distance is reckoned at very nearly 500 miles, while from Khoten to Leh it is about 350, and from Leh to Sultanpur in Kulu it is close on 250 miles more.

Khoten district has a population of 129,500 souls. It is at the northern base of the Kouen Lun mountains, and includes the deep valleys which drain its slopes into the river on which Ilchi or Iltsa, the capital, with its 6000 houses, stands. The district is famous for its musk, silk, gold, and jade.

Khoten may be considered the most central and inaccessible state of all Asia, but it was a seat of very ancient civilisation, and was already in friendly relations with China in B.C. 140. In the 4th century of our era, Buddhism was in high development here. Though much of the surface appears to be rugged mountain, it is interspersed with level tracts, which are both fruitful and populous. At one time, like the other states of Eastern Turkestan, it was under a Muhammadan chief of Turkish or Mongol descent. —*Bunsen; Yule's Cathay*, ii. p. 567; *Moorcroft's Travels*, i. p. 367; *Klaproth, J. Asiatique*, No. xvii.; *Histoire de la Ville de Khoten, Remusat; Quarterly Oriental Magazine*, Calcutta, Sept. 1831; *Russians in Central Asia; Capt. Valikhanof and M. Vemukof*, p. 158; *P. Arminius Vambery's Bokhara*, p. 9.

KHOUNG. BURM. A kind of rice beer made by the hill tribes of Burma.

KHOZDAR, a valley and small town in Baluchistan. The valley is extensive, in shape somewhat like a Maltese cross, and through it, from north to south, passes the caravan road to Wudd and Beyla. In the hills near Khozdar, lead is found. To the west by a little north of Khozdar, and distant about 10 miles, is the small town of Khappar, capital of the district, inhabited by the Kaidrani tribe. Khozdar figures in Persian romances, and was formerly beyond doubt a place of note. A considerable tappa or mound lies north of the town. From Khozdar along the bank of the Rudkhana, the soil is strewed with fragments of burnt brick and pottery, and farther on, a rude obelisk of mud, 20 to 25 feet in height, the base of cemented stones.—*Dr. Cooke in Bombay Med. Trans.*, 1860; *Masson's Journeys*, ii. 44.

KHUBBES, a district of Persia, with a small town of that name, 50 miles E. of Kerman. It is famed for its henna and its dates, the latter of the black and red kinds. The summer heat is so intense that the people go to the higher ground. The poisonous wind, the Bad-i-Simūm, blows for forty days in summer, generally an

hour before and an hour after noon. About 12 miles to the N.E. is a plain 9 to 12 miles long, with salt several inches deep. Eastward of Tekkah lies the great desert extending towards Seistan. It is uninhabited.—*MacGr.* p. 249.

KHUD. PERS. Self. Khud-rai, self-opinionated. Khud-pasand, vain, conceited. It has many combinations. Khud-ba-daolat, our royal selves.

Khud-baft, soft silk fabric made for shawls. Khud-kasht, a person cultivating his own (khud) soil (kasht); land so cultivated. Khud-rang, natural coloured or undyed, applied to woollen fabrics.

KHUDA. HIND. God. Khudawand, master; Nao-khuda, a shipmaster, the English nakoda. Khuda Hafiz, may God protect you, a common Muhammadan salutation when parting with a friend; adieu. The Arabs say Allah Yesellemak, God preserve thee, or Allah Yebarik, God bless thee.

KHULK. PERS. The down which grows under the hair of the mountain goat. It is of this that the Kashmir shawls are fabricated.

KHULLA-MINAR, a pyramid of heads. In 1732, Rustum Khan was appointed to the office of foujdar of the Northern Circars. He exterminated the petty chiefs whom he found there. He offered a reward, and a sufficient number of the heads of the zamindars and their followers were brought in to form two head pyramids or Khulla-minar.

KHULLEE. GUJ. In Gujerat an open spot contiguous to the village in which the whole harvest produce of the village is stored, over which a guard is placed. Attached to the Khullee are a number of pits into which the seed is thrown when brought from the field.

KHULM or Tashkurgan town is 307 miles N.N.W. of Kabul, 310 miles S.E. of Bokhara, 50 miles from Balkh, 70 miles from Kunduz, 420 miles N.E. of Herat, and 497 miles N.W. of Peshawur by Kabul. It is situated on a plain immediately north of the gorge by which the Khulm river escapes the hills. It consists of four or five villages, with a population, in 1845, of 15,000 souls. Since the 9th May 1855 it has been in the hands of the Afghans. Silk is largely produced, and passes through Kabul in the route to Multan. The caravans of Bokhara and Kabul in summer pass successively to Khulm, and render it populous and rich. A great majority of the inhabitants are Tajak. Khulm appears to have been at one time in the possession of a family called Khallach or Killich; and on the north side of the Oxus in this longitude, occupying part of the hill country east of Bokhara, is a poor but independent people of Persian race called Ghalcha. Meyendorff calls them very swarthy, but Valikhanof says expressly, 'The Tajak have dark complexion and hair, whilst fair people are found among the Ghalcha.' This might explain the yellow-haired people mentioned by Goes, and his use of the expression Calciensium populos.—*Mohun Lal's Travels; Ferrier's Journeys; Elphinstone's Caubul; Burnes' Travels; Yule's Cathay.*

KHUMBO, a rana of Mewar capital, Chitore, A.D. 1418-1468, a zealous Jaina religionist, who built the Jaya Stambha towers on the brow of Chitore, also the principal temple at Sadri, near Komulmir. During his long reign he filled his country with beautiful buildings both civil and religious.

KHUMDAN was the name given by the Turkish and Western Asiatic nations to the city of Chhanggan, now represented by Sin-gan-fu in Shen-si, which was the capital of several Chinese dynasties between the 12th century B.C. and the 9th century A.D.—*Yule's Cathay*, i. p. 51.

KHUMI and Kuki, two tribes who occupy the hills of Sylhet, Tiperah, and Chittagong; the Khumi on the skirts, and the Kuki on the tops of the hills. The Kuki are the ruder or more pagan, though also tinctured with Hinduism. They term their supreme being Khojein Putiang, to whom they sacrifice a gyal, and an inferior one is named Shem Saq, to whom they offer a goat. Shem Saq is put up in every quarter of a village, in the form of a rude block of wood. Before this they place the heads of the slain, whether of men in war or of animals of the chase.—*Latham.*

KHUMS or Khams. AR. A fifth part, described in the Koran as the property of God, his prophet, and his relations, or men of his tribe, the Bini Hashim, who are poor and destitute. The right of the Bini Hashim to a share in the khams is grounded upon their being excluded from any portion of the zukaat.—*Malcolm's Persia.*

KHUN, choli pieces of Dharwar, used by women working in the fields. 3 annas for each choli.

KHUN. PERS. Blood. Khuni, a murderer. Khunrez, bloodshed. Khun-i-Shavam or Khun Siawashan, dragon's blood; the Dam-ul-akhwain, also the balsam or resin of Pterocarpus draco.—*Powell.*

KHUND or Khand. HIND. A pool, a spring, a bath.

KHUNDOOA. HIND. A silk fabric made in Khurdha estate, in the Puri district, and worn principally by the Puri people.

KHUNGROO. HIND. An article of female jewellery, anklets with bells.

KHUNNIARA, in Kangra, contains inscriptions in old Pali, of date 1st century A.C. The character used in the inscriptions is Aryan Pali. These are of palæographic importance, as showing the transition state of the Ariano-Pali character. —*Bengal As. Soc. Journ.* xxiii. p. 57.

KHUNOONG, a race or tribe occupying the mountains at the sources of the Irawadi river, in lat. 27° 40′ N., and long. 98° E. They dwell to the N.E. of the Khamti race.

KHUNUKIANA. ARAB. In Arabic medicine, cold remedies.

KHURAK. PERS. A dose of medicine; food. Khuraki, HIND., PERS., an allowance, a dose, a mouthful.

KHURD. PERS. Small. Khurdah, leavings, fragments, small money, change cash.

KHURDADBA or ibn Khurdadba, the surname of Abu'l Kasim Abdullah-bin-Abdullah-bin-Khurdadba, an officer of high rank under the khalifs, who died A.D. 912, A.H. 300. He employed his leisure in topographical and geographical researches, and wrote the Kitab-ul-Masalik wa ul-Mamalik.—*Elliot.*

KHURDHA, in Bengal, is a place noted as the residence of Nityananda, the fellow-reformer of Chaitunya. The latter retired to Nilachull, leaving his colleague at the head of the diocese in Bengal. Nityananda at last took up his abode at Khurdha, and married a Brahman's daughter.—*Travels of a Hindu*, i. p. 5.

KHURDHA, a subdivision of the Puri district in Orissa. It was a Native State until 1804, when, on the raja rebelling, it was resumed by the British; but the rája continued to be the hereditary guardian of the Jagannath temple until convicted of wilful murder in 1878, and transported to the Andaman Islands.—*W. W. Hunter.*

KHURD KABUL, a formidable defile or pass about six miles long, shut in by lofty hills, between whose precipitous sides the sun, in winter, only looks in for a little. When General Sale's brigade passed through this defile in 1841, they were opposed by 200 Ghilzai, and lost 67 men in killed and wounded. It was through this, after the evacuation of Kabul, that 4500 fighting men, including 700 European soldiers, and 12,000 native camp followers, with their women and children, endeavoured to retreat, but the Afghans fired on them, and 3000 souls perished in the attempt, 8th Jan. 1842. When Sir George Pollock twice passed through this defile, he crowned the heights and suffered no opposition.—*MacGr.* p. 540.

KHURI, a clumsy sailing vessel peculiar to the Maldive Islands, which visits India during the fine weather of the north-east monsoon.

KHURM. The inhabitants of Khurm call themselves Tajak, but have no tradition of their origin. They are evidently a mixed race, some of them with remarkable large heads and features, some with small heads and sharp lineaments. The complexion of the men is dark, but that of the girls and young women fair, although they had all black hair and eyebrows, the latter as regularly arched as if they had been pencilled. They are generally pretty, almost handsome.—*Moorcroft's Travels*, ii. p. 398.

KHURMA. PERS. Phœnix dactylifera. Dates, the dried drupes; also sugar of dates. The name is also given to the dried drupes of P. sylvestris.

KHURNK'H, the tribal name of the Oraon race of Chutia Nagpur, known in many parts of India as Dhangars, from Dang or Dhang, a hill.

The Oraons in the Lohardagga district, which includes the whole of Chutia Nagpur proper, number 362,480; in Sirguja, about 20,000; Jashpur, 25,000. They drink spirits when they have the opportunity, but indulge in no narcotics except tobacco, which the males chew and smoke; of ganja, bhang, and opium they have a wholesome dread.

The name of the day of the week is often given to their children, as Etwár to a boy, Etwari to a girl born on Sunday, Sumar and Sumari for Monday; but these are Hindi terms. They have no such names for the days of the week in their own language. Most of the common names are, by a change of termination, adapted to male or female, as Birsa, Birsi; Dulka, Dulki; Chamra, Chamri.

At their marriages most of the males have warlike weapons, real or sham, and as they approach the village of the bride's family the young men from thence emerge, also armed, as if to repel the invasion, and a mimic fight ensues, which, like a dissolving view, blends pleasantly into a dance. In this the bride and bridegroom join, each riding on the haunch of one of their friends.

KHURPA or Karpa. HIND. A weeder.

KHURUM, afterwards Shah Alam, was son of Aurangzeb by a Rajput princess of Amber, of the Cutchwaha tribe, and hence probably his name Kurm, synonymous to Cutchwa, a tortoise. —*Tod's Rajasthan*, i. p. 367.

KHUSH. HIND., PERS. Pleasant, agreeable: hence Khush bash, a well-to-do person; Khush khared, an open market; Khush-hal, in good condition; Khushi, pleasure; Khush hali, a voluntary contribution, a benevolence.

KHUSHAB, a battle was fought here on the 8th February 1857.

KHUSHHAL CHAND, author of the Tarikh-i-Mahomed Shahi, also called Tarikh-i-Nadir uz-zamani. It is a history of India from the time of Ibrahim Lodi to Muhammad Shah, A.H. 1152 (A.D. 1739–40), and gives also notices of other governments. He was a clerk in the Diwani office of Dehli in the time of Muhammad Shah.

KHUSH-HAL-KHAN, the khan of the Khatak tribe, a voluminous author, who wrote several poems for the purpose of exciting the national enthusiasm of his countrymen when Aurangzeb was engaged in a war with the north-eastern Afghans. The poems are remarkable for their high and ardent tone, and for their spirit of patriotism and independence. He was the best governor the Khataks ever had, being liberal, brave, and pleasing in manners. His poems are much prized by the Khataks. He was confined at Dehli by Aurangzeb for 12 years, owing to his eldest son, Byram Khan, having killed one of the sons of Shaikh Rahmkar, a famous Khatak saint. The whole of this time he employed in his favourite pastime of writing poetry. He had 56 sons, of whom 32 lived to manhood. He was a descendant of Malik Akor. Malik Akor agreed with the emperor Akbar to protect the country south of the Kabul river from depredations, and he thus became the chief of the tribe, and handed his authority down.—*Elphin.* p. 561.

KHUSHKA. HIND. Plain boiled rice, also the mark of sovereignty placed on the forehead of a Hindu prince. The Maasar-ul-Umra states that at the time when it was written the rajas of Udaipur were exalted over all the princes of Hind, and that other Hindu princes, before they could succeed to the throne of their fathers, had to receive the khushka or tilak of regality and investiture from them. The tilak of the Udaipur princes is made with human blood.—*Tod's Rajasthan*, i. p. 235.

KHUSH-ROZ. The No-roza, or New Year's Day, when the sun enters Aries, is one of great festivity among the Muhammadan princes of Persia; that alluded to by Prithi-raj and by the historian Abul Fazl was not New Year's Day, but a festival especially instituted by Akbar, held on the ninth day (No-roza), following the chief festival of each month. Abul Fazl says the court assembled, and was attended by all ranks. The queen also had her court, when the wives of the nobles and of the Rajput vassal princes were congregated, and a fair was held within the precincts of the court, attended only by females. The merchants' wives exposed the manufactures of every class, and the ladies of the court were the purchasers. Akbar was also there in disguise, by which means he learned the value of merchandise, and heard what is said of the state of the empire and the character of the officers of government. Abul Fazl thus softens down the unhallowed purpose of this day; but posterity cannot admit

that the great Akbar was to obtain these results amidst the Pushtu jargon of the dames of Islam, or the mixed Bhaka of the fair of Rajasthan. At these royal fairs were sold the productions of princely artisans, men and women, and which out of compliment to majesty made a bounteous return for their industry.

The great Akbar hazarded his popularity and his power by the introduction of a custom appertaining to the Celtic races of Europe and the Goths of Asia, and degraded those whom the chances of war had made his vassals, by conduct loathsome to the keenly-cherished feelings of the Rajput. There is no doubt that many of the noblest of the race were present on the No-roza; and the chivalrous Prithi-raj was only preserved from being disgraced by the high courage and virtue of his wife, a princess of Mewar, and daughter of the founder of the Suktawut. On one of these celebrations of the Khush-roz, the monarch of the Moghuls was struck with the beauty of the daughter of Mewar, and he singled her out from amidst the united fair. On retiring from the fair, she found herself entangled amidst the labyrinth of apartments by which egress was purposely ordained, when Akbar stood before her; but instead of acquiescence, she drew a poniard from her corset, and held it to his breast, dictating, and making him repeat, the oath of renunciation of the infamy to all her race. The anecdote is accompanied in the original description with many dramatic circumstances. The guardian goddess of Mewar, the terrific Mata, appears on her tiger in the subterranean passage of this palace of pollution, to strengthen her mind by a solemn denunciation, and her hand with a weapon to protect her honour. Rae Singh, the elder brother of the princely bard, had not been so fortunate; his wife wanted either courage or virtue to withstand the regal tempter, and although she returned to their dwelling in the desert loaded with jewels, as Prithi-raj expresses it, 'she returned to her abode, tramping to the tinkling sound of the ornaments of gold and gems on her person; but where, my brother, is the moustache on thy lip!'—*The Parsees; Tod's Rajasthan*, i. pp. 72, 345.

KHUSRU or Amir Khusru, of the 13th and 14th centuries, a famous poet of Hindustan, near whose tomb are those of Khaja Kutub-ud-Din, of Muazzam, son and successor of Aurangzeb, of Bahadur Shah, and the tomb of Altamsh, whose daughter, the sultana Raziah, occupied the throne. The tomb of Imam Mushudi, the spiritual guide of Akbar, is west of the mosque of the Kutub-i-Islam. The massive tomb of Taghalaq Shah is outside the southern wall of Taghalaqabad, and was built by his son Muhammad. The Leela Burj, a blue tomb near the Humayun, covers the remains of a holy Syud. The poet Khusru's tomb is side by side in the same courtyard with the saint, his friend and contemporary. No imaginary being, but a living Hindu princess, Dewala Devi, inspired the songs of Khusru. His honey-tongued muse got him the surname of the Parrot of India. The date of his tomb is 1350. He lived and died in India, but was a native of Samarcand, and wrote in Persian. He was the contemporary and friend of Nizam-ud-Din Aolia, near whose tomb, in the vicinity of Dehli, is the Chownsăth Khumbé erected over Khusru's remains. He lived at the court of Ala-ud-Din Khilji. In a Persian poem he celebrated the loves of Khizr Khan and Dewala Devi.

KHUSRU, the Chosroes of the Romans, who applied it as a surname to almost every king of the Sassanian dynasty, and it was applied by the Arabs, like Cæsar among the Romans, to many ancient kings of Persia. Khusru, a polytheist, who was king of Elam (not of Persia), conquered Babylon.

The Tak-i-Khesra formed part of the royal palace of Ctesiphon. The palace was commenced by Sapor II., the ninth king of the Sassanian dynasty, at the beginning of the 5th century. It was added to about a century later by another king of the same line, Nushirwan, usually called Kushru I., and was finished by his grandson, Kushru Parwez or Khusru II. The part remaining is merely a portion of the façade and one of the halls of audience,—not a tenth part probably of the original building. It was covered with brilliant white stucco, and the halls were decorated with historical paintings and figures of the heavenly bodies. It was taken from the Persians by the Arabs in the time of the khalif Umar in the sixteenth year of the Hijira, and was called by them the White Palace. Its splendour and magnificence, as related by the Arabian historians, are scarcely credible. The dimensions of the hall were—105 feet in height, 95 feet in width, and 180 feet in length. The building remained entire till the time of the khalif Al-Mansur, who endeavoured to destroy it in order to make use of the materials in the construction of his palace at Baghdad. At the close of the 9th century the khalif Muktassi-b-illah regularly unbuilt the White Palace, in order to erect his famous edifice called the Taj at Baghdad, and merely left this hall as a specimen of the Sassanian architecture.—*Tr. of Hind.* ii. p. 222; *Catafago.*

KHUSRU PARVEZ, king of Persia A.D. 590–628, of the Sassanian dynasty, grandson of Chosroes Nushirwan, A.D. 531–579, married a daughter of the emperor Maurice, generally supposed to be the same person as the heroine of the eastern romances Khusru and Shirin, and of Farhad and Shirin. Khusru Parvez waged war with the Roman powers, at first with the greatest success. He invaded the dominions of the emperor, wasted a vast extent of territory, overran the Holy Land, took Jerusalem, and burned the Christian churches, carrying off immense booty. He next reduced Egypt, and great part of Northern Africa.

KHUTBAH. ARAB., HIND., PERS. A public prayer or discourse pronounced in the Muhammadan mosques during divine service. It is also pronounced once yearly at the Eed-gah, on the festival at the close of the Ramzan. But from the early days of Muhammadanism the reading of the Khutbah has been a point regarding which the rulers and the people have entertained dissimilar views. It is pronounced from the mimbur or pulpit, which has three steps, and Umar fixed on the second step from which to speak it, praising Mahomed. This rite has ever been a cause of trouble. Scarcely had Mahomed left the scene when Ayzeed consented to three requests of Zain-ul-Abidin, but privately desired his own Syrian Khatib (priest) to read the Khutbah, and to offer up praises and eulogiums in the names of the

descendants of Abu Soofean and Oomea. Accordingly on Friday the Syrian Khatib read the Khutbah, and praised the race of Abu Soofean and Oomea, and spoke with contempt of the descendants of the prophet. Usman fixed on the second or middle step of the mimbur from which the Khutbah was to be read. Since then Muhammadan rulers have claimed as royal prerogatives the right to coin, and to have the Khutbah read in their name. In British India, until the deposition of the emperor of Dehli, the Khutbah was read in his name. And, now, the congregation believe it to be in the name of the Sultan of Turkey. Jafar Sherif, author of the Qanun-i-Islam, says (p. 263), 'The Khatib (priest), after repeating two rukat prayers, alias shukrea, ascends to the second or middle step of the mimbur, and, the congregation being seated, he reads the Khutbah, *i.e.* offers glory to God, praises the prophet, and passes eulogiums on his companions. He then descends to the lowermost step, recounts the many virtues of the king, and offers up supplications on behalf of him. The king is he whose coin is current in the realm, and in whose name prayers are offered up after the Khutbah is read at mosques and feasts.' And here is the following note:—'At present (1832) it is in the name of the king of Dehli, but in the author's opinion erroneously, as it should be in the name of the Honourable East India Company.'

Lane says it is first a prayer for Mahomed, Ibrahim, the four khalifs, and the companions of the prophet, and for El Hasan and El Husain, Fatima, etc., followed by a prayer for El Islam, and for the Sultan, son of the Sultan, etc.

All Muhammadans admit that the Friday Khutbah cannot be recited without the permission of the ruler.

There should, therefore, be in the Khutbah a prayer on behalf of the Empress Victoria, but it may be mentioned that although since the year 1834 the mints of British India have only issued coins bearing the names of the successive rulers of Great Britain, the Muhammadans of that country have never introduced the British ruler's name into the Khutbah, and Dr. Birdwood mentions, correctly, that until a very recent date the emperor of Dehli was the subject of the prayer.

Every Friday of the month of Ramzan the Khatib reads the Khutbah (sermon), which contains praises and eulogiums, and admonition and advice.—*Herklots' Qanoon-i-Islam; Lane.*

KHUZISTAN, a province in the extreme S.W. corner of Persia, between lat. 30° and 32° 30′ N., and long. 48° 51′ E., bounded in the N. by Luristan and the Bakhtiari mountains, on the S. by the province of Fars and the Persian Gulf, and on the W. by the Shat-ul-Arab and the pashalik of Baghdad. For administrative purposes it is divided under the rule of the Shaikh of the Chab Arabs, and of that of Shuster. Shuster is the capital. It has several khor or inlets. Its principal rivers are the Karun, Dizful, Jurahi, and Kerkhah. The population consists chiefly of nomade tribes dwelling in tents. In the north are Feili, Bakhtiari, Kohgelu, and Mamaseni, and in the south are the Arab tribes, Anafijiah, Ali Kathir, Chab, and Beni Lam, pastoral and agricultural, and weavers of cotton and woollen fabrics. Its chief towns are Shuster, Dizful, Ram Hormuz, and Fellahiah.

The Shuster people are not wealthy, live in stone-built houses, in which there are sard-ab or underground rooms for retreat in summer, and some houses have the areesh or open room on the roof. Several of the khor have been at times supposed to have been mouths of the Euphrates. Khor Muso is deep, that of Lusbah is close to the Jurahi, and there is one near Sarema, on the banks of the Indian, rather westward of the borders. The inland khor are those near the towns of Dorak and Mohammerah; one still more extensive is formed by the overflowing of the river Kerah at the town of Hawiza; and lastly, the Samidah marshes above Kurna, which appear to be part of the ancient Chaldæan lake.

Khuzistan is also called Arabistan, and represents the Susiana of Strabo, as well as the Cissia of Herodotus. The celebrated ruins of ancient Sus are near a bend of the Kerkhah. In the bed of the Ab-i-balad, a torrent of ancient Susiana, which falls into the Dizful, a small fossil shell occurs which is in request for the mouthpiece of the nargil pipe, under the name of Sang-i-Birinj or rice stone.—*Markham's Embassy*, p. 2; *Ouseley's Travels*, i. p. 148; *Chesney's Euphrates and Tigris*, p. 205; *Mignan's Travels*, p. 294; *MacGregor; Layard.*

KHWA. Pukhtu. Side, quarter, tract, coast. Pukhtun khwa is Pathan country, Afghanistan. Watan khwa is native country.

KHWA-MI, a tribe of the Arakan Hill tracts. Their name means monkey tail, because the end of their waist-cloth hangs behind.

KHYEN is the name given to several populations of Burma and Arakan. One tribe who tattoo their skins, dwell on the Koladyn river in Arakan; another dwell on the Yoma mountains south of the Koladyn river; the Mru are sometimes called Khyen. Khyen, indeed, as also Kha, are probably names given to most of the rude tribes of the Arakan and Burmese mountains. The name seems to be the soft Burman pronunciation of Karen.

The Khyen or Kayn or Chin are a considerable tribe on the Yoma mountains that stretch from Arakan to the Naga Hills, and are scattered in small settlements on the north of Pegu as far as Tounghoo. Dr. Mason regards them as Karen, but Yule thought them Kuki, and Phayre regarded them as Burmese. They tattoo the faces of their women, to mar their beauty. They call themselves Shyou or Shyu or Sho, and the Burmese style them Pwo-meet Khyen, meaning river Khyen. They are interspersed among the Burmese and Karen, from lat. 23° N., along both sides of the Arakan range, and southwards to the mouths of the Irawadi, and a few are found eastward. They are most numerous about lat. 20° N.

The eastern portion of the district from the Yomadoung to the Lemroo river is mountainous and hilly. The hill tribes living on the eastern frontier are Khyen, Mru-khyen, and Koo. The Khyen, who occupy both banks of the Lemroo river, from the Wah Kheong to the Khee Kheong, and the low hills west of the Jegaendong range visible from the plains, to the valley of the Tarooe Kheong, and the low hills and plains within the Tandan, Ganacharain, Prwanrhay, and Dainboong circles, are a quiet, inoffensive people. The most northern village occupied by the Mru-khyen, paying revenue, is Sikcharoa, situated 14 miles

north of the junction of the Saeng Kheong with the Lemroo river. The Mru-khyen occupy the valleys of the Wah Kheong, Saeng Kheong, Mau Kheong, and that part of the valley of the Lemroo between Peng Kheong and Saeng Kheong.—*Latham; Mason, Burma; Yule; Dalton, Ethn.* p. 114.

KHYENDWEN, a tributary to the Irawadi, in lat. 26° 28′ N., long. 96° 54′ E., runs generally south into the Irawadi, near the town of Amyenmya; length, 470 miles. It receives Myitia Khyoung, 170 miles.

KHYOUK PHYOO, the chief town in the island of Ramree, 55 miles from Akyab, in lat. 19° 25′ N., long. 93° 34′ E., forming a district in the Arakan division of British Burma. It is so called from the white pebbles on its beach.—*Findlay.*

KHY-OUNG-THA. The seaboard of Arakan and the lower portions of the valleys opening into it, form the country of the Rakhoung-tha or Arakan tribe, of whom the Burmans are a branch. Some are found residing on the banks of the mountain streams, and are distinguished by the name of Khy-oung-tha. Their language proves that they do not belong to the Yuma group, but are intruders from the north; and their own traditions recognise the Ku-mi as the tribe in possession of the seaboard when they entered Arakan. Khy-oung-tha means children of the river, are a race of Arakanese origin, who speak the old Arakan dialect, and conform to Buddhist customs. Khy-oung-tha of Eastern Bengal are Buddhists, but still offer rice and flowers to the spirits of the hills and streams.—*Imp. Gaz.*

KHYRIM or Nong Krem, a petty state in the Khassya Hills in Assam, presided over by a siem or chief. Its iron ore is the purest found in the Khassya Hills. Its wild products include caoutchouc, cinnamon, lac, black pepper, and honey.—*Imp. Gaz.*

KHYRODA is a tuppa or subdivision of one of the greater khalisa or fiscal districts of Mewar, and consists of fourteen townships, besides their hamlets. Its land is of three classes, viz. peewul, or watered from wells; gorma, also irrigated land, extending three or four khet or fields around the village; and mar or mal, depending on the heavens alone for moisture. There are two harvests, viz. the oonaloo (from Oon, heat), or summer harvest; and the sealoo (from See, cold), the winter or autumnal. The sealoo crop consists of mukki or Indian corn, sorghum or jowar, and bajra, with the different pulses. The share of the Crown, as in all the ancient Hindu governments, was taken in kind, and divided as follows:—Of the first, or oonaloo crop, which consists of wheat, barley, and gram, the produce is formed into kulla (piles or heaps) of 100 maunds each; these are subdivided into four parts, of 25 maunds each. The first operation is to provide from one of these the seerana, or one seer on each maund, to each individual of the village establishment, viz. the patel or headman; the patwari, registrar or accountant; the shanah or watchman; the bullai or messenger and general herdsman; the kat'hi (alias sootar) or carpenter; the lohar or blacksmith; the khomar or potter; the dhobi or washerman; the chamar, who is shoemaker, carrier, and scavenger; the nae or barber-surgeon. This rough sketch of the agricultural economy of Khyroda, may be taken as a fair specimen of the old system throughout Mewar.—*Tod's Rajasthan*, ii. pp. 595, 598.

KI. CHIN. Several species of Cirsium, Cnicus, Centaurea, and Carduus.—*Smith.*

KI, also written Ke and Kei or Key, a group of three large and many smaller islands, about 60 miles west of the Aru Islands, and the same distance S.W. from New Guinea, thinly peopled. The Ki appear like so many isolated mountains; one of them is famous for its potteries. At another are built the prahu celebrated among the mariners of Banda and Ceram for their sailing qualities and strength.—*St. John's Archipelago*, ii. p. 90; *Horsburgh.*

KIAHTU, near the Baikal lake, is 2400 feet above the sea.

KIAMAT, properly Qiamat. ARAB. The day of resurrection, literally standing. Muhammadans believe that the approach of the resurrection will be known by twenty-five signs.

KIANG, a famous general of the Chin dynasty of China, who was expert in detecting crime, and was canonized.

KIANG, the Dzightai or Jaghtai, is in all probability the true Equus hemionus of Pallas. It has been often confounded with the Gor-khar or wild ass, though they differ considerably in appearance, and inhabit countries with very dissimilar climates. The kiang exists in the high cold regions and mountains of Tibet, the Gor-khar in the heated sandy plains of Sind and Baluchistan. The kiang is found in numbers nearly in the same localities as the yak; it does not, however, go up the mountains so high as the yak, but the range of its distribution is greater than that of the yak. The kiang are abundant near the Pangong Tso, and between Chusal and Hanle. They roam on plains 14,000 to 15,000 feet above the sea. They are shy. The greatest elevation where the Messrs. Schlagentweit found the kiang, was 18,600 English feet, whilst they traced yaks as high up as 19,300 feet.

The natives of Ladakh deny the possibility of any approach at domestication of the kiang, and state that young always die in confinement. Major Hay sent a kiang to the Zoological Society of London. He mentioned that the mares are highly esteemed by the Tibetans for breeding with the thoroughbred Chinese stallion, the produce being a horse with great powers of endurance, and which, on this account, are much in request by the Zhakpa, a predatory race who inhabit the mountains. The chief food of this species appears to consist of the stunted fescue grasses common on the plains and mountains, together with a red-flowered vetch, possibly Oxytropis chiliophylla of Hooker. The speed of the kiang is great; its action seems to consist of a long step or trot, which is never varied.

The regions where the yak and the kiang are found are, in a zoological point of view, among the most remarkable and interesting of our globe. The highest absolute elevation coincides here, it is true, with the greatest height of the snow-line, or rather it causes the snow-line to be higher. But those large, high plateaux and regions, though free from snow and ice in summer, remain a desert throughout the year. The amount of vegetation on them is less than it is in the desert between Suez and Cairo in Egypt. Nevertheless

these high sterile regions are inhabited by numerous herds of large quadrupeds. Species of wild sheep, antelopes, and a few canine animals, chiefly wolves, as well as hares, are abundant. The herbivorous animals find here their food only by travelling daily over vast tracts of land, as there are only a few fertile spots, the greater part being completely barren. The great scarcity of vegetation, particularly the entire absence of mosses and lichens, has a very different effect, though an indirect one, on the occurrence of birds. Those small plants are the chief abodes of insects: the want of mosses and lichens, coinciding with a total absence of humus, limits, therefore, to its minimum the occurrence of insects, the exclusive food of small birds in all extremely elevated parts of the globe, where grains are no more found. The Schlagentweits, indeed, travelling twenty consecutive days between heights of 14,000 to 18,200 feet, met only with three individuals belonging to a species of Fringilla, but occasionally vultures were met with.

KIANG-SU, a province of China on the east coast, washed on the E. by the Yellow Sea. It has the large towns of Chin-kiang, Nankin, Su-chan, and Shanghai, and the great river the Yang-tse-kiang runs through it to disembogue in the Yellow Sea.

KIAN-KU, the largest river of Asia, which rises on the north borders of Tibet, and, after a course of about 2200 miles, enters the Eastern Ocean opposite the island of Tsong-ming.

KIAONG or Kyoung. BURM. The monastery house of the Phoungye or Buddhist monks.

KIAO-YOU. Chinese Christians call themselves by this name.—*Huc.*

KIA-YU, a pass in China. The great highway between Pekin and Europe has from time immemorial been the caravan tract from the western end of the great wall across the desert of Gobi. The route issues from the western end of the great wall, and, moving through the Kia-yu pass, has to traverse N.W. 500 miles of a desolate sand tract to reach the city of Khamil. At this town the road bifurcates, the upper branch leading through Baykul, Urumchi, and Kurkur-usu into Zangaria; the lower through Pijan, Turfan, Karashar, and Kuchu to Aksa in Eastern Turkestan.

KIBITKA, a tent made of felt, called in Russia Jourta or Kibitka, is in Mongol called Gher; several tents together, forming a kind of village or station, are called Ourto. Oulous or Olos signifies in Mongol empire, people; Ordo, a chateau or imperial palace.—*Timkowski's Journey to Pekin*, i. p. 12.

KIBLAH, ARAB., signifies a point of adoration, and is usually applied to the kaba or holy edifice of the Muhammadans, situated in the Bait-ullah or temple of Mecca. But all eastern sects appear to have had some Kiblah or holy point, to which the face was to be turned during prayer. The Jew looked towards Jerusalem; the Sabæan, according to some, to the north star, or, according to others, towards that part of the heavens in which the sun rises, or towards the meridian; and the Magian to the rising sun. According to the Veda, Brahmans should direct their prayers to the east. The early Christians chose the east. Mahomed, who recognised the general custom, and found it necessary to adhere to it, in the early part of his career appointed Jerusalem, but afterwards directed the holy kaba of Mecca to be the Kiblah of his disciples. Kiblah is also a respectful term in common use in India by Muhammadan children towards their parents, or inferiors towards superiors, and in this case means the source of honour and esteem. One of the titles of the king of Persia is Kiblah-i-Alam, point of the world's adoration. Kiblah-i-Alam, asylum of the world, in letter-writing, is an expression of respect in Muhammadan countries from dependents to their masters, children to parents, or servants to a prince, implying towards whom all the world turns with veneration. It is a phrase of daily life, but the rulers of Bokhara were styled Kiblah-i-Alamian, the turning point for both worlds. — *Ouseley's Travels*, iii. p. 133; *Tavernier; Layard's Nineveh, quoting Hyde's Relig. Vet. Persar.* p. 8; *Prideaux Connect.*; *Vambery, Bokhara*, p. 316.

KIBT or Kibti, of Egypt, the Copts, an abbreviation of the Greek word Aiguptios, an Egyptian. They are descendants of the ancient Egyptians. They are agriculturists, and in the subordinate offices of the country.—*Catafago.*

KICH'HRI. HIND. Generally a mixture of lentils and rice, with clarified butter poured over it. This has become common in El Hejaz as well as at Suez, under the name of El Kajari, a corruption which denotes its foreign origin, and renders its name pronounceable to Arabs.—*Burton's Mecca*, i. p. 209.

KIDARKANTA, in lat. 31° 1′ 4″ N., long. 78° 14′ E., in Garhwal, a peak commanding a fine view, in the ridge between the Tons and the Jumna. The base of the stone pillar there is 12,430 feet above the sea. The top of the highest peak is 12,518 feet according to the Grand Trig. Survey, and is 12,689 feet according to Herbert and Hodgson. The upper limit of conifers is 10,700 feet. The upper limit of oaks on the southern slopes of Kidarkanta towards Aur is 11,442 feet.—*Id. Schl. Gr. Tr. Sur.* See Kedarkanta.

KIDARNATH, in lat. 30° 44′ 10″ N., long. 79° 51′ 50″ E., in Garhwal, on the right bank of the Mandagni, near its origin. The entrance to the Hindu temple is 11,794 feet, Rob. Schl., or 11,753 feet, J. A. S.

It is a great place of Hindu pilgrimage, being next to Badrinath in holy estimation. It marks the spot where an incarnation of Siva attempted to dive into the earth to escape the Pandava. Close to the temple is a precipice, the Bhairab Jap, from which formerly devotees threw themselves, but the British prohibited it. The rawal is a Jangam from Mysore.

The upper limit of trees in the Mandagni valley, below Kidarnath, is 11,020 feet. The lower end of the Kidarnath glacier, and origin of the Mandagni, is 12,372 feet. The confluence of the first glacier on the right side within the main Kidarnath glacier is 13,658 feet. The junction of the three principal branches of the Kidarnath glacier is 15,449 feet. The small glacier lake, right side of the Kidarnath glacier, is 13,349 feet.—*Rob. Schl.*

KIDD, CAPTAIN, a piratical leader, a native of England, whose stronghold is still shown in the neighbourhood of Johanna. He was employed by the governor of New York to suppress piracy in the Eastern Seas, but took to piracy, and on his return was convicted and hanged.

KIEF. ARAB. In Morocco, dried flowers of Cannabis sativa; repose; Dolce far niente. It is a rest that does not presuppose labour, a relief that scarcely implies previous care, a mental exaltation by mental effort only, and a dream that fulfils itself. It does not exist in the west, for things move too fast there; but it is a treasured possession of the oriental, which neither armies, treaties, nor fleets can take from him.

KIERNANDER, JOHN ZECHARIAH, a Protestant missionary to Cuddalore 1740, and Calcutta 1758. He built the old church.

KIFRI. Near this town, in the pass through which the Ak-Su penetrates to the plains, is a naphtha pit. The hills are about a mile S.E. of the town of Tuzkurmatti, close to the gypseous hills of Kifri, and the pit, being in the bed of the torrent, is sometimes overflowed by it, and, for a time, spoilt. The pit is about 15 feet deep, and to the height of 10 feet filled with water, on the surface of which black oil of naphtha floats, small air-bubbles continually rising to the surface. They skim off the naphtha, and ladle out the water into a channel, which distributes it into a set of oblong, shallow compartments, made in the gravel, where they allow it to crystallize, when it becomes very good salt, of a fine, white, brilliant grain, without any intermixture of bitterness. Great quantities of this are exported into Kurdistan; and it is worth annually about 20,000 piastres. The oil of naphtha is the property of the village. Part of it is consumed by the manzil khanah, or sold for its support, and part for religious establishments, etc. About two jars, each containing six oka, or one Baghdad batman, of naphtha, may be skimmed from this well in twenty-four hours. The spring is at the bottom of the pit or well, and once a year they cleanse the well, on which occasion the whole village turns out, victuals are distributed to all the poor, and sacrifices of sheep are made to the sound of drums and oboe, in order to insure the good flowing of the spring again,—a ceremony in all probability derived from remote antiquity. The principal naphtha springs are, however, in the hills, a considerable distance south of this, towards Kifri. They are five or six in number, and are much more productive than this pit, but no salt is found there. Indeed, it is probable that naphtha may be found in almost any part of this chain. Near the naphtha pit in the hills are alum (zak or sheb) and chalk (tabashir), of a very fine, close, white grain; but the natives make no use of these products. An earth, also, is found, which they employ to give an acid flavour to some of their dishes; no doubt it is vitriolic. Sulphur is also found, and is used by the peasants to cure the itch in their cattle and themselves.—*Rich's Kurdistan*, i. pp. 27-29.

KI-GEN-SET-SU. JAP. The anniversary of the birthday of the first emperor of the reigning dynasty.

KIKATA, an ancient name of the people of Magadha.

KILAID-us-SHAM. ARAB. Stones of the yellow date, strung on twine, and worn as necklaces by the Hodeilah Arabs.—*Hamilton's Senai.*

KILI-KATR, Muddikpor, or Kotabu, a migratory people in the Southern Mahratta country. Kublgira or Ferryman, Koli, and Barkur are the terms most usually applied, but Muddikpor is their own designation. They are generally tall and powerful men, with an olive-yellow complexion, and they say that their original locality was the village of Talicot, near the town of Sorapur, and that all speak the Mahrati tongue, though a knowledge is requisite of the language of the countries in which they wander, to enable them to gain a livelihood. They are wandering minstrels.

KILOGRAMME, a French measure of weight, equal to 2·2053 lbs., about 2 lbs. 3¼ oz. avoirdupois; it is about the same as the Pakha seer of India.

KILOMETRE, a French measure of length, about 1093¾ English yards.

KILPATRICK, MAJOR, an officer of the E. I. Company in the time of Lord Clive. In May 1751 he served in the fight of Volconda. In November he marched with a detachment to relieve Clive at Arcot. On the 7th August 1753 he led the attack at Sugar-loaf Hill at Trichinopoly, and was desperately wounded. He died in October 1757, in command of the Bengal troops, and Member of Council at that Presidency.

KIMA. The shells of the taclabo, or gigantic Philippine oyster, are used as fonts in the churches of that group. The fish of the Kima cockle frequently weighs 30 or 40 lbs. Some of the shells measure three feet across, are several inches thick, take a fine polish, and form valuable articles of the trade to China. One was found weighing 278 lbs.

KIMEDI, a large zamindari hill tract, on the western border of Ganjam district, Madras. It contains the three estates of Parla Kimedi, Pedda or Boda Kimedi, also called Vizianagram, and Chinna Kimedi or Pratapgiri. Kimedi had been long subject to the family of Narrain Das, descended from the raja of Jaganath, who was formerly ruler over these countries, and whose sons are said to have separated on their father's nominating a natural son to the succession. Moving southward with a numerous train, one son conquered and established himself in Kimedi, as another son did at the same time at Vizianagar in the Itchapur country. The succession was hereditary, and the people regarded them as the offspring or even the incarnation of a deity. Kimedi is surrounded by mountains, the valleys, extensive and very fertile, having every advantage of tanks, rivers, and abundant dews, but the climate is extremely unhealthy.

KIMIA. ARAB., HIND., PERS. Chemistry; but among eastern nations this has always been considered as closely connected with, or indeed as forming a part of, the search for the philosopher's stone. It is the art of magic, supposed to be the constant and favourite study of Indian sages and enchanters, who are much dreaded in Persia. With the Arabic prefix al, we have th European word alchemy.

KIMIS or Koumis, a fermented beverage in use amongst the nomade Tartars.

KIMKHAB, HIND., corruptly Kincob, a fabric of silk with gold or silver in woven pattern; silk brocade, worked in gold and silver flowers. The costly and superb fabrics of cloths of gold and silver or the kimkhab, and the classes of washing satins or mushru and hemru, even if European skill could imitate them by the hand-loom, it would be impossible to obtain the gold and silver thread unless it were imported from India. The

native mode of making this thread is known, but the result achieved by the Indian workman is simply the effect of skilful, delicate manipulation. The kimkhabs are used for state dresses and trousers, the latter by men and women; and ladies of rank usually possess petticoats or skirts of these gorgeous fabrics. Kimkhab, although only employed in India as articles for personal wear, might be used in Britain for covering chairs, couches, etc. The origin of the word kimkhab is said to be from Kum (Kam), little, and Khab, sleep. Kimkhab, hemru, luppa, tas, are all of the same order of manufacture, gold, or gold and silver, and silk. In the kimkhab, metal predominates, whereas in hemru the silk predominates, and in hemru the design is generally a diaper or buta-dar. Affixes of single and double are also made use of to designate one colour or several; such as ekowdu hemru, and bewdu hemru. In Surat it is known as kumjurno alceacha, which means that there is only a small quantity of gold thread used in it. Luppa has so much gold or silver that the metal only is visible. Tas is much thinner, but is manufactured in the same manner. Mushru and hemru are not used for tunics, but for men's and women's trousers, and women's skirts, as also for covering bedding and pillows; they are very strong and durable fabrics, wash well, and preserve their colour however long worn or roughly used; but they can hardly be compared with English satins, which, however, if more delicate in colour and texture, are unfitted for the purposes to which the Indian fabrics are applied. For example, a labada or dressing-gown made in 1842, of scarlet mushru, was washed over and over again, and subjected to all kinds of rough usage, yet the satin in 1862 was still unfrayed, and the colour and gloss as bright as ever. See Clothing; Embroidery; Gold Embroidery.

KI-MO-NO. JAP. A long-sleeved robe, worn by men and women, and fastened with a girdle.

KIMUKHT, turquoise green leather made at Yarkand and at Bareilly, much used in Kābul and Peshawur. It looks like shagreen, is used for native shoes, and for sword scabbards. About Rs. 2000 worth is annually exported from Bareilly to Dehli and other places. It is made from asses' hide.

KINA BALOW, a mountain near Bawang, in Borneo, estimated between 13,000 and 14,000 feet in elevation; properly Kini-ballu, the Chinese widow. It lies E.S.E. from the harbour of Ambong; it is the highest mountain in Borneo. —*J. In. Ar.*

KINARA or Kinaree. HIND. Edging either of silk, or gold or silver thread; also of wide gold and silver ribbon, which often has a pattern printed or pressed on it. Kinara-baf is the maker of silk edging and fringe.

KINAT. HIND., PERS. A tent wall.

KINCHINJUNGA, a mountain peak 45 miles distant from Darjiling, rising 21,000 feet above the level of the observer, out of a sea of intervening wooded hills; whilst, on a line with its shows, the eye descends below the horizon, to a narrow gulf 7000 feet deep in the mountains, where the Great Ranjit river, white with foam, threads a tropical forest with a silver line.—*Hooker, Him. Jour.* i. p. 122. See Kanchinjinga.

KINDERSLEY, J. R., a member of the Madras Civil Service, author of a Manual of the Law of Evidence of the Madras Provinces.

KING.

Sultan, .	ARAB., TURK.	Nawab, .	. . HIND.
Padishah, Malik,	ARAB.	Padshah,	HIND., PERS.
Roi, ...	FR.	Shah, .	"
Konig, ...	GER.	Re, . .	. . IT.
Rao, Raja, . . .	HIND.	Rei, . .	PORT., SP.

KING. CHIN. An imperial capital, as in Pekin, Nanking. Tu, CHIN., is a court or imperial residence, as Tai-tu, Shang-tu. Fu, CHIN., is a city of the first class, or rather the department of which it is the head; Cheu, a city of the second class, or the district of which it is the head.—*Yule's Cathay*, ii. p. 262.

KING. CHIN. The five canonical books written and compiled by Confucius, the Yih-King, Shu-King, She-King, Le-Ke, and Ch'un Ts'ew.

KING CRABS of Acheen. Ikan-mimi, JAV.; Moi-moi, ACHEEN. Two of these crabs join themselves together by their under surfaces, and thus united burrow in the sand. They are eaten by the Chinese and Javanese.—*Bennett's Wanderings*, i. p. 401.

KING-CROW, Dicrurus macrocercus, is often seen on the backs of cattle; it is also called the Kotwal.

KING-FISHER, birds of the family Halcyonidæ, of which there are several species in the East Indies. The Tanysiptera nais of Amboyna, the racquet-tailed king-fisher, is one of the most singular and beautiful of that beautiful family. King-fishers are of the genera Halcyon, Todiramphus, Ceyx, Alcedo, and Ceryle. They are numerous in India, most of them diving in the water for small fishes; others eating crabs, insects, and reptiles. An instance is mentioned of a king-fisher darting into the Coum river at Madras, and being captured by the valves of the mollusc closing on it. One or two of them hover over the water, questing on the wing till they see their prey; others sit motionless, watching on a fixed perch. Their bright plumage is their ruin, for it is saleable, and a class of men make their living by capturing them. In solitary places, where no sound breaks the silence except the gurgle of the river as it sweeps round the rocks, the lonely king-fisher, an emblem of vigilance and patience, sits upon an overhanging branch, his turquoise plumage hardly less intense in its lustre than the deep blue of the sky above him; and so intent is his watch upon the passing fish, that intrusion fails to scare him from his post. The common king-fisher (Alcedo Bengalensis, *Gmel.*), the black and white species (Ceryle rudis), and the Indian king-fisher (Halcyon fuscus, *Bodd.*), are often to be seen. The first is common in rice-fields, streams, and river banks; the two latter are not so plentiful; the Indian king-fisher is a tenant of gardens and pools; the large black and white king-fisher is the Ceryle guttata. Birds' feathers, from the cranes and king-fishers, form a considerable article of trade in South-Eastern Asia; the feathers of a large green king-fisher are exported from Madras, one lakh at a time, to Singapore, to be used by the Malays, Javanese, and Chinese. They sell there at 200 per cent. profit.

The nest of a large red king-fisher of Borneo is said to be pendulous, and invariably to be accompanied in the same mass by a bee which is

peculiarly vicious, so that the nest can only be robbed after destroying the bees.—*Burbidge's Gardens of the Sun; Tennent's Sket. Nat. Hist.* p. 249; *Wallace's Eastern Archipelago; Adams.*

KINNARA, in Hinduism, heavenly choristers, beings with human shape, but with heads of horses; from Sanskrit King, what, Nara, a man. They are also called Aswa-Mykha, also Taranga Vaktra. They dwell with Kuvera on Kailasa. Buddhists represent them with human heads and busts, and tail and legs of a fowl.

KINNARAYA, a small race in the Kandyan province of Ceylon. They are a well-formed race, and resemble the Rodiya in appearance and customs. They are mat-weavers. They shave their heads. They are illiterate.

KINNEIR, J. MACDONALD, author of a Geographical Memoir of the Persian Empire, London 1813; also of a Journey through Asia Minor, Armenia, and Kurdistan in 1813 and 1814, with Remarks on the Marches of Alexander and Retreat of the Ten Thousand, London 1818.

KINO.

Dam-ul-akwain, .	ARAB.	Kino-harz, . . .	GER.
Pulas-gond, . .	BENG.	Kumr kusala, Kini,	HIND.
Padouk, ...	BURM.	Chino, ...	IT.
Gomme de kino, .	FR.	Tamble-hoan, . .	TAM.

The kino of commerce is a product of the Pterocarpus marsupium of India, *Linn.*; Pt. erinaceus *Poiret*, of Senegambia; the Pt. Wallichii and P. Indica or Padouk of Tenasserim, the Butea frondosa of India, and the Eucalyptus resinifera of Australia. The juice of the Pt. erinaceus and that of the Eucalyptus resinifera have much the same properties as the catechu, and have been proposed to be used in dyeing green. Although the colour of kino is a deep-red, it has the power of, communicating a green colour to the salts of iron. The true medicinal gum-kino is obtained from the Pt. marsupium; but the juice of Pt. Indicus, Pt. Wallichii, and of Pt. Dalbergioides are said to be also dried and exported under the name of kino; and it is probable that the properties on which their value depends are of a general nature. Pt. Dalbergioides is found in the northern parts of the Pegu province in the Prome district, chiefly in the vicinity of towns and inhabited places, rarely in the forests. The kino of Botany Bay and Van Diemen's Land is the produce of the Eucalyptus resinifera, which sometimes yields, on incision, 60 gallons of juice. The East Indian kino, imported from Bombay and Tellicherri, is the produce of Pt. marsupium, a lofty, broad-spreading forest tree, which blossoms in October and November. The bark is of a greyish colour, and is upwards of half an inch in thickness on the trunk. When cut, a blood-red juice speedily exudes and trickles down; it soon thickens, and becomes hard in the course of 15 or 16 hours. The gum is extracted in the seasons when the tree is in blossom, by making longitudinal incisions in the bark round the trunk, so as to let the gum ooze down a broad leaf, placed as a spout, into a receiver. The gum is dried in the sun until it crumbles, and then filled in wooden boxes for exportation. Pt. erinaceus, a tree 40 to 50 feet in height, a native of the woods of the Gambia and Senegal, furnishes a kino. Butea frondosa, or the dhak tree of the East Indies, furnishes a similar product in the shape of a milky-coloured, brittle, and very astringent gum. Some specimens of Butea kino, analysed by Prof. Solly, after the impurities had been separated, yielded 73¼ per cent. of tannin. Kino generally occurs in shining grains, of a rich ruby-red colour, nearly all soluble in alcohol, and readily pulverizable between the fingers. It also occurs in small and shining, brittle, angular fragments of a deep-brown colour, which appears to be a natural exudation of some one plant, from the uniformity of its appearance. The gum of Butea frondosa was at one time acknowledged by the Dublin College, and Botany Bay kino, produced by Eucalyptus resinifera, or brown gum tree, by the Edinburgh College. The best is now imported into Great Britain from Bombay. The name is derived from the Indian term kini, applied to a similar exudation from the bark of Butea frondosa, of which the Sanskrit name is Kin-suka. Gum-kino is used medicinally as an astringent, and in India to dye cotton cloth of a nankeen yellow.—*Waterstone; Faulkner; Royle, Him. Bot.* p. 195; *Proc. Royal Asiatic Soc.*, 1838; *M'Clelland; Cullen, MSS.*

KIO or Miaco, the residence of the emperor or Dairi of Japan, about twenty miles from Osacca, and contained, in the time of Kaempfer, according to a census, more than 500,000 inhabitants, besides the numerous court of the Dairi.—*MacFarlane, Japan*, p. 149.

KIPCHAK, a race who have settled down in and around Khokand, and supposed by Vambery to be a division of the Burut. Their social relations are with Muhammadans and the people of Turkestan. He says they are the bravest and most warlike of the Turkish tribes, and are held to be the descendants of those Mongols who, under the name of Djete-moghul, waged such obstinate war against Timur, and afterwards, under the leadership of the sons of Yunis Khan, made themselves masters of the eastern part of Turkestan.—*P. Arminius Vambery*, p. 75.

KIRATA or Kiranti. This martial aboriginal race is spoken of by ancient Sanskrit writers, and classed by Menu and by the Mahabharata as one of the non-Hindu military peoples, along with the Khasa, China, Dravida, and other recognised non-Aryan races. They occupy at this day the exact position assigned to them by the Vishnu Purana, viz. the eastern border of Bharata Varsha. The Kirata are known in classical geography as the Cirrhadæ or the Cirrodes. They occupied the country to the east of the Bharata, and are still numerous in Dinajpur, which was part of the ancient Matsyades, all the inhabitants of which were considered as foreigners and borderers. They are part of the races styled as Limbu, an important segment of the population of Sikkim, and are the Kiranti of Nepal; but the people prefer the names Khwombo or Khombo, and Kirawa. Dr. Campbell says that the correct denomination of the people is Ekthumba; but that the term Limbu is generally used to indicate the whole population of the country between the Dud Kusi and the Mechi, thus including the Kirata, the Eaka (Hodgson's Yakha), and Rais, and that in appearance and habits they are all very much alike, and they intermarry, which is the great test of national connection.

The Kiranti are divided into Wallo Kirant or Hither Kirant, Manjh or Middle Kirant, and

Pallo or Further Kirant. The Wallo include the Limbu and Yakha.

The Limbu and Kiranti have to buy their wives; those who are too poor to pay in cash, serve like Jacob in the father's house till they have given an equivalent in labour.

Those bordering between Sikkim and Nepal are partly Buddhists, partly Brahmanical.

The Kiranti, like the Munda and Kasia, burn their dead, selecting the summits of mountains for the purpose, and afterwards collect and bury the ashes, over which they raise a square tomb of stone about four feet high, placing an upright stone on it.—*Dr. W. W. Hunter; Dalton, Ethnol. of Bengal.*

KIRAT SAGAR, and Madan Sagar, ancient artificial lakes near the town of Mahoba.

KIRBAH. ARAB. An inflated skin used by fishermen as a float on which to rest when fishing.

KIRGHIZ were originally a small tribe settled in a remote corner of Southern Siberia, on the banks of the Yenisei river, but migrated or were removed in the 17th century to the shores of the Balkash and Issyk-kul lakes. In their new abode they amalgamated with the Kazak and Burut, and absorbed a host of smaller tribes, the debris of the old Ghuz, Koman, and Kipchak, and have gone on increasing until their number is now nearly three millions of souls, and constitute almost the exclusive population of the steppe from the Aral river in the west to the Mongolian frontier on the east, and north and south from the Siberian line to the plateau of Pamir.

Kirghiz are in the neighbourhood of Issyk-kul and in the valleys of the Tian Shan, also in those of the Alai mountains and the Pamir east of Badakhshan, to the south of Khokand. Their name for themselves is Kirghiz, but they are called Burut by the Chinese and Kalmuks; the Russians call them Kara-Kirghiz, meaning Black Kirghiz, also Dikokamenni, meaning Wild Mountain Kirghiz, to distinguish them from the Kazak. They are partly (about 200,000) under Russian sway, partly (150,000) under Kashgar, and in Eastern Turkestan and Khokand. They are supposed to be 350,000. Those at Pamir whom Lieutenant Burnes saw had flat countenances, and strongly resembled the Turkoman.

They profess Muhammadanism, but retain Shaman practices. Their Shamans wear long hair.

Kirghiz derive their origin from a red dog and forty maidens (Kyrk-kyz). Some tribes say the maidens were impregnated by the form of the lake Issyk-kul in the Kirghiz steppe. The fable of Cyclops is current, but there called Alp, a giant ogre, and a Kirghiz giant, Batur Khan, enacts the part of Ulysses.—*Schuyler; Muller's Lectures; Malcolm's Persia; Staunton's Narrative; Markham's Embassy; Vigne's Narrative; Captain V. M. Vemukof.*

KIRIAGHUNA, also Kiri Anguna. SINGH. The cow-tree plant of Ceylon, Gymnema lactiferum, is harmless, notwithstanding it belongs to the asclepiadaceous order, which is usually acrid and dangerous.—*Eng. Cyc.* p. 178.

KIRI-ELEEMA. SINGH. The overflow of milk; a ceremony in Ceylon, when the liquid of the cocoanut is boiled till it runs over, as an emblem of plenty and a land flowing with milk. —*Tennent's Christianity in Ceylon*, p. 234.

KIRK, R. A., medical officer of the Bombay army, who wrote a Journal of a Journey from Tadjourra to Ankobar, in Lond. Geo. Trans., 1842, x.; Measurements of Elevation and Astronomical Observations in Abyssinia, in Bom. Geo. Trans., 1844, vi. p. 355; Visit to Volcano of Gibbel Teer, Red Sea, ibid., 1842, vi. p. 366; Rise and Fall of River Indus and Range of Thermometer at Bukkur, 1841, ibid. p. 436.—*Dr. Buist's Index.*

KIRKEE, near Poona. A battle was fought here on the 13th November 1817, which decided the fate of the Dekhan, and led to the downfall of the peshwa Baji Rao, and the extinction of Mahratta rule.

KIRKOOK. Naphtha is obtained near here. It is scooped out with ladles into bags made of skins, which are carried on the backs of asses, for sale. It is principally consumed in the south-west of Kurdistan, while the pits not far from Kifri supply Baghdad and its environs. The Kirkook naphtha is black. On the summit of a hill is a flat circular spot measuring fifty feet in diameter, with a hundred at least of small holes, whence issue as many clear flames. The natives call the place Baba Gurgur, Gur being an Arabic name for naphtha or bitumen. The bitumen pit at Kit must have furnished the builders of Babylon; to qualify the bitumen for use as a cement, it must be boiled with a certain proportion of oil. Its chief use appears to have been in the lower parts as a preservative against damp; at present it is used for coating cisterns, baths, caulking boats, etc. The black naphtha springs at Baku, on the Caspian, are similar. Jonas Hanway mentioned that when the weather is thick and hazy, the springs boil up higher, and that the naphtha, sometimes taking fire on the surface of the earth, runs like burning lava into the sea. In boiling, the oily substance gradually becomes a thick pitchy mass all round the mouth of the pit. The poorer people use it in lamps and to cook their food. It burns best with a small mixture of ashes; but, for fear of accidents, they preserve it in earthen vessels under ground, and at some distance from their dwellings. There is also a white naphtha, a thinner fluid than the black, and not found in such great quantities. This is sometimes recommended, inwardly for chest complaints, and outwardly for cramps and rheumatism. Both it and the black are used for varnish. Strabo calls it liquid bitumen, and asserts that its flame cannot be extinguished by water. The experiment tried by Alexander was horrible in its effects. The flaming soil, or everlasting fire, as it is called, of Baku, is not less famous than its naphtha springs.—*Porter's Travels.*

KIRMAN is situated in lat. 29° 56′ N., and long. 56° 6′ E., on the western side of a capacious plain, so close to the mountains, that two of them, on which there are ancient decayed forts, completely command it.

It is the chief town of a large province of Persia, the northern part of which is a salt and barren desert, but in the south the land is fertile. Many sheep are bred here, and their fine wool is an article of great trade. The capital of this province is a city of the same name, and it is celebrated for its beautiful shawls, carpets, and stuffs. The climate of this province is as varied as the face of the country, and it is accounted the least

salubrious of any part of Persia. They have seldom any heavy falls of rain, but snow lies to a great depth on the mountains in winter, and from their loftiness it does not melt for the greater part of the year.

The province is the ancient Carmania, and is bounded on the east by a part of Sejstan and Baluchistan; west by the province of Fars; south by parts of Luristán, Mekran, and the Persian Gulf; and north by Irak and Khorasan. Kirman fills up the space between Khorasan, Fars, Afghanistan, and Mekran. The surface of Kirman (including Luristan) contains about 72,741 square miles. The southern portion of Kirman, viz. Luristan and Moghostan, formed the chief part of the Himyaritic kingdom of Hormuz, through which ran an important commercial line from the capital, Harmozonte. These districts, together with the different islands, formed part of the territory of Mithrophrastes at the time of the visit of Nearchus, who learned from this monarch that the tomb on the island of Tyrina (Kishm) was that of Erythras, son of Ariarius, satrap of Phrygia, who was banished to this place by Darius (Strabo, lib. xvi. p. 776), whose name was given to the adjoining part of the sea. Artemidorus, however, thought the name was derived from the reflection of mountains glowing with the heat of a vertical sun (Strabo, lib. xvi. p. 779), which certainly cause a deep tint on the waters in this part of the world.

The khalifs, Chengiz Khan, Timur, and the Afghans, successively took, plundered, and destroyed Kirman, the last occasion being in 1794, when it was betrayed into the hands of Aga Muhammad Khan, the founder of the Kajar dynasty; but even yet its manufactures of shawls, matchlocks, and namad or felts are celebrated all over Asia, and are said to afford employment to upwards of one-third of the inhabitants, whether male or female. The wool of its goats approaches nearer than any other in fineness to that of Kashmir, and, under the commercial name Wahab-Shahi, it is used in adulterating shawl-wool.

A third of the inhabitants of the city are employed in their shawl manufacture. In texture and delicacy of fabric they rival those of Kashmir, but they are inferior in downy softness and warmth. The sheep are small and short-legged. After shearing, the wool is repeatedly and carefully picked and washed, and for some weeks is steeped in a wash. It is then spun by the women, and worked up by the men. In making carpets, the threads (all of one colour) are of the length of an upright loom, which consists of two horizontal rollers. The cross coloured threads that form the pattern are worked in by as many small boys as the breadth of the web will permit to squat in front of the loom. As the work progresses, the web is gradually rolled up on the lower roller. After every two or three rows have been worked in, wide-teethed combs are inserted over the threads of wool, and hammered down close and firm with a mallet. The master weaver draws and colours the designs on paper ruled to represent the different threads, after which he teaches the pattern to the pupils, who commit it to memory. The shawls are woven in a similar manner, only on a horizontal loom. The workmen work with the reverse side of the web uppermost. The fabrics are exported to all parts of Persia and Central Asia, and to Sind, India, and Arabia.

A lead mine is worked near the summit of a hill 32 miles N.W. of Kirman.

Kirman and Mekran are peopled by Persians principally, but contain also Turk, Baluchi, Brahui, and Afghan. Kirman has the shrine of Fahm-i-Alam, the father of Nadir Shah.—*Pottinger's Tr.; Kinneir's Memoir; Malcolm's Persia; Chesney's Expedition; E. A. Floyer's Baluchistan; MacGregor's Gazetteer.*

KIRMANI, a Kurd clan in Kurdistan, who were originally from Pizhdar, near Sikoneh, on the frontier of Persia. The Babbeh is the chief family of the Kirmani, and its members are the hereditary chiefs; hence their whole territory and the people are now called the government of the Bebbeh or Baban.—*Rich's Kurdistan*, i. p. 80.

KIRMANSHAH, a district of Persia, lying between lat. 34° and 35° N., and long. 44° 5′ and 48° E., at present greatly depressed, though a peculiarly productive region of manna (Gazanjabin), sheep, and horses, and manufacture of carpets. It is inhabited by the Leh, Turk, and Kurds, of the following tribes,—Ahmadáwand, Bahtui, Balawand, Guran, Hersini, Jalalawand, Jalilawand, Kakawand, Kalhor, Nanakili, Panjanawand, Pyrawand, Surakji, Zanganah, Zulch, Zobonawand. The town, in lat. 34° 18′ 45″ N., and long. 46° 37′ E., is 25 miles S.W. of Teheran. —*MacGregor.*

KIRTAN. HIND. The relation of the deeds of Rama, during the nine days of the Rama Naomi; any hymn or poetical relation or ballad in praise of the Hindu gods, and sung to music. The kirtans are arranged for part singing, in constantly changing measures, and have been composed to be sung by itinerant choirs of boys or young men, under a precentor, at country fairs, and in the village bazars of Gujerat and the Mahratta country. Each kirtan is headed by the auspicious word Sri, and begins with an invocation to Ganesha, the god of wisdom, and Saraswati, the goddess of learning and music, the Minerva Musica of the Hindus, and the other greater gods of their pantheon, and each ends with ascriptions of praise and loyalty to the Queen, and supplication for the blessing of God, and the citation of the names of some of the idol gods invoked at the head of the kirtans. The different metres used are:—1. The Abhanga, unbroken, employed in religious songs; 2. Arati, exclusively sung before idols in the evening or at the end of a religious lecture or song; 3. Ayra, employed in composing narrative; 4. Dhanakshari (?); 5. Dindi, a new metre, used chiefly in modern dramatic performances; 6. Katava or Katao, a fanciful measure, displaying the writer's command of alliteration, etc., and used chiefly in martial songs; 7. Kekawall, imitative of a series of cries of the peacock; 8. Laoni or Lawani, a metre generally used only in obscene songs, but latterly for religious also; 9. Naman, the lines in praise of a deity at the commencement of a Puran; 10. Pad, used chiefly in praising a deity, and sung in Kathas and singing parties; 11. Saki, a light metre used like the Dindi; 12. Sloka or Shlok, stanzas of two lines, the length of which varies, and used in ordinary poetical compositions.

KIRTHIPUR occupies the summit of a low

hill, about three miles west of Patan. It was at one time the seat of an independent prince, and its reduction cost the Gurkhali prince so much trouble, that in resentment of the resistance made by the inhabitants, he barbarously caused all the males whom he captured in it to be deprived of their noses. Chobar is also situated on an eminence, which, with that of Kirthipur, forms a kind of saddle hill.

KIRWAH. KASH. A weight equal to 384 lbs. English.

KISAN, in Bengal, as also Chasa, are terms by which the cultivators of the soil are there designated, like the Kunbi of the Mahratta districts, the Zamindar of the Panjab, the Kapu (Kapulu, pl.) of the Teling races, the Wakkaliga of the Canarese, and the ryot of the Muhammadans generally.

KISAN or Nagesar, a broken tribe in Sirguja, Jashpur, Palemow, and Lohardagga, who devote themselves to agriculture, from which probably they obtain their name. They dwell in the forests and cultivate on the skirts. At Moheri, Colonel Dalton found a great variety of non-Aryan tribes, — the Mar, a mixed race, wild Korwa, Bhuiya, Bhuiher, and Kisan. The Kisan's chief object of worship is the tiger, the ban raja, lord of the jungles. They adore the spirits of their ancestors, and a spirit called the Shikaria deota, offering goats to the latter.

They also worship the sun, and offer a white cock to that luminary. All this is Kolarian, especially Santal, shamanism. Each village has two or more groves or sa, one is sacred to Moihi-dhunia, the other to a local deity, whom they designate Mahadeo, a guardian of their harvests. The Khunt, or tutelar god of the villages, is Darha, as with the Kol, and there are various pat or sacred high places dedicated to divinities, as the Bamonipat and the Andaripat. They keep the ceremony of the sarhul, as the Kol, and have the Kol dances, jadur, jumhir, and karm, but not the kharria, which they say is peculiar to the Oraon. They are singularly ill-favoured.

Kol and Oraon women are all marked distinctively with Godna, but if a Kisan female have herself tattooed, she is at once turned adrift as having degraded herself. — *Dalton, Ethnol. of Bengal*, p. 132.

KISAS. PERS. Blood revenge.

KISH, the birthplace of Timur, who beautified it, and erected many splendid edifices before he made Samarcand his capital. It is now the chief town of the Begship of Shahr-i-Sabz, by which name Timur and Baber noticed it.

KISHENGARH and Bikanir, according to Col. Tod, arose out of Marwar, and Macheri from Amber, to which we might add Shekhawati, which, though not separate, is tributary to Amber, now Jeypore. The Kishengarh family, according to Aitcheson, also is an offshoot from Jodhpur. A treaty was formed with maharaja Kullian Singh in 1818. Prithi Singh succeeded in 1840; he was granted the right of adoption, and he receives a salute of fifteen guns. His territories cover an area of 720 square miles, and contain a population of 70,000 souls. The revenues are about 600,000 rupees. The State pays no tribute, and contributes nothing to any local corps or contingents. The army consists of 250 cavalry, 300 infantry, and 30 guns.—*Tod's Rajasthan*, i. p. 420; *Treaties*, iv. p. 103.

KISHEN KOMARI BAI was born in 1792. Her father, the rana of Udaipur, was the highest prince of Rajputana. Her mother was of the Chawara race of Anhilwara. She was very beautiful, and had an engaging manner. Both the Jeypore and Jodhpur chiefs asked her in marriage, and to obtain her overran the kingdom; but to settle the matter, in 1810, Kishen Komari Bai, when only 17, took poison, and in a few days her mother followed her to the funeral pile. When the Roman father slew the dishonoured Virginia, appeased virtue applauded the deed; when Iphigenia was sacrificed, the salvation of the country was the consolation, and Jephtha's daughter sustained her resignation in her father's fame; but Kishen fell a victim to a false sense of honour, and the sacrifice brought no peace to Rajputana.—*Tod's Rajasthan.*

KISHKINDHYA, the legendary monkey city of Bali.

KISHLAK and Yailak, amongst the Turkoman and Afghan races, are their winter and summer quarters respectively, from the Turki words Kish, meaning winter, and Yai, for summer. In the mountains south of Khokand, these are called 'Kstau and Yailau. These are the Sard-sair and Garm-sair of the nomade Persians.

KISHM ISLAND, called Jazirah-ut-Tul by the Arabs, and Jazirah-i-Daraz by the Persians, both meaning Long Island, is the Oaracta or Verokhtha of the ancients, where Arrian states that Nearchus saw the tomb of king Erythras, after whom the Persian Gulf was named the Erythræan Sea. In the 13th century it was called Jazirah-i-Laset, and one of its towns is still called Laset. The whole island and a large portion of the opposite coast, in both of which are mines of sulphur, was farmed by the Imam of Muscat. Kishm town is in lat. 26° 57′ 30″ N., and long. 56° 19′ E., at the N.E. end of the island. Kishm Island is the largest by far in the Persian Gulf, being about 54 miles long, but narrow, averaging 8 miles, and greatest breadth 20 miles. Its eastern extremity is within 10 miles of Hormuz, nearly opposite Gambroon; it runs parallel with the Persian shore, and is in no place more than 12 miles in breadth, and is surrounded with coral reefs. Nearchus says its length is upwards of 800 stadia, which, at 111⅓ to a degree, would give 43 geographical miles.

MacGregor says, on the authority of Colonel Pelly, that salt is quarried in the island, and that there are caves from which it has been excavated. It produces dates, wheat, vegetables, mangoes, and other fruits, including grapes without stones, and the usual abundance of water-melons. Bassadore is on a barren spot at the western extremity. The people are chiefly Arabs, subject to the Imam of Muscat, and their number may amount to 16,000.

At one time it had 100 villages, only a few of which remain,—Kishm, Luft, Basidu, and Brukh or Urukth, the Oaracta of Nearchus and Arrian.

At the N.E. point there was at one time flourishing Portuguese settlement; the ruins of the town still exist. In 1821 a British force was stationed at this place. On its withdrawal in 1823, the headquarters of the Indian Naval Squadron were established here, the place being the healthiest in the island. Its silk weavers supply the Gulf with loongees and striped cloths of silks and cotton.—*Ouseley's Tr.* i. p. 162; *Ches-*

ney's Ex.; Kinneir's Memoir; Lieut. Kempthorne in Royal Geo. Soc. Journ. v.; *MacGregor.*

KISHR. ARAB. A decoction of the husks of the coffee berry, greatly used in Yemen. The decoction of the berry itself is not much used there. The natives prefer the husks, and the beverage is called Kishr; it is sometimes flavoured with ginger and other spices.

KISHTAH. HIND. Dried unripe apricots, brought from the hills and from Kābul, etc. They are used to clean gold and silver, also in dyeing and in making chatni.—*Powell's Handbook*, i. p. 453.

KISHTI or Kuchkole. HIND. A boat, ship, vessel; cup, or bowl, generally of beggars; a fakir's wallet; also a kind of tray, a flat shield.

KISHTWAR or Kistawar occupies the middle part of the Chenab valley between Lahoul and Jamu. The elevation of the Chenab about the middle of the province is from 6000 to 7000 feet. Kishtwar is separated on the north from the Tibetan valleys of Zanskar and Dras by the axis of the Himalaya, which is crossed by the Umasi pass into Zanskar, elevated 18,000 feet, and by other passes from Wardwan into Dras. The Wardwan district is to the west and to the south. Kishtwar is separated from Chamba by a range of 10,000 to 14,000 feet of elevation.—*Hooker f. et T.* p. 209.

KISMAT. ARAB., HIND., PERS. Fate, fortune.

KISMIS, a small, pale-coloured, stoneless grape, when dried, and from which Shiraz wine is obtained. It is produced in Persia, whence considerable quantities are brought to Bombay. It is chiefly used in puddings as a substitute for currants, and is also served up with stoned almonds, as an article of dessert. They are called sultana raisins by European grocers. Kismis Surkh, red raisins, sun dried. Kismis Sabz, shade dried. Munakka are common dried grapes or pudding raisins.—*Powell's Handbook*, p. 16; *Faulkner.*

KISN-BAKHT, a name of the ascetic Man-Bhao sect.

KISRA, an Arabic title; Kesra, from the Persian (Chosroes, Cyrus) Khusrow, which signifies a great king. The Romans changed it into Chosroes, and applied it as a surname to every king of the Sassanian dynasty, like Cæsar among the Romans.

KISSA-i-SANJAN, a work compiled in the year 1599 by one Bahram, a Zoroastrian, resident at Nowsari, a town about twenty miles south of Surat. It details the various emigrations of the Parsees.—*The Parsees*, p. 7.

KISSILKORUM PASS, in lat. 35° 57′ N., and long. 77° 50′ E., in Turkestan, in the ridge between Yarkand and Yarakash. The top of the pass is 17,762 feet above the sea. From Kissilkorum, following the direction of the principal chain of the Kouen Lun, now turning to the south-south-east, Kiuk-kiul lake is reached. It is slightly salt, and is situated at the northern foot of the Chang-chenmo. Close to the Kiuk-kiul lake is a group of more than fifty hot springs, chiefly containing muriate of soda (common salt), and a great quantity of carbonic acid. Their temperature varies from 25° C. to 49° C. (77° to 120° Fahr.). In the valley of the Nubra are two other groups, the one near Panamick (hottest spring, 78·1° C. = 172·6° Fahr.), the other near Changtung (74·1° C. = 165·4° Fahr.). A march of seventy miles brings the traveller to (S.?) Pungal, where a route branches off to the valley of Bushia, and to Elchi, the capital of Khotan.—*Robert Schlagentweit, Magnetic Survey of India*, pp. 1, 2.

KISSING is a token of love and affection with many of the nations of the East Indies, as of Western Asia and Europe. Kissing of the cheeks and shoulders is noticed in Genesis xxxiii. 4, xlv. 14, 15; and in Luke xv. 20. Smelling the head is a mode of expressing intense affection, parental yearning, still common in India, and a very ancient oriental practice. It was perhaps rather the result of this practice than chance that Isaac noticed the smell of Jacob's person. 'And he came near, and kissed him: and smelled the smell of his raiment, and blessed him, and said, See, the smell of my son is as the smell of a field which the Lord hath blessed.' The Kadam-bosi, or foot-kissing of the Muhammadans of India, is a constant expression in their letters, though figurative with Muhammadans, but Hindus often touch a Brahman's foot with their fingers and then apply them to their lips. Kissing is unknown to the Burman, the Karen, and the Shan races, and the wild tribes of Arakan. They smell or sniff their relatives, applying the lips and nose to the cheek, and making a strong inhalation, which they call Nan-shok-thee, to sniff up a scent.—*Hind. Th.* ii. p. 45; *Forbes.*

KISSING COMFITS of Falstaff. Batatas edulis, *Choisy.* Sweet potato.

KIST. ARAB., HIND., PERS. Tribute, land-rent, instalment. Aksat, plural.

KISTAWAR, in Kashmir, in lat. 33° 18′ 30″ N., and long. 75° 48′ E., near the left bank of the Chenab, 5000 feet above the sea. Shawls and coarse woollens are made.

KISTNA, a river of Southern India, which runs almost across the Peninsula. Its source is in lat. 18° 1′ N., and long. 73° 41′ E., near Mahabaleshwar, at the ancient temple of Mahadeo, at the foot of a steep hill, at an elevation of about 4500 feet above the sea. Inside the temple is a small tank, into which a stream of pure water flows from a spout fashioned into the image of a cow's mouth. This is the traditional fountain-head of the river. On reaching the frontier chain of the Eastern Ghats, the Kistna turns southwards to reach the sea. Its delta, for about 80 miles from the mountains to the Bay of Bengal, lies entirely within British territory, and is now known as the Kistna district, embracing the lands on each side of the eastern third of Kistna river, and part of it in the great alluvial flat formed by the deltas of the Godavery and Kistna. The district suffered from famines in 1686 and 1832–34, the latter especially in Guntur; and in 1763, 1843, and 1864 Masulipatam and other parts were inundated by storm-waves, destroying many people. The famine in 1832–34 caused a decrease of 200,000 in the population. It was most severe in the Guntur portion, and was due to the failure of both the monsoons. Since 1852, to provide for irrigation, the British Indian Government has dammed up the river and its tributaries. The head-waters of the Bhima are dammed up at Kharakwasla to furnish Poona with a water supply. The Madras Irrigation

Company have drawn water for the Kurnool district from the Tumbudra. On the Kistna itself a small work has been constructed high up in the Satara district, where a dam has been thrown across the bed of the river, from which a canal is taken parallel to the left bank, capable of irrigating an area of 1825 acres. But the greatest Kistna work is the Baizwara anicut, first commenced in 1852, at a point where the river is confined by rocky hills on either bank. The length of the crest of this weir is 1280 yards. In 1874 the river rose 19·42 feet above the weir crest. This anicut is 1280 yards long, has a breadth of 305 feet, and a height of 21 feet. The river here is 1300 yards wide, has a rise of from 6 to 36 feet, and its maximum flood discharge is 1,188,000 cubic feet per second. The principal canals are navigable, and the length in 1878 available was 254 miles. The irrigated area is 226,226 acres, and the revenue Rs. 8,90,753. The Baizwara anicut is a great tranverse dam thrown across the river from hill to hill. The total cost of constructing this dam, which consisted of a wall backed with stone, was less than £75,000. More than 340 miles of canals have also been opened, and on these a large number of cargo and passenger boats and rafts are constantly plying for hire.

The Kolar Lake, which covers an area of 21 by 14 miles, and the Romparu swamp, are natural receptacles for the drainage on the north and south sides of the Kistna respectively. Kolar Lake is navigable from June or July, according to the setting in of the heavy rains, till February.

The Kistna is one of the sacred rivers of the Hindus. The temple at Pandarpur, on the left bank, is visited by large bodies of pilgrims, and at other spots on its banks fairs are annually held. The chief of these are at Baizwara and at Cullapilly, where at high tide the salt water of the sea meets the fresh water of the river. There are Saiva shrines, and a Vaishnava shrine at Sricacolam, midway between Cullapilly and Baizwara. At Baizwara a considerable trade is carried on in dressed hides. Kistna district is, speaking generally, a flat country; but the interior is broken by a few low hills, the chief of which are Bellamkonda, Kondavir, and Condapilly.

In the hilly tracts of the more western and northern portion, minerals of value occur,—corundum and garnets in the Narsaraopet Taluk and other places; galena from the neighbourhood of Karunpudi; chrysoberyl, amethystine quartz, quartzose minerals used as inferior gems, agates at Condapilly, Madgol in the Palnad and other places, and diamonds in the mines at Partiyal. Diamond mines are still worked to a very slight extent in five villages belonging to the Nizam; and at other places in the district there are traces of mines which were abandoned long ago.

KISTNA PAKSHAM. SANSK. The dark half of the month, metaphorically a Hindu bastard.

KISTVAEN. Single dolmens or kistvaens, consisting of upright, side, and back slabs supporting a covering stone, the front side remaining open, are not unfrequent on the Neilgherry Hills; and Mr. M. J. Walhouse mentions having seen in 1849, beyond the Nidi-mand, a succession of open-sided connected dolmens or kistvaens,—three large ones of equal height in the centre, and a smaller and a lower one at each end. They stood in a line, the three central compartments being covered with three huge cap-stones, the edge of one overlapping the edge of the next; the supporting stones, four in number, being great slabs set up endwise, with slabs enclosing the back or north side; the front or south side of all was open; the smaller structure at each end was similarly formed.—*M. J. Walhouse in Indian Antiquary*, October 1873, p. 275.

KITAB. ARAB. A book. Ahl-i-Kitab, people of the book, meaning believers in the old Bible, Testament, or in the Koran. This has the same meaning as Kitabi, a follower of the book, a term applied to Jews, Christians, and Muhammadans, as possessing books of revealed religion. In few Muhammadan countries, however, will Muhammadan religionists eat with a Christian; to salute him, even in error, with their ordinary salutation, Salam alaikum, Peace be unto you, is deemed unfortunate. He is looked upon as unclean, and a Muhammadan of India will rarely return the salutation of Alaik-us-salam, And unto you be peace. Nevertheless, amongst the Afghans the Christian is respectfully called a Kitabi, or one of the book. An invidious distinction of dress was, however, enforced generally on Christians at Bokhara, according to an edict of no remote date. It is possible that previously the same liberality of deportment towards Christians distinguished Turkestan. Katib is a scribe, a copyist, a writer; and Katibat, the act or cost of copying a book.—*Masson's Journeys*, ii. p. 245.

KITAB-al-MAGHAZI, a history of the warlike expeditions of Mahomed, by al-Wakidi; that rare and valuable work, dated A.H. 564, contains as much again as the printed text.

KITABAT. ARAB. The inscription on a Muhammadan tomb; writing.

KITAB-i-KUSLUM NAMAH, a book put forth by a conclave of seven learned ladies of Persia on the rights of women. According to these ladies, there are three classes of husbands in the world, viz. a proper man, a half a man, and a Hupul pupla. If the wife of the last man absent herself from his house, even for ten days and nights, he must not, on her return, ask where she has been; and if he see a stranger in the house, he must not ask who it is or what he wants.—*Tr. Hind.* i. p. 399.

KITAI, the name of the wall near Darband in Daghistan.

KITAMA KURA. JAP. A fish, Tetrodon hispidus, so poisonous that when eaten it proves frequently fatal, or, according to the signification of the Japanese name, makes the north one's pillow, it being a custom with these people to turn the heads of those that are dying towards the north. —*Thunberg's Tr.* iii. p. 68.

KITCHELLY CAPUR, a scented root of China, chiefly used in the perfumery powders called sicsa, rautha, and also used for medicine. This is also called Kitchelly Kelangu in Tamil; sold at from 40 to 60 rupees a candy; that from Malabar, from 28 to 40 rupees a candy.

KITE. Pattanga or Lalayang, MALAY. Lalayang are flown by men and boys of the Muhammadans, by all classes, high and low. Kite-flying is a pastime universally practised amongst the Chinese, Japanese, and Burmese, who excel all other people both in the varied forms of their kites and the heights to which they can make

them rise. They are constructed of paper made of refuse silk and bamboo. They assume every possible shape, and sometimes it is impossible, when they have reached the culminating point, to distinguish them from birds. By means of round holes, supplied with vibrating cords, on which the current of the air acts, the kites when ascending issue a humming noise, similar to the hum of a swarm of bees.—*Burton's Scinde; Morrison's Compendious Summary.*

KITES are birds belonging to the sub-family Milvinæ, and they are arranged in the genera Milvus, Haliastur, Pernis, Baza, and Elanus. In Bengal, the kites and Brahmany kites breed chiefly in January and February, and disappear during the rains. The Dung kite or Dung bird, Neophron percnopterus, *Linn.*, called Pharaoh's chicken or the Egyptian vulture, is abundant southwards from Bengal, also in N. Africa, W. Asia, S. Europe, and even in England. The male has a dirty blackish-brown colour, but the hen bird is white, with yellow about the cheeks. It walks with ease and with a stately gait, and frequents localities where flesh or sweepings are thrown. It builds on cliffs, houses, and trees.

The Brahmany kite of India, the Haliastur Indus, *Bodd.*, one of the Milvinæ, is known to all by its clear maroon-coloured black and white breast and abdomen, and frequenting the river valleys, lakes, and sea-coasts, wherever wet cultivation is in progress, swarming where fishers throw their nets, and about shipping in the harbours, picking up small fishes, prawns, or offal, the frogs from rice-fields, water insects, mice, and shrews, and young or sickly birds and wounded snipe. Near towns it is very tame and fearless, and every Sunday pious Hindus may be seen calling Hari! Hari! to attract the bird's attention, and then feeding it by throwing to it bits of flesh. The audacity of the Brahmany kite is admirable. Major Moor mentions as one instance, of which he was a witness, viz. stooping and taking a chop off a gridiron standing over the fire that cooked it. It receives its name from Europeans, because Brahmans and religious Hindus worship it, and regard it as Garuda, the type or vahan of Vishnu. The birds are expert fishers. Hindus of N. India call it the Brahmany chil, and by the Muhammadans it is known as the Ru-mubárak or Blessed Appearance.

The Milvus govinda, *Sykes*, the common pariah kite, extends through all India, Burma, and Malayana, and is one of the most abundant and common birds in India. Every town, cantonment, camp, and village has its colony of this kite, which ply their vocation from morning till night, picking up fragments of food and garbage. In Calcutta, 200 or 300 may be seen at a time. They are bold and fearless. Of all rapacious birds, the govind-kite is the most useful; wherever offal exists, this bird is to be found, hovering over the butcher's shop, the kitchen, or the barrack,—now leisurely sailing in circles, now darting like an arrow upon its prey, which it devours while on the wing, uttering a clear shrill cry whenever a companion disputes its possession. Its ordinary name is the chil, from its peculiarly shrill call. The govind-kite, Egyptian vulture, crow, Indian jackdaw, and mina may justly be termed the great scavengers of India.

The crested black kite of all India is the Baza lophotes, *Cuv.*; it is not abundant. Its very handsome white and black plumage at once attracts attention.

The Lophastur Jerdoni, *Blyth*, is a kite of Malayana and the isles.

The black-winged kite of India, Elanus melanopterus, *Daud.*, lives near the skirts of jungles, and is not much on the wing.

The kite eagles of India belong to the genus Neopus of the Aquilinæ. Neopus Malaiensis, *Reinwardt*, the black eagle, is found in most of the hilly and jungly districts of India, in Burma, and Malayana. It is generally seen circling or questing for prey at no great height. It is a bird of easy and graceful flight. Its chief food is obtained by robbing birds' nests of the eggs and the young.—*Moor*, p. 344; *Adams; Jerdon's Birds of India.*

KITTESOL or Kittysol, parasol, umbrella, paper summer-heads. They are an extensive article of export from China to Bombay, Calcutta, etc. They are a cheap sort of umbrella, made of bamboo frames, covered with oiled paper or cheap silk. They are sent to the Archipelago and India in boxes containing 100 umbrellas each, which is estimated to be a pikul. Considering the material they are made of, these umbrellas or parasols wear a long time, for their use is for the most part as a protection against the sun.—*Faulkner; Morrison; Williams' Middle Kingdom.*

KITTUR, a town of peninsular India, 26 miles S.E. of Belgaum, in lat. 15° 35′ 30″ N., and long. 74° 50′ E. In 1832 Kittur was the scene of a formidable insurrection, which, however, was suppressed by the zeal and intrepidity of two patels or village headmen.—*Imp. Gaz.*

KITU is a form of salutation in Japan, where the inferior, laying the palms of his hands on the floor, bends his body so that the forehead nearly touches the ground, and remains in this position for some seconds. The superior responds by laying the palms of his hands upon his knees, and nods or bows more or less low according to the rank of the other party.

KIUH-HWA, CHIN., also Ku-Kiuh and Hwang-Kiuh, CHIN., are the heads of several composite flowers of the genera Chrysanthemum and Anthemis. They are arranged into k'u, bitter, and kan, sweet.

KIUN, in the Tartar language, the sun; or, according to Abul Ghazi, the sun and moon.

KIWI, a bird of New Zealand, of the genus Apteryx, some of which have been taken to Britain. Its egg, when fresh, weighs 14½ oz., the contents weighing 13¼ oz. The weight of the living bird is nearly 60 oz. The kiwi is purely nocturnal in its habits, and in the night-time will run about lively enough, probing into the ground and round every corner of the place where it is confined, with its long and sensitive bill.

KIZIL KIZL, the red sand deserts, have an area of about 35,000 square miles.—*Wood's Lake Aral.*

KIZIL OZAN, a river of Persia, which rises in the mountains of Abbas Beg in Ardelan, in about lat. 35° 50′ N., and long. 46° 45′ E., after a long course, and traversing Ghilan under the name of Safed Rud (White River), it disembogues into the Caspian Sea. The annual take of sturgeon at the

mouth of the river is about 125,000, principally in February, March, and April. The gross value of fish, caviare, and isinglass is about £23,000. The Kizil Ozan river is supposed by Major Rennell to be the Gozan of the Scriptures, 2 Kings xvii. 6.—*MacGregor*, iv. p. 267.

KIZLA SAFED. To the west of the province of Fars are the ruins of Kizla Safed, and, nearly in the centre, are those of the ancient capital, Persepolis. The territory of Fars represents ancient Persis, which was watered by the Araxes, Gyndes, Oroatis, Arasis, Pelevar, and Bagrad. Its cities were Corna, Axima, Arbrea, and Artacana, besides many others whose sites are unknown. Persepolis was the capital in the time of Alexander. More anciently the seat of the government was at Pasargada (Strabo, lib. xv. p. 729), the Persagadis of Quintus Curtius (lib. v. cap. vi.), but as this historian speaks of the fortress of Persepolis and the city of Persagadis (qu. Farsa—Gerd?), it is possible that the extensive ruins in the plain, near the former, may be the Pasargada of Pliny (lib. vi. cap. xxvi.).—*Col. Chesney*, p. 210.

KIZZILBASH, a term applied in Kābul and Herat to a Turk race, principally of the tribe of Jawanshir, who were placed in the country by Nadir Shah. Under the rulers of Kabul, they have served as bodyguards, cavalry, and artillery, and still retain their own language. Their history has been often written. In the beginning of the 18th century, the feebleness of the Persian monarchy excited the cupidity of the Afghan race, who overran the fairer portion of that kingdom, and possessed themselves of Isfahan. Their successes called forth the energies of Nadir, who not only drove the Afghans from Persia, but annexed the whole of their own territories to his empire, and, turning their swords against India, with a mixed army of Persian and Afghan, sacked several of its cities.

When Nadir Shah marched towards Dehli, he had 12,000 fighting Kizzilbash with him. When he quitted that city, on his return, he left behind him 300 of these, who, with other troops, were directed to bring away his treasure, and follow him. They passed through Kābul, but when within two days' march of Kandahar they heard of his death; and a few days afterwards, Ahmad Shah, Nadir's lieutenant, came up with them, attended by 500 or 600 Daurani. He seized the treasure, and took the Kizzilbash into his service; and his kind treatment of them induced others to come from the neighbourhood of Tabreez, Mashed, Kirman, and Shiraz in Persia, where the true Kizzilbash exercise the profession of horse-breeders, shepherds, and cultivators. There are now perhaps about 10,000 Kizzilbash in the city of Kābul, who are ever ready to draw their swords as mercenaries. Their leaders are by far the most wealthy, the most intelligent, and the most influential men at Kābul. See Kazzilbash.

KLABAT, a mountain in Celebes. The town of Menado is built on a plain surrounded by mountains, the highest of which, Klabat, 6500 feet above the level of the sea, is a conical volcanic mountain in the northern peninsula of this island.—*Marryat's Archipelago*, p. 44.

KLAPROTH, JULIUS, a learned orientalist, author of Asia Polyglotta et Atlas, Paris 1823; Beleuchtung und Widerlegung der forschungen über die Geschichte der Mittel-Asiätischen Volker des herrn J. J. Schmidt, Paris 1824; and many other works.

KLEIN, a Protestant missionary in the south of India, who collected a large herbarium, which was principally described by Willdenow, and that of Heyne by Roth in his Novæ Plantarum Species. Heyne's collections were either obtained from, and were named by, Roxburgh, or were made in Mysore and the southern provinces, and the names attached by Rottler. Klein, Heyne, and Rottler were the scientific men who formed the Herbarium Madraspatense. Drs. Wallich, M'Clelland, Irvine, Lindsay, Stewart, and Thomson, medical officers of the Bengal army, also Dr. (Sir Joseph Dalton) Hooker, of the British navy, have done much for the botany of Bengal and India generally; Drs. Wight, Griffith, and Roxburgh, of the Madras army, for that of all India. Major Beddome, of the Madras army, has done much for the Madras Presidency. The names of Alexander Gibson, Dalzell, and James A. Murray are familiar in Bombay and Sind; and Messrs. Moon and Thwaites in Ceylon.

KLESA or Klesha, in Buddhism, evil desire, the love of pleasure, the cleaving to existence.—*Hardy's Eastern Monachism*, p. 438.

KLEWANG. Jav. A sword, any weapon of war.

KLING, the Burmese and Malay term for a native of India, evidently derived from the ancient kingdom of Kalinga. Newbold, however, supposes that Kling is a corruption from Teling or Telinga. But the Chulia and Kling of the Malays comprehend the traders and settlers, both Muhammadans and Hindus, from the Coromandel coast. These names have been given to them by the Malays from the earliest times of the ancient commercial intercourse subsisting between this part of Asia and India. They are in considerable numbers in Rangoon and Moulmein, also in the islands of Penang and Singapore, and are coachmen, and in similar employments.—*Newbold's British Settlements*, i. p. 8.

KLOI, a snow-white root of Siam, used as food, but requires to be steeped, in slices, in water and exposed to the sun's rays, as, in an unprepared state, it is poisonous.

KNIFE-GRINDER, a term applied to a species of Cicada or grasshopper of Ceylon, from the noise which it makes.

KNIGHTIA EXCELSA, *R. Brown*, the Rewa-rewa or honeysuckle tree of New Zealand, valuable for ornamental work and furniture.—*Von Mueller*.

KNIVES.

Messen, ...	Dut.	Pisau, Piso, . .	Malay.
Couteaux, ...	Fr.	Noshi, ...	Rus.
Messer, ...	Ger.	Cuchillos, ...	Sp.
Churi chaku, Guj., Hind.		Bichak, ...	Turk.
Coltelli, ...	It.		

KNOX. Captain Knox, an officer of the East India Company, who marched from Murshidabad to Patna in thirteen days; attacked and defeated the troops of Shah Alam, 1760, dispersing his entire force. Captain Knox then, with a battalion of sepoys, 200 Europeans, a squadron of cavalry, and five field-pieces, in five hours utterly routed the nawab of Purniah, who had 12,000 men and 30 pieces of cannon.—*Markman*, p. 159.

Robert Knox, author of An Historical Relation of the Island of Ceylon, published in London

in 1681. His father's ship, the *Ann* frigate, in the service of the E. I. Company, sailed from the Downs, 21st January 1657, but on 19th November 1659 was dismasted in a storm off the Coromandel coast, and, to refit, was taken to Cotiar Bay, opposite to Trincomalee. But the captain and two boats' crews were seized, and amongst them the captain's son. The captain died of fever, but the son for 20 years remained captive, and then escaped, 18th October 1679, to the Dutch fort at Aripo, and returned to England, where he was made commander of the E. I. Company's ship *Tarquin*.

KOAN or Koang. SINGH. The Ceylon oak of the English in Ceylon. Grows in the southern parts of Ceylon; a cubic foot weighs 42 lbs. It is used for native oil-presses and wooden anchors; its berries are eaten by the natives.—*Mr. Mendis.*

KOBAD or Kaodes, a Sassanian king, A.D. 488 or 481. See Fars; Sassanian.

KOBAD or Kei Kobad, A.D. 1286, an emperor of Dehli, who made his aged father, Bakarra Khan, undergo the abject oriental obeisance of kissing the ground before the royal throne. He fitted up a palace at Kilokeree, upon the banks of the Jumna, to enjoy there soft society, but nobody in that village now recollects the site of his palace. Kei Kobad was assassinated A.D. 1288.—*Tr. of Hind.* ii. p. 199.

KOBANG, a gold coin of Japan, value about 22 shillings.

KOBI or Chamo, a vast desert of Chinese Tartary, which occupies almost all the south extremity of the country of the Kalkas.

KOBRA TEL. SINGH. A substance supposed in Ceylon to be a virulent poison. The ingredients are extracted from venomous snakes, and from the lizard called Kabaragoya. The receipt far outdoes, in dramatic arrangement, the witch's cauldron of Macbeth.—*Tennent's Ceylon*, p. 274.

KOCH'H, a dark-skinned people in the northern parts of Rangpur, Purniah, Dinajpur, and Maimansing, who have hitherto, erroneously Dalton thinks, been classed as belonging to the Lohitic or Indo-Chinese race. He believes them to be a branch of the great Bhuiya or Bhuniya family, whom he classes as Dravidian. They came from the W. and S., and overthrew the Kachari or Chutia dynasty.

The Koch'h are one of the most ancient of the peoples in India. Those in Koch-Bahar must be regarded as the present nucleus of the race, but they are still numerous in the old Kamarupa and the ancient Matsiya-desh, that is, in Rangpur and Lower Assam and Purniah, extending west as far as long. 87° 45′ E., or to the boundary of ancient Mithila, and east to long. 93° E.

In the north, the Koch'h established their dominion upon the ruins of the Aryan kingdom of Kamrup, which the Afghan king of Bengal had overthrown in 1489. The Koch'h gave their name to the native state of Koch-Bahar. The grandson of Haju, Vishu Singh, with all the people of condition, adopted Hinduism, and took the name of Rajbansi; but the mass of the Koch'h people became Muhammadans, and the higher grades, as Hindus, now reject and contemn the very name of Koch'h, and it is bad manners at the court of the descendant of Haju to speak of the country as Koch-Bahar; and the chiefs accept the myth which, by a reflection on the chastity of the daughters of Haju, give them for ancestor the god Siva. The Rajbansi Koch'h are the dominant tribe. They are all very dark; and as their cognates, the Kachari, Mech, Garo, are yellow or light-brown, and their northern, eastern, and western neighbours are as fair or fairer, it must be from contact with the people of the south that they got their black skins. Koch-Bahar was delivered from the Bhutia tyranny by the treaty of 1772, in accordance with which the raja placed himself under British protection, and paid tribute to the East India Company.

The villages of the Pani-Koch'h lie along the skirts of the Garo Hills. They are much mixed up with that people, and with the Rabha, and in their religion, language, and customs appear to lean sometimes to the one, sometimes to the other.

They greatly respect the Garo for having retained their freedom in regard to food, which they, the Pani-Koch'h, resigned, and now they must not eat beef, and they reject dogs, cats, frogs, and snakes, which the Garos eat. They use tobacco and strong liquors, but refuse opium and hemp. They eat no tame animal without having first given one of their gods the refusal of it.

Like the Rabha, they call their supreme deity Rishi, and his wife is named Jago, and they sacrifice to these deities, to the sun and moon, also to rivers and hills. The women do all work which is not above their strength, such as felling trees and the like. When a woman dies, the family property is divided amongst her daughters; and when a man marries, he goes to live with his wife's mother, and obeys her orders and those of his wife. Widows left with property generally manage to select young men as second husbands. —*Turner's Embassy*, p. 11; *Treaties, Engagements, and Sunnuds*, vii. p. 367; *Hodgson; E. T. Dalton, Ethnol. of Bengal*, p. 91.

KOCH, the Mufflon or wild sheep. Its horns were found by Vigne intermixed with those of the ibex or chup, and the markhor or rawacheh of Little Tibet.—*Vigne's Personal Narrative*, 85.

KOCHIA-VILLOSA, *Lindley*, the cotton bush of Australia, resists the extremes of heat and drought. A species of Kochia is the Ti-fu-tsze, CHIN. The small roundish green seeds of this chenopod resemble the eggs of the silk-worm. —*Von Mueller; Smith.*

KODAGA, called Coorg by the British. The language is spoken in the small principality of this name, lying on the Western Ghats. Kodaga means west. It differs from Tamil, from Canarese, and from Malealam. It was long regarded as Canarese, modified by the Tulu, but Mr. Mögling states that it is more nearly allied to the Tamil and Malealam than to the Canarese. The Coorgs still follow the primitive Dravidian custom of polyandry; they are far from being Brahmanized, and they have no literature, in the proper sense of the term. See Coorg.

KODAIKANAL, meaning The Forest of Creepers, a village on the Palni Hills, in the Madura district of the Madras Presidency, in lat. 10° 13′ 21″ N., and long. 77° 31′ 38″ E. It is a hill sanatorium, 7209 feet above sea-level, and is a summer resort of growing popularity.—*Imp. Gaz.*

KODAL of Cuttack is the inner bark of a forest tree. It makes a strong and most durable

rope, which is said not to be liable to deteriorate from wet, and hence it is made into boat cables. At Autgurh, the fibre is collected for sale, on requisition, by the Saura race.

KODALI. HIND. A hoe. Kodali marna, to to dig with the hoe, a ceremony.

KO-DAW-BA, literally Beg pardon, is one of the Burmese New Year customs. On this festival day, presents are made from vassals and dependents, as deprecatory offerings, to avert deserved punishment for offences against their liege lord. It is called by the British, Beg Pardon Day. It is the Chinese or Mongol Kow-tow (Kheu-theu). —*Forbes*, p. 76.

KODO or KODU. BENG. Kora millet or punctured millet, Paspalum stoloniferum, small grain eaten by the natives. In one form, called mataona, which does not in appearance differ from the ordinary grain, it has the property of intoxicating when made into bread.

KODU and Kondru, TEL., whence the ordinary name of Kond, a barbarous race of mountaineers inhabiting the hills west and north-west of Ganjam to the borders of Nagpur. The plural of Kodu is Kollu.

KODUNGALUR, the Cranganore of Europeans, a small seaport town in the Cochin territory, in lat. 10° 13′ 50″ N., and long. 76° 14′ 50″ E., and 18 miles N.N.W. from Cochin town. It was the first place in India at which St. Thomas laboured (A.D. 52). It was the seat of government of Cheruman Perumal, A.D. 341. Jews now there claim to have been residents since A.D. 378, and Christians have certainly been there since the 9th century. The Portuguese built a fort there A.D. 1523, but it fell to the Dutch (1661), who sold it to a native prince at the end of the 18th century, lost it to Tipu (1776), recaptured it, but in 1784 again ceded to Tipu, and in 1784 they sold it to the maharaja of Travancore, and again in 1789 to Tipu.—*Day; Hunter.*

KOEL. HIND. Indian cuckoo.

Kokil, ...	BENG.	Cowde-choa, . .	TAM.
Chule, ...	MALAY.	Kokila pika, . . .	TEL.

This Indian cuckoo is the Eudynamis orientalis. The male is of a deep black, and the female of a dusky green mottled white. Like the cuckoo, the koel lays its eggs in the nests of some other birds. It inhabits Ceylon, India, the Malay countries, and China; all of its names are obtained from its ordinary call. Like the cuckoo of Europe, the bird is, in India, the harbinger of spring, and its call, koel, though shrill and disagreeable, is associated with all the joys and labours of husbandry of that season, and is quoted in the rhymes and proverbs of the people; and because the call of the koel is especially heard at the season of spring, it is called the friend of love—

> 'Sweet bird, whom lovers deem love's messenger,
> Skilled to direct the god's envenomed shafts,
> And tame the proudest heart; oh, hither guide
> My lovely fugitive, or lead my steps to
> Where she strays.'

Thus 'Koel boli, Sebundi doli,' the cry of the koel, is the grief of the Sebundi soldier, meaning that the disbanding of the armed men gathered together for collection of revenue depend on the koel's note; Sebundi being a corruption of Sipah Hindi, in distinction to Moghul or foreign troops, who were always kept up. The European names are all derived from the Sanskrit name Cuculus. Pliny says that the vinedressers deferred cutting their vines till the cuckoo began to sing. They have the cuckoo ale of England, to partake of which the labourers leave their work when the first cuckoo's note is heard. There is also the vulgar superstition that it is unlucky to have no money in your pocket when the first cuckoo of the season is heard; and the amorous Hobnelia tells us, that in love omens its note is equally efficacious. The female lays its eggs in the nest of the common crow or of the carrion crow, Corvus splendens and C. culminatus; the birds called seven brothers have been seen assiduously feeding a young koel.—*Elliot; The Hero and the Nymph*, p. 267. See Kameri.

KOEL, South, a stream from the watershed of Chutia Nagpur which unites with the Sunkh in Gangpur, and takes the name of the Brahmany, and enters the Bay of Bengal at Point Palmyras. North Koel, river of Chota (Chutia) Nagpur, rises in the west of the Lohardagga district, and falls into the Sone.—*Dalton*, p. 155.

KOENIG, JOHN GERARD, a native of Courland and pupil of Linnæus. He travelled in Iceland in the year 1765, and arrived at Tranquebar, in India, in the end of 1768 or beginning of 1769. He was physician to the Tranquebar mission in the Karnatic; but his enthusiasm, defiance of bodily fatigue, spare meals, the scorching climate, and his simplicity of manners and benevolence, soon made him known to and beloved by the Dutch, French, and British with whom he met. He became naturalist to the nawab Muhammad Ali, and while at Madras made the acquaintance of Dr. James Anderson. In 1778, the Government of Madras granted him a salary to enable him to carry on his researches, and with this aid he visited the Straits of Malacca and Siam towards the end of 1779, and made known the occurrence there of tin ore. His salary was again increased in 1780, and he then visited Ceylon. He travelled along the coast to Calcutta, from which he was returning in 1785, when he was attacked with diarrhœa or dysentery, and died on 26th June. He bequeathed all his plants to Sir Joseph Banks. His example and instructions diffused a similar taste among his companions, and hence originated the botanical labours of the society of 'United Brothers.' But although it may be said that scientific botany took its rise in India from Koenig, the flora of the East Indies had not been entirely neglected by European botanists prior to that period, as the works of Rheede, Rumphius, Plukenet, the two Burmanns, and finally a large and well-preserved yet almost unknown collection of Indian plants in the Oxford herbarium, formed in the early part of the eighteenth century, amply testify.

KOERI, an agricultural and gardener race in Hindustan. The Kunbi are distinguished from the Koeri, as the latter are frequently gardeners as well as husbandmen. Socially, they are on an equality. The Koeri are also called Murao. In Behar they grow the poppy; they are in general very respectable, and the main distinction between the Kunbi and the Koeri is that many of the latter are exclusively kitchen gardeners and have immense gardens; these castes are both laborious. At Hindu marriages a custom prevails of placing a high crown, called maur, made partly of leaves and flowers, on the head of the bridegroom, and

a smaller one, called maurt, on the head of the bride. It is said that no wedding can take place without these crowns. They are made by the gardeners, who receive a considerable price for them, according to the circumstances of the parties.—*Sherring's Hindu Tribes.*

KOFTGARI or Kofttila, HIND., is steel inlaid with gold in patterns. In former days it was carried on to a considerable extent in various parts of India, and was chiefly used for decorating armour,—guns, coats of mail, helmets, swords, and sword-handles. Since the mutiny and rebellion in India of 1857, the manufacture of arms has been generally discouraged, and koftgari work is consequently now chiefly applied to ornamenting a variety of fancy articles, such as jewel caskets, pen and card trays, paper-weights, paper knives, inkstands, etc. The process is exactly the same as that pursued in the inlaid work of Europe, and the workman can copy any particular pattern required. The work is of high finish, and remarkable for its cheapness. Admirable specimens of inlaid metal work by the native artisans of Bhooj were to be found in the collection of arms contributed to the 1862 Exhibition by H.H. the Rao of Cutch. Some of the cutlers still remain at Lahore, but many of them went to Nizamabad in the Gujranwalla district, others to Gujerat, and the koftgari artisans also have mostly left Lahore to reside in the Kotli Loharan in the Sealkote district. At Baroda, iron vases and other vessels are ornamented with gold, hammered in, not in the branching, coral-like designs of the koft work, but in discs or masses. The whole is afterwards polished in the lathe. Though less effective than the damascened koft work, it is a method capable of varied and artistic application.—*Cat. Universal Exhibition*, 1862; *Powell.*

KOGHANI, an Afghan tribe occupying Gandamak. They formerly held the country in the west, but were expelled by the Jabbar Khel Ghilji. They claim to be Ghilji.

KOH. PERS. In Pukhtu, Roh. A mountain, a prefix to many solitary mountains and hill ranges from west of the Himalaya and the Indus even to the Caspian Sea. The Koh-i-Kush or Caucasus, one of these, is the great stony belt that separates Northern from Southern Asia. In traversing the kingdoms of Hindustan and Kābul, from the east of Bengal to Herat, we find them everywhere bounded on the north by a chain of mountains which is covered with perpetual snow for almost the whole of that extent, and from which all the great rivers of both countries appear to issue. This chain commences near the Brahmaputra, and runs nearly north-west as far as Kashmir; during this part of its course it is called the Himalaya (Hima, snow, Alaya, abode). From Kashmir, its general direction is a little to the south-west as far as the high snowy peak of Hindu Kush, nearly north of Kābul. From this peak its height diminishes, it no longer bears perpetual snow, and is soon after lost in a group of mountains, which stretch in length from Kābul almost to Herat, and occupy more than two degrees of latitude in their breadth. Some ranges issue from this mass on the west, and extend so far into Persia as to justify, if not completely to establish, the opinion of the ancients, which connected this range with Mount Caucasus on the west of the Caspian Sea. From Kashmir to Hindu Kush, the whole range is known by the name of that peak. From thence to the meridian of Herat, the mountains have no general name among the natives, but that of Paropamisus was long applied to them by European geographers. As seen from the plains of Peshawur, the fourth is the principal range of the Indian Caucasus, and is always covered with snow. It is conspicuous from Bactria and the borders of India, and is seen from places far off in Tartary. Elphinstone says that the ridge of Imaus or Himalaya is seen for a distance of 150 and even 250 miles. The Paropamisan chain, which bounds the Kohistan on the west, extends 350 miles from E. to W., and 200 miles from N. to S. The whole of this space is a maze of mountains. The eastern half of this elevated region is inhabited by the Hazara, and is cold, rugged, and barren; the level spots are little cultivated, and the hills are naked and abrupt. The western part, which belongs to the Aimak, though it has wider valleys and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh; their acclivity is less on their other extremities, except perhaps on the west or south-west. On the north-west they seem to sink gradually into the plain which borders on the desert. The slope of the whole tract is toward the west.—*Elphin. Caubul; Rennell, Memoir; Vigne's Narrative; Markham's Embassy; Masson's Journeys.*

KOHANU. MAHR. A tumbler, a rope-dancer, an acrobat, an athlete.

KOHAT, a British district in the Panjab, lying between lat. 32° 47′ and 33° 53′ N., and between long. 70° 34′ and 72° 17′ E. Kohat lies to the south and south-west of Peshawur. Its valley is 35 miles long, and, on an average, four miles broad. From Peshawur, through the Afridi Hills, it is reached by two passes, the Jowaki and the Gulli or Kohat; and from the Indus it is also approached by two passes, the Koshalgurh and the Kalabagh, through the Khatak Hills. Again, it is connected with Bannu to the south by two passes, the Surduk, seven miles long, and the Khoon-i-gao, from Nurri to Khurruk, a less direct but safer route. Up to 1848, Kohat was held as a fief from the Kābul Government. It was then taken possession of by the British on account of hostility to them during the second Sikh war. The khan of Hungu in the Bangash country was in the British service as revenue collector, but he was murdered by one of his own relatives, and the khanship descended to his son. The Bangash suffered much from the raids of their hill neighbours, Orakzai, Turi, Kābul Khel, Waziri. The inhabitants of the Miranzai valley are also Bangash. This valley belonged to the fief of Sultan Muhammad, but, being an outlying locality, was overlooked when Kohat was taken possession of. The Kābul Government then lost no time in arranging for the occupation of Miranzai, which appeared to have been vacated, so Sirdar Azim Khan, the governor of the Khurrum province, in 1851, summoned the Miranzai to surrender; but they petitioned the British to include them in Kohat. Under the circumstances, this request was acceded to.

Along the north-west boundary of Kohat, from the lands of the Sipah tribe as far as those occupied by the Zaimusht Afghans, lies the country of the Orakzai. These are one of the largest frontier

tribes, and, if necessary, are able to muster upwards of twenty thousand fighting men. Some of the principal clans are the Samilzai, the Hungu, the Miranzai, the Shekhan, the Mishti, and the Raabeah Khel. The first three of these clans reside in the hills adjoining the Kohat district. The remaining three are those which have come more especially in contact with the British Government. There are a few Orakzai living at Peshawur, Amritsar, and in some other parts of the Panjab. The cool table-land of Terah is situated in the midst of the Orakzai Hills. This is the resort of the people with their cattle in the summer season. In the winter they return to the lower hills on the Kohat frontier. The Hungu valley is twenty miles long, by two or three broad; and the plains of Miranzai, into which it opens, are about nine miles square, and are held by seven fortified villages, which have been taken in charge by the British Government. Formerly each village was a commonwealth, and all were at feud with one another.

The Khatak and Bangash Pathans constitute together more than 60 per cent. of the population. The latter occupy the Miranzai valley, with the western portion of Kohat proper, while the Khatak hold the remainder of the eastern territory up to the bank of the Indus. The Khatak, who occupy the eastern half of the district, are an important tribe, holding the west bank of the Indus for a distance of 120 miles from Hund, north of the Kābul river in Peshawur, to Kalabagh in Bannu. The Khatak are tall and good-looking mountaineers, and have settled, honest habits. The Bangash are not brave. The other inhabitants are Sikhs, Arora, Brahman, Ahir, Jat, and Kshatriya. Hungu is a dependency of the province of Kohat. The inhabitants of the villages in the valley leading from Hungu to Kohat are principally Shiah, as are all the tribes of the Turi, their neighbours, although not so bigoted as these. The plain of Kohat and the valley of Hungu are well cultivated and populous. Wheat is grown, but the stony soil in many parts seems more adapted to the culture of maize, here called jowari, the quality of which is excellent, and the returns large; while its flour makes admirable bread, and is the general food of the inhabitants. The great command of water, in many situations, is made available for the irrigation of rice lands. Near Kohat indifferent coal is found, generally on the surface. Asbestos occurs in veins parallel with the coal strata at Kanigoram. Sulphur abounds in the northern range, and petroleum exudes from a rock at Panoba, 23 miles E. of Kohat. The valley is famous for its salt mines, the chief of which, at Bahadur Khel, is guarded by a fort. The salt rocks are in the line of low hills crossing the valley of the Teri Toi, and extending for 40 miles, and a quarter of a mile wide along either bank of that river. It occurs as a solid rock of bluish-grey colour, 1000 feet thick, and with hills rising 200 feet high. A bituminous substance called Momyai, deemed in India a useful and valuable medicine, is dug out of the hills of Kohat; it is black, and resembles gum.—*Mohun Lal's Travels*, p. 358; *Ad. Schl.; Rec. of G. of I.*, No. ii.; *Masson's Journeys*, i. pp. 114–117; *Cunningham's Sikhs*, p. 6; *Imp. Gaz.*

KOH-DINAR, a mountain chain in the province of Fars, visible from the sea near Bu-shahr. It has a large extent of snow-covered surface, the snow-line is not below 14,000 feet, and the average height of the peaks is from 17,000 to 18,000 feet.

KOHI, female, Koheela, male; also called Shahin, Falco peregrinator, black-eyed hawks, found in Sind.

KOH-i-BABA, a remarkable snow-clad ridge, with peaks about 18,000 feet in height. It is the great continuation of the Hindu Kush, is about 60 miles long, in lat. 34° 30′ N., and between long. 67° 30′ and 68° 30′ E. It is at the S.W. extremity of Hindu Kush, with which it is connected by the transverse ridges of Kalu and Hajeguk. According to Burnes and Lady Sale, it is about 18,000 feet in height; Outram, 20,000 feet; Humboldt, 2800 toises, or 17,640 feet; the most probable is 16,000 feet. The highest accessible point is in lat. 34° 40′ N., long. 67° 30′ E., and is 13,200 feet; Hajikak or Hajeguk pass is 11,700 feet. It is a vast rounded mass, the culminating ridge ascending in lofty peaks, covered with perpetual snow, stretching as far as the eye can reach; farther to the west it sinks into the mazy mountains forming the Hazara highlands. The Helmand, Hari-Rud, Murghab, Balkhab, and Kunduz rivers all rise in the Koh-i-Baba. In 1840 Griffiths ascended it to 13,500 feet. Its general character is that of great barrenness. The Siah Koh is the south branch of the Koh-i-Baba.—*Moorcroft*, ii. p. 384; *MacGregor*, p. 545.

KOH-i-DAMAN, a district north of Kābul, a favourite resort of the wealthier inhabitants. Charekar, at the head of the Koh-i-Daman valley, north of Kābul, is famous for the gallant defence made there by Eldred Pottinger and Haughton, during the Kābul outbreak. It is mentioned by Ibn Batuta as Charkh. Leech, in his report on the passes, calls it Charka.

KOH-i-KAS, or Koh-i-Kush, or Caucasus, is the great stony belt that separates Northern from Southern Asia. Koh-i-Kush offers a plausible etymology for the Caucasus of the classical writers. It is supposed by Ritter and Wilford to be the mount mentioned by Pliny under the name of Graucasas, but slightly deviating from the Sanskrit Gravakasas, meaning shining rock. See Koh.

KOH-i-MEERIAH, a hill which produces coal of good quality. It is near Baljawar, one day's journey north of the Oxus river.—*Wood's Journey to the Oxus.*

KOH-i-MUBARAK or Ras Mubarak, a rock which British sailors call Bombareck. Koh-i-Mubarak means blessed mountain, but it is also called Ras Mubarak, the fortunate or auspicious headland. It is about 30 miles nearer the entrance to the Persian Gulf than Ras Jask. It is a remarkable isolated rock, situated on a sandy flat. It is a landmark for navigation.

KOH-i-NAMAK, a salt mountain in Irak-i-Ajam, 12 miles N.W. of Kum. It is an insulated rocky mountain, from which saline springs issue and deposit salt, and slabs of the salt are quarried for use.—*Abbott; MacGregor*, p. 270.

KOH-i-NOKREH, or Silver Mountain. Mines were formerly worked near the villages of Sahr Rud, Hassa, and Muhammadabad, but abandoned, like many others in Persia, when the produce was found inadequate.—*Ouseley's Travels*, ii. p. 106.

KOH-i-NŪR, or Mountain of Light, a celebrated diamond, said to be the immemorial heirloom of Indian sovereignty from the days of the Pandu.

It is said to have been found at Purteal or Purtyall, a village in the Masulipatam district of the northern division, and that it weighed originally 793 carats. The portion at the Great Exhibition weighed 186 carats. The great Russian diamond has been supposed to be another portion. Colonel Sleeman says that the Koh-i-Nur was first found in Golconda by Mir Jumla, and presented by him to Shah Jahan, as a nuzzer for a passport to his aggrandizement. But Baber states that on his capture of the palace of Ibrahim Lodi at Agra, he found one famous diamond, which had been acquired by Sultan Ala-ud-Din. It was so valuable that judges of diamonds valued it at half the daily expense of the world. Being carried off by Nadir Shah, it was afterwards obtained in that monarch's tents, by Ahmad Shah, from whom it descended to Shah Shuja, who, in his misfortunes, sought refuge in the dominions of Ranjit Singh. The Lion of the Panjab—once the owner of the diamond was in his power—at last got it into his possession. Zaman Shah, brother of Shah Shuja, when defeated near Sar-i-Asp, had fled to the Jalalabad valley, and stopped at Mula Askah's fort, about 14 miles from Jalalabad. Zaman Shah during his confinement there had secreted the Koh-i-Nur with some other jewels in the walls of his apartment. While on his way to Kabul Zaman Shah was blinded by a lancet, but on Shah Shuja ascending the throne, his first act was to release his blind brother. Ranjit Singh bequeathed the Koh-i-Nur diamond, now the property of the Queen-Empress Victoria of Great Britain and India, to Jaganath pagoda.—*MacGregor*, p. 414. See Diamond.

KOH-i-SAFED, or White Mountain, forms a most majestic boundary to the southern side of a plain. Its height is about 17,000 feet, and along the whole southern side of the Himalaya, from the Hindu Kush to Nepal, the Safed Koh is visible. Its snowy top is also visible from Peshawur, but it cannot be seen from Kābul, even from the top of the Takht-i-Shah, which rises behind it.—*Vigne's Personal Nar.* p. 234.

KOH-i-SAFI. East of the Siah Koh is a hilly tract, not mountainous, although waste and desolate, named Koh-i-Safi, from the tribe that pasture their flocks in it, and this tract intervenes between the Siah Koh and the valley of Tagow; moreover, through it meanders the river of the Kohistan.—*Masson's Journeys*, iii. p. 151.

KOHISTAN, literally hill country or highlands and so applied to mountain tracts on the N.W frontier of British India.

Kohistan of Aba Sin is a glen which drains into the Indus, between Gilgit and the Pathan valley of Ghorband and Chakesar, supposed to be occupied by a race similar to those of Gilgit, named Rauza, Yashun, Karmin, and Duman.

Kohistan, a taluk in Sind, a British tract in the Karachee district, is a barren hilly tract, composed of outlying hills of the Kirthar range. Its chief streams are the Hab, Baran, and Malir. The people are nomades, Baluch, Numria, Jokia, who had long been at feud, and adhere to the vendetta. The Baluch inhabit chiefly the northern portion; the Numria and Jokia, who are Sindi tribes, range over the central hills and the southern plains. None of the people erect any buildings more substantial than a mat hut, which can be put up in a couple of hours. All the tribes are great adepts at cattle-lifting.

In the Kohistan of Kābul, the people occupy partially the valleys of Ghorband, Punjir, Nijrou, Tagow, Alishang, Alighur, and the Lower Kuner. To the south-east, the Kohistan extends to the hills of Tagow, and farther away, to Laghman, the Lamghan of Baber, and so called because the tomb of Lamech, the father of Nuh or Noah, is fabled to be seen there. On a detached and comparatively low hill, a whitish streak is observed, extending from the summit to the foot of it. This is the Reg-rawan or running sand mentioned by Baber. The natives say that it runs up again, and that it is never diminished; and that there is a cave at its foot where noises are heard. It is the scene of some romantic tales, which have been alluded to by Abul Fazl. It has been described by Burnes, Vigne, and other travellers.

In the Kohistan of the Jalandhar, the natives of Sukeyt, Mundi, and Kulū have sallow complexions, but appear to be of the same race as the inhabitants of Bashahir. The men are generally tall and strong, but few of them are handsome. Many of the young women are pretty, but at the age of 20 or 25 become coarse and stout. The dress of both sexes is nearly the same. It consists of a drab-coloured woollen frock, trousers of the same or of leather, and a flat skull-cap, generally black, with sandals made of coarse grass. The women, instead of the cap, sometimes have a coloured piece of cloth tied round the head, and occasionally twist their hair into one long plait, the end of which is then ornamented with slips of coloured cloth or shreds of worsted. The plait is by no means unbecoming to the young. The dress of the women on the western side of the Seukandir range consists of a tightly-fitting body and sleeves, with a full petticoat having a broad border at the bottom.

The women of Kulu and the adjoining states are inordinately fond of ornaments. These are of the usual description, with the exception of mother-of-pearl amulets, which both men and women use, consisting of small thin plates of mother-of-pearl of various sizes, and engraved with mystical figures. Several of these are hung around the neck, and hang conspicuously on the chest. Polyandry is said to be unknown amongst them, nor are they guilty of infanticide, but polygamy is general.

The *Guddi* inhabitants of the Chumba range are shorter and appear much stronger, and are certainly cleaner about their persons. They call themselves Rajputs, and say they belong to the Guddijat. They are sharp, and able to impose upon their less knowing neighbours. Most of the witch-finders are of the Chumba Guddi. When Europeans made their first appearance in the Kangra valley, these men had very slight notions of caste, and would eat or drink anything the former gave them, whereas, since their contact with the natives of the plains, they have become as bigoted as any Hindu. The Chumba Guddi may always be known by their peculiar conical caps, with lappets to turn down over the ears, like an English travelling cap. Witch-finders feign the power of discovering evil spirits, which wander over the mountains in the tangible form of witches. If a cow or any other living creature die, its death is immediately attributed to some evil eye, and a witch-finder is employed to discover it. This

impostor having selected some old woman who had no means of propitiating him by gifts, places his victim in the centre of a group, whilst all interested in the case sit around her in a circle. He then dances round the poor creature, and ultimately nods his head towards her, whereupon all the lookers-on do the same, which coincidence is deemed a sufficient proof of guilt. Formerly she was condemned to be burnt to death. But since that district became a British province, and these inhuman proceedings have not been allowed to take place, they declare the victim of their superstitious credulity an out-caste, and refuse her the commonest necessaries of life; thus she is abandoned to her fate, and would probably starve to death, but for the timely gift of a goat or a sheep by some one of her relatives to the witch-finder, who forthwith fastens the guilt on some other person, in the hope of extorting a present in a similar manner from the relatives of the person last accused.

The *Lahouli* are a totally distinct race from the people of Kulu or the Chumba Guddi range. The Lahouli are a short, sturdy set of men, very ugly, and filthily dirty. The women are decidedly plain. The costume of both sexes consists of a pair of loose woollen drawers, with a frock of the same material, whilst a wrapper is also often wound around the body by being thrown over the shoulders and fastened by a brass clasp in front. Their dress, generally of a black colour, is of a kind of plaid, and their caps are of the same. The women wear their hair either in long plaits fastened at the back of the head with a profusion of red wool and coloured threads, or comb it back off the forehead, tying it in a lump behind, and adorning it in a similar manner. Around the flat circular caps are strung large white shells like cowries, glass beads, and pieces of amber. Around their neck, both men and women wear amulets of mother-of-pearl, pieces of amber, turquoises, and other precious stones. Each man has, hanging to his belt, a tinder pouch and a brass instrument for striking fire, with many other nondescript implements. They spend six months of each year in Kulu on account of the severity of the winter season in Lahoul. The greater part of that time they pass in dancing and drinking. On their jubilees they set off fireworks and make a tremendous noise, whilst the women dance. These exhibitions do not terminate until they are all too drunk to continue them. In their orgies the women are ridiculously decked out, especially the aged dames. Many of the young damsels have beautiful eyes, of which they make the utmost use.

Kangra is situated in lat. 31° 57′ N., long. 76° 4′ E. Near Jalandhar, just after leaving Buttail, is a heap of stones in the centre of the road. This is a cairn formed by Tartar tribes, who invariably pass them on their right hand, as well as throw a fresh stone on the pile. These piles of stones are noticed in Lloyd and Gerard's Travels in the Himalaya, also in the Travels of the Russian Mission through Mongolia to China, by George Timkowski, and in the Journal of the Bengal Asiatic Society, April 1859, p. 385. — *Elphin. Caubul*, pp. 309–314; *Imp. Gaz.*

KOH-i-TAK. The Sulimani range is finished by the Pahar, or hills of Koh-i-Tak, and to the north-west is the Koh-i-Kondi, with a little snow upon its summit. The Kaysar mountain arises in front in a southern direction.

KOH KIRANA, a hill just within the boundaries of the Jhang district, yielding iron ore of good quality.

KOHL or Kohol. ARAB. Lamp-black used by women for staining their eyelashes, is collected by holding a knife over the flame of a lamp, and is applied with a glass, leaden, or wooden needle, called a mil, to the edges of the eyelids. This is the fuligo of the Roman ladies. The Arab and Indian women all use it. Women do not use surma or antimony, which men only apply to their eyes.

Smoke-black is also produced by burning 'luban' resin, a species of frankincense, also by burning almond shells. These kinds are used merely for ornament; but there are several kinds used for their medicinal properties, particularly the powders of several kinds of lead ore (Kohl-el-pagar), to which is often added sarcocolla (Anzaroot), long pepper.—*Burton's Scinde*, i. 276.

KOH-PU, CHIN., also Kung Koh, a fibre made into cloth resembling linen. It is obtained in China from the climbing branches. It is of a yellow colour, very fine and durable, and much prized in Hankow. The best of this cloth comes from Wu-chang-hien, and from Kwang-sin-fu in Kiang-si.—*Smith, Chin. Mat. Med.*

KOHTUL is the Persian and Pushtu word for a pass or defile; Lukh is the Baluch term. It may be a contraction of Koh, mountain, and Tel, a rising ground, a hill, a tumulus, etc. But Tel is by some regarded as Arabic, and the Burhan-i-Katia dictionary spells it Kutel. Yet, in a Persian translation of Sultan Baber's Commentaries, composed by himself in the Moghul language, the spelling is two or three times Kotal. The Kohtul of the Shutar Gardan over a northern spur of the Koh-i-Baba, leading from the Kurram valley to Kabul, was stormed by the British Indian forces under Br.-Gen. Roberts on the 2d December 1878. There are many Kohtul in Afghanstan,—

—*Ouseley's Travels*, i. 268; *Pottinger's Travels*, 151.

KOI-KOPAL, *i.e.* Gond Gopal, a settled race of Gond who are cow-keepers.

KOIL. TAM. A temple; thus Kali koil, a temple of Kali.

KOILA-BHUTAL, a wandering Gond tribe, whose women are dancing girls.

KOILASHA, SANSK., from Kelas, to shine in water. This is the Kailas of the Himalaya.

KOITOR, a section of the Gond, including the Raj Gond, the Raghuwal, the Daduvi, and Katulya. The Koitor is the chief clan of the Gond.

KOJAGARA, a Hindu festival in honour of Lakshmi. On the day of the full moon, in the month Aswin, Lakshmi is believed to have promised riches to all who observe a vigil on the night (from Ko, who, and Jagara, wakeful). The night is passed in festivity and in games of chance.

KO-JI-KI, a sacred book of Japan, taken down,

A.D. 711, to the dictation of Hi-ye-ta-no-Are.—*Sir J. E. Reed.*

KOKAND, a small territory west of Kashgar, with capital of same name, the paternal kingdom of Baber. It was ruled by an Uzbak khan or chief of the tribe of Yuz, who claimed a lineage from Baber. It is famed for its silk. The khanate of Kokand comprises almost the entire valley of the Syr-i-Darya, the river Jaxartes, and its various confluents; partly in consequence of the nomade half-savage hordes which form its northern population, partly from its geographical position, it was among the very earliest to come into direct collision with Russia. It possesses considerable celebrity in being looked on as the capital of Afrasiab, and is historically connected with the campaigns of Chengiz and Timur; but it is better known as the birthplace of Baber, from which he raised himself, first to the throne of Kabul, and ultimately to that of Hindustan.

Kokand is the key of Turkestan; it is on the high road to the Chinese settlements of Kashgar, Yarkand, and Khotan, with which it carries on a considerable traffic. Also there is an open and regular communication from Yarkand to Kashmir and Ladakh.

Since 1865, Kokand has been confined to lat. 39° 40′ to 42° N., long. 70° to 74° 30′ E. This is an area of 30,000 square miles, and it occupies a hollow in the Tian Shan mountains, known as the valley of Ferghana. It is surrounded, except on the N.W. corner, on all sides by terraced mountains, occupied by a peaceful Uzbak population, ever at the mercy of the mountain tribes. The Russians subjugated it, and it was designated the Russian Ferghana province of Turkestan.—*Papers, East India, Cabool, and Afghanistan*, pp. 120, 130.

KOKANI, a race who appeared in British India in 1871-72, and were escorted out of it by the police, via Lahore and Multan. In appearance they were true gypsies. The men had long hair like women, and, as a rule, had little beard or moustache. The women were all well featured, some being very pretty, noisy, and forward, with a marvellous amount of slang, and a perfect want of anything like shyness.

KOKA PANDIT, author of a work in Sanskrit verse, de rebus veneris. Translations are to be found in the vernacular dialects of India, as the Mahrati, Telugu, etc. There is no other book in eastern literature, except the Hitopadesa, which is to be found in such variety of languages. In Persian, Hindustani, and Panjabi it is called Lazzat-un-Nissa; in Arabic, the Marifat-un-Nayk; in Sindi, the Farhat-ul-Ashkin.

KOKCHA, one of the three principal affluents of the Oxus.

KOKO KHOTON has five great Lama serai, in each of which are more than 2000 Lama, besides 15 smaller serai; 20,000 is thus a low estimate for the number of Lama in this famous city.—*Prinsep's Tibet*, p. 51.

KOKO-NOR. MONGOL. The Blue Lake or Blue Sea is an immense reservoir of water, more than 400 miles in circumference. According to popular tradition in Tibet, this vast body of water once occupied what is now the site of the city of Lhassa, and found its way by a subterranean course to its present bed.

Central Asia politically is largely under the dominion of China. Physically, it consists of three plateaux, viz. that of Tibet, which is the highest; the plateau of Koko-Nor, which is lower; and the Mongolian plateau, still lower. West of Koko-Nor, between Mongolia and Tibet, there is a depression, which is deepest at Lake Lob, and is the lowest part of Central Asia.

The Tibetan plateau has the Himalaya on the south, and the Kouen Lun mountains on the north, with the Pamir on the west, and Bayan Koro mountains on the east. At its western extremity, its plains are elevated 17,000 feet above the sea; its peaks are amongst the highest in the world, and its valleys are from 10,000 to 14,000 feet. Its greatest breadth in long. 90° E. is 600 miles, and its extreme length, 1500 miles. It is largely drained into inland lakes, but it gives rise to the rivers Brahmaputra, the Indus, and the Yang-tze.

The Koko-Nor plateau is between Mongolia and Tibet. Koko-Nor is 10,500 feet above the sea.

The Mongolian plateau, including the Chinese governments of Inner and Outer Mongolia and Ili, has the Tian Shan and Koko-Nor mountains on the south. It is elevated from 3000 to 12,000 feet.—*Tr. Saunders in Geog. Mag.*, July 1877; *Huc's Journey*, p. 224.

KOKOONA ZEYLANICA. *Thw.* · Kokoongass, SINGH. · This is a large tree not uncommon on the banks of streams in the Saffragam and Ambagamowa districts, at an elevation of 2000 to 4000 feet. The inner yellow bark is employed by the natives medicinally as a sternutatory, and an oil is expressed from the seeds, which is used for burning in lamps. Wood unknown. A species of Kokoona occurs in Borneo.—*Bedd.* p. 146; *Thw. En. Pl. Zeyl.* p. 52.

KOK-SINGHA, a pirate chief who, in A.D. 1661, with a fleet and force of 25,000 men, attacked and destroyed the Dutch settlements in Formosa.—*Collingwood.*

KOK-TASH, a coronation stone in Samarcand, on which Timur and each succeeding amir has sat.

KOL, as popularly used, is a term which includes not only Ho and Mundah tribes, but also the Dravidian Oraon, while its scientific use embraces the three cognate Kolarian tribes of Mundah, Ho or Larka Kol, and Bhumij.

Kol is a term applied to the aborigines of the hill country of Chutia Nagpur, Mirzapur, and Rewah. Europeans apply the term to the Dravidian Oraon, as well as to the others, but perhaps erroneously, and most of the tribes have other distinctive names. In the south of the Chutia Nagpur country, about Singbhum, it is applied to the Larka Kol. The aborigines of Chutia Nagpur are in two tribes, Mundah and Oraon. These are generally separate, but are sometimes found occupying the same villages, cultivating the same fields, but their festivals and amusements are different, and they are of entirely distinct origin, and cannot intermarry without loss of caste. The Mundah were the prior occupants. The Kol, Larka Kol, and the wilder Larka Kol of the hills to the west of the Singbhum district, speak nearly the same language as the Ho, Santal, Bhumi, and Mundah. The Kol, the Kur of Ellichpur, the Korewa of Sirguja and Jushpur, the Mundah and Kheria of Chutia Nagpur, the Ho of Singbhum, the Bhumij of Manbhum and Dhulbhum, and the Santal of Manbhum, Singbhum, Cuttack tributary mahals, Hazaribagh, and the Santal parganas, are kindred

peoples numbering several million. Amongst the Kol, man and wife eat together, as is the custom with some Christian and Muhammadan races. The Kol and the Mundah tribes, and all those cognate to the Mundah, are passionately fond of dancing, which they commence in very early life, and regard as an accomplishment. They also sing well, and have musical voices and a great variety of simple melodies. Their dancing assumes a national character at their great periodical seasonal festivals and fairs, called Jatra, at which the young men treat their partners with fairings. The Kol have a belief in, and greatly dread, witches, and have killed many persons whom they believed to be so. Chota Nagpur, properly Chutia Nagpur, is the country on the eastern part of the extensive plateau of Central India, on which the Koel, the Sabunreka, the Damuda, and other rivers have their sources. It extends into Sirguja, and forms what is called the Upar-ghat or highland of Jushpur, and it is connected by a continuous chain of hills with the Vindhya and Kymor ranges, from which flow affluents of the Ganges, and with the highlands of Amarkantak, on which are the sources of the Nerbadda. The plateau is, on the average, about 3000 feet above the level of the sea, with an area of about 7000 square miles. It is on all sides difficult of access, is a well-wooded, undulating country, diversified by ranges of hills, and it has a genial climate. The population in 1866 was estimated at about a million, and is formed of a number of non-Aryan tribes who had fallen back to that refuge from the plains, more than half of them, however, being the race known to Europeans as Kol. The other races in Chutia Nagpur and its adjoining tracts are, the Larka Kol, Ho, Bhumi, Mundah, and Santal.

Ghasi are numerous wherever there are Kol. They are musicians, and amongst the Kol take the place of the Chandal.

The *Larka Kol*, as they are termed, inhabit those extensive tracts which go under the name of the Kolehan. Part of these wilds is situated in the Singbhum district, and the inhabitants pay a nominal obedience to the maharaja of that province; but the greater proportion of this population is more under the influence of the raja of Mokurbunj, than of any of the other powerful chiefs in that part of the country. But even his orders are obeyed only where they are supposed to tend to the advantage of the Kol themselves. Upon the whole, it may be said of this singular people, that, living in a primeval and patriarchal manner under their Mundah and Manki, they have managed to preserve a sort of savage independence, making themselves dreaded and feared by their more powerful and civilised neighbours. The Kolehan with its wilds and jungles is divided into different pir, as they are termed, or parganas. These pir are, generally speaking, not of any great extent, two or three moderate marches carry a traveller through each of them. There can be little doubt, and such is the tradition among the people themselves, that the Larka Kol came originally from Chutia Nagpur, and are descendants of the old Mundah or Mundari of that district. They emigrated, finding the romantic hills and valleys of Chutia Nagpur too confined for their increasing numbers. The same cast of countenance prevails in the two races, though, perhaps, tinged with a wilder and more fierce expression in the Larka Kol. The Oraon, who inhabit a great part of Chutia Nagpur, regard the Kol as a tribe inferior to themselves, and do not intermarry with them. The villages in the Kolehan are ruled by Mundah and Manki, as in Chutia Nagpur. The former, the Mundah, is the proprietor of one village; while the latter holds six, eight, or twelve. These village potentates used frequently to wage fierce war with one another, and bitter and long-existing feuds have often prevailed amongst them. There is this peculiarity in the Kol character, however, that serious and bloody as may be the domestic quarrels, no sooner are they threatened with hostilities from without, than all their animosities are laid aside and forgotten for a time. The villages are generally built on some elevated spot surrounded by trees, and, at some little distance from the principal entrance to the villages, the Kol standard or ensign, a pair of buffalo horns, is suspended in a conspicuous situation. The dress of both sexes is alike, a strip of cloth brought round the loins and passed between the thighs forming their only covering; the women wear a profusion of coloured beads suspended from their necks, and have their ears pierced with a number of small brass rings. Their diet is of a very promiscuous nature, everything almost that can be considered eatable being relished by them, and much of what we consider carrion is eagerly sought for. In this respect they do not differ from the Kol of Chutia Nagpur. They are greatly addicted to drunkenness. The religion of the Larka Kol is nothing but a superstition of the grossest kind. The great divinity is the sun (suruj), next to the sun ranks the moon (chandu), and then the stars, which they believe to be the children of the latter. They uniformly, upon solemn and great occasions, invoke the sun, and by him many of these lawless men at times swore allegiance to the late E.I. Company. Another form of oath used by them is that of swearing upon a small quantity of rice, a tiger's skin and claws, and the earth of the white ants' nests; besides the sun and moon, other inferior divinities are supposed to exist, to whom the Kol offer up sacrifices of various kinds. These spirits are supposed to inhabit the trees and topes in and around the village. The belief the Kol entertain of the power and influence of the Bhonga must be considerable, as they will on no account allow those trees to be denuded of their branches, and still less cut down. It is the universal custom in the various Kol villages, that when a woman is seized with the pains of labour, she is immediately removed to a lonely hut, the door is shut upon her, offerings of various kinds are suspended near it to propitiate the Bhonga, and no one ventures near till all is over. The women, it may be observed, are not secluded or shut up. When a Kol youth has fixed his affection on a lass, generally the inhabitant of some neighbouring village, she is waylaid and carried off to his house by himself and his friends. So soon as information of this reaches the parents of the girl, they proceed to the village of the ravisher, not, however, in general, with any hostile purpose. Interviews take place between the friends on either side, and at length matters are brought to a final settlement; the new husband paying to the father of his spouse a certain number of cows, goats, or buffaloes, according to his means, or the beauty and comeliness of his bride. After this a scene of feasting and

intoxication generally follows, in which women and children, as well as men, participate. The Kol burn their dead, carefully collecting the bones and ashes, and bury them with offerings of rice, in or near their villages, placing perpendicular or horizontal slabs of stone over each particular grave. Those grave-stones form a remarkable object, and strike the eye of every stranger on approaching a Kol village. The only weapons used by the Kol, whether in war or hunting, are the bow and arrow, and the tulwar or axe.

The Mundah Kol or Ho comprise about two-thirds of the population of the five parganas of Silli, Tamar, Baranda, Rabey, and Bundu, all others being recent settlers. But many of the Mundah Kol have been dispossessed of their ancestors' lands by middlemen, Brahmans, and Rajputs. Mundah settlements are chiefly in the eastern and southern parts of Chutia Nagpur. The Mundah and Santal are amongst the ugliest of mankind, the Santal being remarkable for good nature and ugliness. They are more like Hottentots than Negroes. The extreme featured of the Mundah race have high cheek-bones, small orbits, often with an oblique setting, flat faces, without much beard or whisker, and in colour from brown to tawny yellow. Mundah features are flat and broad. The richer people of the Mundah, who aspire to be zamindars, wear the poita, reverence Brahmans, and worship Kali; but the mass continue in their original faith. The great propitiatory sacrifices to the local deities are carousals, at which they eat, drink, sing, dance, and make love, and the Hindus settled in the province propitiate the local deities. The Mundah country is arranged into Purha or divisions, each consisting of twelve or more villages under a chief, and the chiefs meet at times for consultation. Many of the Oraon, and some of the Mundah clans or Kili, are called after animals, the eel, hawk, crow, heron, and the clans do not eat the animal whose name they bear. The Mundah and Ho dead are placed in a coffin along with all the clothes and ornaments used, and all the money the deceased had, and all burned. The larger bones are preserved till a large monumental stone can be obtained, and the bones are interred below it, the Ho near the houses, the Oraon separate from the village. They are taken to the tomb in a procession, with young girls with empty and partly broken pitchers, which they reverse from them to him to show that they are empty. The collection of these massive grave-stones under the fine old tamarind trees is a remarkable feature in Kol villages. The stones are sometimes so large that the men of several villages are required to move one. The bones are put with some rice into a new earthen vessel, deposited into the hole prepared for them, and covered with the big stone. The Mundah and Oraon races are fond of field sports, and all game, large and small, disappear from near them. They form great hunting parties. Fishing and cock-fighting are also resorted to. The Mundah and Ho have a shamanite religion. They have no worship of material idols, but Singbhongu, the sun, is the supreme being, the creator and preserver, a beneficent deity, and they have secondary gods all invisible, and generally malevolent. Sacrifices to Singbhongu are made of fowls, pigs, a white goat, the ram and buffalo.

The Kol and Sura dwell towards the north of the Gond and Kond in Central India; their languages contain Dravidian words, but they belong to a totally different family of languages. The Kol also inhabit the forest and mountain tracts of Benares, South Behar, and Chutia Nagpur on the north of the Kond in Gondwana, and border on the people in the Rajmahal Hills, dwelling in the east at Sumbulpur, Sirguja, Gangpur, Chutia Nagpur, Ramgarh, and Mongir. The Kol were described by Lieutenant Tickell in 1840 in the Bengal Asiatic Society's Journal. One tribe, called Oraon, was driven at an early period from the neighbourhood of the Ganges, and found the Mundah Kol tribe in possession of Chutia Nagpur. The Mundah call themselves Ho, though more generally known as Kol. The Kol are physically Ultra-Indian more than Dravidian, and the occupation of the Eastern Vindhya and hills on the opposite side of the Gangetic valley by Ultra-Indians implies that the valley itself was at one time possessed by the same race; the simplest conclusion is that the Kol were an extension of the ancient Ultra-Indo Dravidian population of the Lower Ganges and of the highlands on its eastern margin. The Kol and Larka Kol and Sura, in Singbhum, north of the Gond, are regarded by all writers as of the prior Scythic stock.

The Larka Kol were subdued in 1821, and an agreement was made with them by which they bound themselves to be subject to the British Government, and to pay a fixed tribute to their chiefs. In 1857, a large number of the Larka Kol espoused the cause of the raja of Porahat, a Rajput chieftain near the Kolehan, but on the restoration of order they reverted to peaceful pursuits. The estate of the raja of Singbhum, afterwards styled the raja of Porahat, was then confiscated for rebellion. The total revenue from the district is about Rs. 45,000. The expenditure, including a police battalion, amounts to about Rs. 30,000. Kol arms are the bow, a piece of bamboo with bamboo string, the arrow barbed, and battle-axe. The Kol intermixed with the Gond on the Sumbulpur borders are said to be called Kirki.

In British India and on its borders are four distinct branches of the family of languages spoken by members of the Turanian race. In the north are the Himalayan tribes, with their dialects, occupying from the Kanawars on the Sutlej to the Bhoti of Bhutan in the extreme east. Then there are the Lohitic class of languages, comprising with the Burmese and others of the Malay Peninsula the dialects of the Naga tribes and of the Mikir in Assam, and of the Bodo, Kachari, Kuki, and Garo in Eastern Bengal. Another class is the Kol or Mundah family of languages, including the Kol, Santal, and Bhumi of Singbhum and Western Bengal, and the Mundah of Chutia Nagpur, the Kur, or Korku, or Muasi in Hoshangabad, Ellichpur, and westward in the forests of the Tapti and Nerbadda until they come in contact with the Bhil of the Vindhya Hills. Mr. Hislop held that the word Kur or Kor is identical with Kol.

The fourth branch is Tamilic or Dravidian, to which belong the language of the Oraons and of the Rajmahal hillmen, the Gondi, the Tuluva of Kanada, the Karnata of the Southern Mahratta country, the Todava of the Neilgherries, the Malealam of Travancore, the Tamil, the Telugu,

and the Canarese. The Brahui of Baluchistan is also said to be allied to this family.

The Kur and the Santal are closely related, and are separated from the Dravidian. The Kur or Muasi and the Korku or Kurku, to the north-west and west of the Mahadeva Hills, are, in language at least, quite distinct from the Gond tribes.

Mr. Hodgson is of opinion that the Tamilian, Tibetan, Indo-Chinese, Tungus, Chinese, Mongol, and Turk are so many branches of the Turanian family, and he regards the aborigines of British India as northmen of the Scythic stem, but he remains undecided whether they owe their Scythic physiognomy to the Tungus, the Mongol, or the Turk branch of the Tartars or Scythians, and whether they emigrated from beyond the Himalaya at one period and at one point, or at several periods and at as many points. Professor Huxley, on the other hand, considers these people to be allied to the aborigines of Australia. All writers are of opinion that when the Aryans entered India, they found the country occupied by prior races, to whom their writers apply such contemptuous expressions as Dasya, M'hlecha, etc. These prior races seem to have been driven largely out of Northern India into and through the Vindhyan mountains into the Peninsula of India and Ceylon, where their idiom, the Tamil, Telugu, Malealam, and Karnatica are sister dialects of one speech; and Dr. Pritchard concurs in opinion with Professor Rask, who regards the languages of the mountain tribes of India, the Bhil, the Gond, the Toda, and others, as also of the Tartar stock, and mentions that some curious analogies have been observed between the Tamilian and other dialects of the Peninsula and the languages of Australia. Mr. Logan, however, who has had great opportunities of contrasting and comparing the Dravidians from various parts of India, inclines to call them South Indian. He remarks that, physically, the population of Southern India is one of the most variable and mixed which any ethnic province displays. A glance at a considerable number of Kling (Teling) and Tamilar of different castes and occupations, shows that the varieties, when compared with those of similar assemblages of men of other races, such as Europeans, Ultra-Indians, or Indonesians (including Negroes in the last two cases), are too great to allow of their being referred to a single race of pure blood. Some are exceedingly Iranian, some are Semitic, others Australian, some remind us of Egyptians, while others again have Malaya, Polynesian, and even Semang and Papuan features. This varied character of the races of the south of the Peninsula may be seen daily in Madras, to which all the races from the south of India resort.

The language of the Mundah, Kur, and other Kol races differs from the northern languages not only in its greater fluency and agglutinative and inchoate flexional tendency, but in its dissyllabic character, its profusion of dual and relative forms of the pronouns, and in the position of the qualitive before the substantive.

Three lists of words were obtained by Captain Houghton from Chyebassa in Central India, and two by Colonel Ouseley from Chutia Nagpur, all of which Mr. Hodgson regarded as dialects of the great Kol language. The Oraon speech he traced without difficulty to that of the hillmen of the Rajmahal and Bhagulpur ranges. He considers that between those several Kol tongues and that of the Gond of the Vindhya there are obvious links. But Professor Max Muller says they have no affinity whatever. Mr. Elliot showed that much resemblance both in vocables and structure exists between that Gond language and the cultivated tongues of the Dekhan.

From the geographical distribution of the Kol and Dravidian languages, Mr. Hislop concludes that while the stream of Dravidian population, as evidenced by the Brahui in Baluchistan, entered India by the north-west, that of the Kol family seems to have found admission by the north-east, and as the one flowed south towards Cape Kumari, and the other in the same direction towards Cape Romania, a part of each appears to have met and crossed in Central India. This hypothesis rests on the presence of the Brahui where they are, a fact which is not inconsistent, however, with the supposition that the Dravidian tribes may also have entered India from the north-east or even across the Himalaya, as the Kanawar, Newar, Chepang, and other tribes have done; while the Kol tribes were an offshoot from a later horde, the main body of which entered the Eastern Peninsula. The Brahui may have been driven westward by the invading Arya from the Upper Indus. To the early Arya the prior tribes were known as Dasi, who, Dr. J. Wilson tells us, were not altogether barbarians, for they had distinctive cities and other establishments of at least a partial civilisation. Then, as now, they were darker than the Arya; and, according to Dr. Wilson, the more marked Turanians in Gujerat and other provinces are still denominated the Kali Praja (corrupted into Parej) or black population. In former times the Kol tribes possessed the whole of Chutia Nagpur, which may now be said to be divided between them and the Dhangar or Oraon, who came from Rotasghur. The chief men in most of the villages are still, however, of the Mundah or Kol tribe, and they do not intermarry with the Dhangar. The greater part of Singbhum is inhabited by Kol, and we find them numerous in Bamanghotty, and dispersed to the vicinities of Cuttack and Midnapur. The Lurka Kol, as they are termed, inhabit those extensive tracts, as yet but little known, which go under the name of the Kolehan.—*E. Balfour in Jameson's Edinburgh Journal*, 1843; *Ib. in Journal of Beng. As. Soc.*, 1844; *Dr. Voysey's Journal; Campbell; Dalton*, pp. 150–185; *Sir Walter Elliot in Journ. R. A. Journ.*, 1840; *Cunningham's Ancient India; Dalton's Ethnology.*

KOLA. BENG. A class of Hindus whose principal avocations are basket and mat making.

KOLA, or in Shen Tamil Kozha, the Tamil name of the Tanjore province.

KOLABA district is in the Konkan division of the Bombay Presidency, lying between lat. 17° 52′ and 18° 50′ N., and long. 73° 7′ and 73° 42′ E. Area, 1482 square miles. The Sahyadri range forms its eastern boundary, and has two remarkable peaks,—Raigarh in the Mahad subdivision, where Sivaji built his capital; and Miradongar, a station of the Trigonometrical Survey. Kolaba district lies immediately south

of Bombay, and the north-west part touches the sea. The administrative centre, Alibag, situated in this portion of the territory, was the stronghold of the pirate Angria, who long held the coast in terror, and who founded a piratical dynasty. Kolaba Island formed a shelter for the pirate fleets. It is situated just outside Alibag harbour, and was fortified by Sivaji in 1662. In 1772 it was still an important place, where the chief lived in much splendour, and a combined expedition of British ships and Portuguese troops made an unsuccessful attack upon it. The rise of the Indian navy during the second half of the 18th century put an end to piracy on an organized and successful scale in Bombay waters. Under the Angrias, slavery was in force, and included terrible penalties on women, who, for certain offences, became the property of the chief. In 1840 the male line of the Angrias died out, and the application for leave to adopt an heir being refused, the state of Kolaba lapsed. Janjira is a native state. Janjira is, properly speaking, only an island at the entrance of a bay half-way between the rivers Savitri and Roha; but the name has been applied to the whole of the little principality on the coast west of that part of Kolaba which does not touch the sea. In the time of the Arab and early African traders, Janjira was a place of importance, and the descendants of these races, such as Abyssinians and the Beni-Israel, are still to be found there.—*Imp. Gaz.*

KOLABA POINT is a spur of land protecting the entrance to Bombay harbour on the north. It was originally a chain of small islands, which are now connected with each other and with the island of Bombay by causeways and reclaimed tracts.—*Imp. Gaz.*

KOLADYN or Kuladan is the chief river in Arakan. It rises near the Blue Mountain, in the Yoma doung range, in lat. 22° 27′ N., long. 92° 51′ E., and, after a course of 160 miles, during which it receives the Myu and Lemyo, it enters the Bay of Bengal in Combermere Bay. It is navigable to within a few miles of Arakan town for ships of 250 tons burden; above Akyab the stream is narrow, and navigable only for canoes. It is 10 miles broad at its mouth. The name is derived from Kula, western foreigner, and Tan, to stop, or its derivative Atan, a barrier, a boundary, and signifies the barrier of the western foreigner. The races dwelling in the valley of the Koladyn and its affluents are the Kuki, the Mru, the Sak, the Niru Sak, the Ka-mi, the Ku-mi, the Ra-Khyen, the Kin-ni, Shendu, and the Prou-ka-nij, all of them professing a creed partially Buddhist. Colonel Dalton, however (p. 113), names the tribes Kheong-tha, Mron, Kumi, and Shendoo.

KOLAM or Kolamb, a Gond tribe, along the Kandi Konda or Pindi Hills, on the south of the Wardha, and along the table-land stretching east and north of Manikgarh, and thence south to Dantanpilly, running parallel to the right bank of the Pranhita. The Kolam and Kurku hill tribes bring in wood and forest fruits for sale. The Kolam race are found also in the Amraoti, Wun, and Maiker districts as a wild race. They were formerly predatory, occupying the Mailghat and southern skirts of the Vindhya Hills, along with the Andh, Gond, and Kurku. These four resemble each other in appearance, but each speaks a different language, and in their features they are distinct from the villagers.

KOLA NUT is the seed of Kola acuminata, belonging to the natural order Sterculiaceæ. From 6 to 12 are contained in woody pods, from 3 to 6 inches in length, of which 5 or less are produced by each flower. Like olives, they enhance the flavour of whatever is eaten after them, and are said to have the power of staying, even for a prolonged period, the cravings of hunger, and of enabling those who eat them to endure prolonged labour without fatigue. They are the product of the Sierra Leone district. They are largely consumed by the natives of the Gambia, are of bitter taste, and produce no exhilarating effect, but are said to satisfy for a considerable time the cravings of hunger. For this purpose, however, the nut is much less used than it is as a luxury. In the year 1860 the import was about 150,000 lbs.; in 1870, about 416,000 lbs.; while in 1879 it had increased to over 743,000 lbs. The Kola acuminata, in fact, plays the same part in tropical Africa that Erythroxylon coca does in South America. The plant has been introduced into the West Indies, and has been distributed to Calcutta, Cambridge (U. S. A.), Ceylon, Demerara, Dominica, Mauritius, Sydney, and Zanzibar. There are said to be useful seeds of two African trees, one Kola acuminata, *R. Br.*, the other bitter Kola, an undetermined Guttifer, both highly valued, especially those of the bitter Kola. The seed of common Kola is said to possess the virtue of rendering water, becoming putrid, agreeable to the taste.

KO-LAOU. CHIN. The civil government of China is conducted by the Nuy-ko, or Interior Council Chamber, in which there are four chief councillors, two of them Tartar and two Chinese, who bear the titles of Choung-thang and Ko-laou. The Tartar minister presides. The Lu-pu are six boards for the conducting of government business, and the provinces of the country are each under a governor, or, where two provinces are united, a governor-general. Every province is divided into a certain number of districts, called a Fu, Ting, Chow, and Heen. A Fu is a large portion or department of a province under the general control of a civil officer, immediately subordinate to the head of the provincial government. A Ting, a smaller division than, and sometimes a portion of, a Fu; when separate, it is governed as a Fu, and called a Chuh-le. A Chow is similar to a Ting, as also a Heen, but each is a smaller division; each Fu, Ting, Chow, or Heen has one or more towns or walled cities under its guidance, one of which takes its name and rank as Kwang-Chow-Fu and Shang-Hae-Heen, which latter, although of that subordinate rank, is the largest maritime city in the empire, and the greatest resort of the native ships or junks.—*Forbes' China; Sirr's China; Huc.*

KOLAR, a town in Mysore, in lat. 13° 8′ 5″ N., and long. 78° 10′ 18″ E., 43 miles E.N.E. of Bangalore. The Kolar district is known to yield gold, but as yet it is not found to be remunerative to work. Its people are Brahmans, Mahrattas, Kshatriya, Komati, Wakaliga, Beder, Kurubar, Banijiga, with some wandering tribes. The Jain and Lingaet sects are not numerous. Nundidrug hill fort was taken by storm by the British, A.D. 19th October 1791.

KOLAR, a fresh-water shallow lake in the Kistna and Godavery districts of Madras, lat. 16° 30′ to 16° 45′ N., and long. 81° 5′ to 81° 27′ E. It is much reduced in the hot weather, and it has many islets or lankas. Fish and water-fowl are abundant.

KOLAR or Kolaria, an ancient name of India or part of India, supposed to be from the Kol of Central India, and Koli of Kattyawar. See Kol; Languages.

KOLAVANT, a tribe of performers about Benares, professing Muhammadanism. They are persons of reputation and respectability, of much higher rank than the Dharshi.—*Sherring's Tribes*, p. 275.

KOLFF, D. H., author of Voyages through the Moluccan Archipelago and along the Southern Coast of New Guinea, in 1825-26.

KOLHAN, a tract of country forming a British estate in the Singbhum district of Bengal; area, 1905 square miles, with 883 villages. It is occupied by the Ho, and is known also as Ho-desham. A group of from 5 to 20 villages forms a pirhi or pir, each of which has its own mundah or village head. Every mundah or village head is responsible for the payment of the revenue, and for the detection and arrest of criminals in his own village, to the manki or divisional head of the pir, and this latter official is in his turn responsible to Government. For acting as revenue collectors, the manki receive a commission of one-tenth, and the mundah one-sixth, of the rent which passes through their hands. Besides these duties, the manki and mundah, each in his degree, have certain informal powers to decide village disputes and questions of tribal usage.—*Imp. Gaz.*

KOLHAPUR, a Native State in the Bombay Presidency, between lat. 15° 58′ and 17° 11′ N., and between long. 73° 45′ and 74° 24′ E. Kolhapur city is in lat. 16° 42′ N., long. 74° 16′ E., opposite a gap on the Sahyadri Hills, 128 miles south by east of Poona, and 64 miles of Satara.

The rajas of Kolhapur trace their inheritance from Raja Ram, a younger son of Sivaji, founder of the Mahratta power. Kolhapur became separated from the Satara territory in 1731; and in 1760, Sambaji, grandson of Sivaji I., died without issue, and with him the direct line of the great Sivaji became extinct. Successors were adopted in 1866, 1870, and 1884. The last was entitled Shahu Chhatrapati; he was adopted by the widowed rani.

During the captivity of Sahoji, the Mahratta power was exercised by his uncle Raja Ram, younger son of Sivaji. In 1731, Sahoji recognised Kolhapur as an independent principality. When the direct descendants of Sivaji became extinct on the death of Sambaji in 1760, one of the Bhonsla was adopted, under the name of Sivaji, but the State was ruled by the widow of Sambaji amidst the greatest irregularities on land and piracy by sea; and in 1765 and 1792, the British sent expeditions against this State. Sivaji, after a rule of 53 years, died in 1812. His son Sambhu, or Apa Sahib, in 1817 sided with the British in their war with the Peshwa, and was granted the districts of Chikori and Munoli, but he was murdered in 1821. His son died after a year. His brother Bawa Sahib was an aggressive ruler, and three times between 1822 and 1829 the British sent forces against him. He died 29th November 1838, and was succeeded by his son Sivija, then a minor. The regency so mismanaged affairs, that the British appointed a regent, on which a general rebellion followed, which was suppressed by a large British force. During the mutiny of 1857, the raja remained faithful to the British, but his younger brother joined the rebels, and was afterwards imprisoned. Since then there have been three adoptions.

KOLI, a race in the N.W. of the Peninsula of India, supposed to be an offshoot from Kol tribes farther east. Dionysius (Percig. 1148) mentions the Κωλις, and Ibn Khurdad (ob. A.D. 912) alludes to the Kol as north of Malabar, in their present locality. The numbers returned in 1881 are 2,345,489, *viz.* Konkani Koli, 125,949; Mahratta Koli, 881,014; Baroda Koli, 676,661; and Talabda Koli, 661,865.

Koli constitute a large part of the agricultural population in several parts of Gujerat. They are numerous in Attaveesy, and there are many in the Northern Konkan. In the hilly tract of country lying between Moosa, S.W. of Poona, and the hill fort of Trimbak, the inhabitants are chiefly Koli, and a few are scattered over the districts of Kandesh, Ahmadnaggur, Poona, and Sholapur, and along the Balaghat on the western frontier of the Hyderabad territory. They seem to have early occupied Gujerat and the Attaveesy, and part of the latter country is still called Kolwan. They are arranged into many separate tribes, but all of them retain the appellation of Koli. The Raj, Salesi, Tonkri, Dhour, and Dunggari Koli reside in the Attaveesy, Wun, Dandory, and Nasik districts, and worship the Hindu deities Kandoba, Bhairu, and Bhawani. A few Raj Koli are settled in the Konkan and Jowair. They are an offshoot of the Mahadeo Koli, and said to have been expelled for some offence. They are farmers and labourers.

The *Mahadeo Koli* reside in the valleys of the Sahyadri range, extending from Moosa, S.W. of Poona, northwards to Trimbak, the source of the Godavery river, between lat. 18° 15′ and 20° N., and long. 73° 30′ and 74° E. These small valleys are known as Mawil, Khorah, Nahir, and Dang, *i.e.* valleys, glens, straths, and wilds. They are classed into 24 kula or clans, each of which has many subdivisions. The members of the same kulu do not intermarry. With the exception of the cow and village hog, the Koli eat all other animals. The women are generally slender and well formed, with a pleasing expression of features, and some are very pretty. They are chaste, and have large families. The Koli are fond of charms and amulets. The fishermen settled along the coast from Gheriah to the north, near Surat, and at Colaba, in Bombay, are Koli of the Sone tribe; a few of them enter on board of vessels as mariners, but the vessels must be manned by natives, the Sone fearing to lose caste, which they say would take place did they sail with Europeans. The chief patel of this tribe resides at Angria. He is endowed with power to adjust their affairs, settle their disputes, etc. The women of the Sone Koli wear choli or jackets, and have a number of glass bangles on their left wrist; they are frequently seen in Bombay assisting their husbands in fishing and importing fish into the fort and outside market. When they marry, the ornaments which were intended to

adorn their right wrists are consecrated, and thrown into the sea, as an offering to the deity who presides over that element, and an invocation to defend her husband from the dangers of the ocean. Not a caste meeting of the Sone Koli can take place without large potations of mahwa flower arrack being imbibed.

The Dhour are the greatest drunkards, and eat the flesh of animals which have died a natural death. Koli have, in some instances, attached themselves to the Bhil, and taken the name of that race. The Mullar or Panburri or Choomli Koli is respectable. The Koli is employed in every Dekhan and Kandesh village as a member of the third division of the Balotta, and supplies water to travellers, wearing on his head the choomli or twisted cloth, hence the name, on which to rest the water-pot. This Koli is also found in the Hyderabad Balaghat, extending eastward to Khanbar, Indore, and Bodin, between the Godavery and Hyderabad, also near Naldrug, and down the banks of the Bhima and Kistna even to Alpur, near Kurnool.

The chief Koli location lies between lat. 18° and 20° N., in the Western Ghats, also on the seaboard. Some of the Koli are excellent farmers, those on the coast are fishermen, boatmen, and sailors, watchmen, water-carriers, and messengers. The Ambigar Koli are boatmen. The Patanwaria Koli of Gujerat are cultivators and labourers. The Dharala of Gujerat, mostly Koli, bear arms. The Machi Koli of Surat are fishers. The Wagri Koli of Gujerat are hunters. Dr. Carter says the Koli of the ghats refuse to bury the dead who die of cholera, small-pox, or the bite of the Phursa snake, a species of Lycodon. They make forks of sapling, with which they pick up the deceased and throw him over the precipice.

The *Ahir Koli* of Kandesh reside along the banks of the Girna and Tapti rivers, and are employed as watchmen.

The *Murvy Koli* is one of the Balotta in every village in the Northern Konkan, and in Bombay families they were employed as palanquin-bearers. Sone Koli, settled as soldiery in Angria Colaba, and at Bombay and Colaba, in 1837 were 1000 families, and 500 to 600 families at Bassim, employing themselves as fishermen and seamen. At their meetings, whether for congratulation or condolence, they consume large quantities of spirits. Many are wealthy.

Mettah Koli, who reside in Bombay, are fishermen and seamen, and many have wealth.

In Bombay, Thana, Bhewndi, Kallian, Bassim, Daman, etc., are a great number of Christian Koli, said to have been of the Sone section, and to have been forcibly converted by the Portuguese, but, terrified by the cholera in 1820-21, a portion reverted to paganism.

Chanchy Koli are farmers and labourers, settled in Bombay, who came from Junagarh, in Kattyawar.

In Gujerat, the most numerous are the Tullabdah Koli, then the Patanwaria, the Kahrez, the Dhandur, and Bhabria. They are in the Baroda district, north to Khyrallu and Massana in the Mahikanta, and form a large portion of the population. In 1837, in the Khanir district alone, they were 70,000. They are labourers and watchmen, and a few, under the name of Selotta, form escorts of treasure.

The Bombay Island Koli are cultivators, toddy-drawers, etc., and a great many of them sell game, which they snare and bring into Bombay. They are generally habited in a coarse jacket, which extends down to their back, and a small skull-cap, cut in front in the shape of a cone, with a lungoti to hide their persons.

Talapadi Koli are peaceful cultivators. Jugria Koli, also called Chunval Koli, of the Chunval district, are turbulent.

The Tonkri Koli are so termed from the occupation they follow of cutting down bamboos,—a large bamboo being called tonkri. The Dongri Koli are so called owing to their residing on hills,—the term for a hill being Dungur, etc.

The Koli are not so numerous now as they were in the early part of the 19th century, and this is attributed to the internal commotions which disturbed them since that period. They are now spread over various parts of Hindustan, and, owing to the opening of the Emigration Trade a few years back between India and the Mauritius, a great number of them repaired thither to better their circumstances.

Their numbers in British and foreign territory are considerable. The census of 1871 showed 68,302 in the Nasik district. The ferrymen on the rivers in the Peninsula are of the Koli race, stalwart men. The Kili-Katr or Maddakpur race are Koli, also Kabl-gira or ferrymen. The Koli are the labourers and lower cultivators in Gujerat.

In some districts the Mang Koli devote their young women to the gods.

Koli of the Konkan are partly Hindu, and in part Christians. They are a hardy race, of short stature, somewhat inclined to corpulency, but with muscular arms. The younger women are fair, but exposure to the out-door work soon darkens them. The men wear a woollen waistcoat and loin-cloth, and a cap of red broadcloth. The women wear a loose-sleeved bodice and a cotton cloth around their waist, falling more than half-way to the knee, and the end of the cloth is drawn over the right shoulder, and tucked in front into the waistband. On the left wrist they wear glass bangles, those of the right wrist being taken off on their wedding day, and thrown into the sea to win its favour.

The Koli are somewhat ill-tempered, quarrelsome, jealous of strangers, and addicted to drink; but they are manly, brave, honest, and faithful. Many are in debt, and some have taken to cultivation. The Alibag Koli were formerly predatory and piratical.

Koli occupy the sea-coast from the fort of Arnala, near Bassim, to Jaygad in the Ratnagherry district. For caste matters they have a Patel and Sir Patel; the latter is the chief of all the Koli from Kalian and Bhewndi in the Thana district to Harnal in Ratnagherry, and is said to have formerly had the power of life and death.

They are married from ten years of age upwards, and the husband may be younger than the bride. The women worship Gauri, and the men at the Narali Paurnima holiday offer a cocoanut to the sea, and all ships then put to sea. They speak a dialect of Mahrati. When a new boat is completed, the women break cocoanuts on its bows.

They make pilgrimages to Nasik, Panderpur, Jejuri, Dehu, and other Hindu shrines, and at Thana there are deified Sadhu saints, with a temple

to Dattatrāya. The Christian Koli of the Thana district are under the Archbishop of Goa.—*Exhibition of* 1883; *Elliot's Supplemental Gloss.; Sir G. Campbell*, p. 125; *Captain Mackintosh in Madras Lit. Soc. Journ.; Tod's Travels*, p. 137; *Dr. Carter; Census of* 1881.

KOLI, the name given to the lower class of cultivators in the Simla Hills.

KOLI, the birthplace of Guatama Buddha's wife.—*Hardy.*

KOLI ROGA, or black-rot, in the Mulnad and Kadur district of Mysore, attacks coffee leaves and betel leaves.

KOLITA, a good-looking race in the S.W. and E. of Bengal. The Bibor, Jubar, and Kulta or Kolita are populations to the north and east of the Abor and Mishmi localities, on the drainage of the Brahmaputra. But the Kolita are to be found in every district of Assam. Buchanan Hamilton says that the Kolita once had great sway in Rangpur, and many of those remaining there have assumed the title of Kayasths. A Hindu tribe in every way resembling them, and bearing the same name, Kolita, is to be found in the S.W. frontier of Bengal, in the Sumbulpur districts, and some of the Cuttack and Chutia Nagpur Tributary Mahals. These southern Kolita are noted for their industry as an agricultural class like the Kurmi, and are a cleanly, well-clothed, and good-looking race. The Assamese Kolita are not only themselves a good-looking race, but they are the people to whom the Assamese population generally owe the softening of feature which has so improved those of Mongolian descent. In the 1881 Census Report the Kolita are returned at 253,860.—*Dalton's Ethnology of Bengal.*

KOLKOI, in the Tinnevelly district of the Madras Presidency, at the beginning of the Christian era, was at the mouth of the Tamrapurni river, the silt from which has spread seawards, and Kolkoi is now 3 miles inland. The Kolkoi Emporion is mentioned by Ptolemy; also in the Periplus as the seat of king Pandya's pearl fishery, and in the Peutinger tables as Colcis Indorum; and it gave its name to the Colchic Gulf, now the Gulf of Manaar. It was the earliest seat of Southern Indian civilisation.—*Imp. Gaz.*

KOLLAM, an era in use in Malabar.

KOLLA-MALLAI, a mountain range in the Salem district, Madras, lying in the Ahtur and Namkal taluks, lat. 11° 10′ 30″ to 11° 28′ N., and long. 78° 20′ 30″ to 78° 31′ 30″ E. Its general elevation is from 2500 to 3500 feet, the highest point on the range being 4663 feet above sea-level. The population includes a number of Malayali, hillmen of the same race as those on the Shevaroy Hills.—*Imp. Gaz.*

KOLLAN. MALEAL., TAM. A blacksmith; also in Malayala, a tanner, a worker in leather, a turner in wood.

KOLLAR is the plural of Kullan. The prominent Kollar or Colleri tribe are in the Tondiman country, in the Vasanga district, in the eighteen palliams or districts, and throughout the Madura district. Until the 19th century they were so predatory that in the south of the Peninsula of India, Colleri became the ordinary designation of a thief, and their name is really derived from Kallara, thieves, plunderers. In ancient times they seem to have inhabited the woods from Trichinopoly to Cape Comorin. Orme, writing of them, describes them in the middle of the 18th century as expert thieves and plunderers, and the Jesuit Father Martin says they were very cruel. Pennant, writing of them in the 18th century, says the adjacent countries are covered with thick forests and little cultivated by reason of the savage inhabitants, the Polygar and Collerie, who may be truly styled sylvestres homines; they are predatory, and in their government, as also that of the Polygars, feudal. They are 30,000 or 40,000 in number. Their country is hilly. In the British wars against the French in the times of Clive and Dupleix, both the Kollar and Maravar became well known by their adhesion to the British or French standards, and for the fidelity and devotion to the cause of the party which they espoused. The chief Kollar districts were the Tondaman country, Nattam, and Mylore; the last two are in the Madura district. They have a first and second marriage, like the Maravar of Ramnad. The titular surname of all Kollar is Ambalakaren. Calicoil was the stronghold of the lord paramount, the raja of Tondamandalam, the country of the Tondaman, which was an ancient division of the Peninsula of India, of the part now occupied by the Arcot and Chingleput collectorates. H.H. the raja Tondaman of Puducottah is now a petty chief, and his country is a small tract near Trichinopoly. It was an ancient custom in Tinnevelly when a stranger wanted a guide, to appoint a Kullan girl as his guardian, and if any of her caste did her charge violence, she tore her ears, and when the criminals were caught, the same was done to their ears.—*Pennant's Hindustan*, ii. p. 11; *Orme's Hindustan; Wilson.*

KOLLATI. The Dumur or Kollati, called by themselves Bhatu, are wandering acrobats, and their young women are common.

KOLLE-KALLU. TAM.? A term applied to ancient tombs in the Peninsula of India. See Cairns; Dolmen.

KOL-NARU. TAM. Helicteres isora, one of the Sterculiaceæ, a genus included in the natural family of Byttneriaceæ (silk cotton tree and others). It is common in the lower parts of all the ghats, and in great abundance in the plains below Gudalur.

KOLU, in Coorg, a measuring pole. The Virajendra pole is 18¾ feet. The Lingraj pole is 16 feet.

KOLWAH, in Baluchistan, four or five days' journey from the coast, has several villages and castles, and is occupied by the Mirwari, Rodahi, Homerari, and Nushirwani tribes, who interchange their commodities with the coast, sending wool, ghi, hides, and bdellium.

KOMAN or Kipchak are a Turk race, generally styled Kirghiz-Kazaks, the Ghozz Turk of Arab writers.

KOMAR, a chief, a prince, a first-born; hence also Komari, a virgin, from which, according to a legend, is derived the name of Cape Comorin. Komari is also a term given to all forts until they stand an assault. It is usually written Kumar and Kumari. The law of primogeniture prevails in all Rajput sovereignties, and has rarely been set aside. The inconclusive dicta of Menu on this as on many other points, are never appealed to by the Rajputs of modern days. Custom and precedent fix the right of succession, whether to

the gadi of the state or to a fief, in the eldest son, who is styled Raj-komar or Pat-komar, or simply Komar-ji, the prince; while his brothers have their proper names affixed, as Komar Jowan Singh, prince Jowan. Seniority is, in fact, a distinction pervading all ranks of Rajput life, whether in royal families or those of chieftains; all have their Pat-komar and Pat-rani, or head child and head queen. The privileges of the Pat-rani are very considerable. In minorities, she is the guardian, by custom as well as nature, of her child; and in Mewar (the oldest sovereignty in India), she is publicly enthroned with the rana. Seniority in marriage bestows the title of Pat-rani, but so soon as an heir is given to the state, the queen-mother assumes this title, or that of Mah-ji, simply the mother. In the duties of guardian she is assisted by the chiefs of certain families, who with certain officers of the household enjoy this as an established hereditary distinction. On the demise of a prince without lawful issue of his body, or that of near kindred, brothers or cousins, there are certain families in every principality (raj) of Rajwarra in whom is vested the right of presumptive heirship to the gadi. In order to restrict the circle of claimants, laws have been established in every state limiting this right to the issue of a certain family in each principality. And in Jeypore, in the branch Rajawut (according to seniority), of the stock of Raja Man, there is a distinction between those prior, and those posterior, to Raja Madhu Singh; the former are styled simply Rajawut, or occasionally conjoined, Mansingote; the other Madhani. The Rajawut constitute a numerous frèrage, of which the Jhulaye house takes the lead, and in which, provided there are no mental or physical disabilities, the right of furnishing heirs to the gadi of Jeypore is a long-established, incontrovertible, and inalienable privilege.—*Tod's Rajasthan*, ii. p. 381.

KOMARAM. MALEAL. A tribe of barbers who shave the lower classes.

KOMARASAMY, a hill south of Ramanmallai Hill, 30 miles west of Bellary, overlooking the valley of Sundur.

KOMARPAL, a sovereign of Gujerat, of the Chauhan race. According to a legend, astrologers having foretold that he would have a son born in Mula Nacshitra who would cause his father's death, the lad was sent as an offering to the shrine of Bageswara Mata, by whom he was not only preserved from destruction, but she herself, in the form of a tigress (bag), suckled the young Solankhi, whence his issue, which spread over the country, obtained the distinctive name of Bagela. The princes of Baghelcund are of this race, and there are many petty chieftainships of this tribe in Gujerat, as Lunawara, Mandvie, Mahera, Godra, Dubboye, etc. Komarpal was born in S. 1145; and, in the words of the Charitra, 'in S. 1222 (A.D. 1166), Komarpal became a ghôst. He left this world, poisoned by his successor, Ajipal.' It was during the reign of Komarpal that the celebrated Arabian geographer El-Edrisi visited the kingdom of the Balhara, and from his work Bayer and D'Anville gleaned much information.—*Tod's Travels*, pp. 184-191.

KOMARPAL-CHARITRA, a history of the kings of Anhilwara.

KOMARSAMY, lat. 15° 1′ N., and long. 76° 35′ E., in Mysore, a pagoda west of Hirahall; a peak near the pagoda is 3400 feet above the level of the sea.—*Cullen.*

KOMATI, a Hindu race in the south of India, speaking Telugu, who claim to be pure Vaisya, are occupied as traders and in other peaceful avocations. The term is applied in the west of India to shopkeepers, and petty dealers, and clerks, who also claim to be the pure Vaisya. In Madras they are called Chettyar or Chetty; in Western India, Seth; the latter a term also applied to Parsee and Muhammadan tradesmen. The Komati of Mysore invite the Madaga to their weddings, but the Madaga consider the invitation an insult.

KOMERKOLLI or Comer-colli, a creek in the Gangetic delta. Herdsmen at the mouth of the Comer-colli wrap great turbands round the head and neck, and use longer and warmer mantles than are usual in Bengal. They are a caste by themselves, tall, robust men, many with long beards, and all wilder looking than the majority of their countrymen.—*Heber's Journ.* i. p. 174.

KOMSALA, also Komsallar. TAM. An artificer, from Kansa, a metal. In British India there are, amongst the Hindus, five artificer races—1. the gold and silver smith; 2. the brazier or tinsmith; 3. blacksmith; 4. carpenter; and 5. stone-mason or stone-cutter. These worship the Hindu gods, but they do not reverence Brahmans, and their marriage and funeral customs differ from those of the Brahmans. The goldsmiths regard it as a disgrace to have any of their daughters growing up without being married.

KONAJI ANGRIA, a person of low origin who long carried on a piratical warfare on the western coast of India, and rose to princely power. Gheriah was his headquarters, but Severndrug and every creek were fortified. Gheriah was captured by Clive and Admiral Watson in 1755. See Angria; Kolaba.

KONAKAN. MAL. A class of predial slaves in Malabar, a subdivision of the Vetuvar or forest and hunter tribe. They are employed in agriculture, also as boatmen and salt-makers.—*Wilson's Glossary.*

KONDA. TAM., TEL. A hill.

KONDAI, TAM., also Kondek, TAM., a chignon; a knot of hair at the back of the head, in which form the Tamil and Teling women, and the men and women in the Southern and Central Provinces of Ceylon, bind up their hair.

KONDAMIR, the takhallus or literary title of Ghaias-ud-Din-bin-Humam-ud-Din. His book is entitled Habib-us-Sayar-fi-Afrad-ul-Bashar, that is to say, the curious part of the lives of illustrious men. It is a history which he had extracted from that which his father Mirkhond had composed, and entitled Rauzat-us-Safa, but to which he made augmentations. He dedicated this book to the secretary of state belonging to the king of Persia, Shah Ismail Safavi, who gave him the name of Habib-Allah; and for that reason the book had the name of Habib given it in the year 1508, Hijira 927, in the reign of Louis XI. He was also author of another history, which is entitled Khalasat-ul-Akhbar, or the Cream of Histories. Kondamir came to Baber's court soon after his invasion of India, and died in the camp of Humayun during his expedition to Gujerat (A.D. 1535).—*History of Genghiz Can*, p. 422.

KONG-WHA. CHIN. A variety of safflower or Carthamus tinctorius which grows in China. It is held in high esteem by the Chinese, and is used in dyeing the red and scarlet silks and crapes which are so common in that country, and so much and justly admired by foreigners of every nation. Large quantities are annually produced in the Che-kiang province.

KONKAN or Konkana is an ancient name of the country between Devagarh and Sadasegarh; hence, perhaps, the modern Konkan. It is comprised between the ocean and the Western Ghats, and consists of a narrow belt near the sea, with salt-water inlets and a succession of mountain spurs. In the northern parts of the Bombay Presidency, the chain separating the Konkan from the Dekhan is called the Northern Ghats, or Sahyadri mountains, a term which may conveniently be extended to their whole length. Throughout the Konkan, the Sahyadri form a continuous chain of hills, interrupted, however, by deep depressions. Their summits rise to the height of 4000 to 5000 feet, but the mean elevation is very much less. The station of Mahabaleshwar is 4700 feet. In the latitude of Daman, 20½° N., the chain begins to sink abruptly into the Tapti valley, and changes its course, or sends off a spur of considerable elevation in an easterly direction, as the Chandor Hills.

The Konkan comprises the districts of Bombay, Kanara, Colaba, Ratnagherry, and Thana, and has an area of 13,580 square miles, and a population of 3,259,776. South of Bombay it is divided into the districts of Ratnagiri and Colaba, and is much broken up by spurs from the ghat range and by outlying hills. There are in this district about 150 Buddhist caves, two in a ravine N.E. of Chaul; others at Kuda and at Mhar, at Dabhol, Chapalun, and Sangameswar. Gujerati is spoken in the north part, Mahrati at various central parts, and Canarese in the south. But the Konkani language by some is regarded as a sister language to Mahrati. It has claims to be considered a distinct Neo-Aryan tongue, but much influenced by the so-called Dravidian language. It has also a large literature, mostly dating from the times of the early Portuguese rule in Goa, and due to the zeal and ability of the former Jesuits; and for these reasons to a philologist is of great interest. There are three principal dialects of Konkani, but the Southern or Canara dialect is of greater interest to the philologist than either of the others, as it displays better the action of the Dravidian languages of the coast (Tulu and Malealam), which form a marked subdivision in the Dravidian family, not only phonetically, but in the vocabulary.

To others, the mixed Konkani tongue appears to be only Mahrati with a large infusion of Tulu and Canarese words, the former derived from the indigenous inhabitants of Tuluva of Canara; the latter, from the long subjection of this part of the Konkan to Canarese dynasties above the ghats. Mr. H. Moegling, however, mentions that the Konkani-speaking Brahmans of Mangalore consider it quite distinct from, though cognate with, Mahrati. Its limits extend from Goa, below the ghats, to a village north of Upi. From this part of the coast, in Northern Canara, a diagonal line running in a north-eastern direction towards Beder, marks the boundary between Mahrati and Canarese, of the latter at least above the ghats.

Konkaniga, of Coorg, are immigrants from the Konkan; many of them are Roman Catholics. The populations returned in 1881 as speaking Konkani was only 29,585—

—*Burgess*, p. 204; *Elphin.* p. 220; *Cunningham, Ancient Geog. of India*, p. 552.

KOO. To avoid repetitions, for all the words frequently written with the double 'o' see Ku.

KOPHENE, according to General Cunningham, is Kābul. This district is first mentioned by Ptolemy, who calls the people Kabolitæ, and their capital Kabura, which was also named Ortospana. In some copies of Pliny the name is written Orthospanum, which with a slight alteration to Orthostana, as suggested by H. H. Wilson, is most probably the Sanskrit Urddhasthana, that is the high place, or lofty city. The same name is also given to the Kābul district by the Chinese pilgrim Hiwen Thsang. But General Cunningham suspects that there has been some accidental interchange of names between the province and its capital.

The Kophen river is mentioned in the Vendidad under the name of Kubha, and the Kophenes river, named in Alexander's marches, is supposed to be the river of Kābul. Kophes is a name as old as the time of the Vedas, in which the Kubha river is mentioned as an affluent of the Indus; and as it is not an Aryan word, General Cunningham infers that the name must have been applied to the Kābul river before the Aryan occupation, or at least as early as B.C. 2500. In the classical writers we find the Khoes, Kophes, and Khoaspes rivers to the west of the Indus, and at the present day we have the Kunar, the Kurah, and the Gomal rivers to the west, and the Kunihar river to the east of the Indus, all of which are derived from the Scythian ku, water. Ku is the guttural form of the Assyrian hu in Euphrates and Eulæus, and of the Turki su and the Tibetan chu, all of which mean water or river. The district of Kophene must therefore have received its name from the river which flowed through it, like as Sind from the Sindhu or Indus, Margiana from the Margus, Aria from the Arius, Arachosia from the Arachotus, and others. It is not mentioned by Alexander's historians, although the river Kophes is noticed by all of them.—*Cunninghaw's Ancient Geog. of India*, p. 39. See Afghanistan; Bactria.

KOPIA, or Song-Ko, a skull-cap of Celebes, made of Pandan leaf, and worn by the Musalman inhabitants.

KOPPA CHOR. Leaving the Bhotea tribe, and proceeding eastwards, the following are the races on the north of the Brahmaputra river:—Kachari, Akha, Koppa Chor, Mechu, Dofla, Miri, Abor, Bor-Abor, Khamti, and Mishmi.

The races south of the Brahmaputra are—Garo, Mikir, Khasiya, Jaintia, Kuki of N. Cachar, Kutcha, Angami and Arung Naga, Munnipuri, Singpho, Muttuk, Bor Khamti, Khunung, and Shan.

Of those on the north, the Akha and Koppa Chor occupy the slopes of the Himalaya to the north of the Durrung and Luckimpur districts, and more to the eastward in the same range are the Dofla.

Farther eastwards from the Dofla are the Miri,

who live on lower land all along the north bank of the Brahmaputra river, eastwards from the Dofla up to the banks of the Subansiri river.

KORA. Hind. New, fresh, plain, undyed silk; unbleached or undressed cotton cloth.

KORACHARU, a tribe in the Carnatic, who make bamboo baskets and bamboo mats. Professor Wilson writes their name also Korcharu, Korvaru, Korsam, etc., and adds that they carry betel nuts from market to market; but this, as an avocation of the Korawa race, is unknown. They live in the hills and forests, and are usually designated Korcha.

KORAGAR, a servile race occupying the hills and jungles of S. Canara and about Mangalore. They have three divisions,—the Ande Koragar, the Vastra Koragar, and Sappu Koragar. There are said to have been other two tribes, now extinct, the Kumaranna and Mungaranna. They clothe themselves like the poorest of the labouring class. The Ande Koragar, now rarely seen, are described as having a pot suspended from their necks. The Sappu Koragar wear leaves for clothes. The tribes intermarry. Their marriage ceremony consists of bathing; the couple, after sitting together on a mat, have a little rice sprinkled on their heads. Their dead are buried in a consecrated place, and four balls of rice are placed on the grave. They are called after the days of the week, Aita, Toma, Angara, Gurva, Tanya, and Tukra. Their elder present is their priest, and they worship beneath a Kasarkana tree, spreading plantain leaves at the shrine, or Kata, on which they place rice mixed with turmeric. The women cover the lower part of their body with leaves interwoven together. Their traditions are that an Abyssinian brought an army from Anantapore, of which they formed a part. The army was at first victorious, but afterwards, being defeated, the Koragar were driven into the forests.—*The Koragars, by Ullal Raghavendra Rao.*

KORAH, a short but heavy Nepal sword of a half-moon shape, the edge of which is on the inner side, like that of a scythe. Oliphant, in his Journey, mentions that the brother of Jung Bahadur with one blow of a korah decapitated a bullock. Down came the korah with crushing force, and passed right through the animal's neck. The headless trunk tottered for a second, and then fell heavily over.

KORA-KORA, a boat of the Malay Archipelago, near Batchian, some of them of 4 to 5 tons burden. They are open, have bamboo outriggers 5 feet on each side, which support a bamboo platform; they are low in the water.—*Wallace*, ii. p. 35.

KORAN, properly Quran, is the religious book of the Muhammadans, and is designated by them Quran-i-Sharif, the noble Quran; Quran Majid, the glorious Quran; Furqan, the distinguisher; Kalam Allah, the Word of God. Al-Furqan, the distinguisher, is the same as the Jewish use of Perek or Pirka, denoting a section of scripture. It is also called Al-Mushaf, the volume; also Kitab, the book, answering to the Biblia of the Greeks; and also Us-Zikr, the admonition, which name is also given to the Pentateuch and to the Christian Gospel.

Koran or Quran is a term derived from the Arabic Qara, which occurs at the commencement of Sura xcv. It is said to have been the first chapter revealed to Mahomed, and has the same meaning as the Hebrew Kara, to read or to recite, frequently used in Jeremiah xxxvi. and other places in the Old Testament. It is therefore the equivalent of the Hebrew Mikra in Nehemiah viii. 18.

The origin of the book is variously given. Zaid-ibn-Thabit, secretary to Mahomed, is said to have been selected by the first khalif, Abubakr, to collect the scattered portions. The second khalif, Othman, on the representation of a devout man called Hudhaifa, that the books in existence differed, is said to have made a recension of it, and sent a copy to all the countries of Islam, ordering all others to be burned. But a general opinion amongst the learned of Europe is that the oral deliveries of Mahomed were collected and committed to writing by the third khalif, Umar.

According to Sale (Prelim. Disc. pp. 77, 86, 87), Mahomed delivered it to his followers through the space of 23 years, and they are believed either to have committed it to memory or to have written it on palm leaves, stones, or, as Gibbon states (ch. i. p. 264, Milman edition), on shoulder-blades of sheep. The original copies were thrown into a chest, and in this disorder they were left when Mahomed died. Two years later, Abubakr ordered the whole to be collected, both from what was written and what had been committed to memory. About 17 years afterwards, observing discrepancies in the existing copies, he ordered a large number of new ones to be transcribed. The Shiah Muhammadans assert that ten sections, one-fourth of the whole, were struck out by Othman, and the Dabistan is said to contain one of these.

Lane further says (p. 92), it is generally believed that few of the chapters as they now stand were delivered entire. The first five verses of the 96th chapter are supposed to have been the first delivered. Abubakr seems to have arranged the chapters in the manner they now present, and delivered the transcript to Hafza, a daughter of Umar, one of the widows of Mahomed.

The Koran is the highest authority for Muhammadan doctrine; but in addition thereto the believers in Islam must receive the sayings and practices of Mahomed as of divine obligation. In this faith the teachings of the traditions must be received by all its sects side by side with those of the Koran itself, and the opinions in the numerous commentaries of the learned expounders who wrote in the early days of Muhammadanism.

Muhammadans believe the Koran to be the inspired word of God, sent down to the lowest heaven complete, and then revealed from time to time by the angel Gabriel to Mahomed. It is generally diffused amongst the people of this religion in Arabic, but it has also been translated into English, Latin, German, Italian, French, Spanish, Turkish, Persian, Hindustani, Tamil, Burmese, and Malay, though the more strict Muhammadans reject translations. It has had numerous commentators, amongst whom are Al-Baidawi, Maliki, Hanifi, Shafi, and Hanballi. The Koran inculcates the existence of one true God and obedience to his laws, and to this religion they give the name of Islam, and its followers Muslimin, the plural oblique form of Muslim, a Musalman. It contains doctrines and positive precepts as to faith and religious duties and

institutions in civil affairs. It commands certain months to be kept sacred, and sets apart Fridays for the especial service of God. It is arranged into 144 chapters, distinguished by their subjects, the first of which is called the preface, or Al-Fatihah, which is a prayer, and is much venerated by all Muhammadans, who often repeat it in their private and public devotions, as Christians do the Lord's Prayer. It words are—'Praise be to God, the Lord of all creatures, the most merciful, the king of the day of judgment. Thee we do worship, and of thee do we beg assistance. Direct us in the right way, in the way of those to whom thou hast been gracious; not of those against whom thou are incensed, nor of those who go astray.' The Koran recognises men, genii, and angels, heaven and hell, and an intermediate spot, and two gardens where beauteous damsels shall await the good. The Arabic Koran is generally in use, but so little are Indian Muhammadans acquainted with its language, that in Madras in 1872, with 70,000 of this religion, it was supposed that only 4000 or 5000 could read to understand the Arabic Koran. There is probably no other book in the world which has remained 13 centuries with so pure a text.

The idea of a heavenly place enunciated in the Koran is, however, the grossest that any race has ever promulgated or given credence to. The wild hunting tribes of America have sublime notions of a future life; Hebrews were in conflict as to the immortality of the soul; most Buddhists believe in absorption or annihilation as a release from all the troubles and trials of a mundane existence; Christians believe that the future will be a spiritual life; but the doctrines taught in the Koran as to the occupations in heaven are wholly confined to that book and its believers. For the Koran says (ch. lv. pp. 393, 394), 'They shall repose on couches, the linings whereof shall be of thick silk, interwoven with gold; and the fruit of the two gardens shall be near at hand to gather. Which, therefore, of your Lord's benefits will ye ungratefully deny? Therein shall receive them beautiful damsels, refraining their eyes from beholding any besides their spouses, whom no man shall have deflowered before them, neither any genius (which, therefore, of your Lord's benefits will ye be ungrateful?), having complexions like rubies and pearls. . . . And besides these, there shall be two other gardens . . . . of a dark-green. In each of them shall be two fountains pouring forth plenty of water. . . . In each of them shall be fruits and palm trees and pomegranates. . . . Therein shall be agreeable and beauteous damsels, . . . having fine black eyes, and kept in pavilions from public view, . . . whom no man shall have deflowered before their destined spouses, nor any genius. . . . Therein shall they delight themselves, lying on green cushions and beautiful carpets.'

Nevertheless Mahomed was a monotheist and an iconoclast, and when about to die, before the final struggle, lifting up his voice he exclaimed, 'May God be far from those who make the tombs of his servants places of prayers!' The very last words he was heard to utter as he expired, as if in answer to an unseen visitor, were, 'In the company of the blessed on high.' Muhammadans do not speak of a person as dead. They say he has passed away, has taken his departure; and, as in the Koran, the living all believe in and hope for resurrection in a future state; and the Koran says, 'They who believe, and do that which is right, shall enjoy blessedness, and partake of a happy resurrection. . . . Paradise . . . is watered by rivers; its food is perpetual, and its shade also. This shall be the reward of those who fear God' (Koran, ch. xiii.). 'Therein are rivers of uncorruptible water; the rivers of milk, the taste whereof changeth not; and rivers of wine pleasant unto those who drink; and rivers of clarified honey, and therein shall they have plenty of all kinds of fruits, and pardon from their Lord' (ch. xlvii.). 'There shall be gardens with shady trees, with fountains flowing, couches of silk interwoven with gold; beauteous damsels with black eyes, lying on green cushions and beautiful carpets, fruits, palm trees, and pomegranates' (ch. lv.). The words of the Kalama or Muhammadan creed do not occur in the Koran, nor in it is circumcision enjoined. The Christian doctrine that man, in all that he can do of good, is still without merit, is not shared in by the Muhammadan, the Buddhist, or the Hindu sectarians, who all consider that a personal merit is gained by their good-doing; and a Muhammadan passing the funeral of a Muhammadan turns with it a short way, and lends his shoulder to convey the body to the grave, to bring a merit on himself. The histories and legends, precepts and ceremonial of the Old Testament, and traditions of the Rabbi, are largely adopted in the Koran. The commentaries on it are called Maltika. The commentator Hanifi was born at Kufa A.H. 80, died at Baghdad, in prison, A.H. 150, nearly 70 years old. Shafi, born at Ghaza in Palestine A.H. 150, died in Egypt A.H. 204, nearly 50 years old. Hanballi, born A.H. 164 at Baghdad, died there A.H. 241, nearly 70 years old. Maliki, born at Medina A.H. 95, died there A.H. 179, nearly 84 years of age. Muhammadan schoolboys are instructed, almost while in their infancy, to intone the Koran. The Koran is inadequate to provide for the legislative wants of the remote lands and times which it accidentally reached; and throughout Islam the Rasm or ancient practice of the country is held sacred by the people, always when not in direct opposition to revelation, sometimes even when it is so. The law of the Koran does not necessarily settle a disputed point between Muhammadans, and it is by no means an easy operation to adjust the balance between the good sense of the ancient practice and the discrepant decrees of the inspired volume. The Koran says that a man of the name of Dujjul will appear at Isfahan, who will arrogate to himself the attributes of the Supreme Being, and establish a sect of his own. The Koran is also understood to say that Mahdi is the 12th Imam or regular successor of Mahomed, who is yet to come, and for whose coming the Muhammadans are still looking out with anxious expectation.

On a night near the 27th of Ramzan, the Koran is believed by Muhammadans to have come down from heaven. It is called the Lailat-ul-Kadr, the night of power; and the Muhammadans of India pass the night with much solemnity.

The honour which the Muslims show to the Koran is very striking. They generally take care never to hold it or suspend it below the girdle, and they deposit it upon a high and clean place,

and never put another book or anything else on the top of it. On quoting from it, they usually say, 'He whose name be exalted (or God, whose name be exalted) hath said in the excellent book.' They consider it extremely improper that the sacred volume should be touched by a Jew or Christian, or any other person not a believer in its doctrines. It is even forbidden to the Muslim to touch it unless he be in a state of legal purity; and hence these words of the book itself—'None shall touch it but those who are purified'—are often stamped upon the cover.—*Osborn's Islam*, p. 11; *Dr. J. Murray Mitchell; Wilson's Glossary; Lane's Koran*, pp. 84, 92; *Rodwell's Koran; E. H. Palmer's Koran; Hamilton's Senai, Hedjaz, Soudan*, p. 99; *R. F. Burton's Scinde*, pp. 398, 413; *Duff's Indian Rebellion*, p. 179; *Sale's Koran*.

KORAVARA, Koravar, Koraman, a low caste tribe of Mysore. The Kalla Koramar are professed thieves; Walaga Koramar are musicians; Hakki Koramar, migratory basket-makers, fowlers.

KORAWA, a broken nation scattered throughout the south of India. In the Peninsula their subdivisions are—1. The Bajantri, called Gaon Korawa or Sonai Kolawuru; 2. Tiling Korawa or Kasbi Korawa or Kunchi Korawar; 3. Kolla Korawa; and 4. Soli Korawa, a race of the Southern Mahratta country. The Yerkal Korawa or Kunchi Kuri are wanderers, of whose original country they themselves retain no knowledge in their traditions. They style themselves Yerkal, and they give the same appellation to the language in which they hold communication with each other. Their ostensible occupation is bird-snaring. With the exception of the cow, almost all animals are used by them as food. Their dead are burned. A wild Korawar tribe dwell near the Pakhal Lake and the Godavery. The race are in Canarese called Kora-varana, Koram-a-ravanu, or Koravanu, and are there in three branches, — Kalla Koramar, who are professed thieves; Walaga Koramar, who are musicians; and Hakki Koramar, who are a migratory race, and subsist by basket-making, catching birds, etc. In Mysore the Korawar are hill and forest tribes, and have a dialect of their own.

In the south the Yerkala are recognised as Koravar. They eat game and flesh meat of all kinds, in which they are by no means nice. The jungle herbs, roots, and fruits also furnish them with food. The majority of them pretend to fortune-telling. They also take to basket, mat, and wooden comb-making,—for the former two they use the midribs and leaves of the date palm,—and occasionally work as coolies. Sometimes wealthy men of the tribe settle down in places, engage in cultivation, and hold land in puttah like other cultivators. As a rule, they wear only as clothing a small piece of cloth. Their habits are decidedly predatory. They form bands of dacoits and thieves. Their huts comprise mats set upon three sticks, and, when on the move, these they roll up, and place on the backs of their donkeys, and are thus easily transported from place to place. They rear pigs, and are partial to their flesh. They also keep poultry and dogs. Their pack animals consist chiefly of donkeys; occasionally some of them have a few horned cattle, and perhaps a few goats also. A similar tribe, under the name of Upu Koravar, was described by Dr. Bilderbeck as found in South Arcot. Their language seems to be a medley of Tamil and Telugu. Most of them have some household god, which they carry about with them in their constant travels. Polygamy prevails. Marriages are only contracted between adults. The ceremony is usually conducted on a Sunday, preceded by a puja on the Saturday. Rice mixed with turmeric is bound on the heads of the married couple, and when the marriage string is tied round the wife's neck the ceremony is complete. Marriages within certain degrees of relationship are not allowed, and widow remarriages not permitted; they may occasionally live in concubinage. A custom prevails among them by which the first two daughters of a family may be claimed by the maternal uncle as wives for his sons. The value of a wife is fixed at 20 pagodas. The maternal uncle's right to the two first daughters is valued at 8 out of 20 pagodas, and is carried out thus: If he urge his preferential claim, and marry his own sons to his nieces, he pays for each only 12 pagodas, and, similarly, if he, from not having sons, or any other cause, forego his claim, he receives 8 pagodas of the 20 paid to the girl's parents by anybody else who may marry them. The value of a wife differs in different places. In some places they are very much less, and in others again only nominal. In Nellore the Yerkala or Telugu Koravar pledge their daughters to creditors, who may either marry them or give them away. When the Yerkala goes to jail, his wife lives with another man of her tribe. On release he reclaims his wife and children, if any are born in the interval. In North Arcot, Koravars mortgage unmarried daughters, who become the absolute property of the mortgagee till the debt is discharged. In Chingleput, the practice of mortgaging their wives exists among the Upu Koravars. In South Arcot it is said not to exist. In Tanjore it is common. Male children become the property of the mortgagee, females that of the husband of the woman pledged. In Madura they sell the wife for 50 rupees outright, and the husband can never reclaim her. Wives and daughters are both pretty freely pledged; disputes are settled by panchayets or arbitrations. Each gang or community comprises many distinct families, each having their own family names, and, like the Hindus, they form undivided families. Brown and Campbell define the word Yerkalavandlu. Wilson defines Kulaver, Yeraver, and Kuraver, etc.—*Dr. Shortt, Madras Journ. Literat. and Science*, 1851, p. 4; *Asst.-Surg.-Gen. Edward Balfour; Wilson's Glossary; Madras Times*, 8th Jan. 1873.

KORDAD-SAL, a Parsee festival day, the anniversary of the birth of the prophet Zoroaster. —*Parsees*, p. 61.

KOREA, a tributary State in Chutia Nagpur; area, 1631 square miles; ruled by a family who claim to be Chauhan Rajputs. The people, 21,127 in number, are largely of Gond and Cheru races. It yields coal and iron, the latter worked by the Agariah race.

KOREA, known to the natives as Chō-sen, written by the French Tsio-sen or Tsyo Syeun, in some respects to be regarded as an independent section of the Asiatic mainland. It is a peninsula with the Sea of Japan and the Yellow Sea on the E. and W., and Manchuria and Russia on the N. Its area is 80,000 or 90,000 square miles, and its

coast-line 1740 miles. Of all modern states, Korea has maintained the most exclusive isolation, not only from Western influences, but also from those of the surrounding lands. Politically, it consists of an autonomous hereditary monarchy, divided into eight tao or provinces, with a ruler who styles himself Hap-mun. People are chiefly agricultural; but gold, silver, copper, iron, and argentiferous galena are abundant, and to some extent have long been worked. Coal has not been found. Some of the lead mines are 800 feet deep, with sidings.

The Koreans resemble the Japanese and Chinese in dress, habits, and religion. The Manchu call the Korean race Solgo, Sol-bo, or Sol-ho. The people follow Confucianism and Buddhism, but have many shamanist customs, with spirit and ancestor worship, sylvan, river, and mountain deities.

The Koreans were driven out of East Tartary into the peninsula which they now occupy. They have since been conquered by the Japanese. Their country was subsequently invaded by the Mongol, on which occasion the Siogour Yoritomo defeated Kablai Khan. From this province of Japan sailed, by way of Iki and Tsusima Island, the two expeditions of Japanese Catholics who, between 1590 and 1610, were banished upon a crusade against Korea, and through Korea, China. The then emperor, Taikosama, took this means, thinking, if his 150,000 Catholics perished, he would be rid of a faction dangerous to his supremacy; should they succeed, he would push them forward to conquer China. The Japanese expedition in three months fought their way to the Ping-Yang river; in other words, gained two-thirds the length of the kingdom. But then, abandoned by Taikosama to their fate, they were driven by winter, cold, and snow, and by the Chinese troops who came to the aid of Korea with matchlocks, of which the latter then knew not the use, to relinquish step by step the ground they had so rapidly won.

The Koreans have flat faces, oblique eyes, broad cheek-bones, strong black hair, and scanty beard; they are strongly made; their skin varies from tawny or yellow to brown, wheat or straw colour, and reddish-yellow. They have a mixture of the Chinese and Japanese physical features. Their religion is Buddhist.

Korean Buddhists and Buddhism were made known to Mexico by Chinese priests in the 5th century A.D., and had followers in that country until the 13th century, when the conquering Aztecs put an end to it.

Their mode of writing is alphabetic, and they are said to possess an extensive literature. The Korean or Corean language strongly resembles the Japanese, and it approximates phonetically to the Burma-Chinese group. Its Scythic character has been considerably modified by the Chinese. Dr. Gutzlaff says the present spoken language consists in great part of composite words, in which the words of both languages are united to express one idea.—*Mr. Logan in J. I. Archipelago; Adams; Nagasaki*, 12th May 1871; *Latham; Encyclopædia Britannica; Huc's Christianity; Griff. Corea.*

KORESH, an Arab tribe in the Hejaz. They were the descendants of the mixed Arabs, al-Arab-ul-Mostareba, lineal descendants of Ishmael. Mahomed belonged to this Arab tribe. The Koreshi have in Sind many tribal names. They are cultivators, kazees, and scribes, and originally came from Syria, Iran, and Irak, and claim descent from Ali, Abbas, Abubakr, Umar, and Usman, styling themselves Alvi, from Ali; Abbasi, from Abbas; Sidiki, from Abubakr; Faruki, from Umar; Usmani, from Usman. See Adnan; Iran; Joktan.

KOREYALA. HIND. The hen bird of Eudynamis orientalis, *Linn.*, the koel.

KORGO, an island 1½ to 2 miles N. of Kharak; it was the stronghold of the pirate Mir Mohanna.

KORI, the name given to the eastern branch of the Indus. It is also known as Sunkra (narrow), and farther up as the Phran. Kori, also, is any inlet of the sea. The Kori or Lukput river (which separates Sind from Cutch), up to the earthquake in 1819, was the eastern mouth of the Indus river, but that earthquake laid most of the towns of Cutch in ruins, and a ridge called Allah Band having been raised to the northwards of the Kori, entirely cut off the flow of the Indus river into it. Its mouth was greatly enlarged in area, and was shifted, as it formerly entered the sea to the northward of Jucku.—*Findlay.*

KORINCHI. The people of this name in Sumatra border on Menangkabau. Their alphabet has 29 characters, and consists of horizontal or slightly raised scratchings. See India.

KORING, the Persian wheel, for watering land from a tank or ditch.

KORKU, a hill tribe dwelling to the north-west and west of the Mahadeva Hills, speaking a language quite distinct from the Gond. They belong to the Kol or Mundah family. See Kol.

KORLA or Kora. HIND. A lash of one tail. Kora-kora-marna, to flog.

KORNA, a walled town of 800 houses, 47 miles from Basra, and 137 miles above the mouth of the Shat-ul-Arab. A fort here would command the navigation of the Tigris and Euphrates. —*MacGregor.*

KORNEGALLE or Kurunai-galla was the capital of the sovereigns of Ceylon from about 1319 till some year after 1347. During this period the dynasty was in extreme depression, and little is recorded except the names of the kings, Bhuwaneka Bahu II., Pandita Prakrama Bahu IV., Wanny Bhuwaneka Bahu III., Wijaya Bahu V.—*Yule, Cathay*, ii. p. 423.

KOROS. Alexander Csoma de Koros, also written Csoma Korosi. This extraordinary man set out on his travels in 1826 from Paris, and went via Constantinople to Persia in the disguise of a darvesh. On his arrival at Teheran he lodged with Sir Henry Willock. Thence he went to Bokhara, Lahore, and Calcutta. He resided for several years at Kanum in Tibet, where he translated from the Tibetan language a cyclopædia of Tibetan knowledge. He afterwards proceeded to Calcutta, and continued to reside there, engaged in communicating to the public, under the patronage of the Bengal Government and the Asiatic Society of Calcutta, the result of his acquaintance with the language and literature of Tibet, of which he was the first European who had attained a critical knowledge. In the beginning of 1834 he published at Calcutta a Tibetan and English dictionary, and at the end of the same year a grammar of the Tibetan language. Before the

appearance of these useful publications, he had communicated to the Asiatic Society of Bengal notices of the contents of the two great collections in which the principal works of the literature and religion of Tibet are comprehended,—the Kah-gyur, a collection of one hundred large volumes, and the Stan-gyur, of two hundred and twenty-five.. Of the former, he also prepared a detailed analysis, part of which is printed in the twentieth volume of the Asiatic Researches. A summary account of both these works, compiled from his information, was printed in the Calcutta Gleanings of Science, iii., and an abridgment of his analytical view of the whole of the Kah-gyur, in the first volume of the Journal of the Asiatic Society of Bengal. He also furnished to the same periodical several interesting papers on subjects connected with Tibetan literature and the religion of Buddha in that country. He illustrated extensively the Buddhism of Tibet.

KORPHA-PRAJA. BENG. A tenant-at-will; a tenant holding under a Khud-kasht cultivator.

KORSOSSA MAIL. SINGH. A creeper, the rough leaves of which are used at Galle as sand-paper.

KORUM-DEVI, a princess of Patan, and one of the wives of Samarsi, king of Mewar, who fell in the battle of the Caggar. During the minority of her son, she nobly maintained the raj of Mewar, and gave battle in person to Kutub-ud-Din near Amber, where that Muhammadan viceroy was wounded and defeated.

KORUR. A battle was fought here, according to Mr. Fergusson, A.D. 544, in which Harsha of Ujjain, styled Vikramaditya, finally defeated the M'hlecha. Its site is near Multan. At another place Mr. Fergusson places the great battles of Korur and Manshari, which freed India from the Saka and the Hun, between A.D. 526 and 544.

KORWA, a savage tribe in Chutia Nagpur. They may be a portion of the Korava aborigines of Cutch, and of the Korawa of the Tamil, Telugu, and Ceded Districts.

KORWA. TAM. A fish of the Madras coast, the air-bladder of which furnishes isinglass.

KORYGAUM, a hamlet on the left bank of the Bhima river, midway between Seroor and Poona. It is famous for a successful stand made by a small body of the E.I. Company's troops against the peshwa's forces, which were estimated at 20,000 horse and 8000 foot. Captain Stanton left Seroor on the 31st December 1818 at six in the evening, and the following morning, as he approached the Bhima, observing the peshwa's army in the plain on the right bank, he threw himself into Korygaum, which he reached as a body of the peshwa's infantry, chiefly Arabs, entered and took possession of its other side. At noon the British force began attempts to dislodge the enemy, but was soon compelled to restrict its efforts to defending itself against the assaults of the Arab infantry. They were met by repeated discharges of British artillery, but before evening Lieutenant Chisholm of the Artillery had been killed, many artillerymen killed or disabled, Lieutenants Pattinson, Conellan, and Swanston, and Assistant-Surgeon Wingate wounded; and Captain Stanton, Lieutenant Innes, and Assistant-Surgeon Wyllie, of the officers, alone remained effective. On the following day, 2d January 1819, the peshwa moved off along the Poona road, and in the evening Captain Stanton marched to Seroor, which he entered on the following morning, with drums beating and colours flying.—*H. H. Wilson.*

KOS or Coss, a measure of length. The kos of India varies greatly in length. One kos is about 13,000 feet, or 2 miles 5 furlongs 153 yards. In Mysore, the Sultani kos is about 4 miles. In N. India, the kos-minar pillars are apart 2 miles 4 furlongs and 158 yards. In N. India, the Muhammadans having introduced the itinerary measures of their various native countries, there are a great variety of such measures to which the Hindu term kos is indiscriminately applied. The Muhammadan kos may be taken at 85 to a degree. Kos-minar, milestones of India, in form are solid circular stone obelisks, little larger than the usual milestones of Britain. The kos-minar were put up to mark the ancient Moghul royal road in India, at the distance of every two miles.—*Baron Hugel's Travels in Kashmir*, p. 93; *Tr. Hind.* ii. p. 9. See Coss.

KOS. MAHR. A leather bag with which water is drawn from a well. The Ramia-kos has an iron hoop to keep the mouth open; and the Sundi-kos has a long tail, which is doubled up in the lift. Kosio is a water-carrier.

KOSAH, an Afghan tribe who extend from the Bozdar southern border to a point somewhat below the latitude of Dehra Ghazi Khan, a distance of 300 miles. The tribe dwells partly in the hills and partly in the plains, and can muster about 1200 fighting men. They are at enmity with the Bozdar above them and the Lughari below them; but are on good terms with the Khutrani, who are situated behind them. In 1848 the Lughari sided with the officials of the rebel Mulraj; but the Kosah rose on the side of the Government, under their chief, Korah Khan, and his son Gholam Hyder. Korah Khan and his son then joined Major Edwardes' irregular force in the Multan province with a contingent of 400 horse. Korah Khan was confirmed in the possession of a jaghir of Rs. 1000 per annum for his own life and for that of his son; he himself was granted a life-pension of Rs. 1000, and a garden at the native place of the family was confirmed rent-free in perpetuity. The chief always remained loyal. His tribe, however, occasionally joined in forays made by other tribes; cause for dissatisfaction has, however, arisen from plunder having been conveyed through the Kosah passes into the hills by other tribes.

KOSALA or Maha Kosala, written also Koshula and Koshulya, seems to have been an Aryan dominion in ancient India which varied greatly in extent, or may have been a name applied to several distinct kingdoms. One of these, ruled by the Solar dynasty, was on the banks of the Sarayu river, of which Ayodhya was the capital. This may at one time have extended into Vidarba, which has been identified with Berar. Dr. Hunter is of opinion that the Kosala mentioned by Hiwen Thsang had Ujjain on the north, Andhra and Kalinga on the south, and was 1000 miles long from Maharashtra to Orissa. In the Imperial Gazetteer, he says the limits of the kingdom may be roughly described as extending from near Berhampore on the Tapti and Nanda on the Godavery, to Ratanpur in Ch'hattisgarh and Nawagadha near the source of the Mahanadi.

In the ancient story of the Ramayana we are

made acquainted with the distant maritime wars which the princes of India carried on. But even supposing Ravana's abode to be the insular Ceylon, he must have been a very powerful prince to have equipped an armament sufficiently numerous to carry off from the remote kingdom of Koshula, the wife of the great king of the Surya race. It is most improbable that a petty king of Ceylon could wage equal war with a potentate who held the chief dominion of India, whose father, Desaratha, drove the victorious car (ratha) over every region (desa), and whose intercourse with the countries beyond the Brahmaputra is distinctly to be traced in the Ramayana.—*Tod's Rajasthan*, i. p. 586; *Hardy's Eastern Monachism*, p. 438; *Garret; Hunter.*

KOSAMBI or Kosam, on the Jumna, was one of the most celebrated cities in ancient India, and its name was famous among Brahmans as well as Buddhists. The city is said to have been founded by Kusamba, the tenth in descent from Pururavas; but its fame begins only with the reign of Chakra, the eighth in descent from Arjun Pandu, who made Kosambi his capital after Hastinapura had been swept away by the Ganges. The ruins are on the Jumna, about 30 miles above Allahabad; there is an immense fortress of earthen ramparts and bastions, with a circuit of 23,100 feet, or exactly 4 miles and 3 furlongs, and the ramparts 30 to 50 feet high. It is largely visited by the Jains.—*Cunningham's Ancient Geography*, pp. 391-396.

KOSHA, Sansk., from Kush, to issue, to identify. In the trial by Kosha or image water ordeal, the accused person drinks some of the water with which an idol has been washed, and if the accused survive free from calamity through the next fortnight he is innocent. See Divination.

KOSSÆI. In the gradual diffusion of mankind, the western provinces of Iran appear to have fallen to the share of the Arameans and Elamites, while the mass of the Kossæi, Ariani, Mardi, and other tribes composing the earliest inhabitants, moved more eastward, leaving some of their numbers in the mountainous districts to mix with or become subject to the new comers. The Semitic people and language having thus become dominant instead of the Cushite, the ethnography of the former rather than that of the latter becomes an important consideration. From this primitive language, or rather from one of its cognates (as the Himyaritic may possibly prove to have been), two distinct branches were derived, the original Arabic, with the Musnad, Koresh, and other dialects of that tongue, being one of these, and the Aramaic the other. The latter had two grand subdivisions, from one of which, known as the Western Aramaic, were derived the Amharic, Syriac, Hebrew, etc.; and from the other, or Eastern Aramaic, came the Assyrian, Babylonian, and Chaldæan tongues. From its monosyllabic construction, the Eastern seems to be more ancient than the Western Aramaic, and it appears likewise to be the root of the Zend, Pehlavi, Sanskrit, and other dialects in use throughout a portion of the territory along which it had spread eastward. Whether the first of these languages was once in general use, or was merely the sacred language of Iran, the affinity of all of them is such as to imply a common origin. Pehlavi was the court language in the time of the Sassanian monarchs, and, according to some authorities, as far back as that of Cyrus; it contains many words which belong to the Chaldaic and Syriac tongues, and Sir William Jones was of opinion that one of these must have been its root; but it is now generally presumed that the root of the Pehlavi is the Aramaic itself. The cognates of the latter spread westward and eastward, and one of them, the Chaldee, can scarcely be distinguished from the parent root. Another, the Parsi, being a softer language than the Pehlavi, became general in Farsistan, and gave rise to the Deri, or modern Persian. The Pehlavi, however, is still partially used in their sacred writings, in Shirwan, and also by some of the Gabr sect of the eastern provinces, as well as by a numerous section of the natives of India; but among the Parsees it is largely intermixed with the Hindustani and other native dialects, which are more or less connected with the Sanskrit. The affinity of the latter to the Parsi is so great that a learned philologist has pronounced it to be one of its derivatives. The number of words which are identical among the different dialects of Iran and Turan, and some portion of the territory more eastward, goes far to show that at a period anterior to anything like connected history there must have been some common language, and this was probably the Aramaic.

KOSSAH, Sehrai, Chandea, and Sudani are tribes of the Rajputana desert. The Sehrai was the most numerous of the Muhammadan tribes of the desert, but said to be Hindu in origin, and descendants of the ancient dynasty of Arore; but whether his descent is derived from the dynasty of Sehris (written Sahir by Pottinger), or from the Arabic word Sahra, a desert, of which he was the terror, is doubtful. The Kossah or Khossa, etc., are branches of the Sehrai, and their habits were the same. They reduced their mode of rapine to a system, and established koori or black-mail, consisting of one rupee and five durri of grain for every plough, exacted even from the hamlets of the shepherds throughout the t'hul. Their bands were chiefly mounted on camels, though some were on horseback. Their arms were the shail or sang (lances of bamboo or iron), the sword and shield, and but few firearms. Their depredations used to be extended a hundred coss around, even into Jodhpur and Daoudputra, but they eschewed coming in contact with the Rajput, who says of a Sehrai, 'he is sure to be asleep when the battle nakarra beats.' Their chief abode is in the southern portion of the desert, and about Noakote, Mittie, as far as Buliarie. Many of them used to find service at Udaipur, Jodhpur, and Sue-Bah, but they are cowardly and faithless.—*Tod's Rajasthan.*

KOSSEIR or Cosseir, a seaport of the Red Sea, in lat. 26° 6′ 50″ N., and long. 34° 26′ 30″ E., on the African side of the Red Sea, has a population of 1500 or 2000 inhabitants.

KOSSI, an ancient tribe who occupied the mountainous country east of the Tigris. That country was the abode of the Scythians under Nimrud, and Nimrud sprang from them.—*Bunsen.* See Kossæi.

KOSTI, Kusti, Custee, or Kushi, the sacred thread or cord of the Parsees. It is to this which Moore, in his Lalla Rookh, alludes

when he makes Hafiz declare himself a fire-worshipper:—

> '"Hold! hold! thy words are death!"
> The stranger cried, as wide he flung
> His mantle back, and show'd, beneath,
> The Gebr belt that round him hung.'

The Kosti is terminated by two small tails at each end, denoting the four seasons, three knots on each tail represent in the aggregate the twelve months of the year. The cord is twisted, of 72 threads, such being the number, according to Parsee interpretation, of the known kingdoms of the world at the time of Hushang. Every Parsee lad arriving at a certain age must assume it.

KOT, written Cote, Kota, Koth, Kotta, and Kottai, the Hindi, Bengali, Mahrati, and Tamil term for a fort or stronghold, and also applied to the wall of a fort, is alike an affix and suffix to many towns' names, over most parts of British India, or itself a name, as Kot Kangra, Kotah. The bulk of the towns with the affix are in Northern India. Goodicotta, however, is in lat. 14° 50′ N., long. 76° 40′ E. Sabzal Kot in Bahawulpur. Farid Kot, consisting of Farid Kot proper and Kod-kupoorah, is S.W. of Ferozpur, and borders to the S.E. on Patiala. It has an area of 643 square miles, and a population of 51,000 souls, with a revenue of Rs. 75,000.

KOTA, of Coorg, a site beneath a tree, where the Pariah gods are kept.

KOTAGIRI, on the Neilgherry Hills, in lat. 11° 20′ to 11° 20′ 10″ N., long. 76° 51′ to 76° 56′ E., situated 12 miles east of Coonoor, and 6500 feet above sea-level, or rather from the Bowani river. This station is much drier than either Coonoor or Ooty, and although not so cold as the latter, during the summer months the thermometer never rises above 74°, and is then like an English summer, and far more pleasant than Switzerland. In a sanitary point of view, it is the healthiest of all three. Invalids who cannot stand the cold of Ooty and the damp of Coonoor, fly here for comfort and restoration to health. The Kotagiri Ghat begins about 1½ miles north from Metapolliam, and is about 12 miles in length. Tea is largely cultivated. Rainfall about 50 inches.

KOTAH, a Native State in Rajputana, between lat. 24° 30′ and 25° 51′ N., and long. 74° 40′ and 76° 59′ E. Kotah is an offshoot from Bundi (Boondee), forming with that state the tract named Haraoti, after the dominant tribe of Rajputs. Kotah, the principal town, is in lat. 25° 10′ N., and long. 75° 52′ E., on the right bank of the river Chambal. East of the town extends an extensive artificial lake, the Kishar Sagar, which affords facilities for irrigation. The principality of Kotah was formed about the beginning of the 17th century by the chief of Bundi, who was forced by the maharana of Oudeypore to cede half his territory to his younger brother. Subsequently, like all the other Rajput states, Kotah had been despoiled by the Mahrattas, and was under obligations to pay tribute to each of the three great Mahratta families of Malwa, the Puar, Sindia, and Holkar, as well as to the peshwa. Kotah was then saved from absolute ruin by the talents of its minister, raj rana Zalim Singh, into whose hand maharao Omeid Singh surrendered all power, and in the course of forty-five years he raised the Kotah state to be one of the most powerful and flourishing in Rajputana. He was one of the first of the Rajput chiefs to co-operate with the British Government for the suppression of the Pindaras in 1817. Zalim Singh died in 1824, and his son Madho Singh succeeded him. In 1828, the maharao Kishore Singh was succeeded by his nephew, Ram Singh. In 1834 disputes broke out between Ram Singh and his minister, Mudden Singh, the son and successor of Madho Singh. There was danger of a popular rising for the expulsion of the minister, and it was therefore resolved, with the consent of the chief of Kotah, to dismember the state, and to create the new principality of Jhallawur as a separate provision for the descendants of Zalim Singh. Seventeen pargannas, yielding a revenue of 12 lakhs of rupees, were then made over to Mudden Singh.

In the mutiny and rebellion of 1857, the Kotah contingent mutinied and murdered the political agent and his two sons, and the maharao made no effort to aid them. It was captured by General Roberts 30th March 1858, and Faiz Ali Khan, Bahadur, K.C.S.I., was for a time sent to administer the affairs of the state. The troops which the maharao is allowed to entertain are limited to 15,000 men of all descriptions. The state revenue from all sources is about 25,00,000 rupees. The tribute payable to the British Government is 1,84,720 rupees, in addition to the two lakhs of rupees for the Deolee Irregular Force. The maharao has been guaranteed the right of adoption.—*Imp. Gaz.* v.; *Treaties, etc.*

KOTAH, a village on a plain, on the left bank of the Pranhita river, 12 miles above its junction with the Godavery, in lat. 18° 51′ N., and long. 80° 2′ E. Ferruginous sandstone is well developed at the Mahadeva Hills, in the north of the province f Nagpur, in the vicinity of the city itself, and at Kotah on the Pranhita.—*Carter's Geological Papers*, p. 303.

KOTAL. PUKHTU. A pass. There are many in the mountains of Afghanistan. The Kotal-i-Agram and the Kotal-i-Dara lead over the Hindu Kush, between Chitral and Zebak in Badakhshan. See Kohtul.

KOTAR, a tribe of the Neilgherries which ranks next to the Toda in priority of occupation of the hills. They are industrious, employ themselves as carpenters, smiths, basket-makers, curriers, barbers, washermen, etc. They acknowledge the Toda as lords of the soil, and pay to them the tribute by Gudu. At the same time they exact from each Badaga hamlet annual fees for services rendered as handicraftsmen, etc.

The station of Kotagiri takes its name from the Kotar villages in its vicinity. The Kotar as a body are dirty. All the dead cattle and carrion in the vicinity, of every kind, find acceptance among them as food. Some rude image of wood or stone, a rock or tree in a secluded locality, form their objects of worship, and to these sacrificial offerings are made; but the recognised place of worship at each village consists of a large square piece of ground, walled round with loose stones three feet high, and containing in its centre two pent-shaped sheds of thatch open before and behind, and on the posts that support them some rude circles and other figures are drawn. They hold an annual feast in honour of their gods, which comprises a continuous course of debauchery and licentiousness, extending over two or three days.

The Kotar language is a very old and rude dialect of Canarese, having the same Tamil roots, but differently pronounced, without the guttural or pectoral expression of the Toda. They are believed to be descended from some of the tribes of the plains, who sought refuge on the hills, and were the first among the other tribes who followed the Toda.

KOTEGARH, Kot Guru, or Guru Kot derives its name from a local saint, whose burial-place in the midst of the village is decorated with coloured flags. Kotegarh is 54 miles N.E. of Simla, on the left bank of the Sutlej, and is on the high road leading from the plains of India to Tibet. It is 6700 feet above the level of the sea, and is built on the spur of a mountain about 11,000 feet high, which may be considered as the beginning of the Snowy Range towards the north-east. The district contains 41 villages, with a population of nearly 2400 souls. The fields are laid out in terraces above one another. From nearly the crest of the mountain chain, they reach down to the bed of the Sutlej. Wheat, barley, and various sorts of grain grow freely. The Kulus form a considerable branch of the population, and are supposed to be the aborigines of the country. The chieftains are Rajputs, who emigrated from the plains of India during the first Muhammadan invasion. Besides these there are the Kunait or Khumah, also Brahmans, who employ themselves mostly in husbandry.

In former times human sacrifices were offered up in the temples, but since the establishment of British rule these have ceased. In most villages large flocks of goats are kept for sacrificial purposes. The sale of females for the worst purposes of slavery is still continued in various parts of the hill territory. For ages past the rich natives of the plains had been supplied with females from the hill regions, which, together with the custom of female infanticide, caused a great numerical disproportion between the two sexes, and gave rise to no less than four cases, in which the fathers had buried their children alive, being brought to light in 1840. 'No man can obtain a wife without paying a sum of money to her father. The price of one to a peasant is from seven to twenty rupees. Half a century ago, three or four or more brothers married one woman. Unable to raise the required amount individually, they clubbed together and bought one common spouse. Polyandry has now disappeared. But British territory once passed, especially towards the east, polyandry will be still found in Upper Kanawar. The cause assigned is, however, not poverty, but a desire to keep the common patrimony from being distributed among a number of brothers. A little beyond Kotegarh caste distinctions cease, and the physiognomy of the people points to Tartar extraction. The most important class which falls under missionary influence are the Pahari. With them every remarkable peak, cave, forest, fountain, and rock has its presiding demon or spirit, to which frequent sacrifices are offered, and religious ceremonies are continually performed in small temples erected on the spot. One deota is called Shaitan; wooden chairs dressed up with rows of masks fixed to them, and carried on shoulders when a procession takes place. A peculiar dance is kept up before these, people waving branches of trees or punkahs or swords in their hands. The deotas, which have no temples of their own, rest in the houses of zamindars.

KO-TEOU, or adoration, as the Chinese word expresses it, consists in nine solemn prostrations of the body, the forehead striking the floor each time. It is difficult to imagine an exterior mark of more profound humility and submission, or which implies a more intimate consciousness of the omnipotence of that being towards whom it is made. The person rests on his hands and knees, and nine times touches the ground with his forehead. It is literally knocking the head. It is almost the same as the Sajada of the Muhammadans of Southern Asia.—*Macartney's Embassy*, ii. p. 129.

KOT KAMALIA, in the Panjab, identified with the first city of the Malli, captured by Alexander.

KOT KANGRA, a fortress in the east of the Panjab, surrounded by the river Beas on three sides. See Kangra.

KOTMALE, in Ceylon, near Rambodde, on the road to Newera Elia, a lovely valley, through which meanders a flowing stream. The natives believe that whatever woman bathes in this river within three months after she becomes a wife, will be blessed with a numerous, beautiful, and fortunate family.

KOTRI, a small town in the Karachi (Kurachee) district, Sind, and headquarters of the taluk. Its population in 1872, including the neighbouring hamlets of Khanpur and Miani Multani, was 7949. It is situated in lat. 25° 21′ 41″ N., long. 68° 21′ 37″ E., on the right bank of the Indus, here confined by a tolerably permanent bank. After the conquest of Sind, it became the headquarters of the Indus flotilla, and a fort was erected to protect the site.—*Imp. Gaz.*

KOTTAGAR. KARN. A division of the Holayar or servile tribe.

KOTTAI. TAM. A grain measure, varying from 21 to 24 markals in different places.

KOTWAL. HIND. A military superintendent of police, one of the titles given to the headman of a Hindu corporation; head of town or village, a superintendent of markets, a police officer; under Muhammadan and Hindu sovereigns, a criminal magistrate.

KOTYA. MAHR. A coasting ship on the W. coast of India.

KOUCADWIPA was the name given by the Indian Aryans to the basin of the Indus, which was earlier occupied by the Sudras (Cushites or Caucisas). These Aryans gave the name of Jambudwipa to all the mountain region on the N.W. of India, including the ancient Indian province of Afghanistan.

KOU-CHU. CHIN. The Chinese obtain from a tree of this name a fluid resembling milk, which they use in gilding with leaf-gold. This liquid is smeared over the surface of the article to be gilded, in the several forms which the device is intended to represent; the leaf-gold is then applied, which immediately becomes firmly cemented.

KOUK. BURM. Paddy. Kouk-hline, paddy sheaves; Kouk-kye, Kouk-lat, and Kouk-ying, glutinous paddy. See Rice.

KOUK-KO. BURM. A Tavoy wood, employed for bottoms of boats.

KOU-KOU? also K'u-shih-pa-tau, CHIN., is

the St. Ignatius bean, the seeds of Strychnos sancti Ignatii, the Ignatia amara of some authors. It enjoys a high reputation in the Chinese Materia Medica. It is bitter, and believed to be a good vermifuge, but is dangerous from the quantity of strychnine it contains.—*Smith's Mat. Med.* p. 116; *Simmonds' Dict.*

KOU-KOUO. CHIN. A plant originally from the Philippine Islands. Its fruits are of an ashy brown colour, extremely hard and bitter; by steeping in cold water, it forms an excellent application for wounds and contusions, and the water, taken inwardly, cools the blood and allays inflammation. This fruit plays an important part in Chinese medicine, and is sold by all druggists; it is also used to treat the internal maladies of oxen and horses. This is perhaps the seed Lusung-kwo, from a species of pine.—*Smith's Chin. Mat. Med.; Huc's Journey*, p. 97.

KOUMISS, the Ma-ju-tsiu of the Chinese, is a spirituous liquor of various kinds prepared from mare's milk by Mongolians. Tartar drinks of various kinds, made from whey and buttermilk, were called Ti-hu, a name applied to ghi or the oleine of butter. The milk of the mare has 17 per cent. of solid matter, and 8 per cent. of sugar of milk, which render it very liable to undergo alcoholic fermentation. Koumiss is quite distinct from the Russian drink quass. English koumiss is made from the milk of the cow. Russian koumiss can be procured at several places in London.

KOUNG. KAREN. A beer brewed from rice.

KOUNG-KOUAN. CHIN. Communal palaces are, in China, found from stage to stage all along the road, and reserved for the use of the great mandarins when travelling on public service. Ordinary travellers are rigidly excluded from them. A Chinese family has the office of maintaining each of them in good order, and of making the necessary arrangements when a mandarin is about to occupy it. The expenses are paid by the governor of the town, and he appoints the domestics for the service of the palace. The Koung-Kouan of the province of Sze-chuen are particularly renowned for their magnificence, and they were completely renewed under the administration of Ki-chan, who was governor of the province for several years.—*Huc, Chinese Empire*; i. p. 23.

KOUPOOEE, a tribe near the source of the Irawadi, comprises two clans, the Songpoo and Pooeer-on. The Koupooee occupy the hills between Cachar and Munipur in their whole breadth, a direct distance of about 40 miles; and from lat. 25° N. they formerly extended over nearly an equal distance to the south. The whole of the tract was formerly thickly studded with villages, and Songpoo tradition gives, as the place of their origin, the mountain towards the south of the valley named Thung-ching. They and all the other races of hill people congregate in communities, composed usually of families connected with one another by blood ties. Before the subjugation of the Songpoo tribe to Munipur, almost every village was at war with its neighbour, and they would break out afresh were the restraining hand of Munipur withdrawn. A state of active feud appears to be the one natural to all the tribes from Cape Negrais to as far north as we have any knowledge. The Koupooee are much attached to their villages, and when they have been obliged to desert their village, they express their wish to return to it as being the grave of their ancestors. The spot cultivated this year is not again cultivated for ten years. Every village has three hereditary officers, namely, Kool-lak-pa, Loop-lak-pa, and Lum-poo, and officers besides these are elected. The Koupooee are also subdivided into families, Koomul, Looang, Angom, and Ning-than-ja. A member of any of these families may marry a member of any other, but intermarriage of members of the same family is strictly prohibited. Though not attended to with the same strictness, this prohibition in regard to marriage, and this distinction of families under the same designation, exists among the Munipuri race.—*Dalton's Ethnology*, p. 51.

KOUREN. The principal Lama Serai of all Mongolia is that of the Great Kouren (Oorga Kooren of Timkowski). It is situated in the country of the Kalkas, on the banks of the Toula river, and stands on the edge of the great forest that stretches northwards into Siberia. To the south lies the desert of a month's journey. It stands, however, in a pleasant valley, amid mountains, near the source of the Toula, which river falls into the great Baikal lake. There are 30,000 Lama, under several heads, at Oorga; their chief is the Geesoo-Tamba, a regenerated Buddh of great sanctity. There has arisen a large city and mart of commerce in the immediate vicinity of the convent, and it is the headquarters of Mongolia, having been the capital of the princes of the family of Chengiz Khan before their conquest of China. Tea bricks are here the measures of value, an ounce of silver representing five tea bricks.

KOUSHAN, a pass in the Hindu Kush. It is the most frequented east of Bamian, in lat. 35° 37′ N., long. 68° 55′ E. It has three entrances, leads over the principal shoulder of the Hindu Kush peak, is impassable for wheeled carriages, about 40 miles long, narrow, and its crest is 15,000 feet above the sea. The road rocky, uneven, descent is 200 feet per mile.

KOUSSO, the flowers of Brayera anthelmintica, *Kth.*, an Abyssinian tree; a celebrated vermifuge.

KOUTAN, a titular appellation of the Moplah Muhammadans of the S.W. coast of the Peninsula of India.

KOUTCHE town contains between 5000 and 6000 inhabitants, besides the Chinese garrison. To the north of the place is the Moussoor-Daban (or pass) on the route to Kulja, and the great volcano Pe-shan is on the east. Iron and copper are abundant in this region, and the latter mineral is worked. Sulphur and saltpetre are also found, and chloride of ammonium. To the south of Koutche a considerable quantity of rhubarb is produced; it is taken by the caravans to Mai-matchin on the Siberian frontier.—*The Upper and Lower Amoor*, p. 355.

KOU-TOUK-TON in Mongol, and Goussee (Geesoo) in Tibetan, M. Timkowski says is the name of the highest class of the priests of Buddha; the one resident at Oorga is called by the Mongols Gheghen Kou-touk-ton. The Oorga high priest seems also to be called Geesoo-Tamba, a regenerated Bodhi-satwa of great sanctity. — *Prinsep's Tibet*, p. 51. See Kouren; Lama.

KOUYUNJIK, so called by the Turks, but Armushiah by the Arabs, are mounds, opposite Mosul, long believed to be the remains of Nineveh. The ruins include the great mounds of Kouyunjik and Nabbi Yunus on the eastern bank of the river Tigris, and were examined by Sir A. H. Layard in 1849 and 1850. He sent to Great Britain, to the British Museum, many Assyrian and Babylonian sculptures, which were described in 1883 by Dr. Birch. They consist of slabs of gypsum or alabaster from the walls of Sennacherib's palace; of date between B.C. 705 and 681; also slabs of the time of Sennacherib's grandson, Assurbanipal, of date between B.C. 668 and 626; these are split and shattered by fire, which consumed the palace.

Three expeditions conducted by George Smith, and later ones of Hormuz Rassam, have added largely to the stock of tablets from Kouyunjik, originally acquired for the British Museum by Sir A. H. Layard, and have also brought to light a few other tablets from the libraries of Babylonia.

George Smith, the Assyriologist, deciphered the terra-cotta tablets inscribed with cuneiform characters belonging to the great fictile library of Kouyunjik.

Nimrud is stated to have migrated from Cappadocia to the land of Sumer or Shinar, and, meeting there with the Semitic population, he settled with his followers, and built Babylon and Birs Nimrud or supposed Tower of Babel. The language of these settlers, known as Akkadian, is yet preserved in several tablets, but it seems to have been entirely supplanted by the Babylonian about the 12th or 10th century B.C., the Babylonian incorporating many Akkadian words. From the fusion of the intellectual race of Nimrud with the martial Babylonians sprang the two great nations to whom history and tradition ascribe the foremost place of sovereignty among the empires of the ancient world, in science and arts as in war. Mr. Theo. G. Pinches considers that art reached a high degree of excellence during the reign of Assur Nazir-pal, declined for a time, and then again rose to very high excellence about B.C. 700, at the beginning of the reign of Sennacherib.

Assur was the national god of the Assyrians. Bel was the Babylonian god. Istar of Nineveh was the goddess of love. Um-napistim was the Assyrian Noah. — *Sayce, Fresh Light from the Ancient Monuments*, p. 17.

KOVIL, also Koyil. TAM. A Hindu temple, a Christian church; written Koil or Coil.

KOWA DOL. The Barabur Hills are isolated rocks of syenitic granite, rising abruptly from the plain about 15 miles north of Gyah, by the left bank of the Phulgo or Mahanadi; the cluster is remarkable for the masses of rock, piled one above another, with hardly any soil, and rising to various heights, from 100 to 400 feet. Each hill has a name of its own. The highest is called Barabur, also Sidheswur, from a temple to Mahadeva that once crowned its heights. The next in height is the Kowa Dol, which is detached from the rest by near a mile to the south-west. A third is called Nag-arjuni, and is the easternmost of the great cluster. A fourth, and the smallest, called Durhawut, is at the northern extremity; but others also have names. The Kowa Dol is an almost entirely bare rock, having nearly a perpendicular scarp on its northern face, and sloping at an angle of 45° on the southern side; east and west, it is disjointed and inaccessible; huge stratified masses are piled one over the other decreasing in length at each end, the whole is surmounted by single blocks like pillars, the centre one of which towers above the rest, and is conical. It is said that formerly there was a huge block balanced on the top of this cone, which from its being moved by birds alighting on it obtained the name of Kowa Dol, or crow-moved or the crow-swing. About the middle of the 18th century, this rocking-stone fell down to where it may still be seen. This hill seems to have been surrounded by a large town. There is an artificial mound continuous round the north and east faces filled with broken pottery, bricks, and blocks of hewn stone; there are two names given, Sarain and Summunpur; on the portion called by the latter name there is an extensive Muhammadan cemetery. The caves of Barabur, with one exception, are entirely devoid of sculpture or ornament of any kind. They are seven in number; four in one hill, three in another; but the name Satgarba, commonly understood to mean seven chambers, is applied only to two.

KOWEIT, also called Quade or Grave, a town on the Arabian side of the Persian Gulf, on the south side of a bay 20 miles long; it is the native Al Quaat. The country round it is perfectly barren. The present town did not exist prior to the middle of the 18th century. It rose to some importance as a place of trade during a turbulent period in the latter part of that century, and retained its prosperity from having enjoyed peace while all other parts of the Persian Gulf were embroiled. Its trade consists in supplying the inland tribes with grain, coffee, and Indian produce. The exports are ghi and horses. It has a considerable carrying trade between various parts of the Gulf.

KOWL, ARAB.; also Kowl-namah, HIND., deed of protection and assurance.

KOYYA, to cut, is found with variations in all the languages of the south of India, giving the terms for harvest, a reaping-hook, a reaper.

KOYYUNLU, from the Turki word Koyun, a sheep. The Ak Koyyunlu and Kara Koyyunlu are mentioned in history. They were two tribes of Turk race, each of which founded a dynasty, and adopted, respectively, a white and a black sheep as the device of their standards, and hence their names.—*Redhouse; Elliot, H. of I.* iv.

KRAAL is the term used in Ceylon for the enclosure into which, when fresh elephants are required in Ceylon, a herd of wild ones is driven. In the continent of India, the enclosure is called a Kheda. The kraal is made in some spot convenient to the districts in which the elephants are supposed to be. The mudliar or headmen of these districts are required to find a certain number of coolies as beaters. These are formed into a cordon, surrounding the elephant district. The circle is gradually contracted, the coolies advancing slowly by day, beating the jungle as they go, and lighting watchfires by night. The elephants are thus driven towards the kraal, into which they are eventually enticed by decoying elephants placed there for the purpose. Once within the enclosure, strong ropes are skilfully passed round their legs, and then fastened to the largest trees. There the elephant remains until he is subdued

and partially tamed by hunger and fatigue, after which he is gradually liberated, and his education commences. Cordiner gives graphic descriptions of the grand kraals he witnessed at the beginning of the 19th century near Tangalle and Negombo, where scores of elephants were enclosed in parks of labyrinthine passages, many of them being drowned in the water snare. The parallelogram on one occasion was about 240 feet on each side, so that the area was 6400 square yards. The wings were not more than 200 feet in length. The engraving in Tennent's Work (5th edition, ii. p. 340) gives an excellent idea of a Kandian kraal, its form and the principles on which it is constructed. Vacant spaces are left for two elephants to stand at each corner, which it is understood will rush forward towards the entrance the moment the elephants enter the enclosure, and cover with their protection the men employed in putting up the barricades. Cross rear lines are drawn through the jungle, when the beaters are satisfied that the elephants are in front; and as the drive nears the kraal, the cordon of beaters is drawn closer and closer until at last it closes in the elephants and they have no choice but to break through the line or enter the kraal. Many of them do break through the line. On one occasion an elephant broke through the kraal, fairly raising up a portion of the palisades, cross beams, jungle vines, and all, with his tusks, and, scattering the watchers to right and left, rushed up to the palisade, seized a peeled wand pointed at him by a Koralle, and broke it over the man's arm and head, inflicting severe bruises. But this animal was manfully resisted and turned back.—*Frere's Antipodes*, p. 185. See Elephant; Kheda.

KRAKATOA ISLAND. Java is traversed by two chains of mountains, from 10,000 to 12,000 feet in height, in which there are about 45 volcanoes, many of them in occasional activity; and it has explosive mud and brine springs, and a poison valley, in which accumulations of carbonic acid gas kill every form of life which penetrates into it. On the 26th and 27th of August 1883, there occurred the climax of the most tremendous volcanic eruption which, perhaps, the world has ever seen during historic times. In the course of it, Krakatoa Island, 3000 feet high or thereabouts, entirely disappeared: The usual volcanic products, including the finest particles both solid and vapours, were ejected into the air to a height that no man will ever say, since for many miles round the scene of these devastating forces noon was as black as night, and darkness was over all the land for 36 or 40 hours. The scale on which the work was done was such that the noise was heard at a distance of 2000 miles. The shivering of the island produced a wave of water 100 feet high, which destroyed everything over which it swept, and left its mark on tidal registers nearly all over the world. The mere air-pulse produced by the last fearful cataclysm was strong enough to pass with its gradually widening circle nearly three times round the globe.

Krakatoa Island was in eruption on the 26th, but it entirely disappeared on the 27th, and a tidal wave 12 to 30 metres high swept the coast of Mirak as far as Tiyiringen, overwhelming the towns of Anjer, Mirak, and Tiyiringen, destroying about 20,000 people. Soengepen volcano split into five; between the site where Krakatoa had stood and Sibisie Island, sixteen new volcanic craters appeared. A lighthouse in Java and another in Sumatra disappeared. Where once Krakatoa stood, the sea now plays. Ships in the seas sailed through patches of pumice, and Sunda Straits were so much changed as to necessitate resurvey. The craters of the numerous volcanoes for which Java is noted were most of them in active eruption. Madura Island at its east, 500 miles away, also had a share of the terrible effects of this unprecedented convulsion. Sourabaya, in the Straits of Madura, suffered seriously. The steamship Gouverneur-General, belonging to Batavia, was at sea at the height of the eruption, and steamed to Anjer to give the alarm, but found that place destroyed. The ship had a layer of ashes 18 inches thick on her deck. In some places masses of floating pumice-stone seven feet in depth were passed. The volcanic action must have been going on in lat. 5° S. and long. 88° E., at least three weeks prior to the terrible catastrophe in Java. S.S. Siam, from King George's Sound to Colombo, in lat. 5° S., long. 88° E., from 3.30 P.M. till dark was steaming through large quantities of lava floating in broad patches, and trending from north-west to south-east; some pieces larger than a cricket ball. 5° S. and 80° E. is in the middle of the Indian Ocean, about equidistant from the Keeling, Chagos, and Rodrigue Islands. The ancient Hindu temples, the Boro Buddor, the Chandi Siwa, and others, were greatly injured.

KRANI, Karani, or Crani, an English copyist or clerk in a Calcutta office, mostly of mixed European and native descent. The origin of the name has been disputed; it may be a mispronunciation of Carana, by which the Kayasth (Kayastha), or writing tribe, is designated in Bengal; and as most native clerks in public offices are of the Carana caste, it is not unlikely that by merely extending its signification, the same word has been used to designate English writers. The word, from being utterly harmless in its application, has begun of late years to be considered decidedly dyslogistic. In India, Kayasths are never styled Khaja. In Muhammadan countries west of India, however, the term is still applied to clerks and teachers. Dr. Shaw says of the Moors in Barbary, 'The Hojes suspend their inkhorns in their girdles' (p. 227); and Lady Montagu says, 'The monastery is now belonging to a Hojia or schoolmaster.'—*Letters*, p. 176; *Elliot's Supplement*.

KRANTA. BENG. A necklace from the species of chank shell.

KRAPF. John Ludwig Krapf, African explorer, and missionary of the Church Missionary Society, was born in Würtemburg in 1809. In 1837 he went to Abyssinia, but, failing to make way there, he went to the kingdom of Shoa, where he remained three years. In 1844, Dr. Krapf settled on the Zanzibar coast, fixing on Mombas as his base of operations, and in company with Dr. Rebmann made several exploring journeys in the interior, discovering the highest mountains in Africa, Kilimanjaro and Kenia. Krapf returned home in 1856.

KRAW or Kraa, an isthmus at the head of the Malay Peninsula, between the Kaman branch of Pak-chan river in Tenasserim and the Champong river in Siam. Between the two rivers is about

40 miles, and it has been proposed to form either a canal or a railway for the 22 miles that intervene. The Pak-chan river is said to be navigable for steamers drawing 6 fathoms of water for 15 miles from the sea, and the highest ground on the isthmus is not more than 75 feet above the sea-level. The distance saved would be nearly 500 miles; and the saving in a steamer's time, including stoppages for coaling, etc., would be four days, while the saving in cost would be enormous.

KRIS or Karis. MALAY. A dagger or poniard, the ordinary weapon of all the civilised inhabitants of the Archipelago. It is of a hundred different forms, short or long, with a straight or serpentine blade, and with every variety in the shape and ornament of the hilt and scabbard. Men of all ranks, from the peasant to the prince, wear this weapon, and those of rank, when full dressed, two or even four. In Java, even women of rank sometimes wear a small one. The word is probably Malay, but is now of general adoption through the Archipelago. The Javanese have three native names for it besides the Malay one. It is represented on several of the ancient temples of Java. This dagger is in use in all the Indian islands, though ill suited as a weapon of war. The Javanese ascribe its invention to Inakarto Pati, king of Janggolo, in the beginning of the 14th century of our era. Constant use of it gives a facility in handling it. Those of the Eastern Archipelago get their names according to their form or uses; thus, Kris panjang (long), Kris sepucal (straight), Kris chinankas, Kris tumbu Ladah, Kris bladohe, Kris badeh. The kris is used for all purposes, in Bali even to kill the wife who wishes to be burned with her husband. It is always a near relation who gives the first wound with the kris, but never father or son. Sometimes dreadful spectacles occur. In one instance a woman had received eight kris stabs, and was yet quite sensible. At last she screamed out, driven by the dreadful pain, 'Cruel wretches, are you not able to give me a stab that will kill me!' A gusti who stood behind her, on this pierced her through and through with his kris.—*Crawfurd's Dict.* p. 202; *Ind. Arch.* i.

KRISHI. SANSK. In the south pronounced Krūshi, ploughing, tillage, agriculture.

KRISHNA, written Krishn, Kistna, and Kisn, is familiarly known to the Hindus as Kaniya, and also called Heri. He was a prince of the Yadu tribe, and lived towards the closing centuries of the Brazen Age, calculated to have ended about B.C. 1200 to 1100, and he has since been deified by the Hindu people of India. Who his parents were, is doubtful. Vasudeva, a chief of the Yadava, and brother of Kunti, the wife of Pandu, and Devaki, a damsel of the royal family of the Bhoja reigning at Mathura, are claimed; and Nanda and Yasoda, cowherds dwelling at Gokula, are indicated as his ostensible parents. Krishna is the greatest favourite with the Hindus of all their divinities. Of the sectaries who revere Vishnu to the exclusion of the other gods, one sect almost confine their worship to Rama; but though composed of an important class, as including many of the ascetics, and some of the boldest speculators in religious inquiry, its numbers and popularity bear no proportion to a division of the Vaishnava sect which is attached to the worship of Krishna, and the legends told of him are innumerable. When Aurangzeb proscribed the idol of Kaniya, and rendered his shrines impure throughout Vrij, Rana Raj Singh offered the heads of one hundred thousand Rajputs for his service, and the god was conducted by the route of Kotah and Rampura to Mewar. One sect worships Krishna as Paramatma or supreme spirit, prior to all worlds, and both the cause and substance of creation. With them, in his capacity of creator, preserver, and destroyer, he is Brahma, Vishnu, and Siva; and in the endless divisions of his substance or energy, he is all that ever was and will be. Besides these manifestations of himself, he has for various purposes assumed specific shapes, as avatars or incarnations, Ansa or portions, Ansana or portions of portions, and so on ad infinitum. Professor Lassen regards him as identical with Herakles of Megasthenes.

Since the middle of the 19th century, several learned men have formed the opinion that some of the legends relating to Krishna have been taken from the life of Jesus Christ. Major Cunningham believes that the worship of Krishna is only a corrupt mixture of Buddhism and Christianity, and was a sort of compromise intended for the subversion of both religions in India. Several of the legends in the Mahabharata seem to have been written after the birth of Christ, whose miracles have been copied; and Krishna is made to straighten the crooked woman Kubja, which resembles the miracle of raising the bowed down woman. Weber (Krishna Geburts fest, p. 316, English ed. p. 71) thinks that Krishna's sectarian worship as the one God probably attained its perfection through the influence of Christianity.

The name of Krishna occurs in the Rig Veda, but without any relation to the great deity of later and modern times. He appears prominently in the Mahabharata; and as a divine being he delivered to Arjuna the Bhagavat Gita, which is recognised as part of the great epic, in it distinctly declaring himself to be the Supreme.

The divine character was still further developed in the Harivansa, a later addition to the Mahabharata. In the Atmaprabodha and Narayana and Chandogyopanishads, Krishna is mentioned as a pious sage. It is in the Gopalatipaniyopanishad that he is declared divine; and in the Puranas, especially in the Bhagavat Purana, this attained its full expansion, Krishna being there described in his complete apotheosis, and in that he is represented as the eighth avatar of Vishnu.

All the stories told in the Bhagavat Purana, of his childhood and boyhood, and the love scenes of his youth, have been made popular in the Hindi translation called Prem Sagar, or Ocean of Love, and other versions. Much of the story of the early days of Krishna is of comparatively modern invention. The incidents of his relations with the Pandava princes are the most ancient.

Krishna lived during a period of religious changes, and he was able to induce the Yadava to discontinue the worship of Indra, and worship the cows that supported them. The disturbance resulting from this is denoted by the legend that Indra opened the heavens to deluge the race, but Krishna protected them by elevating the Govardhana mountain as an umbrella, which implies that he took shelter on that mountain. He migrated from Mathura to Gujerat, and built or

fortified Dwaraka. But the religious contest continued, as shown by Krishna, while a guest or on a visit to Indra's heaven, stealing the Pari-jata tree from Indra's garden; and when Usha, daughter of Bana, carried off Aniruddha, Krishna's grandson, Krishna defeated Bana, though aided by Siva and his son Skanda.

Wherever the Yadava settled, great violence and disorder prevailed. Krishna seems to have occupied the town of Mathura with his Yadava brethren, and to have been twice attacked by the Turanian king Jarasandha of Magadha, supposed to be Behar. The first attack was repulsed, but after the second Krishna retired with the Yadava to Dwaraka. There is, however, no account extant of the migration or flight from Mathura to Dwaraka, though it must have occupied at least a year. Krishna fought with and defeated Paundraka, though supported by the king of Benares. At some subsequent period of his career he entered the region of the Saura in Gujerat as a conqueror, as he had before been compelled to seek shelter there in defeat, on his flight from the king of Chedi, which obtained him the unenviable epithet of Rinchor, or fleer from the battle-field, though Hindus now appear to consider Rinchor a complimentary title, as under this designation they worship him in crowds. But he last visited this land in company with a few of his kinsmen, the remnant of that tremendous civil conflict which desolated India, to pass the remainder of their days in this insulated nook, in sorrow and repentance for the blood their ambition had shed, though in defence of their rights. Thus, wandering from one tirat or place of pilgrimage to another, he, with his friends Arjuna, Yudishthra, the abdicated paramount sovereign of India, and Baldeo, approached the sacred soil around the shrine of Somnath. Having performed his ablution in the holy Triveni, Kaniya took shelter from the noontide heat under an umbrageous pipal, and while he slept, a forester Bhil, says the legend, mistaking the padma or lotus-like mark on the sole of his feet for the eyes of a deer, sped an arrow to the mark. When his kinsmen returned, they found that life was extinct. For a long time Baldeo would not part from the corpse, but at length they gave it sepulture at the point of junction of three streams. A pipal sapling, averred to be a scion of the original tree, marks the spot where the Hindu Apollo expired, and a flight of steps now conducts to the bed of the golden Hiranya, for the pilgrim to lustrate himself. This place of purification bears the name of Swargadwara, or door of bliss, and contends with that of Devaputtun for superior efficacy in absolving from sin.

The Mahabharata gives two summaries of his numerous exploits, overthrowing, while a youth, kings, cities, and demons. He was present at the Swayamvara of Draupadi, helped Agni to defeat Indra, connived with Arjuna to carry off his sister Subhadra, killed Sisupala, took part in the council which was held prior to the great war; was Arjuna's charioteer in the battle. On the eve of the battle, while acting as charioteer, he related to Arjuna the Bhagavat Gita, or divine song. In the battle he aided Arjuna, but in two instances he suggested unfair dealing. He afterwards went to Hastinapura with the conquerors, and attended their Aswa Medha sacrifice.

On his return to Dwaraka, he gave permission for wine to be drank for the day. A drunken brawl ensued, in which his son Pradyumna was killed in his presence, and nearly all the chiefs of the Yadava were slain. Bala Rama left the fray, and died peacefully under a tree, and Krishna was killed unintentionally by a hunter named Jaras, who shot him with an arrow, mistaking him for a deer. Arjuna proceeded to Dwaraka and performed the funeral obsequies of Krishna. A few days afterwards the city was overwhelmed by a storm-wave. Five of Krishna's widows were subsequently burned upon a funeral pile, in the plain of Kuru-kshetra.

During the discussions prior to the battle described in the Mahabharata, Krishna, who was related both to the Kuru and the Pandu, tried to bring about a reconciliation, and he seems to have continued his efforts to restore peace throughout the eighteen days of the conflict, but he did not personally engage in the fight, and the only part of his career in which he is shown as personally brave, is related in the legend describing his forcing an entry into Mathura. At the gate of the town, the bow of Siva was kept under the care of warders. Krishna entered by that gate to take part in the festival which king Kansa held on the occasion of a great sacrifice to Siva. As he entered the gate of the bow, he took and broke it, slaying the warders. A popular commotion followed, during which the troops of king Kansa were defeated, and Kansa himself was slain.

The popular history of Krishna is contained in the Puranas, which mix up fable with historical details; and the Bhagavat Purana is the great authority about raja Kansa and his cousin Devaki, her seventh conception of Krishna, his change to Rohini's womb, and his birth and preservation and rearing by Nanda, the herdsman in Gokala, where he was brought up. In his childhood killing demons and serpents, doing marvellous feats, playing tricks on the Gopi milkmaids; persuading Nanda to cease the worship of Indra and to worship the mountain Govardhana; his amours with the Gopi, seven or eight of whom he married, his favourite wife being Radha, with whom he danced in the Rasa Mundala. He afterwards killed Kansa, killed the demon Panchajana, defeated Jarasandha, father of his two wives, but retreated before Kala Yavana to Gujerat, where he built and fortified Dwaraka.

Here he carried off Rukmini, daughter of the raja of Vidarbha; he recovered the Syamantaka gem, and married Jambavati and Satyabhama. But he is fabled to have had 16,000 wives and 180,000 sons. Rukmini bore his son Pradyumna and daughter Charumati. Jambavati bore Samba, and by Satyabhama he had ten sons.

He killed the demon Muru and the king Naraka. With Satyabhama he visited Indra at Swarga, and she persuaded him to carry away the Parijata tree which belonged to Sachi, Indra's wife. Indra with an army tried to recover it, but was defeated by Krishna.

Pradyumna bore a son named Aniruddha, with whom a female Daitya, Usha, daughter of Bana, fell in love and carried off, but he was rescued by Krishna. Bala Rama and Pradyumna, and Bana and his allies Siva and Skanda, were wounded.

Krishna's names are numerous. He being Vishnu, they enjoy several in common,—Murari,

Hari, Madhava (Vishnu destroyed the giant Madhu), Baghavan, are among them; Govinda, Gopala, Gokala are derived from his occupation of herdsman; Gopinatha, the Gopi's god; Murlidar, the tuneful; Kessu, Kesava, or Kesavi refer to the fineness of his hair; Vanimali, to his pendent garland; Yadva, Varshneya, and Vasudeva, to his tribe and family. Gokal is a small town on the banks of the Jumna, below Mathura; and Radha, the mistress of Krishna, was wife of a cowherd of Gokal; hence one of Krishna's titles is Gokal Nath, lord of Gokal. Gokal is almost an island, and is one of the prettiest spots in the holy land of the Hindus. The scene there is still as pastoral as it had been 3500 years ago. Large herds of heavy-uddered kine remind us of the days of Nanda, though their number is far short of nine lakhs, possessed by that shepherd-chief of old.

In the civil wars of his kinsmen, the Kuru and Pandu, when he sided with the latter and shared their exile, he had thrown aside his Apollonic character of Murlidar, where, by the sounds of his pipe (Murali), he captivated the shepherdesses as he attended the kine in the pastoral Surasen, and had assumed that of Chacradhari, or wielder of the discus, the most ancient weapon of this Indo-Getic race.

Krishna is worshipped under his infant form as Gopala and Balagopala, and again as Gopi-natha, the god of the milkmaids. In the picture of Krishna, observes Sir William Jones, it is impossible not to discover, at the first glance, the features of Apollo, surnamed Nomios, or the pastoral, in Greece, and Opifir in Italy, who fed the herds of Admetus, and slew the serpent Python.

Krishna's favourite place of resort was a tract of country around Agra, and principally the plains of Mathura, where Krishna and the nine Gopia, evidently the nine muses, usually spent the night in dancing.

Krishna deified is the shepherd Apollo of the Hindus, and his deeds, like those of Rama Chandra, have been sung by the noblest poets of the east.

The legend generally believed by the Hindus is partly historical and in part fable. It is to the effect that Krishna was born in Mathura, and was the son of Vasudeva (giver of wealth) and Devaki, sister to Kansa, the king of that country. At the time of the nuptials of his father and mother, it was predicted to Kansa that the eighth child of Devaki would deprive him of his life and crown, and become sovereign of Mathura in his stead. The king, in consequence, commanded that Devaki should be closely watched, and that whenever she was delivered of a child, it should be brought to him immediately to be put to death. The princess gave birth to five sons and one daughter, who were thus, by the directions of her brother, destroyed as soon as they were born. When she became pregnant the seventh time, a voice from heaven commanded that the fruit of her womb should be conveyed into that of another female named Rohini, who gave birth to the third Rama, called Bala Rama, Krishna's elder brother; and when the period of her delivery the eighth time arrived, the tyrant gave orders for a stricter watch to be placed over her than had been before observed. The guards placed by Kansa over his pregnant sister having failed in their vigilance, Kansa, enraged, ordered all new-born infants to be slain. But Krishna escaped his various snares, one of which was sending a woman named Patnia, with a poisoned nipple, to nurse him. In a miraculous escape of the infant over the Yamuna (Jumna), he is represented as conveyed by his father, and protected by Sesha or immortality. He was fostered by a herdsman named Ananda, or happy, and his wife Yasoda, or the giver of honour, and passed the gay hours of youth dancing, sporting, and piping among a multitude of young Gopa or cowherds, and Gopi or milkmaids, from whom he selected nine as favourites. This is the period which has made most impression on the Hindus, who are never tired of celebrating Krishna's frolics and exploits as a child,—his stealing milk, and his destroying serpents; and among them is an extensive sect which worship him under his infant form, as the supreme creator and ruler of the universe. Krishna excites enthusiasm, especially among his female worshippers. He spent his youth among the Gopi, or milkmaids, dancing, sporting, and playing on the pipe; and captivated the hearts, not only of his rural companions, but of the princesses of Hindustan, who had witnessed his beauty. In Brindaban, where he tended cattle, stole milk, played upon the pipe, and danced and sported with milkmaids, the scenes of his gay amours are now reckoned as objects of the holiest veneration. The cradle of Krishna is preserved among the treasures of Nandagaon, and the dairy is shown from which he used to steal milk and butter in his infancy. His subsequent life was chequered; he recovered his inheritance, but, being pressed by foreign enemies, he removed his residence to Dwaraka in Gujerat. He afterwards appeared as an ally of the family of the Pandu in their war with their relations the Kuru, for the sovereignty of Hastinapur. This war forms the subject of the great Hindu heroic poem, the Mahabharat, of which Krishna is in fact the hero. It ended in the dearly-bought success of the Pandu, and in the return of Krishna to Gujerat. His end was unfortunate, for he was soon involved in civil discord, and at last was slain by the arrow of a hunter, who shot at him by mistake in a thicket.

Other legends told of him are innumerable. At the age of seven, the legends relate that he uplifted on the tip of his little finger the mountain Govardhan, the Hindu Parnassus, to shelter the Gopa and Gopi from the wrath of Indra, the Jupiter Pluvius of the Hindu pantheon, who, enraged with jealousy at the diminution of his votaries and sacrifices, consequent to the adoration of Krishna, attempted to destroy them by a partial deluge. This story is represented in the Matsya Purana, whence Sir W. Jones has thus poetically introduced it in his hymn to Indra. The bard

> 'Warbling in a softer mode,
> Sang the red lightning, hail, and whelming rain
> O'er Gokal green, and Vraja's nymph-lov'd plain,
> By Indra hurl'd, whose altars no'er had glow'd
> Since infant Krishna rul'd the rustic train
> Now thrill'd with terror. Them, the heavenly child
> Call'd, and with looks ambrosial smil'd:
> Then, with one finger rear'd the vast Govardhan,
> Beneath whose rocky burden,
> On pastures dry, maids and herdsmen trod:
> The lord of thunder felt a mightier god.'

In pictures of this miracle, Krishna is always represented as a man, attended by his favourite mistress Radha, and sometimes by a multitude of

shepherds and shepherdesses; the former with poles, steadying the uplifted sheltering mountain, a shower of rain and fire falling vainly on its summit. Krishna and his Gopi are also represented as well in their characters of Apollo and the Muses, as in those of the sun and the planets in harmonious movements round him; and this picture was formerly adduced in support of the idea that the Hindus had a knowledge of the true solar system, a point that no longer requires proof. The colour of this deity is azure, and several animals and vegetables of a black or blue colour are sacred. The metamorphosis of his fleet nymph into the lovely shrub, the tulsi or black ocimum, is related in a style perfectly Ovidian in the Puranas. Tulsi forms a pretty feminine appellation to this day; and, among the women of Hindustan, the beautiful, warlike, and amorous Krishna is a most popular deity. Nareda, the mythological offspring of Saraswati, patroness of music, was famed for his talents in that science; so great were they, that he became presumptuous, and, emulating the divine strains of Krishna, he was punished by having his vina placed in the paws of a bear, whence it emitted sounds far sweeter than the minstrelsy of the mortified musician. In a picture of this joke, Krishna is forcing his reluctant friend to attend to his rough-visaged rival, who is ridiculously touching the chords of poor Nareda's vina, accompanied by a brother bruin on the cymbals. The loves of Krishna and Radha, which, in the writings and conversation of the Hindus, are as constantly adverted to as those of Laila and Majnun by Muhammadans, are said to mean, in their emblematical theology, the reciprocal attraction between the divine goodness and the human soul. They are told at large in the tenth book of the Bhagavat, and are the subject of the beautiful pastoral drama, entitled Gita Govinda, by Jayadeva. This poet, in describing one of the events of Krishna's life in his amours with Radha, exclaims, 'Let him, then, if his soul be sensible to the raptures of love, listen to the voice of Jayadeva, whose notes are both sweet and brilliant.' 'Bring home the wanderer (Krishna) to my rustic mansion, spoke the fortunate herdsman Nanda to the lovely Radha. The firmament is obscured by clouds, the woodlands are black with tamala trees that youth who roves in the forest will be fearful in the gloom of night. Go, my daughter, bring the wanderer home. Radha sought him long in vain. She roved among the twining vasanti covered with soft blossoms, when a damsel, to whom his wanderings were known, pointing out the infidelity of her lover, thus addressed her: 'The gale that has wantoned round that beautiful clove plant, breathes now from the hills of Malaya. The full-blown cesara gleams like the sceptre of the world's monarch, love, and the pointed thyrse of the cetaca resembles the darts by which lovers are wounded. See the bunches of patal flowers filled with bees, like the quiver of Smara full of shafts, while the amrita tree, with blooming tresses, is embraced by the gay creeper atimucta, and the blue streams of the Yamuna wind round the groves of Vrindhavan. A breeze, like the breath of love from the fragrant flowers of the cetaca, kindles every heart, while it perfumes the woods with the dust which it shakes from the mallica with half-open buds; and the cocila bursts into song, when he sees the blossoms glistening on the lovely rasala. In this charming season of youth, Hari (Krishna) dances with a company of damsels.' The jealous Radha, however, gave no answer; when her amiable friend pointed out Krishna, with a garland of wild flowers descending even to the yellow mantle that girds his azure limbs, distinguished by smiling cheeks, enjoying the rapturous embraces of his fair companions. One presses him to her swelling bosom; another meditates on the lotus of his face; a third points to a vanjula bower. He caresses one, kisses another, and smiles on a third; while a fourth, under the pretext of hymning his divine perfections, whispers in his ear, 'Thy lips, my beloved, are nectar.' Radha remained in the forest lamenting to a confidant the wanderings of her faithless swain. 'I saw him,' she exclaimed, 'in the grove with happier damsels, yet the sight of him delighted me. Soft is the gale that breathes over yon clear pool and expands the clustering blossoms of the voluble asoca, soft, yet grievous to me, in the absence of the foe of Madhu. Delightful are the flowers of the amru trees on the mountain top, while the murmuring bees pursue their voluptuous toil; delightful, yet afflicting to me, O friend! in the absence of the youthful Kesava.'

The festival of Huli, more classically called Hulica, otherwise Phalgutsava, meaning the festival of Phalguna, as occurring in the month of that name, commences about the full moon, at the approach of the vernal equinox. It is one of the greatest festivals among the Hindus, and almost all sects seem to partake in its festivities, and all ranks, from kings downward, appear animated by the season, which is peculiarly dedicated to Krishna. Images of this deity are then carried about in palanquins, and on elephants, horses, etc. attended by music and singing, and various antics People of condition receive numerous visitors, who are entertained with dancing girls, music, singing, betel, and rose-water. An annual festival to celebrate the birth of this god is held in the month Bhadra. On this day his worshippers fast; but, on the conclusion of the worship, indulge themselves in music, dancing, singing, and various other festivities. In the month Shravunu, another festival is held in honour of him, which lasts from three to five days, during which the same festivities prevail, to which is added the ceremony of swinging the image of the god in a chair suspended from the ceiling. In the month Kartika, a third festival takes place, to celebrate his revels among the Gopi; and in the month Phalguna is also held the celebrated festival of the dolu, the ceremonies of which last fifteen days, and are accompanied with great splendour and festivity. During these holidays the Hindus spend the night in singing and dancing, and wandering about the streets, besmeared with the dolu (a red) powder, in the daytime carrying a quantity of the same powder about with them, which, with much noise and rejoicing, they throw over the different passengers they may meet in their rambles. Music, dancing, fireworks, singing, and many obscenities, take place on this occasion.

The stories relating to Radha are familiar to every Hindu, being incorporated into their popular songs, and the image of Radha is placed near that of Krishna in many of the temples. Kaniya is the Saint Nicholas of the Hindu navigator, as

was Apollo to the Grecian and Celtic sailors, who purchased the charmed arrows of the god to calm the troubled sea. As the destroyer of Kalinag, 'the black serpent,' which infested the waters of the Yamuna, Kaniya has the character of the Pythic Apollo. He is represented dragging the monster from the 'black stream,' and bruising him with his foot. He had, however, many battles with his hydra foe ere he vanquished him, and he was once driven by Kal-yamun from Vrij to Dwaraka, whence his title of Rinchor. In this myth we have the old allegory of the schismatic wars of the Buddhists and Vaishnava. Diodorus informs us that Kan was one of the titles of the Egyptian Apollo as the sun; and this is the common contraction for Kaniya, whose colour is a dark cerulean blue (nila); and hence his name Nila-nath, who, like the Apollo of the Nile, is depicted with the human form and eagle head, with a lotus in his hand.—*Wh. Hist. of India*, p. 68; *Tr. of a Hindu; Elphinstone's Hist. of India; Tod's Travels; Tod's Rajasthan; Moor's Pantheon; Cole. Myth. Hind.; Ward's Hindoos; Barth; Cunningham; Dowson; Garrett; Weber.*

KRISHNA, a river in the Peninsula of India, rises in the Mahabaleshwar Hills, among the Western Ghats. In Hindu mythology, this river issued from the sweat of Vishnu when he transformed himself into the shape of the Mount Salagram or Gandacisilla.—*As. Res.* xiv. p. 414. See Kistna.

KRISHNA. SANSK., SINGH., TEL. Black; hence the distinguishing name of many plants, etc.

KRISHNA DAS, author of the Chaitanya Charitamrita.

KRISHNA MISRA, author of Prabodha Chandrodaya, meaning Rising of the Moon of Awakened Intellect, a theological and philosophical drama, supposed to have been written about the 5th century with the object of establishing the Vedanta doctrine. What others have asserted by reason and argument, Krishna Misra combats by ridicule.—*Garrett.*

KRISS, HIND., the root of Dioscorea deltoidea, is used in Kashmir to wash the celebrated shawls; soap is used only for white shawls. The root is bruised and mixed with pigeons' dung, and when mixed with water the shawls of Kashmir are steeped in it.—*Simmonds' Comml. Products*, p. 574; *Honigberger*, p. 265; *Dr. J. L. Stewart.*

KRITA. SANSK. Done, finished, made. This word has been adopted into all the Hindu languages under various combinations. Krita, purchased; Krita dasa, a purchased slave; Krita putra, an adopted son.

KRITA YUGA, an age, in Hindu theogony the first age of the world. There are four of these, according to Bentley, the

Krita or first,	B.C.,	19th April 2352.
Treta or second,	,,	28th Oct. 1528.
Dwapur or third,	,,	15th Sept. 901.
Kali or fourth,	,,	8th Feb. 540.

The Krita Yuga is the first or golden age.

KRODHAGARA, SANSK., from Krodha, anger, and Agaru, a house. The room of anger; a room in a house in which when angry a member of a house shuts himself up.

KROR, in India, is a hundred lakhs, or ten millions, a lakh being in India 100,000; but in Persia, the kror is only five lakhs, or 500,000.

KSHAPANAKA, an ancient author, one of the nine gems of the court of Vikramaditya.—*Dowson.*

KSHATRAPA, or Satrap and Mahakshatrapa, are titles which seem to have originated with Nahapana, and were continued by every member of the Sah dynasty.

KSHEMAKA, the last who ruled of the race of Puru.

KSHEMAVATI or Khemavati, the birthplace of the Buddha Krakuchanda. It has been identified with Kakua.

KSHETRA, SANSK., written Khetra and Khet, a field.

KSHETRAJA, a son born of a wife duly appointed to raise issue for a husband in failure of any begotten by him.

KSHETRAPALA, or the guardian of the soil, in Hindu mythology is a personage of various identification. At Benares he is one with Bindumadhava, among the Vaishnava; and, with the Saiva sect, the same as Bhairava. The latter view has the support of the Batukabhairava-stotra. In many places the name of this agrestic protector is bestowed on figures of Hanuman.—*Moor*, p. 7.

KSHETRIYA. Amongst the Aryan Hindus, a warrior branch of their race, taking social rank after the Brahmans. The word is an adjective from the ancient noun Kshatra, which, as meaning rule, dominion, occurs in all the three languages of the Veda, the Avesta, and the Persian inscriptions. Originally it simply denoted possessed of authority, and is so sometimes applied in the Veda even to the gods. A not unusual spelling of the word is Kshatriya, but Chetriya, Ch'hatrya, and Chettrya are not uncommon, and it is also written and pronounced Khatri, K'hetri, and Khutri. The third Upa Veda was composed by Viswamitra, and treats on the fabrication and use of arms and implements handled in war by the Kshatriya tribe. The insignia of a student of this caste, according to Menu, are thus alluded to in the Uttra Rama Cheritra (Hind. Th. i. p. 347) on the approach of Lava, twin son of Rama:—

'Janaka. Who is this youth that thus delights our sight?
Arundhati. Some Kshatriya lad who here awhile pursues his sacred studies.
Jan. You have rightly judged
His birth; for see, on either shoulder hangs
The martial quiver, and the feathery shafts
Blend with his curling locks; below the breast,
Slight tinctured with the sacrificial ashes,
The deer-skin wraps his body; with the zone
Of Murva bound, the madder-tinted garb,
Descending, vests his limbs: the sacred rosary
Begirts his wrists, and in one hand he bears
The pipal staff, the other grasps the bow.
Arun. Whence comes he?'

These insignia of the military student are according to Menu, with the addition of the ashes of the fuel used in sacrifice, and the bracelet or rosary of the seeds of the elœocarpus, which are not indispensable accompaniments, and indicate a bias to the Saiva faith. The pipal staff is a staff made of the wood of the Ficus religiosa. The zone of Murva is a girdle fastened over one hip and hanging loosely over the other, made of the fibres of the Sanseviera Zeylanica.

Barbarous Gond chieftains, in modern times, have learned not only to style themselves rajas, but even to assume the sacred thread of the twice-born Kshatriyas; but the kings of the Kerala

dynasty on the Malabar coast, from whom the rajas of Cochin claim to be descended, are believed to have been the only Dravidian rulers who were really of the Kshatriya caste.

Brahmachari means a Hindu student in theology. All twice-born Hindus, *i.e.* the Brahman, the Kshatriya, and the Vaisya, are enjoined to spend the first quarter of their life in this state.

Hindu writers give this branch of the Aryan immigrants the second place, the Brahmans being first, and the Vaisya and Sudra the third and fourth. In the rules of conduct for this branch of the Aryan race, the natural duties of the Kshatriya are declared to be bravery, glory, fortitude, rectitude, not to flee from the field, generosity, and princely conduct. Menu says, 'To defend the people, to give alms, to sacrifice, to read the Vedas, to shun the allurements of sexual gratification; such are, in a few words, the duties of a Kshatriya.' How this soldier branch broke up is extremely obscure, but though most of the Rajput families are usually believed to belong to them, it is now generally thought that none of the present races in India can trace their descent from the ancient race, whose constant wars amongst themselves and for others exhausted them. If there be a doubt on this point, the present Rajput races undoubtedly take the Kshatriya place as soldiers, princes, and rajas. There seem to have been two branches of that part of the Aryan family that entered India: the Solar, who traced up to Ikshwaku, and the Lunar, who traced up to Budha, and Budha married Ella, daughter of Ikshwaku. These soldier Aryans do not appear to have adopted Brahmanism readily; and the Brahmans, to overawe them, consecrated by fire on Mount Abu, a warrior body who still remain, and are known as the four Agnicula Rajput tribes, whose descendants still dwell in Rajputana. The third Upa Veda, which was composed by Viswamitra, treats on the fabrication and use of arms and of the implements handled in war by the Kshatriya tribe. The four Agnicula Rajput tribes are the Chauhan, Solunki, Puar (or Prumar), and the Purihar. The unnamed progenitors of these races seem to have been invaders who sided with the Brahmans in their warfare, partly with the old Kshatriya, partly with increasing schismatics, and partly with invading Græco-Bactrians, and whose warlike merit as well as timely aid and subsequent conformity, got them enrolled as the Agnicula, or fireborn, in contradistinction to the Solar and Lunar families. The Agnicula are now mainly found in the tract of country extending from Ujjain to Rewah near Benares, and Mount Abu is asserted to be the place of their miraculous birth or appearance. Vikramaditya, the champion of Brahmanism, according to common accounts was a Puar. A Hindu race calling themselves Khatri, is numerous in the Upper Panjab and about Dehli and Hardwar, and they are found along the Ganges as far as Benares and Patna. These Khatri divide themselves into three principal classes—1. the Char-jati or four clans, viz. Seth, Marhota, Khunna, and Kuppur; 2. Bara-jati, viz. Chopra, Talwar, Tunnuhu, Seigul, Kukker, Meihta, etc.; 3. Bawan-jat or fifty-two clans, amongst whom are Bundari, Meindrao, Sehti, Suri, Sani, Unnud, Buhseen, Sohdi, Bedhi, Teehun, Bhulleh, etc. Inferior Rajput tribes are settled in Bundelkhand and in Gurha Mandalla. Others, according to Thevenot, were settled in Multan, as the original country of the Khatri, from whom he says the Rajputs are believed to spring.—*Hind. Th.* p. 347.

KU is the guttural form of the Assyrian hu in Euphrates and Eulæus, and of the Turki su and of the Tibetan chu, all of which mean river or water. It is the Scythic ku, as in the Kophes or Kābul river.

KU or Cu in Sanskrit is a prefix, meaning evil, bad; Ku-mar, the evil-striker. Hence, probably, the Mars of Rome. The birth of Ku-mar, the general of the army of the gods, with the Hindus, is exactly that of the Grecians, born of the goddess Jahnavi (Juno), without sexual intercourse. Kumara is always accompanied by the peacock, the bird of Juno.—*Tod's Rajasthan.*

KU, a race who occupy the mountainous country near the sources of the Semru river, and its principal feeder the Peng Kheong, in lat. 22° N., westward of the Yomadoung range, and estimated at about 14,485 souls. Those living the Peng Kheong have intercourse with the neighbouring Ku-mi of the Koladyn circle, from whom they differ but little in their habits. On occasions of rejoicing, they tie a bull or gayal (Gavæus frontalis) to a stake, and, as they dance round it, the animal is slowly despatched by numberless spear wounds aimed at every part of its body. The blood is caught in bamboo cups, and men, women, and children drink it. The Ku have the reputation of torturing human victims in a similar manner. They appear to be the most savage of these eastern tribes. No carriers or interpreters could be found amongst the adjacent tribes who would proceed to their villages. Their chief food is Indian corn, and they are unacquainted with the use of salt.—*J. H. O'Donel, Esq.*, in xxxii. of 1864 *of B. A. S. Jour.; Dalton, Ethnol. of Bengal*, p. 115.

KUAN-TI-YEH-HSIEH. CHIN. The god of war crab, from the fancied resemblance on the shell to that deity. The Hai Kuan-ti-tao, the god of war's sword, is a fish, so called from its resemblance to that deity's weapon.

KUAN-YU, the Chinese god of war, was the greatest military hero of all Chinese history. He lived during the rule of the Han dynasty. He was canonized as a saint, and afterwards promoted to the rank of a god. He is now the guardian deity of every Chinese city.

KUBAT. ARAB. A cupola, a vault. Kubat-ul-Haj, a mosque with a kiosk near Damascus, where the pasha who conducts the pilgrims passes the first night of the journey. Kubat-un-Nasr, the Arch of Victory, a tomb of a Muhammadan saint, not far from where the Barada or river of Damascus (the Chrysorrhœa or Golden Stream) breaks out from the mountains, on the crest of a hill overhanging the plain. It is a favourite place of resort. Kubat-al-Idris, the dome of Enoch, is a small octagonal building in the plain towards the Bekaa or Cœle-Syria, about a mile from Balbec. It is surrounded by eight beautiful granite columns. This neighbourhood is supposed to be the site of the city built by Enoch (Genesis iv. 17). A mile from Zahle, on the south side of the village of Kerak, the inhabitants show the tomb of Noah, with a tombstone 10 feet long, 3 feet broad, and 2 feet high, over which is a structure 60 feet high. A mile from this is a

ruined temple, called Hermes Nieha, the god Mercury.—*Catafago.*

KUBEIS, one of the holy mountains at Mecca, of which wonderful things are related.—*Yule, Cathay*, ii. p. 391.

KUBJA. SANSK. Crooked, hunch-backed, a deformed female servant of Kansa, whom Krishna made straight, and relieved of her deformity; she became a beautiful woman.

KUBLGIRA or Kili-katr, a migratory tribe in the Southern Mahratta country, who act as ferrymen, and exhibit pictures of the Pandava heroes.

KUBO is the name applied to the Shan race in the Munipur language.

KUBO, a title of the former secular emperors of Japan.

KUBU, a wild race of Sumatra. Dragon's blood, from the Calamus draco, is a granular matter adherent to the ripe fruits, and obtained by beating or threshing the fruit in little baskets. The chief place of production is Jambi, on the N.E. side of Sumatra. The principal collectors are the Kubu, a wild race, who sell it to the Malays at a shilling a lb. About 48 tons are said to be collected in Jambi, but this seems an excessive estimate. The stems of the male plant form walking-sticks, and are supposed to be the Jambi so fashionable in the reign of Queen Anne.—*Crawfurd's Dictionary.*

KUCHA or Kat'cha. HIND. A term in general use to designate anything improper or incomplete or of small value, in opposition to the word Puk'ha, meaning ripe, mature, complete. Kat'cha Bundi, herbalists.

KUCH-BEHAR, a Native State, situated between lat. 25° 57′ 40″ and 26° 32′ 20″ N., and long. 88° 47′ 40″ and 89° 54′ 35″ E., with an area of 1291·83 square miles, and a population of 532,565 souls. It is entirely surrounded by British territory, being bordered by the Western Dwars of Jalpaiguri on the north, and by Rangpur district on the south. It contained the ancient Kamrup, and is now ruled by the Koch tribe. The rajas claim descent from Siva with Hira, who bore a son, from which the ruling family take the title of Narayan, and all the Hinduized Koch call themselves Rajbansi. The official designation of the State is Nij-Behar, nij = own, peculiar. In 1878, the raja married the daughter of Babu Keshab Chandra Sen, and visited Britain. The semi-Hinduized aborigines numbered 117,095, and the aborigines are Morang, Garo, and Mech. The Praja of Kuch-Behar are cultivators almost in a state of serfdom. Hajo, of the Koch tribe, is the earliest known founder of the dynasty; but, according to a second legend, more popular at court, the family trace back to a Mech called Heriya. There are a number of persons of Hindu origin not recognising caste; 48,086 Muhammadans. The great bulk of the population is undoubtedly of mixed origin, in which the aboriginal strongly predominates.

Kuch-Behar city, the residence of the raja, is situated on the Torsha river, lat. 26° 19′ 36″ N., and long. 89° 28′ 53″ E. The town contains a population variously estimated at 7132 and 10,000.—*Imp. Gaz.* See Koch'h; Mech.

KUDAMI or Kudumi. TAM. A tuft of hair on the crown of the Hindu's head. It is called in Sanskrit Sik'ha, and seems to be the Sisoen of Leviticus xix. 27. It is cut off the head of a deceased Hindu by his son, as a preliminary to the further funeral ceremonies. The Greeks, Romans, and Egyptians of old wore, and the Tartars, Chinese, and Hindus now wear, this. Christian missionaries have discussed the questions as to its retention or removal on becoming a convert. The Vellalan or Vellan of Tinnevelly, who become converts to Christianity, retain their kudami or top-knots of hair. They continue vegetarians, and seldom or never marry among lower-caste converts; a Christian Vellalan hesitates to marry a Shanar Christian girl. This is not because they are Hindus at heart, but on account of the great dissimilarity of the social habits of each. The Shanar wife could never live on vegetables alone, and the Vellalan husband has never been accustomed to flesh meat. Even their language, though the same, differs very much in accent. Under these circumstances, such marriages are very injudicious.

KUDDUS. ARAB. Holy, blessed, hence one of the names of God. The Shajrat-ul-Khudush, mentioned by Forskal as a tree of Arabia, is perhaps Kuddūs, blessed, the sacred tree, the olive. Many trees are deemed Kuddūs. Bait-ul-Makaddas is the holy city of Jerusalem.

KUDI. TAM. A village, a town, a house, a tribe, an inhabitant, a tenant. It forms many compound terms. Pagoda is pai kudi, devil house.

KUDMI, a Parsee sect. A Parsee when he prays has to repeat the year, month, and day on which he offers his petition; therefore the mention of the date is the only distinction between the prayer of a Kudmi and that of a Shenshoy, and the same difference exists in the keeping of the festivals, which are common to both sects.—*Census of Bombay*, 1881.

KUDRAT HALVASSI. TURK.
Musi, ARAB. | Guzanjabin, Ghezo, PERS.

A manna found on the dwarf oak, though several other plants are said to produce it, but not so abundantly, or of such good quality. It is collected by gathering the leaves of the tree,

> . . . 'The manna on each leaf did
> Pearled lie,'

letting them dry, and then gently threshing them over a cloth. It is thus brought to market in lumps, mixed with an immense quantity of fragments of leaves, from which it is afterwards cleared by boiling. Another kind of manna is found on rocks and stones, which is quite pure, of a white colour, and is much more esteemed than the tree manna. The manna season begins in the latter end of June, at which period, when a night is more than usually cool, the Kurds say it rains manna, and maintain that the greatest quantity is always found in the morning after such a night. It is called in Turkish, Kudrat halvassi, or the divine sweetmeat; in Arabic, Musi; in Persian, Guzanjabin; in Kurdish, Ghezo.—*Rich's Kurdistan*, i. p. 142.

KUDRAY MALAY POINT, in the Gulf of Manaar, is in lat. 8° 32′ N. It is the Hippuros of Pliny, and may have been the Tarshish of Scripture.

KUDRAY-MUKHA, a peak on the Western Ghats, between the Mysore State and British districts, in lat. 13° 8′ N., and long. 75° 20′ E. It is a good landmark for sailors. It means the horse-face.

KUDUL. PUSHTU. Large-arched huts made of wattled tamarisk bushes, covered with hurdles and coated with clay; used by the Barechi in Shorawak.

KUDUMPAN means a headman or chief. It is the tribal title of the Pallan race of the Peninsula.

KUEN LUN, also written Kouen Lun, as seen from Sumgal in Turkestan, is in lat. 36° 8′ N., and long. 78° 5′ E., and 13,215 feet above the sea. It is part of the great mountain range in Central Asia which bounds the high table-land of Tibet. The range is known to the nations who see it near and from afar by various names. It is their Belur-tagh, meaning Ice Mountain; it is the Bulut-tagh of Captain Strachey, meaning Cloud Mountain; Mus-tagh or Muz-tagh is another name; Kara-korum is a Turki word, meaning Black Mountains; the Tsun Lun, or Onion Mountain, is given to it because of the abundance there of a species of Allium; Tian Shan of the Chinese, or Celestial Mountain, is applied to it because of its great height; and Haro-berezaiti (Albordsh) of the Zendavesta is an ancient name. The range stretches over a space of 27 degrees of longitude, or more than 1500 miles, forming in its whole length the north frontier of Tibet, as the Himalaya does that of the south.

The Kouen Lun is the true watershed between India and Central Asia, the Indus absorbing all the streams which flow from the southern slopes of the range, while the northern rivers which form the Karakash force their way through or round the outer barrier of the Kouen Lun, and wend northward to the Gobi or Sandy Desert. In the Kouen Lun all passes above 15,000 feet are closed in winter by the heavy snowfall. Two systems of cleavage are particularly regular in the central parts of the Kouen Lun; the steeper one dips north 30° to 50° east, the other south 20° to 40° west. A hard crystalline rock occurs, not unlike pudding-stone, which contains enclosures of spherical and angular forms. The quarries where the Yashm stone is dug are at Gulbagashen, in the valley of Karakash. See Kara-korum.

KUFA was a town on the west bank of the Euphrates, about 40 miles from Baghdad, but it has entirely disappeared. It was founded during the khalifat of Umar, opposite Modain. Safah, the first khalif of the Abbassi, made it his capital, but when Mansur built Baghdad, he took there from Kufa a considerable part of the Kufa population. It was much famed for its literary men. The two sects of Arab grammarians were named the Kufiyan and Basriyan, from the towns of Kufa and Basra; and the more ancient writing characters of the Arabs are called Kufic, from this town. The most ancient copies of the Koran are written in them. They are square and heavy, a good deal resembling the Syriac, and are more suited for inscriptions than for writing. The inscriptions on Mahmud's pillar at Ghazni are in the Kufic. Ali was buried at Kufa after his fall here.

Shortly before the institution of El Islam, a character differing little from that now generally used by the Arabs was introduced at Mecca from Irak. The Kufi or Kufic character, which for many years superseded the former, was a later invention, for Kufa was not founded until the 17th year of the Hijira.

The city of Kufa, founded by the khalif Umar, was constructed from the ruins of Babylon. It is 88 miles south of Baghdad, built on an affluent of the Euphrates. It was the residence of the khalifs, and a great town till Mansur removed to Baghdad, A.D. 760. Four miles to the westward, Mashed Ali stands conspicuous. Kufa gives its name to an old form in which Arabic was written.

Kufic coins have been largely found in Gothland. In the Stockholm Museum alone, 20,000 have been preserved minted in about seventy different towns within the former dominions of the Abbassi khalifs.—*Mignan's Travels*, p. 325; *Prideaux's Life of Mahomed*, pp. 29, 30; *MacGregor*.

KUFA, ARAB., is a round wicker basket, towed astern of each boat for the purpose of communicating with the shore. These are in use on the Tigris, Euphrates, and the Diala. The Kufa basket boat (so named from the Arabic word which means basket) is also used as the common ferry boat. Its fabric is of close willow-work, well coated, and made waterproof with the bituminous substance of the country. It holds about three or four persons with room enough, though not in the most agreeable positions. It is moved by paddles.—*Mignan's Travels*, p. 55.

KUFALZAI, more generally known as the Popalzai, a Daurani tribe, numbering 12,000 families, an offshoot of the Abdali, one of the branches of which, the Saddozai, gave sovereigns to the Afghans in the 17th and 18th centuries.

KUFF, also Kuffee. PANJ. Chaptalia gossypina is a mere weed, from Simla to Lolon, and covers the whole of the unwooded hills in the very greatest profusion. Kuff, pealed off the leaves of the plant, is called by the paharries Sokhta, and they use it instead of tinder for their matchlocks, etc. When the leaves are damp and green, the kuff is taken off the back of the leaf with great facility and quickness. Kuff would not make the stronger and larger kinds of paper, but it would be available for that of the finest and most delicate kind. One ton of leaves would produce 1 cwt. of the film.—*General Cox, from Lieut. Ross*, 25th July 1858.

KUFR. ARAB. Infidelity. Muhammadan sins against God are infidelity, despairing of God's mercy, considering oneself saved, false witness, falsely accusing a Musalman of adultery, falsely swearing, magic, wine drinking, appropriating orphans' property, usury, adultery, unnatural crimes, theft, murder, fleeing in battle before the face of an infidel, disobedience to parents. The punishments for adultery, fornication, slander of a married person, apostasy, are designated Hadd; Tazir, punishments inflicted by the judge according to the law. Qisas, literally retaliation, the lex talionis of Exodus xxi. 24; but Mahomed allowed a money compensation, at the discretion of the next of kin, to the murdered person.

KUFRA, a town, six hours from Sert, on the Bitlis road, in the district of Shirwan. The castle of Shirwan is only an hour from Kufra. In Rich's time, the Bey was powerful and independent, and a younger branch of the Hasan Keif family, and consequently an Ayubi or descendant of Salah-ud-Din. There is a gold mine in Shirwan.—*Rich's Kurdistan*, i. p. 377.

KUI KHEL, a section of the Afridi Khel dwelling in Bazar, residing in summer in Bar Bara and Tordara, and in winter move to the mouth of the Khaibar, and to their caves in Kajurai.—*H.A. N.W.F.* pp. 243-245.

KUKA. The founder of this Puritan sect of Sikhs was Ram Singh, a carpenter, native of the small village of Bhaini, about 7 miles S.E. of Ludhiana. In 1845 he served as a soldier in the Sikh army, which he left after the overturn of the Sikh rule, and endeavoured to restore the Sikh faith in its purity. By the year 1867 he had gathered round him a numerous following, and he had about 100,000 disciples, and their objects seemed to assume a political form.

The Sikhs have ten commandments, so have the Kuka,—five affirmative, and five negative. The former are known as the five K's, and are Kard, Kachh, Kerpal, Kanghi, Kes, iron ornaments, short drawers, iron quoits or weapons, the comb, and hair. The negative commandments are Narimar, Kuri-mar, Sri Katta, Sunnat-katta, Dhir Malia; no smoking, no murder; daughters not to marry the shaven crowns, the circumcised, nor the disciples of the guru of Kartarpur.

Sherring says they are like the Nanak Shahi, only more rigid. They wear a peculiar uniform. The term is derived from the loud tone in which they utter their mantra, or sacred text, compared to the kuk or loud note of the kaku or kokila. The Kukapanthis intensely detest all other sects. They care little about the body after death. They hold that after the soul has left the body, the remains require no more attention, and may be put out of sight in any way convenient. They feast, give sweetmeats, and read the Granth incessantly when one of their sect is about to die, and after he is dead they read the Granth day and night, relieving each other at the task, for thirteen days, after which they give a feast. Bishn Singh, a fanatic leader, was executed in 1872, but his Granth, which was to be sent to the guru, was left in the Kuka temple in Lahore, and read by the men of his sect, who performed his obsequies. His ashes were given up on condition that there should be no demonstration by the relatives, and they were committed to the Ravi by his son, who took the remaining bones to Hardwar, according to the Hindu and not Kuka custom.—*Indian Public Opinion.*

KUK'HA, a race in the north-western Panjab, who occupy the rugged mountains along with the Bimba, inhabiting the hills westward from Kashmir to the Indus.

KUKHNAR. TURKI. Poppy heads bruised in water; a narcotic drink.

KUKI occupy the country to the south of the Garo, Khassya, and Mikir areas, or the hill ranges of Garo, Jaintia, and Kachar, in Sylhet, Tiperah, and Chittagong, among the mountains to the north-east of the Chittagong province. They are found as neighbours of the Naga in Assam, and in contiguity with the Mugh of Arakan, and thus the hill country occupied by them extends from the valley of the Koladyn, where they touch on the Kumi, to Northern Kachar and Munipur, a distance of about 300 miles.

The Kachar old Kuki are arranged into three divisions,—the Rhangkul, the Khelma, and the Betch. The Kuki are also called Lungkta.

New Kuki came from the ruder parts of Tiperah and Chittagong, and their form of speech is not always intelligible to an old Kuki. The Munipur dialects and that of the new Kuki are mutually intelligible. In 1848-49, four Kuki tribes—the Thadan, the Shingson, the Changsen, and the Lhungam—were driven into North and South Kachar and into Munipur, from their locations, by the Lushai people, who speak a Kuki dialect, but dwell farther south. They were driven back by Colonel Lister and his Sylhet light infantry. He entertained the new Kuki as soldiers, and they formed good outpost soldiers on the frontiers of both the Lushai and the Angami countries. The Kuki on the eastern frontier are commonly known by Tiperah. In physiognomy some of them are like the Munipuri, but the greater part bear more resemblance to the Khasiya tribes, having strongly marked Kalmuk or Mongolian features, with flat faces and thick lips, not in general shorter in stature than Bengali, but far more muscular and strongly made; many of them with complexions scarcely darker than a swarthy European. The villages contain perhaps from 100 to 200 inhabitants each, and each house is raised on bamboo piles 4 or 5 feet from the ground. The sites of the Kuki villages are well chosen on the broadest parts of the highest ridges, with water near at hand, generally a small hill stream. Some of the chief villages contain as many as 200 houses, commodiously built on platforms raised between 3 and 4 feet from the ground. Every part of the house is formed of bamboo, there being but few trees of any kind.

Kuki of the Tiperah Hills are divided into the Umroi, Chutlang, Halam, Barpai, and Kochauk Kuki. Their only deity is Lachi, to whom they offer the head and neck of a cock. The Chittagong Kuki are divided into Chukma, Tiperah, Reang, and Susai Kuki.

The Kuki who came into Assam from the Chittagong Hills about the beginning of the 19th century, were in a state of nudity, but were soon induced to wear clothing. Since then, four large tribes of Kuki—the Thadan, Shingson, Changsen, and Lhungam—were defeated in a war with the Lushai, and fled into Kachar, where the British Indian Government allowed them to settle.

The Khong-jai Kuki, until lately, occupied the hills to the south of the Koupooce. Whilst in this position, little or nothing of them was known, but they caused fear from their vicinity. South of them lay the Poi, Soote, Taute, Lushai, and other tribes, better armed than they were, and of the same gens as themselves, but at feud with them. By these they were driven from their native hills, the task being rendered easier by the internal animosities of the Khong-jai themselves, and the Khong-jai are now scattered around the valley of Munipur, and thence through the hills to North and South Kachar. Thus they broke into distinct tribes; although occupants of the hills to the south of the valley of Munipur, their traditions do not give the southern hills as the place of their origin, but rather lead them to the belief that it was in the north.

The new Kuki clans are presided over by rajas and muntris. One, among all the rajas of each class, is chosen to be the Prudham or chief raja of that clan. The tradition of the Kuki respecting their origin is, that they and the Mugh are the

offspring of the same progenitor, who had two sons by different mothers. The Mugh, they say, are the descendants of the elder, and the Kuki of the younger son. The mother of the younger having died during his infancy, he was neglected by his stepmother, who, while she clothed her own son, allowed him to go naked. Each man lives with his family in a separate house. The widows live in houses of their own (in this respect like the Naga and Kachari), built for them by the villagers. The men wear a large cloth, sometimes two, wrapped loosely round the body, and hanging from the shoulder to the knee. The women wear a short striped petticoat, reaching from the upper part of the body half-way down to the knee. Married women have their breasts bare, but all virgins are covered, wearing a cloth wound round the bosom underneath the armpits. They wear their hair prettily plaited at the back, the two ends being brought round in front, and tied just above the forehead in the form of a coronet. Like all hill people, the Kuki are dirty in their habits, very seldom washing their bodies. At 12 or 13, a boy is excluded from the family mansion at night, and compelled to take rest or share of the vigil with the young men in the watch-houses.
